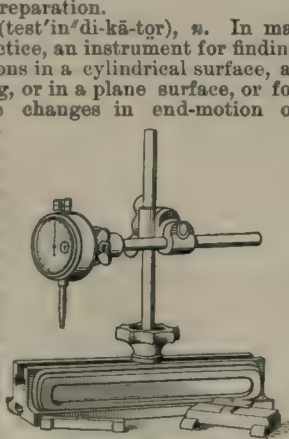
testimonial, *a.*—**Testimonial evidence**, such declarations by a witness as are positive and direct as to given facts, as distinguished from circumstantial evidence. *Wigmore*, Evidence, §§ 25, 475.—**Testimonial privilege**, the right of a witness under examination to withhold certain evidence, such as trade and official secrets and what are known as privileged communications. The secrecy of a political ballot is respected, and a witness may not be compelled to testify to what incriminates him. *Wigmore*, Evidence, § 2197.—**Testimonial qualifications**, such facts regarding a witness as render his evidence inadmissible in the case at hand. Among them are infancy, personal interest, insanity, criminal character, and marital relationship.—**Testimonial recollection**, remembrance of past acts sufficiently clear and certain — and sometimes revived by accounts, memoranda, etc. — to give credence in court to the witness' statements concerning them. *Wigmore*, Evidence, § 725.

testimonium (tes-ti-mō′ni-um), *n.* [L.: see *testimony*.] The usual concluding clause of an instrument or legal document, beginning "In witness whereof" and followed by the signatures and seals of the party or parties. Also *testimonium clause*.

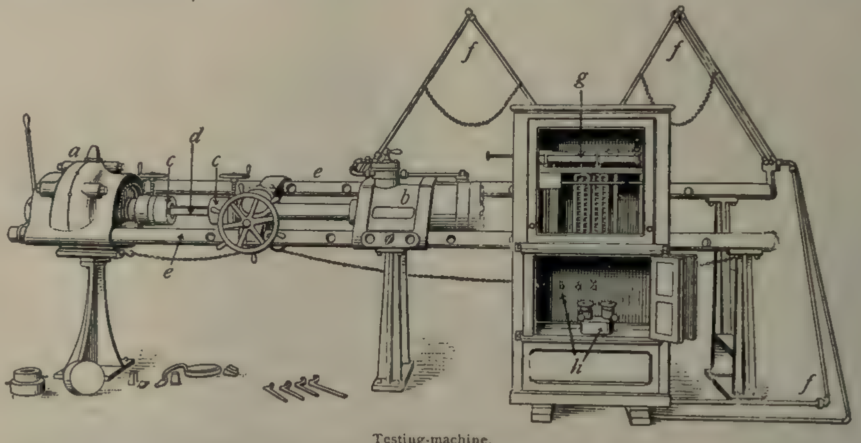
testin (tes′tin), *n.* [L. *testis*, testicle, + *-in*[2].] The dried and powdered testicles of the ox: a commercial preparation.

test-indicator (test′in″di-kā-tọr), *n.* In machine-shop practice, an instrument for finding minute variations in a cylindrical surface, as that of shafting, or in a plane surface, or for finding minute changes in end-motion or lateral deflection between two surfaces. In some instruments the differences or variations are merely indicated; in others the error of motion or form is indicated in thousandths of an inch on a dial.—**Lathe test-indicator**, a test-indicator specially adapted for finding the center of a face-plate or of any piece of work to be correctly centered in a lathe. It is made in several forms, of which the illustration shows one in general use in testing plane surfaces. It can also be used to test the thickness of sheet-metal. Test-indicators are universally used in erecting and inspecting machine-tools.



Lathe Test-indicator.

testing-machine (tes′ting-mạ-shēn″), *n.* 1. A machine or apparatus for ascertaining by experiment or test the resistance offered by a material to a stress which tends to deform or break it. The machine may be adapted to cause failure by tension or pulling apart; by compression or crushing; by bending or flexure; or by torsion or twisting. One machine may be adapted for any of the first three methods by simple change. The torsion machine is usually specially designed, and any of the others may be so. The elements of such a machine are: (*a*) the grips or holding apparatus; (*b*) the straining apparatus for applying load; (*c*) the apparatus for observing, measuring, or recording the intensity of the applied load; (*d*) the apparatus for observing or recording the deformations under applied load. The grip or holder for tension-tests is usually a form of wedge which moves in slots with converging sides. These wedge-grips are borne in holders, one of which is part of the straining mechanism and moves with it, while the other is borne by the table or platform to which the levers of the weighing mechanism are attached. When the specimen is placed between these two sets of holders, a movement of the straining mechanism to separate the two holders transmits its effort through the test-piece to the weighing levers, and thus to the graduated weigh-beam, on which a poise of known weight can be moved out until the stress in the specimen is just balanced by the weight on the beam. The stress can be gradually increased up to the capacity of the weighing beam to record it, or until the test-piece parts; the reading of the poise on the graduated beam then gives the breaking-load, which is reduced to unit load by dividing the test-load by the measured area of the test-piece. The weighing or reducing levers may be simple or compound; the fulcrums may be knife-edges, or thin flexible plates may be used as fulcrums (A. H. Emery's system). The plate-fulcrums do not have a friction increasing with the load in an unknown or variable ratio, as is the case in knife-edge fulcrums. The straining effect may be produced by geared screws, or by hydraulic cylinder action for large machines; in small ones a simple lever action is possible. In some forms the travel of the weighing poise is made automatic by electric or mechanical detents, so that with the lift of the beam the poise is caused to travel, and on its drop the travel stops. For measuring deformations, either a micrometric or vernier pair of scales is used, one element being attached to the specimen near the grip at one end, and the other element being similarly attached near the other. As the two ends are separated by the straining effort, one scale passes by the other and the stretch is measured for any load. The change in rate of stretch with equal increments of load indicates the elastic limit; when the stretch begins to increase steadily the yield-point is passed. An easy extension of this principle enables the moving scale to trace on a paper attached to the fixed scale a diagram in which the abscissas are deformations and the ordinates the load applied. Valuable facts and principles as to ductility, modulus of elasticity, and other properties can be deduced from such records. The ordinary capacities of testing-machines vary from 100,000 to 300,000 pounds. Unusual capacities are 900,000 and 1,200,000 pounds. Early testing-machines were made by Fairbairn and Kirkaldy in Great Britain, and later by Wicksteed. Early American types were devised by Richards, Miller, Riehlé, Thurston, and officers of the United States Ordnance Board. Thurston's torsional machine has been one of the best known of its class. Every important steel manufacturer uses the testing-machine, and most specifications demand its use before a consignment of product is accepted. Special forms are also in extensive use for cement, springs, wire, textile products, twine, paper, and all material in which strength is an important factor. Special types of testing-machines have also been devised to test the abrasive resistance of brick for paving, the lubricating quality of oils and greases, resistance to frequently applied loads, etc.



Testing-machine.

a, abutment or support to resist the effort to deform the test-piece; *b*, hydraulic-press cylinder applying the effort to deform and break the test-piece; *c*, *c*, jaws or grips to hold the test-piece; *d*, test-piece held between the jaws; *e*, *e*, frame of the machine tying *a* and *b* together, and supporting and guiding the latter: it has holes for pins to adjust the distance between *a* and *b* for the length of the specimen; *f*, *f*, *f*, jointed pipes conveying water, alcohol, or oil from a pressure-pump to operate the plunger of the hydraulic press *b*; *g*, scale-beam with weights for measuring the stress on the test-specimen; *h*, *h*, valves and levers for applying the load on the beam and taking up the mechanical deformation as it occurs.

2. Any machine used to test an isolable quantity or property in a substance.

testitis (tes-tī′tis), *n.* [NL., < L. *testis*, testicle, + *-itis*.] Same as *orchitis*.

test-lead (test′led), *n.* Pure granulated lead used in silver assays.

test-letters (test′let″ėrz), *n. pl.* Same as *test-types*.

test-log (test′log), *n.* A record of observations made during a test, as the log-book at sea is used to record observations and occurrences.

> Fig. 1 shows a typical *test-log* upon a 550-hp engine of the three-cylinder vertical type, employing the four-stroke cycle. The thermal efficiency shown is the true or "kinetic" efficiency, namely, the ratio of the input to the output, or the thermal equivalent of the work done to the thermal value of the gas.
>
> *Elect. World and Engin.*, Jan. 9, 1904, p. 90.

testone, *n.* 2. A Portuguese silver coin of 100 reis.

test-piece (test′pēs), *n.* A piece of material adapted by size and shape to be tested in a testing-machine to determine its physical properties, such as strength, elastic limit, deformation under load, etc.; a test-bar.

test-ratio (test′rā″shiō), *n.* The ratio of the *n*th term of a series to the preceding term.

test-ring (test′ring), *n.* A ring-shaped sample of iron, steel, or other magnetic material used in the determination of the permeability, hysteresis, or other magnetic properties of the metal of which the ring is made.

Test-tube clamp. See ★*clamp*[1].

test-tube (test′tūb), *v. i.*; pret. and pp. *test-tubed*, ppr. *test-tubing*. [*test-tube*, *n.*] The use of the test-tube in chemistry. [Rare.]

> Unintelligent "*test-tubing*" according to analytical tables was the prevalent mode of instruction.
>
> *Athenæum*, Dec 30, 1905, p. 900.

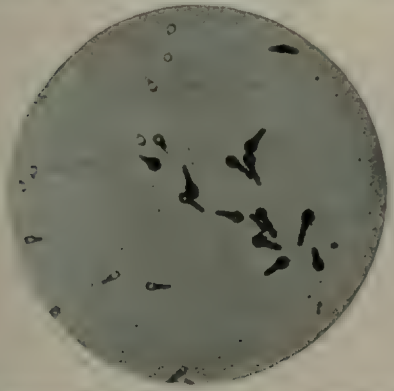
Testudinoidea (tes-tū-di-noi′dẹ-ạ̈), *n. pl.* [NL., < L. *testudo* (*-din-*), a tortoise, + *-oidea*.] A superfamily of cryptodiran turtles. The skull is without parietosquamosal arch, and the squamosal is separated from the postorbitofrontal bone; there is a foramen palatinum between the maxilla and the palatine; the articular faces between the sixth and seventh cervical vertebræ are not plane, and two of the cervicals are biconvex; the nuchal is without well-developed costiform processes, and the series of inframarginals is incomplete. This superfamily includes the *Eurydidæ* (marsh-turtles) and the *Testudinidæ* (land-tortoises).

test-weights (test′wāts), *n. pl.* In *exper. psychol.*, a set of cylinders, of like appearance but different weight, used for the determination of the differential sensitivity (passive pressure or lift). The hollow cylinders may be made of brass (in which case the weights are lifted in wooden trays, to avoid complication by temperature sensations), hard rubber, wood, or cardboard. They are packed with shot, wax, cotton-wool, paper, etc., to secure the required difference in weight. The set of weights ordinarily includes two cylinders, of identical weight but of markedly different size, for demonstration of the size-weight illusion. In work of investigation it is usual to employ a set of weight-holders, all of the same weight and appearance, in which various weights may be placed. *Baldwin*, Dict. of Philos. and Psychol., I. 611.

tetanolysin (tet-a-nol′i-sin), *n.* [*tetanus* + *lysin*.] A toxin produced by the tetanus bacillus, to which the hemolytic action of tetanus poison is due.

tetanospasmin (tet″a-nō-spaz′min), *n.* [*tetanus* + *spasm* + *-in*[2].] A poison produced by the tetanus bacillus, to which the tetanic convulsions are due.

tetanus, *n.* **1.** It is an acute infectious disease, caused by the presence and growth in the tissues of the tetanus bacillus. The characteristic symptom is a tonic spasm of the muscles, more particularly those of the neck and face. The muscles of the jaw are especially affected, whence the common name, lockjaw. The spasms are caused by a toxin, excreted by the bacillus, which passes by way of the nerves to the spinal cord. The bacillus may gain admission through any wound, however trivial, but inoculation occurs usually in deep jagged wounds or punctured wounds made by rusty nails or dirty splinters of wood. Preventive treatment consists in freely opening the wound, since the bacillus does not grow when exposed to the air, and disinfecting it. The injection of tetanus antitoxin will often prevent the development of the disease, but is ineffectual as a curative measure when once the affection is established.—**Acoustic tetanus.** See ★*acoustic.*—**Infantile tetanus.** Same as *trismus nascentium.*—**Ritter's tetanus,** tonic muscular contraction occurring when the electrical current is broken.—**Tetanus bacillus,** the specific micro-organism of tetanus, or lockjaw. It occurs in the form of slender rods 2 to 4 μ in length, having a rounded spore at one extremity, giving them the appearance of short round-headed pins. The bacilli are anaerobic and do not grow when exposed to the air, but the spores are extremely resistant and may retain their vitality for many years in the soil and elsewhere.



Tetanus Bacillus, from agar culture. Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

tetany, *n.*—**Gastric tetany,** recurring attacks of tonic convulsions of mild form, associated with dilatation of the stomach.

tetarcone (tet′ä̤r-kōn), *n.* [Gr. *τέταρτος*, fourth, + *κῶνος*, a cone.] The postero-internal cusp of an upper premolar.

tetartohedron (te-tär-tọ̄-hē′drọn), *n.*; pl. *tetartohedra* (-drä̤). [NL., < Gr. *τέταρτος*, fourth, + *ἕδρα*, seat, base.] A tetartohedral crystal: a form having only one fourth as many faces as the corresponding holosymmetric (holohedral) form. See ★*symmetry*, 6.

tetartoid (te-tär′toid), *n.* [Gr. *τέταρτος*, fourth, + *-oid.*] The twelve-faced solid of the tetartohedral class of the isometric system. It corresponds to the hexoctahedron of the holosymmetric class.

teth (tāt), *n.* [Heb. *ṭēth, ṭēt.*] The ninth letter (ט) of the Hebrew alphabet, pronounced somewhat like the English *t*. Its numerical value is 9.

tether, *n.*—**At the end of one's tether,** or **to the length of one's tether,** at the limit of discretion; as far as one can go without being checked by public opinion or by circumstances.

> Meanwhile Mr. Rodney was being terribly de trop. Mrs. Verulam had now come to what is called *the end of the tether.* *R. Hichens*, The Londoners, iv.

tether-ball (teᴛʜ′ėr-bâl), *n.* **1.** A lawn-game played by two players with rackets and a ball which is hung, or 'tethered,' by a cord to the top of a pole. The object of the game is to wind the string that holds the ball around the pole by striking the ball with the racket, the opponent endeavoring to do this in the opposite direction.—**2.** The ball used in this game.

tethery (teᴛʜ′ėr-i), *a.* [*tether* + *-y*^{1}.] Clinging: said of long-stapled wool, the fibers of which overlap and cling to one another, hindering their proper working in the processes of manufacture. *C. Vickerman*, Woollen Spinning, p. 167.

tetlatia (tā-tlä′tẹ̄-ä), *n.* [Mex. Sp. *tetlatia*, < Nahuatl *tetl*, stone, + *tlatla*, burn.] In Mexico, the poison-oak (*Rhus Toxicodendron*) and *Comocladia Engleriana*, plants with an acrid juice which causes an eruption of the skin. Also called *guao*.

tetrabasic (tet-ra-bā′sik), *a.* [Gr. *τετρα-*, four, + E. *base*^{2} + *-ic.*] In *chem.*: (*a*) Noting an acid which contains four atoms of hydrogen replaceable by more electropositive elements or radicals, as pyrophosphoric acid, $H_4P_2O_7$.

> From the variation of the conductivity with the dilution, the author concludes that casein is a *tetrabasic* acid with a molecular weight equal to 4540. *Nature*, Oct. 23, 1902, p. 637.

(*b*) Noting a salt which contains electropositive elements or radicals replacing four atoms of hydrogen.

tetraboric (tet-ra̤-bō′rik), *a.* [Gr. *τετρα-*, four, + E. *bor*(*on*) + *-ic.*] Containing four atoms of boron.—**Tetraboric acid,** a glassy, amorphous solid, obtained by regulated heating of orthoboric acid. Its formula is $H_2B_4O_7$, containing four atoms of boron, hence the name; but it is more commonly called *pyroboric acid.* Common borax is its sodium salt.

tetrabrachys (tet-ra̤-brak′is), *n.* Same as *tetrabrach.*

tetrabromfluorescein (tet″ra̤-brōm-flö-ọ̄-res′ẹ̄-in), *n.* [Gr. *τετρα-*, four, + E. *brom*(*ine*) + *fluoresc*(*e*) + *-e-in.*] An artificial dyestuff commonly called *eosin* (which see).

tetrachlorid (tet-ra-klō′rid), *n.* [Gr. *τετρα-*, four, + E. *chlorid.*] A chlorid which contains four atoms of chlorin: as, tin *tetrachlorid*, $SnCl_4$.

tetrachloromethane (tet″ra-klō-rọ̄-meth′ān), *n.* [Gr. *τετρα-*, four, + E. *chlor*(*in*) + E. *methane.*] See ★*carbon tetrachlorid.*

tetrachromatic (tet″ra̤-krọ̄-mat′ik), *a.* [Gr. *τετρα-*, four, + E. *chromatic.*] Pertaining to, or characterized by, four colors: said, especially, of normal daylight-vision, as contrasted with the monochromatic vision of total color-blindness. *Baldwin*, Dict. of Philos. and Psychol., II. 793.

tetrachromic (tet-ra̤-krō′mik), *a.* [Gr. *τετρα-*, four, + *χρῶμα*, color, + *-ic.*] Relating to four colors; noting the color-blind who are able to see only four colors.

> Normal sighted persons see six colours, some even seven; the second class of the colour-blind see five, four, three, two or one colour, according to the degree of their defect, and are called pentachromic, *tetrachromic*, &c. *Nature*, Nov. 19, 1903, p. 71.

Tetracladina (tet″ra̤-clā̤-dī′nä̤), *n. pl.* [NL., < Gr. *τετρα-*, four, + *κλάδος*, a twig.] A suborder of lithistid sponges which have skeletons composed of four-rayed spicules. It contains a number of genera ranging from Cambrian to recent time.

tetraclone (tet′ra̤-klōn), *n.* [Gr. *τετρα-*, four, + *κλών*, a twig. See *clon, clone.*] In the nomenclature of the skeletal elements of the sponges, a four-rayed spicule or calthrop with the ends branched or radiciform.

tetracoral (tet′ra̤-kor-al), *n.* [Gr. *τετρα-*, four, + *κοράλλιον*, coral.] One of the *Tetracoralla* (which see).

tetracosane (tet-ra̤-kō′sān), *n.* [Gr. *τετρα-*, four, + (*εἴ*)*κοσι*, twenty, + *-ane.*] A colorless hydrocarbon of the methane series, $CH_3(CH_2)_{22}CH_3$, prepared by the action of hydriodic acid and phosphorus on the dichlorid $C_{24}H_{48}Cl_2$. It melts at 51.1° C., and boils at 243° C. under 15 millimeters pressure.

tetracotylean (tet-ra̤-kot-i-lē′a̤n), *a.* [Gr. *τετρα-*, four, + *κοτύλη*, cup.] Having four cup-shaped or hemispherical organs of adhesion on the scolex, as the common tapeworm.

tetractine (te-trak′tin), *n.* [Gr. *τετρα-*, four, + *ἀκτίς* (*ἀκτιν-*), a ray.] In the sponge-spicules, a four-armed element derived from either the tetraxon or the triaxon.

tetrad, *n.* **4.** In *cytol.*, a group of four chromosomes formed by the division of a single chromosome; a quadripartite chromosome. *Wilson.*—**Tetrad axis of symmetry.** See ★*symmetry*, 6.

tetradactyly (tet-ra̤-dak′ti-li), *n.* [Gr. *τετρα-*, four, + *δάκτυλος*, finger, + *-y*^{3}.] The condition of having four digits on the hand or foot: said of certain mammals.

> The most generalized condition of feet and limbs ranging from the ancestral canid Cynodictis of the Oligocene and lower Miocene, in which both manus and pes are pentadactyl, though with functionless pollex, to Lycaon in which structural *tetradactyly* prevails. *Amer. Nat.*, Jan., 1904, p. 3.

tetradecane (tet-ra̤-dek′ān), *n.* [Gr. *τετρα-*, four, + *δέκα*, ten, + *-ane.*] A colorless hydrocarbon, $CH_3(CH_2)_{12}CH_3$, of the methane series, prepared by the action of hydriodic acid and phosphorus on myristic acid. It melts at 5.5° C. and boils at 252.5° C.

Tetradium (te-trā′di-um), *n.* [NL., < Gr. *τετράδιον*, also *τετραδεῖον*, a set of four, < *τετράς*, the number four. See *tetrad.*] A genus of fossil tabulate corals allied to *Chætetes*, the delicate branching coralla of which are common in the Lowville limestone of the New York Silurian series, and which, when cut in transverse section, form the calcareous spots to the presence of which that rock owes its former name of 'bird's-eye limestone.'

Tetragonal symmetry. See ★*symmetry*, 6.

tetragonidium (tet″ra̤-gọ̄-nid′i-um), *n.*; pl. *tetragonidia* (-ä̤). [NL., < Gr. *τετρα-*, four, + NL. *gonidium.*] Same as *tetraspore.*

Tetragonites (te-trag-ọ̄-nī′tēz), *n.* [NL., < Gr. *τετράγωνος*, rectangular, + *-ites.*] A genus of leptocampylous ammonoid cephalopods with smooth, discoidal, involute shells having a rounded venter and flattened sides, and few lobes and saddles in the sutures. It occurs in Cretaceous rocks.

Tetragonopterinæ (te-trag-ọ̄-nop-te̤-rī′nē), *n. pl.* [NL., < *Tetragonopterus* + *-inæ.*] A subfamily of characinoid fishes.

Tetragonopterus (te-trag-ọ̄-nop′te̤-rus), *n.* [NL., < Gr. *τετράγωνος*, rectangular, + *πτερόν*, wing. The name was originally *Tetragonoptrus*, 'rectangular in appearance.'] A genus of fishes inhabiting fresh waters of the warmer parts of America, one of the species entering the United States. It belongs to the family *Characinidæ.*

Tetragonuridæ (te-trag-ọ̄-nū′ri-dē), *n. pl.* [NL., < *Tetragonurus* + *-idæ.*] A family of fishes, of doubtful relationships, found in the open Atlantic.

Tetragonurus (te-trag-ọ̄-nū′rus), *n.* [NL., < Gr. *τετράγωνος*, rectangular, + *οὐρά*, tail.] A genus of fishes belonging to the family *Tetragonuridæ*, found in the open Atlantic.

tetragram, *n.* **2.** In *geom.*: (*b*) A system of four straights with their six fans.

Tetragraptus (tet-ra̤-grap′tus), *n.* [Gr. *τετρα-*, four, + *γραπτός*, written (see *graptolite*).] A genus of graptolites of the suborder *Axonolipa*, characterized by four branches.

Tetrahedral class. See ★*symmetry*, 6.—**Tetrahedral complex.** See ★*complex.*—**Tetrahedral kite.** See ★*kite*^{1}.—**Tetrahedral theory,** a hypothesis, formulated by Lowthian Green, in accordance with which the solid earth is believed to approximate the shape of a tetrahedron, the oceanic waters filling it out to a spheroid. An attempt is thus made to explain the continental areas and the oceanic abysses.

> The *tetrahedral theory* does not regard the world as a regular tetrahedron with four plane faces; it considers that the lithosphere has been subjected to a slight tetrahedral deformation, to an extent indeed only faintly (if at all) indicated by geodetic measurements, but yet easily recognizable owing to its influence on the distribution of land and water. *Geog. Jour.* (R. G. S.), XIII. 237.

tetrahedric (tet-ra̤-hē′drik), *a.* [*tetrahedron* + *-ic.*] Related to, or shaped like, a tetrahedron. *Smithsonian Rep.*, 1890, p. 367.

tetrahedroid, *n.* **II.** *a.* Resembling a tetrahedron.

> Producing tetrahedral, or *tetrahedroid*, deformation. *Geog. Jour.* (R. G. S.), XIII. 251.

tetrahedron, *n.*—**Six-faced tetrahedron,** a hexakistetrahedron (hextetrahedron).

tetrahydrated (tet-ra-hī′drā-ted), *a.* [Gr. *τετρα-*, four, + *ὕδωρ* (*ὑδρ-*), water, + *-ate*^{1} + *-ed*^{2}.] Containing four molecules of water, as crystallized cadmium nitrate, $Cd(NO_3)_2.4H_2O$.

tetrahydrobenzoic (tet″ra̤-hī-drọ̄-ben-zō′ik), *a.* Derived from benzoic acid and hydrogen.—**Tetrahydrobenzoic acid,** the name of two acids, $C_6H_9CO_2H$, known respectively as Δ^1- and Δ^2-tetrahydrobenzoic acids. The former boils at 235° C.; the latter boils at 240–243° C. and melts at 29° C.

tetrahydrogen (tet-ra̤-hī′drọ̄-jen), *a.* [Gr. *τετρα-*, four, + E. *hydrogen.*] Containing four atoms of hydrogen in combination: as, *tetrahydrogen* calcium orthophosphate, $CaH_4(PO_4)_2$, which occurs in the superphosphate of lime of commerce.

tetrakisazo (tet″ra̤-kis-az′ọ̄), *a.* [Gr. *τετράκις*, four times, + E. *azo.*] Pertaining to a chemical compound that contains four azo groups.—**Tetrakisazo type,** a type of coal-tar coloring-matters characterized by the presence of four azo groups.

tetraleioclone (tet-ra̤-lī′ọ̄-klōn), *n.* [Gr. *τετρα-*, four, + *λεῖος*, smooth, + *κλών*, a twig.] In the sponge-spicules, a tetraclone with smooth arms.

Tetralophodon (tet-ra̤-lof′ọ̄-don), *n.* [NL., < Gr. *τετρα-*, four, + *λόφος*, a crest, + *ὀδούς* (*ὀδοντ-*), a tooth.] A subdivision (subgenus) of the genus *Mastodon* in which the last milk-molar and first and second true molars (the so-called intermediate molars) each bear four transverse ridges on the grinding surface of the crown.

tetramere (tet′ra̤-mēr), *n.* [Gr. *τετρα-*, four,

+ *μέρος*, a division.] In the reticular skeleton of the hexactinellid sponges, a division or mere of the fourth order. See ★*mere*^{6}.

tetrametaphosphate (tet-ra̤-met-a̤-fos'fāt), *n.* [*tetrametaphosph(oric)* + *-ate*^{2}.] A salt of metaphosphoric acid in the molecule of which four atoms of phosphorus are present: as, sodium *tetrametaphosphate*, $Na_4P_4O_{12}$.

tetramethyl (tet-ra̤-meth'il), *n.* [Gr. *τετρα-*, four, + E. *methyl.*] In *organic chem.*, a name given to compounds each molecule of which contains four methyl groups: also used as a combining form.

tetramethylene (tet-ra̤-meth'i-lēn), *n.* [*tetramethyl* + *-ene.*] A hypothetical organic chemical compound,  $\begin{array}{l}CH_2.CH_2\\ |\quad\;\; |\\ CH_2.CH_2\end{array}$, many derivatives of which are known.

tetramine (te-tram'in), *n.* [Gr. *τετρα-*, four, + E. *amine.*] An organic compound containing four amino (NH_2) groups.

tetramorphism (tet-ra̤-môr'fizm), *n.* [Gr. *τετράμορφος*, four-shaped, + *-ism.*] The property of crystallizing in four independent forms. This is characteristic of magnesium metasilicate ($MgSiO_3$), which may exist as a monoclinic pyrogene, as enstatite, as kupfferite, and as a monoclinic amphibole.

tetramyrmeclone (tet-ra̤-mėr'mẹ̄-klōn), *n.* [Gr. *τετρα-*, four, + *μυρμη(κιά)*, wart, + *κλών*, a twig, branch.] In the sponge-spicules, a tetraclone in which the arms are covered with tubercles.

tetranephric (tet-ra̤-nef'rik), *a.* [Gr. *τετρα-*, four, + *νεφρός*, kidney.] Having four urinary or Malpighian tubes. *A. S. Packard*, Textbook of Entom., p. 355.

tetraphenol (tet-ra-fē'nol), *n.* [Gr. *τετρα-*, four, + E. *phen(yl)* + *-ol.*] A former name for ★*furfurane.*

tetraphosphide (tet-ra̤-fos'fid), *n.* [Gr. *τετρα-*, four, + NL. *phosph(orus)* + *-ide*^{1}.] A compound of a supposedly more electropositive element or radical with four atoms of phosphorus: as, sulphur *tetraphosphide*, SP_4, a substance which, however, has been shown to be merely a solution of sulphur in phosphorus.

tetraphosphorus (tet-ra̤-fos'fọ̄-rus), *n.* [NL., < Gr. *τετρα-*, four, + NL. *phosphorus.*] Noting a compound with four atoms of phosphorus in the molecule.—**Tetraphosphorus trisulphid**, a compound of four atoms of phosphorus with three atoms of sulphur, P_4S_3, a yellow crystallizable solid, easily taking fire in the air, and slowly decomposed by boiling water.

tetraplous (tet'ra̤-plus), *a.* [Gr. *τετραπλοῦς*, fourfold.] Fourfold. [Rare.]

> Down the center of the back is a series of *tetraplous* bright red spots. *Proc. Zool. Soc. London*, 1899, p. 684.

Tetrapoda, *n. pl.* **2.** Credner's name for all vertebrates save fishes, since they have, as a rule, four well-defined limbs.

> The vertebræ of the Urodela and those of the Apoda differ from those of all the other *Tetrapoda* by possessing no special centra or bodies.
> *H. Gadow*, Amphibia and Reptiles, p. 11.

tetrapolar (tet-ra̤-pō'lä̤r), *a.* [Gr. *τετρα-*, four, + *πόλος*, pole, + *-ar*^{3}.] In *cytol.*, of or pertaining to an abnormal karyokinetic figure with four instead of two poles, the condition found in a tetraster. *Encyc. Brit.*, XXXI. 514.

tetraprionidian (tet″ra̤-prī-ọ̄-nid'i-a̤n), *a.* [Gr. *τετρα-*, four, + *πρίων*, saw, + *-ιδιον*, dim. suffix, + *-an.*] Having four monoprionidian (single-rowed) polyparies attached by their posterior edges to a common central canal to form a four-flanged colony, as in the graptolite genus *Phyllograptus.*

tetrapropionate (tet-ra̤-prō'pi-ọ̄-nāt), *n.* [Gr. *τετρα-*, four, + E. *propion(ic)* + *-ate.*] In *organic chem.*, a name given to a compound which contains four univalent propionic acid radicals, CH_3CH_2COO-, in its molecule. Such substances are usually classed as salts.

tetraptych (tet'trap-tik), *n.* [Gr. *τετρα-*, four, + *πτύξ, πτυχή*, fold.] An altar-piece, or other arrangement of pictures, in four compartments. See *triptych.*

tetrapylon (tet-ra̤-pī'lon), *n.* [Gr. *τετρα-*, four, + *πυλών*, gateway.] A quadruple arch marking, and covering, the intersection of two avenues in an old Roman city.

> All of them are conjectured to have been vaulted *tetrapylons* at the crossing of thoroughfares.
> *H. C. Butler*, Architecture and Other Arts, p. 393.

tetrapyramid (tet-ra̤-pir'a̤-mid), *n.* [Gr. *τετρα-*, four, + E. *pyramid.*] A name sometimes given to that form of the triclinic system each of whose two faces intercepts the three crystallographic axes.

tetrarch^1, *n.* **3.** One of any group of rulers or chiefs.

> The Parnassian school . . . chose as their *tetrarchs* and judges Théophile Gautier, Leconte de Lisle, Baudelaire, and Banville. *Encyc. Brit.*, XXVIII. 496.

tetrarch^2 (tet'rärk or tē'trärk), *a.* and *n.* [Gr. *τετρα-*, four, + *ἀρχή*, a beginning.] **I.** *a.* In *bot.*, having four centripetally developed xylem plates: said of some radial vascular cylinders.

II. *n.* A stele which has four plerome strands.

tetrasalicylide (tet-ra̤-sal'i-sil-id), *n.* [Gr. *τετρα-*, four, + E. *salicyl(ic)* + *-ide*^{1}.] A crystalline polymerization-product of salicylic acid, $(C_7H_4O_2)_4$, made by heating its solution in toluene with phosphorus oxychlorid. Concentrated alkali slowly changes it into salicylic acid. It melts at 260–261° C. Also called *salicylide.*

tetraseme (tet'ra̤-sēm), *n.* and *a.* [Gr. *τετρα-*, four, + *σῆμα*, sign.] **I.** *n.* In *pros.*, a foot equal to four moræ. See *mora*^{1}, 1.

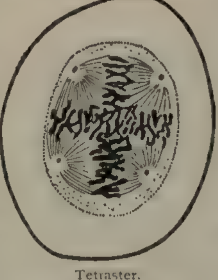
II. *a.* Having the length of four moræ.

tetraskele, tetrascele (tet'ra̤-skēl, -sēl), *n.* [Gr. *τετρασκελής*, four-legged, quadruped, < *τετρα-*, four, + *σκέλος*, leg.] A figure composed of four branches radiating from a center; specifically, the true swastika or fylfot, having four branches in distinction from the triskelion, which has only three. See *triskele*, *swastika*, and *fylfot.*

tetraskelion (tet-ra-skē'li-ọn), *n.*; pl. *tetraskelia* (-ä̤). [NL. See ★*tetraskele.*] Same as ★*tetraskele.* *Haddon*, Evolution in Art, p. 213.

tetraspheric (tet-ra̤-sfer'ik), *a.* [Gr. *τετρα-*, four, + *σφαῖρα*, sphere, + *-ic.*] In *geom.*, of or pertaining to four spheres.

tetraster (te-tras'tėr), *n.* [Gr. *τετρα-*, four, + *ἀστήρ*, star.] In *cytol.*, an abnormal karyokinetic figure with four instead of two astrospheres.



Tetraster.
(From Wilson's "The Cell.")

tetrastim, *n.* See *tetrastigm.*

Tetrastyle in antis, said of a classic façade in which four columns are placed between antæ. *H. C. Butler*, Architecture and Other Arts, p. 358.

tetrastylic (tet-ra-stil'ik), *a.* [*tetrastyl(e)* + *-ic.*] Same as *tetrastyle.*

tetrathionate (tet-ra-thī'ọ̄-nāt), *n.* [*tetrathion(ic)* + *-ate*^{1}.] A salt of tetrathionic acid: as, potassium *tetrathionate*, $K_2S_4O_6$.

tetratricontane (tet″ra̤-trī-kon'tān), *n.* [Gr. *τετρα-*, four, + *τρι-*, three, + *(τριά)κοντα*, thirty, + *-ane.*] A colorless crystalline hydrocarbon, $CH_3(CH_2)_{32}CH_3$, of the methane series, contained in Pennsylvania petroleum. It melts at 71–72° C.

tetravalence (te-trav'a̤-lẹns), *n.* [Gr. *τετρα-*, four, + E. *valence.*] Same as ★*quadrivalence.*

tetravalent (te-trav'a̤-lẹnt), *a.* [Gr. *τετρα-*, four, + E. *valent.*] Same as *quadrivalent.*

tetrazole (te-traz'ōl), *n.* [Gr. *τετρα-*, four, + E. *azole.*] A colorless compound,  $N\begin{array}{l}\diagup\!\!\!\diagup CH.NH\\ \qquad\quad |\\ \diagdown N:N\end{array}$, prepared from aminophenyltetrazole-carboxylic acid. It has acidic properties, crystallizes in lustrous prisms or plates, melts at 155° C., and may be sublimed.

tetrazone (te-traz'ōn), *n.* [Gr. *τετρα-*, four, + E. *azone.*] In *organic chem.*, a name given to a class of compounds derived from the hypothetical compound $H_2N.N:N.NH_2$. They are prepared by the oxidation of alkylphenylhydrazines or of diphenylhydrazines.

tetrazoöid (tet-ra̤-zō'oid), *n.* [Gr. *τετρα-*, four, + E. *zoöid.*] One of the four zoöids which arise from the stolon of a parent *Pyrosoma* zoöid and give rise by budding to the adult colony.

tetrevangelium (te-trē-van-jē'li-um), *n.*; pl. *tetrevangelia* (-ä̤). [NL., < Gr. *τετρα-*, four, + LL. *evangelium.* See *evangel.*] The four Gospels brought together in one work.

> The two books, then, so far as the Greek text is concerned, must have been in circulation by themselves; and hence Codex Bezæ goes back not into a *tetrevangelium*, but into a detached collection, not necessarily of one period, in which the Lucan writings were a separate factor, unconnected with the rest.
> *New York Independent*, Jan. 27, 1898.

tetrinic (te-trin'ik), *a.* [Gr. *τετρα-*, four, + *-in* + *-ic.*] Pertaining to a compound with four carbon atoms.—**Tetrinic acid**, a colorless compound,  $CH_3CH\begin{array}{l}\diagup CO.O\\ \diagdown CO.CH_2\end{array}$ (?), prepared by heating ethyl brommethylacetoacetate. It crystallizes in long needles or triclinic prisms and melts at 189° C.

tetrobol (te-trob'ol), *n.* Same as ★*tetrobolon.* *G. F. Hill*, in Jour. Hellenic Studies, XVII. 81.

tetrobolon (te-trob'ọ̄-lon), *n.*; pl. *tetrobola* (-ä̤). [Gr. *τετρώβολον*, < *τετρα-*, four, + *ὀβολός*, an obolus.] A Greek silver coin of the value of 4 obols (about 12 cents).

tetrode (tet'rōd), *n.* [Gr. *τετρα-*, four, + *ὁδός*, way (or *-ωδης*, *-ο-ειδης*, < *εἶδος*, form?).] Among the sponge-spicules, one with four equal rays in the same plane.

tetrodonic (tet-rọ̄-don'ik), *a.* [*Tetrodon* + *-ic.*] Derived from fishes of the genus *Tetrodon*: applied to an acid, a poisonous substance obtained from the roe of these fishes, probably the cause of a form of fish-poisoning which is common in Japan.

tetrodonin (tet-rọ̄-don'in), *n.* [*Tetrodon* + *-in*^{2}.] A crystalline base which has been obtained, together with tetrodonic acid, from the roe of fishes of the genus *Tetrodon*: like tetrodonic acid, it is probably the cause of a form of fish-poisoning common in Japan.

tetrol (tet'rol), *n.* [Gr. *τετρα-*, four, + *-ol.*] In *organic chem.*, a hypothetical hydrocarbon, C_4H_4, of which some derivatives are known.

tetrolic (te-trol'ik), *a.* [*tetrol* + *-ic.*] Containing four carbon atoms.—**Tetrolic acid**, a crystalline acid, $CH_3C{\vdots}CCO_2H$, formed by the action of potassium hydroxid on chlorcrotonic acid. It melts at 76° C.

tetronal (tet'rọ̄-na̤l), *n.* [Gr. *τετρα-*, four, + *-on* + *-al*^{3}.] A trade-name of diethylsulphonediethylmethane, $(C_2H_5SO_2)_2C(C_2H_5)_2$, prepared, in a similar manner to sulphonal, from diethylketone and ethylmercaptan. It crystallizes in lustrous plates or leaves, melts at 85° C., and is a more powerful hypnotic than sulphonal.

Tetronarce (tet-rọ̄-när'sẹ̄), *n.* [NL., < Gr. *τετρα-*, four (four-cornered), + *νάρκη*, numbness, deadness (equivalent to *Torpedo*).] A genus of electric rays (*Narcobatidæ*) found on both coasts of the Atlantic and on the eastern Pacific coast.

tetronerythrin (tet″ron-e-rith'rin), *n.* [Gr. *τετρα-*, four, + *-on* + Gr. *ἐρυθρός*, red, + *-in*^{2}.] A reddish lipochrome occurring in invertebrates.

tetrose (tet'rōs), *n.* [Gr. *τετρα-*, four, + *-ose.*] In *organic chem.*, the class-name applied to those sugars which contain four atoms of carbon in the molecule.

tetroxid (te-trok'sid), *n.* [Gr. *τετρα-*, four, + E. *oxid.*] An oxid which contains in its molecule four atoms of oxygen. Very remarkable examples are presented by ruthenium and osmium tetroxids, RuO_4 and OsO_4, readily volatile compounds of two of the least fusible and volatile metals.

tetter, *n.*—**Honeycomb tetter.** Same as *favus*, 2.

tettigoniid (tet-i-gō'ni-id), *n.* and *a.* **I.** *n.* A member of the homopterous family *Tettigoniidæ.*

II. *a.* Having the characters of or belonging to the family *Tettigoniidæ.*

teucrin (tū'krin), *n.* [*Teucr(ium)* (see def.) + *-in*^{2}.] A colorless glucoside, $C_{21}H_{24}O_{11}$ or $C_{21}H_{26}O_{11}$, contained in *Teucrium fruticans.* It crystallizes in needles, melting at 228–230° C.

Teut. An abbreviation (*b*) of *Teuton.*

Teuto-Celtic (tū″tọ̄-sel'tik), *a.* Teutonic and Celtic; of mixed Teutonic and Celtic blood.

Teutonomania (tū″tọn-ō-mā'ni-ä̤), *n.* [L. *Teutones*, Germans, + Gr. *μανία*, mania.] Excessive partiality for the Germans or for German ideas and ways.

> Ministers . . . will do no good by tampering with Mr. Chamberlain's exploded *Teutonomania.*
> *Herbert Paul*, in Nineteenth Century and After, Nov., [1905.

Teutophile (tū'tọ̄-fil), *a.* [L. *Teutones*, Germans, + Gr. *φιλεῖν*, love.] Partial to the Germans; having a liking for German ideas and ways.

> Nevertheless, the work of John Venn, 'Principles of Empirical or Inductive Logic,' London, 1889, is such an

independent rendering of Mill as to be worthy of more attention than it receives in the current *Teutophile* philosophy.
Jour. Philos. Psychol. and Sci. Methods, Feb. 4, 1904, [p. 58.

Teutophobe (tū′tọ̄-fōb), *n.* [L. *Teutones*, Germans, + Gr. *-φοβος*, < *φοβεῖν*, fear.] One who fears the Germans or the increase of German power and influence; one who dislikes German ideas and ways.

> One of those professors whom the English *Teutophobes* have accused of wishing to "educate" Germany up to the point of attacking England.
> *N. Y. Evening Post*, Aug. 14, 1905.

tewfikose (tū′fi-kōs), *n.* [*Tewfik*, name of the khedive of Egypt, + *-ose*.] A sugar found in the milk of the Egyptian buffalo, *Bos bubalus*. It yields glucose when hydrolyzed.

Tex. An abbreviation (*a*) of *Texas*; (*b*) of *Texan*.

texas, *n.* Hence—2. The elevated gallery, resembling a louver or clearstory, in a grain-elevator.

Texas bead-tree. See ★*bead-tree*.—**Texas cattle-fever.** Same as *Texas fever*.

text, *n.*—**Golden text**, a short passage of Scripture used in Sunday-school leaflets, embodying the main thought of each week's lesson.

text-blindness (tekst′blīnd″nes), *n.* Same as *word-blindness*.

text-letter (tekst′let″ėr), *n.* 1. A name given (with qualifying term) to many kinds of pointed black-letter used in engrossing or printing special documents or books, being retained or imitated from the text of late medieval manuscripts or early printed books: as, church *text*, chancery *text*, etc.—2. The style or face of any letter or type selected for the text of a book.

text. rec. An abbreviation of the Latin *textus receptus*, the received text.

texture, *n.*—**Anisometric texture.** See ★*anisometric*.—**Bread-crust texture.** See ★*bread-crust*.—**Graphic texture**, in *petrog.*, a fabric or texture produced by the intergrowth of two minerals, commonly quartz and feldspar, in such a manner that one acts as a matrix for the other, which appears in section as detached, more or less regularly shaped inclusions with like crystallographic orientation. The texture is well known in graphic granite, and is sometimes called *pegmatitic* or *implication texture* and *graphic intergrowth*.—**Isometric texture.** See ★*anisometric texture*.

texture, *v. t.* 2. To give the appearance of a certain texture to. See the extract.

> The textile markings so often seen on the exterior surfaces of vases are not, however, impressions of baskets employed in modeling and molding, but of pliable fabrics and cords used, possibly, in supporting the vessel while in the process of construction, but in most cases as a means of shaping, *texturing*, and ornamenting the surface, and applied by successive imprintings or malleations. *An. Rep. Bur. Amer. Ethnol.*, 1898–99, p. 50.

texture-counter (teks′t̤ūr-koun″tėr), *n.* A small magnifying-glass of low power, used in counting the number of threads, within a given space, in the texture of a fabric.

t. f. An abbreviation of *till forbidden*.

t. g. An abbreviation of *type genus*.

Th. 2. In *chem.*: (*b*) a symbol for *thallium*: better *Tl*.

Thackerayana (thak″ẹ-ri-ā′nạ̈), *n. pl.* [*Thackeray* + *-ana*.] Items, details, collections of all kinds, and bibliography relating to William Makepeace Thackeray.

Thalamencephalic velum, a plexus of blood-vessels which in the brains of some animals dips into the third ventricle from the roof of the thalamencephalon (diencephalon) or optic thalamus.

thalassal (thạ̄-las′al), *a.* Same as *thalassic*.

thalassin (thạ̄-las′in), *n.* [Gr. *θάλασσα*, sea, + *-in*².] A poison found in the tentacles of actiniæ.

thalassocrat (thạ̄-las′ọ̄-krat), *n.* [Gr. *θάλασσα*, sea, + *-κρατης*, ruler, < *κρατεῖν*, rule.] A ruler of the sea. [Rare.]

> But one day war came to Knossos, and the dominion of the proud Minoan *thalassocrats* disappeared in the smoke of the burning Labyrinth. *Nature*, Nov. 20, 1902, p. 58.

thalassographical (thạ̄-las-ọ̄-graf′i-kal), *a.* [*thalassograph*(*y*) + *-ic* + *-al*¹.] Pertaining to the ocean; oceanographical.

> The speedy completion of the concluding volume of the great Challenger work. This 'standard work' will remain for all time the foundation for all biological and *thalassographical* investigations, in relation to Plankton and Benthos alike, especially of the deep sea.
> *Smithsonian Rep.*, 1893, p. 370.

Thalassoma (thạ̄-las′ọ̄-mạ̈), *n.* [NL., < Gr. *θάλασσα*, the sea, + *σῶμα*, body.] A genus of labroid fishes.

thalassophobia (thạ̄-las-ō-fō′bi-ạ̈), *n.* [NL., < Gr. *θάλασσα*, the sea, + *-φοβια*, < *φοβεῖν*, fear.] A morbid fear of the ocean or of any large body of water. *Ribot* (trans.), Psychol. of Emotions, p. 213.

Thalassophryne (thạ̄-las-ọ̄-frī′nē), *n.* [NL., < Gr. *θάλασσα*, the sea, + *φρύνη*, a toad.] A genus of toad-fishes found on both coasts of South America.

thalassotherapy (thạ̄-las-ọ̄-ther′ạ-pi), *n.* [Gr. *θάλασσα*, the sea, + *θεραπεια*, cure.] Treatment of disease by sea-bathing, a residence at the seashore, or a sea voyage. *Med. Record*, June 27, 1903, p. 1058.

thalenite (tä′le-nīt), *n.* [Named after Professor R. *Thalen*.] A silicate of yttrium occurring in flesh-red monoclinic crystals of tabular habit: found in Sweden.

thaler, *n.*—**Beichlinger thaler**, a denomination of coin current in Poland. There is one of Augustus II., dated 1702.—**Jubiläumsthaler**, a commemorative thaler.—**Kaiserthaler**, a silver thaler, without date, of Maximilian I. (1493–1519), with his portrait on the obverse.—**Pyramidthaler**, a silver thaler of the Saxon series, struck to commemorate a death, with an inscription in the form of a pyramid on the reverse.—**Salvatorthaler**, a Swedish silver coin of the sixteenth and seventeenth centuries, with the effigy of the Saviour on one side.

thalictrine (thạ̄-lik′trin), *n.* [*Thalictrum* + *-ine*².] A crystalline alkaloid contained in *Thalictrum macrocarpum*. It resembles aconitin in physiological properties, but is less poisonous.

thallate (thal′āt), *n.* [*thall*(*ic*) + *-ate*².] A salt corresponding to thallic hydroxid, $Tl(HO)_3$, assumed at one time to be capable of acting as a weak acid. It has been shown, however, that no such salts are obtainable.

thallene (thal′ēn), *n.* [*thall*(*ic*) + *-ene*.] A greenish-yellow, highly fluorescent hydrocarbon, possibly isomeric with anthracene, contained in the highest boiling portion of Pennsylvania crude petroleum. It forms small acicular crystals.

thalleoquin (thal′ẹ̄-ọ̄-kwin), *n.* A greenish resinous mass obtained by treating an aqueous solution of quinine sulphate of proper strength with chlorin or bromine and then adding ammonia in excess. This is an identity-test for quinine.

thalline, *a.* II. *n.* A trade-name of tetrahydroparamethoxyquinoline,  $CH_3OC_6H_3\left\langle\begin{array}{l}CH_2.CH_2\\ \quad\quad\ \ |\\ NH\ .CH_2\end{array}\right.$, a colorless compound prepared by the reduction of the corresponding quinoline derivative. It crystallizes in thick trimetric prisms, melts at 42–43° C., and boils at 283° C. In the form of its sulphate and other salts it is used in medicine as an antipyretic.

Thallium light. See ★*light*¹.

thallium-green (thal′i-um-grēn″), *n.* The color of the bright-green line, .5350 μ, in the spectrum of thallium vapor.

thallochlore (thal′ọ̄-klōr), *n.* [Gr. *θαλλός*, branch, + *χλωρός*, green.] An old term which was applied to the green coloring-matter of lichens.

thallophori (tha-lof′ọ̄-rī), *n. pl.* [NL., < Gr. *θαλλός*, branch, + *φέρειν*, bear.] In an ancient Greek procession, men carrying branches, as in the frieze of the Parthenon. *A. S. Murray*, The Sculp. of the Parthenon, p. 147.

thallostrote (thal′ọ̄-strōt), *n.* [Gr. *θαλλός*, a branch, + *στρωτός*, strewn.] In *phytogeog.*, a plant distributed by root-sprouts, runners, or other offshoots. *F. E. Clements*.

thalpotasimeter (thal″pọ̄-tạ̄-sim′e-tėr), *n.* [Gr. *θάλπος*, heat, + *τάσις*, tension or intensity, + *μέτρον*, measure.] 1. An apparatus for observing, measuring, or recording the intensity of high heats: a form of pyrometer for high heats. Specifically—2. An apparatus of the kind which uses the tension of a vapor as a means of observing the heat, as that of the vapor of ether for lower ranges, and that of the vapor of mercury for greater. The vapor-tension moves a gage-needle over a dial, or a recording-lever may be moved across a moving disk or band of paper. *Engin. Mag.*, April, 1904, p. 112.

Thamnastræa (tham-nas-trē′ạ̈), *n.* [NL., < Gr. *θάμνος*, a bush, + *ἀστήρ*, a star.] A genus of perforate *Anthozoa*, typical of the family *Thamnastræidæ*, having a composite, laterally expanded, pedunculate coralla and no distinct walls to the individual corallites, which are united by costal septa: abundant in formations from the Triassic to the Oligocene.

Thamnastræidæ (tham-nas-trē′i-dē), *n. pl.* [NL., < *Thamnastræa* + *-idæ*.] A family of perforate madreporarian corals having simple or composite, basally expanded or massive colonies, the individual corallites of which have numerous septa composed of trabeculæ arranged in fan-shaped or vertical rows. The family comprises several genera, abundantly represented in Mesozoic rocks and less common in Tertiary and recent formations.

Thamnidium (tham-nid′i-um), *n.* [NL. (Link, 1809), < Gr. *θάμνος*, a bush.] A genus of zygomycetous fungi, of the family *Mucoraceæ*, having two kinds of conidial sporangia, of which the primary is terminal and provided with a columella, and the secondary lateral and without a columella. About 10 species are known. *T. elegans* is a common species found on dung and various decaying substances.

Thamniscus (tham-nis′kus), *n.* [NL., < Gr. *θάμνος*, a bush, + dim. *-ισκος*.] A genus of fenestellid cryptostomatous *Bryozoa* with freely bifurcating flattened branches united by few dissepiments: found in formations from Silurian to Permian.

thamuria (tha-mū′ri-ạ̈), *n.* [NL., < Gr. *θαμύς*, frequent, + *οὖρον*, urine.] Frequent passing of urine.

thana (thä′nạ̈), *n.* See *tana*¹.

> Within lay the six rifles and the big Police-book of the *Thana* of Howli!
> *R. Kipling*, At Howli Thana, in Soldiers Three, p. 243.

thanadar (thä′nạ̈-där), *n.* Same as *tanadar*.

thanatism (than′ạ̈-tizm), *n.* [Gr. *θάνατος*, death, + *-ism*.] The view that death means not only an arrest of all physiological functions, but also the definite disappearance, cessation, or destruction of the human mind or soul. Thanatism is opposed by Haeckel to ★*athanatism*, the belief in man's personal immortality. *Primary thanatism* is the original absence of the dogma of immortality in certain primitive uncivilized races; *secondary thanatism* is the later outcome of a rational knowledge of nature in the civilized intelligence. *Haeckel* (trans.), Riddle of the Universe, p. 192.

thanatist (than′ạ̈-tist), *n.* [*thanat*(*ism*) + *-ist*.] One who holds the doctrine of thanatism. [Rare.]

> All the monistic philosophers of the century (Strauss, Feuerbach, Büchner, Spencer, etc.) are *thanatists*.
> *Haeckel* (trans.), Riddle of the Universe, p. 194.

thanatol (than′ạ̈-tol), *n.* [Gr. *θάνατος*, death, + *-ol*.] Same as ★*ajacol*.

thanatophobia (than″ạ̈-tọ̄-fō′bi-ạ̈), *n.* [NL., < Gr. *θάνατος*, death, + *-φοβια*, < *φοβεῖν*, fear.] A morbid fear of death. *Alien. and Neurol.*, May, 1903, p. 170.

thanatosis (than-ạ̈-tō′sis), *n.* [NL., < Gr. *θάνατος*, death, + *-osis*.] In *pathol.*, local death; gangrene.

Thanetian (thạ̈-nē′shiạn), *n.* [*Thanet* + *-ian*.] In *geol.*, the basal stage of the Lower Eocene of northern France and Belgium, correlated with the Thanet sands of the London basin. It comprises sands which are often glauconitic, and limestone, both containing a marine fauna.

thao (tä′ọ̄), *n.* [Chinese, from a dialect not determined; Ningpo *diao*, seaweed.] A gelatinous substance extracted from seaweed in Oriental countries. It is nearly pure gelose (agar-agar), mixed with some easily removed mechanical impurities. It is soluble in water at high temperatures, and in thin layers is very flexible, and hence has been found a valuable dressing for silks and calicoes. Also termed *Chinese* or *Japanese isinglass*. The pure form, which is known as *agar-agar*, is used as a gelatinizing substance in the preparation of nutritive media, in bacteriological work.

tharandite (tar′an-tīt), *n.* [G. *Tharand*, *Tharandt* (see def.), + *-ite*².] A variety of crystallized dolomite from Tharandt, near Dresden, in Saxony, containing one molecule each of calcium and magnesium carbonates and about four per cent. of ferrous carbonate.

thatch, *n.*—**Broom-thatch.** See ★*ippi-appa*.

thatch-cloak (thach′klōk), *n.* A rain-coat made of dried grasses or palm-leaves, used by the Indians of Mexico and by many peoples of eastern Asia.

thatchwood (thach′wu̇d), *n.* Small branches of wood, twigs, underbrush, etc., arranged as if for thatching.—**Thatchwood work.** See *thatchwood-work*.

Thaumantian (thâ-man′ti-ạn), *a.* [Gr. *Θαύμας* (*θαυμαντ-*) + *-ian*.] Pertaining to Thaumas, the sire of Iris and the harpies, in Greek mythology; by allusion, wonder-working; thaumaturgic. [Rare.]

> What meant these azure-shafted arrows, this sudden glare into darkness, this Iris message; *Thaumantian*;—miracle-working? *Ruskin*, Modern Painters, ix. 11.

Theaceæ (thē-ā′sē-ē), *n. pl.* [NL. (Mirbel, 1813), < *Thea* + *-aceæ*.] A family of dicotyledonous, chiefly choripetalous plants, the tea family, of the order *Hypericales*. It is characterized by usually bisexual and racemed flowers with numerous stamens. See *Ternstrœmiaceæ*.

theaceous (thē-ā′shius), *a.* [NL. *Theace(æ)* + *-ous*.] Belonging or pertaining to the *Theaceæ*.

theanthropos (thē-an′thrō-pos or thē-an-thrō′-pos), *n.* [MGr. Θεάνθρωπος (7th and 9th centuries), < Gr. Θεός, God, + ἄνθρωπος, man.] The God-man, that is, Christ, as uniting the divine and human natures.

> Thou great *Theanthropos* that giv'st and crown'st
> Thy gifts in dust. *Quarles*, Emblems, I. Invocation.

theater, *n.*—**Saloon theater**, in the seventeenth and eighteenth centuries, a theater in connection with a tavern, in which the public could enjoy the drama together with smoking and light refreshments: the forerunner of the modern music-hall.

> The *saloon theatres* rarely offended the patent houses, and when they did the law was soon put in motion to show that Shakespeare could not be represented with impunity. *Encyc. Brit.*, XXXI. 46.

theatricable (thē-at′ri-kạ-bl), *a.* Capable of being made effective on the stage. [Nonce-word.]

> It is the subordinate affair of the actor to adapt himself to the poet's conception, and find it *theatricable*.
> *W. D. Howells*, in N. A. Rev., CLXXII. 798.

theatricality, *n.* **2.** A theatrical, showy, or stagy action or thing.

> A piece of *theatricality* built to suit a personality, and very badly built at that.
> *The Academy*, Jan. 27, 1906, p. 93.

theatricism (thē-at′ri-sizm), *n.* [*theatric* + *-ism*.] The character of being calculated for display: theatricality; artificiality; a theatrical appearance. [Rare.]

> The preposterous *theatricism* of the Paris Commune.
> *J. McCarthy*, Our Own Times, IV. 357.

theatricize (thē-at′ri-sīz), *v. i.* and *t.*; pret. and pp. *theatricized*, ppr. *theatricizing*. To assume a theatrical manner; play a part; dramatize (something).

theatrophile (thē-at′rō-fil), *n.* [Gr. θέατρον, theater, + φιλεῖν, love.] One who is fond of the drama and of theaters. [Rare.]

> A point for *theatrophiles*. Sarah Bernhardt claims that she holds the world's record for congratulations from the audience. *Referee*, May 26, 1901.

theatrophone (thē-at′rō-fōn), *n.* [Gr. θέατρον, theater, + φωνή, sound, voice.] An arrangement of telephonic apparatus by means of which subscribers at a distance may listen to performances given on the stage of an opera-house or theater.

> I recently found a talking newspaper system being run in connection with the supplying of music, and talking from the theatres by means of the "*theatrophone*." During the day the subscribers were constantly being informed of the latest news of importance. This service, which supplied many thousands of subscribers, was independent of the regular telephone service.
> *W. J. Hammer*, in Smithsonian Rep., 1901, p. 311.

thebaicine (thē-bā′i-sin), *n.* [*theba(ia)* + *-ic* + *-ine*^{2}.] An amorphous alkaloid, $C_{18}H_{19}NO_3$, formed, together with thebenine, by the action of dilute acids on thebaine.

thebaism (thē-bā′izm), *n.* [*theba(ia)* + *-ism*.] The morbid state produced by the habitual use of opium.

thebenine (thē′be-nin), *n.* [*theb(aine)* + *-ene* + *-ine*^{2}.] An amorphous alkaloid, CH_3-$O(OH)C_{11}H_{15}ON$, prepared by the action of hydrochloric acid on thebaine from opium.

theca, *n.* 1. (*d*) (6) In the graptolites, one of the receptacles of the zoöids.—**Brachial thecæ**, the thecæ which compose the branches of the composite *Graptoloidea*, in distinction from the stolonal thecæ. They remain the abodes of zoöids, while the latter frequently become incorporated into stems.—**Stolonal thecæ**, the thecæ which compose the stems of the composite *Graptoloidea*, in distinction from the brachial thecæ.

Thecal cyst. Same as *ganglion*, 3 (*a*).

Thecidea (thē-sid′ē-ạ̈), *n.* [NL.] Same as *Thecidium*.

thecitis (thē-sī′tis), *n.* [NL., < *theca* + *-itis*.] Inflammation of any theca, specifically of a tendon sheath.

Thecla, *n.* **2.** [*l. c.*] An insect of this genus.—**Hop-vine thecla**, an American lycænid butterfly, *Uranotes* (formerly *Thecla*) *melinus*, wide-spread in the United States. Its larvæ damage the pods and seeds of hop, hawthorn, hounds'-tongue, and St.-John's-wort. Also called *gray hairstreak*.—**Streaked thecla**, an American lycænid butterfly, *Thecla liparops*, of wide distribution, which feeds in the larval state on the oak, willow, plum, blueberry, and shadbush.

thecodontosaurian (thē-kō-don-tō-sâ′ri-ạn), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the genus *Thecodontosaurus*.

II. *n.* A member of the genus *Thecodontosaurus*.

thecostome (thē′kō-stōm), *n.* [Gr. θήκη, case, + στόμα, mouth.] The orifice of the hydrotheca in calyptoblastic hydroids. *Challenger Rep.*, VII. xx. 7. *Encyc. Dict.*

theft, *n.*—**Constructive theft**, such a wrongful use of goods, rightfully taken, as amounts, in law, to larceny.

theism^1, *n.*—**Cosmic theism**, the religious doctrine taught by John Fiske in his early work 'Outlines of Cosmic Philosophy,' Part III. chap. iii. It differs considerably from his later views.

thelalgia (thē-lal′ji-ạ̈), *n.* [NL., < Gr. θηλή, nipple, + ἄλγος, pain.] Pain in the nipple.

Theligonaceæ (thē-lig-ō-nā′sē-ē), *n. pl.* [NL. (Gillet and Magne, 1862), < *Theligonum* + *-aceæ*.] A family of dicotyledonous apetalous plants of the order *Chenopodiales*, containing the genus *Theligonum* only. See ★*Theligonum*.

Theligonum (thē-lig′ō-num), *n.* [NL. (Linnæus, 1753).] A genus of plants constituting the family *Theligonaceæ*: spelled more correctly *Thelygonum* by many writers. See *Thelygonum*.

Thelodus (thel′ō-dus), *n.* [NL., < Gr. θηλή, nipple, + ὀδούς, tooth.] An extinct genus of fishes of the subclass *Ostracodermi*, of the family *Cœlolepidæ*, characterized by small, quadrangular, and nearly uniform dermal tubercles, by a small dorsal fin near the base of the heterocercal tail, and by the absence of enlarged ridge-scales: from the Ludlow bone-bed and Oesel limestone of the Upper Silurian and the Lower Old Red Sandstone.

theloncus (thē-long′kus), *n.*; pl. *thelonci* (-lon′sī). [NL., < Gr. θηλή, nipple, + ὄγκος, mass.] A tumor or swelling of the nipple.

thelorrhagia (thel-ō-rā′ji-ạ̈), *n.* [NL., < Gr. θηλή, nipple, + (αἱμ)ορραγία, hemorrhage.] Hemorrhage from the nipple.

Thelotremaceæ (thel″ō-trē-mā′sē-ē), *n. pl.* [NL., < *Thelotrema* + *-aceæ*.] A family of gymnocarpous lichens named from the genus *Thelotrema* (which see).

thelyotokous, thelyotoky. Erroneous forms for *thelytokous*, ★*thelytoky*.

thelytoky (thē-lit′ō-ki), *n.* [Gr. θηλυτοκία, < θηλυτόκος, bearing females.] That kind of parthenogenesis in which only female offspring are produced.

thematic, *a.* **3.** Of or relating to a theme of discourse.

theme, *n.* **10.** In *astrol.*, a figure of nativity.—**Motive theme**, in *music*. Same as *subject*, 8.

thense, *adv.* An amended spelling of *thence*.

theobromic (thē-ō-brō′mik), *a.* [*Theobrom(a)* + *-ic*.] Derived from *Theobroma Cacao*: as, *theobromic* acid.

theocin (thē′ō-sin), *n.* Same as ★*theophylline* or ★*dimethylxanthin*: a trade-name.

theodidact (thē′ō-di-dakt), *a.* [Gr. Θεός, God, + διδακτός, taught.] Taught of God.

> [St.] Francis of Assisi is pre-eminently the Saint of the Middle Ages. Owing nothing to church or schools he was truly *theodidact*.
> *Sabatier* (trans.), St. Francis of Assisi, p. xvi.

theodolite-goniometer (thē-od′ō-līt-gō-ni-om″e-tėr), *n.* Same as *two-circle* ★*goniometer*.

theol. An abbreviation (*c*) of *theologian*.

theoline (thē′ō-lin), *n.* Same as ★*thioline*.

theologastric (thē-ol-ō-gas′trik), *a.* and *n.* [*theologaster* + *-ic*.] Of or pertaining to a theologaster, or theological quack, or to his works. *Froude*, Erasmus, p. 70.

theology, *n.*—**Pectoral theology**, theology in which the emotional element, the religious experience of the individual, predominates.

Theophronian (thē-ō-frō′ni-ạn), *n.* A member of a sect of the Eunomians, followers of Theophronius of Cappadocia, who added to the Eunomian heresy the practice of baptizing in the name of Christ alone, instead of in that of the Trinity. Also called *Eunomio-Theophronians* or *Agnoëtæ*. See *Agnoëtæ*, 1.

theophylline (thē-of′i-lin), *n.* [NL. *thea*, tea, + Gr. φύλλον, leaf, + *-ine*^{2}.] A colorless alkaloid,  $\mathrm{CO}\left\langle\begin{array}{l}\mathrm{N(CH_3).CO.C.NH}\\ \qquad\qquad\qquad\;\; \| \\ \mathrm{N(CH_3)}\text{——}\mathrm{C.N}\end{array}\right\rangle\mathrm{CH.H_2O}$, contained in tea-leaves and prepared synthetically from 1-methylxanthin. It crystallizes in thin monoclinic plates or in needles, melts at 264° C., and acts on the muscles. Also called 1,3-*dimethylxanthin* or 1,3-*dimethyl*–2,6-*dioxypurin*.

theor. An abbreviation of *theorem*.

theorem, *n.*—**Algebraical addition theorem**, a theorem stating that an algebraical equation subsists between ϕx, ϕy, and $\phi(x + y)$, independent of the value of the variables and having coefficients into which the variables in no way enter.—**Archimedes's theorem**, the proposition that the volume of a sphere equals two thirds the volume of the circumscribed cylinder.—**Barbarin's theorem**, the theorem that each of the three spaces, Euclidean, Lobachevskian, Riemannian, contains surfaces of constant curvature of which the geodesic lines have the metric properties of the straight lines of the three spaces.—**Bobillier's theorem**, the proposition that if two sides of a given but movable triangle touch always two fixed circles, the envelop of the third is also a circle.—**Brahmegupta's theorem**, the theorem that if the diagonals of a cyclic quadrilateral are at right angles, the perpendicular from their cross on to one side bisects the opposite side.—**Dirichlet's theorem**, the theorem that every unlimited arithmetical progression, the first term and difference of which are prime to one another, contains infinitely many prime numbers.—**Existence theorem**, a theorem to the effect that under a given hypothesis something of a certain description will exist.—**Parmer's theorem**, the statement that the light obtained from illuminating-gas is proportional to the square of the quantity burned. This relation is approximately true only for a small range of variation, the efficiency of a given burner increasing rapidly, at first, as the gas is turned on, and reaching a maximum when the supply of gas is that to which the burner is best adapted.—**Hadamard's theorem**, a proposition for determining the radius of convergence.—**Harnack's theorems**, two theorems in the theory of the potential given by A. Harnack in 1886. The first is as follows: if a harmonic function u has at the limit of any region T only positive (or only negative) values, U, and if the value of u at any point in that region equals the product of a determinate finite quantity δ with a finite quantity E, then for every other point within T the value of u is representable as the product of δ with a finite quantity E′. The other theorem is: if for any finite region T an endless series of harmonic functions u_1, u_2, u_3, etc., are given, having the same sign throughout that region, and if the series $u_1 + u_2 + u_3 +$ etc. is convergent for any point in T, it is convergent for all points in T and is a harmonic function.—**Hart's extension of Feuerbach's theorem**, the theorem that the inscribed circles of a spherical triangle and its colunar triangles are all four touched by a fifth small circle. *Sir Andrew Hart*, 1861.—**Hermite's theorem**, in *geom.*, the proposition that the number of irreducible conditions under which a surface of the nth order can be passed through a curve of the μth order has for upper limit the number $n\mu + 1$. For a curve of zero deficiency it is precisely $n\mu + 1$. For a curve of deficiency one it is $n\mu$. *Crelle*.—**Heron's theorem**, the proposition that for the area of a triangle in terms of its sides, $\Delta = [s(s-a)(s-b)(s-c)]^{½}$, where $s = (a+b+c)/2$.—**Liouville's theorem**, the proposition that if the modulus of a function remains always within finite limits, it is constant.—**Mannheim's theorem.** (*b*) If the vertex of a triangle and its incircle be given, the envelop of the circumcircle is a circle.—**Möbius's theorem**, the theorem that an anharmonic ratio is unchanged by a bilinear transformation: given by A. F. Möbius (1790–1868) in 1855.—**Negative theorem**, a theorem which expresses the idea that a proposition may be true.—**Salmon's theorem**, the theorem that the distances of any two points from the center of a circle are proportional to the distance of each from the polar of the other.—**Sophie Germain theorem**, the proposition that except 5 no number of the form $a^4 + 4$ is prime.—**Sturm's theorem.** (*b*) In *optics*, the proposition that all the rays constituting a small pencil emanating from a luminous point will, after any number of refractions, pass through two focal lines which are at right angles to each other and to the middle ray of the pencil.—**Theorem of finite increments**, the theorem that $Fa - Fb = (a-b)\,F'\xi$, where ξ is intermediate in value between a and b.—**Theorem of Le Chatelier**, in *phys. chem.*, the theorem that any change of one of the factors of the equilibrium of a thermodynamic system disturbs the system in that direction which imparts to the given factor a change whose algebraic sign is opposite to that of its original change.—**Theorem of Snell**, the equation $u_{2n} = (U_{2n} . u_n)^{½}$, where u_n is the perimeter of the inscribed n-gon, U_{2n} that of the circumscribed $2n$-gon. *Cyclometria*, 1621.—**Theorem of the gnomon**, the proposition that the complements of the parallelograms which are about the diameter of any parallelogram are equal to one another. *Euclid*, I. 43.—**Theorem of undetermined coefficients**, in *alg.*, the theorem that if the series $A + Bx + Cx^2 + Dx^3 + \ldots$ is equal to the series $a + bx + cx^2 + dx^3 + \ldots$, for all values of x which make both series convergent, then the coefficients of like powers of x in the two series must be equal; that is, $A=a$, $B=b$, $C=c$, etc.—**Torricelli's theorem**, the theorem that the velocity of efflux is the velocity which a freely falling body would have on reaching the orifice after having started from a state of rest at the surface: $v = (2gh)^{½}$. See *Torricelli's* ★*law*.—**Trotter's theorem**, in *photom.*, the statement that the light from the crater of an electric arc, emitted in any given direction, is directly proportional to the apparent area of the crater as viewed from that direction.—**Weierstrass's theorem.** (*b*) The proposition that near an essential singularity, which is isolated as regards other essential singularities, a one-valued analytic function, fx, approaches as near as we please to an arbitrarily given value f.—**Weill's theorem**, the proposition that if a variable polygon is inscribed in one circle and circumscribed about another, the mean center of the points of tangency with the latter is constant.

theoretical, *a.* **4.** In *chem.*, indicating the analytical values or other properties which should be obtained from a compound provided the correct conception (theory) of its composition has been formed.

theoria (thē-ō′ri-ạ̈), *n.* [NL., < Gr. θεωρία, the sending of ambassadors, lit. a seeing, going to see. See *theory.*] 1. In *Gr. antiq.*, an embassy sent on a mission of state associated with religion, such as an appeal to an oracle.—2. Philosophic speculation: used by Ruskin to express the higher moral appreciation of beauty, as distinguished from *æsthesis*, which stands for the sensual appreciation. See the extract.

> But the Christian *theoria* seeks not, though it accepts, and touches with its own purity, what the Epicurean sought. *Ruskin*, Modern Painters, II. iii. 17.

theory, *n.*—**Action theory.** See ★*action.*—**Actuality theory.** See ★*actuality.*—**Aggregation theory.** See ★*aggregation.*—**Assemblage theory.** See ★*theory of assemblages.*—**Berzelian theory,** the theory that certain substances induce chemical reactions by their simple presence without taking any part themselves in the process.—**Boscovich's theory,** in *optics*, the hypothesis presented by Boscovich, in 1758, to account, under the emission theory, for the simultaneous reflection and refraction of light. According to this theory the luminous corpuscles rotate, presenting alternately faces capable of reflection and of transmission.—**Calycinal theory.** See ★*calycinal.*—**Carbon theory.** See ★*carbon.*—**Cataclysmic theory.** See ★*cataclysmic.*—**Cell theory.** See ★*cell.*—**Condensation theory,** in *meteor.*, the theory developed by Espy and Ferrel, according to which rain is formed by the dynamic cooling due to the ascent of moist air; the theory that the general phenomena and motions of storms depend principally on those conditions that favor the formation of rain or snow.—**Conscious automaton theory,** a theory, either metaphysically grounded or adopted as a working hypothesis in psychology and biology, of the relation of mind and body; that form of the theory of psychophysical parallelism which regards mind as epiphenomenal.

> At this point we may again for a moment turn aside to consider the so-called *Conscious Automaton Theory.* According to Professor Huxley, the best known modern exponent of this theory, "our mental conditions are simply the symbols in consciousness of the changes that take place automatically in the organism. *Encyc. Brit.*, XXXII. 68.

Double aspect theory, the theory that mental and bodily processes are but two aspects of the same reality: a metaphysical form of the theory of psychophysical parallelism.

> A favourite mode of stating psychophysical parallelism is that known as the *Double Aspect Theory* *Encyc. Brit.*, XXXII. 67.

Dynamical theory of heat. See ★*heat.*—**Dynamic theory of the formation of rain.** See ★*rain*^{1}.—**Dzierzon theory,** the theory according to which the unfertilized eggs of the honey-bee give rise to males, or drones, whereas the fertilized eggs give rise to the queens and workers. *Science*, Dec. 25, 1903, p. 831.—**Espy's theory of storms.** See ★*storm.*—**Faye's theory,** a general theory as to the origin and movement of storms, according to which they begin as whirls in the upper strata of the atmosphere, grow thence downward to the earth's surface, and bring the upper air down with them.—**Ferrel's theory of cyclones.** See ★*cyclone.*—**Glacial theory.** See ★*glacial.*—**Hering's theory of color vision,** or **visual sensation.** See ★*color.*—**Isoglyceride theory,** the assumption by certain chemists that a substance isomeric but not identical with glycerin might form esters with the radicals of the fatty acids different from the ordinary glycerides of the same acids. There seems to be no good ground for any such supposition.—**James-Lange theory,** in *psychol.*, a theory of emotion propounded independently, in somewhat similar terms, by W. James (1884) and C. Lange (1885), to the effect that what is commonly called the expression of emotion is in reality not a consequence, but the cause, of the emotive state. The emotion is regarded as "the effect of the organic changes, muscular and visceral, of which the so-called 'expression' of the emotion consists. It is thus not a primary feeling, directly aroused by the exciting object or thought, but a secondary feeling, indirectly aroused; the primary effect being the organic changes in question, which are immediate reflexes following upon the presence of the object.' As first stated by James, the theory required us to believe that "we feel sorry because we cry, angry because we strike, afraid because we tremble": the situation aroused, reflexly, these organic changes, and the feeling of the changes as they occurred was the emotion. In later writing James appears to admit the possibility of a primary feeling, and maintains merely that the "general seizure of excitement,' which constitutes the body of an emotion, is the effect of the organic changes by which we reflexly meet the situation. In this milder form the theory has found almost universal recognition. Even those who insist most strongly on the primary character of the feeling, and on the invariability of an ideational (associative) content in emotion, admit that the James-Lange theory has called attention, in a needed way, to the part played in the emotive constitution by 'organic reverberation.' In its original and exclusive form, on the other hand, the theory aroused much criticism; and no attempt has been made to apply it to the 'subtler' emotions, the esthetic, etc., sentiments. The theory is sometimes known as the *peripheral theory* or the *effect theory of emotion.* In germ, it goes back, at any rate, as far as Descartes; and hints of it, more or less explicit, have been found in various later writers.—**Laplace's theory of capillarity.** See ★*capillarity.*—**Marx-Engels theory,** the theory of society, of history, and of socialism, formulated by Karl Marx, and developed and expounded by his disciple, Frederick Engels. *Kidd*, Social Evolution, p. 214.—**Mechanical-esthetic theory,** in *psychol.* and *esthetics*, a view propounded by Lipps of Munich in 1891, to the effect that "the optical and the esthetic impressions that a geometrical form makes upon us are merely two sides of one and the same thing, having their common root in ideas of mechanical activities." A similar theory was suggested, independently, by Lee and Anstruther-Thomson in the *Contemporary Review*, Oct.-Nov., 1897.—**Mechanicophysical theory of evolution.** See ★*evolution.*—**Mendel's theory,** the doctrine or opinion that the facts of ancestral inheritance first described by Mendel show that the germ-cells that are produced by cross-bred organisms may, in respect of given characters, be of the two pure parental types, and, on the average, be present in the reproductive organs in equal numbers. See *ancestral* ★*inheritance.*—**Molecular theory of vital currents.** See ★*current*^{1}.—**Mosaic theory of development.** See ★*development.*—**Mutation theory,** the theory that species originate through mutation. See ★*mutation*, 8.—**Pelmatozoic theory.** See ★*pelmatozoic.*—**Pentactæa theory.** See ★*Pentactæa.*—**Plateau's theory** in *psychophys.*, the ratio-hypothesis of Weber's Law, that equal stimulus-ratios correspond to equal sensation-ratios: first propounded by Plateau in 1872.

> The medium stimulus, thus experimentally determined, corresponds neither to the arithmetical mean, as required by *Plateau's theory*, nor to the geometrical mean, as required by Fechner's theory. *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 61.

Recapitulation theory. See ★*recapitulation doctrine.*—**Spiral theory.** See ★*spiral.*—**Tetrahedral theory.** See ★*tetrahedral.*—**Theory of aggregates.** See ★*aggregate.*—**Theory of assemblages.** Same as *theory of sets.* See ★*set*^{1}.—**Theory of combinations.** See ★*combination.*—**Theory of communal intensity.** See *communal* ★*intensity.*—**Theory of manifolds.** Same as *theory of sets.* See ★*set.*—**Theory of Ochsenius,** a theory formulated by Prof. C. Ochsenius of Halle, to explain beds of rock-salt of great thickness. Estuaries of salt water are believed to have existed, cut off from the ocean by shallow bars. The brine concentrated upon the bar by the sun flows down the inner slope and deposits its salt in the depths under the physical conditions there prevailing. Also called *bar theory.*—**Theory of sets.** See ★*set.*—**Theory of symbiosis.** See ★*symbiosis.*—**Theory of types,** in *chem.*, the assumption of a particular number and arrangement of atoms as common to several or many different substances, giving them a common general character, while the nature of these atoms may be varied by replacement. This general idea originated with Dumas in 1839, was expanded and modified later by Laurent, Gerhardt, Williamson, Hofmann, and Wurtz, and led up to the more general conceptions of valence and modern structural chemistry put forward by Frankland and Kekule between 1852 and 1858.—**Theory of von Kries,** in *physiol. optics*, the theory of vision according to which color-perception is due to the action of light upon the cones of the retina, while the rods form a special apparatus adapted to vision by very feeble light and affording only the hazy sensation, devoid of color, known as *rod-white.*—**Tridimensional theory,** in *psychol.*, a name given to Wundt's theory of the simple feelings (1896), according to which there are three dimensions or directions of the affective life, pleasantness-unpleasantness, strain-relaxation, and excitement-depression.—**Tritubercular theory,** the doctrine or opinion that the molar teeth of all mammals are modifications of a tricuspid or tritubercular tooth.

> In reference to the Mammalia, one of Cope's most remarkable generalizations was his so-called "*Tritubercular Theory,*" explaining the origin of the cusps in the molar teeth. *Nat. Sci.*, June, 1897, p. 380.

Unitary theory, method, or **system of chemistry,** the name given by Gerhardt to his system of chemistry, in which the molecular weights of all substances were determined by comparison with one standard molecule (water) by means of one typical form of reaction (double decomposition). Since Berzelius's earlier theory was a dualistic theory, in that it regarded molecules as dual or bipolar in structure, it seems sometimes to be imagined that the unitary theory is one which regards the molecules of a compound as unitary in structure and as acting as units.

> I give the name *unitary method* to the body of principles which I have applied to the study of chemistry, and which are founded on the selection of a unit molecule and of a unit [single] reaction for the comparison of the chemical functions of substances. *Gerhardt.*

Van der Waal's theory. Same as *Van der Waal's* ★*equation.*—**Vasomotor theory,** in *psychol.*, any theory which explains mental occurrence by reference to vasomotor changes: as, the *vasomotor theories* of sleep, a *vasomotor theory* of fluctuation of attention. *Amer. Jour. Psychol.*, XII. 150.—**Welter's theory,** an assumption, now known to be erroneous, that in the combustion of fuel containing both carbon and hydrogen the heat evolved is in direct proportion to the amount of oxygen consumed.

Theos. An abbreviation of *theosophical, theosophist*, or *theosophy*.

theoscopic, theoscopical (thē-ọ-skop′ik, -i-kal), *a.* [*theoscop(y)* + *-ic, -i-kal.*] Pertaining to or of the nature of theoscopy.

theoscopy (thē-os′kō-pi), *n.* [Gr. Θεός, God, + σκοπεῖν, behold.] The beholding of God.

theosis (thē-ō′sis), *n.* [Gr. Θεός, God, + *-osis*, implying fulness.] See the extract.

> The return of the soul to the universal Intellect is designated by Erigena as *Theosis*, or Deification. In that final absorption all remembrance of its past experiences is lost. *J. W. Draper*, Hist. of Conflict between Religion and [Science, v.

theoteleological (thē″ọ-tel″ẹ-ọ-loj′i-kal), *a.* Of or pertaining to, or of the nature of, theoteleology. *L. F. Ward*, Pure Sociol., p. 465.

theoteleology (thē-ọ-tel-ẹ-ol′ọ-ji), *n.* [Gr. Θεός, God, + E. *teleology.*] The doctrine of a divine direction of nature toward a divinely appointed end.

> As far back as Plato we find the germs of a doctrine that afterwards took the name of teleology, but this doctrine would be better called *theoteleology*, since it simply postulates a power outside of nature directing it toward some end. *L. F. Ward*, Pure Sociol., p. 465.

theotokarion (thē″ọ-tō-kā′ri-on), *n.*; pl. *theotokaria* (-ä). [MGr. θεοτοκάριον.] A collection of theotocia. Also *theotocarion. J. M. Neale*, Hist. Eastern Church, I. 832, note.

theotokion (thē-ọ-tō′ki-on), *n.*; pl. *theotokia* (-ä). [Also *theotocion*; < MGr. θεοτόκιον, also θεοτόκος, 'the mother of God.' See *Theotocos.*] The name given in Greek hymnology to the final troparion or strophe of an ode: so called because it ascribes praise to the mother of the Lord (Theotocos).

> The *theotokion* is simply a sticheron or troparion addressed to the Mother of God. *J. M. Neale*, Hist. Eastern Church, I. 832, note.

ther^3, *n.* Same as *thar*^{3}.

therap. An abbreviation of *therapeutic* or *therapeutics*.

therapeutics, *n.*—**Rational therapeutics,** a treatment of disease based upon a knowledge both of the disease itself and of the action of the remedies employed: opposed to *empiricism*.

Theraps (thē′raps), *n.* [NL., < Gr. θέραψ, slave.] A genus of fishes, of the family *Cichlidæ*, found on the west Central American coast.

therapy, *n.*—**Bacterial therapy.** Same as *opsonic* ★*therapy.*—**Opsonic therapy,** the treatment of an infectious disease by means of inoculation with devitalized cultures of the causative microbe. The object of this procedure is to stimulate the production of opsonin, a substance in the blood-serum which promotes phagocytosis by rendering the micro-organisms attractive to the phagocytes.—**X-ray therapy,** the treatment of disease by means of the Röntgen rays.

there, *adv.*—**To have been there,** to have knowledge of something through actual experience; know all about it. [Slang.]

there-beside (thãr′bẹ-sīd″), *adv.* Beside the object named or in mind; close by it.

therevid (ther′e-vid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Therevidæ*.

II. *a.* Having the characters of or belonging to the family *Therevidæ*.

therianthropism (thē-ri-an′thrọ-pizm), *n.* [Gr. θηρίον, a wild beast, + ἄνθρωπος, man, + *-ism.*] The belief that animals are men capable of assuming animal forms, endowed with the powers of both the animal and the human being, and, therefore, more powerful than man.

theriatrics (thē-ri-at′riks), *n.* [Gr. θήρ, a beast, + ἰατρικός, pertaining to medicine. See *iatric.*] Veterinary medicine.

Theridomyidæ (thē″ri-dọ-mī′i-dē), *n. pl.* [NL.] A family of extinct rodents of small size, related to the squirrels and anomalures, based on specimens from the Lower Eocene of Europe. *Alston*, 1876.

theriodic (thē-ri-od′ik), *a.* [Gr. θηριώδης, like a wild beast, savage (< θηρίον, a wild beast, + εἶδος, form), + *-ic.*] Malignant.

theriolatry (thē-ri-ol′ạ-tri), *n.* [Gr. θηρίον, a wild beast, + λατρεία, worship.] The worship by primitive man of wild or venomous beasts. *Tarde* (trans.), Laws of Imitation, p. 274.

theriomimicry (thē″ri-ọ-mim′i-kri), *n.* [Gr. θηρίον, a wild animal, + E. *mimicry.*] Imitation of an animal.

Theriosuchus (thē″ri-ọ-sū′kus), *n.* [NL., < Gr. θηρίον, a wild beast, + σοῦχος, a crocodile.] An extinct genus of crocodiles of the family *Goniopholidæ*, characterized by having the supratemporal vacuities smaller than the orbits, teeth irregular and tumid, and a short mandibular symphysis. The dorsal scutes overlap, and are also united at their outer margins by peg-and-socket articulations. The ventral scutes are polygonal and united by sutures only. The total length is less than 0.5 meter, and the general form approaches that of modern crocodiles. It is found in the Purbeckian beds of Dorsetshire.

theriotheism (thē″ri-ọ-thē′izm), *n.* [Gr. θηρίον, a beast, + θεός, god, + *-ism.*] The worship of or belief in gods in the form of beasts: a term somewhat more precise than *zoötheism*, in this sense.

theriozoic (thē″ri-ọ-zō′ik), *a.* [Gr. θηρίον, a wild beast, + ζῷον, animal, + *-ic.*] Pertaining to the period preceding the domestication of animals.

> This slow and gradual decay, in which bones and shells . . . were exposed to rain and snow, and faded and weathered away, have left us only shreds of the former life in certain fortunate localities, and there is apparently a considerable gap in our evidence, which compels us to separate the *theriozoic* beds into two series. *Sir H. H. Howorth*, in Nat. Sci. April, 1898, p. 269.

therm^2, *n.* **3.** A unit of thermal capacity variously defined as the equivalent of the gram-calory, the kilogram-calory and one thousand kilogram-calories. Of these values the one commonly accepted is that which makes the therm equal to one gram-calory.

The unit which I suggest is 1,000 kilogram calories, for which I propose the designation *Therm.* The word *therm* has already been proposed as the equivalent of the small or gram calorie, but does not appear to have come into general use. Following the analogy of the calorie, we may write the unit here proposed with a capital and use the capital or full-face **T** as a convenient abbreviation. The relation of the units would then be

1 therm (t) = 1 gram-calorie (cal.)
1,000 cals. = 1 kilogram-calorie (Cal.)
1,000 Cals. = 1 Therm (T).

H. P. Armsby, in Science, Nov. 15, 1907, p. 671.

Thermal actinometer. See ★*actinometer.*—**Thermal belt** or **zone,** a band of vegetation, nearly horizontal and several hundred feet in vertical height, peculiar to valleys in the Appalachian Mountain region of North and South Carolina and Virginia, and also found in a few valleys in the Rocky Mountain region, Carinthia, and India, where frost is rarely or never known, although common in the valley below. The freedom from frost is apparently due to the steady flow of cool air down the sides of the mountains and the rising of the warm air to the level of the thermal zone. Also called *frostless zone* and *verdant zone.*—**Thermal charts, conductivity, constant,** etc. See ★*chart*, etc.—**Thermal diffusion.** See *diffusion of heat.*—**Thermal stratum,** that layer of air between 10,000 and 15,000 meters above sea-level in which air-temperatures cease to diminish with altitude and even rise slightly; the inversion layer; the warm layer. —**Thermal value,** the value of a combustible as a means of producing heat. It is measured by the capacity of one unit of weight of the combustible to raise units of weight of water through a given temperature-range. If the units are British, it is the number of heat units given to water by one pound of the combustible on complete combustion. The thermal value is the same as the calorific power and is independent of the rate of combustion. When hydrogen is an element of the fuel, burning to H_2O or water, the thermal value has a higher and a lower figure, according as the heat required to make this water into steam is allowed for, or deducted from the weight of water raised in temperature by the combustion.

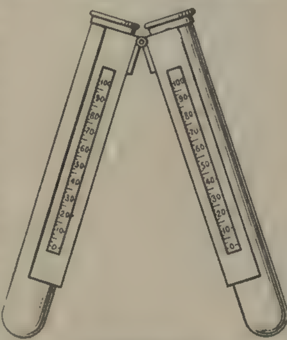
thermanæsthesia (thėr″man-es-thē′si-ä), *n.* [NL., < Gr. *θέρμη*, heat, + NL. *anæsthesia.*] An absence of the sense of temperature: observed under certain pathological conditions involving the integrity of the central nervous system. *Buck*, Med. Handbook, I. 137.

thermeleometer (thėr″mel-ē-om′e-tėr), *n.* [Gr. *θέρμη*, heat, + *ἔλαιον*, oil, + *μέτρον*, measure.] A piece of apparatus for determining the rise of temperature produced by mixing concentrated sulphuric acid with different fixed oils.

thermesiid (thėr-mē′si-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Thermesiidæ.*

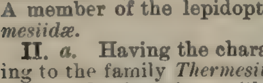
II. *a.* Having the characters of or belonging to the family *Thermesiidæ.*

thermesthesiometer (thėr-mes-thē-si-om′e-tėr), *n.* [Gr. *θέρμη*, heat, + E. *esthesiometer.*] In *exper. psychol.*, an esthesiometer arranged for work upon the temperature senses (warmth and cold). In simple form, the instrument consists of two glass tubes filled with water, the temperature of which is regulated, and held in a transverse handle. By setting the tubes down upon the skin, simultaneously or in succession, one may determine the subjectively equivalent temperatures for two areas of the organ, or the differential limen of a single area. The apparatus may be carried to any desired degree of refinement, and fine metal points may be used for the investigation of the isolated sensations derived from the temperature spots. *Buck*, Med. Handbook, I. 136.



Thermesthesiometer.

thermin (thėr′min), *n.* [Gr. *θέρμη*, heat, + *-in*^{2}.] A trade-name of tetrahydro-*β*-naphthylamine hydrochlorid,



$$C_6H_4\langle{}^{CH_2.CH_2}_{CH_2.CHNH_2.HCl}$$

, prepared by the action of sodium and fusel-oil on *β*-naphthylamine. It crystallizes in lustrous pearly tetragonal plates and melts at 237° C. It is used in medicine as a mydriatic.

thermit, thermite (thėr′mit, -mīt), *n.* [G. **thermit*? < Gr. *θέρμη*, heat, + *-ιτης*, E. *-ite*^{2}.] The trade-name of a mixture of metallic aluminium in a very finely divided condition (so-called 'aluminium bronze powder'), with the oxid of one or more metals, which on being ignited gives rise to an extremely high temperature as the result of combustion of the aluminium which unites with oxygen abstracted from the oxid used. This oxid was originally oxid of iron and the mixture was applied by its inventor, Goldschmidt, to the melting of holes through plates of iron or steel, and the welding of iron rails and pipes; but other oxids may be substituted, sodium dioxid being particularly effective. (See ★*aluminothermics.*) The thermit is ignited by a primer consisting of a mixture of barium superoxid and aluminium, and the temperature obtained is estimated at over 3,000° C.

thermo-æsthesia (thėr″mō-es-thē′si-ä), *n.* [NL., < Gr. *θέρμη*, heat, + *αἴσθησις*, perception.] The sense of heat-perception.

thermo-anæsthesia (thėr″mō-an-es-thē′si-ä), *n.* [NL., < Gr. *θέρμη*, heat, + NL. *anæsthesia.*] Loss of the sense of heat-perception. *Buck*, Med. Handbook, I. 282.

thermo-call (thėr′mō-kâl″), *n.* An automatic electric telltale or alarm for indicating when a predetermined temperature has been attained.

thermochemically (thėr-mō-kem′i-kal-i), *adv.* By means of thermochemistry or of its principles.

thermochroic (thėr-mō-krō′ik), *a.* [Gr. *θέρμη*, heat, + *χρόα*, color, + *-ic.*] Of or pertaining to the differences in wave-length of heat-waves, and to the phenomena resulting therefrom; relating to thermochrosy.

thermocline (thėr′mō-klīn), *n.* [Gr. *θέρμη*, heat, + *κλίνειν*, incline.] A layer within a large body of water sharply separating portions of it which differ in temperature, so that the temperature-gradient through the layer is very abrupt.

At the surface and throughout the circulating water above the *thermocline*, oxygen was abundant, but carbonic acid was absent. *Nature*, Nov. 6, 1902, p. 16.

thermodiffusion (thėr″mō-di-fū′zhon), *n.* Same as *diffusion of heat.* See also *thermal* ★*diffusivity.*

thermodin (thėr′mō-din), *n.* [Gr. *θερμώδης*, warmish, lukewarm, < *θέρμη*, heat, + *εἶδος*, form.] A trade-name of acetyl-parethoxy-phenyl-urethane, $C_2H_5OC_6H_4N(COCH_3)$-$COOC_2H_5$, a colorless pulverulent compound used in medicine as an antipyretic, antiseptic, and analgesic.

Thermodynamic engine. See ★*engine.*—**Thermodynamic scale of temperatures.** See *thermometric* ★*scale.*

thermodynamist (thėr″mō-dī′na-mist), *n.* [*thermodynam*(*ic*) + *-ist.*] One who is versed in the science of thermodynamics; a thermodynamicist. *Thurston*, in Smithsonian Rep., 1901, p. 267.

thermodynamometer (thėr-mō-dī-na-mom′e-tėr), *n.* [Gr. *θέρμη*, heat, + *δύναμις*, power, + *μέτρον*, measure.] A sensitive thermometer, devised by Pictet and Cellerier, in which the thermometric substance is the saturated vapor of some volatile liquid in the closed end of a manometric tube. The temperature of the vapor is shown by the height of the mercurial column supported by it.

thermo-elastic (thėr″mō-ē-las′tik), *a.* [Gr. *θέρμη*, heat, + E. *elastic.*] Of or pertaining to the behavior of bodies under the combined action of heat and stress. *Science Abstracts*, VI. 130.

thermo-electric, *a.*—**Féry's thermo-electric telescope.** See ★*telescope.*—**Thermo-electric diagram,** a diagram upon which are indicated the thermo-electric powers of various pairs of metals when used to form thermo-elements.—**Thermo-electric inversion, power.** See ★*inversion*, ★*power*^{1}. -**Thermo-electric series.** The following table gives the principal metals and their thermo-electric powers, with lead as the standard of reference:

Tellurium	+	502.	Tin	+	0.1
Antimony	+	22.6	Lead	·	0.
Iron	+	17.5	Aluminium	—	0.68
Copper	+	3.8	Palladium	—	6.9
Zinc	+	3.7	German silver	—	11.7
Cadmium	+	3.5	Nickel	—	15.5
Silver	+	3.0	Cobalt	—	22.0
Gold	+	1.2	Bismuth	—	89.
Platinum	+	0.9	Silicon	—	400.

thermofocal (thėr-mō-fō′kal), *a.* [Gr. *θέρμη*, heat, + E. *focal.*] Of or pertaining to changes of focal length which result from the heating of a lens.

Attention was called to the necessity of a study of the *thermo-focal* changes in long focus lenses, to be used in eclipse work. *Science*, Feb. 27, 1903, p. 333.

thermogage (thėr′mō-gāj), *n.* [Gr. *θέρμη*, heat, + E. *gage*^{2}.] An instrument for measuring temperature; specifically, an optical pyrometer devised by Morse. See *optical* ★*pyrometry.*

thermogalvanometer (thėr-mō-gal-va-nom′e-tėr), *n.* [Gr. *θέρμη*, heat, + E. *galvanometer.*] A device for measuring small electric currents, consisting of a Boys's radiomicrometer and a fine wire or metallic strip placed near the lower junction of that instrument. The current to be measured heats the wire or strip, which in turn heats the thermojunction by radiation, thus producing a deflection of the radiomicrometer. *Nature*, May 19, 1904, p. 71.

thermogeny (thėr-moj′e-ni), *n.* [Gr. *θέρμη*, heat, + *-γενεια*, < *-γενης*, -producing.] The production of heat, specifically by living matter; thermogenesis.

thermogeographical (thėr-mō-jē-ō-graf′i-kal), *a.* [Gr. *θέρμη*, heat, + E. *geography* + *-ic* + *-al*^{1}.] Of or pertaining to temperature in its relation to geography; noting the thermal relations of the atmosphere or the ground to the geography of the same region.

The *thermo-geographical* problem is here made to include, not only the analytical determination of the normal mean yearly temperature of a place of given geographical position, but also of the annual movement in temperature, as defined by the corresponding normal mean monthly temperatures.

Geog. Jour. (R. G. S.), XII. 618.

thermograph, *n.*—**Soil-thermograph.** As devised by Professor William Hallock, this consists of a large bulb buried in the ground, containing kerosene or other liquid that will not solidify at ordinary low temperatures. A capillary tube joins this bulb to an expansion-chamber similar to the vacuum-box of an aneroid barometer. The distention of this chamber depends on the underground temperature, and is recorded on a revolving cylinder. In the analogous soil-thermograph devised by Professor A. Sprung of Berlin the large buried bulb is filled with dry air or other gas.

thermohydrometer (thėr″mō-hī-drom′e-tėr), *n.* [Gr. *θέρμη*, heat, + E. *hydrometer.*] An instrument-makers' name for a hydrometer with a thermometer inclosed, so that the density and temperature of a liquid may be read off at the same time.

thermohygrograph (thėr-mō-hī′grō-gráf), *n.* [Gr. *θέρμη*, heat, + E. *hygrograph.*] A thermograph to which a self-registering hygrometer is added. The record is usually made on an enlarged scale by a pencil on paper attached to a revolving drum: in the Kew apparatus a wet-bulb thermometer and a dry bulb are placed near each other and their mercurial columns photographed continuously.

thermohygroscope (thėr-mō-hī′grō-skōp), *n.* [Gr. *θέρμη*, heat, + E. *hygroscope.*] An instrument designed to indicate the absolute moisture in the air. It consists essentially of a metallic thermometer combined with a hair-hygrometer.

thermohyperæsthesia (thėr″mō-hī″pėr-es-thē′si-ä), *n.* [NL., < Gr. *θέρμη*, heat, + NL. *hyperæsthesia.*] Abnormal acuteness of the sense of heat-perception.

thermo-isopleth (thėr-mō-ī′sō-pleth), *n.* [Gr. *θέρμη*, heat, + E. *isopleth.*] **1.** A diagram of isopleths in which the coördinates are time of day and day of year.

An interesting figure shows the '*thermo-isopleths*' for Berlin, these lines indicating, in one drawing, both the diurnal and the annual march of the air temperature.

Pop. Sci. Mo., Dec., 1901, p. 186.

2. A diagram of isopleths in which the coördinates are time of day and altitude above ground.

thermojunction, *n.* There are two such points in the circuit of a thermo-element. It is upon the difference of temperature of the two junctions for a given pair of metals that the electromotive force of the element depends.

thermolabile (thėr-mō-lab′il), *a.* [Gr. *θέρμη*, heat, + L. *labilis*, slipping, perishable. See *labile.*] Subject to destruction or loss of activity through the action of moderate heat: noting especially certain toxins and ferments. Opposed to ★*thermostable.*

Moreover, the digestive ferment of these organs in solution is, as stated by Metchnikoff, *thermolabile* at 56° C.; the entire extract, which is, in reality, partly a solution of organ ferments, and partly an emulsion of organ particles, is *thermolabile* at slightly higher temperatures (58.5°–62° C.), owing to the relative inaccessibility of the solid particles to heat.

Jour. Med. Research, May, 1907, p. 288.

thermoluminescence (thėr″mō-lū-mi-nes′-ens), *n.* [Gr. *θέρμη*, heat, + E. *luminescence.*] Luminescence produced by heating a body which exhibits phosphorescence. Many bodies that glow in the dark after exposure to light show a sudden temporary increase of phosphorescence if heated. Such bodies are said to be *thermoluminescent.* The effect may sometimes be produced a long time after the ordinary phosphorescence has disappeared. See ★*luminescence.*

But though it is only in comparatively few cases that the change produced by the cathode rays shows itself in

> such a conspicuous way as by a change of color, there is a much more widely spread phenomenon, which shows the permanence of the effect produced by the impact of these rays. This is the phenomenon called by its discoverer, Prof. E. Wiedemann, *thermoluminescence*.
> *J. J. Thomson*, in Smithsonian Rep., 1897, p. 158.

thermoluminescent (thėr″mọ̄-lū-mi-nes′ẹnt), *a.* [Gr. θέρμη, heat, + E. *luminescent.*] Of or pertaining to the luminescence produced by heating a body; exhibiting thermoluminescence.

Thermolytic center. See ★*center*¹.

thermometamorphism (thėr-mọ̄-met-ạ-môr′-fizm), *n.* [Gr. θέρμη, heat, + E. *metamorphism.*] In *petrog.*, metamorphism produced by heat. See *metamorphism*. *Van Hise*, in U. S. Geol. Surv., Monograph, XLVII. 39.

thermometer, *n.*—**Aspirated thermometer.** Same as *aspiration thermometer* (which see, under *thermometer*).—**Avitreous thermometer,** a trade-name for an English form of thermometer for clinical use, in shape like a small watch, with a dial and index to show temperature. It contains a small tube bent in circular form, one of the ends of which is fixed and the other free, and connected by a fine spring to the shaft which carries the index. Filled with highly expansible liquid, the tube is by slight changes of temperature caused to expand and to move the index on the dial. The name is not well chosen, since glass is used in the construction of the instrument, which aims, however, to avoid the fragility of the exposed glass tube and bulb of the common clinical thermometer.—**Black-bulb thermometer.** See *solar-radiation thermometer*, under *thermometer*.—**Callendar's gas-thermometer,** a hydrogen thermometer in which special provision is made for the reduction of the waste space to a minimum.—**Callendar's platinum thermometer,** a device for the accurate determination of temperatures, especially of very high and very low temperatures, by means of the change of resistance of a wire of pure platinum.—**Chemical thermometer,** a mercurial thermometer in which the scale is engraved on the glass stem, which may have a lens-shaped front to magnify the column of mercury and facilitate reading. It is a form of thermometer in general use in chemical laboratories.—**Dry-bulb thermometer,** an ordinary thermometer used in conjunction with one the bulb of which is wetted. See *psychrometer*.—**Helium thermometer,** a gas-thermometer containing helium, used in the determination of temperatures below the boiling-point of hydrogen.—**Hydrogen thermometer,** a gas-thermometer containing hydrogen. On account of the low point of liquefaction of hydrogen, this thermometer is available for temperatures even below that of liquid air.—**Mirror-thermometer,** a barometer or thermometer having a small mirror moved by the mercury, which enables readings to be taken by reflected light.—**Moist thermometer,** a thermometer the bulb of which is covered with muslin wetted with water from a reservoir.—**Nitrogen thermometer,** a gas-thermometer containing nitrogen.—**Normal thermometer,** a thermometer in which the mercury is inclosed in a special glass made at Jena and called 'normal glass.'—**Outflow thermometer,** a thermometer in which the mercury above a certain point of temperature escapes from the mercury-tube either into a smaller tube where its volume may be measured, or into an open vessel in which it may be weighed.—**Pentane thermometer,** a thermometer for the measurement of very low temperatures, in which pentane is substituted for mercury or alcohol because of its low freezing-point. Such thermometers may be used for temperatures down to about −200° C.—**Petroleum-ether thermometer,** a thermometer for low temperatures in which the contained liquid is petroleum ether.—**Platinum thermometer,** an instrument for the measurement of temperatures by means of the change of electrical resistance (or of length) of metallic platinum under the influence of heat.—**Resistance-thermometer,** an instrument for measuring temperatures through the change in electrical conductivity of wires at varying degrees of heat.

> In the redetermination a platinum *resistance thermometer* was substituted for the mercury thermometers and an entirely different method adopted for supporting the quartz apparatus within the oven.
> *Physical Rev.*, Jan., 1905, p. 31.

Reversing thermometer. Same as *upsetting thermometer* (which see, under *thermometer*).—**Scale of the gas-thermometer.** See *thermometric* ★*scale*.—**Scale of the hydrogen thermometer.** See *thermometric* ★*scale*.—**Scale of the platinum thermometer.** See *thermometric* ★*scale*.—**Sèvres thermometer,** a constant-volume thermometer filled with pure dry hydrogen under a pressure of one meter of mercury at the temperature of melting ice. It consists of two essential parts, a reservoir and a manometer. The reservoir is made of a platinum-iridium tube whose volume is 1.03899 liters at the temperature of melting ice. Its length is 1.10 m. and its outer diameter 0.036 m. It is attached to the manometer by a capillary tube of platinum 0.7 mm. in diameter. The rise in pressure of the invariable gaseous mass due to rise in temperature is measured by means of the manometer and reading-telescopes.—**Siemens' electrical thermometer,** a resistance-coil of fine wire connected with a galvanometer, a battery, and a Wheatstone bridge. The resistance of the coil at any moment is determined by manipulating the bridge, and from this is determined the temperature of the coil. Siemens' deep-sea electrical thermometer is essentially the same arrangement, except that a second coil is added to the circuit. This is kept at the observing station and is immersed in water the temperature of which can be changed so that the current through one coil balances that through the other.—**Sun thermometer,** a thermometer used in measuring rise of temperature caused by the sun's rays, and giving data for determining the energy of its radiation; a form of actinometer.—**Toluol thermometer,** a thermometer for low temperatures in which toluol is used instead of mercury. The lower range of such instruments extends to about −100° C.—**Walferdin's metastatic thermometer,** a thermometer in which the bore of the stem has a very small diameter along a certain small range of temperature, for the purpose of causing a degree on the scale to be much larger than for higher and lower temperatures.

thermometer-well (thėr-mom′e-tėr-wel), *n.* A small well or closed tube used in taking the temperature of a substance. It can either be immersed in the substance and the thermometer kept dry, or be filled with the substance and the thermometer kept wet.

thermometric, *a.*—**Coefficient of thermometric conductivity.** See ★*coefficient*.—**Normal thermometric scale.** See ★*scale*³.—**Thermometric conductivity.** Same as *thermal* ★*diffusivity*.—**Thermometric heat, standard, ventilation.** See ★*heat*, ★*standard*, ★*ventilation*.

thermoneurosis (thėr″mọ̄-nụ̄-rō′sis), *n.*; pl. *thermoneuroses* (-sēz). [Gr. θέρμη, heat, + νεῦρον, nerve, + *-osis.*] 1. Fever due to nervous action, and not to the presence of toxins in the blood.—2. A disease of the nervous system induced by exposure to a high temperature.

thermoneutrality (thėr″mọ̄-nụ̄-tral′ị-ti), *n.* [Gr. θέρμη, heat, + E. *neutrality.*] Neutrality as regards change of temperature; specifically, the property exhibited by salt solutions (see below) in consequence of which they may be mixed without producing appreciable change of temperature.—**Law of thermoneutrality,** in *phys. chem.*, the law that there is no production of heat on mixing solutions of two salts of strong acids and strong bases, provided no insoluble or volatile product is formed. Another statement is that the heat of neutralization of a strong acid by a strong base is the same, whatever the acid or the base.

thermophile (thėr′mọ̄-fil), *a.* Same as ★*thermophilic*.

thermophilic (thėr-mọ̄-fil′ik), *a.* [Gr. θέρμη, heat, + φιλεῖν, love.] In *bacteriol.*, heat-loving: applied to the bacteria which require high temperatures for their development.

> Excluding the well-known *thermophilic* group of bacteria, it has generally been considered that an exposure to a temperature of 65° C., or frequently to a lower temperature than this, is rapidly fatal to all non-sporing forms of bacterial life. *Nature*, Aug. 28, 1902, p. 423.

Thermophilic bacteria. See ★*bacterium*.

thermophilous (thėr-mof′i-lus), *a.* [Gr. θέρμη, heat, + φιλεῖν, love, + *-ous.*] Living in, or adapted for life in, warm places; thermophilic.

> The author . . . has investigated five *thermophilous* bacteria from the hot water of the thermal springs of the island of Ischia.
> *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 539.

thermophore (thėr′mọ̄-fōr), *n.* [Also *thermophor*; < Gr. θέρμη, heat, + φέρειν, bear.] A device to prevent undue cooling of the masks used in the administration of ether. For this purpose ample provision is made for the conduction of heat, through a metallic attachment, to the surfaces cooled by evaporation.

> In the Section of Gynæcology, the conservative treatment by bath cures, mud poultices, hot baths, *thermophor*, &c., was forcibly advocated as yielding complete success.
> *Nature*, Nov. 6, 1902, p. 22.

thermopile, *n.*—**Differential thermopile,** a thermopile designed to measure small differences in the temperatures of two bodies.

thermoplegia (thėr-mọ̄-plē′ji-ạ̈), *n.* [NL., < Gr. θέρμη, heat, + πληγή, stroke.] Heat-stroke.

thermopsychrophorus (thėr″mọ̄-sī-krof′ọ̄-rus), *n.* [NL., < Gr. θέρμη, heat, + ψυχρός, cold, + -φορος, < φέρειν, bear.] An apparatus to illustrate the formation of cloud by cooling due to ascent and expansion consequent on a slight warming.

thermoregulator, *n.* **2.** A regulator depending upon the action of metals when exposed to heat, and used either to control heat or some other action. Usually they depend on one of two principles: either direct expansion, which lengthens a bar when heated, or the use of two bars of different expansion-coefficients, so that when heated to the same temperature one will be longer than the other, thus causing a compound bar of these two metals, when fixed at one end, to deflect laterally at the other. *The Engineer* (London), 1902, p. 469.

thermoscope, *n.*—**Aneroid thermoscope,** a combination of aneroid face and thermometer-bulb showing on a large scale the changes of temperature. See *soil-*★*thermograph*.—**Differential thermoscope,** a thermoscope which shows the difference in temperature of two bodies.

thermoscopic, *a.* **2.** Of or pertaining to spectacles which protect the eyes from heat and glare. *Nature*, Feb. 5, 1903.—**Thermoscopic eye.** See ★*eye*¹.

thermostabile (thėr-mọ̄-stab′il), *a.* [NL. **thermostabilis.*] Same as ★*thermostable*. See the quotation under ★*thermolabile*.

thermostability (thėr″mọ̄-stạ̄-bil′ị-ti), *n.* [NL. **thermostabilis* (see ★*thermostable*) + *-ity.*] The character of being thermostable; the stability of a substance subjected to a change in temperature.

> The high stability of opsonins against desiccation and the high *thermostability* of dried opsonins are very striking. *Science*, Sept. 13, 1907.

thermostable (thėr-mọ̄-stā′bl), *a.* [NL. **thermostabilis*, < Gr. θέρμη, heat, + L. *stabilis*, stable.] Unaltered in composition or activity by a moderate degree of heat: noting especially certain toxins and ferments. Opposed to ★*thermolabile*.

> Calmette discovered the important fact, destined to have very far-reaching consequences, that one of the venom activating principles is *thermostable*, the other being of the nature of the usual serum complements.
> *Jour. Exper. Med.*, April 25, 1905, p. 192.

thermostat, *n.*—**Electropneumatic thermostat,** an instrument which utilizes the expansibility of a gas to open or close an electric circuit.

thermosynthesis (thėr-mọ̄-sin′the-sis), *n.* [Gr. θέρμη, heat, + σύνθεσις, synthesis.] Chemical combination brought about by the action of heat.

thermotactic (thėr-mọ̄-tak′tik), *a.* [*thermotaxis* (*-tact-*) + *-ic.*] Of or pertaining to the movement of organisms in relation to heat; exhibiting thermotaxis.

thermotaxis, *n.* **2.** In *biol.*, the movement of organisms in relation to heat: movement toward a higher temperature is *positive thermotaxis* and that toward a lower temperature *negative thermotaxis*.

> They [cases of unilateral directive stimulation] have been designated, according to the direction in which they occur in relation to the source of the stimulus, as positive or negative Chemotaxis, Phototaxis, *Thermotaxis*, Galvanotaxis, and so forth. *Encyc. Brit.*, XXXI. 715.

thermotension (thėr-mọ̄-ten′shọn), *n.* [Gr. θέρμη, heat, + E. *tension.*] In *mech.*, tension applied to a substance which is at the same time subjected to a given temperature, for the purpose of determining the tensile strength at the temperature in question.

thermotherapy (thėr-mọ̄-ther′ạ-pi), *n.* [Gr. θέρμη, heat, + θεραπεία, medical treatment.] The use of heat, either moist or dry, in the treatment of disease. *Lancet*, July 11, 1903, p. 104.

thermotor (thėr′mō-tộr), *n.* [Gr. θέρμη, heat, + L. *motor*, a mover.] The trade-name of a special form of thermo-electric battery, with automatic control of the supply of gas used for heating the alternate junctions. The opening and closing of the gas-valve is effected by the contraction and expansion of the frame that supports the battery. *Sci. Amer. Sup.*, May 6, 1905, p. 245.

thermotropic, *a.* **2.** In *biol.*, of or pertaining to the growth or bending of organisms in relation to heat; exhibiting *thermotropism*. *G. S. Hall*, Adolescence, I. 160.

thermotropism, *n.* **2.** In *biol.*, the bending or growing of organisms in relation to heat.

thermotypic (thėr-mọ̄-tip′ik), *a.* [Gr. θέρμη, heat, + τύπος, type, + *-ic.*] Concerning the development of a printing-surface by application of heat.

thermovoltaic (thėr″mọ̄-vol-tā′ik), *a.* Pertaining to the heating effect of the electric current, or to phenomena of a combined thermal and electric character.

Therocephalia (thē″rọ̄-se-fā′li-ạ̈), *n. pl.* [NL., < Gr. θήρ, a wild beast, + κεφαλή, head.] An extinct order of carnivorous reptiles, so named from the resemblance of the skull to that of mammals. There are usually 5 pointed incisor teeth in each premaxillary. In the maxillary there are usually 2 canines (sometimes 3) and a series of small pointed molars varying in number from 1 to 11. With slight modification, the palate is like that of *Procolophon* and *Pareiasaurus*. The internal nasal opening is beside the canines and there is no trace of a secondary palate. Four bones are present in the mandible. There is a well-developed quadrate and a single occipital condyle. The limb-bones are long and slender. The order is found in the lower rocks of the Karoo formation of South Africa and the Permian of Russia. The best-known South African therocephalians are *Ælurosaurus*, *Ictidosuchus*, and *Titanosuchus*, animals varying in size from that of a cat to that of a horse. The best-known Russian therocephalians are *Deuterosaurus* and *Rhopalodon*.

therocephalian (thē″rọ̄-se-fā′li-ạn), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the *Therocephalia*. *Science*, Dec. 6, 1907, p. 796.

II. *n.* A member of the *Therocephalia*. *Amer. Nat.*, Feb., 1904, p. 103.

therocrotaphous (thē-rọ̄-krot′ạ-fus), *a.* [Gr. θήρ, a wild beast, + κρόταφος, side of the forehead, + *-ous.*] Having the condition of the temporal fossæ similar to that found in mammals. Contrasted with ★*stegocrotaphous.*

> The plesiosaurs have a larger temporal vacuity than is to be found in any other reptiles of the *therocrotaphous* (I coin the word) type.
> *Williston*, in Proc. U. S. Nat. Mus., 1907, p. 488.

theromorphism (thē-rọ-môr′fizm), *n.* Same as *theromorphia.*

theromorphological (thē-rọ-môr-fọ-loj′i-kạl), *a.* [Gr. *θήρ*, wild beast, + E. *morphological.*] Characteristic of animals lower than man. Contrasted with *anthropomorphic.* [Rare.]

> Virchow and W. Gruber have agreed in representing this frontal process as *theromorphological* — that is, as characteristic of the lower animals and more especially of apes. *R. Hartmann*, Anthropoid Apes, p. 111.

therosaur (thē′rọ-sâr), *n.* [NL. *Therosaur*(*us*).] An individual of the dinosaurian genus *Therosaurus.*

therosaurian (thē-rọ-sâ′ri-ạn), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the genus *Therosaurus.*

II. *n.* An individual of the genus *Therosaurus.*

Therosaurus (thē-rọ-sâ′rus), *n.* [NL., < Gr. *θήρ*, a wild beast, + *σαῦρος*, a lizard.] A genus of predentate dinosaurs regarded by Von Zittel as synonymous with *Iguanodon* (which see).

Thespesius (thes-pē′si-us), *n.* [NL., < Gr. *θεσπέσιος*, awful, wonderful.] A genus of predentate dinosaurs of the family *Iguanodontidæ*, possessing an elongated depressed skull with broad beak-like snout, very large nostrils, subrectangular orbits, and long, narrow temporal vacuities. The premaxillæ are edentulous. The teeth are arranged in an alveolar groove opening inward. The dorsal vertebræ are opisthocœlous, the caudals amphiplatyan. The genus has been found in the Upper Cretaceous of New Jersey, Dakota, and Montana. It is regarded as synonymous with *Trachodon* and *Hadrosaurus*, and may possibly be identical with ★*Claosaurus.*

Thess. An abbreviation of *Thessalonians.*

theta, *n.* As used in formulæ of mathematics and engineering, theta (θ) usually denotes: (*a*) the entropy, or thermodynamic function or factor by which the absolute temperature is to be multiplied to indicate an amount of heat energy. (*b*) The angle, in angular measure, or at the center, through which a radius vector has swept from a zero position, or through which a line has swept in a rotation. — **Double theta function,** a theta function of two variables.

thetine (thē′tin), *n.* [Gr. *θῆτα*, the letter theta, + *-ine*².] In *organic chem.*, the class-name of cyclic sulphinic anhydrids which resemble the betains and contain the group  $\begin{matrix}CO—O\\ |\quad\quad |\\ CH_2.SR_2\end{matrix}$, where R is a hydrocarbon radical such as methyl (CH_3).

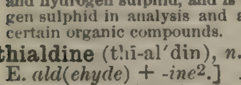
Thetis's hair. See ★*hair*¹.

theveresin (thev-e-rez′in), *n.* [*theve*(*tin*) + *resin.*] A colorless, highly poisonous pulverulent compound, $C_{48}H_{70}O_{17}.2H_2O$, prepared by the action of dilute acids on thevetin. It melts at 140° C.

thevetin (thev′e-tin), *n.* [*Theveti*(*a*) (see def.) + *-in*².] A very bitter narcotic, highly poisonous levorotatory compound, $C_{54}H_{84}O_{24}.3H_2O$, contained in the seeds of *Thevetia Thevetia.* It crystallizes in small leaflets and melts at 170° C.

thiacetic (thī-a-set′ik), *a.* [Gr. *θεῖον*, sulphur, + E. *acetic.*] Pertaining to sulphur and acetic acid.— **Thiacetic acid,** a colorless liquid, CH_3COSH, prepared by the action of phosphorus pentasulphid on acetic acid. It boils at 93° C., has an odor of acetic acid and hydrogen sulphid, and is used in the place of hydrogen sulphid in analysis and as an acetylating agent for certain organic compounds.

thialdine (thī-al′din), *n.* [Gr. *θεῖον*, sulphur, + E. *ald*(*ehyde*) + *-ine*².] A colorless compound,



$$CH_3CH\begin{cases}S.CH(CH_3)\\ S.CH(CH_3)\end{cases}NH$$

, prepared by the action of hydrogen sulphid on aldehyde ammonia. It forms monoclinic crystals melting at 43° C.

thialol (thī′ạ-lol), *n.* [Gr. *θεῖον*, sulphur, + *-al*³ + *-ol.*] A colorless oil, $(C_2H_5)_2S_2$, prepared by the distillation of a mixture of potassium ethyl sulphate, potassium disulphid, and water. It boils at 152.8–153.4° C. under 730 millimeters pressure and has an odor of garlic. Also called diethyl sulphid.

thiamide (thī-am′id), *n.* [Gr. *θεῖον*, sulphur, + E. *amide.*] A class-name applied in organic chemistry to compounds containing the group $RCSNH_2$, where R is a hydrocarbon radical such as phenyl (C_6H_5). The compounds are prepared by the addition of the elements of hydrogen sulphid to the nitriles.

thiamine (thī-am′in), *n.* [Gr. *θεῖον*, sulphur, + E. *amine.*] A class-name applied in organic chemistry to compounds containing the group RNHSH, where R is a hydrocarbon radical such as ethyl (C_2H_5).

thiazin (thī-az′in), *n.* [Gr. *θεῖον*, sulphur, + E. *azin.*] A class-name applied in organic chemistry to compounds containing a cyclic nucleus consisting of one atom of nitrogen, one atom of sulphur, and four atoms of carbon. Three arrangements of these are possible, namely, $\begin{matrix}C.C.N\\ C.C.S\end{matrix}$, $\begin{matrix}C.N.C\\ C.C.S\end{matrix}$, and $\begin{matrix}C.N.C\\ C.S.C\end{matrix}$. The derivatives are respectively termed *ortho-*, *meta-*, and *parathiazins.*

thiazol (thī-az′ol), *n.* [Gr. *θεῖον*, sulphur, + E. *az*(*ote*) + *-ol.*] A colorless liquid having the formula C_3H_3NS. In structure it is equivalent to the benzene ring with three CH groups replaced, two with a nitrogen atom and one with a sulphur atom. An important group of coal-tar colors is related to it.— **Thiazol yellow.** See ★*yellow.*

thibaude (tẹ-bōd′), *n.* [F., < *Thibaud* (E. *Theobald*, *Tibbald*, *Tibalt*), a name conventionally applied to shepherds.] Cow-hair cloth; haircloth.

thicket, *n.* **2.** Specifically, in *forestry*, a stand of saplings.

thicknee, thick-nee, *n.* Same as *thickknee.*

thickness, *n.* **5.** In *mining*, the distance at right angles to the drift or adit measured from the roof or hanging wall to the foot wall in a lode vein or lens.

thief-detector (thēf′dẹ-tek″tọr), *n.* A delicate microphone designed for seismological studies, but so arranged by Milne that it gives notice of tremors produced by the gentlest footstep in its neighborhood.

Thielavia (tē-lā′vi-ạ̈), *n.* [NL. (Zopf, 1876), < Dr. F. von *Thielau*, a German botanist.] A genus of parasitic perisporiaceous fungi which have spherical brown perithecia without appendages or ostiole. The ascospores are unicellular and brown. Two forms of conidia are produced, one endogenous and the other borne in chains. The single species, *T. basicola*, is parasitic on the roots of various plants, especially legumes.

thienol (thī′e-nol), *n.* [*thi*(*oph*)*ene* + *-ol.*] A hypothetical compound, HOC_4H_3S, which has the same relation to thiophene that phenol has to benzene. A number of derivatives are known.

thienyl (thī′e-nil), *n.* [*thi*(*oph*)*ene* + *-yl.*] A class-name applied in organic chemistry to compounds containing the univalent thiophene radical $-C_4H_3S$.

thiev, *v.* A simplified spelling of *thieve.*

thigmotactic (thig-mọ-tak′tik), *a.* [*thigmotaxis* (*-tact-*) + *-ic.*] In *biol.*, of or pertaining to the locomotion of cells or of organisms in relation to contact with foreign solid bodies; exhibiting thigmotaxis.

> One is the *thigmotactic* reaction. Starting with the moving infusorian, we find that it reacts to contact with solid bodies of a certain physical texture by suspending part of the usual ciliary motion.
> *Amer. Jour. Psychol.*, XII. 141.

> The ventral surface of planarians is strongly positively *thigmotactic*, whereas the dorsal surface is negatively *thigmotactic*; hence, when turned over so that the dorsal surface is in contact with a solid, the animal immediately rights itself by an extension of the edge of the body which is in contact with the solid.
> *Science*, May 8, 1903, p. 738.

thigmotactically (thig-mọ-tak′ti-kạl-i), *adv.* In a thigmotactic manner; by or with thigmotropism.

> A definite rat-hole consciousness that acts, as it were, *thygmotactically.* *Amer. Jour. Psychol.*, XII. 229.

thigmotaxis (thig-mọ-tak′sis), *n.* [NL., < Gr. *θίγμα*, touch, + *τάξις*, disposition.] In *biol.*, the movement of cells and of organisms in relation to contact with foreign solid bodies. It is *negative* when away from the solid, and *positive* when toward it. Once in contact with a sufficiently attracting surface, certain organisms (as the spermatozoa of a cockroach) may move to and fro over it, but can hardly leave it. It is as though the spermatozoa were attracted by a magnet. *C. B. Davenport*, Exper. Morphol., p. 108.

> The sensation of thirst is compared with the hydrotaxis of the Mycetozoa, and Davenport's example is followed in regarding as rheotaxis the behaviour of fish in swimming against the stream, the only position in which they are able to breathe. Finally, the "*Thigmotaxis*" exhibited by an oxytricha moving round a spherical egg, unable to leave its surface, is compared with the retreat of a cat into the corner as a dog approaches, or to the preference shown by many people for those seats in a restaurant which have their backs to the wall!
> *Nature*, Aug. 31, 1905, p. 426.

thigmotropic (thig-mọ-trop′ik), *a.* [Gr. *θίγμα*, touch, + *τρόπος*, a turning, + *-ic.*] Of or pertaining to the movement or growth of organisms in relation to contact with foreign bodies; stereotropic. See ★*thigmotropism* and ★*thigmotaxis.*

thigmotropism (thig-mot′rọ-pizm), *n.* [*thigmotrop*(*ic*) + *-ism.*] In *biol.*, the movement or growth of an organism in relation to contact with a foreign body; stereotropism. See ★*thigmotaxis.* *M. F. Washburn*, The Animal Mind, p. 57.

thilanin (thī′lạ- or thil′ạ-nin), *n.* [Gr. *θεῖον*, sulphur, + E. *lan*(*ol*)*in.*] A trade-name of a substance of indefinite composition prepared from sulphur and lanolin: used medicinally in certain cutaneous affections.

thimble, *n.* **2.** (*b*) A ring or oval, made of steel with a concave section on the outside, and convex within, used to form the eye in the end of a wire rope when the latter is bent round the ring and the end spliced into the main part.— **4.** A cone of fat-free paper used in a fat-extraction apparatus. *Jour. Exper. Med.*, March 25, 1901, p. 515.— **5.** A cup-shaped metal support for the handle of a tool in dental operations: it rests in the palm of the hand and is attached to a ring on the middle finger.— **6.** *pl.* A trade-name for crude india-rubber from the lower Kongo and Loanda in small balls of a gray color, darker outside.

thimble-plating (thim′bl-plā″ting), *n.* See ★*plating.*

thimble-roller (thim′bl-rō″lėr), *n.* A hollow roller; a roller which turns on a shaft which it does not fit closely.

thimble-surface (thim′bl-sėr″fạ̄s), *n.* In *ceram.*, a groundwork on the surface of Parian jugs, vases, etc., produced by closely pitting the interior of a mold, which produces in the cast piece a surface of raised dots, usually in blue or white.

thin¹, *a.* **14.** In *art*, characterized, in composition, by few and widely separated elements, by absence of serious interest, or by lack of body and force in technique.

> Next is the "Garden Tulip" pattern, which consists of a tulip spray strongly accentuated by the slight and almost *thin* treatment of the background.
> *Vallance*, William Morris, p. 67.

thingamajig (thing′ạ-mạ-jig″), *n.* A thingumbob. *Dialect Notes*, III. iii. [Colloq.]

thingvalla (ting′vä-lạ̈), *n.* [Icel. *thing-völlr* (gen. sing. *-vallar*, gen. pl. *-valla*), < *thing*, assembly, parliament, + *völlr*, field.] The place where a thing or assembly is held.

Thinite (thī′nīt), *a.* [*Thin*(*is*) (see def.) + *-ite*².] Pertaining to the two earliest Egyptian dynasties, which began about 3400 B.C. with Menes, who came from Thinis (This), near Abydos.

> Early in the thirtieth century B.C. the *Thinites* were finally dislodged from the position of power which they had maintained so well for over four centuries.
> *Breasted*, Hist. of Egypt, p. 111.

thinner, *n.* **2.** Specifically, a liquid used in thinning down a paste paint. Liquids so used are linseed-oil, Japan drier, and turpentine. A keg of lead bought by a painter is a paste paint. It is dry white lead ground in linseed-oil in the proportion of 92 pounds of dry lead to 8 pounds of oil. The painter then adds thinners until the paint will work under his brush. *Jour. Franklin Inst.*, July, 1904, p. 17.

thinning (thin′ing), *n.* Specifically, in *forestry*, the removal of a part of the trees in order to improve a stand without inviting natural reproduction.— **Accretion thinning.** See ★*accretion.*— **Improvement thinning,** usually, the first thinning made when a forest is put under management, to prepare it for the application of a regular system. Also called *improvement cutting.*— **Preliminary thinning.** Same as *improvement* ★*thinning.*

thio-. [Gr. *θεῖον*, sulphur.] In *chem.*, a prefix now restricted to the names of substances in which sulphur may properly be viewed as replacing oxygen. In the older names for such substances the prefix *sulpho-* was often used.

thio-acetic (thī″ō-a-set′ik), *a.* Same as ★*thiacetic.*

thio-albumose (thī-ō-al′bụ-mōs), *n.* [Gr. *θεῖον*, sulphur, + E. *albumose.*] One of the deutero-albumoses, characterized by its large sulphur content.

thio-alcohol (thī-ō-al′kọ-hol), *n.* [Gr. *θεῖον*, sulphur, + E. *alcohol.*] A substance, belonging to the class of alcohols, in which sulphur may properly be viewed as replacing oxygen in the structure of an ordinary hydroxy-alcohol, as in the case of mercaptan ($C_2H_5.SH$), corresponding to common or ethyl alcohol ($C_2H_5.$-OH). The name of this first-discovered thio-alcohol is often used generically for any substance of the class in question.

thio-aldehyde (thī-ọ-al′dẹ-bīd), *n.* [Gr. *θεῖον*, sulphur, + E. *aldehyde.*] A class-name applied in organic chemistry to compounds containing the group RCHS, where R is any hydrocarbon radical. They are rather unstable substances with highly offensive odors, and are formed by the action of hydrogen sulphid on aldehydes.

thio-antimonate, thio-antimoniate (thī-ọ-an′ti-mọ-nạt, thī-ō-an-ti-mō′ni-āt), *n.* [Gr. *θειον*, sulphur, + E. *antimonate.*] In *chem.*, a compound which may be viewed as formed by the union of antimonic sulphid with the sulphid of a more electropositive metal, as sodium *thio-antimonate*, Na_3SbS_4. Formerly called *sulphantimonate.*

thio-antimonic (thī-ọ-an-ti-mon′ik), *a.* [Gr. *θειον*, sulphur, + E. *antimonic.*] Pertaining to *thio-antimonic acid.*—**Thio-antimonic acid,** a hypothetical acid, H_3SbS_4, not actually obtainable, corresponding to the salts, thio-antimonates. See ★*thio-antimonate.* Formerly called *sulphantimonic acid.*

thio-antimonious (thī-ọ-an-ti-mō′ni-us), *a.* [Gr. *θειον*, sulphur, + E. *antimonious.*] Pertaining to *thio-antimonious acid.*—**Thio-antimonious acid,** in *chem.*, a hypothetical acid, $HSbS_2$, not actually obtainable, corresponding to the salts, thio-antimonites. See ★*thio-antimonite.* Formerly called *sulphantimonious acid.*

thio-antimonite (thī-ọ-an′ti-mọ-nīt), *n.* [Gr. *θειον*, sulphur, + E. *antimonite.*] In *chem.*, a compound which may be viewed as formed by the union of antimonious sulphid with the sulphid of a more electropositive metal: as, sodium *thio-antimonite*, $NaSbS_2$. The *thio-antimonites* are sometimes called *livers of antimony* when produced in an impure condition by fusing antimonious sulphid with an alkali or an alkaline carbonate.

thio-arsenate, thio-arseniate (thī-ọ-är′se-nāt, thī′ọ-är-sē′ni-āt), *n.* [Gr. *θειον*, sulphur, + E. *arsenate.*] In *chem.*, a compound which may be viewed as formed by the union of arsenic sulphid with the sulphid of a more electropositive metal. There are three classes of these salts, represented by the general formulæ M_3AsS_4, $M_4As_2S_7$, and $MAsS_3$. Formerly called *sulpharsenate.*

thio-arsenious (thī′ọ-är-sē′ni-us), *a.* [Gr. *θειον*, sulphur, + E. *arsenious.*] Pertaining to thio-arsenious acid.—**Thio-arsenious acid,** a hypothetical acid, H_3AsS_3, $H_4As_2S_7$, or $HAsS_2$. Formerly called *sulpharsenious acid.*

thio-arsenite (thī-ọ-är′sē-nīt), *n.* [Gr. *θειον*, sulphur, + E. *arsenite.*] In *chem.*, a compound which may be viewed as formed by the union of arsenious sulphid with the sulphid of a more electropositive metal. There are three classes of these salts, represented by the general formulæ M_3AsS_3, $M_4As_2S_5$, and $MAsS_2$. Formerly called *sulpharsenite.*

Thiobacteria (thī″ō-bak-tē′ri-ạ̈), *n. pl.* [Gr. *θειον*, sulphur, + NL. *bacteria.*] A name proposed by Migula to include the *Beggiatoaceæ* and other sulphur and iron bacteria mostly inhabiting soils and sea-water. Most of the species are known only from the studies of Winogradsky. Compare *sulphur* ★*bacteria.*

thiocarbamic (thī ọ-kär-bam′ik), *a.* [Gr. *θειον*, sulphur, + E. *carbamic.*] Pertaining to thio-urea or to thiocarbamic acid.—**Thiocarbamic acid,** a hypothetical acid, $SC(NH_2)SH$, known only in the form of its salts and other derivatives.

thiocarbonate (thī-ō-kär′bọ-nāt), *n.* [Gr. *θειον*, sulphur, + E. *carbonate.*] In *chem.*, a compound derived from the union of carbon disulphid with the monosulphid of a strongly electropositive metal or radical: as, potassium *thiocarbonate*, K_2CS_3, analogous to potassium carbonate, K_2CO_3, but containing sulphur in place of oxygen. This salt has been used in the treatment of vines infested by the *Phylloxera.* Formerly called *sulphocarbonate*, a term now applied to a salt of analogous character, but in which only one third of the oxygen of a carbonate is replaced by sulphur.

thiocarbonic (thī″ọ-kär-bon′ik), *a.* [Gr. *θεῖον*, sulphur, + E. *carbonic.*] Pertaining to sulphur and carbonic acid or thiocarbonic acid. —**Thiocarbonic acid,** a dark yellow, strongly smelling, unstable, oily compound, $SC(SH)_2$, prepared by the action of dilute hydrochloric acid on potassium thiocarbonate. Also called, less correctly, *sulphocarbonic acid.*

thiocarbonyl (thī-ọ-kär′bọn-il), *n.* [Gr. *θεῖον*, sulphur, + E. *carbon* + *-yl.*] A name of the bivalent organic radical CS. The term is used as a combining-form in the names of compounds containing the thio group.

thiocarbylamine (thī-ọ-kär-bil-am′in), *n.* [*thiocarbyl* + *amine.*] Same as ★*isothiocyanic acid.*

thiocol (thī′ọ-kol), *n.* [Gr. *θεῖον*, sulphur, + *κόλλα*, glue.] A guaiacol preparation used in tuberculosis and other affections of the lungs.

thiocresol (thī-ọ-krē′sol), *n.* [Gr. *θεῖον*, sulphur, + E. *cresol.*] Three compounds, CH_3-C_6H_4SH, with this name are known. The 1,2- or ortho-derivative is prepared by the reduction of 4-brom-2-toluene-sulphonic chlorid. It crystallizes in leaflets or silky, lustrous needles, melts at 15° C., and boils at 193° C. The 1,3- or meta-derivative is prepared, in a similar manner, from metatoluene-sulphonic chlorid, and is a liquid which boils at 195–205° C. The 1,4- or para-compound is prepared, in the same manner, from paratoluene-sulphonic chlorid. It crystallizes in large plates, melts at 43° C., and boils at 194° C.

thiocyanate (thī-ọ-sī′ạ-nāt), *n.* [Gr. *θεῖον*, sulphur, + E. *cyanate.*] In *chem.*, a salt analagous in composition to a cyanate, but containing sulphur in place of oxygen, as potassium *thiocyanate*, KCNS, which is produced by the direct union of sulphur with potassium cyanide. Ammonium thiocyanate occurs in coal-gas liquor. Ferric thiocyanate forms a deep blood-red solution, resorted to as a test in analytical chemistry. Mercuric thiocyanate is the material for making the toy "Pharaoh's serpents." Formerly called *sulphocyanate* or *sulphocyanide* or *rhodanide.*

thiocyanic (thī″ọ-sī-an′ik), *a.* [Gr. *θεῖον*, sulphur, + E. *cyanic.*] Pertaining to sulphur and cyanic acid or to thiocyanic acid.—**Thiocyanic acid,** a colorless, strongly smelling liquid, NCSH, prepared by heating mercuric thiocyanate in a current of hydrogen sulphid. It crystallizes at a low temperature. Also called *sulphocyanic acid.*

thiocyano (thī-ō-sī′ạ-nō), *n.* [Gr. *θεῖον*, sulphur, + *cyan(ic).*] The radical CNS contained in thiocyanic acid.

thiocyanogen (thī″ō-sī-an′ọ-jen), *n.* [Gr. *θειον*, sulphur, + E. *cyanogen.*] The radical —SCN of thiocyanic acid. Also called *rhodan.*

thioform (thī′ọ-fôrm), *n.* [Gr. *θεῖον*, sulphur, + E. *form(aldehyde).*] A trade-name of bismuth dithiosalicylate, $HOBi(SOCC_6H_4OH)_2$, applied externally as an antiseptic to wounds and excoriations.

thiogenic (thī-ọ-jen′ik), *a.* [Gr. *θεῖον*, sulphur, + *-γενης*, -producing.] Producing sulphur: applied to certain bacteria, as *Beggiatoa* and *Thiothrix*, which are capable of oxidizing sulphureted hydrogen and producing free sulphur.

thiogenol (thī′ọ-je-nol), *n.* [Gr. *θεῖον*, sulphur, + *-γενης*, -producing, + *-ol.*] A trade-name of a solution of sodium sulphonate used in medicine as a wash.

thiol (thī′ol), *n.* [Gr. *θεῖον*, sulphur, + *-ol.*] A trade-name for a substance made by the action of sulphur on the paraffin-oils from the distillation-products of peat. It resembles ichthyol in medicinal properties.

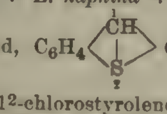
thiolactic (thī-ọ-lak′tik), *a.* [Gr. *θεῖον*, sulphur, + E. *lactic.*] Pertaining to sulphur and lactic acid.—**Thiolactic acid,** an oily compound, $CH_3CH(SH)COOH$, prepared by the action of hydrogen sulphid, hydrochloric acid, and zinc on pyruvic acid. It has an unpleasant smell and may be distilled under reduced pressure. Also called *a-thiolactic acid.*

thiolin (thī′ọ-lin), *n.* [Gr. *θεῖον*, sulphur, + L. *linum*, flax.] A trade-name of a dark-green semisolid substance, prepared by the action of sulphur on linseed-oil, used in medicine. Also called *thiolinic acid.*

thioline (thī′ọ-lin), *n.* [Gr. *θεῖον*, sulphur, + *-ol* + *-ine*^{2}.] A trade-name of crude abietene. Also written *theoline.*

thiolinic (thī-ọ-lin′ik), *a.* [*thiolin* + *-ic.*] Pertaining to sulphur and linseed-oil, specifically to thiolin.

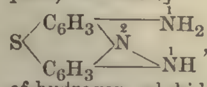
thionaphthene (thī-ō-naf′thēn), *n.* [Gr. *θεῖον*, sulphur, + E. *naphtha* + *-ene.*] A colorless compound,



prepared from 2-amino-1^2-chlorostyrolene. It crystallizes in plates, melts at 30–31° C., and is volatile with steam.

thionic (thī-on′ik), *a.* [Gr. *θεῖον*, sulphur, + *-ic.*] Of or pertaining to sulphur: used specifically, in chemistry, to indicate that in the molecule of the original substance oxygen has been replaced by sulphur.

thionine (thī′ọ-nin), *n.* [Gr. *θεῖον*, sulphur, + *-ine*^{2}.] A brownish-black dye,



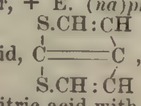
prepared by the action of hydrogen sulphid and ferric chlorid on orthophenylene-diamine-hydrochlorid. It crystallizes in plates, gives with alcohol a violet to violet-red solution with a reddish-brown fluorescence, and is largely used for staining microscopic objects. Also called *amimino-thiodiphenylimine*, *phenylene violet*, and *Lauth's violet.*

thionyl (thī′ọ-nil), *n.* [Gr. *θεῖον*, sulphur, + *-on* + *-yl.*] The radical consisting of a single atom each of sulphur and oxygen, SO.—**Thionyl chlorid,** a colorless heavy liquid with irritating odor, fuming in the air, produced by the interaction of sulphur dioxid and phosphorus pentachlorid, decomposed by water. Its formula is $SOCl_2$.

thiophenol (thī-ō-fē′nol), *n.* [Gr. *θεῖον*, sulphur, + E. *phenol.*] A colorless liquid, C_6H_5SH, prepared by the reduction of benzene-sulphonic chlorid. It boils at 172.5° C. and has the odor of garlic.

thiophosphoric (thī″ọ-fos-for′ik), *a.* [Gr. *θειον*, sulphur, + E. *phosphoric.*] Pertaining to thiophosphoric acid.—**Thiophosphoric acid,** in *chem.*, a substance which may be viewed as ordinary phosphoric acid in which one atom of oxygen has been replaced by one of sulphur. It is not known in the free state, but salts corresponding to it have been produced, and also salts corresponding to acids in which two and three atoms of oxygen of phosphoric acid are replaced by sulphur. All are easily decomposed. Formerly called *sulphophosphoric acid.*

thiophthene (thī′of-thēn), *n.* [Gr. *θεῖον*, sulphur, + E. *(na)phtha* + *-ene.*] A colorless liquid,



prepared by the distillation of citric acid with phosphorus trisulphid. It boils at 224–226° C.

thioresorcin (thī″ọ-rẹ-sôr′sin), *n.* [Gr. *θειον*, sulphur, + E. *resorcin.*] Same as ★*thioresorcinol.*]

thioresorcinol (thī″ọ-rẹ-sôr′si-nol), *n.* [Gr. *θειον*, sulphur, + E. *resorcinol.*] A yellowish-gray compound, $C_6H_4(\overset{1,3}{SH})_2$. It melts at 27° C., boils at 243° C., and is used in medicine as a substitute for iodoform.

thiosalicylic (thī″ọ-sal-i-sil′ik), *a.* [Gr. *θεῖον*, sulphur, + E. *salicylic.*] Pertaining to sulphur and salicylic acid, and specifically to thiosalicylic acid.—**Thiosalicylic acid,** a brownish-yellow, amorphous compound, HOC_6H_4COSH, prepared by the action of potassium hydrogen sulphid on salicylyl chlorid. It is used in medicine as an antiseptic like salicylic acid.

thio-salt (thī′ō-sâlt), *n.* [Gr. *θεῖον*, sulphur, + E. *salt.*] A compound, having the general character of a salt, which may be regarded as formed by the union of a more electropositive with a more electronegative sulphid, or as derived from an oxy-salt by the substitution of sulphur for oxygen.

thiosapol (thī-ọ-sap′ol), *n.* [Gr. *θεῖον*, sulphur, + L. *sapo*, soap, + *-ol.*] A trade-name of a soda (hard) soap containing about 10 per cent. of sulphur in chemical combination: used medicinally in the treatment of certain skin-diseases.

thiosavonal (thī-ọ-sav′ọ-nal), *n.* [Gr. *θεῖον*, sulphur, + F. *savon*, < L. *sapo(n-)*, soap, + *-al*^{3}.] A trade-name of a potash (soft) soap containing sulphur in chemical combination. Its uses are similar to those of thiosapol.

thiosinamine (thī″ọ-sin-am′in), *n.* [Gr. *θεῖον*, sulphur, + *σίν(απι)*, mustard, + E. *amine.*] A colorless compound, $SC(NH_2)NHCH_2$-$CH:CH_2$, prepared by the action of aqueous ammonia on allyl isothiocyanate (allyl mustard oil). It forms monoclinic or rhombic crystals and melts at 78.4° C. Also called *allylthio-urea* or *allylthiocarbamide.*

thiostannate (thī-ọ-stan′āt), *n.* [Gr. *θεῖον*, sulphur, + E. *stannate.*] In *chem.*, a compound which may be viewed as formed by the union of stannic sulphid with the sulphid of a more electropositive metal: as, potassium *thiostannate*, K_2SnS_3. Formerly called *sulphostannate.*

thiostannic (thī-ō-stan′ik), *a.* [Gr. *θεῖον*, sulphur, + E. *stannic.*] Pertaining to thiostannic acid.—**Thiostannic acid**, an acid, H_2SnS_3, corresponding to the salts, thiostannates. The acid has apparently been obtained in the free state, but of doubtful purity. See ★*thiostannate.* Formerly called *sulphostannic acid.*

thiosulphate, *n.*—**Sodium thiosulphate**, formerly called *hyposulphite*, is manufactured upon a large scale for use in photography, in the metallurgical extraction of silver in the liquid way, as an antichlor in connection with the bleaching of paper-pulp, and as an analytical reagent.

Thiothrix (thī′ọ̄-thriks), *n.* [NL. (Winogradsky, 1887), ‹ Gr. *θεῖον*, sulphur, + *θρίξ*, hair.] A genus of bacteria of the family *Beggiatoaceæ*. It includes non-motile filamentous forms surrounded by an inconspicuous sheath and containing sulphur granules. All are found in sulphur water. *T. nivea* is the best known species. Compare *sulphur* ★*bacteria.*

thiotolene (thī-ọ̄-tō′lēn), *n.* [Gr. *θεῖον*, sulphur, + E. (?) *tolu* + *-ene.* Cf. *toluene.*] A colorless liquid,  $$S\left\langle\begin{matrix}\mathrm{CH:CH}\\ |\\ \mathrm{CH:CCH_3}\end{matrix}\right.$$, contained in coal-tar and prepared by the distillation of sodium pyrotartrate with phosphorus trisulphid. Also called *β-methyl-thiophene.*

thiotungstate (thī-ọ̄-tung′stāt), *n.* [Gr. *θεῖον*, sulphur, + E. *tungstate.*] In *chem.*, a compound which may be regarded as formed by the union of tungsten trisulphid with the sulphid of a more electropositive metal, as potassium *thiotungstate*, K_2WS_4. Formerly called *sulphotungstate.*

thiotungstic (thī-ọ̄-tung′stik), *a.* [Gr. *θεῖον*, sulphur, + E. *tungstic.*] Pertaining to thiotungstic acid.—**Thiotungstic acid**, an hypothetical acid corresponding to the salts, thiotungstates. See ★*thiotungstate.* Formerly called *sulphotungstic acid.*

thio-urea (thī-ọ̄-ū′rẹ̄-ä), *n.* [NL., ‹ Gr. *θεῖον*, sulphur, + NL. *urea.*] A colorless compound, $SC(NH_2)_2$, prepared by the fusion of ammonium thiocyanate. It crystallizes in thick rhombic prisms, melts at 172° C., and is also called *sulpho-urea, sulphocarbamide*, and more correctly *thiocarbamide.*

thioxanthone (thī-ok-san′thōn), *n.* [Gr. *θεῖον*, sulphur, + *ξανθός*, yellow, + *-one.*] A yellow compound,  $$C_6H_4\left\langle\begin{matrix}\overset{1}{\mathrm{CO}}\\ \underset{2}{\mathrm{S}}\end{matrix}\right\rangle C_6H_4$$, prepared by the action of sulphuric acid on phenylthiosalicylic acid. It crystallizes in needles, melts at 209° C., and boils at 371–373° C. under 715 millimeters pressure.

thioxene (thī-ok′sēn), *n.* [Gr. *θεῖον*, sulphur, + E. *ox*(*ygen*) + *-ene.*] A general name applied in organic chemistry to the various dimethyl-thiophenes, $(CH_3)_2C_4H_2S$. They are all liquids and can be prepared synthetically.

third[1], *n.* **6.** In *golf*, a handicap allowance equivalent to one stroke at every third hole; an allowance of six strokes in eighteen holes.—**Slurred third.** In *music*, see ★*tierce coulée.*

third-flute (thėrd′flöt), *n.* Same as ★*terzflöte.*

thirdness (thėrd′nes), *n.* **1.** The character of being third; the third position in an ordinal series considered as a character of the object occupying it.—**2.** The mode of being of that which is such as it is by virtue of a triadic relation which is incapable of being defined in terms of dyadic relations.

thirst, *n.* **3.** A waterless region. [S. Africa.]

thirty, *a.* and *n.* **I.** *a.*—**To feel** or **look like thirty cents**, or, **to make one look like thirty cents**, to look or feel exceedingly small; take one down; give one a small opinion of oneself; feel or to make one feel 'mean.' [Slang.]

> "I say old chap what does that mean? *Make* [a man] *look like thirty cents.* It's awfully queer you know."
> In his most sepulchral tone the actor volunteered:
> "I'll tell you old chap. That is merely a colloquial expression indicative of the acme of mediocrity."
> *N. Y. Times*, Dec. 28, 1902.

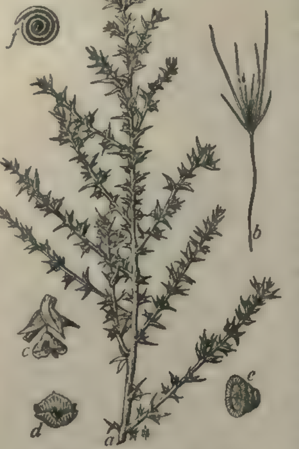
II. *n.* **3.** In *printing* and *teleg.*, the last sheet, word, or line of copy or of a despatch.—**Half thirty**, in *tennis*, one stroke given to a supposedly inferior player at the beginning of the first game, two at the beginning of the second, and thus alternately in the subsequent games of the set.

Thiry-Vella fistula. See ★*fistula.*

thishow (this′hou), *adv.* In this way; in this particular manner.

> What's this then, which proves good yet seems untrue? . . .
> Are means to the end, themselves in part the end?
> Is fiction which makes fact alive, fact too?
> The somehow may be *thishow.*
> *Browning*, Ring and Book, i. 706.

thistle, *n.*—**Napa thistle**, a yellow-flowered star-thistle, *Centaurea Melitensis*, abundantly introduced as a weed in California, apparently diffused from Napa. Also *tocalote.*—**Russian thistle**, an annual weed, *Salsola Tragus*, closely related to the common saltwort of the seashore (see *Salsola*), in recent times troublesome in the Dakotas and adjoining States. It is at first a tender herb available for forage, but matures into a rounded mass of small-leafed, woody, and spiny branches, becoming at length a most effective tumbleweed. An ordinary individual grows 2 to 3 feet in diameter and is estimated to yield 20,000 to 30,000 seeds. These are dropped as the plant rolls, and, being winged by the papery flower parts, may be still further transported (over snow) by the wind. It is unlike a thistle except in being spiny. It was introduced into South Dakota in flaxseed from southeastern Russia in 1873 or 1874, and in twenty years had spread over an area of 35,000 square miles. Its ravages at first caused alarm, but it has been found possible to control it by close cultivation aided by sheep pasturing. Also called *Russian cactus, Russian saltwort*, and *Tatar thistle.*—**Tatar thistle.** Same as *Russian* ★*thistle.*—**Texas thistle.** See ★*star-thistle.*



Russian Thistle (*Salsola Tragus*).

a, branch of mature plant; *b*, seedling about two weeks old — both less than one third natural size; *c*, flower detached from the axil and remaining suspended by minute hairs, in the ordinary inverted position on a rolling plant — slightly under natural size; *d*, flower viewed from above and in front, showing the calyx-lobes connivent into a cone-shaped body, and the large membranaceous spreading wings — slightly under natural size; *e*, seed with flower parts removed — enlarged; *f*, embryo removed from the seed — more enlarged.

(After L. H. Dewey, U. S. D. A.)

thistle-dollar, *n.* **2.** A silver coin of Charles II. of England, struck in 1676: so called from emblems on the reverse.

thistle-saffron (this′l-saf″rọn), *n.* See ★*saffron.*

thiuret (thī′ụ̄-ret), *n.* [Gr. *θεῖον*, sulphur, + *-uret.*] A trade-name of a light odorless powder, $C_8H_7N_3S_2$, used in surgery as a substitute for iodoform.

thlakusk (thlak′usk), *n.* [*Thlinkit* (Tlinkit) of northwestern N. America.] A name given by the Thlinkit Indians to the red seaweed, *Porphyra laciniata*, which is of considerable value as food in southeastern Alaska. See *Porphyra* and *laver*[2].

thola, *n.* See *tola*[2].

tholos (thō′los), *n.* Same as *tholus.*

tholus, *n.* **2.** A round excavated tomb lined with masonry. See ★*beehive tomb.*

> The evidence suggests that *tholos* burial was introduced in Eastern Crete toward the close of the Minoan period.
> *R. C. Bosanquet*, in An. Brit. School at Athens, VIII. [305.

thomäite (tō′mạ̄-īt), *n.* [Named after Prof. Carl *Thomae.*] Ferrous carbonate, probably identical with siderite, but stated to occur in pyramidal crystals.

Thomas (tom′ạs), *v. i.* To beg on St. Thomas's Day, Dec. 31. This is still done in some parts of England by villagers, who go about in procession begging money for the Christmas revels, especially in the district of Almondsbury and Huddersfield: as, to go about *Thomasing. N. and Q.*, 9th ser., VII. 263.

Thomson's law. See ★*law*[1].

thon (ᴛʜōn), *pron.* [*th*(*at*) + *one.*] A word coined, in 1858, by C. C. Converse, as a pronoun of the third person and of common gender designed to be substituted for the locutions 'him or her,' 'his or hers,' etc. It has been but little used.

> Each member of a family, each family of a clan, and each clan of a tribe has a fixed place in the group to which he or she is kept by *thon's* own memory and constrained by the consensus of associates.
> *Rep. Bur. Amer. Ethnol.*, 1897–98, p. 831.

Thoracic choke. See ★*choke*[1].

thoracicolumbar (thọ̄-ras″i-kọ̄-lum′bä̤r), *a.* Same as ★*thoracolumbar.*

thoracocentesis (thō″rạ-kọ̄-sen-tē′sis), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *κέντησις*, puncture.] Same as *thoracentesis.*

thoracocyllosis (thō″rạ-kọ̄-si-lō′sis), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *κύλλωσις*, a crooking, ‹ *κυλλοῦν*, make crooked, ‹ *κυλλός*, crooked.] Distortion of the chest.

thoracocyrtosis (thō″rạ-kọ̄-sėr-tō′sis), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *κύρτωσις*, curvature.] Barrel-shaped deformity of the chest.

thoracodynia (thō″rạ-kọ̄-din′i-ạ̈), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *ὀδύνη*, pain.] Pain in the chest.

thoracogastroschisis (thō″rạ-kọ̄-gas-tros′ki-sis), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *γαστήρ* (*γαστρ-*), belly, + *σχίσις*, fissure.] Congenital fissure of the chest and abdominal wall.

thoracolumbar (thō″rạ-kọ̄-lum′bä̤r), *a.* Relating to the thoracic and lumbar vertebræ considered collectively.

thoracomyodynia (thō″rạ-kọ̄-mī-ọ̄-din′i-ạ̈), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *μῦς*, muscle, + *ὀδύνη*, pain.] Pain in the muscles of the chest-wall.

thoracopagous (thō-rạ-kop′a-gus), *a.* [NL. *thoracopag*(*us*) + *-ous.*] Relating to that form of a double monster known as a thoracopagus, in which the thoraces are united to a considerable extent.

thoracopathy (thō-rạ-kop′ạ-thi), *n.* [Gr. *θώραξ* (*θωρακ-*), chest, + *πάθος*, disease.] Any disease of the thoracic organs, especially of the lungs.

thoracoscope (thō′rạ-kọ̄-skōp), *n.* [Gr. *θώραξ* (*θωρακ-*), chest, + *σκοπεῖν*, view.] A stethoscope.

thoracoscopy (thō-rạ-kos′kọ̄-pi), *n.* [Gr. *θώραξ* (*θωρακ-*), chest, + *-σκοπια*, ‹ *σκοπεῖν*, view.] In *med.*, physical examination of the thoracic organs.

thoracostenosis (thō″rạ-kọ̄-stẹ̄-nō′sis), *n.* [NL., ‹ Gr. *θώραξ* (*θωρακ-*), chest, + *στένωσις*, narrowing.] Narrowness of the chest.

thoria, *n.* The name was first given by Berzelius to a supposed new earth announced by him in 1815 as present in xenotime and other Swedish or Norwegian minerals. He afterward proved that this material was in fact yttrium phosphate. In 1828 he discovered a really distinct earth in the mineral thorite, and applied to it the same name (from the god Thor of Scandinavian mythology), and in this sense the word is used. This earth the oxid of thorium, forms the principal part of the mantles of Welsbach incandescent gas-lamps The material used has been varied, with a view to securing as white a light as possible, but is said to be commonly about 99 per cent. of thorium oxid and 1 per cent. of cerium oxid.

thorianite (thō′ri-ạ-nīt), *n.* [*thori*(*um*) + *-an* + *-ite*[2].] A mineral found in alluvial gravel near Kondurugala, in the province of Sabaragamuwa, and in the Galle district, Ceylon. It occurs in small roughly cubical crystals, of brownish-black color and resinous luster, of specific gravity 9.5-9.7, of hardness nearly 7, infusible before the blowpipe, easily pulverized, and then readily soluble in strong nitric acid. The mineral is strongly radioactive and consists essentially of the oxids of thorium, uranium, the rare earths, and lead. Two varieties have been described, the one containing 78 per cent. of thorium dioxid and 12 per cent. of uranium oxid, the other containing about 60 per cent. of thorium dioxid and over 30 per cent. of uranium oxid. Both varieties contain a relatively high proportion of helium, the former on solution setting free something over ten cubic centimeters of this rare gas. The mineral can properly be classed as a variety of uraninite or pitchblende.

thorite[2] (thor′īt), *n.* [Appar. an independent formation from *Thor* + *-ite*[2], with reference to the strength of the explosive, and not associated, like *thorite*[1], with *thorium.*] An explosive of the ammonium-nitrate class once experimented with as a bursting charge for shell.

thorium, *n.* In 1900 Brauner announced his belief that thorium, as generally known, is separable into two different elements. A little later Baskerville, working by a different method, came to the same conclusion, and in 1903 claimed to have effected its separation into three components, for two of which he proposed the new names *carolinium* and *berzelium*, retaining the name *thorium* for the third component. Later he found for this new or purified thorium an atomic weight of 220.1-220.6. In 1905 R. J. Meyer and A. Gumperz published the results of a careful revision of the previous work on this subject, which they found did not afford any evidence in support of the earlier claims of the separability of thorium. Thorium is a radioactive element and is the parent of a series of radioactive products of which eight separate members have already been identified. These are known as *mesothorium* 1, *mesothorium* 2, *radiothorium*, *thorium X*, *thorium emanation*, *thorium A*, *thorium B*, and *thorium C*, and are ordinarily present in thorium compounds. Thorium and its products appear to constitute a separate radioactive group or family, distinct from the uranium group, of which actinium, ionium, radium, and polonium are members, although generally found associated with it in minerals. Thorium itself emits only α-rays, but, owing to the presence of thorium disintegration-products, β- and γ-rays are also given out by thorium compounds.—**Nitrate of thorium**, a salt of the rare metal thorium, a few years ago found only in very small quantities in the collections of chemical laboratories, now an article of commerce and used in the production of mantles for Welsbach incandescent gas-lamps.—**Thorium emanation,** a highly radioactive gaseous disintegration-product of thorium, freely evolved by certain compounds of thorium, and having but a very brief independent existence. In the course of a few minutes it undergoes almost complete disintegration and is transformed into solid radioactive products known as *thorium A, B,* and *C.* See ★*emanation*, 5.—**Thorium X,** a radioactive disintegration product of thorium which can be separated from the latter by precipitating the thorium as hydroxid from an aqueous solution of the nitrate. After removing the hydroxid the liquid is evaporated to dryness, the residue is ignited to expel ammonium salts, and a slight residue containing the thorium X, but consisting chiefly of impurities, is obtained. This residue may be several thousand times more radioactive than an equal weight of thorium oxid and evolves correspondingly greater amounts of thorium emanation. This activity is gradually lost, however, owing to the disintegration of the thorium X, which disappears at a rate corresponding to the transformation of half of the total amount present in a period of about four days. Thorium X has been found to be the immediate parent from which the thorium emanation is produced.

thorn^1, *n.*—**Black thorn.** Same as *Western* ★*haw.*—**Large-fruited thorn.** Same as *dotted* ★*haw.*—**Wait-a-bit thorn.** (*b*) The hackthorn, *Acacia detinens.* See ★*hackthorn.*

thornback, *n.* 1. (*b*) In Australia, one of the sting-rays, *Raja lemprieri* or *Raja rostata,* of the family *Rajidæ.* *E. E. Morris,* Austral English.

thorn-locust (thôrn′lō″kust), *n.* The honey-locust.

thorogummite, *n.* This mineral, like other native compounds of thorium and uranium, has marked radioactive properties.

thought-consciousness (thât′con″shus-nes), *n.* The disposition of consciousness during the process of thought; the mind as it is when reasoning, arguing, solving a problem, etc. *E. B. Titchener,* Exper. Psychol., I. i. 1.

thought-reading (thât′rē″ding), *n.* Same as *mind-reading.*

thought-writing (thât′rī″ting), *n.* Any endeavor to record ideas by means of signs, pictures, or ideographs, rather than by means of phonetic symbols.

> The monographs on sign language and pictography, having as their text the attainments of the North American Indians in those directions, may contribute to the understanding of similar exhibitions of evanescent and durable *thought-writing,* whether still employed in other parts of the world or now only found in records of material remains. *Smithsonian Rep.,* 1890, p. 50.

thousand-jacket (thou′zand-jak″et), *n.* In New Zealand, the ribbonwood, *Hoheria populnea,* so called from the many layers of its inner bark. See ★*houhere* and *ribbonwood.*

Thracian, *n.* 2. The language (any language) spoken in ancient Thrace. From the scanty remains of the Thracian dialects (chiefly proper names) it is inferred that they belonged to the Indo-European family.—3. In *geol.,* the uppermost stage of the Pliocene Tertiary series in the Vienna basin of Austria, represented by conglomerates, gravels, and sands containing bones of large mammals and shells of *Unios* and, in locally distributed fresh-water limestones, the shells of *Helix* and *Planorbis.* The Thracian beds lie on the Congeria beds of the Lower Pliocene.

thrasher^2, *n.*—**Bahama thrasher,** a bird, *Harporhynchus plumbeus,* related to the familiar brown thrasher, but peculiar to the Bahama Islands.—**Palmer's thrasher,** the bow-billed thrasher, *Harporhynchus curvirostris palmeri.*

thread, *n.* 12. *pl.* A defect in glass articles: same as ★*string,* 15.—**Axial thread.** See ★*axial.*—**British Association thread,** a screw-thread for bolts and nuts proposed by a committee of the British Association for the Advancement of Science in 1882. It has rounded tops and bottoms, similar to the Whitworth, and is taken from Professor Thury's Swiss system.—**Conjunctive threads,** in *biol.,* the achromatic filaments of the nuclear spindle.—**Eve's thread.** Same as *Adam's needle and thread.*—**Floating thread,** in *weaving,* a thread that passes over several other threads without interlacing with them.—**Male thread,** the thread of a bolt, in distinction from the thread of a nut, which latter is called a *female thread* or *internal thread.*—**Metal thread,** a fine metallic wire which can be woven or used for textile purposes, made from gold, silver, copper, or a similar metal.—**Müller's thread,** the common terminal thread of all the ovarian tubes in an insect's ovary.—**Nuclear thread,** an indefinite term applied sometimes to the elements of the achromatic linin network of the cell-nucleus, sometimes to elements of the chromatin reticulum or to the chromosomes.—**Thread blight.** See ★*blight.*—**Whitworth thread,** the British standard for bolts, nuts, and taps. The angle of the helices is 55° instead of 60°, as in the American or United States standard, and the depth of the thread is 0.96 of the pitch instead of ⅞ths. The points and roots are rounded off to about ⅙ of the depth each instead of using a flat top or the sharp angle used in the United States. It was proposed and adopted by Sir Joseph Whitworth of Manchester and by him impressed upon English engineering and manufactures.

thread, *v. t.* 5. In *elect.,* to pass through and link with, as the lines of force of the magnetic field of a D'Arsonval galvanometer pass through the suspended coil of the instrument.

thread-board (thred′bōrd), *n.* A board directly over the spindles of a ring-spinning machine, for holding guide-wires for the thread. *Nasmith,* Cotton Spinning, p. 328.

thread-fish, *n.* 3. A common name of *Alectis ciliaris,* a carangoid fish ranging northward from the tropics on both American coasts to Mazatlan and Cape Cod.

thread-gage, *n.* 2. A gage used to determine the accuracy of screw-threads, cut by machine, as to depth, pitch, and conformity to standard. If the thread is cut with a taper, as on taps and pipes, a thread-gage is used to test the accuracy of these elements also.—**Worm-thread gage,** a special form of screw-gage for measuring the threads of worm-gears.

thread-guide, *n.* 2. In a ring-spinning machine, a wire device for guiding the thread to the spindle.

threading (thred′ing), *p. a.* [*thread, v.,* 5.] Forming a link with the windings of an electric circuit: said lines of force of a magnetic circuit passing through a coil of wire.

threadlet (thred′let), *n.* [*thread* + *-let.*] A delicate or minute thread.

thred, *n.* and *v.* A simplified spelling of *thread.*

three, *a.*—**Three-circle goniometer.** See ★*goniometer.*—**Three-point problem,** a problem employed in surveying for determining a certain point when three signals are in view.—**Three-wire system.** See ★*wire*^{1}.

three-bagger (thrē′bag″ėr), *n.* In *base-ball,* a hit which enables the striker to run three bases; a three-base hit. [Slang.]

three-birds, *n.* 2. Same as ★*nodding-cap.*

three-color (thrē′kul″or), *a.* Characterized by the use of three colors; specifically, printed in three colors. See ★*three-color process,* below.

> The novelty of reproducing the author's very effective paintings by means of the "*three-colour*" process. *Geog. Jour.* (R. G. S.), XV. 193.

Three-color process, the process of producing pictorial prints from three plates or printing-surfaces, made by photography, that respectively convey to the print the three primary colors yellow, blue, and red. Secondary and tertiary colors are produced by successive overlappings of the prints of primary colors. A fourth plate of black is sometimes added when the outlines of form are indistinct or when shading is not enough marked. To improve the general effect a special engraving of parts of each plate is often required. The three-color process is applicable to the methods used in typographic, lithographic, and gelatin printing.

three-crank (thrē′krangk), *a.* Having three cranks on one shaft: an arrangement used with engines or pumps having three cylinders to secure even distribution of turning effect, or, in pumping liquids, a steady flow from the pumps. *Norris and Morgan,* High-speed Steam-engine, p. 22.

Three-fold symmetry. See ★*symmetry,* 6.

three-line (thrē′līn), *n.* A trigram; a system of 3 coplanar straights.

three-on (thrē-on′), *a.* Said of an arrangement of pages for presswork by which three copies in triplicate can be printed together on the same sheet by the same operation. See ★*two-on.*

three-phase (thrē′fāz), *a.* In *elect.,* pertaining to or employing a system of electric distribution in which are used three alternating currents differing in phase from one another by one third of a period, so that they reverse in direction successively at equal intervals of time: that is, first current 1, then current 2, then 3, then again 1, etc., reverses.

> The electric energy is generated by *three-phase* machines at 20,000 volts. *Nature,* April 23, 1903, p. 588.

Three-phase alternater, a generator for the production of the three alternating electric currents of different phase for use on a three-phase circuit.—**Three-phase circuit,** an electric circuit supplied with three alternating currents differing in phase from one another by one third of a cycle.—**Three-phase generator.** See ★*generator.*—**Three-phase system,** a system for the production and distribution of three alternating electric currents differing from one another by a third of a cycle, and the utilization of such currents.—**Three-phase transformer.** See ★*transformer.*

three-phaser (thrē′fā″zėr), *n.* In *elect.,* a three-phase alternating-current generator or motor. *Jour. Brit. Inst. Elect. Engin.,* 1902–1903, p. 751.

three-rhythm (thrē′riᴛʜm), *n.* 1. A rhythm of which the unit is trimembral; dactylic or anapestic rhythm.

> The dactyl is undoubtedly the simplest *three-rhythm.* *Amer. Jour. Psychol.,* XII. 540.

2. A bimembral, iambic or trochaic, rhythm as estimated in terms of time (one long syllable = two short syllables).

> No circumstance in the history of æsthetics is so curious as the overpowering passion of the English ear for 3-rhythm. *S. Lanier,* Sci. of English Verse, p. 141.

threesome, *a.* II. *n.* In *golf,* a match in which one player, playing his own ball, plays against two opponents with one ball, each opponent playing alternate strokes.

> In a *threesome* or foursome the partners shall strike off alternately from the teeing-grounds, and shall strike alternately during the play of the hole. *Encyc. Brit.,* XXIX. 26.

three-stringed (thrē′stringd), *a.* Having three strings: said of musical instruments: as, a *three-stringed* viol.

three-throw (thrē′thrō), *a.* Having three cranks. Usually these cranks are at 120° with each other so as to produce or consume more evenly distributed turning effect. In a three-throw pump or engine each crank is connected to its own cylinder.

> At present the current from the turbine is taken to a Riedler pump at the shaft bottom, and to a small *three-throw* pump. This takes up less than half the power available, and that in reserve will be used to duplicate the shaft pump or for haulage purposes. *Elect Rev.,* Sept. 24, 1904, p. 535.

Three-way cock or **valve.** See ★*cock*^{1}.

thresh *v. t.* 3. In *wire-drawing,* to raise (a wire rod or bar of small section) high in the air and throw it heavily against a flat smooth plate on the ground in order to straighten it or to loosen the scale and dirt. *Stand. Dict.*

thresherman (thresh′ėr-man), *n.* One who pursues the occupation or business of threshing; a thresher.

> But there is no need for the *thresherman* to be victimized by such mis-statements. *Threshermen's Rev.,* June, 1906, p. 11.

threshold, *n.*—**Absolute threshold of difference.** See ★*absolute.*—**Discriminative threshold.** See *discriminative* ★*limen.*

threshold-plate (thresh′ōld-plāt), *n.* A threshold or saddle made of metal, as brass or cast-iron.

thret, threten. Simplified spellings of *threat, threaten.*

thril, *v.* and *n.* A simplified spelling of *thrill.*

thriller (thril′ėr), *n.* [*thrill, v.,* + *-er.*] 1. Something which thrills or affects with a tingling sensation of pleasure or, occasionally, pain; a shocker; specifically, a shilling shocker. [Colloq.]

> The British-Boer spectacle, "Best of Friends' and . . . home-made *thriller,* "The Evil Men Do," have shared alike in the disfavor of the below-Fourteenth-Street masses, whose fancy remains true to such unfailing heart-wringers as "No Wedding Bells for Her." *The Forum,* Jan.–March, 1904, p. 415.

2. One who thrills others; specifically, a writer of 'thrillers' or shilling shockers. [Colloq.]

> Come, then, ye gentles and geniuses, ye poets, . . . ye *thrillers* and movers with the pen. *J. Ralph,* War's Brighter Side, vii.

thrimes (thrim′es), *n.* [AS.] Same as ★*trimes.*

thripid (thrip′id), *n.* and *a.* I. *n.* A member of the family *Thripidæ.*

II. *a.* Having the characters of or belonging to the thysanopterous family *Thripidæ.*

Thrissops (thris′ops), *n.* [NL., < Gr. *θρίσσα,* a fish, + ὤψ, eye.] A genus of rather large teleostean fishes found in Jurassic and Cretaceous rocks of Europe.

thro^4 (thrō), *n.* A Burmese viol with three silk strings, a flat elliptical body, and a carved head, in general appearance curiously resembling the violin; also *tarau.*

throat, *n.* 3. (*n*) Any passage from large to small cross-section, as in a pipe which leads off from a main, where in the neck of the joint the area is enlarged to give easy flow and smooth curves. (*o*) The top or head opening of a shaft or blast-furnace through which the charges of ore fuel and flux are dumped by gravity. (*p*) The curve where the flange of railway car-wheels joins the straight cylindrical or conical part of the tread. This throat part bears against the upper corner of the head of the rail. (*q*) In *geol.,* the upper portion of a volcanic conduit, which is adjacent to the crater.

> As soon as the *throat* of the crater is thoroughly cleared, and the climax of the eruption is reached, a mass of incandescent lava rises and wells over. *Nature,* Aug. 21, 1902, p. 406.

(*r*) The front part of the mold-board of a plow.

> That part which perforates the soil . . . and which is usually termed the *throat* or breast. *Rees,* Cyclopedia, article 'plough.'

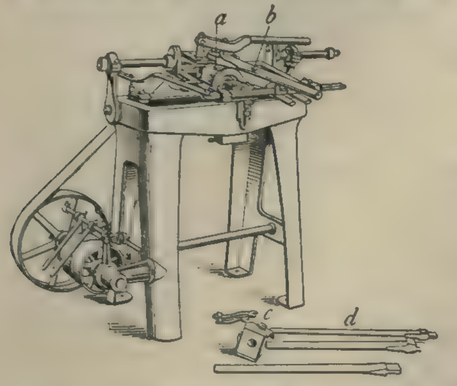
Hospital sore throat, ulcerative pharyngitis.

throat-fringe (thrōt′fring), *n.* A line of very long hair running lengthwise on the throat of a mammal.

> In the winter coat the narrowness and banded coloration of the *throat-fringe* must likewise be noted as a well-marked feature. *Proc. Zool. Soc. London,* 1896, p. 932.

throating-line (thrō'ting-līn), *n.* Same as *cutting-down line.*

throating-machine (thrō'ting-mạ-shēn″), *n.* In *wood-working*, a machine for shaping the throat of a wagon- or carriage-wheel spoke. Small machines employ a horizontal cutter-head having suitable cutters, and must be fed by hand, the tenoned spoke being held in the machine by the operator until the throat, or tapering abutment that forms the base of the spoke when in place in the wheel, is shaped out. Large machines are self-feeding and automatically shape the throat to any required pattern. The capacity is 15,000 spokes a day. It is sometimes combined with other machines, as in the tenoning-, mitering-, and throating-machine.



Throating-machine.

a, cutter; *b*, spoke in position for work; *c*, extra cutter for spoke of different size; *d*, sample of throated spokes.

throatlatch, *n.* 2. The upper under-part of a horse's throat, around which the throatlatch of the harness passes: used in describing the characters or 'points' of a horse.

throat-piece, *n.* 2. The wooden part of a tennis-racket where the frame or rim is bent together to meet the handle.

throat-plate (thrōt'plāt), *n.* The exterior plate of a locomotive fire-box, which is fastened to the lower segment of the cylindrical barrel. Its upper edge is flanged forward to receive the barrel-plate and the sides are flanged backward to receive the sides of the water-legs.

throat-ring, *n.*—**Waldeyer's lymphatic throat-ring**, the faucial, pharyngeal, and lingual tonsils, which form a broken ring of lymphoid tissue encircling the beginning of the respiratory tract. Also called *Waldeyer's tonsillar ring. Med. Record*, Feb. 7, 1903, p. 228.

thrombase (throm'bās), *n.* [Gr. *θρόμβος*, a lump, clot, + *-ase.*] The ferment which causes the clotting of blood; thrombin: same as *fibrin ferment.*

thrombin (throm'bin), *n.* [Gr. *θρόμβος*, a lump, clot, + *-in*^{2}.] The fibrin ferment which causes the coagulation of the blood; thrombase.

thrombocystis (throm-bọ-sis'tis), *n.* [NL., < Gr. *θρόμβος*, a lump, clot, + *κύστις*, bladder, cyst.] A cyst-like inclosure of the blood effused into a soft tissue such as the brain.

thrombogen (throm'bọ-jen), *n.* [Gr. *θρόμβος*, a lump, clot, + *-γενης*, -producing.] A substance assumed to be present in the blood-plates which converts fibrinogen into fibrin; the proenzym of the fibrin ferment. *Amer. Jour. Clin. Med.*, Oct., 1907, p. 1227.

thrombogenic (throm-bọ-jen'ik), *a.* [As *thrombogen* + *-ic.*] Inducing coagulation.

thromboid (throm'boid), *a.* [Gr. *θρομβοειδής*, full of clots, clotty, < *θρόμβος*, a clot, + *εἶδος*, form.] Resembling a blood-clot or a thrombus.

thrombokinase (throm-bọ-kin'ās), *n.* [Gr. *θρόμβος*, a clot, + E. *kinase.*] A kinase found in the tissues and the formed elements of the blood, which in the presence of a calcium salt activates the proenzym of the fibrin ferment, thrombogen.

thrombolite (throm'bō-līt), *n.* [Gr. *θρόμβος*, a clot, + *λίθος*, a stone.] An amorphous emerald-green mineral occurring with malachite at Rézbánya, Hungary. It contains the oxids of copper and antimony, with water, but its homogeneity is doubtful.

thrombosin (throm'bō-sin), *n.* [Gr. *θρόμβος*, a clot, + *-ose* + *-in*^{2}.] According to Lilienfeld's conception of the process of coagulation, the substance formed on the decomposition of fibrinogen by ★leuconuclein (which see). This substance combines with a calcium salt and then constitutes fibrin.

thrombosis, *n.*—**Puerperal thrombosis**, intravenous coagulation of blood occurring occasionally after childbirth.

thrombus, *n.*—**Marasmic thrombus**, a clot formed within a blood-vessel, due to stagnation of the circulation from weakness of the heart or general debility.—**Milk thrombus.** See ★*milk-thrombus.*—**Thrombus neonatorum.** Same as *cephalæmatoma.*

throne-room (thrōn'röm), *n.* In a royal palace, the chief audience-room where the throne is placed.

> It was upon this example that the restoration of the *Throne-room* at Knossos was based.
> *Th. Fyfe*, in Jour. Roy. Inst. of Brit. Architects, X. 114.

throscid (thros'id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Throscidæ.*

II. *a.* Having the characters of or belonging to the family *Throscidæ.*

throstle-spinning (thros'l-spin-ing), *n.* The spinning of yarn on a throstle or fly-frame. *Webb*, Indust. Democracy, I. 424.—**Throstle spinning-machine.** Same as *throstle*, 2.

throstle-yarn (thros'l-yärn), *n.* Yarn made on a throstle spinning-machine.

throttle, *v. t.* 4. In *elect.*, to reduce (the flux in a magnetic circuit) by diminishing the cross-section of the iron traversed by the lines of force, or by the introduction of joints or air-gaps.

> Every such *throttling* of the magnetic circuit will directly produce a diminution of the mean flux of induction. *H. Du Bois*, The Magnetic Circuit, p. 168.

throttle-governor (throt'l-guv″ėr-nọr), *n.* A governor which regulates the speed of an engine by throttling the steam admitted to the cylinder, thus changing the pressure on the piston.

throttle-pipe (throt'l-pīp), *n.* The vertical pipe leading from the dry pipe of a locomotive to the throttle-valve.

throttling-bar (throt'ling-bär), *n.* A metal bar, of uniform width and varying thickness, placed on the inside of the hydraulic cylinder of a gun-carriage to limit the recoil of the gun by varying and gradually closing the orifice in the piston-head. *Jour. U. S. Artillery*, Nov.–Dec., 1903, p. 297.

through^1, *adv.*—**Through-and-through**, noting a system of mining the softer bituminous coal, when no pretense is made to sizing the lumps. The product is known in the United States as 'run of mine' coal. [British.]

through^1, *a.* **II.** *n.* In plowing and other field-work, a single passage across the field; half of a bout.

> The entire width of the cut of the gang is twenty-four inches, from which can be computed the number of "*throughs*" necessary to clean a row.
> *Catalogue John Deere Plow Co.*, 1905–06, p. 121.

through-key (thrö'kē), *n.* A key or pin the hole for which goes entirely through the element to be fastened, so that, if desired, the key may also go through and protrude on the side opposite the head. *Whitham*, Const. Steam Engin., p. 81.

through-rod (thrö'rod), *n.* A rod which runs from end to end of the structure of which it is a part, or which comes out at both ends of such a structure in order to be fastened there. *Whitham*, Const. Steam Engin., p. 81.

throw^1, *v.* **I.** *trans.*—**To throw a fit**, to suffer from an epileptic seizure; hence, to act in an excited way. [Slang.]—**To throw down.** (*c*) In *chem.*, to precipitate; separate in solid form from a solution, either by chemical action or by the addition of a liquid miscible with the solvent, but incapable of holding in solution the solid which is separated. Thus, silver may be thrown down as silver chlorid from a solution in water of silver nitrate by the addition of common salt, or camphor may be thrown down from a solution of it in alcohol by the addition of water. *Philos. Trans. Roy. Soc.* (London), 1899, ser. B, p. 218.—**To throw in.** (*e*) In *printing*, to distribute composed type, throwing, with rapid motion of the hand, each type in its proper box. See *distribute, v. i.*, 2.

II. *intrans.*—**To throw over**, in a steam-engine, to run over; to turn in such a direction that the crank-pin will rise when it moves from the dead-center next to the cylinder: said only of horizontal or inclined engines.—**To throw under**, in a steam-engine, to run under; to turn in such a direction that the crank-pin will descend when it moves from the dead-center next to the cylinder: said only of horizontal or inclined engines.

throw^1, *n.* 10. A crank. [Eng.]—11. The length or lever-arm of a crank.—12. In *elect.*, the angular movement or swing of the needle of a galvanometer, with incompletely damped motion, measured from the zero-point to the turning-point of its first excursion. *H. Hertz* (trans.), Electric Waves, p. 190.

throw-disk (thrō'disk), *n.* A crank-disk (see ★*throw, n.*, 10). Such a disk may be, in design, a plain disk-crank or wrist-plate, or it may be slotted and with the pin adjustable in the slot by a screw. This latter arrangement is much used in slotting-machines and for reciprocating feed-motions, where the element driven by the pin should have a throw or travel of varying or adjustable length.

Thrower's wheel, a potter's wheel.

throwing-board (thrō'ing-bōrd), *n.* See ★*spear-thrower.*

throwing-club (thrō'ing-klub), *n.* A weapon somewhat like a club which is thrown at the enemy.

throwing-iron (thrō'ing-ī″ėrn), *n.* A peculiar knife-like weapon used for throwing: found among certain tribes of Central Africa. *Ratzel* (trans.), Hist. of Mankind, III. 68.

throwing-knife (thrō'ing-nīf), *n.* A knife used as a weapon and intended to be thrown at the enemy. Such knives are common in parts of Africa, especially among the Mombuttus, and are of various shapes, often with a number of secondary projections or arms on the principal blade. *Ratzel* (trans.), Hist. of Mankind, III. 72.

throwing-machine (thrō'ing-mạ-shēn″), *n.* 1. A machine for forming threads by twisting filaments, as in silk manufacture.—2. A form of simple weaving-machine in which the shuttle is thrown athwart the warp-threads.—3. A primitive form of lathe for rough turning.—4. A potter's wheel, usually driven by mechanical power.

throwing-net (thrō'ing-net), *n.* A net designed to be thrown by the hand, as from the shore or a boat; a casting-net.

> The *throwing*- or casting-*nets*, circle-nets, sweep-nets, modified trammel-nets, long nets like those for sand-eels with a median pocket, push-nets, conical wicker traps, elaborate weirs of stones which closely resemble those at present in use in Japan, besides baited and unbaited hooks, show how varied these methods [used on the Nile] are.
> *Nature*, Nov. 7, 1907, p. 10.

throw-line (thrō'līn), *n.* Same as ★*trip-line.*

throw-out (thrō'out), *n.* Same as ★*frog*^{2}, 4 (*b*).

thru, *prep.*, *adv.*, and *a.* A simplified spelling of *through.*

thrum^1, *n.* 7. The character of being thrum-eyed.

> Short style or "*thrum*" is a dominant—with a complication. *Nature*, Aug. 25, 1904, p. 412.

thruout, *adv.* and *prep.* A simplified spelling of *throughout.*

thrush^1, *n.*—**Austral thrush.** Same as *Port Jackson* ★*thrush.*—**Fen thrush**, a local English name for the mistlethrush, *Turdus viscivorus.*—**Native thrush**, the Australian thick-headed shrike, *Pachycephala olivacea.*—**Port Jackson thrush**, the best known species of Australian shrike-thrushes, the *Colluricincla harmonica* of Latham.—**Whistling-thrush**, an East Indian bird of the genus *Myiophoneus*, belonging to the family of babblers, *Timeliidæ.*

thrust^1, *n.* 6. In *geol.*, a compressive strain in the crust of the earth, which, in its most characteristic development, produces reversed or thrust faults.

> Horizontal differential movements had occurred, and local *thrusts* and shear slips took place again, fragmenting the previous thrust-masses and igneous intrusions.
> *Nature*, Feb. 12, 1903, p. 359.

7. In *marine engin.*, the force exerted endwise on a propeller shaft to drive a vessel ahead. An *indicated thrust* is a fictitious thrust which would be exerted if the whole indicated horse-power of the engine was used to drive the vessel ahead at a speed equivalent to the rate of advance of the screw turning in a solid block instead of in water. An *effective thrust* is the real thrust equal to the resistance which the vessel opposes to motion through the water.

8. Abbreviation of *thrust-bearing*, ★*thrust-block*, or *thrust-box.*

> For each wheel is provided a 24-in. high-pressure gate valve, with roller bearing *thrusts.*
> *Elect. World and Engin.*, April 11, 1903, p. 646.

9. See the extract.

> In one of these [mines] 19,000 "shots" or "*thrusts*" have been made by four machines in 12 months, which yielded 40,000 tons of coal. [Hydraulic mining cartridge.]
> *Sci. Amer. Sup.*, Feb. 21, 1903, p. 22700.

Horseshoe thrust, a form of thrust-bearing used for taking the end thrust of a shaft. It consists of a series of U-shaped blocks against which collars on the shaft bear.

thrust-bearing, *n.*—**Ball thrust-bearing.** Same as ★*ball-thrust.*

thrust-block (thrust'blok), *n.* A massive bearing for the propeller-shaft of a marine engine, constructed so as both to support the shaft and to resist motion in the direction of its length. Whatever force the propeller exerts to drive the vessel forward must be opposed by an equal reaction in the hull, and the thrust-block is designed to provide this. In the older and common form, there was formed on the length of shaft just aft of the engine a series of rings or collars greater in external diameter than the shaft. These collars fitted into corresponding grooves in the box or bearing, and the surfaces of these collars or rings, which were at right angles to the length of the shaft, received and resisted the thrust. If for any reason they wore unequally the area for thrust resistance was proportionately reduced and at once the bearing began to heat, necessitating devices for cooling the contact-surfaces. The bearing-surfaces of the box are usually cast with hollow channels so that water can easily be circulated through them. To enable worn areas to be easily and cheaply replaced, a modern design makes the contacts removable elements, having somewhat a horseshoe form, which fit into recesses in the bearing and can be taken out easily to enable new ones to be put in. Roller thrust-bearings, in which the rolling friction of balls or rollers in a suitable track replaces the sliding friction of the other type, are coming into favor. Thrust-bearings are also used in which a fluid, such as oil or water, is forced under pressure between the contact-areas of shaft-collar and bearing-groove, so as to prevent these from coming together for metallic contact and preserving a condition of fluid friction where the pressure of the thrust is exerted. Thrust-bearings of all types are also used for vertical shafts to support their weight.

thrust-collar (thrust′kol″ạr), *n.* See ★*thrust-block.*

thrust-fault (thrust′fâlt), *n.* In *geol.*, a reversed fault; a fault along an inclined fissure whose upper side has been forced by compressive strain to slide up on its lower.

> The overfolding and repetition of strata by *thrust-faults* are well shown in numerous sketches and diagrams. *Nature*, Aug. 20, 1903, p. 375.

thrusting, *n.* **3.** In *geol.*, the development of reversed faults by compression or thrust.

> The structure of the Basin ranges is believed to be the result of crustal movements of uplift and subsidence accompanied by faulting, *thrusting*, and erosion at different stages of Paleozoic time. *Science*, Jan. 2, 1903, p. 26.

thrust-post (thrust′pōst), *n.* A post, either fastened in the ground or forming a part of a structure, so arranged as to take the thrust from a load or force.

thrust-ring (thrust′ring), *n.* A collar turned on a thrust-shaft and in the thrust-bearing. *Whitham*, Const. Steam Engin., p. 102.

thrust-screw (thrust′skrö), *n.* A screw, with or without the power of end-long adjustment, which takes the thrust of a revolving spindle. *Lockwood*, Dict. Mech. Engin. Terms.

thrust-shaft (thrust′shȧft), *n.* That portion of a propeller-shaft on which are the thrust-bearings.

thrypsis (thrip′sis), *n.* [NL., ‹ Gr. θρίψις, a breaking in pieces, ‹ θρύπτειν, break in pieces.] In *surg.*, comminution of the bone in fracture.

Thuja, *n.* See *Thuya.*

thujetin, thujigenin, thujin, thujone. See ★*thuyetin*, ★*thuyigenin*, ★*thuyin*, ★*thuyone.*

Thujopsis (thū-jop′sis), *n.* [NL. (Siebold and Zuccarini, 1844), ‹ *Thuja* + Gr. ὄψις, appearance, resemblance.] A monotypic coniferous genus, comprising *T. dolobrata*, a Japanese tree sometimes planted for ornament. It is closely related to *Thuya*, being distinguished chiefly by having 4 to 5 ovules, rather than 2, under each scale. It is a handsome tree for lawn planting, hardy in southern New England, bearing glossy green leaves marked with a white band beneath. There are horticultural forms. See *Thuyopsis*

thulia (thū′li-ạ̈), *n.* [NL.] The oxid of thulium.

Thulite stone. See ★*stone.*

thulium, *n.* The name was given in 1879, by Cleve, to a supposed new element present in the compounds of Mosandu's erbium extracted from gadolinite. The evidence of its existence was found in an examination of the absorption-spectra of products of the fractionation of erbium salt solutions, but it is very doubtful whether the separation is complete and whether thulium is to be considered as a distinct and single element.

thum², *n.* and *v.* A simplified spelling of *thumb*¹.

thumb¹, *n.* **6.** In *geol.*, a columnar projection of eruptive rock.

> In how far the structures may or may not be identical only a new study of the Indian field can positively determine; but I believe that the Indian figures will be found to represent the extremely acute '*thumbs*' and pinnacles which surmount the trap plateau of different parts of Greenland (Omenak Promontory, Disko Island), whose origin through erosion can not be questioned. *Science*, May 20, 1904, p. 803.

thumb¹, *v. t.* **4.** To cover with the thumb, as the vent of a muzzle-loading cannon.

thumb-fingered (thum′fing″gėrd), *a.* Having the 'fingers all thumbs'; being as awkward in delicate manipulations as if using the thumb only.

> Tridectomy must be skilfully and delicately performed. No *thumb-fingered* tyro need attempt it with hope of success, for in care and delicacy and expertness lie the hopes of brilliant achievement here. *Med. Record*, Feb. 28, 1903, p. 335.

thumb-index (thum′in″deks), *n.* An index, especially an alphabetical one, placed on the outer edges of the pages of a book and so arranged (by cutting away a small portion of the over- or underlying margins) that each letter is visible when the book is closed: the book can be opened at the place desired by placing a 'thumb' or finger upon the proper exposed letter of the index.

thumb-lancet (thum′lȧn″set), *n.* The usual form of lancet, having a broad two-edged blade. *Med. Record*, May 30, 1903, p. 853.

thumb-loose (thum′lös), *n.* The method of loosing the string of a bow with the thumb.

thumb-mark, *n.* **2.** The imprint of the ball of the thumb used as a means of identification, as in the case of a criminal. It is used also as a seal and as the signature of an illiterate, "his mark." See ★*thumb-print.*

thumb-mold (thum′mōld), *n.* In *ceram.*, a small plaster or clay mold, usually bearing intaglio designs, in which the plastic clay is pressed with the thumb in making ornaments for the decoration of ware.

thumb-nail (thum′nāl), *n.* and *a.* **I.** *n.* **1.** The nail of the thumb.—**2.** Hence, figuratively, something as small as the nail of the thumb; something quite small, as a sketch or a volume.

II. *a.* As small as the nail of the thumb; hence, quite small: as, a *thumb-nail* sketch; a *thumb-nail* series of books.

> He shaded his eyes, he stepped backward and forward; he gave, as it were, a *thumb-nail* sketch of a professional critic at a private view. *John Oliver Hobbes*, Flute of Pan, p. 62.

thumb-plane (thum′plān), *n.* A cabinet-makers', joiners', or piano-builders' plane, four or five inches long, with an iron an inch wide or less, used for light work where larger tools cannot be handled: so called from its diminutive size. [Eng.]

thumb-print (thum′print), *n.* The impression or mark of the inner surface of the terminal joint of the thumb, made upon any receptive surface; especially, the print formed by inking this surface of the thumb and pressing it on paper. Such impressions or prints show the arrangement of the lines on the surface of the skin, which vary in different persons, and are thus valuable for purposes of identification. See ★*finger-print.*

thumb-ring, *n.* **3.** A ring worn on the thumb in archery.

> *Thumb ring*, a ring worn on the thumb in archery by those peoples that use the Mongolian release; called sefin by the Persians. *Smithsonian Rep.*, 1893, p. 637.

thumb-wheel (thum′hwēl), *n.* **1.** A small hand-wheel with projecting pins against which the thumb of the operator may press to turn the valve-spindle attached to the wheel.

> The spark-lead-controlling lever is at the right of the driver's seat, while on the left of his seat is a *thumb-wheel* for regulating the supply of gasoline. *Sci. Amer.*, Jan. 17, 1903, p. 43.

2. A wheel or segment attached to and forming part of a larger hand-wheel, and so arranged that it can be turned by the thumbs of the hands which are controlling the larger wheel: used in motor-car practice.

thump, *n.* **2.** *pl.* Beating of the chest in horses due to spasmodic contractions of the diaphragm. It is similar to hiccough in man. *U. S. Dept. Agri.*, Rep. on Diseases of the Horse, 1903, p. 140.—**3.** In machinery, the dull sound caused by lost motion at some joint where the stress is alternately in one direction and another, and the hole is slightly larger than the pin from wear or mal-adjustment.

thunder-cloud, *n.*—**Kick of the thunder-cloud.** See ★*kick.*

thunder-squall (thun′dėr-skwâl), *n.* A squall of wind accompanied by thunder.

thunder-storm, *n.*—**Thunder-storm belt** a long area within which thunder-storms occur almost simultaneously, and which advances broadside on, for one or more days, steadily southeastward or northeastward. Within this belt the storms may die out during the day or night and revive again on the next day farther eastward.

Thunnus (thun′us), *n.* [NL., ‹ L. *thunnus*, ‹ Gr. θύννος, a tunny. See *tunny.*] A genus of scombroid fishes, of the open seas, which attain a great size.

Thur., Thurs. Abbreviations of *Thursday.*

thuribuler (thū-rib′ų-lėr), *n.* [LL. *thuribularius*, ‹ *thuribulum*, a censer. See *thurible.*] Same as *thurifer.*

Thuringian, *n.* **2.** The dialect of German spoken in Thuringia.—**3.** In *geol.*, the upper third of the Permian system, which is typically developed in Thuringia, Germany. Same as *Zechstein.*

thuro, *prep.* and *adv.*, *a.* and *n.* An amended spelling of *thorough.*

Thursday, *n.*—**Black Thursday.** See ★*black.*

thutter (thut′ėr), *v. i.* [Onomatopœic.] To make a dull, vibrating sound. See the extract. [Rare.]

> Suddenly, . . . there boomed out of the dark a *thuttering*, shaking roar, that swelled to a shriek and died away—the voice of the great steam foghorn of the Skakit Light. *J. C. Lincoln*, Partners of the Tide, vii.

thuyetin (thū′yẹ-tin), *n.* [Also *thujetin;* ‹ *Thuya, Thuja,* + *-et* + *-in*².] A yellow compound, $C_{14}H_{14}O_8$, prepared by the action of dilute acids on thuyin.

thuyigenin (thū-yij′e-nin), *n.* [Also *thujigenin;* ‹ *Thuya, Thuja,* + *-gen* + *-in*².] A colorless compound, $C_{14}H_{12}O_7$, contained in small quantity in the green parts of *Thuja occidentalis*, and prepared from thuyin by the action of dilute acids. It crystallizes in microscopic needles.

thuyin (thū′yin), *n.* [Also *thujin;* ‹ *Thuya, Thuja,* + *-in*².] A lemon-colored glucoside, $C_{20}H_{22}O_{12}$, contained in the green parts of *Thuja occidentalis.* It crystallizes in microscopic quadratic plates.

thuyone (thū′yōn), *n.* [Also *thujone;* ‹ *Thuya, Thuja,* + *-one.*] Same as ★*tanacetone.*

thwart², *n.* **2.** See the extract. [Rare.]

> The Christian cross is unique in its conception. Prehistoric crosses are the same in form, but different in interpretation. The difference in meaning is important. For the sake of distinguishing between the two, let us call the figure of intersecting lines a *thwart*, and reserve the word cross for its original significance, viz., a martyr instrument. *Science*, Jan. 24, 1902, p. 126.

thwarter, *n.* **2**†. One who crosses or goes athwart.

> Xenomanes the great traveller and *thwarter* of dangerous ways. *Motteux*, trans. of Rabelais' Pantagruel, iii. xlix.

thwartwise (thwârt′wīz), *a.* Athwart; being at right angles to the line of sight: as, *thwartwise* motion. Such motion of a star is deducible from the star's proper motion when its parallax is known.

> Thus the rate of the solar translation through space, valued little better than conjecturally from the proper, or *thwartwise* motions of the stars, can be derived securely and at once from their radial motions. *A. M. Clerke*, Problems in Astrophysics, p. 4.

T. H. W. M. An abbreviation of *Trinity high-water mark.*

Th. X. An abbreviation of *thorium X.* See ★*thorium.*

Thyestes (thī-es′tēz), *n.* [NL., ‹ Gr. θυέστης, a pestle.] An extinct genus of fishes belonging to the subclass *Ostracodermi*, of the family *Cephalaspidæ*, characterized by the presence of three or four series of dorsolateral scales fused into a continuous plate behind the head-shield. The body is depressed, and ovoid in cross-section. From the Upper Silurian and Lower Old Red Sandstone.

Thyiades (thī′i-a-dēz), *n. pl.* [Gr. Θυιάδες, pl. of Θυιάς, ‹ Θυία, Thyia, who was said to have been the first who sacrificed to Dionysus. Otherwise θυιάς is defined as a mad or inspired woman, a bacchante, ‹ θύειν, sacrifice, or θύειν, rush, storm, rage.] In *Gr. antiq.*, daughters of Thyia, the mother of Delphus; women who went yearly to Mount Parnassus to celebrate the Dionysiac orgies.

thylacitis (thī-lạ-sī′tis), *n.* [NL., ‹ Gr. θύλακος, a bag, + *-itis.*] Acne rosacea.

thylacothere (thī′lạ-kō-thēr″), *n.* [Gr. θύλακος, a bag, + θηρίον, a wild beast.] An individual of the genus *Thylacotherium*, a minute, presumably marsupial animal from the Great Oölite (Jurassic) of Stonesfield, near Oxford, England. It is known only from the lower jaw.

thymacetin (thī-mas′e-tin), *n.* [*thym*(*ol*) + *acetin.*] A trade-name of acetaminothymol or acetparaminothymol ethyl ether, $C_2H_5\overset{1}{O}C_6H_1$-$(\overset{4}{N}HOCCH_3)(\overset{2}{C}H_3)\overset{5}{C}H(CH_3)_2$. It is a colorless crystalline compound, used in medicine as a hypnotic.

Thymallidæ (thī-mal′i-dē), *n. pl.* [NL., ‹ *Thymallus* + *-idæ.*] A family of fishes commonly known as the graylings, inhabiting rivers of cold or arctic regions.

Thyme camphor. See ★*camphor.*

thymectomize (thī-mek′tọ̄-mīz), *v. t.*; pret. and pp. *thymectomized*, ppr. *thymectomizing.* [NL. *thymus*² + Gr. ἐκτομή, excision, + *-ize.*] To operate upon by removing the thymus gland.

thyme-dodder (tīm′dod″ėr), *n.* See ★*dodder*[1].

thymela (thim′e-lä), *n.* See *thymele.*

thymeleaceous (thim″e-lē-ā′shius), *a.* [NL. *Thymeleace(æ)* + *-ous.*] Belonging or pertaining to the *Thymeleaceæ.*

thymelic (thi-mel′ik), *a.* Of or pertaining to the thymele.

thymene (thī′mēn), *n.* [Gr. θύμον, thyme, + *-ene.*] A terpene from oil of thyme, identical with levopinene.

thymetic (thi-met′ik), *a.* [Gr. θυμός, soul.] See the extract. [Rare.]

> His [Jesus'] anabasis of resurrection from the depths of humiliation, renunciation, and self-immolation to Deity itself is the Eternal Gospel, for it shows that human nature, in what Reischle calls its *thymetic* core, is sound, resilient, positive, and can not be overwhelmed.
> *G. S. Hall*, Adolescence, II. 338.

thymic, *a.* **2.** Noting an acid, a colorless compound, $C_{16}H_{25}O_{12}N_3P_2$, obtained by the action of water on thymus-nucleic acid.

thymine (thī′min), *n.* [*thym(ic)* + *-ine*[2].] A colorless crystalline compound, $C_5H_6N_2O_2$, prepared by the action of dilute sulphuric acid on thymic acid. It may also be obtained synthetically. It sublimes in plates and melts above 250° C. Also called 5-*methyluracil.*

thyminic (thī-min′ik), *a.* Noting an acid, a derivative of the nucleinic acids. On decomposition it gives rise to a carbohydrate complex, thymine, phosphoric acid, and other still unknown bodies. The formula of its barium salt is given as $C_{14}H_{23}N_3O_{12}P_2Ba$.

thymitis (thī-mī′tis), *n.* [NL., < *thymus* + *-itis.*] Inflammation of the thymus gland.

thymoform (thī′mọ-fôrm), *n.* [*thym(ol)* + *form(aldehyde).*] A yellowish, tasteless antiseptic powder of faint thymol odor, obtained by the condensation of thymol and formaldehyde.

thymolize (thī′mọ-līz), *v. t.*; pret. and pp. *thymolized*, ppr. *thymolizing.* [*thymol* + *-ize.*] To add thymol to (a solution) as a preservative.

> The urine should be *thymolized* as soon as passed to prevent fermentation and the precipitation of phosphates.
> *Jour. Exper. Med.*, Oct. 1, 1900, p. 30.

thymonucleinic (thī″mọ-nū-klẹ̄-in′ik), *a.* [NL. *thymus* + *nucleus* + *-in* + *-ic.*] Noting an organic acid, $C_{25}H_{36}N_9P_3O_{20}$, belonging to the group of nucleinic acids, obtained from the cells of the thymus gland.

thymopathy[1] (thī-mop′ạ-thi), *n.* [Gr. θυμός, mind, + πάθος, disease.] Any mental disorder.

thymopathy[2] (thī-mop′ạ-thi), *n.* [Gr. θύμος, a glandular excrescence (thymus), + πάθος, disease.] A disease of the thymus gland.

thymotal (thī′mọ-tạl), *n.* [*thym(ol)* + *-ote* + *-al*[3].] A trade-name of thymol carbonate, a colorless crystalline compound, used in medicine. Also called *tyratol.*

thynnid (thin′id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Thynnidæ.*

II. *a.* Having the characters of or belonging to the family *Thynnidæ.*

thyreal (thī′rē-ạl), *n.* [*thyr(oid)* + *-e-* + *-al*[1].] A hypobranchial; one of the lowest paired bones of the gill-arches of fishes. *Starks,* Synonymy of the Fish Skeleton, p. 518.

thyreo-antitoxin (thī″rẹ-ọ-an-ti-tok′sin), *n.* [*thyreo(id), thyro(id),* + *antitoxin.*] The component or components of the thyroid gland to which the supposed action of this gland in neutralizing certain poisonous products formed during normal metabolism is due. The term, however, is misleading and might better be abandoned in this sense.

thyreoglobulin (thī″rẹ-ọ-glob′ụ-lin), *n.* [*thyreo(id), thyro(id),* + *globulin.*] The essential albuminous principle of the thyroid gland. Together with another albuminous substance belonging to the nucleoproteids it forms the colloid substance of the gland. It is an iodized product and on decomposition yields Baumann's iodothyrin or thyroiodine, which was formerly regarded as the active principle of the thyroid gland. The specific properties of the organ are referable to the globulin in question.

thyreoidin (thī-rẹ-oi′din), *n.* [*thyreoid* + *-in*[2].] **1.** A whitish dry powdered extract of the sheep's thyroid gland, having six times the strength of the fresh gland: an alterative and an antifat.—**2.** Same as ★*iodothyrin.* See also ★*thyreoglobulin.*

thyreolytic (thī″rẹ-ọ-lit′ik), *a.* [*thyreo(id)* + *lytic.*] Causing the destruction of thyroid cells by specific lysins.

thyreoproteid (thī″rẹ-ọ-prō′tẹ-id), *n.* [*thyreo(id)* + *proteid.*] A nucleoproteid found in the colloid material of the thyroid gland in association with thyreoglobulin. The proteid contains no iodine and is physiologically inert.

thyreoprotein (thī″rẹ-ọ-prō′tẹ-in), *n.* [*thyreo(id)* + *protein.*] The specific albumin found in the thyroid gland. See ★*thyreoglobulin.*

thyreotoxic (thī″rẹ-ọ-tok′sik), *a.* [*thyreo(id)* + *toxic.*] Same as ★*thyreolytic.*

thyreotoxin (thī″rẹ-ọ-tok′sin), *n.* [*thyreo(id)* + *toxin.*] A specific cytotoxin directed against the glandular cells of the thyroid.

thyridium (thī-rid′i-um), *n.*; pl. *thyridia* (-ä̤). [NL., < Gr. θυρίς (θυριδ-), a door, a window.] A whitish spot marking a break in the cubital vein of the fore wing of *Trichoptera*; also, any one of several similar spots on the wing-veins of certain saw-flies and earwigs.

Thyrina (thi-rī′nä̤), *n.* [NL. So called from the translucent air-bladder, which shows through the skin; < Gr. θύρα, a door (θυρίς, a window), + *-ina*[1].] A genus of fishes belonging to the family *Atherinidæ,* found on the west coast of Mexico.

Thyris (thī′ris), *n.* [NL. (Laspeyres, 1803), < Gr. θυρίς, a window (?).] **1.** A genus of moths typical of the family *Thyridæ.*—**2.** [*l. c.*] A moth of this genus.—**Mournful thyris,** an American moth, *Thyris lugubris,* dark brown in color, with yellowish translucent spots. Its larvæ feed on the grape.—**Spotted thyris,** an American thyrid moth, *Thyris maculata.*

thyrocele (thī′rọ-sēl), *n.* [*thyro(id)* + Gr. κήλη, tumor.] Bronchocele or goiter.

thyrocricoid (thī-rọ-krī′koid), *n.* [*thyroid* + *cricoid.*] The thyroid and cricoid cartilages considered collectively. *Proc. Zool. Soc. London,* 1901, I. 286.—**Thyrocricoid muscle,** a fibrous muscle running from the thyroid cartilage to the cricoid cartilage and upper laryngeal rings.

thyrogenic (thī-rọ-jen′ik), *a.* [*thyro(id)* + Gr. -γενης, -producing, + *-ic.*] Originating in the thyroid gland or occurring as a result of an altered secretion of that gland. *Buck,* Med. Handbook, V. 143.

thyroglossal (thī-rọ-glos′ạl), *a.* [*thyro(id)* + Gr. γλῶσσα, tongue, + *-al*[1].] Relating to the thyroid body or cartilage and the tongue: noting especially a duct existent in fetal life. See *thyroglossal* ★*duct.*

thyroid, *n.*—**Accessory thyroid,** a mass of glandular tissue identical with the thyroid, but separated from it, not infrequently found at the base of the tongue.—**Thyroid cachexia.** Same as *exophthalmic goiter* (which see, under *exophthalmic*).—**Thyroid extract,** a substance obtained from the thyroid gland of the sheep, employed in the treatment of cretinism, myxedema, and other conditions in which it is known or assumed that there is a deficient secretion by the thyroid gland.—**Thyroid treatment.** See ★*treatment.*

thyroidectin (thī-roi-dek′tin), *n.* [*thyroidect(omize)* + *-in*[2].] A preparation of the blood of thyroidectomized animals, which is used in the treatment of exophthalmic goiter.

thyroidectomize (thī-roi-dek′tọ-mīz), *v. t.*; pret. and pp. *thyroidectomized,* ppr. *thyroidectomizing.* [*thyroid* + Gr. ἐκτομή, excision, + *-ize.*] To operate upon for removal of the thyroid gland. *Med. Record,* Feb. 28, 1903, p. 339.

thyroidin (thī′roi-din), *n.* [*thyroid* + *-in*[2].] See ★*thyreoidin.*

thyroidism (thī′roi-dizm), *n.* [*thyroid* + *-ism.*] The aggregate of symptoms—rapid pulse, insomnia, headache, etc.—following an overdose of thyroid extract, or produced by overaction of the thyroid gland.

> As to the etiology of *thyroidism,* he said that there were three theories usually advanced, the first having for its basis the belief that the nerves were entirely responsible; the second, that it was due to the absorption of thyroid material; and the third, that it was a sort of fibrin ferment condition induced by the absorption from the hæmatoma. *Med. Record,* May 30, 1903, p. 875.

thyroiditis (thī-roi-dī′tis), *n.* [*thyroid* + *-itis.*] Inflammation of the thyroid gland.

thyro-iodine (thī-rọ-ī′ọ-din), *n.* [*thyro(id)* + *iodine.*] Same as ★*iodothyrin.* See also ★*thyreoglobulin.*

thyrolingual (thī-rọ-ling′gwạl), *a.* [*thyro(id)* + L. *lingua,* tongue, + *-al*[1].] Same as ★*thyroglossal.* *Annals of Surgery,* Jan., 1903, p. 63.

thyrolytic (thī-rọ-lit′ik), *a.* [*thyro(id)* + Gr. λυτικός, loosing, dissolving.] Destructive of thyroid tissue: having reference to an immune serum with cytolytic properties which are directed toward thyroid tissue. *Buck,* Med. Handbook, App., p. 539.

thyrophyma (thī-rọ-fī′mä̤), *n.*; pl. *thyrophymata* (-mạ-tä̤). [*thyro(id)* + Gr. φῦμα, a tumor.] A tumor or enlargement of the thyroid gland.

thyroprival (thī-rọ-prī′vạl), *a.* [Irreg. < *thyro(id)* + L. *privare,* deprive, + *-al*[1].] Relating to a removal or loss of function of the thyroid gland.

thyroproteid (thī-rọ-prō′tẹ-id), *n.* See ★*thyreoproteid.*

thyroptosis (thī-rop-tō′sis), *n.* [NL., < *thyro(id)* + Gr. πτῶσις, a falling.] A downward displacement of the thyroid gland.

thyrotherapy (thī-rọ-ther′ạ-pi), *n.* [*thyro(id)* + *therapy.*] Treatment of disease by preparations made from the thyroid gland of the sheep.

> He regretted that *thyrotherapy* had been neglected in the treatment of skin diseases, and pointed to the fact that remedies useful in chronic urticaria were also useful in functional disorders of the thyroid gland.
> *Med. Record,* Oct. 5, 1907, p. 584.

thyrotoxic (thī-rọ-tok′sik), *a.* Same as ★*thyreotoxic.* *Nature,* Feb. 18, 1904, p. 375.

Thyrsitinæ (thėr-si-tī′nē), *n. pl.* [NL., < *Thyrsites,* a genus, + *-inæ.*] A subfamily of fishes, the escolars or family *Gempylidæ.*

thyrsocephalic (thėr″sọ-se-fal′ik), *a.* [Gr. θύρσος, a stalk, thyrsus, + κεφαλή, head, + *-ic.*] In *anthrop.,* having that short and high form of skull which results from premature synostosis of the coronal suture. Compare ★*trochocephalic.*

> When the union is of the coronal suture, the skull becomes short and high, or *thyrsocephalic.*
> *Encyc. Brit.,* XXV. 398.

Thysanocrinus (this-ạ-nok′ri-nus), *n.* [NL., < Gr. θύσανος, tassel, + κρίνον, a lily (see *crinoid*).] A genus of camerate crinoids having a deep calyx with dicyclic base, and from 10 to 20 biserial arms, represented by species in Silurian rocks.

thysanurid (this-ạ-nū′rid), *n.* and *a.* Same as *thysanuran.*

T. I. An abbreviation of *Thrice Illustrious.*

Tiarechinus (tī-ar-e-kī′nus), *n.* [NL., < Gr. τιάρα, a tiara, + ἐχῖνος, a hedgehog.] A genus of very small regular perischoëchinoid sea-urchins with a flat ventral and subhemispherical dorsal surface. Each plate of the ventral surface has a single large tubercle; all the other plates of the dorsal surface are granulated. A single species is known in the Triassic rocks of St. Cassian, in Tyrol. This genus has been considered a synthetic type combining the characters of the *Blastoidea* and *Echinoidea.*

Tiaroga (tī-ạ-rō′gä̤), *n.* [NL., a made word.] A genus of minnows known only from the San Pedro, a tributary of the Gila river, Arizona.

tib[2] (tib), *v.* Used in the following phrase.—**To tib out,** to go out of bounds. [Eng. school (Charterhouse) slang.]

> Blacking his master's shoes with perfect readiness, till he rose in the school, and the time came when he should have a fag of his own; *tibbing out* and receiving the penalty therefor; bartering a black eye, per bearer, against a bloody nose drawn at sight, with a schoolfellow.
> *Thackeray,* Newcomes, I. ii.

Tibeto-Burman (tib″e-tọ-bėr′mạn), *a.* and *n.* Ranging from Tibet to Burma, or including the Tibetan and Burmese languages: applied specifically to a group of languages, belonging to the Indo-Chinese family, spoken in central and southeastern Asia, especially in Tibet, Assam, and Burma. Cust ("Sketch of the Modern Languages of the East Indies," pp. 88–116) enumerates 87 languages and 84 dialects of this group.

tibia, *n.* **5.** (*b*) In *organ-building,* a stop of the open diapason species, with pipes of an exceptionally broad scale, giving a full, powerful tone. Different varieties are known by specific names, as *tibia plena, tibia profonda,* etc.

Tibial aponeurosis, a fibrous membrane attached to the tibia and enveloping the muscles of the leg.

tibiella (tib-ị-el′ä̤), *n.*; pl. *tibiellæ* (-ē). [NL. dim. of L. *tibia,* shin-bone, pipe. See *tibia.*] In the nomenclature of the sponge-spicules, a long, slender, sometimes arcuate, monaxial rhabd with slightly swollen extremities.

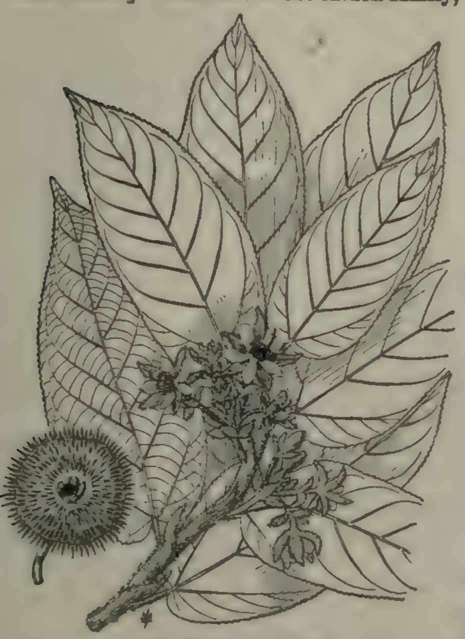
tibigaro (tē-bē-gä′rō), *n.* [Native name.] In Colombia and Venezuela, same as ★*gateado.*

tibiofibula (tib′i-ō-fib″ụ-lä̤), *n.*; pl. *tibiofibulæ* (-lē). A bone which, in the tailless amphibians, is formed by the coalescence of the tibia and fibula. *Parker and Haswell,* Zoology, II. 254.

tibionavicular (tib″i-ō-na-vik′ụ-lär), *a.* [*tibia* + *navicular.*] Relating to both the tibia and the scaphoid bone.

tibor (tē-bōr′), *n.* [Philippine Sp. (Morga), of untraced origin (perhaps Chinese).] An ancient earthenware jar or vase of a peculiar kind, usually glazed and ornamented exteriorly, occasionally found in certain regions in the Philippine Islands. These jars are of Japanese origin and are highly valued, especially by the Japanese.

tibourbou (tē-bör-bö′), *n.* [A F. spelling of the Carib name.] A tall tree of the linden family, *Apeiba Tibourbou*, of Venezuela, Guiana, and Brazil, which yields a fiber resembling Russian bast. Its spiny fruits resemble a chestnut-bur, for which reason it is called *erizo* (hedgehog) in Venezuela and Colombia.



Apeiba Tibourbou, with fruit.

tiburon (tib-ö-rōn′), *n.* [Sp. *tiburón* (Acosta), *tebura* (Oviedo), from a Taino or Carib name.] A shark of West Indian or Central American waters; in a present use (Mexican), *Carcharinus fronto*, a shark found on the Pacific coast of Mexico.

tic[1], *n.*—**Bowing** or **nodding tic.** Same as *salaam convulsion* (which see, under *salaam*).—**Convulsive tic,** an affection, apparently hysterical in nature, of children, marked by attacks of muscular jerkings of the face and arms, accompanied sometimes by a cry. Also called *Giles de la Tourette's disease.*—**Diaphragmatic tic,** a spasmodic contraction of the diaphragm accompanied by considerable pain.—**Motor tic,** a rhythmical twitching of certain muscles, involuntary in character, and present even during sleep.—**Nodding tic.** See *bowing* ★*tic.*—**Psychic tic,** a spasmodic muscular contraction, which recurs at irregular intervals, ceases during sleep, and is more or less controllable by an effort of the will.—**Rotatory tic,** wryneck due to spasmodic contractions of the muscles of the neck.—**Tic non-douloureux,** a habitual involuntary contraction of one or more of the facial muscles, such as winking, drawing up or down of the corners of the mouth, etc. Also called *habit spasm, habit chorea, facial chorea.*

ticca, tikka (tik′ä̤), *a.* [Also *ticker*; < Hind. *ṭhīka*, hire, fare.] To be hired by the job or on contract: applied to both persons and things. [Anglo-Indian.]—**Ticca gharry,** a hired carriage.

> Kim swallowed his disappointment, while the Colonel bundled him into a *ticca gharri* with his small belongings and despatched him alone to St. Xavier's.
>
> *R. Kipling*, Kim, vii.

tice[2] (tīs), *n.* In *cricket*, a yorker, whether underhand or overhand. *N. and Q.*, 9th ser., VIII. 284. [Obsolete.]

tick[2], *n.*—**Black-pitted tick,** a name given in South Africa to the ixodid *Rhipicephalus simus*, which occurs on several species of warm-blooded animals.—**Blue tick,** a South African ixodid, *Rhipicephalus decoloratus*, allied to the American *R. annulatus*, and said to carry the causative organisms of a disease of cattle (African Coast fever) similar to the Texas fever.

> Mr. Lounsbury publishes an interesting account of the experiments by which he proved that the infection was carried by the common brown cattle tick of South Africa (Rhipicephalus appendiculatus). He failed in ten experiments to convey it through the *blue tick*, which Koch says is partly responsible for the transmission.
>
> *Nature*, July 28, 1904, p. 310.

Bont-leg tick, *Hyalomma ægyptium* Audouin, a common tick in South Africa.—**Bont-tick.** See ★*bont-tick.*—**Brown tick,** a name given in South Africa to the injurious cattle-tick *Rhipicephalus appendiculatus*, which carries the causative organisms of a disease highly fatal to cattle. See extract under *blue* ★*tick.*—**Castor-bean tick,** a tick common to Europe and the United States, *Ixodes ricinus*, and found on sheep, goats, cattle, horses, dogs, and cats. Numerous cases of septicemia are recorded as having resulted from its bite.—**Full as a tick,** drunk. [Slang.]—**Lone Star tick,** a common American ixodid, *Amblyomma americanum.*—**Red tick,** the name given in South Africa to the ixodid *Rhipicephalus evartsi*. It is the immediate host of the *Piroplasma equi*, the direct cause of biliary or swamp fever of equines, a disease resembling in many respects the Texas fever of cattle in America.—**Senegal tick,** a common African tick, *Hyalomma ægyptium*, also known as the *bont-tick.*—**Tick heart-water.** Same as ★*heart-water.*

tick-bird (tik′bėrd), *n.* **1.** An African bird of the genus *Buphaga* which frequents the backs of cattle and rhinoceroses to devour ticks. Also called *rhinoceros-bird* and *oxpecker.*—**2.** In the West Indies and parts of South America the ani, *Crotophaga ani*, one of the cuckoos.

ticket, *n.* **7.** Commission; papers showing or entitling to appointment, rank, or rating. [Slang.]

> I 'm Captain of the whole of this show now, by your making, and I intend to be respected as such, and hold a full captain's *ticket.*
>
> *Cutcliffe Hyne*, A Master of Fortune, i.

ticket-chopper (tik′et-chop″ėr), *n.* In *railroading:* (*a*) A machine for chopping to pieces or otherwise destroying the tickets deposited by passengers on entering a platform or waiting-room. It consists of a wooden box having a hopper of wood and glass at the top, combined with some simple form of knife for tearing or chopping to pieces or otherwise destroying a ticket dropped in the hopper. Larger machines of somewhat different construction are used to destroy canceled and used tickets collected by the conductor of a railroad-train. (*b*) The man at the gate where such a machine is used, who works the machine as the tickets are dropped into it.

ticket-scalper (tik′et-skal″pėr), *n.* See *scalper*[1], *n.*, 3.

tickey, *n.* Same as ★*ticky*, 3.

tick-fever (tik′fē″vėr), *n.* Any fever transmitted through the agency of ticks. Some of these fevers attack man, as the so-called spotted fever of the Rocky Mountains; others cattle, as Texas fever. They are due to the presence in the blood of some form of micro-organism, the species varying with the different diseases.

> A disease which was causing much heavier direct losses than pleuro-pneumonia, and which was almost equally feared by cattle owners, was known by the local name of Texas, or Spanish, fever. This disease, which has numerous popular and local names, has more recently been called by different writers splenetic fever, Southern fever, and *tick fever.* *Yearbook U. S. Dept. Agr.*, 1897, p. 240.
>
> Dr. C. Christy read a paper "Ornithodoros moubata, and *Tick Fever* in Man." He came across the disease first at Toro in Uganda, and subsequently found that it was fairly common in Buddu, Busoga, Uganda, Unyoro, and also on the Nile. The tick which caused the disease was called Bibo by the natives. Mr. Pocock, of the British Museum, recognized it as identical with that which has long been known to be pathogenic in the Zambesi valley, the Ornithodoros moubata. Dr. Christy described the symptoms of the disease, which he was able to examine in one of his own servants. He always took the precaution of encamping far from native habitations, and was never bitten. Indeed, throughout his travels, this precaution was the reason that he did not suffer a single day's illness. *Jour. Trop. Med.*, Aug. 15, 1903, p. 259.

Coast tick-fever. Same as *African Coast* ★*fever.*—**Rhodesian tick-fever.** Same as *African Coast* ★*fever.*

tickle[1], *v.* **I.** *trans.*—**To tickle a trout,** to catch a trout by hand by stealing behind it as it lies quietly basking, or with its head under something, tickling or soothing its sides, getting the hand as far as its gills, and then grasping it firmly.

> He keeps it at the end of his line, runs it up the stream and down the stream, till at last he brings it to hand, *tickles the trout*, and so whips it into his basket.
>
> *Farquhar*, Beaux' Strategem, iii. 2.
>
> This is the tamest *trout* I ever *tickled.*
>
> *Beau. and Fl.*, Humourous Lieutenant, iii. 5.

II. *intrans.*—**To tickle for trout.** See *to* ★*tickle trout.*

tickle[2], *n.* [Prob. < *tickle*[1], *a.*, difficult, perilous.] A narrow passage or entrance to a harbor.

> The most favorable spot for determining the nature of the deposit was found at the ragged cliffs on the west side of the northern "*tickle*" or channel affording entrance to Kirpon Harbor. *Amer. Geol.*, Aug., 1903, p. 66.

tickly-benders (tik′li-ben-dėrz), *n. pl.* Same as *kittly-benders.*

tickomeg (ti-kō′meg), *n.* [Prob. Amerindian.] The common whitefish, *Coregonus clupeiformis*, found in the Great Lakes and neighboring waters.

ticky[2] (tik′i), *a.* Full of ticks or other vermin.

> I 'm 'ere in a *ticky* ulster an' a broken billycock 'at,
> A-layin' on to the sergeant I don't know a gun from a bat.
>
> *R. Kipling*, Back to the Army Again, st. 1.

ticky[3] (tik′i), *n.* [Origin obscure.] Threepence; a threepenny bit. Also *tickey.* [Eng. mil. slang.]

> The humble private, to whom a three-pence (a "*ticky*," as it is called in Africa) sometimes appears as big as a cart-wheel. *J. Ralph*, War's Brighter Side, vi.

ticky-ticky (tik″i-tik′i), *n.* [Native name in Jamaica.] A cyprinodont fish, *Fundulus melapleurus*, found in streams of Jamaica.

t. i. d. An abbreviation of the Latin *ter in die*, thrice a day.

Tidal constants. A set of tide-tables is published yearly by the United States Coast Survey Office, which gives the computed times of high water for the important ports of the United States, and constants, in the way of a quantity of time, to apply to such calculations in order to obtain the hour of high-water at neighboring ports.—**Tidal day, eddy, equations, load, register.** See ★*day*[1], etc.—**Tidal evolution,** the assumed evolution of the present orbits of planets, satellites, and binary stars by the tidal reactions between the movable portions of the bodies concerned which caused them to recede from each other and to increase the eccentricity of their orbits up to limits attained when they constantly turn the same faces toward one another. This theory was first proposed and mathematically developed by G. H. Darwin in 1881, with special reference to the moon and earth.

tiddledewinks (tid′l-dẹ̄-wingks″), *n.* A trivial game in which the players try to make small counters jump into a box, by pressing on their edges with another counter.

tiddly-benders (tid′li-ben″dėrz), *n. pl.* Same as *kittly-benders.*

tiddlywink, *n.* **3.** *pl.* See ★*tiddledewinks.*

tide[1], *n.* **9.** In *forestry*, a freshet. In the Appalachian region logs are rolled into a stream and a 'tide' is awaited to carry them to the boom.—**Acid tide,** the increase in acidity of the urine occurring in one fasting or during sleep.—**Age of the tide.** Same as *retard of the tide* (which see, under *retard*).—**Alkaline tide,** a temporary decrease in the acidity of the urine occurring after the taking of food.—**Head tide,** a current flowing directly opposite to the course of the vessel.—**Head to tide.** See ★*head.*—**High tide,** the highest elevation of the tide on its flood.—**Inferior tide,** the high tide that is produced in the hemisphere away from the moon.—**Low tide,** low water; the lowest point of the tide.—**Maiden tide,** a tide of such a nature that no vessel can enter or leave a dock or harbor.

> Hull.—There was today a *maiden tide*, no vessel being able either to enter or to leave, owing to the storm and flood. *Daily Telegraph*, Nov. 10, 1897. *N. E. D.*

Primary tide, the high tide which is supposed to be produced in the Pacific Ocean daily by the passage of the moon.—**Semidiurnal tide,** the theoretical tide which occurs every twelve hours and twenty-six minutes.—**Solar tide,** the tide produced by the sun. The period of the solar tide is 12 hours and its height about ⅓ that of the lunar tide.—**Tide and half tide.** In channels where the tide-stream continues to flow up for three hours after it is high-water, it is said to make a *tide and half tide.*—**Tide barge.** See ★*barge*[1].—**Tide-raising force.** See ★*force*[1].—**To make a tide and a quarter tide,** said of a tide-stream when it continues to flow up channel for an hour and a half after high water.—**True tide,** the normal movement of tidal waters, when not diverted or turned by headlands or islands.

tide-indicator (tīd′in″di-kā-tọr), *n.* An apparatus by which the state of the tide is shown at any moment by an index, usually a vertical staff, but sometimes a circular dial-plate.

tide-meter, *n.* Any arrangement for measuring tidal oscillations; specifically, the pneumatic tide-meter of A. Mensing, in which a volume of air is compressed under the varying pressure of the water.

tide-race (tīd′ rās), *n.* A strong tidal current in a strait or inlet.

> The bottom action is wholly shoreward, and the intensity of motion which is attained in the sea except in *tide-races.* *Geog. Jour.* (R. G. S.), XI. 535.

tide-register (tīd′rej″is-tėr), *n.* **1.** A marigraph; any apparatus that registers the rising and falling tide either at regular intervals or continuously: a notch or mark showing the highest and lowest stages of water.—**2.** The record of tides made by a tide-register.

Tide-water glacier. See ★*glacier.*

tids (tidz), *n. pl.* An abbreviation of ★*tiddly-benders.*

tie[1], *v.* **I.** *trans.*—**Tied house.** See ★*house*[1].

II. *intrans.*—**To tie to,** or **to tie up to,** to attach oneself to for protection; depend upon; rest with confidence on; follow as a guide. [Slang.]

tie[1], *n.* **13.** The binding down of the skin over the backs of fat cattle by connective-tissue fibers which pass through the thick fatty layer from the subcutaneous tissue.

> In thick-fleshed cattle, as they ripen the hide raises uniformly over the back. In some cases the gristly strings hold the hide down, thus making what is known as the "*tie.*"
>
> *Rep. Kansas State Board Agr.*, 1901–02, p. 168.

14. In *mining*, a support in tension for the roof or hanging-wall of a mine. It is usually attached to the braced structure of a rib.—**Oxford tie,** a smart low shoe tied with wide laces.

tie-back (tī′bak), *n.* **1.** Braces of rope, or a stay-rod, attached to the tower of a mine-head on the side opposite to the lead of the hoisting-rope, to hold the tower from being swayed by the drag of the cable.—**2.** A beam having a function like that of a fend-off beam, but on the opposite side of the shaft or incline. *Coal and Metal Miners' Pocket Book.* [British.]

tie-bolt (tī′bōlt), *n.* **1.** A long rod, threaded at both ends, with a nut and washer-plate, or with a fixed head at one end, used to connect two or more parts of a structure or frame or truss and resist tension. In England used as a synonym for 'through-stay,' employed in boilers or similar structures exposed to internal pressure, to tie two parallel surfaces together.

tie-boom (tī′böm), *n.* **1.** A wooden member or beam used to resist tension as in the timber guy of a boom-derrick. *London Engineer*, 1903, p. 258.—**2.** A local name for a log-boom in rivers carrying logs to sawmills where the boom does not control the entire channel.

tie-chain (tī′chān), *n.* A chain used in place of a rod, in any structure, to resist tension or to bind together parts which tend to separate.

Tiedemann's body or **vesicle.** See *racemose* ★*vesicle.*

tie-plant (tī′plant), *n.* A plant some part of which, as the leaves, is used for tying.

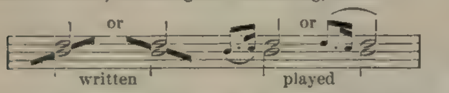
> Bear-grass is used all over the South in a rude way as a "*tie-plant*," the twisted leaves being employed for hanging hams, and in other similar uses.
> *U. S. Dept. Agr.*, Rep. No. 5, p. 70.

tie-plate, *n.* **2.** A casting placed under the nut of a bolt or tie-rod to distribute the pressure and protect the wood.—**3.** In railroad construction, a broad flat steel or iron plate, sometimes corrugated, placed on a tie and under the base of a rail to distribute the load and prevent the rail from cutting into the face of the tie.—**4.** In *iron ship-building*, a narrow longitudinal or diagonal plate on top of the beams of a deck not having a complete metal deck.

tier[2], *n.* **3.** A range of mountains. [Tasmania.]

> Two chains of mountains, the eastern and western *tiers*, run through it nearly north and south.
> *W. B. Wildey*, Australasia and Oceanic Region, p. 320, [quoted in E. E. Morris, Austral English.

Tierce coulée, an old grace or embellishment in harpsichord music, consisting of a rapid run leading to two principal notes separated by a third: a slurred third. It had two forms, ascending and descending, thus—



Tierce de Picardie, in *music*, the major third in the final chord of a minor piece or passage, or the effect that it produces.—**Tierce minor,** in *whist*, any sequence of three cards which is not the best in the suit. See *tierce major.*

tier-pole (tēr′pōl), *n.* One of the poles or small scantlings with which a tobacco-barn is furnished to support the laths or strings, reaching from one to another, by which the plants or leaves are hung up. The space between two poles with its contents forms a tier. See ★*tobacco-barn.*

tierse, *n.* An amended spelling of *tierce.*

tiersman (tērz′man), *n.*; pl. *tiersmen* (-men). In Tasmania, one who lives in the tiers or mountain ranges; a mountaineer.

> Splitters, or, as they are commonly called, *tiersmen*, reside in the forest of stringy bark.
> *F. Lancelott*, Australia as it is, II. 115, quoted in E. E. [Morris, Austral English.

tieute (ti-yö′tē), *n.* [A nominal NL. spelling of a native name in Java (not found in Javanese?).] The seeds of *Strychnos Tieute* of Java, similar in appearance to nux vomica, though smaller. The root-extract is used in the manufacture of the poisonous upas tieute or upas radja. See *chettik.*

tie-wall (tī′wâl), *n.* A connecting wall which binds other walls together.

> Towards the northern end a *tie-wall* has been inserted coincident with the upper 6 ft.
> *Jour. Hellenic Studies*, XII. 86.

tie-wire (tī′wīr), *n.* A wire used to fasten the line-wire of an electric circuit to an insulator. *Elect. World and Engin.*, Feb. 6, 1904, p. 272.

tie-wrench (tī′rench), *n.* A special form of wrench employed in securing line-wires of an electric circuit to the insulators upon which they are mounted. *Elect. Rev.*, Sept. 3, 1904, p. 328.

tiff[4] (tif), *n.* [Origin obscure.] A local name for the calcite occurring with the zinc and lead deposits of Joplin, Missouri.

tiffanyite (tif′a-ni-īt), *n.* [Named after Charles Lewis *Tiffany* (1812–1902), a jeweler of New York.] The variety of diamond that appears steel-colored or steel-blue in color, possesses the property of emitting light in the dark after exposure to sunlight, electric light, or ultra-violet rays, and is unusually sensitive to radium, the Röntgen rays, polonium, and actinium. This property is due to the coloring-matter, evidently a phosphorescent hydrocarbon, or one of the rare earths. *Kunz.*

tiffin (tif′in), *v. i.* [*tiffin, n.*] To lunch; take tiffin.

> Pack had been *tiffining* by himself . . . and had heard everything.
> *R. Kipling*, The Bisara of Pooree, in Plain Tales from [the Hills, p. 258.

tiffy (tif′i), *n.*; pl. *tiffies* (-iz). [*(ar)tifi(cer)*.] In the English navy, a reduction of *artificer.*

> I 'll teach you to come alongside properly, if I keep you '*tiffies* out all night.
> *R. Kipling*, Steam Tactics, in Traffics and Discoveries, [p. 168.

tiger, *n.* **10.** In *poker*, a hand which is seven high and deuce low, without a pair, sequence, or flush. When played, it beats a straight and loses to a flush. Sometimes called a *little dog.*—**11.** In Central and South America the jaguar, *Felis onca*, whose black and yellow coat suggests the Asiatic tiger.—**Blind tiger.** See ★*blind*1.—**Native tiger,** a local Tasmanian name for the zebra-wolf or thylacine, *Thylacinus cynocephalus.*—**Tasmanian tiger.** Same as ★*native tiger.*

tiger-cat, *n.* **2.** In Tasmania and parts of Australia, the spotted dasyure, *Dasyurus maculatus*, a marsupial of carnivorous habits.

tiger-heart (tī′gėr-härt), *n.* A form of fatty degeneration in which, on post-mortem examination, the substance of the heart shows alternate streaks of yellow (fat) and red color (normal muscular tissue). *Buck*, Med. Handbook, IV. 588.

tiger-lily, *n.*—**Dwarf tiger-lily.** Same as *blackberry lily* (which see, under *lily*).

tiger-mosquito (tī′gėr-mus-kē″tō), *n.* Any striped or banded mosquito of the genus ★*Stegomyia* (which see).

> It is in this genus (Stegomyia) that we find special predilection for settling, when at rest, on dark objects and clothing. They have been popularly known as "*tiger-mosquitoes*" on account of their banded and striped appearance; but a glance at the synoptic table will show that that name is misleading as many members of the genus are unbanded or unstriped.
> *Jour. Trop. Med.*, Aug. 1, 1903, p. 237.

tiger-python (tī′gėr-pī″thon), *n.* The common Indian python, *Python molurus*, whose markings suggest the stripes of a tiger.

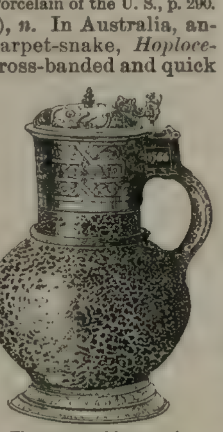
tiger-salamander (tī′gėr-sal″a-man-dėr), *n.* A book-name of the common large western salamander, *Ambystoma tigrinum.*

tiger's-eye, *n.* **2.** In *ceram.*, a crystalline glaze containing streaks of luminosity resembling gold or the iris of a tiger's eye: used in a variety of earthenware produced at Rookwood Pottery, Cincinnati, Ohio.

> The highest achievements in glazing are the so-called *tiger's-eye* and gold-stone, which glisten in the light with a beautiful auriferous sheen.
> *E. A. Barber*, Pottery and Porcelain of the U. S., p. 290.

tiger-snake (tī′gėr-snāk), *n.* In Australia, another name for the carpet-snake, *Hoplocephalus curtus*, which is cross-banded and quick in its movements.

tiger-ware (tī′gėr-wãr), *n.* In old English pottery, a stoneware with a spotted glaze. The jugs are frequently mounted in silver-gilt.



Tiger-ware, with mount in silver-gilt.

tight[1], *a.* **12.** In *billiards*: (*a*) Noting balls that are fast, or frozen to each other. (*b*) Noting pockets that are small for the diameter of the balls.—**13.** See the extract. [Art slang.]

> In his first style he [Corot] painted traditionally and "*tight*"—that is to say, with minute exactness, clear outlines, and with absolute definition of objects throughout.
> *Encyc. Brit.*, XXVII. 252.

tightening-screw (tīt′ning-skrö″), *n.* A screw, in a joint, by means of which more or less friction can be caused when the movable elements are made to slide on one another. Used in drafting-instruments, surveyors' apparatus, machinists' calipers, and the like.

tiglic (tig′lik), *a.* [*(Croton) Tigl(ium)* + *-ic.*] Noting an acid, a colorless compound,  $\begin{matrix}\mathrm{CH_3CH}\\ \parallel\\ \mathrm{HOOCCCH_3}\end{matrix}$, contained, in combination, in croton and certain other oils. It crystallizes in triclinic plates or rods, has an odor of benzoic acid, melts at 64.5° C., and boils at 198.5° C. Also called *methyl-crotonic acid.*—**Tiglic aldehyde,** a colorless liquid, $CH_3CH:C(CH_3)CHO$, extracted from guaiac resin and prepared by the action of sodium acetate on a mixture of acetaldehyde and propionic aldehyde. It boils at 115.5° C. and has an odor of benzaldehyde. Also called *guaiol.*

tiglinic (tig-lin′ik), *a.* [*(Croton) Tigl(ium)* + *-in* + *-ic.*] Relating to croton-oil (expressed from the seeds of *Croton Tiglium*); also, noting an acid derived therefrom.

Tigoma (tī-gō′mä), *n.* [NL., a made word.] A subgenus of cyprinoid fishes under the genus *Leuciscus.*

Tigré (tē-grā′), *n.* [Tigré name.] See ★*Abyssinian languages* (*b*).

Tigriña (tē-grēn′yä), *n.* [Tigriña name.] See ★*Abyssinian languages* (*b*).

tigroid (tī′groid), *a.* and *n.* [Gr. *τιγροειδής*, like a tiger, spotted, < *τίγρις*, tiger, + *εἶδος*, form.] **I.** *a.* Spotted like a tiger.

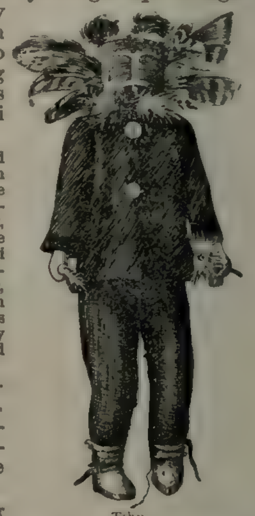
II. *n.* Same as *Nissl* ★*substance.* See also *Nissl* ★*granules.* *Buck*, Med. Handbook, II. 338.

tigrolysis (tī-grol′i-sis), *n.* [NL., < *tigro(id)* + Gr. *λύσις*, dissolution.] In *pathol.*, a breaking down of the tigroid, or Nissl substance, in the nerve-cell. *Buck*, Med. Handbook, VI. 264.

tigrolytic (tī-grō-lit′ik), *a.* Of or pertaining to tigrolysis. *Buck*, Med. Handbook, VI. 264.

tihu (tē′hö), *n.* [Hopi.] A sort of doll or effigy representing certain mythological personages or katcinas, made by the men and given by the women to the children during certain ceremonies among the Hopi Indians.

> The figurines produced by the Hopi men and given by the mothers to the children during the Niman, or Farwell ceremony, and known as *tihus*, are objects found in all Hopi collections, but as a matter of fact these *tihus*, which represent certain mythological personages called Katcinas, are only reproduced for a limited number of characters.
> *Science*, Feb. 8, 1901, p. 222.



Tihu.
(In Field Museum of Natural History, Chicago.)

Tiki (tē′kē), *n.* [Maori.] **1.** A Polynesian deity, generally regarded as the creator of man.

> *Tiki*, n. Maori name for the Creator of man, and thence taken to represent an ancestor. The Maoris made large wooden images to represent their *Tiki*, and gave the name of *Tiki* to these images. Later they were made in miniature in greenstone, and used as neck-ornaments.
> *E. E. Morris*, Austral English.

2. [*l. c.*] A carved image or representation of the god Tiki, especially one of the large carved wooden pillars set up at the tombs of chiefs and influential men. *Keane*, Man Past and Present, p. 379.

tikka, *a.* See ★*ticca.*

til, *prep.* and *conj.* A simplified spelling of *till*[2].

tilaite (til′a-īt), *n.* [*Tila* (see def.) + *-ite*[2].] In *geol.*, a variety of olivin gabbro exceptionally rich in diopside. The name was given by L. Duparc and F. Pearce and is derived from a locality in the northern Urals.

tilasite (til′a-sīt), *n.* [Named after Daniel *Tilas*, a Swedish mining engineer.] A fluoarsenate of calcium and magnesium ($(MgF)\text{-}CaAsO_4$), analogous in composition to adelite and occurring in gray cleavable masses: found in Sweden. Also called *fluoradelite.*

tile[1], *n.*—**Embossed tile,** an ornamental tile with relief designs which has been pressed in a mold and (usually) covered with a tinted glaze or enamel. Wall-tiles of this variety are extensively made by American manufacturers.—**Inlaid tile.** Same as *mosaic* ★*tile* (which see).—**Mathematical tile,** a tile decorated with a geometrical or conventional design.—**Mosaic tile,** tile made by Malkin's ★process (which see), in which the brass or paper stencils are cut in patterns of minute squares, resembling mosaic-work. When pressed, the colored tessellated designs are inlaid in the body of the tile to the depth of about one eighth of an inch.

tile¹, *v. t.* 2. To provide with tile-drains, as land. *W. J. Chamberlain*, Tile Drainage, p. 72.

tile-drain (tīl′drān), *v. t.* To drain with tiles, as land.

> Why do we *tile-drain* land?
> *W. J. Chamberlain*, Tile Drainage, p. 28.

tile-fish, *n.* In 1882 vessels arriving at New York and Boston reported having sailed through miles of dead and dying tile-fish. For several years following no tile-fish were taken, and the species was supposed to have become extinct. It was not until 1892 that the United States Fish Commission steamer *Grampus* captured a few. Since that time more have been taken each year, and the fish appears now to have thoroughly reëstablished itself and may become an important food-fish. The tile-fish reaches a length of three feet and inhabits depths of from 70 to 80 fathoms at the edge of the Gulf Stream.

tile-pipe (tīl′pīp), *n.* Pipe made of cement or clay and used for chimney-pots, drains, flues, etc.

tile-press (tīl′pres), *n.* A machine for making tiles from dampened clay-dust, having a die between a push-up and plunger for shaping and pressing the tiles.

tiler, *n.* 5. A cat which makes music on the roofs (or tiles) at night. [Slang.]

> In London . . . a nice *tiler* and mouser would be more appropriate . . . than a blue Persian.
> *V. Hunt*, Autobiography of a Cat, p. 108.

tilhemic (til-hem′ik), *a.* [*t*(*itanite*) + *il*(*menite*) + *hem*(*atite*) + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), having equal or nearly equal proportions of tilic minerals (normative titanite, ilmenite, perofskite, rutile) and hemic minerals (normative magnetite and hematite), that is, within the limits $\frac{T}{M} < \frac{5}{3} > \frac{3}{5}$.

tiliadin (til′i-a̤-din), *n.* [L. *tilia*, linden, + *-ad* + *-in*².] A colorless dextrorotatory compound, $C_{21}H_{32}O_2$, contained in the bark of the linden-tree. It crystallizes in plates resembling cholesterol and melts at 228–229° C.

tilic (til′ik), *a.* [*t*(*itanite*) + *il*(*menite*) + *-ic.*] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), having the characters of, or pertaining to, the titaniferous femic minerals, titanite, ilmenite, perofskite, rutile.

tilkerodite (til′ke-rọ̄-dīt), *n.* [G. *Tilkerode*, a locality in the Harz Mountains, Germany.] A variety of clausthalite containing cobalt.

till⁴, *n.*—**Upper till**, till supposed to be derived from the interior or the surface of an ice-sheet.

tillage, *n.*—**Intercultural tillage**, in *agri.*, tilling the land between growing plants rather than tilling the entire area when no plants are growing on it; ★intertillage (which see). *E. L. Sturtevant.* See quotation under *intercultural*.

tiller-comb (til′ėr-kōm), *n.* In marine hardware, a quadrant rack or comb having a single row of shallow teeth: designed to be secured to the deck of a boat immediately under the tiller. A short blade called the *knife* is fastened to the under side of the tiller, and to hold it in any desired position, in sailing or at anchor, th^ tiller is dropped until the knife falls between two teeth of the comb.

Tilletiaceæ (ti-lē-shi-ā′sẹ̄-ē), *n. pl.* [NL., < *Tilletia* + *-aceæ.*] A family of smut-fungi of the order *Ustilaginales*, named from the genus *Tilletia*, and having the promycelium non-septate.

tillite (til′īt), *n.* [*till*⁴ + *-ite*².] Consolidated till.

> Individual specimens of facetted pebbles might sometimes be difficult of identification as to origin; but a collection of a score or two of pebbles, one set from a district of wind-work, the other set from a bed of till or of *tillite* (consolidated till), would be easily distinguished.
> *Amer. Jour. Sci.*, Feb., 1907, p. 150.

tillot (til′ọt), *n.* A case or sack made of highly glazed muslin, used to cover broadcloth, etc., as a protection against dust and injury from handling.

tilt¹, *v. i.* 6. In *seismology*, to tip; incline from the vertical as the result of a movement of the earth's crust.

> A pair of heavy horizontal pendulums, which record with ink on a metal cylinder, and which have a sensibility for *tilting* three or four times that of the Milne apparatus.
> *Nature*, Oct. 8, 1903, p. 552.

tilt¹, *n.* 8. In *seismology*, that component of an earth-tremor which throws upright objects out of the vertical plane.

> The chief differences in the records obtained from these two types of instruments are the ratios of the recorded amplitudes. These differ so widely that it may be inferred that "the dominant feature of the movements in the majority of disturbances does not indicate *tilt*."
> *Nature*, Oct. 8, 1903, p. 552.

9. A see-saw; a plank tilting on a narrow support in the middle. [U. S.]

> The neck-yoke or portage bar, so often seen on ancient Egyptian walls, or the plank resting on a narrow support, the delightful seesaw of children, called in America a "*tilt*," in Germany a "wippe," constitutes a ready-made equal-armed balance as soon as anybody thinks of putting it to that use.
> *H. Sökeland*, quoted in Smithsonian Rep., 1900, p. 552.

tilt², *n.* 2. One of the small log-huts of the Labrador hunters. They are about 6 by 8 feet, have low ceilings, no windows, and a small hole for entrance and exit. They are built along a hunting path, and are situated about 10 miles apart.

tilt-board (tilt′bō•d), *n.* In *exper. psychol.*, a horizontal board, pivoted at the center upon a transverse axis in such a way that the subject, lying at full length upon it, may be tilted up or down: used in the study of the kinesthetic senses. See ★*rotation-chair*. Also called *tilting-board*. *E. C. Sanford*, Exper. Psychol., p. 39.

tilt-chair (tilt′chãr), *n.* In *exper. psychol.*, a chair the seat of which is so pivoted upon a transverse axis that the subject, seated in it, may be tilted backward or forward: used in the study of the kinesthetic senses. See ★*rotation-chair*.

tilting (til′ting), *n.* The act denoted by the verb *tilt*, in *seismology*, any motion of the earth's crust which produces an inclination of objects from the vertical position.

tilting-furnace (til′ting-fėr″nạ̄s), *n.* A furnace which can be tilted; specifically, an open-hearth furnace so arranged that it can be tilted to facilitate tapping. In the Campbell furnace the tilting is accomplished by means of a hydraulic ram, the body of the furnace being mounted on strong curved girders, which rest on a series of rollers running on a curved bed. The tap-hole is above the level of the metal when the furnace is in a horizontal position, and the slag is above the tap-hole when the furnace is tilted. The Wellman furnace is mounted on two curved rockers, which roll on strong steel standards, the rolling movement being accomplished by two hydraulic cylinders. Also called *rolling-furnace*.

tilting-hammer (til′ting-ham″ėr), *n.* Same as *tilt-hammer*.

tilting-lever (til′ting-lev″ėr), *n.* Same as ★*tilt-lever*.

tilt-lever (tilt′lev″ėr), *n.* A lever used to tilt or tip something, as a bolt or block from which shingles are being sawed.

tilt-roof (tilt′röf), *n.* [*tilt*² + *roof.*] A roof which has a generally semicircular section inside and out. The thing and the word are both rare.

tilt-steel (tilt′stēl), *n.* The name for a grade of steel, no longer made, or only to a very limited extent for a few special uses. The pure iron bar was carbonized by the cementation process (which see) and then welded under a tilt-hammer (which see) at first: later the steam-hammer was always used.

tilt-table (tilt′tā″bl), *n.* 1. In *exper. psychol.*, same as ★*tilt-board*.—2. A table or carriage used in sawing-machinery, hinged at one end so that the projection of the revolving saw above the upper or working face may be varied in cutting gains, or plowing, or similar work.—3. A table, or carriage, or frame in a sawing-machine, so constructed that the angle of the plane of its top or working-face may be varied to that of the saw-blade or cutting-plane: used in machines for sawing shingles to give the desired taper and thickness alternately, and for cutting clapboards from the log.

Tim. An abbreviation of *Timothy*, a book of the New Testament.

tima (tē′mä̤), *n.* [Also *timma*; < Malay *tīma*, tin, lead, or zinc, also a coin (see def.).] A tin coin of Malacca worth one tenth of a doit.

timarau, *n.* See ★*tamarao*.

timbal, *n.* 2. The membrane of the sound-making apparatus of a cicada.

timbe (tim′bā), *n.* [Mexican name.] A name applied in Mexico to certain barks and roots used in the manufacture of pulque. They have a bitter, astringent taste and abound in tannic acid. Among the plants from which timbe is obtained are *Acacia filicioides*, a shrub or small tree of the mimosa family, and a sumac, *Rhus pacchyrrhachis*. Also called *timbre*. See *pulque*.

> The *timbe* bark, after having been toasted and pounded, is added to the sap about four hours after the fermentation has begun. It has the effect of precipitating the greater portion of mucilaginous substances held in solution, undoubtedly owing to the action of the tannic acid in the bark upon the proteids, which, if let alone, would cause the liquid to putrify or turn sour.
> *W. E. Safford*, in Science, Jan. 22, 1909, p. 160.

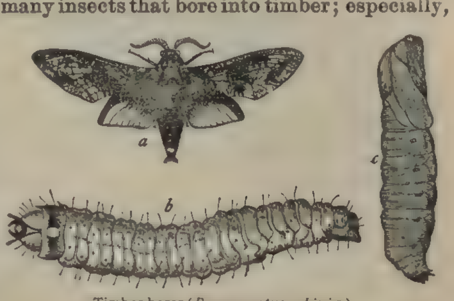
timber¹, *n.* 9. In *cricket*, the stumps; the wickets: usually in the plural. [Colloq.]—10. In *mining*, a local name for a braced frame forming the roof and side-supports of a gallery or drift. The bottom horizontal element or sill receives two side uprights, usually converging toward the top, and these support the head-piece or lintel under the roof. Planking may go in behind the heavy frame.—**Blue timber**, timber which has been attacked by the fungus *Ceratostomella pilifera*, which causes it to assume a blue color.

> The pine girdled by the bark beetles is first attacked by a fungus, *Ceratostomella pilifera* (Fr.) Winter, feeding on the medullary rays, wood parenchyma and cell contents, but not affecting the woody fibres of the stem at all. This "*blue*" *timber* has been impregnated with zinc chloride and used for ties in the trying climate of the Southwest to test its wearing qualities.
> *Forestry Quart.*, Feb., 1904, p. 80.

Round timber, pine-trees which have not been turpentined.—**Timber and room.** See ★*room*¹.—**Timber-belt beds.** See ★*bed*¹.—**To take to timber**, or **high timber**, to take to the woods; hide in among thick forest trees: often used of any refuge. [Colloq.]

timber¹, *v. t.* 2. To furnish (a tunnel, drift, gallery, or other excavation) with braced frames of logs or squared timbers which support the roof and resist the caving in or crushing at the sides.

timber-borer (tim′bėr-bōr″ėr), *n.* Any one of many insects that bore into timber; especially, a member of either of the coleopterous families *Cerambycidæ* and *Buprestidæ*, or one of certain members of the lepidopterous family *Cossidæ*.



Timber-borer (*Prionoxystus robiniæ.*)
a, adult; *b*, larva; *c*, pupa. (Redrawn from Riley.)

Timber Creek formation. See ★*formation*.

timber-dresser (tim′bėr-dres″ėr), *n.* See ★*planing-machine*.

timberello (tēm-be-rel′lō), *n.* [Appar. It. dial.] A name given, in the Adriatic region, to *Auxis thazard*, the frigate-mackerel, found in all warm seas.

timber-land (tim′bėr-land), *n.* Forest land. See ★*forest*.

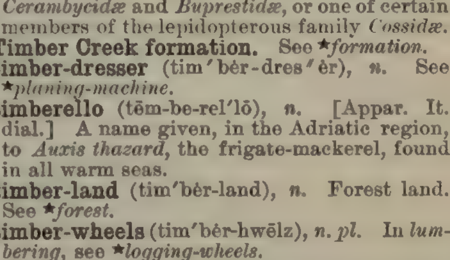
timber-wheels (tim′bėr-hwēlz), *n. pl.* In *lumbering*, see ★*logging-wheels*.

timbo (tēm-bō′), *n.* [Tupi *timbó* (in comp.).] 1. In eastern Argentina, Paraguay, and southern Brazil, a very large tree of the mimosa family, *Enterolobium contortisiliquum* (*E. Timbouva* of Martius), sometimes reaching a height of 90 feet and a diameter of 6 feet. Its wood is red in color, light and easily worked, and is much used for carpentry, furniture, and the interiors of houses. The Indians of eastern Argentina make canoes of one piece by hollowing out a large log of this tree. The bark is astringent, and the pods, called negro's-ear, contain saponin. The tree is called *pacara* in western Argentina. See ★*pacara*.
2. In Brazil, a climbing shrub, *Paullinia pinnata*, of the family *Sapindaceæ*, the root-bark of which contains a bitter principle and is used in medicine and for stupefying fish.

timbouva (tēm-bō-ö′vä), *n.* [Native name in Argentina; cf. Tupi *timbó*.] Same as ★*timbo*, 1.

timbre (tim′brạ̄), *n.* Same as ★*timbe*.

Timbrel arch, an arch in which the elements, usually flat tile or brick, are laid with their largest surfaces at right angles to the radii of the centering, and not in the direction of the radii as in voussoir arches. A timbrel arch must have two or more layers of elements, and depends for its strength on the cohesive power of the cement or mortar used.



Timbrel Arch.

time¹, *n.* 20. One of the four or five grand divisions of geologic history, namely, Archæan, Paleozoic, Mesozoic, and Cenozoic *time:* by some a fifth division, Psychozoic *time*, is added. In more recent usage 'era' has been substituted for 'time.'—**Dead time**, time during which the active work of accomplishing a purpose is not going on, although preparations for it may be in progress. Such, in pile-driving, is the time occupied in lifting the hammer.—**Fechnerian time error.** See ★*error.*—**Geologic time,** the time embraced in geologic history and suggested by the evidence recorded and interpreted by geologists.—**Habitual time,** in *psychophys.*, a reaction-time which, by the routine of the experiment, has become a matter of habit, independent of the specific conditions of the particular tests.

> A series of puzzle tests . . . was accordingly planned to discover whether *B* was influenced by some *'habitual-time'* tendency, analogous to an 'optimal-time' influence. *Amer. Jour. Psychol.*, XIII. 232.

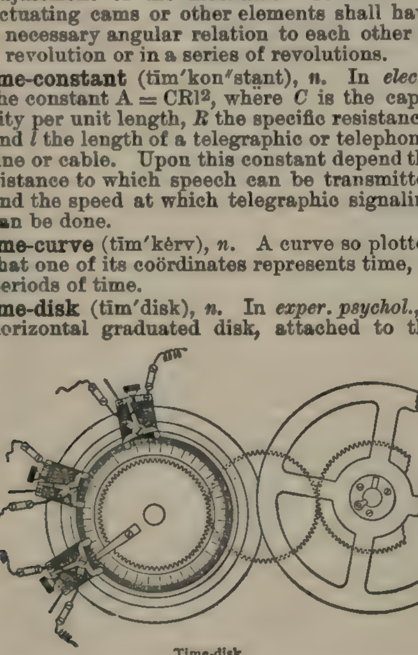
International time system, the system now adopted by many nations in accordance with which a railroad and frequently a whole community regulates the time shown by its clocks and watches to agree with that of the Greenwich meridian or with that of some meridian exactly one hour distant therefrom (see *standard time*). The civil day begins with midnight on the adopted meridian, and the hours of the day should be numbered consecutively from zero or naught at midnight to naught at the end of twenty-four hours. This international time system is that recommended by the International Time and Meridian Conference held at Washington in 1884.—**Mean solar time,** time measured by the motion of the mean sun. Navigating chronometers carry mean solar time.—**Mean sun time.** Same as *mean solar* ★*time.* See *mean sun*, under *mean*3.—**Periodic time,** in *physics*, the time required for a vibrating particle to pass through one complete set of its values. See *natural* ★*period. E. W. Scripture*, Exper. Phonet., p. 2.—**Principle of least time.** Same as *Fermat's* ★*law.*—**Septuple time.** See *septuple* ★*rhythm.*—**Simple time.** See *simple* ★*rhythm.*—**Standard time.** See *international* ★*time system.*—**Time and marching.** See ★*march*2.—**Time ensemble.** See ★*ensemble.*—**To make time.** (*a*) To secure time for the doing of a certain thing by omitting another or others. (*b*) To gain time by extra speed, as a train or boat. (*c*) With qualifiers, to maintain a certain speed: as, we *made good time*; the motor-car *made poor time* up the hill.

time, *v. t.* **5.** To adjust the elements of (a motor or other machine) so that the succession of events in a cycle, or a revolution, or a process shall take place at the desired intervals, or in the desired sequence. It involves an adjustment of the mechanism so that the actuating cams or other elements shall have a necessary angular relation to each other in a revolution or in a series of revolutions.

time-constant (tīm'kon″stant), *n.* In *elect.*, the constant $A = CRl^2$, where C is the capacity per unit length, R the specific resistance, and l the length of a telegraphic or telephonic line or cable. Upon this constant depend the distance to which speech can be transmitted and the speed at which telegraphic signaling can be done.

time-curve (tīm'kėrv), *n.* A curve so plotted that one of its coördinates represents time, or periods of time.

time-disk (tīm'disk), *n.* In *exper. psychol.*, a horizontal graduated disk, attached to the Baltzar kymograph for work upon the time-sense: contacts and releases, arranged about the periphery, are actuated as the kymograph drum revolves.



Time-disk.

> The most useful appliance for investigation is, probably, Meumann's 'time-sense' apparatus, consisting of Baltzar kymograph, *time-disc*, set of contacts, and sound-hammers. *E. B. Titchener*, Exper. Psychol., I. ii. 338.

time-displacement (tīm'dis-plās″mẹnt), *n.* In *exper. psychol.*, the acceleration or retardation of the perception of one of two or more objectively simultaneous stimuli, due to a preferential direction of the attention; the positive or negative displacement of the complication experiment.

> Later experiments with a more adequate technique have shown that the magnitude and direction of this *time-displacement* are conditioned in the most various ways.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 271.

time-equation (tīm'ē-kwā″shọn), *n.* Same as *equation of time. Sci. Amer.*, Aug. 20, 1904, p. 125.

time-experience (tīm'eks-pē″ri-ẹns), *n.* Conscious duration; experience as based upon the temporal attribute and relations of mental processes.

> An hour is just as much an hour of space-experience as an hour of *time-experience.* Space gives us our only means of measuring time, and time our best means of measuring space.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 19.

time-expired (tīm'eks-pīrd″), *a.* Having completed one's term of enlistment or service.

> The American Government had taken precautions as early as January looking to possible hostilities, and had telegraphed to the naval commanders-in-chief abroad to hold *time-expired* men. *Encyc. Brit.*, XXXII. 767.

> But whin I 've served my time I 'm a Reserve man, an' the Articles av War have n't any hould on me. An orf'cer can't do anythin' to a *time-expired* savin' confinin' him to barracks. *R. Kipling*, The Big Drunk Draf'.

time-glass (tīm'glȧs), *n.* An hour-glass or sand-glass.

time-lag (tīm'lag), *n.* The interval of time between the application of a force and the effect: said of recording instruments in which the inertia of moving parts causes a certain retardation of action, of electromagnets in which the full magnetization lags behind the magnetizing force, and of all cases in which the response to any stimulus follows the latter after an appreciable interval.

timelian (ti-mē'li-ạn), *a.* [NL. *Timelia* + *-an.*] Relating to or resembling the *Timeliidæ*, a group of old-world birds of debatable extent and affinities, but agreeing in having short, rounded wings; timeliine.

time-marker (tīm'mär″kėr), *n.* In *physiol.* and *exper. psychol.*, an instrument which traces the time-line, or indicates the time of application of a stimulus, etc., upon the smoked paper of the kymograph. The time-marker may consist of a writing lever actuated by an electromagnet vibrating in connection with a tuning-fork; of a bristle attached directly to a tuning-fork tine; of a writing lever attached to the escapement of a clock (Jacquet chronometer); etc. *Amer. Jour. Psychol.*, XIII. 221.

timepiece, *n.*—**Equation timepiece.** See ★*equation.*

time-recorder (tīm'rẹ̄-kôr″dėr), *n.* A person who records, or any apparatus for recording, the time of arrival or departure of workmen to and from their work, the time expended in the performance of specified work, or the like. Mechanical time-recorders are, for the most part, clocks combined with recording-mechanism. *Engin. Mag.*, July, 1904, p. 617.

Time-sense apparatus, in *psychol.*, an apparatus for the study of the discrimination and comparison of time-intervals. It consists essentially of a metal disk furnished at the periphery with electrical contacts, which are closed or opened by a revolving metal radius; the contacts are in connection with a sound-hammer, the strokes of which mark off the times to be compared.—**Time-sense instrument.** See ★*instrument.*

time-service (tīm'sėr″vis), *n.* The work of astronomical observatories in furnishing correct time to the community by telegraph. *Smithsonian Rep.*, 1890, p. 160.

time-sheet (tīm'shēt), *n.* **1.** A slip of paper with printed headings or columns and blank spaces, on which workmen in a shop or factory may fill in the number of hours they have worked and the jobs or orders on which they have been employed. These are collected and handed to the time-keeper and cost-clerk.—**2.** The sheet summarized from these slips (def. 1.) on which the amount and kinds of work done on any job or order are brought together for computing cost.—**3.** The blank on which the time-keeper records the hours per week of work done by each workman, for use in making up a weekly pay-roll.

time-stamp (tīm'stamp), *n.* An instrument controlled by clock-mechanism by which the time of day at which letters, documents, etc., are sent, received, or recorded is stamped upon them. It is usually a date-stamp also. *Engin. Mag.*, July, 1904, p. 605.

time-verse (tīm'vėrs), *n.* Verse recited in a scanning fashion, with regard to the temporal values of the syllables.

> Neither in intensity-verse nor *time-verse* are the lengths of feet ever exactly equal.
> *Scripture*, Exper. Phonetics, p. 538.

time-worker (tīm'wėr″kėr), *n.* One who does time-work. *Webb*, Indust. Democracy, I. 412.

time-zone (tīm'zōn), *n.* One of the twenty-four regions or divisions of the globe approximately coinciding with meridians at successive hours from Greenwich Observatory. Within each region or zone the railroads and telegraphs and, generally, the people adopt as "local standard time" the mean solar time proper to the nearest meridian exactly an integral number of hours distant from Greenwich meridian; the local date is also reckoned so as to agree with the Greenwich date. This system does away with the former methods of computing "local mean time" proper; it also does away with "apparent time" so far as that is legal. It is "clock time" as distinguished from "sun time." It was explained and recommended in a report of Professor Cleveland Abbe to the American Metrological Society in May, 1878, was urged by Mr. H. A. Allen, chairman of the Committee on Official Railroad Time-tables, was adopted in 1883, and went into effect October 1, 1884, in the United States. It was recommended by the International Meridian and Time Convention, Washington, October, 1884, and has now been adopted for popular use by all civilized nations except France.

timing-valve (tīm'ing-valv), *n.* A valve, in an internal-combustion motor, which opens at such a period in the cycle of the operations in the cylinder that ignition of the compressed mixture of gas and air takes place just before the piston reaches the dead center, or point of maximum compression. *F. E. Hutton*, Gas Engine (2d ed.), p. 202.

timon, *n.* **2.** A pole, sometimes of square steel tubing, rigidly attached to a plow-beam, designed to regulate the depth of the plowing and made adjustable.

> The *timon* is hitched to the yoke when in use.
> *Trade Catalogue*, 1905–06.

timothy, *n.*—**Apache timothy,** the southern canary-grass, *Phalaris Caroliniana.* See ★*canary-grass.*—**Mountain timothy,** *Phleum alpinum*, a lower, stouter, and more leafy species than the common timothy, found in mountain regions northward in both hemispheres.—**Southern timothy.** See ★*canary-grass.*—**Wild timothy.** (*a*) A satin-grass, *Muhlenbergia racemosa*, with somewhat the appearance of timothy, found in moist ground from New England to the Rocky Mountains, northward and southward. It is not valued in the eastern United States, but is esteemed a good hay-grass in the Northwest and in Texas. (*b*) Same as ★*slough-grass.* [Nevada.]

timucu (tim'ū-kū), *n.* [NL. *timucu*, prop. *timuçu*, < Tupi *timuçu.*] A fish, *Tylosurus timucu*, of the family *Esocidæ*, found from the Florida Keys to Brazil.

tin, *n.* **5.** In *cricket*, a sheet of metal bearing painted numbers, exhibited in a conspicuous place to indicate the score of the match to spectators. *Hutchinson*, Cricket, p. 97. [Colloq.]—**Alluvial tin,** stream-tin, or disintegrated tin ore found in river gravels and on the bed-rock.—**Boiling of tin,** a method of refining metallic tin by stirring it, in the melted state, with sticks of green wood. The escape of steam from the sap in the wood agitates the melted metal and brings fresh portions to the surface, where the impurities are oxidized and converted into dross by the action of the air.—**Disease of tin.** See *tin* ★*pest.*—**Feathered tin,** metallic tin which has been granulated by melting and pouring into cold water, and has therefore assumed various irregular forms, some of them suggesting the appearance of feathers. It is applied to the preparation of stannous chlorid for dyers' use.—**Head tin,** the tin ore which lies on the surface of the mass after washing. It corresponds to the heads of the concentration process.—**Malacca tin,** tin produced in Malacca or Banca. It is made from very high-grade ore. Also called *Straits tin.*—**Phosphide of tin.** Same as ★*phosphor-tin.*—**Straits tin.** Same as *Malacca* ★*tin.*—**Tin chlorid.** See ★*stannic* and ★*stannous chlorid.*—**Tin crystals,** stannous chlorid in crystals: used by dyers as a mordant.—**Tin-pickling machine.** See ★*machine.*—**Tin spirits.** See ★*spirit.*

tina (tē'nä), *n.* [Sp. *tina*, large earthen jar, vat.] An amalgamating-pan differing from the Washoe pan chiefly in that its bottom and muller are made of an alloy of copper and tin instead of cast-iron. The copper assists in the chemical reactions whereby the minerals are decomposed and the silver amalgamated.—**Tina cargadera,** the first tank into which the metalliferous mud from the torta is charged to be washed, in patio amalgamation. See *patio process*, under *process. Phillips and Bauerman*, Elements of Metallurgy, p. 745.

tinamine (tin'ạ-min), *a.* [*tinamou* + *-ine*2.] Relating to or having the characters or appearance of the tinamous, a group of birds peculiar to Central and South America.

tinction, *n.* **2.** In *histol.*, the process or result of staining.—**3.** In *pharm.*, the addition of a flavoring or coloring agent to the ingredients of a prescription.

Tinctorial chemistry. See ★*chemistry.*

tinctumutation (tingk″ṭụ-mū-tā'shọn), *n.* [L. *tinctus* (*tinctu-*), coloring, + *mutātio*(*n*), change.] The change of color which is exhibited by certain animals, such as the chameleon, anoli, and many cephalopods.

> In 1883, while studying *tinctumutation* or the color-changing function in certain animals, I reared a large number of newts, or salamanders, from the eggs. The eggs were placed in shallow vessels which were covered by colored glasses, blue, orange, green, and red.
> *Sci. Amer. Sup.*, Nov. 22, 1902, p. 339.

tincture, *n.*—**Churchill's tincture of iodine**, an aqueous solution of iodine containing 120 grains of iodine and 240 of potassium iodide to 1 fluid ounce of water; Churchill's iodine caustic.—**Tincture of steel.** See ★*steel*1.

tinder-box, *n.*—**Pistol tinder-box**, an old form of tinder-box which had the handle and lock of a pistol without the barrel.

tinder-fungus (tin′dėr-fung″gus), *n.* Same as *amadou.*

tine^1, *v. t.* **2.** To close. [Prov. Eng.]

> "Well, Shepherd Oak, and how 's lambing this year, if I may say it?" inquired Joseph Poorgrass.
> "Terrible trying," said Oak. . . . "Cainy and I have n't *tined* our eyes to-night."
> *T. Hardy*, Far from the Madding Crowd, xv.

tine^7, *n.*—**Royal tine**, the third tine from the base of a deer's antler. Also *tine-royal.*

Tinea imbricata, a form of ringworm marked by scaly patches of ring shape. It occurs chiefly in the tropics, is contagious, and is due to the presence in the skin of a parasitic fungus.—**Tinea tarsi**, inflammation of the edges of the eyelids, accompanied by much itching and occasionally by ulceration.

tineine (tin′ẹ-in), *a.* and *n.* **I.** *a.* Having the characters of or belonging to the group *Tineina.*

II. *n.* One of the *Tineina.*

tineoid (tin′ẹ-oid), *a.* and *n.* **I.** *a.* Having the characters of or belonging to the lepidopterous superfamily *Tineoidea.*

II. *n.* One of the *Tineoidea.*

Tineoidea (tin-ẹ-oi′dē-ä), *n. pl.* [NL., < *Tinea* + *-oidea.*] The old lepidopterous family *Tineidæ* considered as a superfamily: same as *Tineina.*

tin-frame (tin′frām), *n.* A frame or buddle for concentrating a tin ore and separating valuable particles of the metal from the gangue or worthless material.

t'ing (ting), *n.* [Chin.] In China, a pavilion; a kiosk.

> The most general model of Chinese buildings is the *t'ing.* This consists essentially of a massive roof with recurved edges resting upon short columns. The curvilinear tilting of the corners of the roof has been supposed to be a survival from the days of tent dwellers, who used to hang the angles of their canvas pavilions on spears; but this is carrying it back to a very dim antiquity, as we have no records of the Chinese except as a settled agricultural people. The roof is the principle feature of the building and gives to it when finished its qualities of grandeur or simplicity of strength or grace. To vary its aspect the architect is induced occasionally to double, or even to triple, it. *Smithsonian Rep.*, 1904, p. 677.

tingible (tin′ji-bl), *a.* [L. **tingibilis*, < *tingere*, tinge.] In *cytol.* and *pathol.*, capable of taking a stain; stainable: said of cells or tissues; chromophil.

> The adjacent *tingible* substances in the nucleus.
> *Jour. Exper. Med.*, Nov. 29, 1901, p. 58.

tingid (tin′jid), *a.* and *n.* Same as ★*tingitid.*

tingitid (tin′ji-tid), *n.* and *a.* **I.** *n.* A member of the homopterous family *Tingitidæ.*

II. *a.* Having the characters of or belonging to the family *Tingitidæ.*

tin-glazed (tin′glāzd), *a.* Coated with tin-glaze or enamel. See *stanniferous* ★*enamel.*

tinguaite (ting′gwa-īt), *n.* [Serra de *Tingua*, Rio Janeiro, Brazil, + *-ite*^{2}.] In *petrog.*, a name given by Rosenbusch (1887) to a phonolite composed of alkali feldspar and nephelite with abundant ægirite as the distinguishing characteristic.

tinguoid (ting′gwoid), *a.* [*tingu(aite)* + *-oid.*] In *petrog.*, resembling tinguaite in mineral composition and texture.

tinker, *n.* **13.** A playfully abusive epithet for a child.

Tinmen's solder. See *soft* ★*solder.*

tinner, *n.*—**Tinners' stove.** (*a*) It is a cylinder of sheet-iron with a convenient base, fitted with a grate near the bottom and an opening for air below the grate; it is used by tinsmiths and plumbers for heating soldering-irons and melting solder. Often called a *furnace*, and usually burning charcoal as fuel. (*b*) A form of gasolene-stove burning a mixture of gasolene-vapor and air as a fuel, fitted specially to heat and melt the solder used by plumbers and other workers in soft metal under the general name of 'lead.'

tin-pickling (tin′pik″ling), *n.* The dipping of the thin steel sheets which are the basis of tin-plate in a bath of dilute acid, in order to remove grease and oxid of iron, previous to dipping them in the bath of melted tin.

tin-scum (tin′skum), *n.* The material removed by skimming from the surface of melted tin in the process of refining. It contains in a partially oxidized condition some tin and a large proportion of the foreign metals originally present as impurities.

tinsel^2, *n.* **4.** In *elect.*, fine threads of copper or bronze wire used in making up flexible stranded conductors for portable and other fixtures.

> The stranded conductors are universally made of very fine copper or copper bronze wire, or what is technically called *tinsel*, and the finer and more numerous the threads the better. *Elect. World and Engin.*, Aug. 29, 1903, p. 341.

tinsel^2, *v. t.* **2.** Specifically, to embellish (ceramic ware) with metallic effects.

tint^1, *n.*—**Neutral tint**, an artists' pigment of a gray color, a mixture of black and white with a small proportion of blue.—**Tint of passage.** See ★*passage.*

tinto (tin′tō), *n.* [Pg.] Same as *tent*^{5}, *n.*

tintometric (tin-tọ-met′rik), *a.* [*tintometr(y)* + *-ic.*] Relating to tintometry or the determination of shades of color by comparison with a standard. See *tintometer.* *Buck*, Med. Handbook, II. 58.

tintometry (tin-tom′e-tri), *n.* [*tintometer* + *-y*^{3}.] The scientific use of the tintometer (which see).

tip^1, *n.* **7.** A horseshoe which covers only the front half of the hoof, with the branches tapered to an edge. *U. S. Dept. of Agr.*, Rep. on Diseases of the Horse, 1903, p. 379.

tip^2, *v. t.* **8.** To throw up (wool or cotton) so that it will fall in bunches.—**To tip the grampus**, *naut.*, to dash a bucket of water over a look-out man caught asleep on his watch.

tip-burn (tip′bėrn), *n.* A disease of the potato-leaf, caused by dry, hot weather and other unfavorable conditions, which affects the tips of the leaves, especially turning them brown.

tipiti (tē-pē-tē′), *n.* [Tupi.] A long tubular cylinder woven of strips of the jacitara-palm, used for extracting the poisonous juice of the cassava. The cassava-roots are cut up and placed in the cylinder, which is suspended from a beam, while its lower end is pulled down by means of a lever. The elongation of the plaited cylinder produces a contraction of its diameter, and by the strong pressure thus obtained the poisonous juice is pressed out of the roots.

tipolo (tē′pō-lō), *n.* [Philippine.] Same as ★*antipolo.*

tiponi (tẹ-pō′nẹ), *n.* [Hopi.] Among the Hopi Indians of Arizona, the badge of a religious fraternity or of a chief priest. It usually consists of an ear of corn wound with cotton thread and ornamented with feathers, pieces of shell, turquoise, etc.

> There were no stone fetishes along the rear of the sand picture, nor stone implements or sticks in pedestals on that side. The *tiponi* was placed back of the extreme right-hand corner, and was separated by a considerable space from the sand picture.
> *An. Rep. Bur. Amer. Ethnol.*, 1894–95, p. 279.

tipping-bucket (tip′ing-buk″et), *n.* One of a pair of buckets used in a tipping-bucket gage. See the following phrase.—**Tipping-bucket gage**, a gage having a pair of small buckets upon the two ends of a lever (or a single bucket divided into two portions) so arranged that the rain or other material to be measured flows into one bucket until its weight bears down that end of the lever and brings the other bucket into action while the former is being emptied. Each tip of the lever is recorded.

tippler^1, *n.* **2.** A breed of domesticated pigeons, derived from and very closely resembling the tumblers. They do not, however, 'tumble' when on the wing and fly but poorly.

tipstaf, *n.* A simplified spelling of *tipstaff.*

tip-truck (tip′truk), *n.* A truck or car so constructed that by tipping the body on the frame the contents can be dumped. The body may either tip lengthwise, and toward the rear, as in horse-drawn trucks for bricks and other building material, or sidewise, as in trucks which are run on rails and handled in trains by a motor. *Jour. Brit. Inst. Elect. Engin.*, 1901–02, p. 535.

tipulid (tip′ụ-lid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Tipulidæ.*

II. *a.* Having the characters of or belonging to the family *Tipulidæ.*

tipulideous (tip-ụ-lid′ẹ-us), *a.* Of or pertaining to the dipterous family *Tipulidæ.*

tirage (tẹ-räzh′), *n.* [F., < *tirer*, draw, pull, print.] A new edition or reprinting of a book: usually accompanied by the number of the edition or reprint.

tirata, *n.* Same as *tirade*, 3.

tire^7, *n.*—**Clincher tire**, a form of double pneumatic rubber tire in which there is on each edge of the outer case a clinch or rim by which it is held in the channel-iron or metal tire.—**Cushion tire**, a form of rubber tire, for bicycles or other light vehicles, in which the hollow tube usual in the pneumatic form is filled with shreds or small masses of rubber, making a tire less elastic and heavier than the inflated pneumatic tire, but less inconvenient in case of cut or puncture.—**Flat tire**, in a locomotive, a tire of a driving-wheel which is flat or without a flange; a blank or flangeless tire used to allow lateral play to the wheel on the rail in passing a curve.—**Pneumatic tire**, a tire consisting of a tube made of some strong and durable fabric, generally coated with rubber and inflated with air, used on bicycles, etc. In the double tire an inner air-tight tube of thin rubber is protected by a strong, unelastic outer tube. Various devices have been used to prevent puncturing.

tire-glass (tīr′glȧs), *n.* A tiring-glass; a toilet hand-glass.

tire-room (tīr′röm), *n.* A dressing-room; a tiring-room.

tires (tīrz), *n.* [Pl. of *tire*^{1}, *n.*?] The milk-sickness.

tire-screw (tīr′skrö), *n.* A tire-bolt; a conical-headed screw countersunk in the metal of a tire and passing radially through the felly, and held up by a nut on the inside over a curved washer-plate. It is intended to hold the tire in place sidewise and lengthwise, when the wheel is so light that a powerful shrinkage of the tire on the rim causes the wheel to go out of shape.

tire-setter, *n.*—**Hydraulic tire-setter.** (*a*) A machine for placing tires on the wheels of cars or locomotives, in which the tire is heated by gas-flames in a horizontal position until sufficiently expanded, when the center is lifted (or lowered) into the tire by hydraulic pressure on a ram or plunger. (*b*) A machine for forcing tires on wheels of cars or locomotives, in which the wheel-center is forced into the tire by hydraulic pressure without use of heat to expand the tire.

tire-steel (tīr′stēl), *n.* A mild steel from which are made the tires of locomotive and railway-carriage wheels. To resist abrasion it is made rather harder than structural steel, usually containing about .5 or .6 per cent. of carbon. To secure toughness and resistance to shock, it should not contain phosphorus in more than very minute quantity.

tiresum, *a.* An amended spelling of *tiresome.*

tire-tête (tēr-tāt′), *n.* [F.] Any instrument employed in childbirth to make traction on the fetal head.

tiring-glass (tīr′ing-glȧs), *n.* A mirror used in dressing.

Tirolian (ti-rō′li-an), *a.* and *n.* [*Tirol* + *-ian.*] In *geol.*, noting the basal series of the upper pelagic Trias, typically developed in Tyrol, western Austria, and widely expanded throughout the Mediterranean Jurassic basin into India, northern Asia, and western South and North America. It comprises the Ladinian stage below and the Carnian stage above. Also *Tirolic.*

T-iron, *n.* **2.** An iron plate with slots planed in it having the section of an inverted T so as to receive bolt-heads.—**3.** A T-shaped rest, used by tinsmiths and other metal-workers.

tiru (tē′rö), *n.* [It. dial. (?).] A fish, *Synodus saurus*, of the coasts of southern Europe and neighboring islands.

Tirynthian (ti-rin′thi-an), *a.* and *n.* **I.** *a.* Relating to, or found at, Tiryns, a city of Ancient Greece thought to have been destroyed about the fifth century B.C.: as, *Tirynthian* pottery. See the extract below.

II. *n.* An inhabitant of Tiryns.

> It was suggested long since by Prof. Mahaffy in Schliemann's 'Mycenæ' that this ignorance of Æschylus points to a very old destruction of Mycenæ and Tiryns, and he even predicted to Schliemann that the excavation of Mycenæ would disclose no coins or inscriptions of the fifth century B.C. The *Tirynthians* in question may even have been descendants of the slaves who seized the deserted fort, and held it against Argos for some time.
> *Athenæum*, Feb. 21, 1903.

tisic, *a.* An amended, and former, spelling of *phthisic.*

tisis, *n.* An amended, and former, spelling of *phthisis.*

tissue, *n.*—**Conjunctive tissue**, in *bot.*, the fundamental tissue within the stele.—**Differentiated tissue**, a circumscribed mass of tissue which has a distinct and separate character from that of the tissues by which it is surrounded. *C. S. Minot*, in Science, March 29, 1901, p. 497.—**Dotted tissue.** Same as *bothrenchyma.*—**Ground tissue**, in *bot.*, the tissue of the pith, medullary rays, and cortex.

tissue, *v. t.* **3.** Figuratively, to weave; construct; elaborate. [Rare.]

> 'Dream and Reality' is *tissued* from a series of such metaphors—quitting the valley, ascending to the heights, descending into the market-place, and so forth.
> *Athenæum*, May 6, 1905, p. 556.

tissue-lymph (tish′ö-limf), *n.* Lymph derived from the tissues and not formed directly from the blood. *Nature*, May 26, 1904, p. 88.

tit^1, *n.* **2.** In *mech.*, a round projection on a tool or other piece to serve as a guide. A tit is usually made on the end of a counterbore, so that the hole made by it shall be concentric with the hole which it is desired to enlarge.

tit^{2}, *n.*—**California least tit.** Same as *brush-tit.*

> In southern California . . . the *California least tit* feed[s] extensively on the destructive olive scale.
> *Yearbook U. S. Dept. Agr.*, 1901, p. 109.

tit. An abbreviation (*a*) of *title;* (*b*) [*cap.*] of *Titus* (a book of the New Testament).

tita (tē'tä̤), *n.* See ★*ais.*

titanation (tī-ta̤-nā'sho̤n), *n.* [*titanat*(*e*) + *-ion.*] The production of a titanate by the union of titanic acid with a base or by its substitution for another acid in a compound already formed. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. 204.

titani-. See ★*titano-.*

Titanic oxid. See ★*oxid.*

Titanichthys (tī-ta̤-nik'this), *n.* [NL., < Gr. Τιτάν, a Titan, + ἰχθύς, a fish.] An extinct genus of arthrodiran fishes, of the family *Coccosteidæ*, with very large cranial shield and much reduced edentulous, probably horn-sheathed jaw-elements. The dorsomedian plate is without an inferior longitudinal keel and is deeply emarginate in front. The antero- and postero-dorsolaterals are fused, articulated to the cranial shield by a long hinge, and overlapped by the large claviculars. The genus is found in the Cleveland shale (Upper Devonian) of Ohio.

titanifluoride (tī-ta̤-ni-flö'o̤-rid), *n.* Same as ★*titanofluoride.*

titanism (tī'ta̤n-izm), *n.* [*Titan* + *-ism.*] The character of a Titan; titanic force, or the like. [Rare.]

> Life is now polarized, oriented, and potentialized. The soul is filled with a *Titanism* that would achieve a vita nuova upon a higher plateau, where the music of humanity is no longer sad but triumphant.
> *G. S. Hall*, Adolescence, II. 123.

titanium, *n.* As obtained by Moissan in the fused condition by means of an electric furnace, although not quite free from carbon, metallic titanium is not unlike silicon, but whiter, lustrous, very hard, but brittle, of specific gravity 4.87. It burns when heated in the air, and is attacked by the common mineral acids.

titanium thermit (tī-tā'ni-um-thėr''mit), *n.* A mixture of finely divided metallic aluminium with the oxids of titanium and iron, one of the varieties of so-called 'thermit,' which on ignition develops an exceedingly high temperature and produces a fused alloy of iron and titanium. It has been used in steel-making with the expectation of removing any iron nitride present. See ★*aluminothermics.*

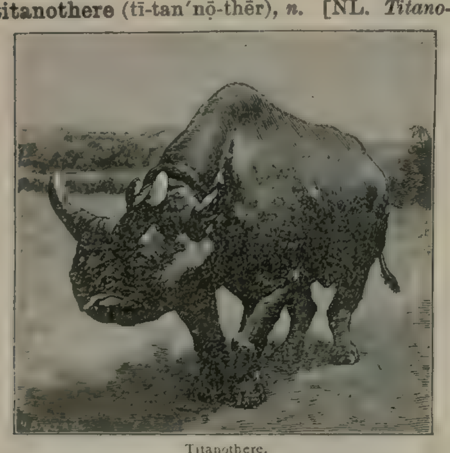
titano-. In *chem.*, a prefix to the name of a compound signifying the presence of titanium as a constituent, as potassium titanofluoride (K_2TiF_6). Sometimes written *titani-.*

titanofluoride (tī''ta̤-nō̤-flö'o̤-rid), *n.* Same as ★*fluotitanate.*—**Hydrogen titanofluoride.** Same as ★*fluotitanic acid.*

Titanosaurus (tī-tā-nō̤-sâ'rus), *n.* [NL., < Gr. Τιτάν, a Titan, + σαῦρος, a lizard.] A genus of sauropod dinosaurs with procœlous posterior caudal vertebræ: reported from the Middle Cretaceous of India, the Cretaceous and Wealden of England, and the supposed Cretaceous of Patagonia. The genus is very imperfectly known.

titanosilicate (tī''ta̤-nō̤-sil'i-kāt), *n.* A silicate into which titanium enters as a prominent constituent.

titanothere (tī-tan'nō̤-thēr), *n.* [NL. *Titanotherium.*] Any individual of the genus *Titanotherium* or member of the family *Titanotheriidæ* or superfamily *Titanotheroidea.* The titanotheres are extinct rhinoceros-like animals belonging among the odd-toed ungulates. The upper molar teeth are bunoselenodont with two outer crescents and two inner cusps. The lower molars are selenolophodont. In some forms the nasals bear horn-cores. There are four functional digits in the manus and three in the pes. Found in the Tertiary formation (Eocene and Lower Oligocene of North America and Miocene of Europe).



Titanothere.

(From a water-color sketch, based on mounted skeleton and skulls, in the American Museum of Natural History, New York.)

titanotheriid (tī-tā-nō̤-thē'ri-id), *n.* and *a.* **I.** *n.* One of the *Titanotheriidæ.*

II. *a.* Pertaining to or having the characters of the *Titanotheriidæ.*

titanous (tī'ta̤-nus), *a.* [*titan*(*ium*) + *-ous.*] In *chem.*, containing titanium as a constituent with apparently dyad valence, as titanous sulphate ($Ti_2(SO_4)_3$).

titel (tē'tel), *n.* A species of antelope, *Bubalis mauritanica*, allied to the hartebeest, but much smaller, standing about 3 ft. 6 in. high at the shoulder. It is the smallest member of the genus and the only one not confined to Africa, occurring in Arabia and Syria.

titer^{2}, **titre** (tē'tėr), *n.* [F. *titre*, title, standard of fineness. See *title, n.*, 10.] **1.** In *chem.*: (*a*) The strength of a standard solution used in titration in volumetric chemical analysis. (*b*) Inaccurately, the amount of a standard solution required in a given analysis.

> The solution was kept cooled to 15°. One cc. was removed at intervals (5 cc. in all), and the "immediate" *titer* was found to gradually decrease from its original value of 6.4 to 1.2 in about one-half hour, the total active oxygen content of the solution remaining the same (decreased slightly by the dilution with acetic anhydride).
> *Amer. Chem. Jour.*, March, 1903, p. 188.

2. See ★*number*, 17.

titfish (tit'fish), *n.* A name given in northern Australia to the sea-slug or trepang, because the appearance of its tentacles suggests the teat of a cow. *E. E. Morris*, Austral English.

tithe, *n.*—**To set out tithe,** to mark every tenth shock in the row in a field of corn, for tithe; the first shock being chosen by the setter-out without previous arrangement with the owner, to prevent fraud, since he might have made the tenth shocks smaller than the rest if he had known which would be marked. The same process held with cocks of hay, the mark in each instance being a small green branch. The process was in use till the early part of the nineteenth century, if not later. *N. and Q.*, 10th ser., II. 349, 454, 493.

titi^{2}, *n.*—**Black titi.** Same as *buckwheat-tree.*—**Red** or **white titi.** Same as ★*leatherwood*, 3.

titi^{3} (tē'tē), *n.* [Aymará of Bolivia.] A species of wildcat indigenous to Bolivia and found also around Lake Titicaca. The name of the lake is derived from a rock on the island of Titicaca which bears natural marks resembling heads of cats. In the valleys of the eastern Bolivian Andes the titi is called *mulu-mulu* in Aymará.

titivation (tit-i-vā'sho̤n), *n.* [*titivat*(*e*) + *-ion.*] The act of titivating, or dressing or sprucing up; the adding of small attractions to the toilet.

> All efforts to enhance his charms by the *titivation* of his person were useless, he was and remained a clumsy lout. *J. Brander*, The Camp on the North Fork, i.

title, *n.*—**Binder's title.** See ★*binder.*—**Brief of title.** Same as *abstract of title.*—**Document of title.** See ★*document.*—**Doubtful title,** a title which an alleged purchaser cannot be compelled to take, in a suit for the specific performance of a contract to purchase real property, by reason of some defect in the title, or some claim upon it, which, though not necessarily rendering it bad, may put the purchaser to expense or litigation in clearing it.—**Good title,** such a title as gives a legal right to property and to the possession of the same. The term is usually employed with reference to real property, and does not necessarily mean a perfect or a marketable title.—**Naked title,** in *law*, a title to land, without possession, or without right of immediate possession.—**Paper title,** a title to land that is evidenced by one or more deeds or other documents which give 'color of title.' The term usually implies that the title is not substantial.—**Presumptive title,** a title to lands founded only on the rebuttable presumption that the possessor is the owner. It is the most imperfect title recognized in law.—**Requisitions of title.** See ★*requisition.*—**Short title,** the brief alternative title of a statute. It is given in the statute itself with such words as 'this act shall be known as,' etc.—**Slander of title.** See ★*slander.*—**Title by occupancy,** in *law*, the right of ownership acquired by occupying land or possessing property before occupied or possessed by nobody. It is the root of individual ownership, more recognized in the civil than in the common law. See *occupancy.* It is a legitimate title, not questionable as is the squatter's. See *squatter.*—**Title of a cause,** in *law*, the designation of a case. The entire title usually consists of the name of the court, the venue, the parties to the action, or a brief description of the subject-matter of a special proceeding. The title as commonly used is generally abbreviated to the names of one plaintiff and one defendant in an action, or to the name of a particular party to a special proceeding, as 'White v. Jones,' et al., meaning that there are other defendants, 'Matter of Smith,' etc., not stating the subject.—**To quiet title,** to bring an action in equity to remove clouds upon, or to determine the validity of, a title to real estate.—**Trespass to try title,** in *law*, the name of the suit brought in South Carolina, to settle a disputed title to land.

titman (tit'ma̤n), *n.*; pl. *titmen* (-me̤n). [*tit* + *man?*] **1.** The smallest and weakest of a litter of pigs, puppies, or the like; a runt. [New Eng.]—**2.** Hence a man who is stunted, physically and mentally.

> We are a race of *tit-men*, and soar but little higher in our intellectual flights than the columns of the daily paper. *Thoreau*, Walden, p. 169.

titoki (tē'tō̤-kē), *n.* [Maori.] A New Zealand tree, *Alectryon excelsum*, of the soapberry family, which bears large panicles of reddish flowers. From the hardness of the wood and its crooked growth it is called *New Zealand oak*, and from its resemblance in foliage and the toughness of its wood *New Zealand ash.*

titoxin (ti-tok'sin), *n.* [(*an*)*titoxin.*] One of two substances which, according to the doctrine of Arrhenius and Madsen, are formed during the interaction between toxin and antitoxin, the other being termed *toxinan.* During the interaction between toxoid and antitoxin titoxin is also formed, but in the place of toxinan another product results which is termed *toxoinan.*

titre, *n.* See ★*titer*^{2}.

titri (tē'trē̤), *n.* [Austral Eng.] A spelling of *tea-tree*, from the notion that it is of Maori or aboriginal Australian derivation. The Maori name *ti* refers to an entirely different tree. See *tea-tree* and *ti*^{1}.

titrimetric (tit-ri-met'rik), *a.* [*titrimetr*(*y*) + *-ic.*] In *analyt. chem.*, involving the use of measured volumes of reagent solutions of determined strengths: same as *volumetric* in relation to liquids and to solids in solution.

> In a recent article, a method for the *titrimetric* estimation of nitric acid or nitrates was described. It consisted, briefly, in the measurement of the amount of ferrous salt oxidized in the reduction of the nitric acid to nitric oxide by an excess of ferrous sulphate in the presence of hydrochloric acid. *Amer. Jour. Sci.*, March, 1904, p. 201.

titrimetry (ti-trim'e-tri), *n.* [F. *titre*, standard of fineness, + Gr. *-μετρια*, < μέτρον, measure.] Same as *titration* or *volumetric analysis* as applied to liquids or to solid substances in solution. See *titration.* *E. von Meyer* (trans.), Hist. of Chem., p. 201.

tit-screw (tit'skrö), *n.* A screw the point or end of which is formed either into a cone, like a nipple, or into a cylinder with a reduced diameter for a short distance. The purpose is to have the tit enter a groove or depression and prevent end-motion while permitting the element into which it projects to revolve: or the tit may prevent both revolution and side-play without straining or marring the second element as a set-screw would do. *Cycle and Autotrade Jour.*, Dec., 1904, p. 120.

tjemoro (che-mō'rō), *n.* [D. spelling, answering to an Eng. spelling **chemoro*, of a Malayan or Jav. name.] A tree, *Casuarina montana.* which forms exclusive xerophilous forests at moderate altitudes in the mountains of eastern Java. The tjemoro forest, classed by Schimper as a peculiar form of savanna forest (see *savanna* ★*forest*), passes in places into tjemoro savanna. *A. F. W. Schimper* (trans.), Plant-Geog., p. 726.

tlacochtli (tlä-kōch'tli), *n.* [Nahuatl.] A dart or small lance used by the ancient Mexicans.

> Clavigero describes the Mexican *tlacochtli* or dart, a small lance of otalli or some other strong wood, the point of which was hardened by fire or shod with copper, or itzli, or bone, and many of them had three points.
> *Smithsonian Rep.*, 1900, p. 220.

tlalcapolin (tläl-kä-pō̤-lin'), *n.* [Nahuatl *tlalcapolin*, < *tlalli*, ground, + *capolin*, a cherry-like fruit.] In Mexico, a shrub, *Karwinskia Humboldtiana*, belonging to the buckthorn family, the fruit of which is attractive and cherry-like, but poisonous to man and animals. The leaves and root have purgative properties, and in many parts of Mexico, including the peninsula of Lower California, they are used medicinally. Also called *tullidora.*

Tm. The chemical symbol of *thulium.*

tn. An abbreviation of *ton.*

T. O. An abbreviation (*a*) of the Latin *tinctura opii*, tincture of opium; (*b*) of *turn over;* (*c*) of *Topographical Office* (of the Ordnance Survey of England). In the last sense also written *T-O.*

toad, *n.*—**Holy-Cross toad.** Same as *Catholic* ★*frog.*—**Panther toad, pantherine toad,** *Bufo mauritanica* or *B. pantherina*, a pretty African species, buff-colored above, with brown or olive markings.

toad-bug (tōd'bug), *n.* Any member of the family *Galgulidæ* (which see). *L. O. Howard*, Insect Book, p. 281.

toad-fish, *n.* **5.** In New Zealand, a scarce marine fish of the family *Cottidæ*, *Neophrynichthys latus*. *E. E. Morris*, Austral English. **—6.** In Australia, *Tetraodon hamiltoni* and various other species of *Tetraodon*, of the family *Gymnodontes*. *E. E. Morris*, Austral English.—**Poison toad-fish,** any fish of the genus *Thalassophryne*, having the spines of the dorsal fin and opercles each with a longitudinal tunnel which leads into a poison-sac at its base. When pressure is brought to bear at the tip of the spine the poison is ejected. The arrangement is similar to that of the fangs of the rattlesnake.

toad-frog (tōd'frog), *n.* A book-name of the tailless amphibians of the genus *Pelobates* which have teeth in the upper jaw, the processes of the sacral vertebræ expanded, and the ends of the toes simple. The typical representative is the brown toad-frog, *Pelobates fuscus*, of Europe.

> The fifth family . . . comprises eight genera, which may be collectively termed *toad-frogs*, since they come neither under the designation of toads or frogs.
> *R. Lydekker*, New Nat. Hist., V. 283.

toad-mug (tōd'mug), *n.* A cup in old Staffordshire ware on the bottom of which was modeled a toad, usually in red clay with white slip eyes. This was uncovered as the drinker neared the bottom. *R. L. Hobson*, in Burlington Mag., II. 67.

tob (tōb), *n.* [Ar. *tōb*, a loose gown, a roll of such material.] A loose gown (or a roll of cotton for the purpose) worn by native women in Egypt under the habara or cloak.

Tob. An abbreviation of *Tobit*, an apocryphal book of the Old Testament.

tobacco, *n.* **2.** There are five leading types of tobacco grown in the United States, namely: seed-leaf or cigar, white Burley, heavy shipping or export yellow, and perique. See the phrases below and ★*perique*. In growing tobacco ★topping, suckering (see *sucker*, *v.t.*, 1), and ★worming are regularly practised, and priming (see ★*prime*, *v. t.*, 3 (*a*)) sometimes. In harvesting yellow tobacco, the leaves are often stripped from the standing stalk; in general the leafy stalks are cut. These are either scaffolded (see ★*scaffolding*, 5) or immediately housed. In the barn they are hung for curing, usually upon laths or other strips of wood, to which they are attached by pegging, spearing, or splitting (see these terms) or by means of twine or wire. The strips rest upon tier-poles. Curing is mainly either air- or pole-curing (see ★*pole-cure*, *v.*), flue-curing (see ★*flue-cure*, *v.*), or open-fire curing (see ★*fire-cure*, *v.*). For another method see ★*perique*. Curing is followed by stripping (see ★*stripping*, 10) and tying into hands (see *hand*, 13 (*c*)). These are bulked (see ★*bulk*^{1}, *v. t.*, 2) either for sweating in bulk or to be packed for sweating by other methods (see ★*sweating*, 5). Much export tobacco undergoes stemming (see *stemmed* ★*tobacco*). For cigar and plug tobaccos the principal grades are wrapper (the best) and filler (see these terms). For other grading terms see *export* ★*tobacco*, *white Burley* ★*tobacco*, and *yellow* ★*tobacco*.—**Air-cured tobacco.** Same as *pole-cured* ★*tobacco*.—**Bright tobacco,** any leaf of a conspicuously light color, most often the lemon-yellow of North Carolina, etc.—**Broad-leaf tobacco,** a cigar tobacco of Connecticut origin, there grown only in one small area (hence called *East Hartford broad-leaf*), and thence introduced into New Hampshire, Vermont, and several Western States. The leaves are very broad, sweet-tasting, thin, elastic, silky, and small-veined, and are used mainly for cigar binders and wrappers. Generally known to the trade as *seed-leaf*.—**Colonial tobacco,** in Australia, tobacco manufactured in the colonies, whether from imported American leaf or from home-grown leaf of the ordinary tobacco.—**Connecticut tobacco,** tobacco of the seed-leaf type grown in Connecticut or disseminated thence. See *broad-leaf* ★*tobacco*, *Havana* ★*tobacco*, *Cuban* ★*tobacco*.—**Cuban tobacco,** a type of cigar tobacco valued for flavor, aroma, smooth taste, and other qualities. In Cuba the best and the largest amount is produced in the low districts (Vuelta Abajo) near Havana, but large amounts are also grown elsewhere. In the United States Cuban tobacco is grown in shade (Connecticut valley) for cigar wrappers and unshaded (Florida, Texas, Ohio, Georgia) for fillers.—**Dappled tobacco.** See *spangled* ★*tobacco*.—**Export tobacco,** in the United States, any tobacco sold abroad; a shipping tobacco or "shipper"; specifically, a class of tobaccos largely preferred by foreign purchasers, spoken of as *dark*, *heavy shipping*, or *export tobacco*, and characterized by a dark-colored, heavy-bodied, gummy leaf of high nicotine content (sometimes even 6 per cent.). These tobaccos are mainly cured over open wood fires. They are grown in northern and western Tennessee, Kentucky (outside of the white Burley district), and central Virginia. The leaves are assorted into five principal grades, 'selections' being the highest and 'lugs' the lowest. Other tobaccos exported are the Maryland 'smoking,' in considerable part, one third to one half the 'yellow,' a smaller amount of the 'white Burley,' and part of the 'perique.' The American surplus goes widely over the world, the bulk, however, to Europe, Great Britain taking far the largest amount, followed by Germany, France, Italy, etc. See ★*régie contract system*. For examples of English shippers see *bird's-eye*, *n.*, 2, *navy* ★*plug*, *Scotch elder* ★*tobacco*, *spinning-leaf* ★*tobacco*. See also *olive-green* ★*tobacco*, *shag*^{1}, 4, and ★*saucer*^{2}.—**Flake tobacco,** cake (plug) tobacco cut into slices one twentieth to one fourteenth of an inch thick. [Eng.]—**Florida tobacco.** (*a*) Before the Civil War, a type grown exclusively in that State yielding beautifully spotted wrappers, now known as 'old Florida': no longer produced. (*b*) For types now raised in Florida, see *Cuban* ★*tobacco*, *Sumatra* ★*tobacco*.—**Granulated tobacco,** leaf first cut into flakes, then reduced by a special machine to grains for pipe-smoking.—**Havana tobacco,** nearly the same as Cuban ★tobacco, Havana being the chief emporium and seat of manufacture. *Connecticut Havana*, or *Havana seed*, is a variety thought to be derived by selection from a cross of Connecticut broad-leaf and Cuban stock, grown in the Connecticut valley and somewhat westward, especially in Wisconsin. The leaves are smaller than those of the broad-leaf, thin, and of a fine texture and delicate flavor, and are used for cigar wrappers and binders, the top leaves for fillers.—**Indian tobacco.** (*b*) The wild tobacco, *Nicotiana rustica*. (*c*) The mouse-ear everlasting, *Antennaria plantaginifolia*.—**Kite-foot tobacco,** a variety with a broad, short leaf grown in two counties in Indiana, used for making common cigars.—**Little Dutch tobacco,** a variety from German seed grown chiefly in Ohio for cigar fillers, with an aroma resembling that of the Cuban yara. See ★*yara*.—**Mahogany tobacco,** a subtype with a mottled yellow and brown leaf grading into the proper yellow tobacco. The best qualities are used for wrappers of plug tobacco ('mahogany wrappers'). The term, however, is also applied to other tobaccos of a reddish color.—**Maryland tobacco,** in trade, chiefly a light smoking tobacco grown in Maryland and somewhat in Pennsylvania and Virginia. The yield is partly manufactured domestically, partly exported. See also *spangled* ★*tobacco*.—**Native tobacco.** (*a*) In Australia generally, a true tobacco, *Nicotiana suaveolens*, readily eaten as a forage by stock and formerly manufactured. (*b*) In Queensland, the name is also applied to the pituri, *Duboisia Hopwoodii*. See ★*pituri*. (*c*) In Tasmania, a shrub of the aster family, *Cassinia spectabilis*.—**Olive-green tobacco,** a subtype of heavy export tobacco required by the English trade, not forming a separate commercial class. The leaves are harvested less ripe than for other sorts.—**Oregon tobacco,** *Valeriana edulis*. See *valerian*^{1}, 1.—**Piebald tobacco,** any tobacco with a spotted leaf; somewhat specifically, the Virginia 'dappled' export tobacco. See *spangled* ★*tobacco*.—**Pole-cure tobacco.** See ★*pole-cure*, *v.*—**Red Burley tobacco.** (*a*) A variety classed with the dark export tobaccos. See *white Burley* ★*tobacco*. (*b*) A commercial subdivision of the white Burley (see below) consisting of the darker, heavier leaves.—**Returns of tobacco.** (*a*) In the British excise law. See the extract.

> *Returns of tobacco* . . . may fairly be said to consist of the dust, "smalls" (fragments), siftings, scraps, waste pieces, and rejected portions arising in the manufacture of tobacco and snuff, and include the fragments and refuse portions of unmanufactured tobacco.
> *A. E. Tanner*, Excise Tobacco Laws, p. 135.

(*b*) Sometimes a brand of tobacco (see *return*^{1}, *n.*, 5). One such is known as *bird's-eye returns*. [Eng.]—**Root-rot of tobacco.** See ★*root-rot*.—**Scotch elder tobacco,** a type of tobacco very popular in England and Scotland, having a large capacity for absorbing water, hence advantageous to dealers in view of the import duty. It forms a grade of American shipping tobacco.—**Seed-leaf tobacco,** in the United States, a class of tobaccos with broad leaves, suited by this and other qualities for making cigars. For the included types see *broad-leaf* ★*tobacco*, *Connecticut Havana* (under *Havana* ★*tobacco*), and *Sumatra* ★*tobacco*.—**Shipping tobacco.** See *export* ★*tobacco*.—**Shoestring tobacco,** a narrow-leaved variety of heavy tobacco much grown for shipping.—**Spangled tobacco,** piebald or spotted tobacco: chiefly a form of the Virginia export, better known locally as 'dappled,' and a related form grown in western Maryland, West Virginia, and Ohio.—**Spinning leaf tobacco,** leaf or strips suited for spinning into roll tobacco; a 'spinner.' Spinning tobaccos are exported to Great Britain and Germany. See *roll tobacco* (under *tobacco*).—**Stemmed tobacco,** a leaf from which the midrib has been removed, leaving the two halves (sometimes called *wings*) separate. Tobacco exported to England (except for bird's-eye: see *bird's-eye*, *n.*, 2) is sent largely in this state, and known as *strips*. See ★*strip*, 2, *n.*, 6, and *strip-leaf*.—**Sumatra tobacco,** a seed-leaf variety esteemed solely for the production of high-grade cigar wrappers: in the United States (chiefly in western Florida) grown in the shade of slats or cloth. See quotation under *wrapper*, 1 (*b*).—**Sun-cured tobacco,** a commercial name of certain Virginia tobaccos formerly left on the scaffold from four to seven days before removal to the barn: at present air-cured, by the ordinary method.—**Tobacco extract,** a material of pasty consistence made by dissolving out the soluble constituents of refuse tobacco and tobacco-stems with water and evaporating the liquid. It is extensively manufactured for use as an agricultural insecticide, especially as an application to the skin of sheep (a so-called 'sheep-dip').—**Tobacco fermentation, leaf-miner.** See ★*fermentation*, ★*leaf-miner*.—**Tobacco-seed oil.** See ★*oil*.—**Tobacco-stalk flour,** tobacco stalks or stems ground to be changed by fermentation into snuff.—**Tobacco stems** or **stalks,** in the trade, the midribs of the leaves (not the stem or stalk of the plant) discarded in cutting the leaves for wrappers and in *stemming* (see *stemmed* ★*tobacco*). These have been utilized abroad for making cheap snuff and chewing-tobacco and serve also as a protection against vermin and as a fertilizer.—**Tobacco white fly.** See ★*fly*^{2}.—**To drink tobacco.** See *drink*, *v. t.*, 5.—**White Burley tobacco,** a light-colored variety which originated from a sport of the red Burley in Brown county, Ohio, in 1864, now grown extensively in southern Ohio and north-central Kentucky, and elsewhere, and used more largely than any other in domestic manufacture. It is highly absorbent of 'sauces.' Its nicotine content is at most about 3 per cent. The leaves are thus classified: lowest two, 'fliers'; next two, 'common lugs' ('trash' apparently the same); these followed by 'good lugs,' 'bright leaves,' 'long red,' 'short red,' and 'top leaves.' The fliers are used for pipe tobacco, the heavy-bodied top leaves for plug and twist fillers, and the best leaves for cigarettes, plug and twist wrappers, and cut tobacco. See *red Burley* ★*tobacco* (*a*) and (*b*).—**Wild tobacco.** (*c*) A small-flowered uncultivated tobacco, *Nicotiana attenuata*, common as a weed of cultivated and waste land in California and Arizona.—**Yellow tobacco,** a type of tobaccos derived from the native Maryland and Virginia plant, characterized by a leaf grading from bright lemon-yellow to mahogany. This tobacco was first produced as a crop in Caswell county, North Carolina, in 1852, but is now extensively grown in the Piedmont region of North and South Carolina, in southern Virginia, and elsewhere. The product (flue-cured) is made domestically into plug and smoking tobacco and cigarettes, and is also largely exported. Yellow tobaccos are graded as wrappers (see *plug* ★*wrapper*), fillers, smokers, and cutters, these grades being also much subdivided. The lighter shades are spoken of as *bright yellow tobacco*. Cf. *mahogany* ★*tobacco*.—**Zimmer Spanish tobacco,** a variety thought to be a hybrid of broad-leaf and Cuban, considerably grown, especially in the Miami valley, Ohio, for use as a cigar filler.

tobacco-barn (tọ̄-bak'ō-bärn), *n.* A structure for storing tobacco during the curing process. The log buildings (chinked or unchinked) of earlier days have largely given way to frame buildings carefully adapted to their purpose. The plants or leaves are hung in tiers, of which there are several in a vertical rank, the ranks being separated by spaces (in the South called 'rooms'). For air-curing, means of regulating the access of air are provided, and for flue-curing (see ★*flue-cure*, *v.*), the requisite appliances. Also *tobacco-shed* or *-house* and *curing-house*. [U. S.]

tobacco-bug (tọ̄-bak'ō-bug), *n.* A small American capsid bug, *Dicyphus minimus*, which damages the leaves of tobacco in Florida. Also called *suck-fly*.

tobacco-clipper (tọ̄-bak'ō-klip″ėr), *n.* An implement for cutting the stems of standing tobacco-plants. It consists of a pair of shears having one serrated edge and operated by means of long wooden handles set at an angle of 45°.

tobacco-cricket (tọ̄-bak'ō-krik″et), *n.* The snowy tree-cricket, *Œcanthus niveus*. See *tree-cricket*.

tobacco-flea (tọ̄-bak'ọ̄-flē), *n.* The tobacco flea-beetle, *Haltica ignita*.

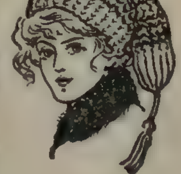
tobacco-prize (tọ̄-bak'ō-prīz), *n.* An arrangement of levers used to press tobacco in hogsheads for shipping. A screw also is used for this purpose.

tobacco-shears (tọ̄-bak'ō-shērz), *n. pl.* A tool for cutting ripe tobacco-plants, consisting of a pair of short shears, having long handles that enable the operator to cut the plant close to the soil.

tobacco-thrips (tọ̄-bak'ō-thrips), *n.* A thysanopterous insect, *Thrips tabaci*, possibly of European origin. It damages tobacco in southern Europe, and in the United States is found commonly on onions and many low-growing plants, as well as in the flowers of the orange, lemon, and other fruit-trees, especially in the South.

Tobin bronze. See ★*bronze*.

toboggan-cap (tọ̄-bog'a̤n-kap), *n.* A knit woolen cap, made in a long, bag-like form, the top of which falls down over the head: now commonly called a *toque*.



Toboggan-cap.

tobogganing, *n.*—**Water-tobogganing,** the sport of sliding on a toboggan down a smooth decline leading into the water, over which the toboggan glides.

> Within the last few years the sport known as "*water-tobogganing*," the invention of which is said to be due to the ingenuity of Paul Boynton, the swimmer, has become quite a summer fad in Boston and other cities, of the East especially.
> *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 262.

toby, *n.* **2.** A kind of cheap cigar. [U. S.]

tocalote (tō-kä-lō'tā), *n.* [A corruption of Mex. *chicalote*, < Nahuatl *chicalotl*, a spiny plant of the genus *Argemone*.] Same as *Napa* ★*thistle*.

toccato (tok-kä'tọ̄), *n.* [It. See *tucket*^{1}.] In old music for the trumpet, a bass part made up of detached or reiterated tones like those of a drum, or the performance of such a part.

tochka (tōch'kä), *n.* [Russ. *tochka*, a point.] A Russian measure of length, equal to the hundredth part of an inch.

tocogenetic (tō″kọ̄-jẹ̄-net'ik), *a.* [Gr. τόκος, breed, offspring, + γένεσις, generation.] Pertaining to the evolutionary process in which the higher terms are generated by the lower through creative synthesis, and are thus affiliated upon them. *L. F. Ward*, Pure Sociol., p. 96.

tocogony (tọ̄-kog'ọ̄-ni), *n.* [Gr. τόκος, offspring, + -γονια, < -γονος, -born.] Generation by sexual reproduction. *Encyc. Dict.* [Rare.]

tocological (tō-kọ̄-loj'i-ka̤l), *a.* [*tocolog*(*y*) + *-ic* + *-al*^{1}.] Same as *obstetrical*. *L. F. Ward*, Pure Sociol., p. 70.

tocologist (tọ̄-kol'ọ̄-jist), *n.* [*tocolog*(*y*) + *-ist*.] An obstetrician. *Amer. Anthropologist*, Oct.–Dec., 1902, p. 739.

tocomania (tō-kọ-mā′ni-ạ̈), *n.* [Gr. τόκος, bringing forth, + μανία, madness.] Puerperal insanity.

tocornalite (tọ-kôr′nạ-līt), *n.* [Named after A. *Tocornal*, of Santiago University.] An iodide of silver and mercury which occurs in massive granular forms of pale-yellow color: found in Chañarcillo, Chile.

tod-boat (tod′bōt), *n.* A Dutch fishing-boat.

toddy-cat (tod′i-kat), *n.* The palm-civet, *Paradoxurus musanga*, so named from its fondness for palm juice, or toddy, which is gathered by the natives for the manufacture of arrack.

toe, *n.* **8.** In *mach.*: (*c*) A form of cam by which the valve-rods are lifted in the Stevens valve-gear for vertical river-boat engines. (*d*) In a car-wheel, the outer edge of the flange.—**9.** The pointed end of the foot of an organ-pipe.—**10.** In *golf*, the nose of a club. See ★*nose*¹, 5.—**Morton's painful toe**, a neuralgic state of the nerves of the plantar surface of the toes, especially the fourth.

toe, *v. t.* **3.** In *golf*, to strike (a ball) off the toe of the club.—**4.** To drive (nails or heavy steel pins) obliquely through a piece or element of a frame to secure it to another placed at an angle with it. The nails, entering both pieces, fasten them together against light stresses laterally, and the necessity for tenon and mortise is avoided.

toe-board (tō′bōrd), *n.* A curved piece of board which marks the limits within which the contestants must stand when putting the shot or throwing the weight, hammer, or discus. Also *stop-board*.

toe-crack (tō′krak), *n.* In *vet. surg.*, a crack or fissure in the anterior part or toe of a horse's hoof: similar to quarter-crack, except for its position. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 405.

toe-nail (tō′nāl), *v. t.* Same as ★*toe*¹, *v. t.*, 4.

> The braces are *toe-nailed* in place to prevent the possibility of their becoming loosened and dropping down.
> *Yearbook U. S. Dept. Agr.*, 1900, p. 443.

toe-narrow (tō′nar″ō), *a.* Noting an abnormal standing position of the horse in which the phalangeal bones slant downward and inward from the fetlock, causing the fore feet to stand too close together. The foot-axis from in front is broken outward at the fetlock-joint. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 560.

toe-out (tō′out), *n.* An outward bend in any line of a diagram; a sharp change in the curvature of a line, making it bend outward. [Colloq.]

toe-ragger (tō′rag″ėr), *n.* [Of Maori origin.] In Australia, especially in the bush, a good-for-nothing, worthless, contemptible fellow. [Austral Eng.]

> The bushie's favorite term of opprobrium, a '*toe-ragger*, is also probably from the Maori.
> *Truth* (Sydney), Jan. 12, 1896, quoted in E. E. Morris, [Austral English.

toe-ring, *n.* **2.** The heavy ring or ferule on the end of a cant-hook. It has a lip on the lower edge to prevent slipping when a log is grasped.

toeroe (tŏ-rŏ′), *n.* [A D. spelling, also *toeroe-toeroe* and *troetroe*, of a native name in Guiana.] A common name of *Cynoscion acoupa*, a sciænoid fish found on the Atlantic coast of South America.

toe-step (tō′step), *n.* Same as *foot-step*. *Lockwood*, Dict. Mech. Engin. Terms.

toe-wide (tō′wīd), *a.* Noting an abnormal standing position of the horse in which the phalangeal bones slant downward and outward from the fetlock, causing the fore feet to stand too far apart. The foot-axis from in front is broken inward at the fetlock-joint. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 560.

Toga candida, the white toga worn by candidates for public office in Rome.

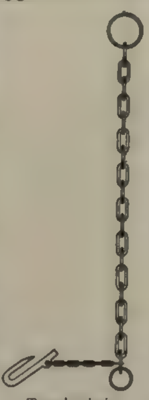
togetherness (tọ̈-geᴛʜ′ėr-nes), *n.* The state of being together; the state of being reciprocally related; juxtaposition.

> The unique *togetherness* that combines different qualities in a single presentation or simultaneous state of mind should be clearly grasped.
> *H. Nichols*, Cosmology, I. § 237.

toggle, *n.* **3.** A bar spanning (within) an opening in a tank or other structure, to which a lifting chain or sling can be secured in order to lift the structure. Also *toggle-pin*.

toggle, *v. t.* **2.** To fasten (skins) together with wooden pins. *Modern Amer. Tanning*, p. 112.—**3.** To lift or attach to a hoisting chain by means of a cross-bar inserted in a hole or angle. The bar or toggle is inserted in the hole by passing it in parallel to the lifting chain. When in place it is turned at right angles and spans the hole or opening, and receives the stress of lifting. The toggle-bar must be longer than the diameter of the hole, or the space across the span of the opening used.

toggle-chain (tog′l-chān), *n.* A short chain, with a ring at one end and a toggle-hook and ring at the other, fastened to the sway-bar or bunk of a logging-sled and used to regulate the length of a binding-chain. Also called *bunk-chain*.



Toggle-chain.

toggle-hook (tog′l-hůk), *n.* A grab-hook with a long shank, used on a toggle-chain.

tohunga (tō′höng-ạ̈), *n.* [Maori.] A wise man; a native priest or medicine-man. [New Zealand.] *Nature*, May 14, 1903, p. 36.

toil², *n.*—**In the toils**, ensnared; captured.

toilet, *n.* **8.** A room designed as a dressing-room, especially one provided with facilities for bathing; in a restricted sense, a bath-room or water-closet.

toilet-paper (toi′let-pā″pėr), *n.* A manila tissue-paper, readily soluble in water, for use in toilet-rooms.

toilet-room (toi′let-röm), *n.* Same as ★*toilet*, 8.

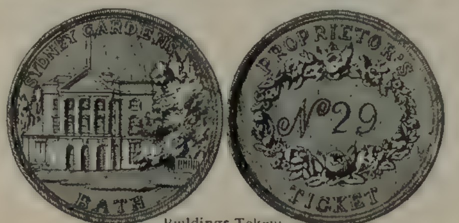
toilsum, *a.* An amended spelling of *toilsome*.

toke (tōk), *n.* [Origin obscure.] A piece or a bit, as of tobacco or bread. [Eng. slang.]

> The aged gentleman snuffed himself with tremulous fingers that spilled half, and offered Matt the box. The young man took a pinch for exhilaration.
>
> A strayed sparrow hopped dolefully amid the grains of snuff on the floating platform in futile quest of seeds.
>
> "It would be 'appier stuffed," the aged gentleman declared. "I mean with tow, not *toke*." And he laughed wheezingly. *I. Zangwill*, The Master, ii. 9.

tokelau (tō′ke-lou), *n.* A parasitic fungous skin disease occurring in the South Sea islands, formerly attributed to *Trichophyton*, but caused, according to Wehmer, by *Aspergillus Tokelau*.

token, *n.*—**Buildings tokens**, the name given to a series of tokens (private or traders' coinage) struck in the eighteenth century for local trade in several English cities, which contain, on the reverse, excellent illustrations of notable local monuments. The earliest series was made by Kempson of Birmingham to illustrate that city. The most important series illustrates the architecture of Bath and was probably made there. These tokens were equivalent in value to the halfpenny, and were beautifully executed. *M. A. Green*, Eighteenth Century Architecture of Bath, p. 231.—**Granby token, Higley token**, a copper token struck by John Higley of Granby, Connecticut (1737–39).—**Hard-times tokens**, private tokens struck in the United States and circulated as money, in lieu of copper cents, during the periods of stringency of a circulating medium prior to the Civil War.

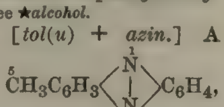


Buildings Tokens.
(From M. A. Green's "Architecture of Bath.")

tokocyte (tō′kọ̄-sīt), *n.* [Gr. τόκος, birth, + κύτος, hollow (cell).] A general term for the reproductive cells of sponges. They may be either gemmule cells or sexual cells. Also *tococyte*. Compare ★*archæocyte*.

tolane (tō′lān), *n.* [*tol*(*u*) + *-ane*.] A colorless compound, $C_6H_5.C\vdots CC_6H_5$, prepared by the action of alcoholic potassium hydroxid on stilbene chlorid or bromide. It crystallizes in large plates or rods, melts at 60° C., and may be distilled. Also called *diphenyl-acetylene*.—**Tolane alcohol.** See ★*alcohol*.

tolazin (tōl-az′in), *n.* [*tol*(*u*) + *azin*.] A colorless compound,



$$\overset{5}{C}H_3C_6H_3\left\langle\begin{matrix}\overset{1}{N}\\|\\\underset{2}{N}\end{matrix}\right\rangle C_6H_4,$$

prepared by the action of 3,4-toluylenediamine on pyrocatechol. It crystallizes in needles, melts at 117° C., boils, with some decomposition, at about 350° C., and may be sublimed. Also called 2-*methylphenazin* and *toluphenazin*.

tolderia (tōl-dā-rē′ä), *n.* [S. Amer. Sp., < *toldo*. See ★*toldo*.] A village or settlement of the Indians formed of toldos.

> About an hour later Manuel arrived, accompanied by another chief, and said Cacique Sumaye had his *tolderia* about 2 miles further down the river.
> *Geog. Jour.* (R. G. S.), XV. 606.

toldo (tōl′dō), *n.* [Sp. Pg. *toldo*, an awning, a shelter.] A skin tent or shelter used by the Indians of the pampas region of South America.

> Saw various signs of Indians and several abandoned "*toldos*" in the forenoon.
> *Geog. Jour.* (R. G. S.), XV. 606.

tolene (tō′lēn), *n.* [*tol*(*u*) + *-ene*.] A colorless liquid hydrocarbon, $C_{10}H_{16}$, obtained by the distillation of tolu balsam with water. It boils at 170° C. and readily absorbs oxygen from the air.

tolerance, *n.* **5.** The capacity of a tree to endure shade.—**6.** In *mech.*, an allowable amount of variation in the dimensions of a machine or part. A tolerance of .00025 of an inch is allowed above or below the exact dimension in fine machine parts.

tolerism (tol′ėr-izm), *n.* [*toler*(*ation*) + *-ism*.] Toleration; universal toleration. [Rare.]

> Thou wouldst be sadly out of place in these days of cold philosophic latitudinarian doctrine, universal *tolerism*, and half-concealed rebellion. *Borrow*, Lavengro, iii.

tolidine (tol′i-din), *n.* [*tol*(*u*) + *-id* + *-ine*².] One of various isomeric compounds, of which the ortho derivative, $H_2\overset{4}{N}\overset{1}{C}_6H_3(\overset{3}{C}H_3).\overset{1}{C}_6H_3$-$(\overset{3}{C}H_3)\overset{4}{N}H_2$, is the most important. It is prepared by the reduction of the corresponding dinitroditolyl, crystallizes in lustrous laminæ, melts at 128° C., and readily yields a number of valuable azo dyes which are used for cotton goods. The compound bears the same relation to toluene that benzidine does to benzene.

tolidol (tol′i-dol), *n.* A trade-name of a photographic developer of unpublished composition.

tolipyrin (tol-i-pī′rin), *n.* [*tol*(*u*) + (*ant*)*i-pyrin*.] A trade-name of dimethyl-tolyl-pyrazolone, $C_3H(CH_3)(C_6H_4CH_3)N_2O$, a colorless crystalline compound prepared like antipyrin, which it resembles in general chemical and physiological properties: used in medicine. Also called *methylantipyrin*.

tollage, *n.* **2.** A sum of money paid for the temporary use of land as a place in which to buy and sell. See *toll*¹, 1, *n.* *N. and Q.*, 10th ser., I. 126–232.

toll-board (tōl′bōrd), *n.* A switchboard at which connections are made with the toll-lines entering a telephone exchange.

> A *tollboard* of ten stations is also in service, demonstrating the manner in which toll connections are given to users of automatic telephones.
> *Elect. World and Engin.*, June 25, 1904, p. 1213.

toll-gin (tōl′jin), *n.* A public cotton-gin, established for the convenience of small farmers who are unable to bear the expense of a private gin.

> With the subdivision of farms an almost new industry was developed in the way of *toll gins*. The old plantations had each its own ginhouse, but the small farms could not bear the expense of such a plant, and public gins became a necessity.
> *U. S. Dept. Agr.*, The Cotton Plant, Bulletin, 1896, p. [357.

toll-line (tōl′līn), *n.* In *telephony*, a long-distance or suburban line for the use of which toll is charged.

toll-room (tōl′röm), *n.* In a telephone exchange, a room in which long-distance and toll-line connections are made.

> Adjoining the switchroom is the long-distance or *toll-room*, where all toll line connections are made.
> *Elect. World and Engin.*, July 16, 1904, p. 90.

Tolstoian (tol′stoi-ạn), *a.* [*Tolstoi* (see def.) + *-an*.] Of or pertaining to the eminent Russian writer Count Lyeff (Leo) Nikolaievich Tolstoi (1828 O. S.–).

> He has an almost *Tolstoian* eye and memory for details, and will tell you vividly enough how any one of his contemporaries of fifty years ago looked and spoke.
> *Athenæum*, Jan. 6, 1906, p. 22.

toluide (tol′ụ̄-id), *n.* [*tolu* + *-ide*¹.] A class-name applied, in organic chemistry, to compounds containing the univalent group $-CONHC_6H_4.CH_3$. They are prepared by the removal of the elements of water from a salt of any of the three toluidines with an organic acid, and correspond exactly to the anilides, which they closely resemble in general properties.

toluidine (tọ-lū'i-din), *n.* [*toluid*(*e*) + *-ine*².] A name of three compounds, $CH_3C_6H_4NH_2$, formed by the reduction of the corresponding nitrotoluenes. They are all colorless, and are used in the regeneration of vulcanized rubber and in the preparation of certain so-called aniline dyes. The ortho- (1,2-) and the meta- (1,3-) derivatives are liquids, boiling at 197° C. and 199° C. respectively. The para- (1,4-) derivative crystallizes in plates, melts at 45° C., and boils at 198° C.

Toluifera (tol-ū-if'ẹ-rä), *n.* [NL. (established by Linnæus, 1753), < *tolu* + L. *ferre*, to bear.] A genus of small trees or shrubs belonging to the family *Flacourtiaceæ*. See *Myroxylon*.

toluric (tọ-lū'rik), *a.* [*tolu* + *-r-* + *-ic*.] Noting two acids, colorless crystalline compounds, $CH_3C_6H_4CONHCH_2COOH$. They are found in the urine after the administration of the corresponding toluic acids, and are prepared by the action of sodium hydroxid and glycin on the respective toluic chlorids. The ortho- (1,2-) derivative is crystalline and melts at 162.5° C. The meta- (1,3-) derivative is deposited in thin plates melting at 139° C.

tolusaffranine (tol-ụ-saf'rạ-nin), *n.* [*tolu* + *saffranine*.] A dye, $C_{21}H_{21}N_4Cl$, prepared by oxidizing a mixture of paratoluylene-diamine and toluidine. See ★*saffranine*.

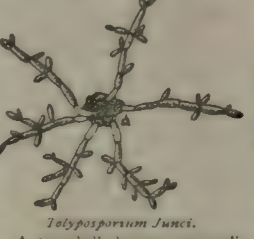
toluylene (tọ-lū'i-lēn), *n.* [*tolu* + *-yl* + *-ene*.] A colorless compound, $C_6H_5CH{:}CHC_6H_5$, prepared by the action of lead oxid on toluene vapor. It crystallizes in large monoclinic plates, melts at 124° C., and boils at 306–307° C. Also called *stilbene, symmetrical diphenylethylene*, and *tolylene*.—**Toluylene brown G, R.** See ★*brown*.—**Toluylene red.** Same as *neutral* ★*red*.

toluylene-diamine (tọ-lū"i-lēn-dī-am'in), *n.* A name of six possible compounds, $CH_3C_6H_3(NH_2)_2$, only two of which ($CH_3{:}NH_2{:}NH_2 = 1,2,4$ or $1,2,5$) are of much importance. They are used in place of the corresponding phenylene diamines in the manufacture of certain dyes and are formed by the reduction of the corresponding nitro-compounds. The first or α-derivative crystallizes in needles, melts at 99° C., and boils at 283–285° C. The second or γ-derivative crystallizes in colorless rosettes consisting of plates, melts at 65° C., and boils at about 280° C.

tolyl (tol'il), *n.* [*tol*(*u*) + *-yl*.] A name given, in organic chemistry, to the univalent radical $-C_6H_4CH_3$, which bears the same relation to toluene that phenyl does to benzene. Three classes of derivatives are possible, according to the relative position of the methyl group and the one combining with the tolyl radical. The resulting compounds are termed *ortho-* (1,2-), *meta-* (1,3-), or *para-* (1,4-), respectively. The word is also used, with the same meaning, as a combining-form.

tolylene (tol'i-lēn), *n.* [*tolyl* + *-ene*.] In *organic chem.*, the bivalent radical $CH_3C_6H_3$. It bears the same relation to toluene that phenylene does to benzene.

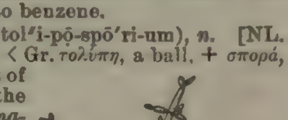
Tolyposporium (tol"i-pọ-spō'ri-um), *n.* [NL. (Woronin, 1882), < Gr. τολύπη, a ball, + σπορά, spore.] A genus of smut-fungi of the family *Ustilaginaceæ*, having the spores united in subspherical masses. The germinating spores produce promycelia bearing both lateral and terminal sporidia. Nine species are known, occurring as parasites on various glumaceous plants. *T. Junci* attacks the flowers and culms of *Juncus bufonius*, producing gall-like outgrowths. *T. bullatum* is found on the ovaries of the barn-yard grass, *Echimochloa Crus-galli*, in North America.



Tolyposporium Junci.

A spore-ball showing promycelia bearing sporidia: highly magnified.

tolysal (tol'i-sal), *n.* [*toly*(*l*) + *sal*(*icylate*).] A trade-name of 1-paratolyl-2,3-dimethyl-pyrazolone salicylate,



$$\mathrm{CO}\left\langle\begin{matrix}\mathrm{CH{:}C(CH_3)}-\\ \overset{4}{\mathrm{N}}(\mathrm{C_6H_4}(\overset{1}{\mathrm{C}}\mathrm{H_3})\end{matrix}\right\rangle\mathrm{NCH_3}.\text{-}\mathrm{C_6H_4}(\overset{1}{\mathrm{O}}\mathrm{H})\overset{2}{\mathrm{C}}\mathrm{OOH}.$$

It is an almost colorless crystalline compound, melts at 101–102° C., is closely related to antipyrin, and is used in medicine as an antineuralgic, antirheumatic, and antipyretic.

tom¹, *n.*—**Mad tom,** a catfish, *Schilbeodes insignis*, found in fresh water from Pennsylvania to South Carolina. The name is also applied to other species of the same genus.—**Tom of Lincoln,** an alloy composed of 22 per cent. of tin and 78 per cent. of copper. It is named after the big bell ('Tom of Lincoln') in Lincoln Cathedral.—**Tough tom,** in *ceram.*, a refractory sandy clay used in England for making molds, crucibles, and glass-pots. Also called *Stourbridge clay* and *clunch* (which see).

tom. An abbreviation of *tome* (volume).

tomahawk, *v. t.* **2.** Specifically, to cut sheep when shearing them. *E. E. Morris.* [Austral English.]

tomato, *n.*—**Black rot of tomato.** See *black* ★*rot*.—**Gooseberry-tomato.** Same as *cape gooseberry* (which see, under *gooseberry*).

tomato-blight (tọ-mä'tō-blīt), *n.* **1.** See ★*blight*.—**2.** Tomato-scab. See ★*scab*.—**3.** Potato late blight. See ★*blight*.

tomato-rot (tọ-mä'tō-rot), *n.* See ★*rot*.

tomato-scab (tọ-mä'tō-skab), *n.* See ★*scab*.

tomb, *n.*—**Beehive tomb.** See ★*beehive*.

tombac, *n.*—**White tombac,** a name for any white brass of the copper-zinc series of alloys, to which the white color is given by adding antimony or arsenic.

tombolo (tọm'bọ-lō), *n.* [It. *tombolo*, a cushion.] A sand-reef by which an island is connected with the mainland. See the extract. [Rare.]

> The writer [F. P. Gulliver] has proposed to call all such island-tying bars *tombolos*, taking the name from the characteristic forms uniting Monte Argentario with the coast of Italy. *Geog. Jour.* (R. G. S.), IX. 540.

Tom Collins (tom kol'inz). A drink made of gin and club-soda and lemon or lime-juice, and sweetened.

Tomes's fibers or **fibrils.** See ★*fiber*¹.

tomin¹, *n.* **2.** A silver coin of Bolivia, equivalent to one fifth of a boliviano; also, a coin of Paraguay, equivalent to two reales.

tomin² (tō'min), *n.* [Ar. *tāmin*, the eighth, *tamān*, eight.] A measure of length used in Morocco, equal to an eighth of a derah or drah, or to 2.8 inches.

tommy, *n.* **8.** [*cap.*] Short for *Tommy Atkins*,' a nickname for the British private soldier.

> The *Tommies* enjoyed the fun, and — Oh, yes, there was one *Tommy* who was the bard of the detachment.
> *R. Kipling*, Conference of the Powers, in Many Inventions, p. 36.

tommy-ax (tom'i-aks), *n.* A popular corruption of *tomahawk*. See *tom-ax*. [Austral English.]

tommy-store (tom'i-stōr), *n.* Same as *tommy-shop*.

tomomania (tō-mọ-mā'ni-ạ̈), *n.* [Gr. τομή, a cutting, a surgical operation, + μανία, madness.] **1.** An immoderate tendency to perform surgical operations.—**2.** A morbid desire to be operated upon.

tomotocia (tō-mọ-tō'si-ạ̈), *n.* [NL., < Gr. τομή, a cutting, + τόκος, birth, offspring.] Extraction of the fetus by Cæsarean section.

tompkin (tomp'kin), *n.* A corruption of *tompion*¹ or *tampion*.

tompong (tom'pong), *n.* [E. Ind. (Malayan?).] A tin coin of Selangor, 8 of which equal a dollar.

tom-tate (tom-tāt'), *n.* [Also *Tom Tate*; origin obscure.] A common name of a fish of the family *Hæmulidæ, Bathystoma rimator*, found from Cape Hatteras to Trinidad. *Jordan and Evermann*, Fishes of N. and M. America, p. 1308.

tom-toe (tom'tō), *n.* [*Tom* (abbreviation of *Thomas*), in the sense of big.] The great toe. [Colloq.]

tom-tom, *n.* **3.** A circular dye-vat constructed in such a way that a series of upright mallets may be made to pound upon the material placed within it and thus work the dye-liquor well into the fiber. Largely used in hosiery-dyeing, particularly in the application of aniline black.

ton¹, *n.*—**Cornish mining ton,** a weight equal to 2,352 pounds avoirdupois, or 21 hundredweight of 112 pounds each.—**French ton,** the metric ton, or millier, equal to 2,204.6 pounds avoirdupois. See *metric system*.—**Gross ton,** the ton of 2,240 avoirdupois pounds. Often called *long ton*.—**Metric ton,** a measure of weight equal to 1,000 kilograms, or 2,204.6 pounds.—**Net ton,** the short ton of 2,000 pounds, as distinguished from the gross ton of 2,240 pounds. *C. Hering*, Conversion Tables, p. 58.—**Shipping ton,** a unit of volume used in transportation by sea. A shipping ton in the United States and Great Britain is 40 cubic feet or 1.1327 cubic meters.

tonal, *a.* **3.** Of or pertaining to muscular tonicity.

> The amount of tonus can often be measured by a *tonal* dynamometer. *Scripture*, Exper. Phonetics, p. 383.

tonalist (tō'nạl-ist), *n.* [*tonal* + *-ist*.] In *painting*, one who aims at a prevailing tone of color, or a harmonious color scheme, produced by effects of light and shade in their relation to the principal light rather than by contrasts of color.

> The collection is one of colorists and *tonalists* without the aid of any of the more notable open-air landscape painters. *N. Y. Times*, Jan. 31, 1903.

tone¹, *n.* **15.** In *philol.*, a distinctive quality or pitch forming in some languages a fixed feature of the pronunciation of words, as in Chinese, Swedish, etc. Such tones in Chinese (called *sheng*) serve to distinguish, theoretically, eight phases of a given monosyllable. These tones have been supposed to represent a former chanting or singsong utterance; but they represent, rather, the faint phonetic relics of otherwise vanished syllables, kept in the process of monosyllabizing because they serve to differentiate what would otherwise be indistinguishable homonyms. So in Russian and French a vanished final vowel ('silent *e*') has left a phonetic effect upon the preceding consonant. In Chinese these reliquial effects have come to be conventionally regulated into a kind of musical system similar to that which in English utterance is purely rhetorical and therefore variable.

16. In telephonic testing, the humming noise produced by the introduction of an alternating or rapidly alternating current into the line.—**Affective tone.** See ★*affective*.—**Cavity tone,** a tone produced in a cavity, as the mouth or a tube. *Scripture*, Exper. Phonetics, p. 293.—**Choral tone.** See *choir-pitch*.—**Gallery tone,** in *painting*, the brown tone which age brings upon an oil-picture after it has hung long in a gallery.

> Though the oil painting does not change in drying, or in weeks or months, it changes inevitably in decades and centuries, and always in the same way, by assuming a general yellowish brown cast, called the "*gallery tone*." *Sci. Amer.*, April 15, 1905, p. 299.

Ground tone, in *acoustics*, the tone of lowest pitch uttered by a vibrating body; a fundamental tone.—**Hedonic tone,** in *psychol.*, the pleasant or unpleasant coloring of any mental state or process; algedonic tone. For those psychologists who reduce the affective elements to pleasantness and unpleasantness, 'hedonic tone' is identical with 'affective tone'; for those who accept a pluralistic affective theory, 'hedonic tone' is the narrower term, referring only to one pair of affective opposites.—**Intermittence tone, interruption tone,** in *psychophys.*, a tone produced by rapid interruption of a given tone, and having a pitch-number corresponding to the frequency of interruption.

> P. considers this to be disproved by the *intermittence tones* obtained by K., who rotated a disc perforated with 128 holes before tuning forks of different pitches, and obtained the same *tone of intermittence* whatever was the pitch of the fork.
> *Helmholtz* (trans.), Sensations of Tone, p. 533.

Root tone. Same as *fundamental tone*. *Helmholtz* (trans.), Sensations of Tone, p. 294.—**Tone of intermittence.** See *intermittence* ★*tone*.

tone¹, *v. t.* **5.** In *printing*, to grade or soften with a graver, or roulette, or by etching certain parts (especially the edges) of (an illustration, usually an electrotype), as an aid in reducing the quantity of ink caused by pressure in printing.

toned, *a.* **2.** Having distinctive tones as a fixed feature of the pronunciation of a word, as in Chinese. See ★*tone*¹, 15.

> The more isolating and *toned* languages of Indo-China.
> *Keane*, Ethnology, p. 326.

tone-deafness (tōn'def"nes), *n.* Inability to hear musical sounds. Also called *amusia*.

tone-determination (tōn'dẹ-tėr-mi-nā"shọn), *n.* In *musical acoustics*, the science, theory, or process of fixing the exact size of musical intervals, usually by means of certain intervals taken as units of measurement. See especially under *third-*★*step, fifth-*★*step*, etc.

tone-formation (tōn'fôr-mā"shọn), *n.* Same as ★*voice-building* or ★*voice-production*.

tonelada (tō-nä-lä'dạ̈), *n.* [Sp. Pg., < *tonel*, a cask, an ancient measure. See *tunnel, ton*¹.] **1.** A Spanish and Spanish-American unit of weight equal to 2000 local pounds, or about 2032.2 pounds avoirdupois. It is now applied also to the metric ton of 2204.6 pounds avoirdupois.—**2.** A dry measure, in Portugal over 40 bushels, in Argentina 29.2 United States bushels.—**3.** A liquid measure, in Portugal about 224 gallons, in Spain about 256 gallons, and in Brazil about 264 gallons, United States measure.

tone-picture (tōn'pik"tụ̈r), *n.* A descriptive or pictorially suggestive piece of music.

tone-placing (tōn'plā"sing), *n.* Same as ★*voice-placing*.

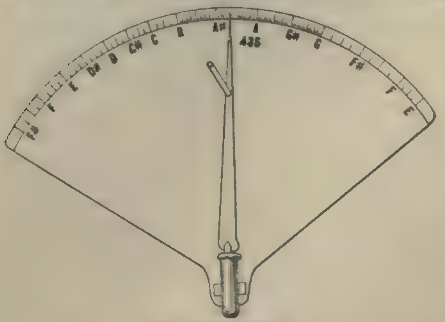
tone-poem (tōn'pō"em), *n.* In *music*, a term somewhat loosely applied to an instrumental composition in which is expressed such a train of sentiments or images as might be or are contained in a poem. Compare *symphonic poem*.

> At a recent Ysaye concert at Brussels two orchestral novelties by Flemish composers were produced: a 'Homeric' Symphony, by L. Mortelmans, and a symphonic *tone-poem*, 'Lalla Rookh,' by J. Jongen.
> *Athenæum*, Jan. 6, 1906, p. 29.

tone-poet (tōn'pō"et), *n.* An original or imaginative composer of music, especially of the modern school: occasionally applied also to an instrumental performer.

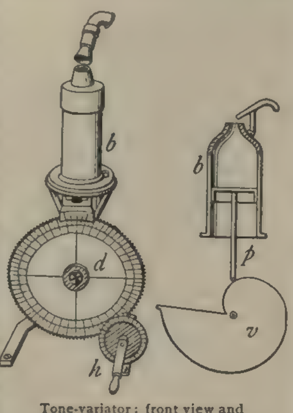
tone-production (tōn′prǫ-duk″shǫn), *n.* The act, process, or manner of producing musical tones: used both of instruments and of the voice. See ★*voice-production* and ★*voice-building.*

tone-tester (tōn′tes″tėr), *n.* In *exper. psychol.*, a tonometer, or instrument for determining the differential sensitivity for tones. In simple form, the tone-tester consists of an adjustable pitch-pipe with an index-arm moving over a large scale. *Yale Psychol. Studies*, 1893, p. 81.



Gilbert's Tone-tester.
(From "Yale Psychological Studies.")

tone-variator (tōn′vā″ri-ā-tǫr), *n.* In *exper. psychol.*, an instrument which permits of the variation (continuous or discrete) of the pitch of an approximately pure tone by known amounts and at uniform rate. In its original form, the *tone-variator* consisted essentially of a blown bottle of which the pitch could be varied by the continuous introduction or withdrawal of mercury. Since the pitch of the bottle-tone changes, in siren fashion, more quickly in the higher than in the lower regions, and a uniform rate of tonal change is desired, the bottle was connected with a variator trough, so constructed that the rise and fall of the mercury in the variator furnished the necessary correction to the movement of mercury in the bottle. In the most recent form of the instrument the bottle is of brass and the mercury has been replaced by a tightly fitting piston-head connected to a metal cam (the variator) cut to the shape of the required curve. Readings of tonal change (in terms of rate of vibration) are made from a circular scale placed in front of the variator cam. *E. B. Titchener*, Exper. Psychol., II. ii. 139.



Tone-variator: front view and mechanism.

b, bottle with blowing-tube; *p*, piston; *v*, variator, turned by handle *h*; *d*, graduated disk indicating pitch of tone.

tone-wave (tōn′wāv), *n.* The sound-wave to which a musical tone is due. *Wundt* (trans.), Human and Animal Psychol., p. 77.

tonga^2 (tong′gä), *n.* [Fijian.] A mixture of several barks said to consist principally of *Premna Taitensis* and *Epiprennum mirabile:* used by the Fiji Islanders as an antineuralgic. It has been introduced into the United States.

tonging, *n.* **2.** In *lumbering,* handling logs with skidding-tongs.

tongue, *n.* **6.** (*q*) *pl.* A commercial name of crude rubber in long, narrow, tongue-shaped pieces. See ★*rubber*^{1}, 3.—**Blue tongue,** an infectious disease of sheep in Cape Colony caused by an ultramicroscopic, filterable organism, and characterized by a short incubation period, high fever, with edema and eruption about the mouth and discharge from the nose, followed by an eruption about the feet and great emaciation. It is very deadly in young, poorly nourished animals. Also called *malarial catarrhal fever of sheep.* *Nature*, Sept. 14, 1905, p. 503.—**Geographical tongue,** a disease of the dorsum of the tongue, consisting of patches of desquamation which increase at the periphery and overlap, the raised edges forming various figures (fancifully compared to maps) on the surface.—**Parrot tongue,** a shriveled, dry condition of the tongue occurring in human beings as a symptom of typhus.—**Stamp-lickers' tongue,** inflammation of the surface of the tongue, due to irritation and subsequent infection from licking postage-stamps.

tongue, *v. t.* **5.** To insert the tongue or spindle in (a weft-cop or bobbin) to hold it in the loom-shuttle. *T. W. Fox*, Mechanism of Weaving, p. 283.

tongue-bar (tung′bär), *n.* In *Balanoglossus* and *Amphioxus*, a downgrowth of the dorsal wall of a gill-slit more or less completely subdividing the latter: so named from its resemblance to the tongue of a jews'-harp.

> The *tongue-bar* is the essential organ of the gill-slit in Balanoglossus, and exceeds the septal bars in bulk, while in Amphioxus the reverse is the case.
> *Encyc. Brit.*, XXVI. 85.

tongue-curve (tung′kėrv), *n.* A graphic representation of the positions and movements of the tongue in speech or song.

> The accumulation of phonograms, palatograms, breath records, *tongue curves*, etc., etc., from an individual year by year under the influence of a certain environment or internal condition would indicate the results of such conditions. *Scripture*, Exper. Phonetics, p. 469.

tongue-key (tung′kē), *n.* In *exper. psychol.*, a reaction-key which is opened or closed by movement of the tongue. *Baldwin*, Dict. of Philos. and Psychol., II. 419.

tongue-pipe (tung′pīp), *n.* In musical instruments, especially the organ, same as *reed-pipe.*

tongue-tambour (tung′tam″bör), *n.* In *phonet.*, an instrument for registering the elevation of the tongue. An artificial palate is converted into a tambour by covering it with a sheet of thin rubber and attaching an outlet tube. *Scripture*, Exper. Phonetics, p. 335.

tongue-twister (tung′twis-tėr), *n.* A sentence or verse constructed with a view to test the enunciation or dexterity of a speaker. The following is an example: Theophilus Thistle, thistle-sifter, sifted a sieveful of unsifted thistles, etc. [Colloq.]

tongue-worm, *n.* **3.** A parasitic worm-like arachnid, *Pentastomum tænioides*, occurring in the viscera of cattle, sheep, and other animals, and in the nostrils and frontal sinuses of dogs and wolves.

> The *Tongue-worm* is found encysted in the viscera of cattle, sheep, and other animals. It is about a quarter of an inch long, and when eaten by dogs grows to be 2 to 5 inches long, inhabits the nasal cavities, and produces numerous eggs, which are transmissible to man as well as to the domesticated animals.
> *Yearbook U. S. Dept. Agr.*, 1896, p. 161.

tonic, *a.* **5.** Characterized by distinctive tones. Same as ★*toned*, 2. See ★*tone*^{1}, 15.

> A far more important feature than the length of the words is their *tonic* utterance, the origin and nature of which was necessarily misunderstood so long as these languages were supposed to represent a primitive condition of speech. It is now clear that tone gives no support to the theory of a supposed primitive singsong utterance, but that it is a compensating element unconsciously introduced to distinguish the numerous homophones resulting from the ravages of phonetic disintegration. "Thus the monosyllable pa will be toned in six or more different ways to represent so many original dissyllables, pada, paka, pana, pasa, pata . . ., and some of the Chinese and Shan dialects have, in fact, as many as ten or twelve such tones, which unless correctly uttered lead at once to the greatest confusion, and to all kinds of misunderstandings. Hence these languages are now called isolating and *tonic* rather than isolating and monosyllabic." *Keane*, Ethnology, p. 325.

Tonic accent. See ★*accent.*

tonicity, *n.* **1.** (*b*) In *zoöl.*, occasionally employed to denote the quality of dead, as well as living, tissue.

> Yet in slightly macerated specimens of C[arolin] brevicauda the incision disappears, showing that it is a character which is dependent upon *tonicity* and not on any distinctive structural peculiarities.
> *H. Allen*, in Proc. U. S. Nat. Mus., XIII. 295.

toning, *n.* **2.** Delicate variations of light and shade on a photograph.

> The *tonings* brought out in photographs of the disc [of the sun]. *A. M. Clerke*, Problems in Astrophysics, p. 70.

Platinum toning, in *photog.*, the tinting of silver positives by the use of a bath containing platinic chlorid, whereby metallic silver is removed and platinum takes its place.

tonite, *n.* Standard tonite, as manufactured in the United States, is an explosive consisting of 52.5 per cent. of pulverulent guncotton and 47.5 per cent. of barium nitrate. These materials are moistened and intimately incorporated under edge-rollers until a uniform paste is produced, which is then formed into cartridges covered with paraffined paper. A specially heavy detonator is required to fire this explosive. Also known as *cotton-powder No.* 1.

tonitruone (to-nit′rǫ̈-ōn), *n.* [L. *tonitruum*, thunder.] A percussive musical instrument devised in 1908 by Ignace Paderewski to suggest the sound of distant thunder. It consists of a large plate of resonant metal hung from a frame, and hence is essentially a species of gong or tam-tam. *Program Boston Symphony Orchestra.* 1908-1909, p. 11.

ton-kilometer (tun′kil″ǫ-mē-tėr), *n.* A unit of accounts used by railroads, which represents the transportation of one ton of freight the distance of one kilometer.

ton-mile (tun′mīl), *n.* A unit of railroad accounts which represents the transportation of one ton of freight the distance of one mile.

> Freights have risen on the most frequented roads [in Persia] from 3d. per *ton-mile* in 1880 to 10d., and even 13d., per ton-mile now. *Encyc. Brit.*, XXXI. 622.

ton-mileage (tun′mīl″ā̤j), *n.* Charge per ton-mile; also amount in ton-miles.

> Many valuable curves showing the relations between *ton-mileage*, total weight, useful load, &c., are given, and the paper is, on the whole, a valuable contribution on the subject. *Nature*, Jan. 29, 1903, p. 304.

tonnage, *n.* **2.** The *tonnage under the tonnage deck* is the interior volume in tons of 100 cubic feet under the tonnage-deck (which see) measured in accordance with the Moorsom system. The *between-deck tonnage* is that included between the tonnage deck and the highest complete deck on the vessel considered. The *under-deck tonnage* is the sum of that under the tonnage-deck and the between-deck tonnage. The tonnage above the highest deck includes all covered in and inclosed spaces, such as inclosed poop and forecastle or deck erections available for cargo, stores, or for accommodation of passengers or crew. This added to the under-deck tonnage constitutes the *gross registered tonnage*, usually called *gross tonnage.* The *net registered tonnage* is obtained from the gross by making certain deductions according to rules which differ in some respects among certain nations. The deductions generally allowed are as follows: the tonnage of spaces specifically appropriated to the officers and crew of the vessel; spaces exclusively for the working of the helm, for anchor-gear, for the charts and instruments of navigation, for the boatswain's stores, and for the donkey-engine and boiler; for a ship propelled by sails, space exclusively for storage of sails. In addition, for a paddle-steamer in which the actual space occupied by the boilers and machinery, but excluding coal-bunkers, is between 20 and 30 per cent. of the gross tonnage, a deduction of 37 per cent. may be made; for ships propelled by screws, in which the tonnage is between 13 and 20 per cent., the deduction is 32 per cent. of the gross; in paddle-steamers in which the actual space occupied by the propelling machinery is less than 20 per cent. or over 30 per cent., the allowed deduction is $1\frac{1}{2}$ times the actual space. In screw-steamers in which the actual space is less than 13 per cent. or over 20 per cent., $1\frac{3}{4}$ times the actual space is deducted. All these deductions having been made from the *gross tonnage*, the remainder is the *net registered tonnage.* The term *register-tonnage* or *registered tonnage* used alone means net registered tonnage.—**Breadth for tonnage.** See ★*breadth.*—**Custom-house tonnage,** the legal tonnage of a vessel determined by the commissioner of navigation.—**Displacement tonnage.** See ★*displacement-tonnage.*—**Register tonnage.** See ★*tonnage*, 2.—**Suez Canal tonnage,** the net tonnage fixed by the rules of the Suez Canal for payment of tolls in passing through the canal. The gross tonnage is substantially as above (see ★def. 2), but the deductions include only the following: spaces occupied or used exclusively by officers and crew (but not including the space occupied by the captain), the chart-room, and spaces for working the helm and anchor gear; but the total deduction for all these spaces cannot exceed 5 per cent. of the gross. The deductions for machinery may be made by taking the actual space occupied by engines, boilers, and the permanent coal-bunkers, or alternatively by the *Danube rule*,—that is, $1\frac{3}{4}$ times the actual machinery space, exclusive of bunkers, for screw-steamers, and $1\frac{1}{2}$ times the actual machinery space for paddle-steamers. The total deduction for machinery cannot exceed 50 per cent. of the gross tonnage.—**Tonnage length,** in *ship-building*, the length of a vessel upon which is based the calculation of its gross register tonnage. "Measure the length of the vessel in a straight line along the upper side of the tonnage-deck, from the inside of the inner plank, average thickness, at the side of the stem to the inside of the plank on the stern timbers, average thickness, deducting from this length what is due to the rake of the bow in the thickness of the deck, and what is due to the rake of the stern timber in the thickness of the deck, and also what is due to the rake of the stern timber in one third of the round of the beam." (*U. S. Revised Statutes*, §4153.) In the old rule for tonnage by 'builders' old measurement,' the length taken along the deck from the stem to the after side of the stern-post was reduced three inches for every foot of draft of water. From the length thus obtained was deducted three fifths of the breadth for tonnage. (See ★*breadth.*) The remainder was the *length for tonnage*, now obsolete.

tonnage-duty (tun′ā̤j-dū-ti), *n.* A tax of so much per ton levied upon vessels by the customs authorities under certain conditions.

tonnage-rent (tun′ā̤j-rent), *n.* The rent of a mine or quarry when it takes the form of a royalty on each ton of mineral obtained.

tonne^2 (ton), *n.* [F., a ton. See *ton.*] The metric ton or millier of the metric system, equal to 2204.6 pounds avoirdupois. Also *tonneau.*

tonneau (to-nō′), *n.* [F. *tonneau*, a cask, a tub, a tun. See *tunnee.*] **1.** A tub.

> When a proper slope cannot be had, we must of necessity fall back upon either the earth closet, *tonneau*, or pail system for the collection of excreta.
> *Buck*, Med. Handbook, IV. 767.

2. A name given by French builders of motor-cars to the rounded or cask-like rear body of the vehicle. The barrel form has gradually changed to a molded shape, and entrance is gained through side-doors. This form gives larger seating-capacity at the back than the ordinary back seat of the surrey or carryall, as the rounding sides can be utilized. Tonneau backs can accommodate two, three, or five persons. The tonneau is often made removable, leaving either a box back or a sloping surface behind the front seat, or it can be replaced by a rumble or tiger's seat. The name 'toy-tonneau' has been applied to a form of rear-seat arrangement for two passengers only, in which the seat-backs are much lower than in the standard type. If doors of entry are omitted, the name tonneau ceases to apply.

The prevailing type was the gasoline-propelled vehicle modeled generally after the foreign *tonneau* form, though here and there were new shapes distinctively American in their idea. *Sci. Amer.*, Jan. 31, 1903, p. 80.

3. See ★*tonne*².

tonneaued (to-nōd′), *p. a.* Furnished with a tonneau. [Rare.]

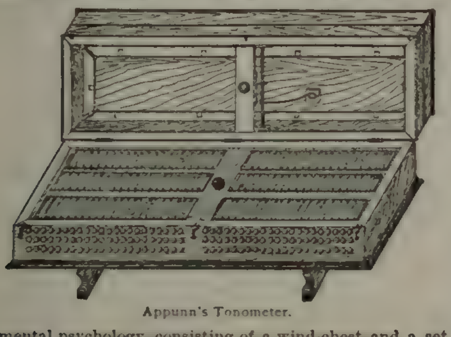
It was a big, black, black-dashed, *tonneaued* twenty-four horse Octopod [motor-car].
R. Kipling, Steam Tactics, in Traffics and Discoveries, [p. 185.

tonobole (ton′ọ-bōl), *n.* [Gr. *τόνος*, a stretching, + *βόλος*, a throw, < *βάλλειν*, to throw.] In *phytogeog.*, a bolochore in which propulsion results from the resilience of the calyx or involucre. *F. E. Clements.*

tonogram (tō′nọ-gram), *n.* [Gr. *τόνος*, tension, + *γράμμα*, a writing.] The record made by a tonograph.

tonograph (tō′nọ-grȧf), *n.* [Gr. *τόνος*, tension, + *γράφειν*, write.] A recording tonometer.

tonometer, *n.* **2.** (*b*) An instrument for determining the degree of intravascular blood-pressure.—**3.** An instrument for measuring strains within a liquid. A thermometer with very thin elliptical bulb may be used, as the pulling forces distend the bulb, causing the mercurial column to descend.—**Appunn's tonometer,** a form of tonometer, frequently used in experimental psychology, consisting of a wind-chest and a set of reeds. The instrument generally employed has 129 reeds between the limits of 512 and 1024 vibrations, so that each reed differs from its neighbor in the series by 4 vibrations.



Appunn's Tonometer.

tonometric (tō-nọ-met′rik), *a.* [*tonometr*(*y*) + *-ic.*] Of or pertaining to the measurement of musical tones, specifically of their pitch or frequency. *Encyc. Brit.*, XXX. 61.

tonoplast (tō′nọ-plȧst), *n.* [Gr. *τόνος*, a stretching, + *πλαστός*, formed.] One of the vacuoles of the plant-cell, having a distinct wall and dividing like a true cellular organ, such as a chromosome, chromatophore, etc. *Went* (1888).

tonotactic (tō-nọ-tak′tik), *a.* [*tonotaxis* (*-tact-*) + *-ic.*] Same as ★*osmotactic.*

tonotaxis (tō-nọ-tak′sis), *n.* [NL., < Gr. *τόνος*, tension, tone, + *τάξις*, disposition.] Same as ★*osmotaxis.*

tonsillitis, *n.*—**Lacunar tonsillitis,** a form of inflammation of the tonsils in which the crypts or follicles are clogged with a whitish deposit.

tonsillolith (ton-sil′ọ-lith), *n.* [L. *tonsillæ*, tonsils, + Gr. *λίθος*, stone.] A concretion in the substance of the tonsil. *Buck*, Med. Handbook, VI. 599.

tonsol (ton′sol), *n.* A trade-name of a substance which gives a red color with potassium nitrate. It is used to develop meteorological records traced with potassium-nitrate solution by automatic instruments, at temperatures below the freezing-point of ink.

Since ink would freeze at great elevations the trace is made by a pen containing a solution of saltpeter, which writes on the disc coated with lampblack, treated with a solution of "*tonsol.*" The chemical reaction gives a red trace that can not be obliterated by handling nor by immersion in water.
U. S. Monthly Weather Rev., July, 1902, p. 359.

Tonto group. See ★*group*¹.

tonus, *n.* **3.** A condition of preparedness in an organ or tissue to perform its normal function as soon as the customary stimulus is applied.

A continuous lesser "change" or stream of changes sets through the neuron, and is distributed by it to other neurons in the same direction and by the same synapses as are its nerve impulses. This gentle continuous activity of the neuron is called its *tonus.*
Encyc. Brit., XXXI. 740.

Reflex tonus, in *physiol.*, muscular tonicity reflexly maintained by constant or recurrent peripheral stimulation.

The single transient reflex process is superinduced upon a *reflex tonus.*
W. Wundt (trans.), Physiol. Psychol., I. 244.

Tonus peregrinus, the Gregorian melody or tone in the ninth or Æolian mode, regularly used for Psalm cxiv., beginning with the words "In exitu Israel" (whence the name).—**Tonus regius,** the Gregorian melody or tone in the sixth or Hypolydian mode, regularly used for the antiphon in connection with the prayer for the reigning sovereign often inserted at the end of the mass (whence the name).

took² (tök), *n.* See the extract. [Prov. Eng.]

The common practice in this country of protecting the banks of rivers by means of little piers or "*tooks*" to throw the water off them, and into the middle of the bed of the stream, generally results in failure, because the piers cause eddies, and deep pools endangering the banks are frequently dug out by these eddies.
Nature, Dec. 12, 1907, p. 127.

tookytook (tůk′i-tůk″), *n.* [A New Zealand abbreviation of Maori *kotukutuku.*] In New Zealand, the native fuchsia or kotukutuku, *Fuchsia excorticata*, or its fruit. See ★*konini* and ★*kotukutuku.*

tool¹, *n.*—**Laying-on tool,** an instrument used by edge-gilders which consists of a light wooden frame having three sides and covered with crape, for laying on covers, and a pad covered with Canton flannel.—**Pneumatic tool,** in its widest sense, any tool which is operated by compressed air, as the pneumatic rock-drill, broom, air-jack, and air-hoist; specifically, a self-contained combined motor and interchangeable tool operated by compressed air. Such machines are either reciprocating motors, as the pneumatic hammer, or rotary motors, as the pneumatic drill, and are made in a number of forms named after the tools used in them.—**Portable tool,** any tool or small machine which may be moved about by hand or by means of a traveling crane and operated by power, as distinguished from an ordinary hand-tool. Portable tools may be self-contained, as, for example, a shaper or a milling-machine to which an electric motor is attached. Such a machine is portable in the sense that it can be disconnected from its feed-wire, moved to another place, and again connected with a wire conveying a current to its motor. Any pneumatic tool, hammer, chisel, or drill, that can easily be moved within the limits of its air-hose, or any drill, grinder, emery-wheel, polishing-wheel, tapping-, reaming-, or boring-machine, operated by means of flexible shafting, may be said to be portable.—**Spring tool,** a turning tool used in an engine or machine-lathe for taking a finishing cut along a piece of work already roughed down nearly to size. It is curved or arched upward and downward just behind the cutting edge in side view, and has a curved line in plan for the cutting edge. Hence it has a slight amount of elasticity or spring, which, though not conducive to accuracy in sizing, produces a smooth and polished surface. *Lockwood*, Dict. Mech. Engin. Terms.

tool-board (töl′bōrd), *n.* A board attached to or near a machine-tool such as a lathe or milling-machine, to receive and display for easy access the tools or cutters or gears used on such a machine.

tool-box (töl′boks), *n.* **1.** Any box which is used to contain workmen's tools. Pattern-makers' tools are kept in a chest suitably fitted with trays and drawers; molders' tools in an open rectangular box without any trays or partitions, and furnished only with a cross handle bridging over the top. Fitters and turners keep their tools in drawers or in plain boxes. For outdoor work the erectors' tools, as spanners, ratchet-braces, etc., are put in strong iron-clamped packing-boxes. *Lockwood*, Dict. Mech. Engin. Terms.

2. An English term for the holder of the steel cutting-tool on the carriage of machine-tools, such as lathes, planers, shapers, slotters, etc. It is often used to cover all parts having a feed-function above the saddle which runs on the ways of the bed of the machine.

tool-clamp (töl′klamp), *n.* A device for holding a tool in a fixed desired position on a tool-carriage or -holder, or in the revolving spindle or percussion element in boring-machines or rock-drills.

tool-grab (töl′grab), *n.* A device or grip to seize and raise from the bore of a well a tool or piece of apparatus which has broken off and fallen to the bottom.

tool-grinder (töl′grīn″dėr), *n.* A machine for shaping or sharpening tools for the machine- or other work-shop, by exposing the surface to be treated to an abrading wheel driven at high speed. Such wheels, if of small diameter, are of emery or corundum; large grinders may use a true grindstone. The grinder often has special holders, or holders with special motions, designed to present the surface to be ground at the correct and best angles for subsequent use as cutters.

tooling, *n.*—**Blank tooling, dumb tooling.** Same as *blind tooling* (which see, under *tooling*).

tool-plate (töl′plāt), *n.* The tool-holder in a machine-tool. The tool-bar is clamped by bolts and straps to a surface or plate on the tool-carriage which is fitted with T-slots for the purpose. Also called *tool-box. The Engineer* (London), 1903, p. 571. [Eng.]

tool-rest, *n.*—**Capstan tool-rest,** a circular or polygonal revolving head having radial holes in which the shanks of various tools can be inserted, mounted on the tail-stock of a lathe. The axis of this head is vertical, and the various tools carried by it can each be brought into service by swinging the head around. Other machines for doing similar work are made with revolving heads that turn on horizontal axes: such machines are called *cross turret-lathes* or *chucking-machines*, depending on whether the axis runs across the bed or lengthwise of it.

tool-room (töl′röm), *n.* A department in a well-ordered machine-shop in which tools, jigs, and gages, etc., are made, ground, or otherwise kept in order, and whence they are handed out to the men. *Lockwood*, Dict. Mech. Engin. Terms.

tool-smith (töl′smith), *n.* A blacksmith whose business consists in forging, hardening, and tempering the steel tools used by machinists. *Lockwood*, Dict. Mech. Engin. Terms.

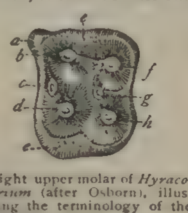
tool-steel (töl′stēl), *n.* Steel of the composition and manufacture which render it suitable for use in machine-tools for the cutting of metals. Such steel must be tough and yet hard enough to resist the abrasion and heat of the cutting process. It was formerly steel high in carbon (one per cent. or over), capable of being hardened and tempered. Recently steels with alloying percentages of manganese, tungsten, vanadium, titanium, and chromium have been introduced, having the property of self-hardening, or of not losing their hardness and ability to cut if the point or edge becomes red-hot from the severity of the cutting duty. *Trans. Amer. Inst. Elect. Engin.*, 1903, p. 511.

toondah (tön′dä), *n.* See ★*oyster-whelk.*

tooral-looral (tö′ra̤l-lö′ra̤l), *n.* See ★*ture-lure.*

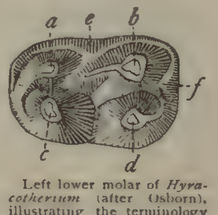
tooshqua (tösh′kwä̤), *n.* [Amerind. of British Columbia.] A common name used in British Columbia for *Ophiodon elongatus*, a fish related to the cottoids and found on the Pacific coast of North America.

tooth, *n.* **1.** The topography of the tooth, as now described, is shown in the cuts.



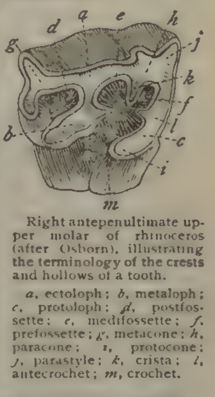
Right upper molar of *Hyracotherium* (after Osborn), illustrating the terminology of the upper molar cusps.

a, parastyle; *b*, paracone; *c*, protoconule; *d*, protocone; *e*, *e*, cingulum; *f*, metacone; *g*, metaconule; *h*, hypocone.



Left lower molar of *Hyracotherium* (after Osborn), illustrating the terminology of the lower molar cusps.

a, protoconid; *b*, hypoconid; *c*, metaconid; *d*, entoconid; *e*, cingulum; *f*, hypoconulid.



Right antepenultimate upper molar of rhinoceros (after Osborn), illustrating the terminology of the crests and hollows of a tooth.

a, ectoloph; *b*, metaloph; *c*, protoloph; *d*, postfossette; *e*, medifossette; *f*, prefossette; *g*, metacone; *h*, paracone; *i*, protocone; *j*, parastyle; *k*, crista; *l*, antecrochet; *m*, crochet.

11. A roughened surface, as of a paper prepared for pastels.—**12.** In *masonry*, one of the several projecting ends of stones or bricks already built into a wall and left at an unfinished end of it to facilitate the fitting of another piece of wall to the first one.—**Block teeth.** See ★*block*¹.—**Giant tooth,** an abnormally large but not deformed tooth.—**Hutchinson's teeth,** upper incisor teeth in which the cutting edge is notched: occurring in the subjects of hereditary syphilis.—**Pacinotti tooth,** in *elect.*, one of the radial projections upon the core of a Pacinotti ring or armature. See *Pacinotti* ★*ring.*—**Palatine tooth,** a tooth situated on one of the palatine bones, as in fishes: sometimes, but wrongly, applied to any tooth on the roof of the mouth. *Parker and Haswell*, Zoology, II. 302.—**Pavement teeth,** large, rounded teeth, closely set together and suggesting a cobblestone pavement. Such teeth were common in many extinct sharks, are found in the existing Port Jackson shark, and are well shown in the pharyngeal teeth of the drum.

On either side of the palate and on the dentary are three large rectangular *pavement teeth.*
Zittel (trans.), Text-book of Palæon., II. 188.

V-tooth, a form of tooth for a gear, having an appearance, in side view, of an inverted V: used in clockwork for actuating the hammer of alarm-clocks, in some old forms of escape-wheels, and in saw-teeth for cutting metals by a revolving blade.

toothake, *n.* An amended (and former) spelling of *toothache.*

tooth-ax (töth′aks), *n.* A stone-cutters' ax the edges of which are divided into blunt teeth.

tooth-block (töth′blok), *n.* A part of a machine designed to form the mold for casting iron gear-wheels in sand. The toothed rim is not formed complete by a wooden pattern, but only a segment is carefully shaped, having the space between two teeth and these two teeth themselves shaped upon a block. This has the depth of the face desired and is about nine inches long, parallel to the tangents of the rim, and four inches radially. This is the tooth-block. It is borne on an arm, turning on a central vertical stem, and fitted with a tangent screw and train of gears, so that with the latter combination the circumference of the gear can be carefully and exactly divided into equal aliquot parts. The sand is carefully molded round the tooth-block, when the latter is raised vertically, and by the dividing-gear swung horizontally through the required angle to locate the next tooth. The tooth-block is again lowered, and the next tooth molded. All shrinkage defects and warping of gear-patterns are eliminated, the expense of making all teeth, and on many patterns, is avoided, and storage of patterns is simplified.

tooth-chisel (töth′chiz″l), *n.* A stone-masons', or stone-dressers', chisel having a wide cutting edge which is serrated or cut with spaces resembling a V-tooth.

tooth-cleaner (töth′klē″nėr), *n.* A form of gear-tooth milling- or planing-cutter, or a grinding-wheel of special profile section, adapted to dress or finish the spaces between the teeth of a gear-wheel on face and flank.

toothing-press (töth′ing-pres), *n.* A stamping-machine for cutting out the interdental spaces and forming the teeth of band-saws.

toothing-stone (töth′ing-stōn), *n.* See *toothing.*

tooth-plane (töth′plān), *n.* A plane with V-shaped notches or serrations in its edge, used in scoring the under surface of a veneer or other wood surface, to form grooves within which the glue shall be received when the surfaces are glued and pressed together, or when cloth is to be fastened to the surface of the wood; a toothing-plane.

tooth-shell, *n.* **2.** A small marine mollusk, *Marinula pellucida*, whose shell is used in Australia for necklaces. *E. E. Morris*, Austral English.

tooth-stop (töth′stop), *n.* In *exper. phonet.*, a part of Atkinson's bent-wire instrument for obtaining the position of a point on the surface of the tongue. It consists of a small coil of wire, which may be slid along the principal (exploring) wire or locked in place, and which is set in the depression between the two front teeth. *Scripture*, Exper. Phonetics, p. 331.

top¹, *n.*—**Military top** (*naut.*), a mast-top encircled by a breastwork of steel, behind which machine-guns are worked when the vessel is in action, and by means of which a plunging fire is obtained. See *military mast*, under *mast*¹.—**Top on**, in *cricket*, a vertical spin imparted to the ball by the bowler, which causes it to increase its pace from the pitch. *Hutchinson*, Cricket, p. 88.

top¹, *v. t.* **12.** In *golf*, to strike (a ball) above its center.—**To top out**, to complete at the top, as a chimney.—**To top up.** (*b*) To bestow the finishing touches upon; bring to the best condition. [Colloq.]

As graziers' beasts Welsh cattle are well known in the midland counties of England, where, under the name of Welsh runts, large herds of bullocks are fattened upon the pastures, or "*topped up*" in the yards in winter.
Encyc. Brit., XXV. 191.

top³, *n.*—**Artificial spectrum top**, in *psychophys.*, a rotating disk of black and white which, under certain conditions, gives rise to sensations of color.—**Chameleon top**, a color-top so constructed that the arrangement of colors can be altered by interrupting its motion, thus changing in a striking manner the blended tints produced by its rotation.

topalgia (tọ-pal′ji-ä̤), *n.* [NL., ‹ Gr. τόπος, place, + ἄλγος, pain.] A localized neuralgic pain.

topaz, *n.*—**Brazilian topaz**, the true yellow topaz, found at Ouro Preto, Minas Geraes, Brazil.—**Fiery topaz**, a humming-bird, *Topaza pyra*, so called from its brilliant crest which glows like a coal of fire. The throat is yellow.—**Indian topaz**, a name for the rich sherry-colored topaz found in Ceylon and rarely in Brazil.—**Saxon topaz**, a name originally applied to the true topaz found at Schneckenstein, Saxony, in the eighteenth century. At present the name is applied solely to the pale yellow, decolorized variety of smoky quartz commonly sold as topaz by the jeweler.

top-buggy (top′bug″i), *n.* A buggy with a cover or top. See *buggy.*

And had brought his *top-buggy* along, so 's he could fly high and have a big time with the girls.
Fursman, Sanctified Town, p. 212.

top-card, *n.* **2.** An indicator-card taken by a steam-engine indicator from the end of the cylinder above the piston, in Cornish pumping-engines operating with a beam. This was quite different from the card taken below the piston (or bottom-card), since the work of lifting the massive pump-rods was done on the lifting stroke, with steam pressure from the boiler on top of the piston. The bottom-card showed only the equalizing and the condenser pressures.

top-chain, *n.* **2.** A chain used to secure the upper tiers of a load of logs after the capacity of the regular binding-chains has been filled.

top-dry (top′drī), *a.* Same as *stag-headed.*

top-dyeing (top′dī″ing), *n.* The process of dyeing worsted tops. Dyeing-machines of special construction are used, in which the dye-liquor is forced back and forth through the material.

tope³, *n.* **2.** An Australasian shark, *Galeus australis.* It differs somewhat from *Galeus galeus*, the tope of Great Britain. In Australia also called *school-shark.* *E. E. Morris*, Austral English.

topek (tō′pek), *n.* Same as ⋆*tupik.*

top-flask (top′flȧsk), *n.* The upper part of a foundry molding-box or flask, when the latter is made in two parts for the convenient molding of surfaces of revolution by parting them through the meridian section, or the section of maximum area. Same as the *cope* or *nowel*, when the lower part is called the *drag.*

Tophaceous gout. See ⋆*gout*¹.

top-hat (top′hat), *n.* A tall silk hat; a dress hat, a 'chimney pot.' [Colloq.]

Rouse up the best hatter in the royal borough, buy a *top-hat* of that size and bring it back as fast as the horse can gallop. *R. Hichens*, The Londoners, x.

toph-stone (tōf′stōn), *n.* [See *tophus.*] Same as ⋆*tophus*, 2.

tophus, *n.* **2.** Calc tufa.

The curiously shaped hill "Cuerno del Diablo" (the Devil's Horn), of some 6500 feet, near the top of which volcanic *tophus* with alternate layers of lava and basaltic conglomerate have been found.
Geog. Jour (R. G. S.), XVI. 35.

Dental tophi, deposits of calcareous material on the roots of the teeth, occurring in gouty subjects.

tophyperidrosis (tof-i-per-i-drō′sis), *n.* [NL., ‹ Gr. τόπος, place, + NL. *hyperidrosis.*] Local excessive sweating.

topiarius (tō-pi-ā′ri-us), *n.*; pl. *topiarii* (-ī). [L. See *topiary.*] In *Rom. antiq.*, one skilled in ornamental gardening.

topic, *n.* **4.** *pl.* In *geom.*, topology. See ⋆*topics*, 2.

Topical geometry. Same as ⋆*topics*, 2.—**Topical song,** a song (as in a comic opera) containing jesting allusions to persons and events in the place where it is sung.

topics (top′iks), *n.* [Gr. τοπικά, the title of Aristotle's treatise on this subject. See *topic.*] **1.** That branch of logic or rhetoric which treats of topics in the sense of *topic, n.*, 1.—**2.** The most general, fundamental, and naturally elementary branch of geometry, which neither considers lengths, areas, or volumes in their character of being measurable, nor distinguishes straight from curved or crooked lines, nor plane from curved or bent surfaces, but studies only the manner in which the parts of places are continuously connected. Although topics is of its own nature the easiest kind of geometry, yet, owing to its having been neglected, geometers have not been at home in the subject and have found great difficulty in demonstrating its theorems. It is often called *topology.*

top-iron (top′ī″ėrn), *n.* The slightly curved upper iron used in carpenters' and joiners' smoothing- or jack-planes which have wooden faces. It stiffens the plane-iron by a pressure applied close to and along the length of the cutting edge, and if very close to the latter may help to break the shaving in brittle woods.

topit (top′it), *n.* A sort of brace-head fastened by screwing to the top of boring-rods when the latter are being withdrawn from the bore of the well or shaft. [Prov. Eng.]

top-lift (top′lift), *n.* The outside or last piece of sole-leather put on to complete the heel of a shoe or boot. In cheap shoes the rest of the heel is of pasteboard and scrap-leather.

top-line (top′līn), *n.* The profile of the back from the center of the shoulders to the end of the hip-bones: used in describing cattle.

toploader (top′lō-dėr), *n.* In *lumbering*, one who works on the top of a load of logs.

But the *toploader* is the man who runs the greatest risks, for he has little room in which to work and he is liable at any time to be caught and crushed between the logs, or to lose his footing, or to be knocked off the load and thrown to the ground, perhaps with a log on top of him. *Amer. Inventor*, April 15, 1904, p. 184.

top-notcher (top-noch′ėr), *n.* One who or that which is at the top notch or highest point of excellence. [Colloq.]

As a matter of course there are not a sufficient number of "*top-notchers*" to go around, the result being—as was the case during the Bates craze—the use of many inferior specimens and the neglect of good cattle of other blood. *Rep. Kansas State Board Agr.*, 1901–02, p. 64.

topo (tō′pọ), *n.* [Properly *tupu;* Aymará of Bolivia and Peru.] The pin or pins of copper, silver, or gold by means of which the Indian women of Peru and Bolivia fasten their wraps over the breast. The pin is part of the aboriginal dress and ornament of the mountain Indians, but was also used on the Peruvian coast. The Quichua name is *tumi.*

topochemical (top-ọ-kem′i-ka̤l), *a.* [Gr. τόπος, place, + E. *chemical.*] Of or pertaining to the antennary sense in certain insects, such as the ants, in which a sense of touch or contact is combined with an olfactory sense.

topog. An abbreviation (*a*) of *topographical;* (*b*) of *topography.*

topografer, topografy. Amended spellings of *topographer, topography.*

Topographic adjustment, adolescence, engineer, infancy. See ⋆*adjustment*, etc.—**Topographic old age, reconnaissance.** See ⋆*age*, ⋆*reconnaissance.*

Topographical climatology. See ⋆*climatology.*—**Topographical engineering.** Same as *topographical surveying* (which see, under *surveying*).

topographize (tọ-pog′ra̤-fīz), *v. i.*; pret. and pp. *topographized*, ppr. *topographizing.* [*topograph*(*y*) + *-ize.*] To study and describe in detail the natural features of a region or locality. *Southey*, Doctor, interchap. xiv.

topography, *n.*—**Immature topography.** Same as *topographic* ⋆*infancy.*—**Knob-and-hollow** or **knob-and-basin topography.** See the extract.

The *knob-and-hollow* type of irregularity which represents, in reverse, the irregularities of the surface of the ice, against which the sand and gravel of the plain were deposited.
R. D. Salisbury, in Geol. Surv. of New Jersey, 1893, p. [312.

Mature topography, a land-surface in which the processes of dissection or sculpture have produced the greatest possible variety and strength of relief.—**Medical topography.** (*a*) The topography of a country with reference to the prevailing diseases. (*b*) Regional anatomy. See *topography*, 4.—**Step-and-platform topography,** in *phys. geog.*, a phrase occasionally used to describe a land-surface eroded on alternately strong and weak (nearly) horizontal strata, and therefore possessing a series of flat benches separated by steep escarpments. *Geog. Jour.* (R. G. S.), IX. 666.

topologic (top-ọ-loj′ik), *a.* [*topolog*(*y*) + *-ic.*] Of or pertaining to topology.

topological (top-ọ-loj′i-ka̤l), *a.* [*topolog*(*y*) + *-ical.*] Of or referring to topology.

topology, *n.* **3.** The study and description of the localities in a particular district. *Encyc. Dict.*

topomorph (top′ọ-môrf), *n.* [Gr. τόπος, place, + μορφή, form.] One of a group of organisms limited to a particular district and characteristic of it.

The vast majority of natural groups of animals being "topo-politan," i.e. restricted to more or less definite areas on the Earth's surface, it follows that these various areas are characterized by the presence of certain forms of animal life which do not occur elsewhere. These forms it is proposed to call "*topomorphs.*" Thus the giraffe is a "*topomorph*" of the Æthiopian region (Africa south of the Atlas); the sloths and anteaters are *topomorphs* of the neotropical region (South and Central America).
P. L. Sclater, in Geog. Jour. (R. G. S.), IX. 673.

toponarcosis (top″ọ-när-kō′sis), *n.* [NL., ‹ Gr. τόπος, place, + νάρκωσις, a benumbing. See *narcosis.*] Localized anæsthesia.

toponym, *n.* **2.** In *biol.*, a scientific name antedated by another name based on the same type.

A name is rejected when there is an older valid name based on the same type (*toponym*).
Code of Bot. Nomenclature, p. 258.

toponymy, *n.* **2.** In *geog.*, see the extract. Compare *toponomy.*

Toponymy, M. Wauters explains, is a new science which takes up the names of places and studies them with a view to elucidating history and geography.
Geog. Jour. (R. G. S.), XI. 207.

topophobia (top-ọ-fō′bi-ä̤), *n.* [NL., ‹ Gr. τόπος, place, + -φοβια, ‹ φοβεῖν, fear.] A morbid dread of certain special localities.

topopolitan (top-ọ-pol′i-ta̤n), *a.* [Gr. τόπος, place, + πολίτης, citizen, + *-an.*] Inhabiting only a definite region or restricted area of the earth, as the giraffe or the sloth; not cosmopolitan.

The sloths and anteaters are confined to tropical America, and the polar bear to the North Polar lands. Such animals may be called "*topo-politan*" (τόπος, locus, and πολίτης, civis) in contradistinction to those that are universally distributed, or "cosmo-politan."
P. L. Sclater, in Geog. Jour. (R. G. S.), IX. 673.

topotype (top′ọ-tīp), *n.* [Gr. τόπος, place, + τύπος, type.] In the nomenclature of types in natural history, a specimen of a named species from the locality of the original or holotype.

T.l. (Type-locality): The place from which the holotype or the specimen figured as standard of reference came, so that it may be known what are *topotypes*, for they are of the greatest importance, next to types, for specific determination.
Annals and Mag. Nat. Hist., Dec., 1904, p. 390.

topotypic (top-ọ-tip′ik), *a.* [*topotyp*(*e*) + *-ic.*] Pertaining to or of the nature of a topotype.

topotypical (top-ọ-tip′i-ka̤l), *a.* Same as ⋆*topotypic.* *Proc. Zool. Soc. London*, 1900, p. 405.

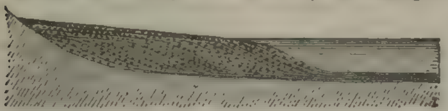
topper, *n.* **5.** An exceptionally high sea or wave.

topping, *n.* **6.** Specifically, in tobacco-growing, the removal of the budded or blossoming summit of the plant in order that its strength may be thrown into the leaves.

topsail, *n.*—**Half topsails under,** said of a vessel when it is so distant that only the spars and sails from the middle of the topmast up are visible above the horizon.

topsawyer, *n.* 4. A member of a crew who is always in the lead when work is going on either on deck or aloft.

top-set (top′set), *a.* In *geol.*, noting the upper and shoreward layers of a delta, consisting of the coarser sediment dropped as the inflowing stream is checked.



Top-set.

These *top-set* beds are laid down in a nearly horizontal position, and their seaward margin is gradually extended.
Chamberlin and Salisbury, Geol., I. 191.

top-spindle (top′spin″dl), *n.* Same as *elastic* ⋆*spindle*.

top-turnip (top′tėr″nip), *n.* Same as *kohlrabi*.

top-twist (top′twist), *n.* In *tennis*, a twist put on the ball to cause it to drop more rapidly than usual.

top-yeast (top′yēst), *n.* See *yeast*.

toque, *n.* 5. See ⋆*toboggan-cap*.

tora¹, *n.* See *torah*.

tora² (tō′rä̤), *n.* [Native name.] A large antelope, *Bubalis tora*, of northeastern Africa, very similar to the hartebeest.

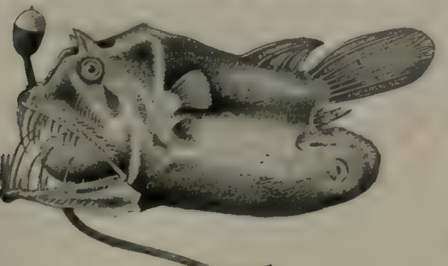
Torbay group. See ⋆*group*¹.

torberite (tôr′bėr-īt), *n.* [G. *torberit* (1793), after *Torbern* (*Torber-n*) Olof Bergmann, who first examined it.] Same as *torbernite*.

torcel (tôr-sel′), *n.* [S. Amer. Sp. ?] The larva of a South American bot-fly, *Dermatobia cyaneiventris*, which sometimes attacks human beings.

torch¹, *n.*—**Alcohol torch,** a simple form of lamp burning alcohol, used in plumbing and other trades requiring a small, very hot, portable flame: sometimes used with a blowpipe. See *paint-burner*.—**Gasolene torch.** (*a*) A simple form of portable gasolene-vapor burner designed to give a large, bright flame, for use in shops and outdoor work, such as track-repairing. It consists of a flat tank which may be hung against a wall, a pipe, and a vapor-burner. (*b*) A similar torch used in plumbing, gas-fitting, electric-wiring, etc., for giving a heating flame wherever a condensed hot flame is required. It is made in many forms. Where air-pressure is used it is called a *gasolene blow-torch*. It is sometimes used as a paint-burner. (*c*) A lamplighters' torch using gasolene.

torch-fish (tôrch′fish), *n.* A name applied to a deep-sea pediculate fish, *Linophryne lucifer*, taken off Madeira. The first dorsal spine carries a luminous bulb above the eye like a torch. *Discovery*, Oct., 1907, p. 120.



Torch-fish (*Linophryne lucifer*).
(From a drawing by Dr. R. W. Shufeldt.)

torch-holder (tôrch′hōl-dėr), *n.* A device or fixture for holding a torch; also, a lamp fixture or bracket for gas or electric-lighting systems representing a supported torch.

tordrillite (tôr-dril′īt), *n.* [*Tordrillo* Range, Alaska, + *-ite*².] In *petrog.*, aphanitic or glassy igneous rocks, which may or may not be porphyritic, characterized by equal amounts of quartz and alkali feldspar; the porphyry equivalent of alaskite. *Spurr*, 1900.

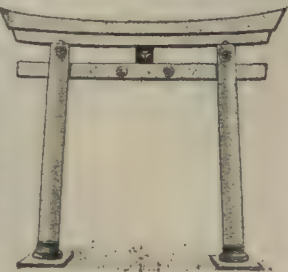
torea (tō′rā̤-ä̤), *n.* [Maori.] The native name of the oyster-catcher (*Hæmatopus longirostris* and *H. unicolor*) of New Zealand.

Torenia (tọ-rē′ni-ä̤), *n.* [NL. (Linnæus, 1751–1753), named in honor of Olof *Toren*, a Swedish traveler and pupil of Linnæus.] A genus of plants of the family *Scrophulariaceæ*. They are perennial or annual herbs with simple and opposite leaves, tubular 2-lipped flowers in terminal or axillary small racemes, 4 stamens all perfect, and many very small seeds. There are twenty species, chiefly of tropical Asia and Africa, of which three are cultivated as tender garden annuals, *T. flava* having mostly yellow flowers, *T. Fournieri* and *T. Asiatica* having mostly blue or white flowers.

toric (tō′rik), *a.* [*tor*(*us*) + *-ic*.] Of or pertaining to a torus: used in optics in reference to a lens the surface of which is a portion of that of a torus, or solid of revolution generated by rotating a circle about any axis in its plane. See ⋆*torus*, 5.

A concave or a convex *toric* lens surface.
Buck, Med. Handbook, I. 595.

torii (tō′ri-ē), *n.* [Jap. *tori-i*.] A form of decorative gateway or portal found in Japan. It consists of two upright wooden posts connected at the top by two horizontal cross-pieces, the lower straight and usually terminating with the supports, and the other curved gracefully and resting upon and overhanging the supports. The torii is associated with Shinto worship, and is found at the entrance to Shinto temples. The Japanese suppose that it was intended originally as a roosting-place of the sacred fowls which gave warning of daybreak. The type is common in the East, appearing in the toran of India, the pailoo of China, and the red-arrow gate of Korea. *Trans. Jap. Soc.*, IV. 82.



Torii.

tormentilla, *n.* 3. The astringent rhizome of *Potentilla Tormentilla*, a plant belonging to the rose family and native to Europe and Asia.

tormentil-tannic (tôr″men-til-tan′ik), *a.* Derived from tormentil-root and resembling tannin.—**Tormentil-tannic acid,** the particular variety of tannic acid extracted from tormentil-root.

tornado-cave (tôr-nā′dō-kāv), *n.* A hole in the ground, a cellar, a vault, or a stone structure, built as a place of refuge from tornadoes.

tornado-lamp (tôr-nā′dō-lamp), *n.* See ⋆*tornado-lantern*.

tornado-lantern (tôr-nā′dō-lan″tėrn), *n.* A form of portable or fixed lantern in which the air for the combustion of the illuminant oil is conducted to the wick through tubular air-passages having bends or elbows, instead of allowing air to reach the combustion point directly from outside. The flame is much less likely to be blown out in a wind or gale. If the circuitous passages can further be heated by the flame so that the air is preheated before delivery to the flame, the latter is hotter, and gives more light and less smoke.

tornal (tôr′nạl), *a.* [*torn*(*us*) + *-al*¹.] Of or pertaining to the tornus. *Proc. Zool. Soc. London*, 1897, p. 76.

tornese (tōr-nā′se), *n.*; pl. *tornesi* (-si). [It., lit. 'of Tours,' where the coin was first struck; F. *Tours*, L. *Turones*.] A subsidiary coin of the Two Sicilies, $\frac{1}{300}$ of a ducat, equivalent to $\frac{27}{100}$ of a United States cent.

tornesello (tōr-nā-sel′lō), *n.* [It., dim. of *tornese*. See ⋆*tornese*.] A bronze coin introduced into Venice by the Doge Barbarigo (1486–1501).

tornhexactine (tôrn-hek-sak′tin), *n.* [Gr. τόρνος, compasses, + ἕξ, six, + ἀκτίς (ἀκτιν-), ray.] In the sponge-spicules, a hexactine with the arms abruptly and sharply pointed.

tornus (tôr′nus), *n.*; pl. *torni* (-ni). [L. *tornus*, < Gr. τόρνος, a turners' wheel, lathe, also compasses. See *turn*.] The inner or anal angle of an insect's wing: used especially to denote the anal angle of the hind wing of a tineine moth.

Hind wing with the medial area striated with brown; a postmedial line incurved at discal fold; an indistinct silvery subterminal line; a fiery red terminal band irrorated with silver from apex to discal fold, where there is a small ocellus with semicircular black mark on its outer edge; a fiery red stigma on termen near *tornus*.
Annals and Mag. Nat. Hist., Sept., 1904, p. 176.

toro (tō′rō), *n.* [Sp. *toro*, bull, < L. *taurus*, < Gr. ταῦρος, bull. See *steer*², *n.*] A common name of *Caranx hippos*, a carangoid fish found on both coasts of tropical America.

toroid (tō′roid), *a.* and *n.* [*tor*(*us*) + *-oid*.]
I. *a.* Same as *toroidal*.

II. *n.* A surface or solid of revolution determined by revolving any closed-plane contour about an axis in its plane which does not intersect it.

Each reflecting surface, according to this plan, would be part of a parabolic *toroid*.
Astrophysical Jour., Dec., 1903, p. 339.

Toroidal coil, a solenoid closed upon itself so as to form a circular ring.

torpedo, *n.*—**Boom-torpedo,** a torpedo fastened to the outer end of a boom projecting from a torpedo-vessel. When attacking, the end of the boom was lowered under water. [Obsolete.]—**Brennan torpedo, Maxim torpedo,** two similar types of dirigible torpedoes named from their inventors, in which two large reels of wire in the interior are geared to screw-propellers. After the torpedo is launched the wire is pulled off the reels by a steam-engine ashore which causes the reels to rotate and turn the screws, thus propelling the torpedo ahead.—**Dirigible torpedo,** a torpedo in which the lateral steering remains under the control of an operator, on a ship or on shore, during the whole length of its run, by means of electric or other wires forming a connection between the torpedo and the operating station.—**Drifting torpedo,** a torpedo which is dependent for its motion on the tide or the current of a stream.—**Howell torpedo,** an automobile torpedo used in the United States navy. It is propelled by a fly-wheel weighing about 100 pounds, which is made to revolve at a high rate of speed just before the torpedo is discharged.—**Lay torpedo,** a dirigible surface torpedo, the motive power of which is an engine driven by compressed carbonic acid gas carried in a reservoir in the interior.—**Oil-well torpedo,** a cylindrical metallic case or shell which contains a heavy charge of nitroglycerin, used, in sinking petroleum-wells, to fracture by explosion the rock at the bottom of the well and so produce or increase the flow of petroleum.—**Schwartzkopff torpedo,** an automobile torpedo made in Germany, substantially the same as the Whitehead except that it is made of a special bronze instead of steel.

torpedo, *v. t.* 2. In sinking oil-wells in a petroleum district, to explode a charge of nitroglycerin at the bottom of (the drilled well) in order to shatter the rock and increase the flow of oil. Charges of from 20 to 80 quarts of the explosive are frequently used, and are contained in tin-plate cases, which are carefully lowered into position and exploded by the dropping of a heavy iron cylinder from above.

torpedo-boat, *n.*—**Submarine torpedo-boat.** See ⋆*submarine*, 2.—**Torpedo-boat destroyer,** a vessel of extremely high speed (from 25 to 35 knots), built on the general lines of a torpedo-boat but larger, running from 300 to 700 tons displacement. It carries torpedo-tubes and guns and is designed especially for chasing and destroying torpedo-boats or for itself acting as a torpedo-boat against the enemy's large ships on the high seas. Commonly, by abbreviation, *destroyer*.—**Torpedo-boat stern.** See ⋆*stern*².

torpedo-director (tôr-pē′dō-di-rek″tọr), *n.* An instrument by which to determine the direction in which an automobile torpedo should be fired to hit the enemy or a target. The relative speed and direction of motion of the enemy, with reference to the vessel on which the director is placed, and the speed of the torpedo to be fired being known, these data are set on certain bars of the instrument. When the sight-bar is pointed at the enemy, the instrument shows the angle at which the torpedo should be fired to strike the target.

torpedo-fuse (tôr-pē′dō-fūz), *n.* A fuse designed for exploding the charge in the head of a torpedo.

torpedo-stern (tôr-pē′dō-stėrn), *n.* Same as *torpedo-boat* ⋆*stern*.

torque, *n.* 3. A proposed unit for the measurement of the moment of forces; one dyne acting with a lever-arm of one centimeter. See *unit of* ⋆*torque*.

In the French system the absolute unit of moment would be the moment of a force of one dyne about a point at one centimetre distance from its line of action; this unit we shall call one *torque*.
Jude, Physics, Experimental and Theoretical, I. 33.

Synchronizing torque, in *elect.*, the torque acting upon the armature of an alternating-current machine which tends to bring the machine into synchronism with others in the same circuit and to hold it in synchronism.—**Unit of torque,** a unit of force acting at the end of an arm of unit length, where the force is perpendicular to the arm and to the axis of revolution. In physics, the unit of torque is the torque of one dyne at the end of an arm one centimeter in length: in engineering, where forces are measured as weights, the unit of torque is the pound-foot or kilogram-meter respectively. These terms although similar in form to the 'foot-pound' and 'kilogrammeter' are not to be confused with them.

torrefication (tor′ē-fi-kā-shọn), *n.* Same as *torrefaction*.

Torrejon group. See ⋆*group*¹.

Torrens system, a method of government registration and guarantee of land-titles, named from its author, Sir Robert Richard Torrens, of South Australia, where the Torrens Land Transfer Act was passed in 1858. It established land registry offices, where, after examination of his title to a given property by a public examiner, a proprietor might have his title registered with a description of the property, and so officially guaranteed. Subsequent purchasers, mortgagees, or lease-holders are likewise protected, on registration of their transactions regarding the property. Certificates of title are issued by the registration office to each party in interest on the surrender of conflicting certificates. The system passed rapidly from South Australia to other British colonies, and is now, with some modification, in use in parts of England and Canada, and in several of the United States. In most jurisdictions its use is optional.

Torrentaria (tor-ẹn-tā′ri-ä̤), *n.* [NL., < L. *torrens*, a torrent: see *torrent*.] A subgenus of fishes of the genus *Etheostoma* under the family *Percidæ*.

Torrential cone. (*a*) See ⋆*cone*. (*b*) Same as ⋆*fan*¹, 9.

torrent-portion (tor′ẹnt-pôr″shọn), *n.* That middle portion of a river's course which is marked by swift currents. Above it, nearer the sources in the steep mountains, is the *cascade-portion*, while below it, in the flood-plain region, is the *river-portion*. *J. D. Dana*, Manual of Geol. (4th ed.), p. 181.

Torridonian (tor-ı-dō′ni-ạn), *a.* In *geol.*, relating to the Torridon sandstone, a Precambrian formation in the north of Scotland. The Precambrian strata are divided into the Torridonian sandstone above and the Lewisian gneiss below. *Geikie*, Text-book of Geol., p. 890. **Torridonian group.** See ★*group*¹.

torsiometer (tôr-si-om′e-tėr), *n.* [L. *torsio(n-)*, torsion, + Gr. *μέτρον*, measure.] An instrument for measuring the degree of torsion; specifically, one for measuring the amount of rotation of the eyeball on the visual axis; also, one for testing the twisting of a revolving shaft, as in a steam-driven vessel.

> This has been a serious obstacle in the path of ship designers, but it appears to have been overcome by taking indicators of the torsion of the shafting through which power is conveyed from the turbine to the propeller. . . . In the Denny and Johnstone *torsiometer* is an electrical method in which a telephone is used, whilst in Mr. Gibson's instrument recourse is had to a flash of light deflected by a mirror.
> *Nature*, March 28, 1907, p. 523.

torsion, *n.*—**Antidromal torsion.** See ★*antidromal.*—**Moment of torsion.** See ★*moment.*—**Torsion couple.** See ★*couple.*

Torsional strain. See ★*torsional strength.*—**Torsional strength,** the capacity of a bar, or shaft, or structure to resist an effort to twist it. The effort to twist is called the 'torsional stress'; the angle through which the bar or shaft is deformed by the twisting process is the 'torsional strain'; the relation of the angular deformation to the moment producing it is the 'torsional stiffness.' Torsional stiffness is a requisite for steady transmission of power by a shaft, since otherwise a torsional vibration would be present, occasioning loss of power.—**Torsional stress.** See ★*torsional strength. Lockwood*, Dict. Mech. Engin. Terms.

torsion-curve (tôr′shọn-kėrv), *n.* In *geol.*, the curved trace of an outcropping stratum due to torsional deformation of dipping formations.

torsion-head (tôr′shọn-hed), *n.* A clamp or support to which one end of a rod or wire is fastened, and which, by revolution about an axis coincident with that of the rod or wire, serves to twist the latter through any desired angle. Angular movements of the torsion-head are usually indicated upon a divided circle mounted with its center in the axis of rotation.

torsion-permeameter (tôr′shọn-pėr-mẹ-am″e-tėr), *n.* See ★*permeameter.*

torsion-rod (tôr′shọn-rod), *n.* The rod used in motor-car construction to resist the tendency of the driving gear or chain to rotate the housing of the driving axle, and also the tendency of obstacles to rotate the spring and axle around the attachment of the former to the frame. Either tendency throws the driving elements out of line, and brings side-stress on the fastenings. The torsion-rod is often attached to the frame with spiral springs between the end of the rod and the lug on the frame, to give elasticity to such joint and lessen the intensity of the shock on it when the rod comes into action. *Cycle and Automobile Trade Jour.*, Dec., 1904, p. 81.

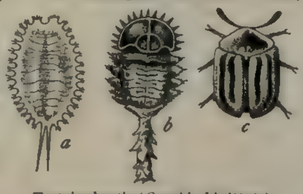
torsion-spring (tôr′shọn-spring), *n.* A spiral wire spring designed to resist a strain of torsion. It is essentially a compression spring in which the strain to which it is submitted tends to unwind the spiral by pulling the two ends in opposite directions. It is used for door- and hinge-springs and in many other places where the pressure or strain to be resisted is at a right angle with the point where the end of the spring is fastened.

tort-feasor, *n.*—**Joint tort-feasors,** in *law*, two or more persons who together commit the same tort. They are jointly and severally liable for the injury.

torticone (tôr′ti-kōn), *n.* [L. *tortus*, twisted, + *conus*, a cone.] Any tetrabranchiate cephalopod shell which is closely or loosely coiled in an asymmetrical depressed or elevated spiral. Such shells among the *Nautiloidea* are distinguished as trochoceracones, and among the *Ammonoidea* as turriliticones. In all cases they present phylogerontic stages of the particular races of which they are the terminals.

tortoise, *n.* 3. An American nymphalid butterfly, *Eugonia j-album*: more fully called the *Compton tortoise.*—4. Same as *tortoise-beetle.*—**Compton tortoise,** an American nymphalid butterfly, *Eugonia j-album*, which ranges throughout Canada and the northern United States east of the Rocky Mountains. Its larvæ feed on the willow and white birch. See *white* ★*J.*—**Five-dotted tortoise,** an American chrysomelid beetle, *Physonota unipunctata*, which feeds on the leaves of the wild sunflower. It has five black dots on the prothorax, of which four are sometimes wanting. The specific name was originally given to one of the one-spotted specimens.—**Greaved tortoise,** a South American fresh-water turtle of the genus *Podocnemis*: so named from the large plates on the front legs.—**One-dotted tortoise,** an American tortoise-beetle, *Physonota unipunctata.* It is yellow in color, with one or five black dots on the prothorax, and feeds on sunflower-leaves.—**Painted tortoise.** See *painted terrapin*, under *terrapin.*

tortoise-beetle, *n.*—**Two-striped tortoise-beetle,** an American chrysomelid beetle, *Cassida bivittata*, which feeds, both as larva and as adult, on the leaves of the sweet-potato and morning-glory vines.



Tortoise-beetle (*Cassida bivittata*).
a, larva; *b*, pupa; *c*, adult: all enlarged.
(Redrawn from Riley.)

Tortoise-shell fish. Same as *handfish.*

tortola (tôr′tọ-lä), *n.* [Sp. *tórtola*, a turtle-dove. See *turtle*¹.] A stamped cut-money of the Virgin Islands, struck in 1801, and so called from the stamp.

Tortonian (tôr-tō′ni-an), *a.* and *n.* [*Tortona* (see def.) + *-ian.*] In *geol.*, noting the upper member in Mayer-Eimar's classification of the Miocene Tertiary of France and Mediterranean Europe, which lies between the Helvetian below and the Messinian-Pontian Pliocene above. It is typically developed about Tortona, in northern Italy, and consists of marls and sands containing marine and fresh-water shells and of local deposits in fissures of Jurassic limestone; the latter are of terrestrial origin and contain abundant fossil mammals.

tortricid, *n.*—**Oak ugly-nest tortricid,** *Archips fervidana*, a species whose larvæ roll together wads of oak-leaves in which they live, several in a nest.

tortuosity, *n.* 3. In *geom.*, the quality of being non-plane.

torup (tor′up), *n.* [Origin uncertain.] The common snapping turtle, *Chelydra serpentina.* [Local, U. S.]

> The small edible tortoise has a name and a fame; it is the terrapin. But whence that name? Not from terra, earth. Farmers and sailors call the big "snapper" the *torup* or torop—however one should spell it. . . . Early travellers in North America describe and figure this creature, noting that it was considered a toothsome dish; but the writer has not seen its name given. There can be no doubt that it is an Indian name originally, and the root whence terrapin was developed by a derivative suffix.
> *The Critic*, Oct. 27, 1894, p. 268.

torus, *n.* 5. In *geom.*, a tore or anchor-ring. See *tore*⁵, 2. *Astrophysical Jour.*, Dec., 1903, p. 335.—**Torus occipitalis,** a slight projection occasionally present on the upper portion of the occipital bone.—**Torus palatinus,** a projection sometimes present at the point of crossing of the palatomaxillary and intermaxillary sutures on the palate.

torymid (tor′i-mid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Torymidæ.*

II. *a.* Having the characters of or belonging to the family *Torymidæ.*

Tosa fowl, a Japanese breed of domesticated fowls, named from the province of Tosa, characterized by the extremely long sickle-feathers of the male. These reach a length of from six to fourteen feet.

Tosafist, *n.* See ★*Tosaphist.*

Tosafoth, *n.* See ★*Tosaphoth.*

Tosaphist, Tosafist (tō-sä′fist), *n.* One of the rabbis who composed the additional commentary on the Talmud called ★*Tosaphoth* (which see).

Tosaphoth, Tosafoth (tō-sä′fōt), *n.* [Heb., < *Yāsaph*, add.] Literally, addition, increase: a name for critical annotations on the Talmud. Most of the composers of the Tosaphoth were Hebrew scholars from Germany and France in the twelfth and thirteenth centuries. The two principal commentaries on the Talmud, Rashi and Tosaphoth, are always printed around the text. The Tosaphists were the immediate followers of Rabbi Solomon ben Isaac (Rashi), and many important interpretations of difficult passages in the text were added by them to those of their predecessor. Five of the foremost Tosaphists were two sons-in-law and three grandchildren of Rashi: contracted from the initials of his full name, *R̊abbi S̊helomoh Itzhaki.*

toscanite (tos′kạ-nīt), *n.* [It. *Toscana* (Tuscany) + *-ite*².] In *petrog.*, a name given by H. S. Washington (1897) to a group of lavas in Tuscany characterized by the presence of lime-soda feldspar and orthoclase with some quartz: related to vulsinites and ciminites. Equivalent to ★*dellenite.*

toss, *v. t.* 11. In *cricket*, to bowl (a full-pitch). [Obsolescent.]—12. To refine (tin) by fusing it and then causing the molten metal to fall in thin filaments through the air. Oxidizable impurities acted on by the air are separated out and form a scum which is skimmed off, after the stream has come to rest in the receiving vessel.—**Toss up the bunt,** an order to the sail-furlers to roll the bunt of the sail on to the top of the yard.

toss, *n.* 7. In *cricket*, a ball bowled so as to reach the batsman before touching the ground; a full-pitch. [Obsolescent.]

tossing, *n.* (*b*) In the refining of metallic tin, the dipping up of the melted metal in ladles and pouring it back into the pot whence it came, thus by exposure to the air causing oxidation of the foreign metals and other impurities which accumulate as a scum on the surface of the refined tin.

tostão (tos-toun′), *n.* [Pg. *tostão* (= Sp. *toston*), variant of *testão*, a teston. See *teston.*] A silver coin of Brazil and Portugal, equivalent to 100 reis. Compare ★*toston.*

tosto (tōs′tō), *a.* [It., also adv., soon, = OSp. OPg. *tosto* = Cat. Pr. *tost* = OF. *tost*, F. *tôt*; origin undetermined; prob. < L. *tostus*, toasted, hot, hence quick: see *toast*, *v.*] In *music*, quick; rapid. Compare *presto.*

toston (tos-tōn′), *n.* [Sp., = Pg. *tostão.* See ★*tostão.*] A silver coin of Bolivia, Guatemala, Mexico, Peru, and Venezuela, equivalent to four reals.

total, *a.*—**Absolutely total motion.** See ★*motion.*—**Total buoyancy.** See ★*buoyancy.*—**Total heat of steam, or of evaporation.** Steam, like all condensable vapors, has a sensible heat for each pressure, measurable by a thermometer or other temperature-measuring device. In addition, it has the heat necessary to change water at that temperature into steam at that temperature, called the 'latent heat.' And thirdly, it has the heat corresponding to the work of overcoming the mechanical resistance or external work due to its tendency to increase its volume or change its state. These latter two factors are revealed upon cooling a weight of steam by absorbing its heat in water. The total heat is sometimes expressed as the sum of: [the heat of the liquid] + [heat of vaporization] + [heat corresponding to external work in increasing volume].—**Total increment,** in *forestry*, the total volume of wood produced by the growth of a tree or stand up to the time it is cut.

tote⁵, *v. t.* 2. To haul (supplies) to a logging-camp.

tote-bag (tōt′bag), *n.* [*tote*⁵, *v.*, + *bag.*] A bag for the use of hunters and others. See the extract. [New Eng.]

> The . . . *Tote Bag*, . . . the best thing for hunting, tramping and fishing trips; for carrying coat, camera, blanket, lunch, etc., made of stout canvas with draw-rope mouth or entrance to bag and with flaps to protect its contents from rain. It is to be carried on the back the same as a knapsack.
> Quoted in *N. and Q.*, 10th ser., II. 162.

tote-box (tōt′boks), *n.* See ★*shop-pan.*

totem-animal (tō′tem-an″i-mạl), *n.* An animal that is the totem of a clan.

totem-badge (tō′tem-baj), *n.* A badge which represents or indicates the totem of the clan to which the owner belongs. *Haddon*, Evolution in Art, p. 118.

totem-clan (tō′tem-klan), *n.* A clan which possesses a totem.

totem-kin (tō′tem-kin), *n.* The kinsfolk of a metronymic clan possessing a totem. *Giddings*, Prin. of Sociol., p. 167.

totem-pole (tō′tem-pōl), *n.* A post erected in front of an Indian house, carved so as to represent totem-animals, ancestral figures, or a series of figures that illustrate a clan legend. Totem-poles are used by the Indians of the coasts of Alaska and British Columbia. See *totem.*

totem-stock (tō′tem-stok), *n.* A group having the same totem. *Ratzel* (trans.), Hist. of Mankind, I. 125.

totem-stone (tō′tem-stōn), *n.* In *prehistoric archæol.*, a stone with peculiar markings believed to represent totems.

tote-team (tōt′tēm), *n.* [*tote*⁵, *v.*, + *team.*] A team which is used to haul or 'tote' supplies to a logging-camp.

> A tote road is cut through the woods to the camp-site, over which the necessary boards, supplies, etc., are hauled. . . . The team which is used in drawing provisions is called the *tote-team.* *Dialect Notes*, II. vi.

totipotence (tō-tip′ọ-tẹns), *n.* [*totipoten(t)* + *-ce.*] In *biol.*, the capacity to generate or regenerate the whole. An egg or a bud which may become a complete organism, or a fragment of the leaf of a begonia which may give rise to a complete plant, is an illustration of totipotence or the potency of the whole. *T. H. Morgan*, Regeneration, p. 243.

totipotent (tọ-tip′ọ-tẹnt), *a.* [L. *totus*, all, + *potens*, powerful.] Exhibiting or characterized by totipotence.

> It appears in Planaria lugubris that while the material at every level has the double potency of producing a head

or a tail according to which end of the piece it comes to lie at, yet in very short pieces from the middle and posterior regions of the body a double-tailed form may arise. We must suppose, therefore, on our hypothesis, that while in this species also the material is *totipotent*, yet when the determining influence of the polarity is removed the stronger teudency is to produce a tail, while in Planaria maculata, as we have seen, the stronger tendency is in the other direction.

Amer. Nat., July–Aug., 1904, p. 504.

totitive, *n.*—**Prime totitive**, a totitive with respect to 1.—**S-totitive of *k***, or totitive of a number *k* with respect to a divisor, *s*, of it, a number as small as *k* and having no factor in common with *k* not also a factor of *s*.

Totonacan (tō-tō-nä′kan), *a.* and *n.* **I.** *a.* Of or pertaining to the Totonacs, a tribe living principally in the state of Vera Cruz, Mexico.

II. *n.* An American linguistic family of which the language of the Totonacs is the sole representative.

totora (tō-tō′rä), *n.* [Aymará of Bolivia.] A reed, *Typha Dominguensis*, growing in shallow places in Lake Titicaca and other mountain lakes of the Andes of southern Peru and Bolivia. The balsas on Lake Titicaca are made of these reeds. The Indians eat the sprouts as a vegetable.

totuava (tō-tö-ä′vä), *n.* [Native name.] A large food-fish, *Cynoscion macdonaldi*, of the family *Sciænidæ*, found in the Gulf of California.

tou (tō′ö), *n.* [Polynesian; Hawaiian *kou.*] Same as ★*banago.*

touart, *n.* Same as *tooart.*

toucan, *n.*—**Red-billed toucan**, *Rhamphastos erythrorhynchus*, a species having the lower mandible and the sides of the upper mandible bright red. The rump and throat are yellow.—**Toco toucan**, *Rhamphastos toco*, a large species, about two feet in length, with an orange-colored bill, tipped with black. The plumage is black, with a white throat and red rump.

touch, *v.* **I.** *trans.* **27.** To ask from; borrow or obtain from: as, to *touch* an acquaintance for a dollar. *Grose*, 1785. [Obsolete or colloq.]

They have *touched* citizens B. B. and Harvey Dixon for a few hundreds.

Lecky, England in the Eighteenth Cent., VIII. 191, note.

II. *intrans.*—**Touch and stay.** See ★*stay*^{2}.

touch, *n.* **26.** In *med.*, palpation, especially examination of the cavities of the body by the finger.—**27.** In *sugar-manuf.*, see ★*string-proof.*—**28.** A theft; pocket-picking. [Slang.]

"You 'll see thot this berg ain't backward with its *touches*. . . ." With all respect to this man's statement, my own observation is that more big "*touches*' take place in Chicago than in New York.

Josiah Flynt, in McClure's Mag., XVI. 574.

Active touch, in *psychol.*, perception by means of cutaneous sensations in combination with the organic sensations (muscular, tendinous, articular) involved in movement. See the extract.

Most psychologists have distinguished *active touch* from sensations of pressure as differing in kind. But so far as we do not introduce other sensations connected with the movement of the organ, the difference is one of degree only.

G. T. Ladd, Psychol. Descript. and Explan., p. 112.

Field of touch, in *psychol.*, the extent of cutaneous surface which, at any given time, is furnishing sensations of touch in response to adequate stimulation: a phrase formed, loosely, on the analogy of 'field of vision.' *J. M. Baldwin*, Dict. of Philos. and Psychol., I. 382.—**Separate-touch**, a name sometimes given to the method of making permanent magnets commonly known as *double-touch*. See *magnet*.—**To make a touch**, to pick a pocket, etc., successfully. [Slang.]

If I *make a touch* here in town and the holler 's big, they [the police] 'll land me if they can.

Josiah Flynt, in McClure's Mag., XVI. 573.

Touch in goal, in *foot-ball*, any one of the spaces at the corners of the field formed by the touch-lines and goal-lines extended.

touch-back (tuch′bak), *n.* In *foot-ball*, the act (of a player guarding his own goal-line) of touching the ball to the ground on, over, or behind the goal-line, the ball so touched being declared dead by the referee, provided the impetus which sent it to or across the line was given by an opponent.

touch-cell (tuch′sel), *n.* A dermal nerve-cell found at the termination of a sensory nerve. *Parker and Haswell*, Zoology, II. 100.

touche (tösh), *n.* [F., < *toucher*, touch.] In musical instruments, a key or digital of any sort.

toucher, *n.* **2.** See the extract.

Nor has the Scottish doctrine of "*touchers*' proved generally acceptable south of the Cheviots. A bowl which, during its original course, touches the jack is called a *toucher*, and counts in the game even should it run into the ditch, or be driven in by another bowl.

Encyc. Brit., XXVI. 328.

touch-line, *n.* **2.** Either of the two lines which bound the sides of a foot-ball field.

touch-proof (tuch′pröf), *n.* See ★*string-proof.*

Tough pitch. Tough-pitch copper should show a silky fracture of light color and a close grain, and the cast ingot must be free from any depression on the surface, as this would indicate an excess of dissolved oxid, due to insufficient poling. In tough-pitch copper the impurities present should all be in the oxidized condition, but no oxid of copper should be present. See ★*overpole*, also ★*wire-bar pitch* and ★*plate-pitch.*—**Tough Tom.** See ★*tom*^{1}.

toughen, *v. t.* **2.** Specifically, of copper, in its metallurgy, the elimination of the foreign metals as oxids and of copper oxid itself, changing the qualities of the cast from brittleness to ductility.

tough-ingot (tuf′ing″got), *n.* An ingot of tough-pitch copper. *Phillips and Bauerman*, Elements of Metallurgy, p. 419.

touloucouna-oil (tö-lọ̈-kö′nạ̈-oil), *n.* [F. spelling of a native name in Guiana (?).] See ★*oil.*

toulouron-oil (tö-lọ̈-ron′oil), *n.* [F. spelling of a native Senegal name.] A brownish-yellow fatty oil from the body of *Pagurus latro.*

Tounatea (tọ̈-nā′tẹ̄-ạ̈), *n.* [NL. (Aublet, 1775), from *tounou*, or *tunu*, the Carib name of *Tounatea guianensis.*] A genus of plants belonging to the family *Cæsalpiniaceæ.* See *Swartzia.*

touradon (tö-rä-doṅ′), *n.* [F. dial.] A hillock of sand and humus formed about a pioneer plant on shore-land mainly withdrawn from the sea and increasing each year in breadth and plant-content.

The *touradons*, thanks to the matting of the roots and stolons, already possess considerable powers of resistance.

A. F. W. Schimper (trans.), Plant-Geog., p. 187.

tourbillion, *n.* **2.** The point near the vertex around which the hair grows radially in different directions. *Deniker*, Races of Man, p. 73.

toure-loure, *n.* See ★*ture-lure.*

touring (tör′ing), *v. n.* and *a.* [*tour*^{2}, *v.*] **I.** *n.* The act of making a tour or journey; traveling; specifically, travel in a motor or other vehicle which lasts for several days, as distinguished from a drive or simple excursion out and back in one day or a very few days.

II. *a.* Designed for use in making tours or considerable journeys: as, a ★*touring*-car (which see).

touring-car (tör′ing-kär), *n.* A form of motor-car, designed for four, five, or six passengers in addition to the driver. Such cars were originally named from the fact that they were designed for touring purposes, with provision for carrying luggage and tourists' necessities and luxuries. The name is now used for a type of motor vehicle (whether designed or used for touring purposes or not) in which more than one seat is provided, and the rear portion is in tonneau form.

Tourist car, a plainly fitted car for the use of excursionists or emigrants; also, a private car designed to be chartered by a party of tourists.—**Tourist sleeping-car**, a special type of plainly furnished sleeping-car for the use of emigrants or excursionists.

touristry (tör′ist-ri), *n.* [*tourist* + *-ry.*] The occupation or sport of touring. [Nonce-word.]

tourmalin, *n.* A yellowish-green variety from Ceylon is known as Ceylonese peridot or Ceylonese chrysolite.

tourmalinize (tör′mạ-lin-īz), *v. t.* [*tourmalin* + *-ize.*] To charge with tourmalin; render tourmalin-bearing.

Along the margin of this intrusive body, the granite is often strongly *tourmalinized.*

Amer. Jour. Sci., April, 1908, p. 323.

tournament, *n.* **4.** In *billiards*, tournaments are of two kinds. Adhering to the import of the word, which is *turnabout*, one kind requires all contestants to play with one another; the other dismisses contestants as fast as they individually lose either two games or three. The first is the original plan, adopted professionally in America in 1860 and never deviated from by professionals in that country. It was adopted in England in 1874 75 and is still known there as the 'American plan,' and was adopted in France in 1879. The other was first introduced in England.

tournamental (tör-nạ-men′tạl), *a.* [*tournament* + *-al*^{1}.] Of or pertaining to a tournament. *Modern Billiards*, p. 305. [Rare.]

tournee (tör-nā′), *n.* [A German form of the F. *tournée*, fem. of *tourné*, turned.] One of the bids in skat, in which the trump is turned up, as distinguished from *solo*, in which it is declared. See ★*skat*^{2}. Also *tourné.*

tovera (tō-vā′rạ̈), *n.* [Sp. *tovera, tobera*, = F. *tuyère.* See *tuyere.*] The twyer of a smelting-furnace. *Coal and Metal Miners' Pocketbook.*

tow^{3} (tō), *v. t.* [*tow*^{3}, *n.* Less prob. another use of *tow*^{1}, *v. t.*, pull.] To make fluffy by picking to pieces, as hair.

tow-car (tō′kär), *n.* A trail-car or trailer. See *trail-car.*

towel-pattern (tou′el-pat″ėrn), *n.* In *wood-carving* and *joinery*, same as *linen-scroll.*

tower^{1}, *n.* **8.** In *chem.*: (*a*) Same as ★*distilling-tube.*

The solution was then filtered from the spongy zinc and distilled, using a *tower*. The acetone was recovered intact, boiling at 54.7° to 55.0° C. under a pressure of 738.8 mm. *Jour. Phys. Chem.*, Oct., 1904, p. 487.

(*b*) A drying-apparatus of cylindrical shape: same as *calcium-chlorid* ★*tube.*

Ammonia (evolved by heating lime mixed with ammonium chloride and dried by passing through a *tower* of lime and one of dry pumice covered with phosphorus pentoxide) is passed into the solution.

Nature, Nov. 13, 1902, p. 42.

9. In a railroad, a building in which are assembled the levers which control a system of switches and signals; a signalman's cabin. Signal-towers are usually two stories high, to give the signalman a view of the tracks and signals under his control. See ★*switch-tower* and ★*signaling.*—**10.** In *geol.*, a columnar protrusion of eruptive rock, such as the famous spine of Pelée on Martinique. See ★*cumulo-volcano.*

Sir Richard Strachey has, indeed, called attention (in *Nature*) to numerous '*towers*' or fingers occurring over the trap-flows of the Dekkan plateau, and he likens these (observed and sketched by him the better part of seventy years ago) to the Pelée excrescence.

Science, May 20, 1904, p. 801.

Angel Tower, also called **Bell Harry Tower**, the great central tower of the cathedral of Canterbury in England. It was completed by Prior Selling, who held office in 1472, and contains the great bell weighing three and one half tons. It derived its name from a gilded angel which once decorated one of the corner pinnacles. It is in the early perpendicular style.—**Cooling-tower**, a tower or stack of pipes, trays, or openwork of brick or terra-cotta, over which the hot condensing-water from a steam-engine condenser is allowed to flow or trickle in order to cool it and thus permit its repeated use as condensing-water: used only where cooling- or condensing-water is difficult or expensive to procure.—**Emmerling tower**, a type of absorption-tube. See ★*absorption-tube.*—**Gay-Lussac tower**, a tower, from 4 to 6 feet in diameter and from 25 to 50 feet in height, forming a part of the lead-chamber plant for the manufacture of sulphuric acid. It usually consists of a timber framework supporting a casing of heavy sheet-lead lined with glazed tiles, and filled with coke or other suitable porous material, over which strong sulphuric acid is caused to trickle, while the waste gases from the chambers pass upward through the mass and escape from the top of the tower to the chimney. The acid absorbs the valuable oxids of nitrogen, which are subsequently recovered and returned to the chambers, while the atmospheric nitrogen, which is valueless, is carried off by the chimney.—**Glover tower**, an important part of the modern plant for making sulphuric acid by the lead-chamber process. Introduced into use about 1860, it has taken the place of the previously used denitrating tower of Gay-Lussac, not only doing its work of recovering from the 'nitrous vitriol' the oxids of nitrogen which have been taken up in the Gay-Lussac absorbing-tower, but also reconcentrating this vitriol so that it is ready to be used again, and employing for this concentration the otherwise waste heat of the gases from the sulphur- or pyrites-burners. See *denitrificator.*—**Porcelain tower**, an octagonal tower, about 260 feet high, built during the fifteenth century at Nanking, China. The outer walls were cased with bricks of white porcelain. Each of its nine stories was provided with overhanging eaves covered with green glazed porcelain tiles, and from them hung numerous bells and lanterns. The tower was destroyed by the Taipings in 1853.—**Solvay tower**, in the working of the Solvay process for making sodium carbonate, the cylindrical tower in which brine containing ammonia in solution is acted upon by carbon-dioxid gas pumped in at the bottom. It consists of some 15 superimposed cylinders of boiler-plate, separated by concave plates perforated by small holes.—**Spode's tower**, a decorative pattern which originated at the Spode factory, Stoke-on-Trent, England, toward the middle of the nineteenth century, and was later revived by W. T. Copeland & Sons. It was printed, usually in blue, on white ware and porcelain.

tower-crane (tou′ėr-krān), *n.* A crane placed on a portable tower and used in the construction of buildings to dispense with scaffolding.

tower-liquor (tou′ėr-lik″ọr), *n.* See ★*liquor.*

towerman (tou′ėr-mạn), *n.* In *railroad signaling*, the man in charge of a railroad switch-and-signal tower. See ★*tower*^{1}, 9, and ★*signaling.*

towhead, *n.* **4.** A shoal or other obstruction in a stream-bed, perceptible through rippling or other movement at the surface. [Local, U. S.]

towing-lights (tō′ing-līts), *n. pl.* White lights carried by a vessel engaged in towing other vessels or boats. [U. S.]

town, *n.*—**On the town.** (*a*) On the list of the town's poor; supported by the town. (*b*) Earning a living on the town, as a prostitute.—**Town warrant** or **town order**, an official order on a town treasurer for the payment of a certain sum of money from the town treasury.

tow-netter (tō′net-ėr), *n.* One who uses a tow-net or towing-net.

There are two schools of *tow-netters*: the old-fashioned method here employed, by which the nets are towed horizontally; and the new method, by which an opening and closing net is let down as vertically as may be, and hauled in open through a given vertical area and then closed. *Geog. Jour.* (R. G. S.), XIII. 153.

tow-netting (tō′net-ing), *n.* **1.** The material (zoölogical specimens, etc.) obtained by the use of the towing-net.

Plaice eggs have been present in every gathering since that date off both the Welsh and the Lancashire coasts. The Port Erin *tow-nettings* later than January have not yet been examined in detail.
Nature, March 24, 1904, p. 488.

2. The act of using a towing-net.

The serial tow-nets were towed on several occasions to get the silk properly seasoned, and the sounding-gear, accumulators, etc., were carefully overhauled. In the first of these preliminary *tow-nettings*, off the North Foreland, a few miles from land, coccospheres were obtained. *Geog. Jour* (R. G. S.), XIII. 148.

town-musician (toun′mū-zish″ạn), *n.* In Germany, especially from the sixteenth to the eighteenth centuries, a musician, usually a player upon some instrument, employed by a town or city to superintend or take part in official or municipal music. Such musicians constituted small licensed gilds, receiving municipal patronage. As a title, *town-musician* denotes a municipal organist or band- and chorus-leader. See ★*town-organist* and ★*town-piper*.

town-organist (toun′ôr″gạn-ist), *n.* In Germany, a town-musician whose duties included playing the organ in one or more of the churches of the municipality. See ★*town-musician*.

town-piper (toun′pī″pėr), *n.* In Germany, a town-musician whose duty was to play a wind-instrument in the municipal band, especially at festivals and merrymakings. See ★*town-musician*.

town-reeve (toun′rēv), *n.* A reeve having jurisdiction in a town or township, as in Canada. See *reeve*¹, 1.

town-site (toun′sīt), *n.* The site of a town; specifically, a tract of land set apart to be occupied by a town; such a tract surveyed and laid out with streets, etc., for this purpose. [U. S. and Canada.]

town-tallow (toun′tal″ọ̄), *n.* Animal fat collected from the refuse of household cookery, used chiefly in soap-making. Practically the same as *kitchen-stuff* or ★*pot-grease*.

towny, *n.* **2.** A fellow-townsman. [Slang.]

He wa′n't no outlandish man neither; he was a born and bred *towney* of ourn. *G. S. Wasson*, The Green Shay, vii.

3. An interpreter.

They [an Eng. regiment in India] enjoyed a fine full flesh meal in the middle of the day, and then threw themselves down on their cots and sweated and slept till it was cool enough to go out with their "*towny*,' whose vocabulary contained less than six hundred words and the Adjective, and whose views on every conceivable question they had heard many months before.
R. Kipling, In the Matter of a Private, in Soldiers [Three, p. 120.

tow-team (tō′tēm), *n.* In *lumbering*, an extra team stationed at an incline in a logging-road to assist the regular teams in ascending with loaded sleds.

tox (toks), *n.* [Gr. τόξον, a bow.] In the sponges, a skeletal element or spicule of monaxial type, which has the form of a double-curved rod or Cupid's bow.

tox. An abbreviation of *toxicology*.

toxalbumic (tok-sal-bū′mik), *a.* [*toxalbum(in)* + *-ic.*] Relating to, or caused by, toxalbumin. *Buck*, Med. Handbook, V. 33.

toxalbumose (tok-sal′bụ-mōs), *n.* [*tox(ic)* + *albumose.*] A poisonous albumose from whatever origin — for example, the active principle of snake-venom.

Such a powder gives a proteid reaction, and is no doubt largely composed of albumoses, hence the name *toxalbumoses* has been applied. *Encyc. Brit.*, XXVI. 64.

toxic, *a.* **3.** Of or relating to a toxin.—**Toxic albumin, albumose, insanity, neuritis.** See ★*albumin*, etc.

toxication (tok-si-kā′shọn), *n.* [NL. *toxicatio(n-)*, < ML. *toxicare*, poison. See *toxicate.*] Poisoning.

toxicity, *n.*—**Venom toxicity,** the poisonous property of snake-venom.

Venom-toxicity. For the study of the toxic principles copperhead venom was chiefly employed. The animal selected for these experiments was the guinea-pig. The method of procedure was the following: We first determined for the particular sample of venom to be used the minimal lethal dose. This was found to be 0.3 mg. for a guinea-pig weighing from 250 to 300 grammes, death resulting within 24 hours. A dose of 0.6 mg. caused death in from two to three hours, and of 0.9 mg. in from 30 to 45 minutes.
Jour. Exper. Med., March 17, 1902, p. 291.

toxicodendric (tok″si-kọ̄-den′drik), *a.* [*Toxicodendr(on)* + *-ic.*] Derived from *Toxicodendron*: applied to an acid. See ★*toxicondric*.

toxicodendrol (tok′si-kō-den′drol), *n.* [*Toxicodendr(on)* + *-ol.*] The non-volatile, oily, active constituent of poison-ivy and similar plants. It is insoluble in water and cannot, therefore, be removed from the skin by washing. Alcohol readily dissolves it, and it is quickly destroyed by an alcoholic solution of lead acetate (sugar of lead).

The poison is in reality a nonvolatile oil. In January, 1895, Dr. Franz Pfaff, of the Harvard University Medical School, announced this discovery. The oil has since been purified and named *toxicodendrol*. It is found in all parts of the plant, even in the wood after long drying. Like all oils, it is insoluble in water, and can not therefore be washed off the skin with water alone. It is readily removed by alcohol.
U. S. Dept. Agr., Bulletin 20, Botany, p. 37.

toxicogenic (tok″si-kọ̄-jen′ik), *a.* [Gr. τοξικόν, poison, + -γενης, -producing, + *-ic.*] Forming poison. *Buck*, Med. Handbook, IV. 184.

toxicohemia, toxicohæmia (tok″si-kọ̄-hē′mi-ạ̈), *n.* Same as *toxemia*.

toxicol. An abbreviation of *toxicology*.

toxicomaïne (tok-si-kō′ma-in), *n.* [*toxic* + *(pt)omaine.*] Same as ★*phosphoptomaïne*.

toxicondric (tok-si-kon′drik), *a.* An abbreviation of ★*toxicodendric*.—**Toxicondric acid,** an acid derived from *Rhus Toxicodendron* and *R. Vernix*. Same as *acetic acid*.

Pfaff proved beyond a doubt that the so-called "*toxicondric acid*' of Maisch is acetic acid, and that the active principle is an oil, which has as yet not been analyzed. Pfaff extracted the "*toxicodendric acid*" out of the fresh leaves with steam, prepared the baryum salt of the watery solution of the *toxicodendric acid* and proved by analyses that the acid was acetic acid.
Med. Record, May 30, 1903, p. 855.

toxicophagous (tok-si-kof′ạ-gus), *a.* [Gr. τοξικόν, poison, + φαγεῖν, eat.] Addicted to eating poisons.

The famous *toxicophagous* Sultan Mahmúd Begara (1459–1511).
H. Yule, Marco Polo (2nd ed.), III. xxv., note 5.

toxicophagy (tok-si-kof′ạ-ji), *n.* [Gr. τοξικόν, poison, + φαγεῖν, eat.] The habit of eating poisons.

toxicophobia (tok″si-kọ̄-fō′bi-ạ̈), *n.* [Gr. τοξικόν, poison, + -φοβια, < φοβεῖν, fear.] A morbid dread of being poisoned.

toxiferous (tok-sif′ẹ-rus), *a.* [Gr. τοξι(κόν), poison, + L. *-fer*, < *ferre*, bear, + *-ous.*] Carrying poison.

toxignomic (tok-sig-nom′ik), *a.* [Gr. τοξι(κόν), poison, + γνώμη, opinion, judgment.] Characteristic of the toxic action of a substance.

toxi-infectious (tok″si-in-fek′shius), *a.* [*toxi(n)* + *infectious.*] Due to infection with the toxic products of a micro-organism.

The statement of Dide, who asserts that there is a diminution in alexin in patients suffering from the "*toxi-infectious*" forms of insanity, notably dementia præcox and general paralysis.
Jour. Med. Research, Dec., 1907, p. 352.

toxin, *n.* **2.** A specific poison of albuminous character, immunization with which leads to the production of a specific antitoxin. The toxin molecule, according to Ehrlich's doctrine, consists of two molecular groups, one toxophoric, to which the poisonous properties of the substance are due, the other haptophoric, which effects the union with the cell, against which the action of the toxin is directed. Soluble toxins have been found only in a limited number of infections, namely, in diphtheria, tetanus, and botulism. See ★*immunity*.

toxinan (tok′si-nan), *n.* [*toxin* + *-an.*] See ★*titoxin*.

toxinemia, toxinæmia (tok-si-nē′mi-ạ̈), *n.* [NL., < *toxin* + Gr. αἷμα, blood.] The circulation of toxins in the blood.

The different *toxinæmias* induced by the infectious diseases — diphtheria and typhoid or typhus fever.
Buck, Med. Handbook, I. 284.

toxin-immunity (tok′sin-i-mū″nị-ti), *n.* Immunity produced by the injection of toxins; hence, a form of active immunity. See ★*immunity*, 5.

In the development of *toxin-immunity* the doses, small at first, are gradually increased in successive inoculations.
Encyc. Brit., XXVI. 66.

toxin-toxoid (tok′sin-tok″soid), *n.* A mixture of toxin and toxoid, as in filtrates of old diphtheria cultures.

Cobbett has recently published a paper on the question whether the normal horse's serum contains diphtheric antitoxin. To solve the problem of the identity or non-identity of the protective substance with antitoxin he attacks it experimentally, basing his work and conclusions upon an acceptance of the *toxin-toxoid* composition of diphtheria-culture filtrates as set forth by Ehrlich.
Jour. Exper. Med., Oct. 1, 1900, p. 62.

toxiphoric (tok-si-for′ik), *a.* Same as ★*toxophoric*. *Science*, Oct. 24, 1902, p. 665.

toxocampid (tok-sọ̄-kam′pid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Toxocampidæ*.

II. *a.* Having the characters of or belonging to the family *Toxocampidæ*.

Toxochelys (tok-sok′e-lis), *n.* [NL., < Gr. τόξοι, a bow, + χέλυς, tortoise.] An extinct genus of turtles of the family *Chelydridæ*, distinguished from the other representatives of the family by having the tympanic ring open and the caudal vertebræ procœlous, with well-developed chevron-bones: from the Upper Cretaceous of the United States.

toxoid (tok′soid), *n.* [*tox(in)* + *-oid.*] A toxin which has lost its toxophoric group, but has retained the haptophoric group, so that it can still unite with the corresponding antitoxin. Such bodies result from the toxins by heat and age. They can be utilized in immunization, as though the toxophoric group were present.

Ehrlich was led to this belief in the complex nature of the toxin molecule through the very curious fact that diphtheria toxin may under a variety of conditions lose its toxicity but still retain its capacity of neutralizing antitoxin and also of uniting with cells, and thus inducing the formation of antitoxin in the animal body. Such toxin molecules deprived of the toxophorous group are called *toxoids*. *Med. Record*, Feb. 14, 1903, p. 243.

toxoinan (tok′sọ̄-i-nan), *n.* Same as ★*toxinan*.

toxoinfectious (tok″sọ̄-in-fek′shius), *a.* Same as ★*toxi-infectious*.

The original cause of the lack of coagulation may be *toxoinfectious*, or due to marked congestion.
Med. Record, Aug. 17, 1907, p. 279.

toxon², toxone (tok′son, -sōn), *n.* [*tox(in)* + *-on(e).*] A substance of the same general character as a toxoid, which, however, has not resulted from the toxin by age, but has been present in the culture bouillon from the start. The post-diphtheritic palsies are referable to the action of such bodies.

In my second research, 'Ueber die Constitution des Diphtheriegiftes,' I supposed that we had to do with a primary secretive product of the diphtheria bacillus which I called '*toxon*.' The *toxon* possesses the same haptophore groups as the 'toxin,' but a lower affinity for the antitoxin. The main difference lies in the toxophore groups, in that the *toxon* even in very large doses does not cause death, but paralysis which only comes on after a long incubation of fourteen days or more.
Jour. Med. Research, Dec., 1906, p. 470.

toxonoid (tok′sọ̄-noid), *n.* [*toxon*² + *-oid.*] A variety of toxon which is capable of binding antitoxin but is not toxic.

toxopeptine (tok-sọ̄-pep′tin), *n.* [*tox(in)* + *peptine.*] A somewhat poisonous substance found by Petri in cultures of the bacillus of Asiatic cholera.

toxopeptone (tok-sọ̄-pep′tōn), *n.* [*tox(in)* + *peptone.*] **1.** A poisonous albuminous substance of peptone character found in cultures of the cholera bacillus.—**2.** Same as *peptotoxin*.

toxophil (tok′sọ̄-fil), *a.* [*tox(in)* + Gr. φιλεῖν, love.] Having an affinity for a toxin. *Vaughan and Novy*, Cellular Toxins, p. 182.

toxophilous (tok-sof′i-lus), *a.* Same as ★*toxophil*.

toxophore (tok′sọ̄-fōr), *a.* [*tox(in)* + Gr. -φορος, < φέρειν, bear.] Toxin-bearing: referring to a special group of the toxin-molecule to which its poisonous properties are due.

The intermediary body, therefore, carries two sets of combining or haptophore groups: one for the cells and the other for the complement (complementophilic group). The complement possesses in addition to such a corresponding haptophore group, another group which exhibits fermentative properties (zymotoxic or *toxophore* group), through the action of which solution of cells takes place.
Jour. Exper. Med., March 17, 1902, p. 282.

toxophoric (tok-sọ̄-for′ik), *a.* [*toxophore* + *-ic.*] Pertaining to that group of the toxin-molecule to which its poisonous properties are due.

In antitoxic neutralization direct union between the toxin and antitoxin occurs; while in bacteriolysis and other forms of cytolysis there is conclusive evidence that, although the intermediary body unites first with the cells, this substance by itself can not bring about injury or solution, but after its union with the cells the substance called 'complement,' normally present in the blood, is capable of being brought into action, whence the injury is inflicted. The action of the complement depends upon its possession of properties designated zymotoxic and *toxophoric*, through the influence of which hæmoglobin is set free from red corpuscles, various organic cells are dissolved, bacteria are disintegrated, and ciliar and flagellar motions are suppressed. *Science*, July 3, 1903, p. 11.

toxophorous (tok-sof′ọ̄-rus), *a.* [*toxophore* + *-ous.*] Same as ★*toxophoric*.

In the molecule of toxin there are at least two chief atom groups — one, the "haptophorous," by which the

> toxin molecule is attached to the cell protoplasm; and the other the "*toxophorous*," which has a ferment-like action on the living molecule, producing a disturbance which results on the toxic symptoms. *Encyc. Brit.*, XXVI. 65.

toxophylaxin (tok sọ-fi-lak′sin), *n.* [*tox*(*in*) + Gr. φύλαξις, defense, + -*in*^{2}.] A defensive proteid in the sense of an antitoxin.

toxosozin (tok-sọ-sō′zin), *n.* [*tox*(*in*) + Gr. σώζειν, save, + -*in*^{2}.] A defensive albuminous substance, in the sense of an antitoxin.

Toxylon (tok′si-lon), *n.* [NL. (Rafinesque, 1818), < Gr. τόξον, a bow, + ξύλον, wood; in allusion to the use of the wood by the American aborigines for bows.] A monotypic genus of trees of the family *Moraceæ*. The species, *T. pomiferum*, is the Osage orange, long known as *Maclura aurentiaca*. See *Maclura*.

toy, *n.* **10.** A domesticated pigeon of small size, bred for certain color-markings. The toys resemble the tumblers in general build and are among pigeons what bantams are among fowl.

tp. An abbreviation of *township*.

T-pipe (tē′pīp), *n.* See ★*pipe*^{1}.

tr. An abbreviation (*f*) of *transactions*; (*g*) of *treasurer*; (*h*) of the Latin *tribunus*, tribune; (*i*) of *trustee*; (*j*) of the Latin *tinctura*, tincture.

trabacole (tra′ba̤-kōl), *n.* [It. *trabaccolo*, < ML. **trabaculum*, dim. of L. *trabs*, a ship, a beam, a tree, etc.] A ship of moderate size, with two or three masts and squaresails, used on the Adriatic.

trabeculation (tra̤-bek-ụ-lā′shọn), *n.* [*trabecul*(*æ*) + -*ation*.] The formation of trabeculæ in an organ or part. See *trabecula*.

> David C. Hilton discusses the early morphogenesis and histogenesis of the liver in the pig, with notes on the development of the ventral pancreas. The most interesting deviation of the results of this research from those of other investigators concerns the relations of the vascular system in the septum transversum to the *trabeculation* of the glandular structures derived from the primitive "protonic" wall. *Jour. Roy. Micros. Soc.*, Dec., 1904, p. [636.

trabeculopalatine (tra̤-bek″ụ-lọ-pal′a̤-tin), *n.* That portion of the skull of the Devonian cyclostome fish *Palæospondylus* which lies beneath the trabeculæ cranii in the region corresponding more or less closely to the palate in other vertebrate animals.

trace^1, *v. t.* **10.** To mark out upon the ground the lines of a field-work.

trace^1, *n.* **4.** In reporting the results of a chemical analysis, a trace of a particular substance is generally understood to mean enough of such substance to verify the fact of its presence, but not enough to be weighed with the balance in ordinary use.

8. (*b*) The original position or place of a figure after that figure has been supposed to move: thus a circle is the closed line which will slide in its *trace*. (*c*) The intersection of a surface by a given line or surface: as, the *trace* of a line is a point; the *trace* of a surface is a line.—**10.** In *angling*, a short line or a length of gut by which the hook is attached to the reel-line; a snell; a snood; a leader.—**Horizontal trace**, in *descriptive geom.*, a trace on the horizontal plane of projection.—**Vertical trace**, in *descriptive geom.*, a trace on the vertical plane of projection.

tracer, *n.* (*f*) In *ordnance*, an attachment to a projectile for use at night, provided with a burning composition by means of which, when the projectile is fired from a gun, its path through the air is rendered visible.

tracery, *n.*—**Geometric tracery**, the geometrical patterns employed in decoration: the most striking peculiarity of Mohammedan or Saracenic art.

trachea^1, *n.*—**Book-leaf trachea**, the respiratory sac with leaf-like divisions characteristic of many arachnids.—**Capillary tracheæ**, in *entom.*, the minute tracheal endings or interosculations. *A. S. Packard*, Text-book of Entom., p. 655.

Tracheal sac. See ★*sac*^{2}.—**Tracheal commissure**, a tube uniting the main branches of the trachea.—**Tracheal tugging**, rhythmical downward movement of the laryngeal prominence in the neck, synchronous with the cardiac contraction, sometimes noted in aneurism of the arch of the aorta.—**Tracheal twig**, one of the smaller branches of the trachea.

trachelhematoma (trā-kel-hem-a̤-tō′mạ̈), *n.*; pl. *trachelhematomata* (-ma̤-tạ̈). [NL., < Gr. τράχηλος, neck, + NL. *hematoma*.] A blood-cyst in the neck.

trachelian (tra̤-kē′li-a̤n), *a.* [Gr. τράχηλος, neck, + -*ian*.] Same as *cervical*.

trachelitis (trā-kẹ-lī′tis), *n.* [Gr. τράχηλος, neck, + -*itis*.] Same as *cervicitis*.

trachelocyllosis (tra̤-kē″lō-si-lō′sis), *n.* [NL., < Gr. τράχηλος, neck, + κύλλωσις, a crooking.] Wryneck.

trachelocyrtosis (tra̤-kē″lō-sėr-tō′sis), *n.* [NL., < Gr. τράχηλος, neck, + κύρτωσις, hump-backed condition.] Same as ★*trachelokyphosis*.

trachelodynia (tra̤-kē-lọ-din′i-ạ̈), *n.* [NL., < Gr. τράχηλος, neck, + ὀδύνη, pain.] Pain in the neck.

trachelokyphosis (tra̤-kē″lō-kī-fō′sis), *n.* [NL., < Gr. τράχηλος, neck, + κύφωσις, humping. See *kyphosis*.] Kyphosis of the cervical spine.

trachelomyitis (tra̤-kē″lō-mī-ī′tis), *n.* [NL., < Gr. τράχηλος, neck, + μῦς (μυ-), muscle.] Inflammation of one or more of the neck muscles.

tracheloplasty (tra̤-kē′lō-plas-ti), *n.* [Gr. τράχηλος, neck, + πλαστός, formed, < πλάσσειν, form, + -*y*^{3}.] Plastic surgery of the neck of the womb.

tracheloschisis (trā-kẹ-los′ki-sis), *n.* [NL., < Gr. τράχηλος, neck, + σχίσις, fissure.] Congenital fissure in the neck.

trachelotomy (trā-kẹ-lot′ọ-mi), *n.* [Gr. τράχηλος, neck, + -τομια, < ταμεῖν, cut.] Amputation of the neck of the womb.

tracheobronchitis (tra̤-kē″ọ-brong-kī′tis), *n.* [NL., < Gr. τραχεῖα, trachea, + βρόγχος, bronchus, + -*itis*.] Inflammation of the mucous membrane of both trachea and bronchi.

tracheolar (tra̤-kē′ọ-lạ̈r), *a.* [*tracheol*(*e*) + -*ar*^{3}.] Of or pertaining to the tracheoles.

> Now that it is proved that the tracheæ do not so end, but merely pass over into the *tracheolar* network, the name "transition cells," as used by Holmgren ('96), is far preferable. *Amer. Nat.*, Feb., 1904, p. 134.

tracheolaryngotomy (tra̤-kē″ọ-lar-ing-got′ọ-mi), *n.* [Gr. τραχεῖα, trachea, + E. *laryngotomy*.] Same as *laryngotracheotomy*.

tracheole (trā′kẹ-ōl), *n.* [NL. *tracheola*, dim. of *trachea*.] One of the delicate ultimate branches of a trachea in insects.

> The term *tracheoles*, which is used elsewhere in insect histology to designate fine tracheal branches not possessing spiral thickening, is preferable to "tracheal capillaries." *Amer. Nat.*, Feb., 1904, p. 134.

tracheophony (trā-kẹ-of′ọ-ni), *n.* [Gr. τραχεῖα, trachea, + φωνή, voice.] The sound of the voice as heard through the stethoscope applied over the trachea.

tracheopyosis (tra̤-kē″ō-pī-ō′sis), *n.* [NL., < Gr. τραχεῖα, trachea, + πύον, pus, + -*osis*.] Suppurative inflammation of the tracheal mucous membrane.

tracheoschisis (trā-kẹ-os′ki-sis), *n.* [NL., < Gr. τραχεῖα, trachea, + σχίσις, fissure.] Congenital fissure in the neck opening into the trachea.

Trachichthyidæ (trak-ik-thī′i-dē), *n. pl.* [NL., < *Trachichthys* (a genus) + -*idæ*.] A family of berycoid fishes of the deep sea.

Trachidermis (trak-i-dėr′mis), *n.* [NL., < Gr. τραχύς, rough, + δέρμα, skin.] A genus of cottoid fishes found in mountain streams of Japan, China, and the Philippines.

Trachinocephalus (trak″i-nọ-sef′a̤-lus), *n.* [NL., < Gr. τραχύς, rough, + κεφαλή, head.] A genus of fishes, of the family *Synodontidæ*, widely distributed in the tropical seas.

Trachinoidea (trak-i-noi′dẹ-ạ̈), *n. pl.* [NL., < *Trachinus* + -*oidea*.] A large group of transitional fishes, some of them of doubtful relationship, showing affinities with the *Percoidea* on the one hand and with the *Batrachoididæ* and *Blennioidea* on the other.

Trachinoidei (trak-i-noi′dẹ-ī), *n. pl.* [NL.] Same as ★*Trachinoidea*.

Trachinops (trak′i-nops), *n.* [NL., < *Trachinus* + Gr. ὤψ, eye.] A genus of serranoid fishes found on the eastern and southern coasts of Australia.

Trachinotinæ (trak-i-nō-tī′nē), *n. pl.* [NL., < *Trachinotus* + -*inæ*.] A subfamily of carangoid fishes including the pampanos.

Trachinotus (trak-i-nō′tus), *n.* Same as *Trachynotus*.

trachiole, *n.* Same as ★*tracheole*.

Trachoma of the vocal bands, an affection of the larynx marked by the appearance of nodular swellings on the vocal cords. Also called *singers' nodes*.

Trachonurus (trak-ọ-nū′rus), *n.* [NL., irreg. < Gr. τραχύς, rough, + οὐρά, tail.] A genus of deep-water fishes of the family *Macrouridæ*.

trachorheite (trā-kọ-rē′īt), *n.* [Gr. τραχύς, rough (see *trachyte*), + ῥοία, flow, + -*ite*^{2}.] In *petrog.*, a name proposed by Endlich (1873) as a collective designation for the igneous rocks propylite, andesite, trachyte, and rhyolite.

trachy-. [*trachyte*.] In *petrog.*, a prefix used with the name of a rock to form the name of an intermediate variety between trachyte and the rock named: as, *trachy*andesite, a lava intermediate in composition between trachyte and andesite; *trachy*dolerite, a lava between trachyte and basalt, or having minerals characteristic of both rocks, basic plagioclase, orthoclase, pyroxene, and olivin. *Trachy*rhyolite is a lava intermediate between trachyte and rhyolite.

trachyacanthid (trak″i-a̤-kan′thid), *n.* [Gr. τραχύς, rough, + ἄκανθα, thorn, + -*id*.] A hypothetical stage, in the phylogeny of the fishes, in which the dentition was plate-like and permanent and the dermal armor was gradually becoming reduced in transition from the plated Paleozoic fishes to the shagreen-coated sharks. Trachyacanthids have also been supposed to occupy a position intermediate between sharks and chimæroids.

trachyandesite (trak-i-an′dẹ-zīt), *n.* Effusive rocks intermediate between trachytes and andesites. Used by H. S. Washington for trachytes which have also much acidic plagioclase (andesin to oligoclase). *Jour. of Geol.*, V. 351.

Trachyceras (tra̤-kis′e̤-ras), *n.* [NL., < Gr. τραχύς, rough, + κέρας, horn.] A genus of discocampylous ammonoid cephalopods with involute shells having tuberculated surfaces: found in the Triassic rocks of Europe.

trachychromatic (trak″i-krọ-mat′ik), *a.* [Gr. τραχύς, rough, + χρῶμα(τ-), color, + -*ic*.] Strongly staining: originally applied to certain myelocytes occurring in the bone-marrow, the nucleus of which stains well with basic dyes, in contradistinction to the nucleus of another type which stains feebly and is hence said to be *amblychromatic*.

trachydolerite (trak-i-dol′e̤-rīt), *n.* A name suggested by Abich for a group of rocks intermediate between the trachytes and basalts. H. S. Washington uses the word to mean a trachyte with considerable basic plagioclase (labradorite to anorthite). *Jour. of Geol.*, V. 351.

Trachypoma (trak-i-pō′mạ̈), *n.* [NL., < Gr. τραχύς, rough, + πῶμα, lid.] A genus of serranoid fishes inhabiting the South Pacific.

Trachypora (tra̤-kip′ọ-rạ̈), *n.* [NL., < Gr. τραχύς, rough, + πόρος, pore.] A genus of favositid corals growing in dendroid colonies with cylindrical stems, represented by numerous species in the Devonian formations.

Trachyrinchinæ (trak″i-ring-kī′nē), *n. pl.* [NL., < *Trachyrinc*(*h*)*us* + -*inæ*.] A subfamily of macruridoid fishes.

Trachyrincus (trak-i-ring′kus), *n.* [NL., prop. **Trachy*(*r*)*rhynchus*, < Gr. τραχύς, rough, + ῥύγχος, snout.] A genus of deep-sea fishes of the family *Macruridæ*.

trachyte, *n.*—**Acmite-trachyte**, in *petrog.*, a kind of trachyte characterized by the soda-bearing pyroxene acmite. The rock is rich in soda and its dominant feldspar is anorthoclase, a soda feldspar. It is closely related to phonolite.

Trachytic andesite. See ★*asperite*.—**Trachytic texture**, rock texture characterized by abundance of tabular alkali feldspars, with or without parallel arrangement (flow-structure).

tracing-slate (trā′sing-slāt), *n.* Same as *transparent* ★*slate*.

track^2, *n.*—**Decauville track**, a portable railway much used in France for the contractors' light trains of cars which convey dirt and rock from excavations on railways, canals, etc. Named from the French manufacturer who designed and built the cars and track.—**On track**, in transit, as cattle or grain in cars.—**To take the back track**, to return; retrace one's steps.—**Tracks of approach**, in a railroad terminal yard, the switches, cross-overs, and ladder-tracks used to connect the line-tracks with the waiting-tracks of the train-shed. They form a fan-shaped system of tracks in front of the station and are used to distribute the incoming traffic and concentrate the outgoing traffic.

track^2, *v.* **II.** *intrans.* **1.** To follow a track, or to proceed along a certain definite route.

> The effused blood had *tracked* down between the coats of the œsophagus into the wall of the stomach where it had burst through the mucous membrane into the cavity of the stomach. *Lancet*, April 18, 1903, p. 1102.

2. To tow.

> Following the advice of Mr. Moberly, of the Hudson Bay Company's service, I "*tracked* up the McLeod river," and thence westward into the mountains some way to the south of "Jasper's House."
>
> *Geog. Jour.* (R. G. S.), XIII. 547.

trackable (trak′a̤-bl), *a.* Admitting of tracking or towing. *Stand. Dict.* [Rare.]

> A single whale-line will sometimes force the brig into a barely perceptible crevice, enlarging it into a '*trackable*' canal. *Kane*, in U. S. Grinnell Exped., p. 88.

trackage, *n.*—**Trackage contract**, an agreement between two railroad companies by which one has the use of tracks belonging to the other.

track-athletics (trak'ath-let″iks), *n.* Athletics conducted on a track, as running, hurdling, walking, and bicycling. Sometimes used in an enlarged sense to include jumping, shot- and hammer-throwing, pole-vaulting, etc.

track-brake (trak'brāk), *n.* A brake which is arranged to rub on the track of a railroad to stop the train instead of being applied to the wheels, as is commonly done; specifically, an automatic device for stopping a car at a fixed point on a road, independently of the car-brake. It consists of two short sections of rails, curved at each end, resting on slide-rails on the ties and held by springs against the inside of each track-rail. The flanges of a car entering the brake press the spring-rails back until the pressure of the springs overcomes the momentum of the car and causes it to slow up or to stop. Used on industrial ★railways (which see). *Science Abstracts,* VI., sec. B, p. 57.

track-channeler (trak'chan″el-ėr), *n.* A channeler mounted on a car or truck which runs on a track.

track-chisel (trak'chiz″el), *n.* A track-layers' hammer which has a peen in the form of a flat or double-faced chisel.

tracker^{1}, *n.*—**Tracker action,** in *organ-building.* See *action,* 11 (*b*).

tracker^{2}, *n.* **3.** One who finds or shows a track or path; a guide.

> Abdulla, our taciturn Midgan guide and *tracker,* points across a long dull-red depression, evidently in better times of rain a water-pan. *Geog. Jour.* (R. G. S.), XI. 41.

Black tracker. See ★*black.*

track-leveler (trak'lev″el-ėr), *n.* In *railroading,* a double-share plowing-car for leveling and crowning the top of a newly filled track. It consists of a flat car to the sides of which are hinged broad wings or shares, that can be raised and lowered by means of chains suspended from a frame erected on top of the car and operated by compressed air. When not in use the shares are folded back against the car and raised above the track. When gravel or other road material has been dumped along the road, the shares are lowered and securely braced. The leveler is then drawn along by a locomotive, sweeping the gravel away on each side and leaving the road slightly crowned and in a finished condition. The leveler, when in use, is weighted by filling tanks on the car with water.

track-scraper (trak'skrā″pėr), *n.* See ★*snow-plow.*

tract^{1}, *n.*—**Frontopontine tract,** a tract of fibers which originates in the pons Varolii and passes anteriorly to form a portion of the crus or peduncle of the cerebrum. *Philos. Trans. Roy. Soc.* (London), 1898, ser. B, p. 38.—**Loewenthal's tract.** Same as *Marchi's* ★*tract.*—**Marchi's tract,** the motor (descending anterolateral) tract in the spinal cord.—**Optic tract.** (*b*) That portion of an insect's brain directly connected with the eyes.—**Urinary tract.** Same as *urinary* ★*passages.*

traction, *n.* **6.** In recent use, traffic by means of railroads; railroads, and especially street-railroads, collectively; the interests and rights represented by such railroads. [Colloq.]

> Any effort to block the building of subways by private capital will simply be playing into the hands of the present *traction* syndicate, which desires that no further or additional independent subway facilities be permitted to compete with its present monopoly.
> *N. Y. Evening Post,* Jan. 7, 1909.

Pneumatic traction, the use of compressed air as a motive power. See the extract.

> With a more extensive use of compressed air for power purposes has come a corresponding broadening of the scope of its employment as a transportation agent, and indeed it has been conclusively proven that *pneumatic traction* has decided advantages over all other forms of mechanical haulage for a large variety of operations.
> *Sci. Amer.,* Dec. 13, 1902, p. 408.

Tangential traction, a proposed system of electric traction in which power is continuously applied by the inductive action of a set of stationary windings extending at intervals the entire length of the road, between the rails, upon a moving part corresponding to the rotor of an alternating-current machine. This moving part of the system is called the 'propeller' and to it the car is attached. A three-phase current in the stationary coils creates a moving magnetic field in the direction in which the car is to travel and the propeller is thus drawn along. *Elect. World and Engin.,* Sept. 26, 1903, p. 530.—**Traction diverticulum.** See ★*diverticulum.*—**Traction increaser,** in locomotives, a system of levers used to transfer a part of the weight of the engine from the trailing truck, under the cab and fire-box, to the driving-wheels; it is under the control of the engineer and is operated by compressed air: used to secure better adhesion to the rails in starting heavy trains and upon steep grades.—**Traction of adhesion.** Same as *friction of rolling.*

traction-engine, *n.* **1.** It is usually steam-driven, the boiler, of locomotive type, forming the frame in part, and supporting the engine and transmission machinery. To give adhesion and adequate support upon the softer ground, and to diminish injury to the road-surfaces, the tires are made very wide. The front axle is made to serve as means of steering by a wheel. It differs from a railway locomotive in being lighter and capable only of low speeds. Usually the load to be hauled is placed in several wagon-bodies on their own wheels, the whole forming a train. It is used in hauling logs, mineral, and similar heavy masses.

2. A semi-portable stationary engine, capable of motion on its own wheels, when self-propelled from place to place, and used for hauling plows in gangs across a field. The plows are attached to a frame by steel ropes which are led by pulleys to a drum or windlass driven by the tractor, doing the work of many horses or oxen, and in much less time.—**3.** A locomobile engine, capable of running on highways or on the ground and dragging behind it the plant or machinery for threshing grain. When the desired point is reached, the threshing plant is set up, and the engine in the tractor is used to drive the thresher by means of belting. Sawmills of small size can be used instead of a thresher.

traction-load (trak'shon-lōd), *n.* **1.** The weight of the locomotive engine which presses vertically downward upon the driving-wheels. Such weight causes adhesion of the smooth tire of the wheel to the top smooth surface of the rail, or by the friction of such contact resists the tendency of the drivers to slip when the effort of the steam is applied to revolve the wheel in either direction.

2. The similar weight of the motor vehicle which presses the tire of the driving-wheels upon the ground. When this is too small, the wheel slips.

traction-splint (trak'shon-splint), *n.* In *surg.,* a splint provided with an attachment for pulling upon the limb.

Tractive force, power. See ★*force*^{1}, ★*power.*

tractor, *n.* **2.** A traction-engine for use on streets and highways. Such tractors may be used to drag loaded vehicles, to drag plows in a gang, or to haul artillery-wagons and field-pieces.

> Hancock seems to have made considerable advance in the construction of boilers and engines suitable for vehicles, a number of which were built extending over the time from 1830 to 1840, carriages, omnibuses and *tractors* being seen on the roads about London.
> *Hiscox,* Horseless Vehicles, p. 41.

3. The frame and steel rope by which a gang of plows is drawn across a field by a traction-engine.

trade^{1}, *n.* **13.** Commodities designed for use in trading.

> The mountaineers carried no clubs, but had spears and some tomahawks and half-axes which formed part of the *trade* forsaken by Anthony's expedition.
> *Geog. Jour.* (R. G. S.), XVI. 284.

Board of Trade unit. See ★*unit.*—**Bureau of Trade Relations.** See ★*bureau.*—**Open trade,** a trade which does not prescribe such rules of apprenticeship, fees, or other conditions of admission of members as would give to its present members a quasi-monopoly of their field of employment. *Webb,* Indust. Democracy, II. 474.—**Régie trade.** See ★*régie.*—**Restraint of trade.** See ★*restraint.*—**Silent trade.** See the extract.

> In an interesting chapter devoted to early trade, the "*silent trade*" mentioned by the old writers is discussed, and accounted for—in West Africa—by the influence of fetish. . . . Many other accounts of dumb trading might have been added to Miss Kingsley's list, *e.g.* of the old writers, those of Pliny, Cosmas Indicopleustes, the Periplus of the Erythæan sea, Ibn Batuta, and John de Marignolli. The earliest intercourse of the Russians with the Chukches is said to have been carried on in this fashion, while in modern times the Poliars of the Pulney hills are said to adopt the practice. The modern form seen by Miss Kingsley in West Africa is also mentioned by Mr. Millson (*Proc. R. G. S.,* n.s. xiii. 582).
> *Geog. Jour.* (R. G. S.), XIII. 420.

Trade board. See ★*board.*

trade-cumulus (trād'kū″mū-lus), *n.* The small cumulus of the trade-wind region during the daytime, rarely developing any rain. See *trade-wind.*

trade-fixture (trād'fiks-tūr), *n.* Anything that a tenant, for the pursuit of the trade or business for which he has leased property, has attached to the property, as shelving, machinery, or an engine-house. Such things may be removed at the tenant's option, and belong to him.

trade-school (trād'sköl), *n.* A school in which instruction in one or more trades is given.

trades-waste (trādz'wāst), *n.* Factory refuse; waste materials incidentally produced in the course of industrial processes. The utilization of such materials whenever possible, and in any case the avoidance of danger to public health or comfort arising from them, constitute important problems of modern civilized life.

> The bare fact that in the majority of cases *trades waste* is likely to be strongly acid or strongly alkaline, or, worse still, charged with chemicals of an antiseptic character, has deterred many from even entertaining the idea of resort to bacterial methods of treatment in connection therewith. *Sci. Amer. Sup.,* Feb. 28, 1903, p. 22713.

trading-stamp (trā'ding-stamp), *n.* A small coupon or certificate used in a commercial scheme for increasing retail sales. The usual method is as follows: A number of merchants agree with the publisher of a subscribers' directory that on his printing their names therein and circulating an agreed number of copies they will buy of him a quantity of trading-stamps which they give to their customers as premiums with purchases. The customers paste a certain number of stamps in the directories and may then exchange the latter for certain articles stocked by the publisher. The scheme has been adjudged to be a gambling device and illegal.

traffic-taker (traf'ik-tā″kėr), *n.* An official of a railway, or other concern engaged in the business of transportation, who compiles traffic-returns (which see).

trag. An abbreviation of *tragedy* or *tragic.*

tragelaph (trạ-jel'af), *n.* [NL. *Tragelaph*(*us*).] A member of the tragelaphine section of antelopes, comprising the nilgaus and kudus. *Sir Harry Johnston,* The Nile Quest, p. 5. [Rare.]

tragophony (trā-gof'ọ-ni), *n.* [Gr. *τράγος,* goat, + *φωνή,* voice.] Same as *ægophony.*

trah (trä), *n.* [Malay *trā, terā,* a stamp, seal.] A tin coin of the Malay Peninsula.

trahira (trä-hē'rä), *n.* [S. Amer. (?).] A common name of *Macrodon microlepis,* a fish of the family *Erythrinidæ* found in fresh waters from Panama to Ecuador.

trail^{1}, *n.* **6.** A local term in southern England for confused deposits of glacial debris resting upon soft sands, clays, etc., which latter have been crumpled and squeezed by ice-pressure. *O. Fisher,* in Quart. Jour. Geol. Soc., XXII. 533.—**Warp and trail,** unsorted glacial or related deposits containing human implements and resting upon a preglacial surface in southern England called the 'Palæolithic floor.' See ★*trail*^{1}, 6. *J. Geikie,* The Great Ice Age, p. 639.

trail^{1}, *v.* **I.** *trans.* **7.** To fasten (as wagons) one behind the other so as to form a train. [Western U. S.]

II. *intrans.* **7.** In *casino,* to play a card which neither builds nor takes in anything.

trail-bar (trāl'bär), *n.* A wooden bar by which the trail of a howitzer carriage is turned and the piece pointed.

trailer, *n.* **1.** (*d*) A dog that follows or tracks by scent.

> They [bloodhounds] are not at all superior to the fox-hound as *trailers.*
> *Forest and Stream,* Jan. 24, 1903, p. 74.

4. *pl.* Several logging-sleds hitched one behind another and pulled by from 4 to 8 horses, driven by one man, thus saving teamsters' wages.

trailing-switch (trā'ling-swich), *n.* See ★*switch.*

trailing-weight (trā'ling-wāt), *n.* **1.** That part of the weight of a locomotive engine which is supported upon the pair of wheels which are behind the main driving-wheels, or which trail behind them when the engine moves forward. Such weight does not increase the tractive power of the engine since the wheels are not drivers but are only present to steady the engine and eliminate a tendency to see-saw around the axis through the center of gravity.

2. That part of the weight of the locomotive engine which rests upon the rear pair of driving-wheels. [Rare.]

trail-lever (trāl'lev″ėr), *n.* A trailing lever hinged to the spindle-carriage of a spinning-mule. *Nasmith,* Cotton Spinning, p. 270.

trail-rope (trāl'rōp), *n.* Same as *prolonge.*

trail-spade (trāl'spād), *n.* A projection at the lower end of the trail of a field-artillery carriage. See ★*spade*^{1}, 5.

> The carriage . . . upon which the barrel is mounted, permits of checking the recoil without undue strain on the parts, through a *trail-spade* provided with an elastic joint. *Sci. Amer.,* May 21, 1904, p. 402.

train^{1}, *n.*—**Armored train,** a locomotive and cars covered with armor of sufficient thickness to keep out small-arms and shrapnel bullets: of occasional use in military operations for moving troops on a railway in the presence of an active enemy.—**Corridor train.** See ★*corridor.*—**Gravel trains,** elongated bodies of glacial gravel, running parallel with the rivers of southeastern Ohio, but south of the limit of the continental glacier. They have been brought from the terminal moraines by torrential currents and have been incised and eroded by later stream developments.

> As the basin lies entirely beyond the glaciated area, there are within it no deposits directly attributable to the action of land ice. The glacial deposits consist of two classes; first, the *gravel trains,* which extend throughout the valleys of the through-flowing streams.
> *W. G. Tight,* in U. S. Geol. Surv., Prof. Paper 13, p. 90.

Incident train, the sound that produces an echo, as distinguished from the echo itself.

> In some cases of echo, when the original sound is a compound musical note, the octave of the fundamental tone is reflected much more strongly than that tone itself. . . . Hence the octave, though comparatively feeble in the *incident train,* may predominate in the scattered reflection constituting the echo. *Encyc. Brit.,* XXV. 49.

Long train, a train that runs a long distance: opposed to *short train,* which runs only a short distance.—**Optical train,** the system of lenses, prisms, or other devices employed in an optical instrument.—**Three-high train,** in a rolling-mill, three rolls arranged one above another in the same housing. The rolls revolve continuously in one direction, and the piece passes first through under the middle roll and then back above the same roll. This saves time over the two-high train, in which either the rolls must be reversed after each passage of the piece or else the piece is passed between the rolls and then handed back for another pass in the same direction.—**Train de luxe,** a railway-train with luxurious fittings; a 'limited train, that is, one in which the number of passengers is limited and the fare may be higher than on ordinary trains.—**Two-high train.** See *three-high* ★*train.*

train-brake (trān'brāk), *n.* See ★*air-brake, continuous brake, vacuum-brake.*

train-despatcher (trān'des-pach″ėr), *n.* In *railroading,* the officer in immediate charge of the running of trains on a railroad. His duty is to maintain an office in telegraphic communication with every station of the division over which he has control. In this office, usually placed at one end of a division, he receives, day and night, reports of the departure, arrival, or passing of every train at every station of the division. These reports, as fast as received, are entered upon a time-sheet or train-sheet, which, when filled for the day, presents a complete record of the progress of each and every train making a trip during that day. Under normal conditions, when all trains are on schedule time, the train-despatcher has a general oversight of the progress of all the trains. When a train stops by reason of an accident to the train or any obstruction on the line, he assumes immediate control by telegraph of all trains approaching the point where the delay has occurred. With the train-sheet before him he is enabled so to order the movements of all the trains that the delay will be as brief as possible. He can side-track or delay locals or freight-trains to allow express and fast-freight trains to pass, can use any track at will for miles up and down the line, can divert traffic to a loop or to a connecting road, and can, when the obstruction is removed, set all trains again in motion and restore the traffic to its normal conditions, all these exceptional movements of trains being recorded on the train-sheet as fast as made. See ★*train-sheet.*

trainer, *n.* 5. *Naval,* a member of a gun's crew or turret crew whose duty it is to keep his gun, or the axis of the turret, in lateral train exactly on the target. Also called *training-pointer.* In modern practice the tendency is to have two persons engaged in keeping the gun on the target, the *training-pointer* and the *firing-pointer.* See ★*gun-pointer.*

> The turrets are trained by one man, the *trainer;* and each gun is pointed by another man, the pointer, who fires the gun. *Sci. Amer.*, June 18, 1904, p. 475.

training-college (trā'ning-kol″ej), *n.* A normal school: a training-school. [Eng.]

training-gear (trā'ning-gēr), *n.* The combination of cranks, shafts, pinions, racks, etc., by means of which a large cannon with its carriage may be pointed in direction.

training-school, *n.*—**Manual training-school.** See ★*manual.*

train-oil, *n.*—**Doegling train-oil.** Same as *doegling* ★*oil.*

train-pipe (trān'pīp), *n.* In a continuous train-brake or power brake for railway-trains, the pipe which connects the source of power or stored energy on the locomotive with the brake elements under each car. In the air-brake it is the pipe connecting the compressing air-pump on the locomotive with the storage air-tanks under each car, by means of which the engineman in the locomotive sets and releases the brakes by causing variations of pressure in the pipe and on the face of the piston in the triple valve on each car. Now called *brake-pipe.* See *triple* ★*valve.*

train-robber (trān'rob-ėr), *n.* One who robs a railway-train.

train-shed (trān'shed), *n.* A protection for a platform, or for several platforms, at which passenger-trains stop, consisting of a roof supported by posts; an open structure in which trains stop, or from which they start, as distinguished from the more completely inclosed station or depot. [U. S.]

> "Now, don't over-eat," warned Ernestine Penwell, as she said good-bye to her husband in the *train-shed* at Chicago. "You know, dear, how careful you have to be." *The Reader*, May, 1904, p. 646.

train-sheet (trān'shēt), *n.* In *railroading,* a printed sheet of paper on which are recorded the movements of trains: used for the guidance and convenience of the train-despatcher. The sheet is ruled in horizontal and vertical lines, the spaces between the horizontal lines representing the stations along the lines and the spaces between the vertical lines being devoted to the records of the movements of trains, one space to each train. The names of the stations are printed on the sheet, and the number of each train and the name of the engineer are written in at the top of the space assigned to that train. When the time (usually eight hours) which the sheet is designed to cover begins, the sheet is spread before the telegraph operator in the train-despatcher's office, and the operator enters upon the sheet the departure and time of passing of every station as fast as received by wire from the stations along the line. When finished the sheet presents a graphic statement of the progress of each and every train in motion during the time represented. When, for any reason, a train is stopped and the traffic thrown into confusion, the train-sheet becomes of great value in enabling the train-despatcher to restore the traffic to its normal conditions with the least possible delay.

train-signal (trān'sig″nal), *n.* A method of signaling from the cars of a train to the engine by means of a small pipe under each car which is connected by hose with the engine and the other cars. In the engine is a connection, through a pipe and reducing-valve, with the compressed-air reservoir of the air-brake system which supplies air to the signal-pipes. In each car is a valve controlled by a lever to which is attached a short cord. When the cord is pulled, a discharge-pipe on the outside of the car (under the hood) shows that the signal has operated and at the same time a whistle is blown in the engine-cab. If the train breaks or any injury is done to the signal-pipes or hose, the whistle sounds.

train-wrecker (trān'rek″ėr), *n.* One who wrecks or destroys a railroad train, by placing obstructions on the track or by other means, for the purpose of robbing it, or from some other criminal motive.

Trajanic (trā-jan'ik), *a.* Of or relating to the Roman emperor Trajan or to the style of art characteristic of his reign.

> The *extispicium* scene probably represents the nuncupatio votorum before Trajan set out on his Dacian campaign, and is *Trajanic* in style. *Athenæum*, Jan. 27, 1906, p. 113.

traject, *n.* 4. A projected alinement or course for a railway or other line of transportation.

> As to the new Bagdad line, two different *trajects* were proposed. The first, which was explored and recommended by Major Von Moltke, started from Angora, passed by Sivas, Diar-Bekir, and followed the valley of the Tigris to Bagdad and Bassorah. *Sci. Amer. Sup.*, March 5, 1904, p. 23553.

tram^1, *n.* 9. See ★*tramway,* 2.

tram^3 (tram), *v.* [*tram(mel).* See *tram*^{3}, *n.*] To use a trammel or distance gage in order to get two shafts, or other axes, parallel to one another, or at right angles to another axis to which both are to be perpendicular. Used of railway axles or those of locomotive drivers; of a millstone spindle in relation to the plane in which the stone or mill is to revolve; and of the shafts of engines relatively to the bed-plate, etc.

tram^4, *n.*—**Milanese tram,** the poorer quality of silk raised about Milan in northern Italy, suitable only for tram or weft.

tram-crane (tram'krān), *n.* A crane mounted on a car and running upon rails. (See *railway-*★*crane.*) When such a crane is driven by its own motor it has been called an *automotor crane.* When the motor is driven by gasolene or some derivative of petroleum it has been called a *petro-automotor crane.*

tram-horse (tram'hôrs), *n.* A horse suitable for drawing a street-car; a trammer.

trammer (tram'ėr), *n.* [*tram*^{1}, *v.*, + *-er.*] A tram-horse; a horse suitable for drawing a street-car. [Colloq.]

> *Trammers* are very little different from bussers except that they are rather plainer, an inch or two smaller in size and correspondingly lighter, but they should have as much weight as possible for their height. They are used on the tramways of European cities. *U. S. Dept. Agr.*, Bur. Animal Industry, Bulletin 37, 1902, [p. 21.

tramp, *v.* I. *trans.* 4. To run (a tramp steamer), taking on merchandise at one port and selling it wherever possible or carrying freight anywhere desired. [Colloq.]

> Dear Captain Kettle,—
> Having noted from your cables and reports you are making a good thing for us out of *tramping* the Parakeet. *Cutcliffe Hyne*, A Master of Fortune, x.

II. *intrans.* 3. To sail on a tramp steamer. [Colloq.]

> It flashed through his mind that it was she who had ordered those grisly heads to be stuck above the water-gate, and he heartily wished himself away back on the steamer, *tramping* for cargo. *Cutcliffe Hyne*, A Master of Fortune, viii.

Trampan (tram'pan), *n.* [Las *Trampas* creek, Cal.] In *geol.*, a stage of the Lower Berkeleyan series of late Tertiary strata in the Coast ranges of California. The name was suggested by A. C. Lawson, and was applied to 2000 feet of marine shales, sandstones, and pebbly conglomerates.

tramper, *n.* 4. A device, in a cotton-baling press, for compacting cotton to the desired density for baling.

tramping-card (tram'ping-kärd), *n.* A certificate entitling a member of a trade-organization to maintenance while traveling in search of work.

> It [Mutual Insurance] includes also what are often termed "trade" benefits; grants for replacing tools lost by theft or fire, and "out-of-work pay," from the old-fashioned "*tramping card*" to the modern "donation" given when a member loses his employment by the breakdown of machinery. *Webb*, Indust. Democracy, I. 153.

tramping-machine (tram'ping-ma̤-shēn″), *n.* An apparatus, similar in construction to a fulling-stock, for rendering pelts of sheep and goats soft and pliable.

> Tubbing is gradually giving way in a greater or less extent to the "*tramping machine,*" whenever anything less than the very best work will suffice. This machine is adapted from the French apparatus for fulling wool stock. It consists of two wooden hammers, which are moved alternately back and forth or up and down in a suitable receptacle, agitating the skins slowly and constantly, turning them over and over each other, and developing by friction the necessary heat, thus rendering the pelts soft and pliable. *Sci. Amer. Sup.*, Feb. 27, 1904, p. 23534.

trampous, trampoose (tram'pus, tram-pös'), *n.* [*trampous, v.*, which see.] A tramp; a long walk.

> I was with him in one of his *trampooses*, and the youngster was risky enough, for he brought us so near the enemy that rifles began to talk. *Cooper*, Pathfinder, viii.

tram-rail (tram'rāl), *n.* 1. A special form of rail, suitable for laying in streets for street railways. The vertical depth is considerable so that in paved streets the stones may be laid above the plane of the cross-stringers or ties. On macadam thoroughfares the depth of the rail is greater than the thickness of the road material. The bearing surface for the wheels is on the top of the upper chord or flange.
2. A rail suspended in a shop, factory, or warehouse on which a trolley or truck may run, so that loads suspended from the trolley may easily be transported from one part of the building to another in the same plane.

tramway, *n.* 2. A light or temporary railroad, as for the transportation of logs, often with wooden rails and operated by horse-power.—3. A gutter attached to a pool-table, designed to save time in gathering the dead or pocketed balls. It is now, in improved form, attached to the under side of tables used in other pocket games. *W. Broadfoot*, Billiards, p. 323. [Eng.]—**Aërial tramway,** a cableway.

trance-coma (trȧns'kō″mä̤), *n.* A comatose condition induced by hypnosis.

trance-speech (trȧns'spēch), *n.* The utterances of a 'medium' during hypnosis or other trance-state: supposed by some to show evidence of supernormal knowledge, to predict the future, etc.

> Post-hypnotic suggestion, crystal-gazing, automatic writing and *trance-speech*, the willing-game, etc., are now . . . instruments of research. *W. James*, in Proc. Soc. Psychical Research, May, [1901, p. 17.

trans-. 2. A combining-form used, in organic chemistry, to indicate that two radicals are on opposite sides of the plane of union of two carbon atoms, or on opposite sides of the plane of the ring in a cyclic compound. It is, therefore, complementary to *cis-*. Thus maleic acid is a cis-derivative,  $\begin{array}{c}\text{HCCOOH}\\ \| \\ \text{HCCOOH}\end{array}$, and fumaric acid a trans-compound,  $\begin{array}{c}\text{HCCOOH}\\ \| \\ \text{HOOCCH}\end{array}$.

> This case is more complicated, as a '*cis*' and '*trans* isomerism of cyclic compounds is involved as well as the optical difference. *Science*, Oct. 14, 1904, p. 406.

transaccidentation (trȧns-ak″si-den-tā'sho̤n), *n.* The notion that in the sacrament the accidents of the bread and wine are transmuted into the accidents of the body and blood of Christ: an idea widely held by ignorant persons in the middle ages and sometimes confused with the doctrine of transubstantiation. *G. S. Hall*, Adolescence, II. 275.

transafrican (trȧns-af'ri-ka̤n), *a.* [*trans-* + *African.*] Crossing Africa; extending across Africa: as, a "*transafrican* railway." *Geog. Jour.* (R. G. S.), XV. 204.

transbaikalian (trȧns-bī-käl″i-an), *a.* [*trans-* + *Baikalian*, relating to Lake Baikal.] Across or beyond Lake Baikal.

> The *Transbaikalian* branch of the Siberian railway. *Geog. Jour.* (R. G. S.), XVI. 223.

transboard (trȧns-bōrd'), *v. t.* [*trans-* + *board, v. t.*] To transfer directly from one vessel to another.

> No sooner has the "ticker" reported the Campania or other big liner "off Fire Island" than a veteran of the transportation department . . . hastens to the foot of Cortlandt Street and boards the "Postmaster-General," the flag-ship of the post-office fleet. The boat was built for this service, and is equipped with spacious mail-

rooms, chutes for *transboarding* sacks, and other expediting appliances. Steam is up, and she is off down the bay to meet the big steamer. She makes fast to her sides, and the mails are received aboard through the chutes.
Scribner's Mag., July, 1899, p. 69.

transcaspian (trȧns-kas'pi-an), *a.* [*trans-* + *Caspian.*] Across or beyond the Caspian Sea; specifically, east of the Caspian.

transcaucasian (trȧns-kâ-kā'sian), *a.* [*trans-* + *Caucasian.*] Across or beyond the Caucasus Mountains or Caucasia; specifically, [*cap.*] of or pertaining to Transcaucasia, the southern division of the Russian government of the Caucasus.

transcendent, *a.* 5. In *math.*, indefinable by any combination of a finite number of equations with rational integral coefficients.

Such numbers are said to be transcendental. Hermite first completely proved the *transcendent* character of *e*. Lindemann, by a similar method, proved the transcendence of π *Encyc. Brit.*, XXXI. 287.

Transcendental irrational, number. See ★*irrational*, ★*number*.

transcession (trȧn-sesh'ọn), *n.* [L. as of **trancessio*, < **transcedere*, < *trans*, across, + *cedere*, yield.] See the extract.

Transcession . . . is the interchange of lip and throat vowels across the vowel scale, as between U and I in food, feed; O, E, in English snow, German schnee.
S. S. Haldeman, Analyt. Orthog., p. 56.

transcondyloid (trȧns-kon'di-loid), *a.* [*trans-* + *condyloid.*] Across or through the condyles.

[The amputation] of Carden being known as the *transcondyloid* operation. *Buck*, Med. Handbook, I. 263.

transcortical (trȧns-kôr'ti-kạl), *a.* [*trans-* + *cortical.*] Across or through the cortical region of the brain: noting any condition, such as aphasia, caused by a lesion destroying a cross-section of the cerebral cortex. *Buck*, Med. Handbook, I. 410.

transe, *n.* and *v.* An amended and former spelling of *trance*.

transect (trȧn'sekt), *n.* [*transect*(*ion*).] In *phytogeog.*, a cross-section (or representation of one) of the vegetation of a station or larger unit. A *line transect* records the species as they occur along a chosen line. A *belt transect* shows the occurrence and the arrangement of plants in a strip, say one decimeter wide. Either of these may be *permanent*, that is, marked for observation year after year with only the natural change; or *denuded*, that is, cleared of vegetation after charting to observe the invasion of new plants. A *layer transect* is a vertical cut through a layered formation as a forest, showing the species occurring in a line and their height. *F. E. Clements.*

transempirical (trȧns-em-pir'i-kạl), *a.* [*trans-* + *empirical.*] Metempirical; noumenal; transcending human experience.

A conclusion supposed to flow from the intrinsic absurdity of *transempirical* objects.
W. James, in Jour. Philos., Psychol. and Sci. Methods, [Dec. 20, 1906, p. 712.

transequatorial (trȧns"ē-kwạ-tō'ri-ạl), *a.* [*trans-* + *equatorial.*] Across or beyond the equator.

The Southern, Australian, or *trans-equatorial* land of our hemisphere. *Geog. Jour.* (R. G. S.), XV. 381.

transf. An abbreviation of *transferred*.

transfer, *n.* 7. *pl.* In *archery*, sheets upon which the hits, score, and golds of every archer in a shooting-match are copied from the several target-papers after each distance is shot. The transfers are the official record from which the prize-list is made up.—**Collodion transfer.** See ★*collodion.*—**Transfer agent**, one who passes upon the evidence of the transfer of title to stock of a corporation and issues new certificates therefor. This office is usually performed by trust companies.—**Transfer chamber**, a chamber or space where two bodies can exchange certain of their physical properties, as where steam by losing heat can be changed into water, or where air by transfer of its heat to some cooler mass, as of metal cooled by water, can be reduced in volume or pressure by loss of some of its intrinsic energy. *Norris and Morgan*, High-speed Steam Engine, p. 16.—**Transfer tax.** See ★*succession tax.*

transferor, *n.* Same as *transferrer*: common in legal use.

transferring-lathe (trȧns-fėr'ing-lāᴛʜ), *n.* A lathe equipped with a lever or pantograph attachment for guiding the tool in order that a design may be reproduced either larger or smaller than the model.

transferrotype (trȧns-fėr'ẹ-tīp), *n.* [L. *transferre*, transfer, + Gr. τύπος, type.] In *photog.*, a transfer-print obtained from a gelatinobromide emulsion film. *Woodbury*, Encyc. Dict. of Photog., p. 499.

transfer-station (trȧns'fėr-stā"shọn), *n.* A point, either at a station or in the street, where railroad transfer-tickets are given and where passengers are transferred from one line of cars to another.

transfer-table (trȧns'fėr-tā"bl), *n.* 1. In a railroad repair-shop, a long platform-car supported upon wheels placed at a right angle with its length, and running upon rails laid in a sunken pit between the ends of parallel tracks. On it is laid a section of track. It is operated by a small motor, and is used to transfer cars from one track to another or from one shop to another.—2. A platform-car for drilling electric cars. It consists of a flat-car hung between and below two four-wheel trucks, each wheel running on one of four parallel rails that cross all the tracks of a storage-yard or car-barn. On this transfer-table, at a right angle with its travel, is a section of standard track, and at each end are inclined rails held by springs, when not in use, just clear of the yard-tracks. When a car is to be transferred, it is run upon the transfer-table, its wheels pressing the spring-rails down on the track to form an incline up which the car moves until it rests on the table, which can then be moved by its own motor to connect with the yard-tracks.

transfinite (trȧns-fī'nīt), *a.* Beyond the finite.

The next part is necessarily based largely on the work of Cantor. To readers unacquainted with the "Mengenlehre," the introduction of *transfinite* numbers must appear rather startling, but this is perhaps partly due to an unusual weakness in the English language. It must be remembered that by a *transfinite* cardinal number is meant a certain kind of infiniteness of aggregate, the same number belonging to different aggregates which are similar in the preceding sense; and a *transfinite* ordinal number is another name for a type of infinite series, or of generating relation. *Nature*, Sept. 3, 1903, p. 411.

Least transfinite cardinal, in *math.*, the number of finite numbers. This number G. Cantor denotes by the Hebrew aleph with the suffix 0 ($\aleph_0$).—**Transfinite cardinal number.** See ★*number*.

transfix, *v. t.* 2. In *geom.*, to cut by a fixed straight, m, a subject composed of planes, a, β, γ, that is, to construct the passes $m \cdot a$, $m \cdot \beta$, $m \cdot \gamma$.

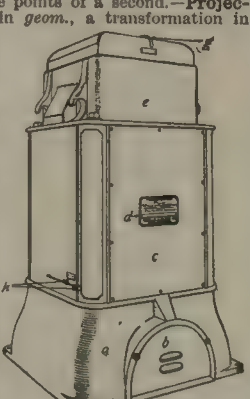
transfluvial (trȧns-flö'vi-ạl), *a.* [*trans-* + *fluvial.*] Across or beyond a stream. [Rare.]

transform (trȧns-fôrm'), *n.* [*transform*, *v.*] In *math.*, the figure or function or operator which results from performing the operation of transformation.

transformation, *n.* 4. (*d*) In *geom.*, an operation which replaces a given figure by a second figure.—10. In *elect.*, change in the voltage of an alternating-current circuit by means of a transformer or other device. *Elect. World and Engin.*, March 28, 1903, p. 533.—**Bilinear transformation.** (*b*) The most general is $w = (az + b) / (cz + d)$. It contains four constants, but only three ratios. We may therefore assume any relation between a, b, c, d. The most suitable one is $ad - bc = 1$.—**Biuniform transformation**, a transformation such that every point must have one transformed point, and only one, and be the transformed point of one point, and of only one.—**Contact transformation.** See ★*contact.*—**Cremona transformation.** (*b*) A birational or one-to-one transformation by which one point of a figure is depicted by one, and only one, point of its transform.—**Double points of a homographic transformation.** See ★*point*1.—**Equations of the transformation.** See ★*equation.*—**Euclidean transformation**, a transformation which replaces a given figure by a congruent or similar figure.—**Isogonal transformation**, orthomorphic transformation.—**Line-sphere transformation**, a transformation which makes a sphere correspond to a straight line, and permits, consequently, the connecting of every proposition relative to straights with a proposition relating to spheres, and vice versa.—**Orthomorphic transformation**, in *math.*, an angle-true transformation; the transformation in conformal depiction.—**Point transformation**, a transformation which replaces the points of one figure by the points of a second.—**Projective transformation**, in *geom.*, a transformation in which corresponding costraight points have the same cross-ratio.—**Ratio of transformation.** See ★*ratio.*

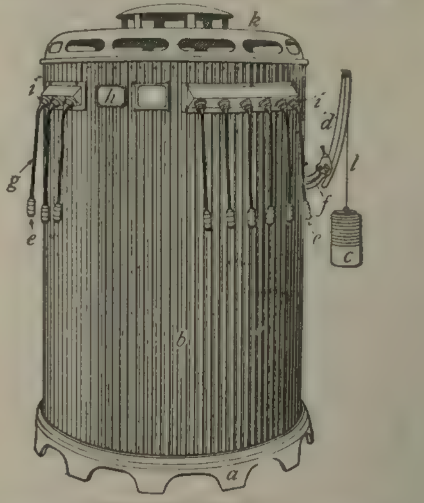
transformation-myth (trȧns-fọr-mā'shọn-mith), *n.* See ★*creation-myth* and ★*myth*.

transformer, *n.*—**Air-blast transformer**, in *elect.*, a transformer cooled by an air-blast.—**Constant-current transformer**, a transformer changing an alternating current of constant or approximately constant voltage into an alternating current of constant intensity, but a voltage varying with the load. It consists of one or two primary coils and one or two secondary coils, which can approach closer to the primary coils, with increasing load, or separate therefrom, and are balanced by a weight acting on a system of levers: used very largely for series arc-lighting.—**Core-transformer**, a transformer in which the coils surround a core of laminated iron, the latter sometimes forming a closed circuit and sometimes consisting of a straight laminated bar, as in the hedgehog transformer, the induction-coil, and other open-circuit transformers.—**Hedgehog-transformer.** See ★*hedgehog-transformer.*—**Impulse transformer**, a type of transformer, designed by Ryan, in which the greater portion of the time-integral of secondary electromotive force is compressed into a very small part of the time of an alternation. A series of sudden electrical impulses are thus obtained which occur at the instant when the primary current passes through zero.—**Leakage current of transformer.** See ★*current*1.—**Multiple transformer.** (*a*) In *elect.*, a transformer the secondary coils of which are so arranged as to supply two or more multiple circuits. (*b*) A transformer designed for use in multiple with other transformers on the same circuit.—**Oil-transformer**, an alternating-current transformer the coils of which are submerged in oil.—**Oscillation transformer**, in *elect.*, a transformer for the production of the electric waves or oscillations employed in wireless telegraphy.—**Phasing-transformer**, in *elect.*, a transformer for shifting the phase of an alternating current.—**Pilot-transformer**, a small portable transformer for determining the voltage at any given point of an alternating-current circuit.—**Polar transformer**, in *elect.*, a transformer the magnetic circuit of which is open and which therefore has poles and an air-space.—**Polyphase transformer**, a transformer with one primary and one secondary coil for each phase of a polyphase circuit.—**Raising transformer.** Same as *step-up* ★*transformer.*—**Rectifying transformer**, a device for converting an alternating current into a direct current; a rectifier.—**Resonance transformer**, in *wireless teleg.*, a transformer of variable frequency used to bring the transmitter and receiver of a wireless system into syntonism. *Elect. World and Engin.*, May 14, 1904, p. 919.—**Rotary transformer**, in *elect.*, a term formerly used for *rotary converter*. See ★*converter*, 3.—**Series-transformer**, one connected in series with the circuit.—**Shell-transformer**, in *elect.*, an alternating-current transformer in which the coils are surrounded by a mass of laminated iron, instead (as in the *core-transformer*) of surrounding a central core of iron.—**Static transformer.** (*a*) A transformer for alternating currents which has no moving parts as distinguished from a rotary transformer. (*b*) A name sometimes given to the dynamostatic machine of Elihu Thomson.—**Step-down transformer**, an alternating-current transformer with more turns in the primary winding than in the secondary, so that the secondary voltage is lower than that of the primary circuit.—**Step-up transformer**, an alternating-current transformer in which the number of turns in the secondary winding is greater than in the primary and the secondary voltage therefore higher than that of the primary circuit.—**Tesla transformer**, a form of induction-coil for the production of alternating currents of very high frequency and high voltage, devised by Nikola Tesla. It consists of a vertical helix of large diameter having only one layer of well insulated wire which constitutes the secondary coil. About this the primary coil, consisting of a few turns of heavier wire, is placed with an intervening air-space between the two coils. No iron core is used. The primary coil is placed in the secondary circuit of an ordinary step-up transformer which has an adjustable spark-gap and condenser in parallel with the Tesla transformer. Under favorable arrangement of the circuits frequencies of many thousands of alternations per second and differences of several hundred thousand volts may be attained in the secondary circuit of the Tesla transformer.—**Three-phase transformer**, a transformer giving in the secondary circuit three alternating currents having a difference of phase of one third of a cycle.—**Tube-transformer**, a small transformer used as a regulator on alternating-current arc-lamps.—**Two-phase transformer**, an alternating-current transformer the secondary windings of which furnish two-phase currents.



Air-blast Transformer.

a, base-casting; *b*, hand-hole cover; *c*, sheet-iron casing; *d*, name-plate; *e*, top-casting; *f*, lifting-lugs; *g*, coil-cooling shaft-indicator; *h*, core-cooling shaft-handle and indicator.



Constant-current Transformer.

a, base-casting; *b*, sheet-iron casing; *c*, counterweight; *d*, adjustable lever arm; *e*, couplings; *f*, secondary leads; *g*, primary leads; *h*, name-plate; *i*, porcelain bushings; *k*, ventilating cover; *l*, counterweight suspending wire.

transformism, *n.* 2. [It. *trasformism.*] In *Italian history*, the parliamentary situation and the financial and administrative policies and methods which marked the premiership of Agostino Depretis (1876–86). See the extract.

Towards 1884 [Minghetti] joined Depretis in creating the parliamentary phenomenon known as "*Transformism*," which consisted in bringing Conservative support to Liberal cabinets. *Encyc. Brit.*, XXX. 761.

transformist, *n.* 2. A supporter of (political) transformism.

II. *a.* Of or pertaining to transformism, in either sense.

A few weeks before his death he repented of his *transformist* policy, and again included Crispi and Zanardelli in his Cabinet. *Encyc. Brit.*, XXVII. 419.

transfrontal, *a.* 2. In *entom.*, across the forehead: as, a *transfrontal* ridge.

transfusion-cell (trȧns-fū′zhọn-sel), *n.* A cell occurring in the endodermis (inner layer of bark) of a root, which retains its thin walls when those of other cells have thickened and permits the passage of water. *Strasburger*, (trans.), Text-book of Bot., p. 115.

transfuze, *v. t.* An amended spelling of *transfuse.*

transgredient (trȧns-grē′di-ẹnt), *a.* [L. *transgrediens* (*-ent-*), ppr. of *transgredi*, step across.] Passing across or beyond; objective. [Rare.]

Pragmatism, thus conceived, is purely individualistic. It yields assurance and individualistic success, but it guarantees no objective or social certainty. Its standards are lacking in the essential character of a standard — *transgredient* reference and verifiability. *Jour. Philos., Psychol. and Sci. Methods*, 1904.

transgression, *n.* 2. In *geol.*, the process which produces overlap. Thus a shore-line, with one series of strata recently formed beneath the neighboring waters, may subside and allow the sea, bringing new sediments, to encroach farther and farther upon the land, away from the old series, and deposit new and overlapping beds by transgression.

The depression in southern Ohio, where the outcrop of the Corniferous limestone and the Corniferous-Hamilton is concealed by the *transgression* of the shale, probably included the arch and allowed its deposition over the edges of some of the older strata. *Amer. Geol.*, Aug., 1903, p. 91.

transilition (trȧn-si-lish′ọn), *n.* [LL. *transilitio*(*n-*), < L. *transilire*, leap over. See *transilient.*] A skipping; a leap from one thing to another. See the extract.

Transilition or over skipping of number by rule and order, as from 1 to 3, 5, 7, and 9 [in a verse]. *T. Watson*, Century of Love, lxxx.

transilluminate (trȧns-i-lū′mi-nāt), *v. t.*; pret. and pp. *transilluminated*, ppr. *transilluminating.* To shine through; illuminate by transmitted light.

A small glow-lamp is held in the closed mouth, in a darkened room, and by a comparison of the shadows on the two sides of the face, thus *trans-illuminated*, an exact diagnosis can often be obtained as to the presence or absence of pus in this central cavity. *Encyc. Brit.*, XXXIII. 85.

transit, *n.* — **Inferior passage** or **transit,** in *astron.*, the passage or transit of a star across the meridian at the point opposite to the point of culmination. In the case of a circumpolar star it is often called *lower culmination* or *transit sub polo.* — **Local transit of the moon,** the passage of the moon across the meridian of the observer. — **Lower transit of the moon,** the passage of the moon across the meridian 180 degrees distant from its upper transit. — **Mine transit,** a surveying instrument for use in mines and so constructed as to permit of sighting at very steep gradients. — **Rapid transit,** quick transportation for passengers in a city and its suburbs: specifically now applied to elevated and subway roads; originally to electric trolleys and other surface methods.

transit, *v. t.* 2. On a surveyors' transit, to turn (the telescope) over so as to make it point in the opposite direction.

Some surveyors prefer not to *transit* the telescope, but to read alternately the true bearing and the true bearing + 180°; the results obtained are the same, but the method is less mechanical than the other. *Encyc. Brit.*, XXXIII. 89.

transitable (trȧn′sit-ạ-bl), *a.* That may be used as a means of transit; that may be passed over or through. [Rare.]

The efforts which have been made to open a *transitable* road to [the valley of the Rio Grande de Terraba] from the north, ever since the time of the Spanish conquest, have proven futile. *Geog. Jour.* (R. G. S.), X. 63.

transite (trȧn′sīt), *n.* [L. *trans*, across, + *-ite*².] A trade-name for a plastic material containing asbestos, intended to replace wood in some of its applications, having the advantage of incombustibility. *Elect. World and Engin.*, Aug. 22, 1903, p. 288.

transiter (trȧn′sit-ėr), *n.* [*transit* + *-er*¹.] A name given by Snyder to his apparatus for making a wire traverse the field of a transit-instrument with a uniform motion adjustable to the speed of a star, keeping the star continually bisected, automatically registering its passage across certain definite points in the field of view, and so eliminating the personal equation of the observer. *Science*, May 2, 1902, p. 693.

Transition form, in *biol.*, a form showing structural characters intermediate between two other forms either in ontogenetic or phylogenetic development. — **Transition point.** Same as *multiple* ★*point.* — **Transition resistance.** (*b*) See ★*resistance.* — **Transition zone.** See *life* ★*zone.*

transitional, *a.* — **Transitional series.** See ★*series.*

II. *n.* In *gram.*, the case expressing direction toward. Also called *terminalis. A. S. Gatschet*, Gram. of the Klamath Lang., p. 484.

transitive, *a.* 3. (*b*) In *Eskimo gram.*, noting the case expressing the subject of a transitive verb and the owner of an object. Also called *subjective. Barnum*, Innuit Language, p. 12. — 5. In *math.*, having the quality or power of transmutation, transmission, or transition: as, a group *transitive* in respect of a set of objects.

If S is any operation of the group, and O any one of the objects, then O. S is an object occurring in the set. If it is possible to find an operation S of the group such that O. S is any assigned one of the set of objects, the group is called *transitive* in respect of this set of objects. When this is not possible the group is called intransitive in respect of the set. *Encyc. Brit.*, XXIX. 121.

transitman (trȧn′sit-mạn), *n.* In *surveying*, one who uses the transit.

transit-micrometer (trȧn′sit-mī-krom″e-tėr), *n.* A filar micrometer with fixed and movable wires placed in the optical focus of the telescope of a transit-instrument. *Science*, July 1, 1904, p. 17.

transit-pass (trȧn′sit-pȧs), *n.* See the extract.

The foreign nations, in order to obviate these difficulties, have arranged with the Chinese Government to permit foreign articles destined for the interior to pay a single tax of two and a half per cent. to the Imperial Maritime Customs and then to receive what is called a '*transit pass*' entitling the goods to pass the interior likin stations without further charge. *Pop. Sci. Mo.*, Dec., 1900, p. 196.

transit-time (trȧn′sit-tīm), *n.* The time when a transit occurs, as of a star over the middle wire of a transit-instrument, or of a spot on the disk of a planet over its central meridian.

But when the disc is outlined with vivid sharpness and the details stand out boldly, as they often do in the comparative absence of atmospheric ebullition, the aspect of the planet seems to have been transformed, and a crowd of interesting features immediately present themselves for examination. On special occasions of this kind, it is possible to take between fifty and a hundred *transit-times* of well-defined marks in the course of a few hours. *Nature*, Feb. 5, 1903, p. 329.

transl. An abbreviation of *translation.*

translate, *v. t.* 12. In *mech.*, to move (a solid body), or to cause (it) to be moved, in such a way that all lines which join different points (of it) are always parallel to the lines which joined these points when it was at rest.

translation, *n.* — **Simple translation,** motion of translation unaccompanied by rotation. — **Translation of light,** in *horary astrol.*, a term used to describe the act of a planet separating from one that is slower than itself and overtaking another, by either conjunction or aspect.

Translucent-disk photometer. See ★*photometer.*

translumination (trȧns″lū-mi-nā′shọn), *n.* [*trans-* + *lumination.*] Same as *transillumination.*

transmarine, *a.* 2. Crossing the sea.

The recent dispatch of a train from Miami, Florida, to Knights Key marks the completion of the greater part of the remarkable *transmarine* railroad which is under construction from the mainland of Florida to Key West. *Sci. Amer.*, Feb. 15, 1908, p. 106.

transmental (trȧns-men′tạl), *a.* and *n.* [*trans-* + *mental*¹.] Independent of, or an existence or reality that is independent of, or apart from, subjective human experience.

Should the reply be that some sort of *transmental* is implied, I would gladly recant, even though Professor James should still insist that the nature of that *transmental* is irrelevant to all human interests. *Jour. Philos., Psychol. and Sci. Methods*, Jan. 17, 1907, [p. 45.

transmissibility, *n.* 2. In *phys.*, transmitting power, specifically for radiation, of a substance or medium; perviousness or diathermancy.

The decrease in the *transmissibility* of the air this year as compared with the last is so marked that some local effect on climate and vegetable growth might seem to be probable. Whether the unusual coolness of the summer, reported both in America and abroad, is connected with it may be a subject for speculation. *S. P. Langley*, in Nature, Nov. 5, 1903, p. 5.

transmission, *n.* 4. The apparatus and mechanism for transmitting (with transformation) the revolutions of the motor-shaft in a motor-car to the driving-wheels. The motor should turn faster than the driving-wheels; it should turn at a uniform speed, while the wheels should have a varying speed; and the motor-shaft must turn in one direction, in internal-combustion motors, while the motion of the car must on occasion be reversed. The transmission may be by shafting and gears and clutches, or by sprocket-wheels and chains. The change of speed may be by a train of gears made variable by sliding one set lengthwise upon a short counter-shaft, so that the ratio of driving to driven gear will be different when different pairs are in gear; or the so-called planetary gear may be used, an epicyclic train or several of them, which go into action when the motion of the supporting casing which carries the rolling gears is constrained by a brake; or a multiplicity of clutches may be employed, with the teeth of the gears constantly in mesh; or a frictional transmission is possible. Reversing of the wheels is effected in an irreversible motor by throwing an additional idle or transmitting wheel into the train. The steam-motors do not require so much transformation mechanism, since they are always reversible and have in themselves a wide flexibility as to speed of the crank-shaft. In large cars, however, it is of advantage to have a high gear and a low gear, the latter for hill-climbing on bad roads and for other cases where high speed of the vehicle is undesirable and yet the power of the motor should not be unduly throttled. In the transmission is also usually included the compensating gear, enabling the two driving-wheels to traverse a different length of roadway, as on curves, without slipping at the contact of wheel and road surface. — **Individual-clutch transmission,** an arrangement of the power-transmission device in motor-cars or other machines whereby a separate clutch is provided for each speed or set of gears. — **Planetary transmission,** a form of gearing for a motor-car, placed between the motor- and the driving-axle, by which varying speed of the latter may be produced from a sensibly constant speed of the motor-shaft. The transmission is made by epicyclic trains of rolling gears of varying ratios, carried each on its own mounting-disk. When the motion of any disk is restrained by applying a brake-pressure to it, this train begins to turn the axle. When the brakes are loose, the train rolls on the pitch-surfaces of the teeth, but no motion of the axle takes place. As all teeth are in mesh at all times, there is no shock or jar in changing speed, and the sliding of the brake in starting any gear precludes sudden shock even in careless hands. The levers must be so designed that it will be impossible to apply the restraining brake to more than one disk at the same time. — **Sliding-gear transmission,** a combination of toothed wheels on parallel shafts, in a motor-car, whereby the motor-shaft may turn at nearly constant speed and cause different speeds for the driving-axle or driving-wheels. This is done by having toothed wheels of differing diameters on one shaft, and on the other complementary gears which may slide lengthwise on the shaft and come in line with the desired wheel on the first shaft. — **Social transmission,** the acquisition, by social animals, of the customs of their kind, through imitation or instruction; social heredity. *J. M. Baldwin*, Development and Evolution, p. 39. — **Transmission efficiency, grating.** See ★*efficiency*, ★*grating.*

transmission-gear (trȧns-mish′ọn-gēr), *n.* In motor-vehicles, the arrangement or device for transmitting the power from the engine or motor to the driving-wheels: sometimes applied specifically to the gears for changing speed. See ★*transmission*, 4.

transmissionist (trȧns-mish′ọn-ist), *n.* and *a.* [*transmission* + *-ist.*] **I.** *n.* One who accepts the doctrine or opinion that the effects of habits, practice, use and disuse, and the direct action of the conditions of life, are transmitted to descendants; a Lamarckian.

II. *a.* Pertaining to or characterizing the doctrine of the transmissionists.

transmissive, *a.* 2. Of or pertaining to transmission; transmitting: as, the *transmissive* power of the atmosphere (for light).

The effect of a slight change in the *transmissive* coefficient of the atmosphere, in altering the equator-poleward temperature-gradient, is very great. *Geog. Jour.* (R. G. S.), XVIII. 522.

transmitter, *n.* (*c*) See ★*indicator*, 1 (*j*). — **Double current transmitter,** in *teleg.*, an instrument for sending signaling currents alternating as to direction on the line; a pole-changer. — **Octuple transmitter,** a telegraphic apparatus for the simultaneous sending of eight messages over a single wire.

It is said that after prolonged experiments in sending four telegraphic messages each way simultaneously over a single wire, the German postal department has accepted the *octuple transmitter* invented by the late Professor Henry A. Rowland, of the Johns Hopkins University. The experiments were conducted between Berlin and Hamburg. Between 300 and 350 words were transmitted a minute. It is understood that the German postal department intends to introduce the Rowland system between Berlin, Hamburg, Cologne, Leipzig and Frankfort. *Science*, April 11, 1902, p. 599.

Reverse-current transmitter, a form of telephone transmitter with carbon buttons on either face of the diaphragm, instead of behind it only, as in the usual type. *Elect. World and Engin.*, Jan. 23, 1904, p. 180. — **Rotary transmitter,** in *elect.*, a device consisting either of a motor-generator or of a machine with one armature wound with separate motor and generator coils, by means of which an alternating current is converted into direct current; a rotary transformer. Rotary transmitters are frequently employed where it is desired to obtain direct currents for electric trolley service and the like from an alternating circuit.

transmitter-hood (trȧns-mit′ėr-hůd), *n.* In *elect.*, a metallic box surrounding a telephone-transmitter with a mouthpiece so arranged as to permit the transmitter to be used without the voice of the speaker being overheard. *Elect. World and Engin.*, May 21, 1904, p. 987.

transmundane (trȧns-mun′dān), *a.* [*trans-* + *mundane.*] Beyond this world or the things of this world. *G. S. Hall*, Adolescence, I. vi.

transocular (trȧns-ok′ụ̄-lär), *a.* [*trans-* + *ocular.*] In *ornith.*, drawn longitudinally through the eye: applied to a stripe or color marking.

transom, *n.* **9.** One of the cross-ties or sleepers laid under the longitudinal sills of a permanent way for a street railway, or for any railway laid on this system, as in a mine. [Eng.]

transom-bar (tran′sum-bär), *n.* The transom, as over a door: from the extended use of transom to denote the window or light at the head of a door.

transom-frame (tran′sum-frām), *n.* See ★*frame*, 5 (*b*).

transom-lifter (tran′sum-lif″tėr), *n.* An apparatus for controlling, opening, closing, locking, and holding in position a transom over a door. It is essentially a sliding rod placed at the side of the door and operating an adjustable lever fixed to the transom.

transonance (trȧn′sọ̄-nạns), *n.* [L. *trans*, across, + *sonans*, sounding, + *-ce.*] In *med.*, the transmission of a sound produced in one organ through the substance of another, as when the sounds of the heart-valves are heard through the overlying lung.

transpacific (trȧns-pạ-sif′ik), *a.* [*trans-* + *Pacific.*] Crossing the Pacific; also, across or beyond the Pacific.

> The U. S. S. Albatross, surveying the Monterey submerged valley with a view to its possible termination for a *transpacific* cable, found 868 fathoms sixteen and one half miles from shore. *Science*, Jan. 10, 1902, p. 59.

Transpanamic subregion, a term applied by Sclater to a zoögeographical division comprising the low-lying and southern parts of Mexico and Central America as far south as the Isthmus of Panama.

transparency, *n.*—**Thermal transparency**, the property of transmitting the heat-waves of the spectrum; diathermancy.

transperitoneally (trȧns-per″i-tọ̄-nē′ạ-li), *adv.* In a manner involving passage through the peritoneum. *Lancet*, June 6, 1903, p. 1591.

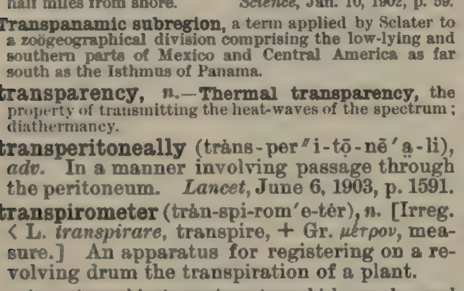
transpirometer (trȧn-spi-rom′e-tėr), *n.* [Irreg. < L. *transpirare*, transpire, + Gr. *μέτρον*, measure.] An apparatus for registering on a revolving drum the transpiration of a plant.

> An autographic *transpirometer*, which can be used with any balance sensitive to a gram, and which records precisely on a drum the transpiration of a plant for a week. *Science*, March 11, 1904, p. 424.

transplant (trȧns-plant′), *n.* **1.** The act or process of transplanting; specifically, the carrying of bacterial organisms from one medium to another for purposes of culture.

> A number of trials at both temperatures were made. Both microorganisms failed to survive the exposure, *transplants* failing to produce a growth on broth and on kidney. The second method, prolonged cultivation from kidney to kidney, the *transplants* being made after three days' growth at 37° C., we were led to believe would succeed. *Jour. Exper. Med.*, Oct. 25, 1900, p. 173.

2. That which is transplanted; specifically, in *forestry*, a seedling which has been transplanted once or several times.



Transplanter.

transplanter, *n.* **4.** A horse-power machine used in setting out tobacco or other field plants. It consists of a carriage supporting a small plow for opening the ground, rollers for pressing the soil against the plants, and a water-tank and pipes for watering each plant as soon as it is set out. It is operated by a driver and two boys, who ride behind and drop the plants in the furrow as the machine moves over the ground.

transport, *n.* **6.** Means of transportation; animals and vehicles used in transportation.

> The Political Resident, Captain Le Mesurier, to whom the party were indebted for the most valuable aid in arranging their *transport*. *Geog. Jour.* (R. G. S.), XV. 642.

Transport number. See ★*number*.

transportation, *n.* **5.** In *geol.*, the movement of land-waste by rivers, glaciers, waves, currents, wind, etc.

> The movement of land waste from one place to another by various agents (streams, currents, winds, waves, etc.) is called *transportation*. The process of laying down land waste on valley floors, in lake basins, and on sea floors is called deposition. *W. M. Davis*, Elem. Phys. Geog.

6. Railway tickets or other permits for traveling. [U. S.]

transporter, *n.* **2.** A trade-name of a special type of derrick-boom. It may be an I-beam, the lower flange of which serves as a track for a traveling hoisting-carriage, or a hollow beam having a track suspended from the under side; and it can be used as a derrick-boom, or may be suspended from a gallows-frame or from another derrick. It employs a traveling hoisting-carriage resembling one used in a cableway.—**3.** In *mach.*, in general, any carrying device, as one used for transporting coal from one vessel to another.

transporter-bridge (trȧns-pōr′tėr-brij), *n.* A bridge over a navigable waterway, placed, by the aid of towers, high enough to avoid interference with navigation. The bridge has a track for the passage back and forth of a trolley or traveler, from which is suspended a car at the level of the roadway or approaches below. The trolley is propelled back and forth along the elevated bridge-track by motors controlled from the car beneath, which thus can be made to transport the traffic from one approach to the other. *Sci. Amer.*, May 28, 1904, p. 420.

transportive, *a.* **2.** Having the power to transport or move from one place to another; transporting.

> As the declivity increased the cutting and *transportive* power of the drainage increased, and as the dissection of the land proceeded, the water level was lowered and the effective zone of atmospheric contact augmented. *T. E. Chamberlin*, in Jour. of Geol., Oct.-Nov., 1899.

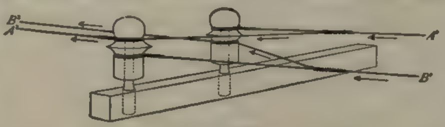
transport-riding (trȧns′pōrt-rī″ding), *n.* In South Africa, the business of a public carrier.

> Philip Hadden was engaged for several years in *transport-riding*—that is, in carrying goods on ox-waggons from Durban or Maritzburg to various points in the interior. *H. R. Haggard*, Black Heart and White Heart, i.

transpose, *v. t.* **7.** In *elect.*, to interchange as to position (the two parallel wires) of an electric circuit, specifically of a telephone circuit, so as to reduce inductive action from neighboring circuits. See ★*transposition*, 7.

transposing (trȧns-pō′zing), *n.* **1.** In *music*, the act or process of changing a piece or passage from one tonality to another; transposition.—**2.** In *elect.*, the shifting, with reference to each other, of line-wires so as to reduce inductive action. See ★*transposition*, 7.

transposition, *n.* **6.** In *geom.*, any motion other than revolution.—**7.** In *elect.*, arrangement of the wires of a power-transmission, telegraph-, or telephone-line so that after a certain distance the wires change places with each other, for the purpose of reducing the disturbing effect of the line on other lines or of other lines on the former, which may occur by induction, electromagnetic or electrostatic.—**Transposition insulator**, in *elect.*, an insulator especially constructed to facilitate the crossing of the wires of an electric circuit without danger of contact where transposition is to be made.—**Transposition joint**, in *elect.*, a particular form of joint made in transposing line-wires. Such joints are placed where the wires are tied to the transposition insulators.



Transposition.

transpower (trȧns′pou-ėr), *n.* [*trans*(*mission*) + *power.*] The time-rate of transmission of energy. Usually modified by a term which denotes the form of energy transmitted; as, *heat-transpower*. *The Engineer*, London, 1903, p. 35. [Rare.]

transpulmonary (trȧns-pul′mọ̄-nạ̄-ri), *a.* [*trans-* + *pulmonary.*] Acting through the lungs, as in birds, where the lungs are connected with large air-sacs into, and out of which, the air passes through the lungs.

> He [Huxley] had already instituted comparison with the Crocodiles, and was clearly coming to the conclusion that the arrangement in the bird is but the result of extreme specialisation of a type common to all Sauropsida with a 'cellular' lung. The respiratory process in the bird may be defined as *transpulmonary*, and it is an interesting coincidence that, as I write, there comes to hand a memoir, supporting Huxley's conclusion, and establishing the fact that there is a fundamental principle underlying the development and primary differentiation of all types of vertebrate lung. *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 624.

transradiable (trȧns-rā′di-ạ-bl), *a.* [*trans-* + *radiable.*] Same as ★*radiable*.

transriverine (trȧns-riv′ėr-in), *a.* [*trans-* + *riverine.*] Across or on the other side of the river.

> "The town [Birkenhead] was projected at first simply as a residential *trans-riverine* suburb of Liverpool." *Athenæum*, Dec. 22, 1900, p. 824.

transsaharan (trȧns-sa-hä′rạn), *a.* [*trans-* + *Saharan.*] Crossing or traversing the Sahara: as, a *transsaharan* railway; also, across or beyond the Sahara.

transsegmental (trȧns-seg-men′tạl), *a.* [L. *trans*, beyond, + *segmentum*, segment, + *-al*^{1}.] Passing beyond the limits of a segment: noting, in *anat.*, nerves or blood-vessels traversing one segment of a limb to terminate in another.

transsiberian (trȧns-sī-bē′ri-ạn), *a.* [*trans-* + *Siberian.*] Crossing or traversing Siberia: as, the *transsiberian* railway.

> In Siberia, along the line of the *Transsiberian* Railway, the climate is very severe. Great mountains shut off this region from the moderating influences of the oceans to the east and south, and from October until late in the spring it is exposed to the sweep of cold winds from the Arctic Ocean. *U. S. Monthly Weather Rev.*, March, 1904, p. 124.

transsolid (trȧns-sol′id), *a.* [*trans-* + *solid.*] Noting a physical condition beyond or distinct from that of solidity. [Rare.]

> Geologic facts in a vast system lead to the induction that the centrosphere does not exist in the solid state; if it is metallic the weight reduces it to a *trans-solid* condition. *J. W. Powell*, Truth and Error, p. 43.

transsubjective (trȧns-sub-jek′tiv), *a.* Of or pertaining to reality beyond the sphere of direct experience or of immediate knowledge.

> From this epistemology he derives the metaphysical conclusion that the things we know are indeed independent of my consciousness and of yours, taken individually, or, to use a new phrase, are "*trans-subjective*." *Encyc. Brit.*, XXX. 668.

transuranian (trȧns-ū-rā′ni-ạn), *a.* [*trans-* + *Uranian.*] Situated beyond the planet Uranus.

> Further observations placed beyond a doubt that this 8th magnitude star was in reality the *trans-Uranian* planet. *Chambers*, Descriptive Astronomy, p. 158.

Transvaaler (trȧns-väl′ėr), *n.* A Transvaal Boer.

> In Natal the Boers (*Transvaalers*) have occupied Newcastle without opposition, and have advanced beyond it to Danhauser, nearly two-thirds the way from Newcastle to Dundee and only twelve miles from the latter place. *N. Y. Tribune*, Oct. 17, 1899.

transvaalite (trȧns-väl′īt), *n.* [*Transvaal* (see def.) + *-ite*^{2}.] A mineral, consisting mainly of black oxid of cobalt, found at a cobalt-mine north of Middleburg in the Transvaal, South Africa. It seems to be a product of the alteration of cobalt arsenide.

transverberation (trȧns-vėr-bẹ-rā′shọn), *n.* [*transverberat*(*e*) + *-ion.*] The act of transverberating, or of being transverberated or pierced through. *G. C. Graham*, Santa Teresa, I. 178.

transversal. I. *a.*—**Transversal comparator**, a comparator with fixed microscopes and a bed-plate carrying the standards of length to be compared, the motion of the bed-plate being at right angles to the line joining the axes of the microscopes.

II. *n.* **3.** In *optics*, the line in which the plane of polarization of a beam of light intersects the wave-front.

transversale^2 (troṅs-ver-säl′), *n.* [F., fem. of *transversal*. See *transversal.*] In *roulette*, a bet placed at the end of any three numbers, taking them horizontally.—**Transversale six**, a bet placed on the line, taking in six numbers horizontally, three above and three below the line.

transversan (trȧns-vėr′san), *a.* [L. *transversus*, transverse, + *-an.*] Placed transversely: used only in the following phrase.—**Transversan plane**, the plane which passes through the center of a diatom frustule vertical to the pervalvar axis. *O. Müller.*

transverse, *n.* **2.** In *math.*, a transverse axis. [Rare.]

tranter, *n.* **2.** Specifically, a seller of fish; a name applied to a boatman who visits vessels in harbor for the purpose of supplying them with fish. [Eng.]

trap^{3}, *n.*—**Dekhan traps,** vast flows of basaltic rocks of Cretaceous age, estimated to cover 200,000 square miles in southern India.—**White trap,** a local name in the south Staffordshire coal-field for a white decomposed basaltic rock intruded in narrow veins into the coal and bituminous shales.

Trapaceæ (tra-pā'sẹ̄-ē), *n. pl.* [NL. (Dumortier, 1827), < *Trapa* + *-aceæ.*] A family of dicotyledonous choripetalous plants, the water-nut family, of the order *Myrtales*, consisting of the single genus *Trapa*, the water-nut, water-chestnut, or water-caltrop. See *Trapa.*

trap-board (trap'bōrd), *n.* In *weaving*, a perforated board on a Jacquard that takes the place of a griffe. *T. W. Fox*, Mechanism of Weaving, p. 143.

trap-crop (trap'krop), *n.* A crop planted for the purpose of protecting another crop from an attack of a fungous or insect enemy. The plant used for the trap-crop must be one which is especially susceptible to attack by the fungus or insect from which the main crop is to be protected. See ★*crop.*

The points to remember are: the *trap-crop* should consist of some plant readily susceptible to the disease it is intended to catch, and that after becoming diseased it should be removed before spores or sclerotia are produced.
Massee, Plant Diseases, p. 26.

trap-door, *n.* **2.** In *mining*, a door designed to direct air-currents in ventilating systems, or to prevent surface wind from deranging the normal direction of air-currents.

trap-drummer (trap'drum"ėr), *n.* A street musician who plays upon several instruments simultaneously by means of levers and cords worked by the hands, feet, elbows, and head.

Trap-drummer's neurosis, a hitherto undescribed occupation-disease. *Med. Record*, Feb. 14, 1903, p. 268.

trapezitæ (trap-e-zī'tē), *n. pl.* [NL., < Gr. *τραπεζίτης*, a money-changer.] Greek money-changers, or bankers. They sat at tables and exchanged the many forms of Hellenic money.

The difficulties of exchange would have been endless, but for the class of *Trapezitae*, which existed in all Greek cities. *P. Gardner*, Types of Greek Coins, p. 11.

trapezium, *n.* **1.** In *geom.*: (*b*) Any quadrilateral not a parallelogram. *Todhunter*, Euclid, p. 5. (*c*) A trapezoid.

Some writers propose to restrict the word *trapezium* to a quadrilateral which has two of its sides parallel.
Todhunter, Euclid, p. 5.

3. [*cap.*] An irregular quadrangle in the nebula of Orion, formed by its four brightest stars.

trapezohedral, *a.*—**Trapezohedral symmetry.** See ★*symmetry*, 6.

trapezoid, *n.* **3.** In *anthrop.*, a type of cranium with somewhat flattened vertex and basal region which are approximately in parallel planes. *G. Sergi* (trans.), Var. of the Human Species, p. 41.

trapiche (trä-pē'chā), *n.* [Sp.] A sugar-mill; a cane-mill; a small sugar plantation; also, in Chile, a rude form of grinding-mill for ores.

The *trapiche* or sugar-cane press of the chief. Here two huge wooden rollers set close together pressed the cane stalks and large metal vessels received the juice. Distilling pots were placed conveniently near.
National Geog. Mag., VII. 242.

trap-lid (trap'lid), *n.* A hinged door or lid, in the top of a box or case, which is provided with a spring or snap fastening to hold it in place when closed.

These precision instruments are enclosed in a walnut casing with a *trap-lid* which serves as protection during transportation.
Elect. World and Engin., Oct. 1, 1904, p. 563.

trap-light (trap'līt), *n.* A light connected with a device for trapping insects which the light attracts.

In view of these facts, Mally, during his two summers' investigations, made extensive experiments with *trap lights* for the moths.
U.S. Dept. Agr., The Cotton Plant, Bulletin 1896, p. 331.

trap-mold (trap'mōld), *n.* A mold in which the curved shapes of the plumbers' traps (see *trap*, 4) can be cast in lead or brass or other metal or material.

trappy^{2} (trap'i), *a.* [*trap*^{3} + *-y.*] Same as *trappean.*

trap-shooter (trap'shö"tėr), *n.* One who practises trap-shooting.

Western Pennsylvania *Trapshooters'* League.
Forest and Stream, Feb. 21, 1903, p. 158.

Designed especially for duck shooters, *trap shooters*, etc., but suitable for all out-door purposes.
Forest and Stream, Jan. 24, 1903 (advt.).

trap-shooting (trap'shö"ting), *n.* The sport of shooting live birds released from a trap, or inanimate targets thrown into the air from a trap. See *trap*^{1}, 2. *Forest and Stream*, Jan. 31, 1903, p. 98.

trap-tree, *n.* **2.** A tree deadened or felled at a time when destructive bark-beetles will enter the bark. The bark is then peeled and either burned or buried.

trascoro (träs-kō'rō), *n.* [Sp., < *tras-*, L. *trans-*, beyond, + *coro*, choir. See *choir.*] In Spanish churches, a space at the back of the choir; one part of the inclosed space for the clergy and altar-ministrants, when that space is divided. The Spanish terms *coro* and *trascoro* correspond to *choir* and *farther choir*. See ★*back-choir* and ★*capilla mayor.*

trash^{1}, *n.* **5.** A low grade of tobacco-leaf. See *white Burley* ★*tobacco.*—**Corn trash.** See ★*corn*^{1}.

trash^{1}, *v. t.* **2.** To discard. [Colloq.]—**3.** To remove the outer leaves from (growing cane). See *cane-trash*, 2.

The ancient practice of *trashing* ratoons, i.e. stripping them of their outward leaves, being of late very generally and justly exploded.
Bryan Edwards, A Hist. of the British W. Indies, II. 257.

trashy, *a.* **2.** Encumbered with trash, that is, with the growth of the previous season.

The high curve of the beam prevents fouling in *trashy* land. *Trade Catalogue*, 1905–06.

Traube's corpuscles. See ★*corpuscle.*

traumatize (trâ'ma-tīz), *v. t.*; pret. and pp. *traumatized*, ppr. *traumatizing.* [Gr. *τραυματίζειν*, wound, < *τραῦμα*, a wound. See *traumatism.*] In *surg.*, to inflict an injury upon.

In spite of the general insensibility the orifices retain their sensibility, the patient struggling when they are *traumatized*, though he will preserve no recollection of this. *Therapeutic Gazette*, Feb. 15, 1903, p. 100.

traumatol (trâ'ma-tol), *n.* [Gr. *τραῦμα(τ-)*, a wound, + *-ol.*] A trade-name of an iodo-orthocresol, $HOC_6H_4CH_2I$. It is a reddish, insoluble, pulverulent compound, used in surgery as an antiseptic, deodorizer, and drying-powder.

traumatosis (trâ-ma-tō'sis), *n.* [NL., < Gr. *τραῦμα(τ-)*, wound, + *-osis.*] Same as *traumatism.*

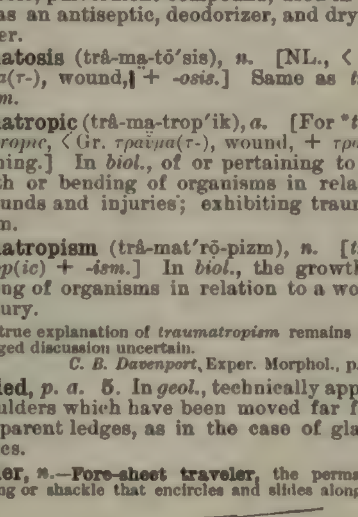
traumatropic (trâ-ma-trop'ik), *a.* [For **traumatotropic*, < Gr. *τραῦμα(τ-)*, wound, + *τροπος*, a turning.] In *biol.*, of or pertaining to the growth or bending of organisms in relation to wounds and injuries; exhibiting traumatropism.

traumatropism (trâ-mat'rọ̄-pizm), *n.* [*traumatrop(ic)* + *-ism.*] In *biol.*, the growth or bending of organisms in relation to a wound or injury.

The true explanation of *traumatropism* remains after prolonged discussion uncertain.
C. B. Davenport, Exper. Morphol., p. 386.

traveled, *p. a.* **5.** In *geol.*, technically applied to boulders which have been moved far from their parent ledges, as in the case of glacial erratics.

traveler, *n.*—**Fore-sheet traveler,** the permanent iron ring or shackle that encircles and slides along the iron span or bar which is bolted through the deck so that it sets in athwartships direction under the after end of the fore-boom. The fixture in the deck upon which the ring or shackle slides is known as a *horse*, and the *traveler* secures to the lower end of the lower one of the sheet-blocks under the boom.—**Shop traveler,** a form of traveling-crane for indoor use, in which the carrying girders or cross-beams are supported upon the side walls, leaving the floor space free. Such cranes can receive and deliver their load from and at any point in the rectangle described by the longitudinal and transverse motion of the hoisting hook.—**Traveler wheels,** the wheels of a buggy or trolley running back and forth upon a stretched cable or aërial tramway for conveying material or men; specifically, such a trolley used in stretching or laying the wires for a suspension or wire-cable bridge. *Elect. World and Engin.*, May 14, 1904, p. 917.



Fore-sheet Traveler.
a, traveler; *b*, horse; *c*, *c*, sheet-blocks; *d*, *d*, buffers.

traveler-iron (trav'el-ėr-ī"ėrn), *n.* See *fore-sheet* ★*traveler.*

traveler's-grass (trav'el-ėrz-gràs"), *n.* Same as ★*settler's-twine.*

Traveling bridge, crane. See ★*bridge*^{1}, *crane*^{2}, 1.—**Traveling guys,** portable jib-boom guys sometimes used as additional supports for the jib-boom (sideways) when under a press of sail. These are also known as *preventer guys.*—**Traveling martingale,** a portable martingale once used on small English sailing-vessels and yachts, but only when a jib-boom was rigged out in order to carry a greater spread of head-sail in a race, etc.—**Traveling staircase.** See ★*escalator.*—**Traveling table.** See ★*table.*

traveling-rings (trav'el-ing-ringz), *n. pl.* Same as ★*flying-rings.*

travers^{2} (tra-vers'), *n.* [F.] In the *manège*, a sidewise movement of the horse with the forehand a little in advance of the croup.

traverse. **I.** *a.*—**Traverse motion.** See ★*motion.*—**Traverse wind,** a wind which blows into a harbor, requiring a vessel to tack out.

II. *n.*—**Boat's traverse,** in *naval ordnance*, one of the athwartship pieces upon which the tracks for a field carriage are placed.—**Common traverse,** in pleading, a direct and unqualified denial of the allegations of the adverse party, and a demand for a trial upon the issues thus joined.—**Differential traverse,** a motion on a cotton-roving machine for minimizing the wear of the draft-rollers.—**General traverse,** in *law*, a pleading in which all the allegations set forth in the last preceding pleading of the opposite side are denied.—**Special traverse,** a traverse or denial beginning with the words *absque hoc* followed by the substance of the allegation it denies. It is preceded by new matter explanatory of the denial, and therein it differs from the common traverse which simply denies.—**To make a traverse** (*naut.*), to sail an irregular track by beating against the wind.

traverse, *v.* **I.** *trans.* **8.** To cause to move across; propel.

These [movable eccentric grate bars] automatically *traverse* the material forward into the furnace.
Encyc. Brit., XXVII. 425.

traverse-map (trav'ėrs-map), *n.* A rough map generally prepared by pacing, without other instruments than compass and aneroid barometer.

Where there are neither Geological Survey sheets nor accurate county maps it is almost impossible to carry on the soil survey except through the cooperation of State institutions which will undertake to make a *traverse map.* *Yearbook U. S. Dept. Agr.*, 1901, p. 121.

traversing (trav'ėr-sing), *n.* The motion of the cutting tool in a machine: strictly, it denotes the motion across the work, but is popularly extended to mean the same as 'travel' (of the tool or its carriage). Originally, it was the horizontal angular motion of a gun-carriage.

traversing-gear (trav'ėr-sing-gēr), *n.* Machinery designed to adjust the carriage of a gun laterally for sighting; also, feed motions to cause the traverse or travel of a tool-carriage.

traversing-screw (trav'ėr-sing-skrö"), *n.* A screw used to produce the traverse or travel of a tool-carriage. The screw does not move endwise, as a rule, but as it revolves the element driven is made to travel as a nut on the screw.

travertinous (trav'ėr-tin-ous), *a.* [*travertin* + *-ous.*] Of or resembling travertin, the common building stone of Rome.

A block of yellow *travertinous* rag-stone.
Jour. Hellenic Studies, XVI. 186.

travois, *n.* **2.** See ★*dray*^{1}, 3.

travoise (tra-vwos'), *n.* [F.] Same as *travois.*

On the plains they will have horses dragging *travoises*, dogs with *travoises*, women and children loaded with impedimenta, a colt or two running loose.
J. Ralph, in Harper's Mag., March, 1892, p. 508.

trawley (trâ'li), *n.* A small truck used in mining: same as *trolley.*

trawling-ground (trâl'ing-ground), *n.* A locality where trawling is carried on.

The Natal coast is by no means promising for trawling, and as much money had been spent on previous occasions with no good results, and the recent trip proved equally unsatisfactory, the Government was advised to devote its attention to the development of line fishing, and to rely on the Cape *trawling-grounds* for its supply of soles.
Nature, Nov. 26, 1903, p. 91.

tre^{2} (trā), *a.* [It., < L. *tres*, three.] In *music*, three: as, *a tre*, for three voices or instruments, and *tre corde*, with three strings. See ★*tutte corde.*

Treacle Bible. See ★*Bible.*

tread, *v. i.* **5.** To form puddles under the tread of horses: said of the ground. *W. J. Malden*, Tillage and Implements, Glossary.

tread, *n.* 16. Any horizontal element in a floor upon which the walker treads or presses, and so gives an alarm or makes a signal. *Elect. Rev.*, Sept. 17, 1904, p. 498.

treadle-press (tred′l-pres), *n.* A small printing-press, made for job-work and operated by a treadle.

treas. An abbreviation (*a*) of *treasurer*; (*b*) of *treasury*.

treasury, *n.*—**Treasury day.** See ★*day*^{1}.

treat^{1}, *v. t.* 11. In *elect.*, in the making of glow-lamps, to coat (the filament) with a deposited layer of carbon. This is done by bringing the filament to intense incandescence in an atmosphere of hydrocarbon vapor. The process is termed *flashing* and the product a *treated filament*. The layer of semi-metallic carbon thus deposited on the surface of the filament reduces the resistance of the latter, increases its life and improves its efficiency as a source of luminous radiation.

> In the manufacture of carbon-filament lamps a process is very generally applied to the carbon which is technically termed "*treating*." *Encyc. Brit.*, XXVIII. 89.

treat^{2} (trēt), *n.* [Also *trete*; ‹ OF. *trait*, *tret*, a drawing (in many uses), ‹ L. *tractus*, drawing. See *tract*^{1}, *n.*] A plaster or a salve made of wax, lard, etc., spread on cloth; a cerate. *Halliwell.*

treatis, *n.* A simplified spelling of *treatise*.

treatment, *n.*—**Causal treatment**, treatment of disease directed toward removal of the continuing cause.—**Flechsig treatment**, the administration of opium for a definite period before beginning that of the bromides in epilepsy.—**Mixed treatment**, the treatment of syphilis by potassium iodide and corrosive sublimate in combination.—**Nauheim treatment**, a method of treatment of certain forms of heart-disease by means of baths in water which contains carbonic-acid gas, and of suitable exercises: first employed at Bad Nauheim, Germany.—**Salisbury treatment**, a dietary treatment of disease by the almost exclusive employment of finely divided underdone beef and hot water.—**Specific treatment**, the employment of a remedy having a definite curative action upon the disease present, as quinine in malaria or the special antitoxin in diphtheria or tetanus.—**Symptomatic treatment**, the use of measures designed to relieve the symptoms of a disease rather than to remove the cause.—**Tallerman treatment**, treatment of local affections of the limbs, especially joint diseases, by hot air.—**Thyroid treatment**, the employment of preparations made from the thyroid gland of the sheep in the treatment of various diseases.—**Woodbridge treatment**, the administration of small but frequently repeated doses of calomel and various antiseptics in the treatment of typhoid fever.

treaty, *n.*—**Personal treaty**, in *international law*, a treaty which relates solely to the persons of the parties thereto, for example, a treaty by which the throne is guaranteed to a particular sovereign and his family; a treaty entered into with the sovereign in his individual capacity and dying with him.

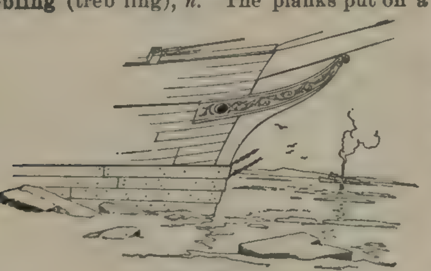
> International law is not concerned with so-called *personal treaties*. *Hall*, Internat. Law (5th ed.), p. 361.

Real treaty, in *international law*, one which relates solely to the subject-matter of the treaty, without reference to the persons of the parties to it, and which will still be binding upon the states irrespective of changes in constitutions or rulers.—**Treaty of cession.** See ★*cession*.

treaty-port (trē′ti-pōrt), *n.* A sea- or river-port of one country opened by treaty to the trade and commerce of another. The term is applied more particularly to certain ports of those countries of the far East—for example, China, Korea, and Japan—which at the time of making the treaties were more or less opposed to commercial or any intercourse with other nations. The first treaty-ports of China were opened in accordance with the Anglo-Chinese treaty of Nanking (1842); the first in Japan by Townsend Harris, acting for the United States, in 1858; and the first in Korea by treaty with Japan in 1876.

Trebizond date. See ★*date*^{3}.

trebling (treb′ling), *n.* The planks put on a vessel's bow as strengthening pieces to enable it better to withstand the pressure of ice.



Trebling.

trecena (trā-thā′nạ̈), *n.* [Sp., fem. of *treceno*, thirteenth, ‹ *trece*, ‹ L. *tredecim*, thirteen.] A group of thirteen days in the Mexican calendar. See *Mexican* ★*calendar*. *Amer. Anthropologist*, Jan.–March, 1900, p. 145.

trecentismo (trā-chen-tēs′mō), *a.* [It., ‹ *trecento*, three hundred. Compare *cinquecento*, etc.] Of the fourteenth century. Compare ★*seicentismo*.

trecherous, trechery. Simplified spellings of *treacherous*, *treachery*.

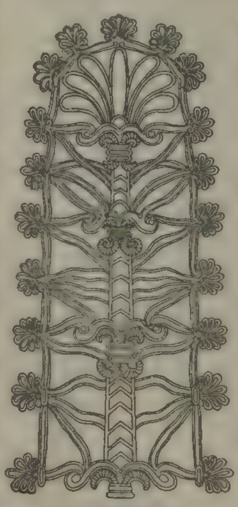
trechmannite (trek′mạ̈n-īt), *n.* A rare mineral, which occurs in red rhombohedral crystals in the dolomite of the Binnenthal. It contains arsenic and silver and is probably a sulpharsenite of silver.

tred, *v.* and *n.* A simplified spelling of *tread*.

tredle, *n.* and *v.* A simplified spelling of *treadle*.

tree, *n.*—**Burn-nose tree.** Same as *bonace-tree*.—**Green-tree ant**, a common, apparently undetermined, Queensland ant, which is said to live in small colonies in rude nests between the green leaves of shady trees.—**Leichhardt's tree.** [*Leichhardt*, an Australian explorer.] (*a*) In Australia, the Indian mulberry, *Morinda citrifolia*. (*b*) In Queensland, same as ★*bangkal*.—**Metallic tree**, in earlier *chem.*, a crystalline deposit in arborescent form of one metal upon another immersed in a solution of a salt of the former. Such a deposit of lead upon a strip of zinc immersed in a solution of lead acetate or nitrate used to be called the *lead-tree*. See ★*lead-tree*, 2.—**Single-tree method.** See ★*method*.—**To wedge a tree.** In *forestry*. See ★*wedge*^{1}.—**Tree analysis**, in *forestry*, a series of measurements and observations upon a felled tree made to determine its growth and life-history. Tree analyses vary with their purpose and may include all or a part of the following details, or may require additions to meet special needs. The usual measurements comprise the length of each section, the diameter inside and outside the bark, the total age, the age and width of the sap-wood, the diameter growth at given periods on the upper end of each section, the diameter breast-high, the total height, and the clear, used, and merchantable lengths. The observations determine the class, form, and condition of the tree. Although a tree analysis may include many combinations of the above measurements, two important classes are distinguished: *stump analysis*, which includes measurements of the diameter growth at given periods upon the stump only, no matter what other measurements it may comprise; and *section analysis*, which includes measurements of the diameter growth at given periods upon more than one section. When, in a stump or section analysis, the measurement of the diameter growth at given periods covers only a portion of the total diameter growth, the analysis is a *partial stump analysis* or a *partial section analysis*.—**Tree and pillar cult**, the widespread association of tree and pillar, or sacred stone, in the symbolism of early religions. It appears in India and in the sacred tree and dolmen of the Druids. The most important development of the type is in early Mycenæan civilization, especially in Crete.—**Tree of Diana**, a fanciful name given by the earlier chemists to an arborescent crystallization of metallic silver as separated from a solution of one of its salts by mercury.—**Tree-of-life motive**, a plant pattern which appears frequently in decoration. It is most clearly defined in Assyrian sculpture and in Oriental rug designs. Traces of it appear also in Greek, Roman, and Renaissance art. It is characterized by a peculiar cone-like fruit and horn-like stems highly conventionalized. Birdwood (Industrial Arts of India, p. 336) identifies it with the hom or soma of the Sanskrit myths; Goodyear (Grammar of the Lotus, p. 179), with the Egyptian lotus.—**Weed tree**, in *forestry*, a tree of little or no economic value.

> In a full-grown piece of woodland each tree has a value, even the *weed trees*, as soil cover.
> *Yearbook U. S. Dept.* [*Agr.*, 1894, p. 487.



Tree-of-life Motive.

tree-beard, *n.* 2. A lichen, *Usnea barbata*, having a thallus with numerous small pendulous branches. See *Usnea* (with cut).

tree-burial (trē′ber″i-ạ̈l), *n.* The custom of depositing bodies in the branches of trees, practised by many primitive people—for instance, in North America and Malaysia.

tree-chafer (trē′chā″fėr), *n.* Any one of the scarabæid beetles of the group containing the genus *Melolontha*, to which the common cockchafer and its allies belong. *Kirby and Spence*, Entomology, p. 413. [Eng.]

tree-cult (trē′kult), *n.* The religious worship of trees. *Ratzel* (trans.), Hist. of Mankind, II. 481.

tree-dweller (trē′dwel″ėr), *n.* One who lives in a hut placed in the branches of a tree. Such huts are used by some of the Malay tribes.

> The *tree-dwellers* of Malaya.
> *Rev. of Revs.*, XXVII. 485.

tree-dwelling (trē′dwel″ing), *n.* A hut erected in the branches of a tree: used by some Malay tribes. *Ratzel* (trans.), Hist. of Mankind, I. 108.

tree-fern, *n.*—**Silver tree-fern**, *Cyathea dealbata*, a variable New Zealand fern, with a stem from 10 to 15 feet high, the fronds borne in a close crown and conspicuously glaucous-farinose on the under surface.

tree-haw (trē′hâ), *n.* See ★*haw*^{2}.

tree-hopper, *n.*—**Apple-tree hopper**, either *Ceresa bubalus* or *Ceresa taurinus*, two membracids which injure apple-twigs by puncturing them for oviposition.—**Black-backed tree-hopper**, a tree-hopper, *Acutalis dorsalis*, of the family *Membracidæ*, greenish white in color, with a large black spot on its back: found commonly on grape-vines in the United States in midsummer.—**Single-striped tree-hopper**, an American tree-hopper, *Thelia univittata*, found on grape-leaves in July and August.—**Thorn-bush tree-hopper**, a common American tree-hopper, *Thelia cratægi*, which feeds on apple, cratægus, and other rosaceous plants.—**Two-spotted tree-hopper**, an American tree-hopper, *Enchenopa binotata*, found commonly on grape-stems, but also on redbud and on *Ptelea trifoliata*.

tree-hornbill (trē′hôrn″bil), *n.* Any one of the hornbills which belong to the subfamily *Bucerotinæ*, as distinguished from the two African hornbills of the genus *Bucorvus*, which frequent the ground.

tree-house (trē′hous), *n.* A house or dwelling built in the branches of a tree.

tree-huckleberry (trē′huk″l-ber-i), *n.* Same as *farkleberry*.

tree-lichen (trē′lī″ken), *n.* Any lichen which grows upon trees.

tree-lizard, *n.* 2. A lizard of the genus *Calotes*, which comprises a number of small, beautiful species from southern Asia.

tree-lucerne (trē′lụ̄-sėrn″), *n.* See ★*lucerne*.

tree-martin (trē′mär″tin), *n.* *Progne tapera*, a South American relative of the house-martin, but plainer in color, being glossy brown above and white below. The name is sometimes applied also to the tree-swallow, *Hirundo bicolor*.

tree-partridge, *n.* 2. A common name for about fifteen species of game-birds of the genus *Arboricola* found in southern Asia and some of the adjacent islands.

tree-rat, *n.* 2. The common wild rat of India, *Mus rufescens*, which frequents the roofs of houses

tree-runner (trē′run″nėr), *n.* One of several Australian birds of the genus *Sitella*, related to and having the habits of the nuthatches.

tree-scribe (trē′skrīb), *n.* Same as ★*scratcher* (*e*).

tree-stool (trē′stöl), *n.* The stump of a tree. Same as *stool*, 6.

> The deeply submerged peats and *tree-stools* indicated, again as in the north, that the post-glacial recovery brought the land-level almost to normal pre-glacial conditions. *Geog. Jour.* (R. G. S.), XI. 431.

tree-sugar (trē′shůg″ạ̈r), *n.* Sugar obtained from the sap of trees, as maple-sugar.

tree-village (trē′vil″ạ̄j), *n.* A village consisting of huts built in the branches of trees. Such villages are found in some parts of Malaysia.

trefa (tref′ạ̈), *n.* [Heb., ‹ *taraf*, rend, tear to pieces.] 1. An animal torn to pieces by wild beasts.—2. Something (meat or utensil) not prepared in accordance with rabbinical law, and therefore unfit for Jewish consumption. See *kosher* and *tref*.

trefoil, *n.* 6. In *anat.*, the triangular area which forms the front part of a molar tooth; the protocone, paracone, and metacone lying at the angles. Same as ★*trigon*^{1}, 6.

> The tooth is very large (8·1 × 4·7 mm.), high, and complicated, the anterior *trefoil* well developed.
> *Ann. and Mag. Nat. Hist.*, June, 1904, p. 409.

trehalase (trē-hal′ās), *n.* [*trehala* + *-ase*.] A ferment, obtained from an *Aspergillus*, which will cause the cleavage of trehalose (a sugar obtained from Syrian manna) into two molecules of dextrose.

trehalum (trē-hal′um), *n.* [NL., ‹ *trehala*.] A colorless carbohydrate, $C_{24}H_{42}O_{21}$, obtained, together with trehalose, from trehala manna. It crystallizes in microscopic prisms.

trek, *n.*—**The great trek**, the movement of the Boers, in large numbers, northward from Cape Colony, during the years 1833 and 1836, due to dissatisfaction with the policy of the British government, especially with its liberal treatment of the natives.

> When *the Great Trek* occurred, two courses obviously lay before the British authorities: either to let the Trek Boers go, and give them their blessing and liberty, or to repudiate and discourage the trek from the outset. The action taken by the British authorities was one of vacillation between these two courses.
> *Encyc. Brit.*, XXXII. 717.

trekker, *n.* 2. Specifically, one of the Boers who took part in the great ★trek (which see).

Tremanotus, *n.* See ★*Trematonotus*.

Trematis (trem′a̤-tis), *n.* [NL., ‹ Gr. *τρῆμα(τ-)*, a hole.] A genus of small neotrematous brachiopods typical of the family *Trematidæ*, with rounded shells, having pitted or punctate quincuncial or radial ornamentation. They occur in Lower Silurian rocks.

Trematonotus (trem″a̤-tọ̄-nọ̄′tus), *n.* [NL., ‹ Gr. *τρῆμα(τ-)*, a hole, + *νῶτος*, back.] A genus of rhipidoglossate gastropods having large involute shells with flaring apertures, wide-open umbilicus, and median longitudinal row of siphonal slits, found in the Silurian rocks. Incorrectly written *Tremanotus*.

Trematopora (trem-a̤-top′ọ̄-rä̤), *n.* [Gr. *τρῆμα(τ-)*, a hole, + *πόρος*, pore.] A genus of trepostomatous *Bryozoa* common in Silurian rocks.

trembler, *n.* **4.** See *electric* ★*ray*.

tremellaceous (trem-e-lā′shious), *a.* Same as *tremellineous*.

Tremellales (trem-e-lā′lēz), *n. pl.* [NL., ‹ *Tremella*, the type genus, + *-ales*.] An order of the higher basidiomycetous fungi mostly of a gelatinous texture and included chiefly in the family *Tremellaceæ*. Two other small families occur in the tropics.

tremelline (trem′e-lin), *a.* Same as *tremelloid*.

tremogram (trem′ọ̄-gram), *n.* [L. *tremere*, shake, ‹ Gr. *γράμμα*, a writing.] See the extract.

> The curious marginal irregularities which accompany and seem to a certain degree to characterize the handwriting of each writer, which I have called "*tremograms*." In studying those of different individuals it will be observed that these irregularities differ (1) in general appearance; (2) in the margin of the ink line on which the greater number of them occur; (3) in the number of these to a unit of length in the ink line; (4) in the rapidity with which lines joining the apexes of the angles on the two margins oscillate up and down from horizontality in a given length of ink line.
>
> *P. Frazer*, in Jour. Franklin Inst., April, 1907, p. 263.

tremograph (trem′ọ̄-gråf), *n.* [L. *tremere*, shake, + Gr. *γράφειν*, write.] In *physiol.*, an instrument for the recording of involuntary muscular tremor. See the extract.

> The *tremograph*, a thimble attached to a pivoted lever, moving freely in all directions, showed that children could not hold the index-finger still for half a minute.
>
> *G. S. Hall*, Adolescence, I. 145.

tremor, *n.* **4.** In colonial furniture, a sort of hood or head-piece found on high cupboards and the like: probably derived from a French type. *J. W. Lyon*, Colonial Furniture of New England, p. 49.—**Metallic tremor**, a tremor occurring as a symptom of chronic poisoning by lead, mercury, arsenic, etc.—**Tremor cordis**, palpitation of the heart.

tremor-disk (trem′o̤r-disk), *n.* The telescopic image of a star, as apparently enlarged by the tremors of the instrument and the atmosphere. These tremors spread the light, which would otherwise be condensed to a point, over a surface of some extent, thus rendering the image fainter and less effective on a photographic plate, or on the slit of a spectroscope. *Athenæum*, April 29, 1905, p. 534.

tremorous (trem′o̤r-us), *a.* [*tremor* + *-ous*.] Marked by tremors; vibrating rapidly. *E. Berliner*.

trench-brace (trench′brās), *n.* A telescope screw-brace used to hold up the side walls or the sheet-piling of a trench. It has plates at each end, with universal joints to fit the irregular surface of the walls, and a windlass for turning the screw and extending the brace until it touches both sides of the trench, preventing caving.

trenchmaster† (trench′mȧs-tėr), *n.* In *mil.*, an officer commanding a body of pioneers. See the extract.

> He [Henry VIII.] also added to the organization a body of pioneers under *trenchmasters* and a master *trenchmaster*.
>
> *Encyc. Brit.*, XXVIII. 173.

trench-planting (trench′plan″ting), *n.* A method of planting on dry ground, in which the seeds of young trees are set in pits or trenches. Also called *pit-planting*.

trench-plowing (trench′plou″ing), *n.* See ★*plowing*.

trepanning-bar (trẹ̄-pan′ing-bär″), *n.* The cutting- or boring-bar of a trepanning-machine. *Jour. Brit. Inst. Elect. Engin.*, 1902–03, p. 955.

trepanning-machine (trẹ̄-pan′ing-ma̤-shēn″), *n.* A machine for cutting a hole lengthwise in an ingot or forging, leaving a solid core which is not reduced to chips in the boring process. A trepanning-bar, carrying several cutters at its end, is driven by a machine resembling a boring-machine, and the work is fed against the cutting surfaces. The bar is hollow, so that an annular cavity is made, as by an end-milling cutter. For boring large holes, as the bore of a gun from the solid metal, less power and time are required than if the drilling process is used: but the solid core is of little practical value, since it is usually the least solid section of the casting. *Jour. Brit. Inst. Elect. Engin.*, 1902–03, p. 955.

trepha, *n.* See ★*trefa*.

trephination (tre-fi-nā′shọn), *n.* [*trephin(e)* + *-ation*.] Same as *trepanning*.

> Fortunately the way in which barbaric and savage people think is coming to be understood; and the light thus given illumines fairly, though at some points faintly, the wonderful course of development of the art of *trephination*.
>
> *An. Rep. Bur. Amer. Ethnol.*, 1894–95, p. 20.

trepidancy (trep′i-da̤n-si), *n.* [**trepidance* + *-y*³. See *trepidation*.] Same as *trepidation*. [Rare.]

> In the manner of my friend I was at once struck with an incoherence, an inconsistency; and I soon found this to arise from a series of feeble and futile struggles to overcome an habitual *trepidancy*, an excessive nervous agitation.
>
> *Poe*, Fall of the House of Usher.

trepidate (trep′i-dāt), *v. i.*; pret. and pp. *trepidated*, ppr. *trepidating*. [L. *trepidatus*, pp. of *trepidare*, be agitated. See *trepidation*.] To suffer from trepidation or alarm; be agitated by fear or apprehension. [Rare.]

> It sounded rather appalling to be engaged in a glee for three voices, with two performers such as these; and I *trepidated* a little as I went up stairs, having previously understood that the great man was already come.
>
> *De Quincy*, Literary Reminiscences, Sir Humphry Davy, [p. 38.

Treponema (trep-ọ̄-nē′mä̤), *n.* [NL., ‹ Gr. *τρέπειν*, turn, + *νῆμα*, a thread.] A genus of parasitic flagellates. The best-known species is *T. pallidum*, the supposed pathogenic micro-organism of syphilis, formerly called *Spirochæte pallida*.

> Before the appearance of this paper by Schaudinn, Vuillémin had already suggested the name Spironema, which Schaudinn accepted. Stiles and Pfender pointed out that this name had been preempted by a genus of Mollusca, and put forward the name Microspironema. However, before the appearance of their publication, Schaudinn had also discovered the incorrectness of the name Spironema, and proposed the name *Treponema*.
>
> *Jour. Med. Research*, Dec., 1907, p. 376.

Trepostomata (trep-ọ̄-stō′ma̤-tä̤), *n. pl.* [NL., ‹ Gr. *τρέπειν*, turn, + *στόμα(τ-)*, mouth.] A suborder of gymnolæmatous *Bryozoa* characterized by direct superposition of the zoœcia to form long tubes which are intersected by straight or curved partitions representing the floors and covers of successive layers. The zoœcial covers have small and usually subcentral apertures. Monticules or maculæ with larger or more elevated cells are scattered regularly over the surface of the colony (zoarium). The suborder includes the *Monticuliporidæ* and other allied families abundantly represented in the Silurian and Devonian formations. Properly written *Treptostomata*.

trepostomatous (trep-ọ̄-stō′ma̤-tus), *a.* Pertaining to or having the characters of the *Trepostomata*.

Treptostomata, *n. pl.* See ★*Trepostomata*.

tres. An abbreviation of *tierces*.

trescone (trās-kō′ne), *n.* [It., ‹ *tresca*, a romp, ‹ *trescare*, romp, play.] In Italy, a lively dance for one couple.

tresette (trạ̄-set′tạ̄), *n.* [It.] An Italian game of cards for four players with a forty-card pack. There are no trumps. The cards rank: 3, 2, A, K, Q, J, 7, 6, 5, 4. Each player receives ten, dealt five at a time. Three points are scored for holding and showing trey-deuce-ace of any suit, or three treys, deuces, or aces. Four of a kind count four. Tricks taken in play have no value in themselves; but at the end the side that has taken in three treys or deuces scores a point. Each ace and the last trick scores a point. Ten points is game.

tresis (trē′sis), *n.* [NL., ‹ Gr. *τρῆσις*, a perforation, ‹ *τετραίνειν*, perforate.] In *surg.*, perforation from without.

trespassory (tres′pa̤-sọ̄-ri), *a.* [*trespass*.] Pertaining to or of the nature of trespass.

tressilate (tres′i-lāt), *v. i.*; pret. and pp. *tressilated*, ppr. *tressilating*. [F. *tressaillir*, be agitated.] To be suddenly agitated; be a-quiver. [Rare.]

> The ladies *tressilated* deliciously. The crime began to take an air of romance. The gardener slept in the basement of the house for its extra safety, and the local officer was pampered to keep a special eye upon the premises. With these precautions the feminine inmates of the house felt no more sense of danger than was just agreeable.
>
> *D. C. Murray and H. Murray*, A Dangerous Catspaw, [xiv.

tresson (tre-sôṅ′), *n.* [F., ‹ *tresse*, tress.] An ancient ornamented head-dress for women.

tressure, *n.* **2.** In *numis.*, the ornamental inclosure containing the type found on many coins, especially gold, in the French, Anglo-Gallic, and English series. *W. C. Hazlitt*.

T-rest (tē′rest), *n.* The rest for the hand-tool in speed-lathes for turning wood or metal. It is shaped like the capital letter T, with the upright carried in a pillar upon the carriage or base of the rest, and the horizontal member giving a long bearing parallel to the revolving work upon which the tool may be steadied as the operator holds it to its work. The T-arms may be longer or shorter for work of differing lengths.

> The hand rest is provided with short and long *T-rests*, the rest socket and saddle are locked to the bed by a cam-locking device and the *T-rest* is held in its socket.
>
> *Elect. World and Engin.*, Feb. 13, 1904, p. 335.

trestine (trēz′tīn), *n.* [L. *tres*, three, + E. *tine*.] The third tine from the base in such an antler as that of the red deer and wapiti. It lies just below the terminal tine, or tine royal, and may be known by its position in the many species in which the second, or big tine, is lacking. Known also as *tine royal* and *trez tine*. *Lydekker*.

trestle¹, *n.*—**Birago trestle**, an old type of portable bridge-trestle, used only in the construction of military bridges: invented by Carlo, Baron of Birago (1792–1845), an Italian engineer.

trevally (tre-val′i), *n.* [Also *trevalli*, *trevalla*, *travale*; perhaps a corruption of *cavalli*, *cavally*.] A large food-fish of the family *Carangidæ*, *Caranx georgianus*, common in the markets of eastern Australia. In various localities the name is applied to several fishes, most of which are of the family *Carangidæ*. See *cavally*.—**Black trevally**, *Siganus nebulosus*, of the family *Siganidæ*. [New South Wales.]—**Mackerel trevally**, *Neptomenus dobula*, of the family *Carangidæ*. [Tasmania.]—**Silver trevally**, *Caranx georgianus*.—**Snotgall trevally**. (*a*) *Neptomenus travale*. [Victoria.] (*b*) *Neptomenus brama*. [Tasmania.]—**White trevally**. (*a*) *Caranx georgianus*, of the family *Carangidæ*. [New South Wales, New Zealand, and Tasmania.] (*b*) *Siganus jarus*, of the family *Siganidæ*.

Trevelyan effect, the musical tone produced by a Trevelyan rocker.—**Trevelyan rocker**, in *physics*, a device consisting of a block of copper deeply corrugated on one side and a bar or slab of lead. When the copper is heated and while still very hot it is placed upon the cold lead in such a position that it rests only on the thin edges of the corrugations, rapid vibrations of the masses of metal are set up and a distinct musical tone is heard.

trezure, trezurer, trezury. Amended spellings of *treasure*, *treasurer*, *treasury*.

T. R. H. An abbreviation of *Their Royal Highnesses*.

tri-. (*b*) Specifically, in *chem.*, a prefix to the names of compounds containing three atoms or combining units of some particular element or radical, as sulphur trioxid, SO_3, and triethylamine, $N(C_2H_5)_3$.

triacetin (trī-as′e-tin), *n.* A colorless liquid, $CH_3COOCH_2CH(OCOCH_3)CH_2OCOCH_3$, contained in the seed of *Euonymus Europæus* and prepared from tribromhydrin. It is the triacetate of glycerol and boils at 258° C.

triactine (trī-ak′tin), *n.* [Gr. *τρεῖς* (*τρι-*), three, + *ἀκτίς* (*ἀκτιν-*), ray.] In the sponge-spicules, an element with but three arms, generally derived from the hexactine by suppression of one half of each axial arm.

triad, *n.* **8.** [*cap.*] *pl.* See *the* ★*Triad Society*.—**Triad axis of symmetry.** See ★*symmetry*, 6.—**The Triad Society** (of China), a secret society or fraternity whose ritual and ceremonies resemble in some points those of freemasonry. Its Chinese name is *San Ho Hwui*, the "union of the three" powers or forces of nature, viz., heaven, earth, and man. It is also sometimes called *T′ien Ti Hwui*, or the "heaven and earth society." It seems to have been founded during the first part of the eighteenth century in the reign-period called Yung Ching, the third of the present Tatar dynasty, against which it is leveled. Hence it is strictly forbidden by the government, and membership in it is a capital offense. It exists wherever there are Chinese. Its membership is very large.—**Under triad**, in *music*, a triad reckoned downward from a given tone exactly as a major triad is reckoned upward, that is, first a major third and then a minor third. Thus, while the major triad of C is C-E-G, the *under triad* of C is C-A♭-F. See ★*undertone*, 4.

triæne, *n.* **2.** In the sponge-spicules, a tetraxon in which one arm is different from the other three.

triænostrongyle (trī-ē-nọ̄-stron′jīl), *n.* [Gr. *τρίαινα*, a trident, + *στρογγύλος*, rounded.] In the sponge-spicules, a triæne in which the main arm is blunt at the extremity.

triænostyle (trī-ē′nọ̄-stīl), *n.* [Gr. *τρίαινα*, a trident, + *στῦλος*, pillar.] In the sponge-spicules, a triæne in which the main ray is sharp.

triænotyle (tri-ē′nọ̄-tīl), *n.* [Gr. *τρίαινα*, a trident, + *τύλη*, a cushion.] In the sponge-spicules, a triæne in which the main arm is blunt and rounded.

triakaidekaphobia (trī-a̤-kī″dek-a̤-fō′bi-ä̤), *n.* [NL., ‹ Gr. *τρεῖς*, *τρία*, three, + *καί*, and, + *δέκα*, ten, + *-φοβια*, ‹ *φοβεῖν*, fear.] Superstitious fear of the number thirteen. *Ribot* (trans.), Psychol. of Emotions, p. 213.

Triakis (trī′a̤-kis), *n.* [NL., ‹ Gr. *τριάκις*, three times, ‹ *τρεῖς* (*τρι-*), three.] A genus of requiem sharks found in the Pacific and Indian oceans.

trial, *n.*—**Elimination trial**, a process of elimination; specifically, a competitive process for removing by previous trial any competitors in races or tournaments whose performance would be comparatively unsatisfactory, so that in the final trial or real competitive event only the few best contestants shall appear: used, in races and athletic tournaments, of men, horses, motor-cars, etc. — **To stand trial**, to be brought to trial, not pleading guilty. **Trial and error.** (*a*) In *comp. psychol.*, the empirical method of attacking a problem by repeated trial of habitual reactions: opposed to the rational method of using one's previous knowledge to indicate a mode of solution. See the extract.

> The expression was first used by Lloyd Morgan to distinguish between the human method of solving a problem and the dog's method, the latter being called "*trial and error.*" Morgan meant that the dog does not attempt to reason the matter out beforehand, making use of his previously acquired knowledge before beginning to act; but that he attacks it at once in some manner derived from individual experience or racial inheritance. If this method fails, he tries another similarly derived, and so on until one method proves successful.
>
> *M. F. Washburn*, The Animal Mind, p. 206.

(*b*) The process of obtaining accuracy in mechanical undertakings, whereby the result is attained by successive approximations. The first operation is tested and the error ascertained: then this error is corrected, and other trials made. Used in centering rough-finished work for the lathe operations, for the turning and boring of cast-pulleys, in making of face-plates, straight edges, valves, bearings, and the like.— **Trial by witnesses**, the usual form of trial, under the civil law, in which witnesses were examined and the parties or their advocates were heard and decision was rendered by the judge.— **Trial per pais.** See *per pais*.— **Writ of trial**, in *English law*, a writ by which an action brought before a superior court was removed for trial to an inferior or county court The writ was superseded in 1867 by the County Courts Act.

trial-bar (trī′ạl-bär), *n.* A cuboid used by turners for testing the inclination of planes.

trial-frame (trī′ạl-frām), *n.* A metal frame of spectacle shape into which trial-glasses are set.

triamide (trī-am′id), *n.* [*tri-* + *amide.*] A class-name applied, in organic chemistry, to compounds containing in their molecule three amido groups, $-CONH_2$. The word is sometimes used, by mistake, for triamine.

triamine (trī-am′in), *n.* [*tri-* + *amine.*] A class-name applied, in organic chemistry, to compounds containing in their molecule three amino groups, $-NR_2$, where R may be hydrogen or any hydrocarbon radical such as methyl, CH_3.

triangle, *n.* **13.** A triangular box-fish, as *Sectophrys trigonus*, of the family *Ostraciidæ* of the West Indies.— **14.** In *angling*, an arrangement of three fish-hooks bound together with the points outward, forming a triangle. —**Antipodal triangles**, spherical triangles whose respective vertices are diametrically opposite to one another in pairs.— **Autopolar triangle.** Same as *self-conjugate triangle.* See *self-conjugate*.— **Brocard's first triangle**, the triangle whose vertices are the perpendicular projections of the circumcenter on the Lemoine parallels.— **Brocard's second triangle**, the triangle whose vertices are the perpendicular projections of the circumcenter on the symmedians.— **Carotid triangles**, in *anat.*, two triangular areas in the neck where an incision is made, in surgery, in order to reach the carotid artery: the triangles are called the *inferior* and the *superior*.— **Cervical triangles.** See *anterior triangle of the neck* and *posterior triangle of the neck*, under *triangle*.— **Coaxial triangles**, ABC, A′B′C′, if the points of intersection of BC and B′C′, of CA and C′A′, and of AB and A′B′ lie in one straight line: this straight line is called the axis of the two triangles, or the axis of either triangle with respect to the other.— **Colunar triangles**, the spherical triangles ABC, A′BC, when A and A′ are opposites.— **Copedal triangle**, a triangle whose vertices are one of the vertices of a primitive triangle, and the feet of perpendiculars from the others upon the opposite sides.— **Diagonal triangle of a complete quadrilateral**, the triangle formed by the three diagonals of the quadrilateral.— **Flying triangle**, a triangle of fish-hooks mounted on a swivel, used in spinning.— **Geometry of the triangle**, the Lemoine-Brocard geometry. It dates from 1873.— **Gergonne point of a triangle**, the cointersection point of the joins of the points of contact of the in-circle with the opposite vertices.— **Heronic triangle**, a triangle whose sides and area are expressible by whole numbers.— **Invariable triangle**, the triangle formed by the three invariable points of three similar figures. It is a perspective with every triangle whose vertices are homologous points.— **Medioscribed triangle**, a triangle having as vertices the mid-points of the sides of another triangle.— **Metaharmonic triangles**, ABC and $G_1G_2G_3$, where G_1 is the cross of the circumcircle (O) of ABC with the straight AG, where G is centroid of ABC. —**Orthocentric triangle**, the triangle whose vertices are the feet of the altitudes of the original triangle. —**Pascal's triangle.** Same as *arithmetical triangle*. —**Pedal triangle**, a triangle whose vertices are the feet of transversals onto the sides of the original triangle ABC through a designated point and the vertices of ABC.— **Perpendicular of a triangle**, an *altitude of a triangle* (which see, under *triangle*).— **Prime triangle**, a triangle the three sides of which have no common divisor. —**Principal triangle**, in *elliptic geom.*, a triangle with each side less than $\frac{1}{2}\pi\gamma$, where γ is the numerical constant, real or imaginary, used in defining distance.— **Rational triangle**, a triangle whose sides and area are expressible by whole numbers.— **Suprameatal triangle**, an area bounded by the posterior wall of the external auditory meatus, the bony crest above the mastoid process, and a line drawn between the posterior and inferior portion of this meatus and this crest.— **Triangle of accelerations.** See ★*acceleration*.— **Triangle of similitude**, the triangle formed by the three centers of similitude of pairs of three directly similar figures.— **Triangle of velocities**, a vector diagram for the composition or resolution of velocities. See ★*polygon of vectors*.— **Triangle winding**, in *elect.*, a three-phase winding of armatures in which the free ends of the coils are connected pairwise to the collector rings.— **Wire triangle**, three bits of wire, generally either iron or platinum, twisted together so as to form a triangle, with the twisted ends forming arms projecting at the angles, used in chemical laboratories to support crucibles and evaporating-dishes over a lamp flame. Iron wire is often protected from burning by bits of tobacco-pipe stem or other fire-clay coating.

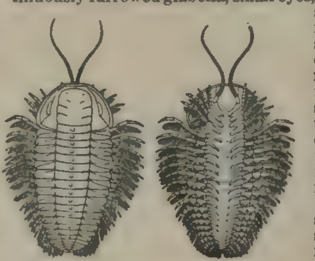
Triangular number. See ★*number*.

triannulate (trī-an′ụ̄-lāt), *a.* [*tri-* + *annulate.*] Consisting of three annuli, as certain segments of the body in some species of earthworms.

> The fourth and fifth segments are each divided into two by a median furrow; the sixth is *triannulate*.
>
> *Proc. Zool. Soc. London*, 1901, p. 197.

triarch, *a.* **2.** In *bot.*, having three centripetally developed xylem plates: said of vascular cylinders.

Triarthrus (trī-är′thrus), *n.* [NL., < Gr. τρι-, three, + ἄρθρον, a joint.] A genus of opisthoparian trilobites. They have a carapace of depressed elliptical form; a semicircular cephalon with large discontinuously furrowed glabella, small eyes, and rounded genal angles; 14–16 thoracic segments; and an entire pygidium with 6 axial rings. This genus is represented by a few species in the Silurian rocks, one of which, *Triarthrus becki*, is of great interest in connection with Beecher's researches upon its structure. Perfectly preserved specimens from the Utica shale near Rome, New York, have one pair of flagellate antennæ rising from the sides of the hypostome, and a pair of biramous limbs on each segment of the thorax and pygidium. The cephalon carries four limbs in addition to the antennæ, the proximal joints of which are enlarged to form gnathobases. The thoracic and abdominal limbs are longer, with jointed endopodites that served as crawling-legs, and exopodites furnished on their posterior sides with filiform lamellæ that served both as swimming and respiratory organs.



Triarthrus becki, dorsal and ventral aspects.
(From Zittel's "Palæontology.")

triaster (trī-as′tėr), *n.* [Gr. τρεῖς (τρι-), three, + ἀστήρ, a star.] In *cytol.*, an abnormal karyokinetic spindle having three instead of two poles or astrospheres. *W. Bateson*, Study of Variation, p. 430.

triazin, triazine (trī-az′in), *n.* [*tri-* + *azin.*] The general term applied, in organic chemistry, to compounds the molecules of which contain a cycloid group consisting of three nitrogen and three carbon atoms. Three such arrangements are possible, termed *symmetrical* or *cyanidine*,  *asymmetrical* or *a*-,  and *vicinal*, *osotriazin*, or *β*-, 
triazo-. A combining form sometimes used, in organic chemistry, to indicate the presence of three atoms of nitrogen in the molecule of a compound.

triazoate (trī-az′ọ-āt), *n.* [*triazo*(*ic*) + *-ate*¹.] A salt of triazoic or hydrazoic acid: as, sodium *triazoate*, NaN_3.

triazobenzene (trī-az″ọ-ben′zēn), *n.* Same as ★*diazobenzene imide*.

triazoic (trī-a-zō′ik), *a.* Noting an acid, the same as hydrazoic acid, HN_3. See ★*hydrazoic*.

triazole (trī-az′ōl), *n.* [*tri-* + *az*(*o*) + *-ole.*] A class-name applied, in organic chemistry, to compounds containing in their molecule a cyclic group consisting of three nitrogen and two carbon atoms, such as . Various arrangements of these atoms are possible.— **1,2,3-triazole**, a colorless oily compound, , prepared by heating the corresponding dicarboxylic acid. It boils at 208–209° C.

tribade (tri-bäd′), *n.* [F., < Gr. τριβάς (τριβαδ-), a woman who practises lewdness with other women.] A woman who is addicted to tribady.

> The tattoo designs among prostitutes are usually of this character; and such emblems are common among pæderasts and *tribades*.
>
> *H. H. Ellis*, The Criminal, p. 106.

tribadism (trib′ạ-dizm), *n.* Same as ★*tribady*. *Mann*, Forensic Medicine, p. 115.

tribady (trib′ạ-di), *n.* [F. *tribadie*, < *tribade.*] Carnal union of females with females; gratification of the sexual desire of females in an unnatural way; sapphism.

tribe, *n.*— **The lost tribes**, the ten tribes of Israel carried into exile by Shalmaneser, King of Assyria, to Lahlah and Habor. According to the Talmud, the ten tribes will never return. The literature on their identity and location is considerable, and many fanciful identifications have been made.

triblastic (trī-blas′tik), *a.* [Gr. τρεῖς (τρι-), three, + βλαστός, germ, + *-ic.*] Same as *triploblastic:* opposed to *diploblastic*.

> A possible basis for a division of the '*triblastic*' animals into two parallel but independent series.
>
> *Science*, Dec. 6, 1901, p. 891.

Triblemma (trī-blem′ạ̈), *n.* [NL. (a name invented by Robert Brown, published by Sprengel, 1830), < Gr. τρεῖς (τρι-), three, + βλέμμα, look, eye; in allusion to the appearance of the three-valved capsule.] A genus of plants of the family *Melastomaceæ*, natives of Brazil, of dwarf, sometimes creeping habit. The garden forms have membranous 5- to 7-nerved leaves; flowers 5-petaled, rose-colored, and arranged in scorpioid racemes or spikes. The genus includes about 9 species. They are essentially fanciers' plants. *T. marmoratum* (*Bertolonia marmorata* of Naudin), *T maculatum* (*Rhexia maculata* of Bonpland), and *T. Houtteanum* (*Bertolonia Houtteana* of Van Houtte) are some of the best-known forms.

triboluminescent (trib-ọ-lū-mi-nes′ẹnt), *a.* [Gr. τριβή, rubbing, friction, + E. *luminescent.*] Capable of excitation to luminescence by friction; exhibiting or capable of triboluminescence. *Science*, May 27, 1904, p. 827.

Tribonema (trī-bọ-nē′mạ̈), *n.* [NL. (Derbes and Solier, 1856), appar. < Gr. τριβή, rubbing, + νῆμα, thread.] A genus of grass-green filamentous algæ, the *Conferva* (which see) of some authors.

tribophosphorescence (trib-ọ-fos-fọ-res′ẹns), *n.* [Gr. τριβή, rubbing, + E. *phosphorescence.*] Phosphorescence excited by friction; that type of triboluminescence which outlasts the exciting cause. See ★*luminescence*.

tribophosphorescent (trib-ọ-fos-fọ-res′ẹnt), *a.* [Gr. τριβή, rubbing, + E. *phosphorescent.*] Capable of becoming phosphorescent by friction. *Science*, May 27, 1904, p. 826.

tribophosphoroscope (trib-ọ-fos′fọ-rọ-skōp), *n.* [Gr. τριβή, rubbing, + E. *phosphoroscope.*] An instrument for the investigation of tribophosphorescence. *Science*, May 27, 1904, p. 826.

tribromsalol (trī-brōm-sal′ol), *n.* [*tri-* + *brom*(*ine*) + *sal*(*icylic*) + *-ol.*] A trade-name of tribromphenyl salicylate, $H\overset{1}{O}C_6H_4\overset{2}{C}OOC_6H_2Br_3$, prepared by the action of tribromphenol on salicylic acid. It is a colorless powder and is used in medicine as a hypnotic and hemostatic. Also called *cordol*.

tribulum (trib′ụ̄-lum), *n.*; pl. *tribula* (-lạ̈). [L. *tribulum*. See *tribulation*.] An ancient Roman sledge for threshing; a broad, heavy board set with many teeth of stone or iron. The tribulum is still in use in northern Africa.

tribunal, *n.* **4.** [Sp. pron. trē-bö-näl′.] In villages in the Philippines, a kind of town-hall or common house, used as a meeting-place by the head men of the village, for the entertainment of travelers, and for other purposes of general interest.— **Mixed tribunal**, a name given to any of the courts established in Egypt in 1876 for the administration of civil justice between Egyptians and foreigners or between foreigners of different nationalities. They have slight criminal jurisdiction. They are composed of foreign and native judges, the former predominating. The Christian powers of Europe and the United States are represented. Also called *International Tribunals* or *Courts* and *Mixed Courts*.

> The jurisdiction of the Mixed Courts extends over all civil cases between Europeans and Egyptians, . . . also over civil cases between Europeans of different nationalities. *Cromer*, Modern Egypt, II. 318.

> The Mixed Tribunals or International Courts of Egypt constitute a unique institution.
>
> *Farman*, Egypt and its Betrayal, xxiv.

tributist (trib'ū-tist), *n.* [*tribut*(*e*) + *-ist.*] One who pays tribute. [Rare.]

Capitalists, landowners, inventors, Cornish *tributists* . . . are all brought under the stimulating influence of self interest. *Encyc. Brit.*, VI. 218.

tributyrin (trī-bū'ti-rin), *n.* [*tri-* + *butyrin.*] A colorless compound, $C_3H_5(OCOCH_2CH_2CH_3)_3$, contained in cows' butter and formed from glycerol and butyric acid. It boils at 285° C.

trica (trī'kạ̈), *n.*; pl. *tricæ* (-sē). [NL., irreg. < Gr. *θρίξ*, the hair (?).] A button-like apothecium in the lichen genus *Gyrophora*.

tricalcic (trī-kal'sik), *a.* Same as ⋆*tricalcium*.

tricalcium (trī-kal'si-um), *a.* Containing three atoms of calcium: as, *tricalcium* orthophosphate, $Ca_3(PO_4)_2$, the phosphate of calcium, which occurs in the mineral apatite, in animal bones and teeth, etc.—**Tricalcium phosphate.** Same as *tricalcic phosphate.* See ⋆*calcium phosphate.*

tri-car (trī'kär), *n.* [*tri-* + *car.*] A motor-vehicle having three wheels. One form is the motor-tricycle. *Cycle and Auto-trade Jour.*, Jan., 1905.

tricarballylic (trī'kär-ba̤-lil'ik), *a.* Having three carboxylic groups.—**Tricarballylic acid,** a colorless compound, $HOCOCH_2CH(COOH)CH_2COOH$, contained in unripe beet-roots and prepared from aconitic acid. It forms rhombic crystals and melts at 166° C.

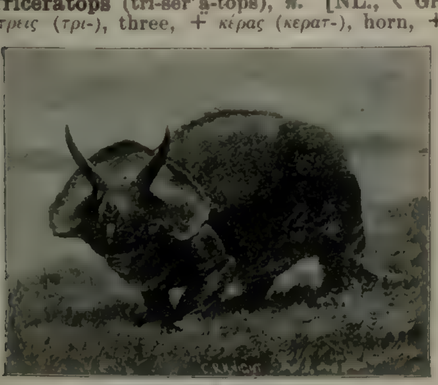
tricarbimide (trī-kär'bi-mid), *n.* Fulminic acid, $(HN:CO)_3$, a hypothetical compound of which various derivatives are known.

tricarinate (trī-kar'i-nāt), *a.* [*tri-* + *carinate.*] Having three ridges or keels, as does the carapace of the three-keeled emys, *Emys trijuga*. *Proc. Zool. Soc. London*, 1897, p. 198.

Triceps reflex. See ⋆*reflex*.

triceptor (trī-sep'tor), *n.* [*tri-* + *ceptor.*] In *physiol. chem.*, an intermediary body having three combining groups. *Vaughan and Novy*, Cellular Toxins, p. 132.

Triceratops (trī-ser'a̤-tops), *n.* [NL., < Gr. *τρεις* (*τρι-*), three, + *κέρας* (*κερατ-*), horn, + *ὤψ*, eye, face.] A genus of predentate dinosaurs belonging to the family *Ceratopsidæ*. It is characterized by a strong nasal horn-core, a pair of large pointed horn-cores above the orbits, a sharp cutting-beak, and an enormous cape-like bony frill extending over the neck from the hinder portion of the skull and having its margin studded with a row of sharp prominences. The brain is proportionately smaller than in any other reptile. The animal is quadrupedal, the pes having three-hoofed digits. The dermal armor is not observed. From the Laramie formation of Montana, Wyoming, and Colorado. See cut at ⋆*ceratopsid*.



Triceratops, one of the *Ceratopsidæ*.
(After a restoration by Knight.)

tricerium (tri-sē'ri-um), *n.*; pl. *triceria* (-ạ̈). Same as *tricerion*.

trichalcite (trī-kal'sīt), *n.* [*tri-* + *chalcite.*] Hydrous copper arsenate ($Cu_3As_2O_8 + 5H_2O$) occurring in radiated groups of a verdigris green color and in dendritic forms.

trichauxis (tri-kâk'sis), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *αὔξη*, for *αὔξησις*, increase.] Increase in number and thickness of the hairs.

trichesthesia (trik-es-thē'si-ạ̈), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *αἴσθησις*, perception.] A form of paræsthesia in which there is a sensation as of a hair on the skin. *Nature*, Aug. 7, 1902, p. 360.

trichi (trik'i), *n.*; pl. *trichies* (-iz). [An abbreviation of *Trichinopoli.*] A cheroot or cigar made at Trichinopoli. [Slang.]

Mon Jock, ye smoke the *trichi* coarse,
For ye are short o' cash.
An' best Havannahs couldna leave
Sae white an' pure an ash.
R. Kipling, The Fall of Jock Gillespie.

trichinophobia (tri-kī"nọ-fō'bi-ạ̈), *n.* [NL., < *trichina* + Gr. *-φοβια*, < *φοβεῖν*, fear.] Morbid and unreasonable fear of contracting trichinosis.

trichite, *n.* **3.** One of the minute acicular crystals of which the starch-grains of plants are supposed to consist.

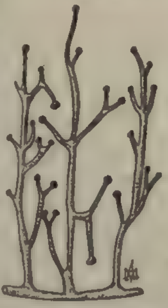
trichitis (tri-kī'tis), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *-itis.*] Inflammation of the hair-bulbs.

trichlorid (trī-klō'rid), *n.* [*tri-* + *chlorid.*] A compound containing three atoms of chlorin united to a more electropositive element or radical: as, phosphorus *trichlorid*, PCl_3.

trichobacteria (trik"ọ-bak-tē'ri-ạ̈), *n. pl.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + NL. *bacteria.*] All filamentous forms of bacteria, such as *Beggiatoa* and related genera. *A. Fischer.* Compare ⋆*haplobacteria.*

trichocephaliasis (trik"ọ-sef-a̤-lī'a̤-sis), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *κεφαλή*, head, + *-iasis.*] Infection with intestinal whipworms belonging to the nematode genus *Trichuris* (*Trichocephalus*), as *Trichuris trichiura*, one of the most common intestinal parasites of man.

Trichoderma (tri-kọ-dėr'mạ̈), *n.* [NL. (Persoon, 1796), < Gr. *θρίξ* (*τριχ-*), hair, + *δέρμα*, skin.] A genus of hyphomycetous fungi forming somewhat effuse, loose, pulvinate masses with branched conidiophores bearing unicellular hyaline or bright-colored conidia. About 13 species are known. *T. lignorum* is the most common and widely distributed species, forming small dark green masses on decaying wood throughout Europe and North America.



Trichoderma lignorum, showing conidiophores bearing conidia: much magnified.

Trichodiodon (trik-ọ-dī'ọ-don), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + NL. *Diodon.*] A genus of porcupine-fishes (*Diodontidæ*) of uncertain habitat.

trichoëpithelioma (trik-ọ-ep-i-thē-li-ō'mạ̈), *n.*; pl. *trichoëpitheliomata* (-ma̤-tạ̈). [NL., < Gr. *θρίξ* (*τριχ-*), hair, + NL. *epithelioma.*] A tumor formed by overgrowth of the epithelium of the hair-follicles.

In view of its follicular origin the name given it by Jarisch—*trichoepithelioma*—is most appropriate, and should be used to the exclusion of the many others used. *Jour. Med. Research*, March, 1908, p. 163.

trichoid (trik'oid), *a.* [Gr. *θρίξ* (*τριχ-*), hair, + *-oid.*] Having the form or appearance of a hair; hair-like.

Tricholoma (trik-ọ-lō'mạ̈), *n.* [NL. (Fries, 1821), < Gr. *θρίξ* (*τριχ-*), a hair, + *λῶμα*, a fringe, referring to the veil which sometimes remains as a fibrous fringe on the margin of the pileus.] A large genus of fleshy, white-spored, central-stemmed agaricaceous fungi. The stem is fleshy and the gills sinuate behind. The species grow upon the ground in woods or open places and many are edible. *T. personatum* is a common edible species found in Europe and North America.

trichomania (trik-ọ-mā'ni-ạ̈), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *μανία*, madness.] Same as ⋆*trichotillomania*.

trichomatous (tri-kom'a̤-tus), *a.* Same as *trichomatose*.

trichonosus (tri-kon'ọ-sus), *n.* [Gr. *θρίξ* (*τριχ-*), hair, + *νόσος*, disease.] Any disease of the hair. —**Trichonosus versicolor.** Same as *ringed* ⋆*hair.*

trichophagia (trik-ọ-fā'ji-ạ̈), *n.* [Gr. *θρίξ* (*τριχ-*), hair, + *φαγεῖν*, eat.] The habit of biting off the ends of the hairs of the beard or mustache.

trichophyllous (tri-kof'i-lus), *a.* [Gr. *θρίξ* (*τριχ-*), hair, + *φύλλον*, leaf, + *-ous.*] In *bot.*, having the leaves hair-like or composed of hair-like divisions.

trichophytosis (trik"ọ-fi-tō'sis), *n.* [NL., < *Trichophyton* + *-osis.*] Any disease due to the presence of a species of *Trichophyton*; specifically, ringworm of the scalp caused by *Trichophyton tonsurans*. *Med. Record*, Oct. 12, 1907, p. 621.

Trichopsetta (trik-op-set'ạ̈), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *ψῆττα*, flounder.] A genus of flounders found in the Gulf of Mexico.

trichoptilar (tri-kop'ti-lạ̈r), *a.* [*trichoptile* + *-ar*³.] Pertaining to, or having the structure of, a trichoptile.

trichoptile (trī-kop'til), *n.* [Gr. *θρίξ* (*τριχ-*), hair, + *πτίλον*, down.] Any one of the long, hair-like structures which form part of the downy covering of the young of some birds: typically present in the nestling of *Centropus sinensis*. The trichoptiles are prolongations of the horny sheath of the developing feather. *R. Shelford.*

trichorrhexis, *n.* See *trichorexis*.

Trichosphæria (trik-ọ-sfē'ri-ạ̈), *n.* [NL. (Fuckel, 1869), < Gr. *θρίξ* (*τριχ-*), hair, + *σφαῖρα*, a ball.] A genus of pyrenomycetous fungi having subglobose, superficial, pilose perithecia and hyaline 1- or 2-septate ascospores. About 40 species are known. They occur chiefly on decaying wood. *T. pilosa* is frequently found in Europe and North America and *T. Sacchari* is regarded as a wound parasite of sugar-cane; it does considerable damage, especially in the West Indies.

Trichostomata (trik-ọ-stō'ma̤-tạ̈), *n. pl.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *στόμα*, mouth.] A large order of ciliate protozoans. They have the mouth usually open, the pharynx tubular and open, and the edges of the mouth provided with undulating membranes which are continued into the pharynx, or the latter is provided with cilia. Food is usually brought to the neighborhood of the mouth in a whirlpool produced by the cilia. *Bütschli.* Compare ⋆*Gymnostomata.*

trichostomatous (trik-ọ-stō'ma̤-tus), *a.* [Gr. *θρίξ* (*τριχ-*), hair, + *στόμα* (*στοματ-*), mouth, + *-ous.*] Having the mouth and pharynx provided with undulating membranes or having cilia in the pharynx, as certain ciliate protozoans.

Trichothecium (trik-ọ-thē'ṣi-um), *n.* [NL. (Link, 1809), < Gr. *θρίξ*, a hair, + *θήκη*, receptacle.] A genus of hyphomycetous fungi having erect, simple septate conidiophores and two-celled hyaline or bright colored apical conidia. *T. roseum* is a cosmopolitan species forming pinkish masses on decaying plant and animal substances.

trichotillomania (trik"ọ-til-ọ-mā'ni-ạ̈), *n.* [NL., < Gr. *θρίξ* (*τριχ-*), hair, + *τίλλειν*, pluck, + *μανία*, madness.] The habit of continually pulling out hairs from the beard, at the nasal orifices, etc.

trichroism, *n.* **2.** In *biol.*, trimorphism in the coloring of a species.

trichromatism (trī-krō'ma̤-tizm), *n.* [Gr. *τρι-*, three, + *χρῶμα*(*τ-*), color, + *-ism.*] **1.** The condition of having or exhibiting three colors: said, specifically, of certain birds and insects which, apart from coloration due to age or sex, appear under three different color-phases. —**2.** The condition produced by the combination of three fundamental colors or pigments.

trickett (trik'et), *n.* [From the name of a noted oarsman of New South Wales.] A long drink of beer. *E. E. Morris*, Austral English. [Australian slang.]

Triconodonta (trī-kon-ọ-don'tạ̈), *n. pl.* [See *Triconodontidæ.*] The family *Triconodontidæ* and its allies considered as a suborder. *Osborn*, 1893.

triconodonty (trī-kon-ọ-don'ti), *n.* [*triconodont* + *-y*³.] The fact or condition of being trichonodont, or of having teeth with three long cusps in line with one another, such as are found in most of the earless seals. *Proc. Zool. Soc. London*, May, 1899, p. 571.

tricosane (trī'kọ-sān), *n.* [Gr. *τρι-*, three, + *εἴκοσι*, twenty, + *-ane.*] A colorless hydrocarbon, $CH_3(CH_2)_{21}CH_3$, of the methane series. It is contained in paraffin from shale and in petroleum, and may be prepared by the action of hydriodic acid and phosphorus on the chlorid, $C_{23}H_{46}Cl_2$. It crystallizes in lustrous leaflets, melts at 47.7° C., and boils at 234° C. under 15 millimeters pressure.

tricresol (trī-krē'sol), *n.* [*tri-* + *cresol.*] A trade-name of the mixture from the three cresols from coal-tar. It is used as an antiseptic and disinfectant.

tricurvate (trī-kėr'vāt), *a.* [L. *tri-*, three, + *curvus*, curve, + *-ate*¹.] Having three curves or a threefold curve.

Tricuspid insufficiency. See *valvular* ⋆*insufficiency*.

tricyanide (trī-sī'a̤-nid), *n.* [*tri-* + *cyanide.*] A compound containing three combining units of the radical cyanogen united to a relatively electropositive element or radical: as, arsenic tricyanide, $As(CN)_3$.

tricyclic (trī-sik'lik), *a.* [Gr. *τρι-*, three, + *κύκλος*, circle, + *-ic.*] In *chem.*, consisting of three rings or closed chains of atoms (usually of carbon) united together, with any other atoms united to those of such rings. See *tricyclic* ★*system*.

tridecane (trī-dek′ān), *n.* [*tri-* + *decane.*] A colorless liquid hydrocarbon, $CH_3(CH_2)_{11}CH_3$, of the methane series, prepared by the action of hydriodic acid and phosphorus on tridecylic acid. It melts at −6.2° C. and boils at 234° C.

tridecatoic (trī″dek-ạ-tō′ik), *a.* [Gr. τρι-, three, + δεκα, ten, + *-t-* + *-o-* + *-ic.*] Noting an acid, the same as tridecylic acid. See ★*tridecylic.*

tridecylic (trī-dẹ-sil′ik), *a.* [Gr. τρι-, three, + δέκα, ten, + *-yl* + *-ic.*] Noting a colorless crystalline compound, $CH_3(CH_2)_{11}COOH$, of the acetic-acid series, prepared by the oxidation of methyl tridecyl ketone. It melts at 40.5° C., and boils at 236° C. under 100 millimeters pressure.

trider (trī′dėr), *n.* [Gr. τρίδειρος, three-necked, ‹ τρι-, three, + δειρή, neck.] In the sponge-spicules, a tetraclon in which one arm differs from the rest in length or shape.

Tridimensional analyser. Same as ★*movement analyser.*

tridimensionality (trī″di-men-shọn-al′ị-ti), *n.* [*tridimensional* + *-ity.*] The property or quality of being tridimensional. *E. B. Titchener*, Exper. Psychol., I. i. 138.

triennium (trī-en′i-um), *n.*; pl. *triennia* (-ạ̈). [L. See *triennial.*] A period of three years.

trier, *n.* 3. A tool used in trying, testing, or sampling.

> These samples are drawn by means of a "*trier*," or clover-seed sampler, which is thrust through the bag, allowing the seed to run out at the open end of the *trier*.
> *Yearbook U. S. Dept. Agr.*, 1901, p. 237.

triethylamine (trī-eth-il-am′in), *n.* [*tri-* + *ethylamine.*] A colorless oil, $(C_2H_5)_3N$, prepared by the action of ethyl iodide on ammonia. It has an odor of ammonia and boils at 88.8° C.

triferous (trif′e-rus), *a.* [L. *trifer*, bearing thrice, ‹ *tri-*, three, + *ferre*, bear, + *-ous.*] Bearing fruit three times a year: said of plants. *Encyc. Dict.*

triferrin (trī-fer′in), *n.* [L. *tri-*, three, + *ferrum*, iron, + *-in*^{2}.] An iron compound of paranucleinic acid, said to contain 22 per cent. iron and 2½ per cent. phosphorus. It is hematinic.

trificial (trī-fish′ạl), *a.* [L. *tri-*, three, + *facies* (in comp. *-ficies*), face, + *-al*^{1}.] In *anat.*, same as *trifacial*. *Encyc. Dict.*

trifilar (trī-fī′lạr), *a.* [L. *tri-*, three, + *filum*, thread, + *-ar*^{3}.] Consisting of three threads or filaments: said of a form of suspension used in some physical instruments in which the suspended part is held up by three threads or wires attached at symmetrically placed points.

> The chairman referred to an inertia table designed by Prof. Perry in which an aluminium ring was supported by a *trifilar* suspension. *Nature*, Feb. 5, 1903, p. 334.

trifluormethane (trī″flö-ọr-meth′ān), *n.* [*tri-* + *fluor* + *methane.*] Same as ★*fluoroform.*

triformol (trī-fôr′mol), *n.* [*tri-* + *form*(*aldehyde*) + *-ol.*] Same as ★*paraformaldehyde.*

trig^{3} (trig), *v. i.* [*trig*^{3}, *n.*] To act as an obstacle or check; act as a brake. See ★*trig*^{3}, *n.*, 3. [Local.]

> Put the swale hay to the rest of the pitches. It will *trig* better than gravel. Don't let them put a chain round a runner. You want to keep your road so smooth that every load of logs will go down there like a boy down a barn rollway. *Holman Day*, King Spruce, xxv.

trig^{3}, *n.* 3. Material, such as gravel or hay, placed on a slippery declivity on a road to check the motion of a sled passing over it. [Local.]

> Twenty rods further on they struck the hay, spread thickly for the *trig* — the checking of the runners. And the sled-runners, biting it, jerked and halted, the bind-chains creaked, the chafing logs groaned — and they were stopped! *Holman Day*, King Spruce, xxvi.

trig. An abbreviation (*a*) of *trigonometrical*; (*b*) of *trigonometry.*

triga (trī′gạ̈), *n.*; pl. *trigæ* (-jē). [L.] In *Rom. antiq.*, a chariot rigged for three horses. See *biga* and *quadriga.*

Trigeminal foramen. See ★*foramen.*

trigenic (trī-jen′ik), *a.* [Gr. τρι-, three, + -γενης, -producing, + *-ic.*] Noting an acid, a colorless compound, $NH\left\langle\begin{matrix}CO.NH\\CO.NH\end{matrix}\right\rangle CH.CH_3$, prepared by the action of cyanic acid on aldehyde. It crystallizes in small prisms and decomposes when heated. Also called *ethylidenebiuret.*

trigger-block (trig′ėr-blok), *n.* That element of the mechanism in a Corliss valve-gear by which the valve-stem is released from the rod which actuates it, permitting the valve to close suddenly by gravity or a spring or both. The trigger is released by a push or pull from a rod connected to the governor of the engine, whereby the speed is made to determine the point at which the trigger is pulled, and the admission of steam cut off. *D. K. Clark*, Steam Engine, III. 58.

Triglops (trig′lops), *n.* [NL., ‹ *Trigla* + Gr. ὤψ, eye (appearance).] A genus of cottoid fishes found in the northern Atlantic and Pacific.

Triglopsis (trig-lop′sis), *n.* [NL., ‹ *Trigla* + Gr. ὄψις, sight, appearance.] A genus of cottoid fishes found in deep waters of the Great Lakes.

trig-meat (trig′mēt), *n.* Shell-fish. [Eng. sailors' slang.]

trigon^{1}, *n.* 6. The prominent anterior portion of an upper molar tooth forming a triangular area at whose angles are the three principal cusps — the protocone, paracone, and metacone. The study of the Mesozoic mammals has left no doubt that the upper and lower triangles, or 'trigon' and 'trigonid,' were derived from the reptilian protocone by the addition of lateral cusps. See cut under ★*tooth*, 1.

trigon. An abbreviation (*a*) of *trigonometrical*; (*b*) of *trigonometry.*

Trigonal symmetry. See ★*symmetry*, 6.

trigonalid (trī-gon′ạ-lid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Trigonalidæ.*

II. *a.* Having the characters of or belonging to the family *Trigonalidæ.*

trigonalyid (trig-ọ-nal′i-id), *n.* and *a.* Same as ★*trigonalid.*

trigone, *n.* — **Cerebral trigone.** Same as *fornix cerebri.*

trigonelline (trig-ọ-nel′in), *n.* [*Trigonella* + *-ine*^{2}.] A colorless alkaloid,  contained in the seed of fenugreek, *Trigonella Fænum-græcum*, and prepared artificially from nicotinic acid. It crystallizes in prisms and melts at 130° C.

trigonid (trī-gon′id), *n.* [*trigon*^{1}, 6, + *-id.*] The anterior portion of a lower molar tooth, forming a prominent triangular area, at whose angles lie the three principal cusps, the protoconid, paraconid, and hypoconid: correlated with ★*trigon*^{1}, 6.

trigonitis (trig-ọ-nī′tis), *n.* [NL., ‹ *trigone* + *-itis.*] Inflammation of the bladder confined to the region of the trigone.

trigonocephalic (trig″ọ-nọ-se-fal′ik), *a.* [Gr. τρίγωνος, triangular, + κεφαλή, head, + *-ic.*] In *anthrop.*, having that form of head which results from premature closing of the medio-frontal suture and which is characterized by flat sides of the head which converge in an angle toward the medial line of the frontal bone.

> If the halves of the frontal unite before birth, it is wedge-shaped or *trigonocephalic.*
> *Encyc. Brit.*, XXV. 398.

Trigonocephalus, *n.* 2. [*l. c.*] A trigonocephalic skull or person.

trigonocephaly (trig″ọ-nō-sef′ạ-li), *n.* [*trigonocephal*(*ic*) + *-y*^{3}.] The character or condition of being trigonocephalic.

> The strange cranial deformation known as *trigonocephaly*, in which the forehead is constricted and more or less pointed, and the temporal region and the base of the skull are broadened. *Nature*, March 26, 1903, p. 498.

Trigonoceras (trig-ọ-nos′e̤-ras), *n.* [NL., ‹ Gr. τρίγωνος, triangular, + κέρας, horn.] A genus of orthochoanitic nautiloid cephalopods having gyroceraconic shells the volutions of which are triangular or tricarinate in section, with surface ornamented by longitudinal ribs. It occurs in Carboniferous rocks.

trigonodont (trī-gon′ọ-dont), *a.* [Gr. τρίγωνον, a triangle (see ★*trigon*^{1}, 6), + ὀδούς (ὀδοντ-), tooth.] Having molars whose anterior primitive cusps are so arranged that lines drawn between them would form a triangle.

> '*Trigonodont*' is most appropriate because the first step in molar morphology is to identify the primitive triangle. *Amer. Nat.*, Dec., 1897, p. 1002.

Trigonometric ratios. See ★*ratio.*

trigonometry, *n.* — **Analytic trigonometry**, the body of doctrine in which the algebraic relations of the trigonometric functions are developed. — **Plane trigonometry**, trigonometry which comprises the solution of plane triangles and investigations of plane angles and their functions. — **Spherical trigonometry**, the application of goniometry or angular analysis to spherical geometry. It treats principally of the solution of spherical triangles.

Trigonum interpedunculare, a space between the peduncles of the crura of the cerebrum. *Baldwin*, Dict. of Philos. and Psychol., I. 143. — **Trigonum olfactorium**, a triangle bounded by the external and internal roots of the olfactory nerve and forming the base of the olfactory tubercle. See *caruncula mammillaris.*

trigram, *n.* 2. A geometrical form consisting of three elements, like a triangle, a triskele, a heart, etc. — 3. In *geom.*, three coplanar, non-copunctal straights.

> The swastika itself merely represents two superposed *trigrams*. *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. 842.

Diagonal trigram, in *projective geom.*, the trigram determined by the three diagonals of a tetragram.

trihedral, *a.* **II.** *n.* The figure determined by three non-coplanar rays from a point.

trihedron (trī-hē′drọn), *n.*; pl. *trihedra* (-drạ̈). [Gr. τρι-, three, + ἕδρα, base.] In *geom.*, a figure having three faces or sides.

trihemitonion (trī″hem-i-tō′ni-on), *n.*; pl. *trihemitonia* (-ạ̈). [Gr. τριημιτόνιον, ‹ τρι-, three, + ἡμιτόνιον, a half-tone.] In *anc. Greek music*, an interval equal to three hemitones; a minor third.

trihydrated (trī-hī′drā-tėd), *a.* [*tri-* + *hydrate* + *-ed*^{2}.] Containing in combination three molecules of water, as crystallized copper nitrate, the composition of which is $Cu(NO_3)_2.3H_2O$.

trike (trīk), *n.* and *v.* A contraction of *tricycle.* [Slang.]

> "Bike" is familiar, but displeasing to the present reviewer, who has not heard "*trike*" for tricycle ventured often. *N. and Q.*, 10th ser., II. 359.

triker (trī′kėr), *n.* [*trike* + *-er.*] One who rides a tricycle. [Slang.]

> I was further gratified with the intimation that the peccant *triker* had been discovered, and that there would be a nuisance the less upon the London street-ways from that date. *Pall Mall Gazette*, May 15, 1901, p. 1.

trikosane (trik′ọ-sān), *n.* Same as ★*tricosane.*

trikresol (trī-krē′sol), *n.* Same as ★*tricresol.*

tril, *v.* and *n.* A simplified spelling of *trill.*

trilby (tril′bi), *n.* [From the name *Trilby.* See def.] A foot: from the beautiful left foot of the heroine of Du Maurier's story 'Trilby,' of which it was said that there was only one in Paris to match it and that was Trilby's other foot. [Humorous slang.]

> Lovely eyes, and all the rest of it; splendid figure; . . . and awfully pretty *Trilbys*. *Clyde Fitch*, Two Letters.

trillo^{2} (trēl′yō), *n.* [Appar. Sp. *trillo*, a harrow used in threshing grain, ‹ *trillar*, thresh grain.] A trade-name for the 'beard' which covers valonia, the acorn-cups of *Quercus Ægilops*. This beard, which is easily separated in handling, is richer in tannin than the cup itself. See *valonia.*

trilobe (trī′lōb), *v. t.*; pret. and pp. *trilobed*, ppr. *trilobing*. [L. *tres* (*tri-*), three, + E. *lobe.*] To divide into three lobes.

> The evagination has become *trilobed* by the anterior and the anterior ventral depressions.
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 64.

Triloburus (trī-lọ-bū′rus), *n.* [NL., ‹ Gr. τρι-, three, + λοβός, lobe, + οὐρά, tail.] A subgenus of *Centropristis*, a serranoid fish of the Atlantic coast of the United States.

trilophous (tril′ọ-fus), *a.* [Gr. τρεῖς (τρι-), three, + λόφος, crest, + *-ous.*] In sponge-spicules, having three rays forked or branched. Compare ★*monolophous.*

trim, *v.* **I.** *trans.* 11. In *elect.*, to replace the burned-out carbons or electrodes of (an arc-lamp) by new ones.

II. *intrans.* 2. To be in a given condition of trim. — **To trim by the head**, to have a greater draft at the bow than at the stern. — **To trim by the stern**, to have a greater draft at the stern than at the bow.

trim, *n.* 2. (*b*) The difference in draft at the bow of a vessel from that at the stern. *White*, Manual of Naval Arch., p. 5.

trimachy (trim′ạ-ki), *n.* [Gr. τρεῖς (τρι-), three, + μάχη, fight.] A contest in which three are engaged; a contest among three. [Rare.]

trimellic (trī-mel′ik), *a.* [L. *tri-*, three, + *mel* (*mell-*), honey, + *-ic.*] Same as ★*trimellitic.*

trimellitic (trī-mẹ̄-lit′ik), *a.* Noting an acid, a colorless compound, $C_6H_3(\overset{1.\,2.\,4}{\mathrm{COOH}})_3$, prepared by the oxidation of colophony by means of nitric acid. It forms warty crusts and melts and evolves water at 216° C. Also called *asymmetrical benzene tricarboxylic acid.*

trimere (trī′mēr), *n.* (Gr. *τριμερής*, having three parts. See *trimerous.*] In the reticulum or supporting skeleton of the hexactinellid sponges, a mesh of the third order. See ★*mere*6.

Trimerella (trim-ẹ-rel′ạ̈), *n.* [NL., < Gr. *τριμερής*, having three parts, + L. dim. *-ella.*] A genus of atrematous brachiopods having thick calcareous biconvex shells of ovate outline, with prominent cardinal areas. The interiors of the valves are provided with long, narrow, doubly vaulted platforms extending forward from the hinge-plates. The genus is represented in the Upper Silurian dolomites of the Baltic region of Europe and in the Guelph dolomites of similar age in North America.

Trimeroceras (trim-ẹ-ros′ẹ-ras), *n.* [NL., < Gr. *τριμερής*, having three parts, + *κέρας*, horn.] A genus of orthoceraconic cephalopods having short stout shells, the apertures of which are trilobate. It occurs in the Silurian formations.

trimes (trim′es), *n.* [AS. *trimes, trymes*, also (with a leaning on *threó, thrȳ*, three) *thrymes*, < LL. *tremis*, a coin, the third part of an aureus, < *tres, tri-*, three, formed after the analogy of LL. *semis*, a coin, half an aureus, L. *semis*, half, half of a unit, < *semi-*, half, + *as*, a unit: see *as*4.] In Anglo-Saxon use, the name of a coin: (*a*) used to translate Latin *as* and Latin-Greek *stater*; (*b*) in England, a coin of the value of threepence (in this use found only in gen. pl. *thrimsa, thrymsa*).

trimesic (trī-mē′sik), *a.* [Gr. *τρι-*, three, + (?) *μέσος*, middle, + *-ic.*] Noting an acid, a colorless compound, $C_6H_3(\overset{1\,3\,5}{\mathrm{COOH}})$, prepared by the oxidation of the corresponding triethylbenzene. It crystallizes in thick prisms, melts above 300° C., and sublimes at a lower temperature. Also called *symmetrical benzene tricarboxylic acid.*

trimesitic (trī-mẹ̄-sit′ik), *a.* [Gr. *τρι-*, three, + *μεσίτης*, a mediator (lit. being in the middle), + *-ic.*] 1. Pertaining to trimesitic acid.—2. Incorrect form for ★*trimesic.*—**Trimesitic acid.** (*a*) A colorless compound,  $N{<}^{\mathrm{C(COOH).CH}}_{\mathrm{C(COOH).CH}}{>}\mathrm{CCOOH}$, prepared by the oxidation of the corresponding trimethylpyridine. It crystallizes in long plates or needles, and melts at 227° C. Also called *symmetrical pyridine tricarboxylic acid.* (*b*) Incorrect form for *trimesic acid.* See ★*trimesic.*

trimetaphosphate (trī″met-a-fos′fāt), *n.* [*tri-* + *metaphosphate.*] A salt which may be viewed as arising from the polymeric union of three molecules of a monometaphosphate: as, sodium *trimetaphosphate*, $Na_3P_3O_9$.

trimethyl (trī-meth′il), *a.* [*tri-* + *methyl.*] In *organic chem.*, a term noting the presence, in the molecule of a compound, of three methyl groups, CH_3. It is also used as a combining form.

trimethylene (trī-meth′i-lēn), *n.* [*tri-* + *methylene.*] A colorless gas,  $CH_2{<}^{CH_2}_{CH_2}$, prepared by the action of zinc-dust and alcohol on trimethylene bromide. It melts at −126° C. Also called *cyclopropane.*

trimethylenediamine (trī-meth″i-lēn-dī-am′-in), *n.* [*tri-* + *methyl* + *di-*2 + *amine.*] A poisonous ptomaïne obtained from cultures of the cholera bacillus in bouillon.

trimmer, *n.* 1. (*f*) In *wood-working*, a large power-saw table for trimming lumber. The surface of the table has a series of feed-chains that bring the lumber laid on the table to a gang of saws placed in a row at the back of the table. Each saw is hung on a balanced frame called a *ladder*, and in the normal position is idle under the table. Each ladder is controlled by a foot-pedal, and to use the machine two or more pedals are touched, bringing a group of saws into action above the top of the table. The lumber to be trimmed is then laid on the feed-chains and is carried to the saws, cut, and delivered at the outboard side of the table. To trim to other dimensions other groups of saws are brought into action, the number of combinations being sufficient for a large range of work. A ten-saw machine is 7 feet 6 inches wide and 22 feet long. Another type of machine employs saws suspended above the table and is called an *over-cut trimmer.* (*g*) In *elect.*: (1) One who renews the carbons in arc-lamps and adjusts the lamps for further service. *Elect. Rev.*, Sept. 3, 1904, p. 332. (2) An implement for cutting the worn ends of metallic dynamo brushes.—**Over-cut trimmer.** See ★*trimmer*, 1 (*f*).—**Two-saw trimmer**, a trimmer employing only two saws on a fixed arbor.

trimmer-beam (trim′ėr-bēm), *n.* A short beam framed into two others, at right angles, by tenons which fit mortises in the latter: used to receive and support the ends of shorter beams or joists parallel to the main supporting beams, to form a well or interruption of the series of main-beams where they cannot be continuous from wall to wall. Such wells and trimmer-beams occur when stairways or hearths are to be provided, and around elevator-wells or -shafts, hoistways, and the like. In light work such trimmers are often fastened by nails: or they may be suspended by iron clamps or stirrups.

trimming-machine, *n.*—**Trimming-and-beading machine.** See ★*beading-machine.*

trimming-spout (trim′ing-spout), *n.* A delivery-spout from a grain-elevator or a coal-pocket, or from a conveyer delivering sand, coal, broken stone, or other material in bulk to a car or boat, and designed to deliver the material in different directions at will to place it evenly or in such a way as to trim the vessel and keep it upon an even keel, or to distribute the load to the car in such a manner that the larger part of the weight shall come over the trucks and prevent uneven strains in the floor of the car. It is so jointed that the open end can be slued in any direction while delivering the material.

trimming-tank (trim′ing-tangk), *n.* In *ship-building*, a deep watertight compartment, in the bow or in the stern, which can be filled with water-ballast to trim the vessel down at the bow or the stern respectively. See also ★*deep-tank.*

trimorph (trī′môrf), *n.* [Gr. *τρίμορφος*, having three forms.] In *crystal.*, a substance which exhibits trimorphism, or one of the three forms which such a substance presents: thus the term may be applied to titanium dioxid, or to rutile, one of its three forms of crystallization.

Trin. An abbreviation of *Trinity.*

Trinacrian (tri-nā′kri-an), *a.* Of or relating to Trinacria (an ancient name of Sicily); Sicilian.

> Far less abhorr'd than these
> Vex'd Scylla, bathing in the sea that parts
> Calabria from the hoarse *Trinacrian* shore:
> Nor uglier follow the night-hag, when call'd
> In secret riding through the air she comes.
> *Milton*, Paradise Lost, ii. 661.

trineural (trī-nū′ral), *a.* [Gr. *τρι-*, three, + *νεῦρον*, nerve, + *-al*1.] Relating to three nerves.—**Trineural fascicle** or **fasciculus.** See ★*fascicle.*

T-ring (tē′ring), *n.* A ring the cross-section of which has the shape of a capital letter T; specifically, a ring for piston-packing in an engine-cylinder, which has a T-section. The head of the T gives a larger contact-area against the bore and the stiffness of the upright resists tendency to deform radially; there is also less weight or mass than if the ring were of full rectangular or square section. *Power*, April, 1904, p. 212.

trinitride (trī-nī′trid), *n.* [*tri-* + *nitride.*] A hydrazoate or salt of hydrazoic acid.

trinitrocellulose (trī-nī-trọ-sel′ụ̄-lōs), *n.* [*tri-* + *nitro*(*gen*) + *cellulose.*] A name often, though improperly, applied to guncotton under the assumption that the formula of cellulose or pure cotton fiber is $C_6H_{10}O_5$ and that the action of nitric acid converts it into $C_6H_7O_5(NO_2)_3$: but this latter formula should be written $C_6H_7O_2(NO_3)_3$, since the product is not a nitro compound but a true nitrate, and the molecule of cellulose contains many times the number of atoms assumed in the above formula, which merely serves to indicate the relative proportions of the constituents.

trinitrocresol (trī-nī-trọ-krē′sol), *n.* A substance obtained by the action of concentrated nitric acid on cresol from coal-tar. It forms yellow needle-like crystals, sparingly soluble in cold water, melting at about 100° C., burning when ignited by a flame, but exploding violently from the shock of a heavy detonating fuse. It has been used in France as an explosive agent under the name *cresilite*, and its ammonium salt similarly in Austria as *ecrasite.* It has been to a limited extent applied in medicine as an antiseptic.

trinitronaphthalene (trī-nī-trọ-naf′thạ-lēn), *n.* A substance produced by the action of concentrated nitric acid on naphthalene from coal-tar, forming yellow crystals which may be caused to explode by sufficiently sudden heating. It has been used as an ingredient of *grisonnite*, a French explosive agent.

trinitrophenol (trī-nī-trọ-fē′nol), *n.* [*tri-* + *nitro*(*gen*) + *phenol.*] A substance, $C_6H_2.HO.(NO_2)_3$, produced by the action of concentrated nitric acid on phenol or carbolic acid from coal-tar, and obtainable also by several other reactions. It forms yellow crystals, which are sparingly soluble in cold water, melt at 122° C., burn on the application of flame, and explode by the shock of a detonating fuse. It is more generally known as *picric acid.* This acid and its salts are used under various names as explosives, *melinite* and *lyddite* being examples. It is also extensively used in dyeing wool and silk, and has been met with as an adulterant of beer, giving a bitter taste which simulates that due to the use of hops.

Trinity formation, lily. See ★*formation*, ★*lily.*

trinucleate (trī-nū′klẹ̄-āt), *a.* [*tri-* + *nucleus* + *-ate*1.] In *cytol.* and *pathol.*, having three nuclei: said of certain cells and abnormal eggs.

> Binucleate eggs are not uncommon, *trinucleate* eggs are more rare. *Bot. Gazette*, May, 1903, p. 344.

Trinucleus (trī-nū′klẹ̄-us), *n.* [NL., < L. *tri-*, three, + *nucleus*, a kernel.] A genus of small blind hypoparian trilobites, typical of the family *Trinucleidæ*, with relatively large crescentic cephalic shield provided with prominent tumid glabella and cheeks, broad pitted border, and long sharp genal spines, thorax with six segments, and a small pygidium. The genus is indicial of Lower Silurian formations.

triobolon (tri-ob′ọ̄-lon), *n.*; pl. *triobola* (-lạ̈). [Gr. *τριώβολον*, < *τρι-*, three, + *ὀβολός*, obolus.] A Greek silver coin, the hemidrachm, of the value of 4½ pence.

triod, *n.* (*b*) An abnormal or derived form of the 4-rayed spicule.

triœcism (trī-ē′sizm), *n.* [Gr. *τρι-*, three, + *οἶκος*, house, + *-ism.*] In *bot.*, a condition in which the same species has staminate, pistillate, and hermaphrodite flowers, all on different plants. Sometimes called *cœnodiœcism.*

trional, *n.* It is diethyl-sulphone-methyl-ethyl-methane, $CH_3C(C_2H_5)(C_2H_5SO_2)_2$, prepared in a similar manner to sulphonal, which it resembles in general properties. It crystallizes in lustrous plates melting at 76° C.

triose (trī′ōs), *n.* [*tri-* + *-ose.*] 1. A class-name applied, in organic chemistry, to carbohydrates containing three atoms of oxygen in their molecules, such as glycerose (OCH.CH-(OH)CH_2OH).—2. A combining-form to indicate the combination into one molecule of three carbohydrate radicals, as in raffinose (melitriose), which is a saccharotriose.

trioxymethylene (trī″ok-si-meth′i-lēn), *n.* [*tri-* + *oxy*(*gen*) + *methylene.*] Same as ★*paraformaldehyde* and *metaformaldehyde.* Some authorities apply the name only to the latter, but no satisfactory distinction between the two substances seems to have been established.

trioxypurin (trī″ok-si-pū′rin), *n.* [*tri-* + *oxy*(*gen*) + (?) *pus* (*pur-*), pus, + *-in*2.] Same as *uric acid.*

Trioxys (trī-ok′sis), *n.* [NL., < Gr. *τρι-*, three, + *ὀξύς*, sharp.] 1. A genus of braconid insects.—2. [*l. c.*] An insect of the genus.—**Red-legged trioxys**, an American braconid insect, *Trioxys testaceipes*, parasitic on the orange-aphis and other plant-lice.

trip1, *n.* 11. The set of mine cars run into or out of the mine as a unit or train. [Eng.]—**Trip valve-gear.** See ★*valve-gear.*

tripalmitin (trī-pal′mi-tin), *n.* [*tri-* + *palmit*(*ic*) + *-in*2.] A colorless compound, $C_3H_5(C_{16}H_{31}O_2)_3$, contained in all fats which yield palmitic acid when hydrolyzed and prepared by heating glycerol with palmitic acid. It forms ill-defined crystals melting at 62° C.

tripara (trip′ạ-rạ), *n.* [NL., < L. *tri-*, three, + *-para*, < *parere*, bring forth.] A woman who has borne three children.

trip-catch (trip′kach), *n.* The detent which engages the trip or releasing-element in a Corliss valve-gear and holds it until, by the action of the governor, the catch is thrown out, or the release is tripped, and the valve stem is permitted to return to its position when closed. *Uhland*, Corliss Engines, p. 193.

trip-coil (trip′koil), *n.* Same as ★*tripping-coil. Trans. Amer. Inst. Elect. Engin.*, 1903, p. 657.

trip-engine (trip′en″jin), *n.* An engine having a valve-gear which is tripped, released, or disconnected to cut off the admission of steam, as opposed to an engine in which the valve is at all times directly actuated by the eccentric. The Corliss engine is an example of a trip-engine.

tripeptide (trī-pep′tid), *n.* [*tri-* + *pept*(*ic*) + *-ide*¹.] A condensation-product resulting from the union of three amino-acid radicals, as alanyl-leucyl-glycin. Products of this order are possibly formed during proteolytic digestion. See ★*digestion products.*

triphase (trī′fāz), *a.* [Gr. τρι-, three, + φάσις, phase.] In *elect.*, same as ★*three-phase. Jour. Brit. Inst. Elect. Engin.*, 1901–02, p. 67.

triphasic (trī-fā′zik), *a.* [*triphas*(*e*) + *-ic.*] Occurring in three phases.

> In the frog's heart the variation shown by the capillary electrometer is diphasic. For the human heart the later work seems to show a *triphasic* current.
> *Buck*, Med. Handbook, III. 105.

triphenetol (trī-fē′ne-tol), *n.* [*tri-* + *phenetol.*] A general name, in organic chemistry, for compounds containing, in their molecule, three phenetol radicals ($C_2H_5OC_6H_4-$).

triphenin (trī-phē′nin), *n.* [*tri-* + *phen*(*yl*) + *-in*².] A trade-name of ethoxypropionylaniline, $C_2H_5OC_6H_4NHCOCH_2CH_3$. It is a colorless crystalline compound, and resembles phenacetin in general properties and medicinal uses. It differs from this substance in containing a propionyl instead of an acetyl group.

triphenyl (trī-fē′nil), *n.* [*tri-* + *phenyl.*] A term applied, in organic chemistry, to compounds containing, in their molecule, three phenyl radicals (C_6H_5). It is also used as a combining-form.

triphenylated (trī-fē′ni-lā-ted), *a.* [*tri-* + *phenyl* + *-ate* + *-ed*².] Containing three combining-units of the radical phenyl (C_6H_5).

triphenyl-methane (trī-fē″nil-meth′ān), *n.* [*triphenyl* + *methane.*] A colorless compound, $(C_6H_5)_3CH$, prepared by the action of aluminium chlorid and benzene on chloroform. It is trimorphous, forms rhombic crystals, melts at 92° C., boils at 359° C., and is the parent substance of many valuable dyes.

triphenyl-methyl (trī-fē″nil-meth′il), *n.* [*triphenyl* + *methyl.*] A colorless crystalline compound, $((C_6H_5)_3C)_2$, prepared by the action of zinc on triphenyl-chlormethane. It combines with great ease with oxygen and the haloids, and for this reason was at first supposed to have the formula $(C_6H_5)_3C$. It is probably hexaphenylethane, $(C_6H_5)_3C\text{-}C\text{-}(C_6H_5)_3$, but may exist in part in an isomeric form and it dissociates readily into two molecules of $(C_6H_5)_3C$.

triphenyl-rosaniline (trī-fē″nil-rọ-zan′i-lin), *n.* [*triphenyl* + *rose*¹ + *aniline.*] An aniline dye, $C_{20}H_{18}N_3(C_6H_5)_3O$. Also called *aniline blue.*

trip-hook (trip′hu̇k), *n.* An instrument of torture of some kind. See the extract. [Rare.]

> Ah, they come! Fly you, save yourselves, you two
> The dead back-weight of the beheading axe!
> The glowing *trip-hook*, thumbscrews and the gadge!
> *Browning*, A Soul's Tragedy.

Triphragmium (trī-frag′mi-um), *n.* [NL. (Link, 1825), < Gr. τρεῖς (τρι-), three, + φράγμα, a partition.] A genus of rust-fungi having three-celled teleutospores and uredospores on the same host. Six species are known. *T. Ulmariæ* is frequently found on *Filipendula Ulmaria* in Europe, and *T. echinatum* on umbelliferous plants in North America.

triple. **I.** *a.*—**Triple crown.** (*c*) In *horse-racing* in England, the three prizes known as the 'Two Thousand Guineas,' the 'Derby,' and the 'St. Leger': as, "he is one of the select few horses who have won the *triple crown*." *Spirit of the Times*, cxxxvi. 421.—**Triple-effect evaporation.** See *multiple-effect* ★*evaporation.*—**Triple first,** an honor-man, in the University of Cambridge, England, who obtains a first in three Triposes; the threefold honor thus obtained.—**Triple root, union, valve.** See ★*root*¹, etc.

II. *n.* **3.** In *geom.*: (*a*) A triad of points. (*b*) A triad of systems of orthogonal surfaces.—**Weingarten triple,** in *geom.*, a triad of systems of orthogonal surfaces in which one system is of pseudospheric surfaces of the same radius (or also of surfaces of constant positive curvature).

triple-expansion (trip″l-eks-pan′shọn), *a.* Having the expansion from initial to final pressure in three steps or stages: used of steam in a steam-engine or of an engine itself in which the steam expands continuously in three cylinders of successively increasing volume, or in which more than three cylinders cause the steam to expand progressively, the exhaust from one being the driving steam for the next in series, in three such processes of expansion.

triple-geared (trip′l-gērd), *a.* **1.** Noting a combination of gear-wheels in a train for driving the spindle of a tool or other axle (where resistance is to be overcome) so designed that the reduction in speed is effected by a reduction in two steps, or with three parallel axes for the gear, from the driving source of power to the driven part: as in large lathes, drills, and the like which are electrically driven.—**2.** Fitted with three trains of gear- or toothed wheels, whereby with a given driving speed the speed of the driven axis may be one of three differing speeds for varying resistances.—**3.** Fitted with a train of gears between the driving and driven axles such that the speed of the driver is three times that of the driven, or the gain in power is threefold.

triplegia (trī-plē′ji-ạ̈), *n.* [NL., < Gr. τρι-, three, + πληγή, stroke.] Hemiplegia with paralysis of one limb of the other side. *Med. Record*, July 18, 1903, p. 116.

triple-riveted (trip′l-riv″et-ed), *a.* Riveted, as a plate, with three rows of rivets parallel to the edge: usually with the rows staggered, or with the third row (the farthest from the edge) specially spaced.

triple-screw (trip′l-skrö), *a.* Having three screws, one of which is in the center line: restricted to war-ships and turbine-driven steamers.

triplet, *n.* **8.** A bicycle for three riders.

trip-lever (trip′lev″ėr), *n.* **1.** A lever for operating a stop or throw-out device; a lever which is caught or tripped; a lever which releases some part.

> The arm, B, is mounted on a horizontal movable stem which projects outside of the cylinder. On this stem is fixed a *trip lever*, C, which holds B against A by the spring, D. *Sci. Amer. Sup.*, July 23, 1904, p. 23880.

2. Specifically, a lever used in many forms of releasing valve-gear, in which the valve stem or spindle is not positively connected to the mechanism which actuates the valve, so as to follow the motion of the latter in both directions. As the lever moves a certain distance a detent or trip attached to the valve-stem and carried by the motion of the lever is released from the latter, and the valve closes suddenly by gravity or spring, or both. This is a feature of the Sickles and Corliss valve-gear. See ★*trigger-block*, ★*trip-catch*, *Corliss* ★*valve.*

triplex, *n.* **II.** *a.* Three-fold; triple; specifically, having three elements or working parts: used of pulleys with three sheaves, of pumps with three plungers, of steam-engines with three cylinders, etc.

triplexity (trī-plek′si-ti), *n.* Same as *triplicity.* [Rare.]

trip-line (trip′līn), *n.* **1.** In *lumbering*, a light rope attached to a dog-hook, used to free it when employed in breaking a jam or a skidway.—**2.** See ★*haul-back.* Also called *throw-line.*

triplopia (trip-lō′pi-ạ̈), *n.* [NL., < Gr. τριπλόος, triple, + ὤψ, eye.] Perception of three images of the same object; triplopy.

triplumbic (trī-plum′bik), *a.* [L. *tri-*, three, + *plumbum*, lead, + *-ic.*] Containing three atoms of lead, as triplumbic oxyacetate ($Pb_3(C_2H_3O_2)_2O_2$), the solution of which constitutes the Goulard lotion used in medicine.

Triply orthogonal. See ★*orthogonal.*

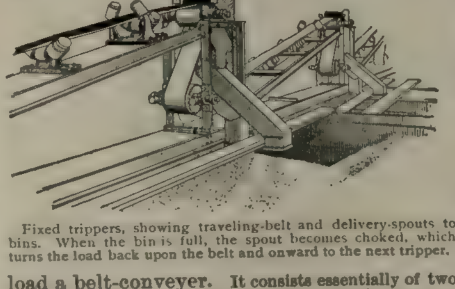
tripod, *n.* **5.** In the sponge-spicules, a three-rayed element having the arms of equal length and sloping from the point of union.

tripod-compass (trī′pod-kum″pạ̈s), *n.* See ★*compass.*

Tripodic walk, a method of walking, common in certain insects, in which two legs of one side and one of the other are moved at the same time.

tripolith (trip′ọ̄-lith), *n.* [*tripo*(*li*) + Gr. λίθος, stone.] Same as *tripoli.*

tripper, *n.* **5.** A machine used to trip or unload a belt-conveyer. It consists essentially of two rolls placed one over the other in a suitable frame or support. The traveling-belt, guided upward by rollers supported by the frame of the tripper, passes over the upper roll, turns abruptly downward and backward and under the lower roll, and then onward in a horizontal direction. The load, which rests on the traveling-belt, is carried over the upper roll, when the sudden change in the direction of the belt throws it off into a spout which leads it away to the bins or other storage-places. The tripper may be fixed at one point, or it may travel on rails placed on each side of the conveyer for convenience in unloading at different points. The fixed tripper may be arranged to discharge into a bin and to stop automatically when the bin is full. See ★*conveyer*, 4.



Fixed trippers, showing traveling-belt and delivery-spouts to bins. When the bin is full, the spout becomes choked, which turns the load back upon the belt and onward to the next tripper.

tripping-coil (trip′ing-koil), *n.* The coil of an electromagnet the armature of which, by its movement, releases the escapement of any mechanical device, such as the spring of a circuit-breaker. *Trans. Amer. Inst. Elect. Engin.*, 1903, p. 1162.

tripping-lever (trip′ing-lev″ėr), *n.* Same as ★*trip-lever.*

tripping-relay (trip′ing-rẹ̄-lā″), *n.* See ★*relay*¹.

trippkeite (trip′ke-īt), *n.* [Named after Dr. P. *Trippke* (died 1880).] An arsenite of copper occurring in bluish-green tetragonal crystals: found in Chile.

tripple (trip′l), *v. i.* [D. *trippelen*, mince one's steps.] To amble: said of a horse; also, to ride at this gait. [South Africa.]

tripple (trip′l), *n.* [*tripple*, *v.*] An amble. [South Africa.]

tripsill (trip′sil), *n.* A timber placed across the bottom of the sluiceway in a splash-dam, against which rest the planks by which the dam is closed.

tripuhyite (tri-pö′i-īt), *n.* [*Tripuhy* (see def.) + *-ite*².] An iron antimoniate, $Fe_2Sb_2O_7$, occurring in greenish-yellow fragments in the cinnabar-bearing gravels of Tripuhy, Minas Geraes, Brazil.

tripus (trī′pus), *n.*; pl. *tripi* (-pī). [Gr. τρίπους, three-footed. See *tripod.*] A monster having three feet.

tripyramidal (trī-pi-ram′i-dạ̈l), *a.* [*tripyramid* + *-al*¹.] Characterized by the presence of three types of pyramids, as that class of the hexagonal system to which apatite belongs. See ★*symmetry*, 6.

triquadrantal (trī-kwod-ran′tạ̈l), *a.* [*tri-*, three, + *quadrant* + *-al*¹.] In *spherics*, made by three quadrants: as, a *triquadrantal* triangle. *Crockett*, Trigonometry, p. 126.

triquaternion (trī-kwạ̈-tėr′ni-ọn), *n.* [*tri-* + *quaternion.*] In *math.*, an expression of the form $q_1 + \omega q_2 + \mu q_3$, where q_1, q_2, q_3 are quaternions, and where the symbols ω and μ are commutative with quaternions, and where $\omega^2 = 0$, and $\mu^2 = 1$, and $\mu\omega = -\omega\mu = \omega$. *G. Combebiac*, 1902.

triquetrum, *n.* **2.** An instrument used by ancient and medieval astronomers for measuring altitudes of heavenly bodies; the parallactic rules of Ptolemy. It consisted of three rods: one vertical, the second jointed to it at the top and carrying sights, the third jointed to the first at the bottom. The second and third were graduated.

> With the Copernican "*triquetrum*" the measured apparent intervals between any two of the heavenly bodies could be depended upon to within ten minutes; with the new Repsold heliometer the error of a single observation is less than one-tenth of a second of arc.
> *Smithsonian Rep.*, 1891, p. 120.

triradiation (trī″rā-di-ā′shọn), *n.* [*tri-* + *radiation.*] Threefold radiation; radiation in three directions.

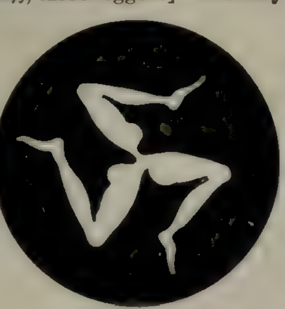
> The callosal eminence . . . , the hippocamp, and the occipital eminence form an irregular *triradiation.*
> *Buck*, Med. Handbook, II. 177.

trirhombohedral (trī-rom-bō-hē′drạ̈l), *a.* [*tri-* + *rhombohedral.*] In *mineral.*, characterized by the presence of three types of rhombohedrons, as that class of the trigonal division of the hexagonal system to which phenacite belongs. See ★*symmetry*, 6.

trisectrix (trī-sek′triks), *n.*; pl. *trisectrices* (-trī′sēz). [NL., < L. *tri-*, three, + NL. *sectrix.*] A curve employed in the trisection of an angle.—**Maclaurin's trisectrix,** the curve whose equation is $x(x^2 + y^2) = \frac{r}{2}(y^2 - 3x^2)$.

trisilicate (trī-sil′i-kāt), *n.* [*trisilic*(*ic*) + *-ate*¹.] A salt corresponding to the hypothetical trisilicic or polysilicic acid, $H_4Si_3O_8$, which may be viewed as the product of the union of three molecules of silicon dioxid and two molecules of water ($2H_2O + 3SiO_2$).

triskelion (tris-kē'li-on), *n.*; pl. *triskelia* (-ạ̈). [NL., < Gr. *τρισκελής*, three-legged.] A widely distributed symbolic device composed of three arms or branches radiating from a center. It does not seem to be connected with the swastika, which has four arms. It first appears in a simple form in the coinage of Lycia. In antiquity it was the national symbol of Sicily. The three legs appear in the Sicilian coinage and upon vases. They also compose the armorial emblem of the Isle of Man. See *triskele*.



Triskelion.

trisnitrate (tris-nī'trāt), *n.* Same as *trinitrate*.

trisoctahedron, *n.* This name is usually limited to the isometric form having triangular faces, formerly called a *trigonal trisoctahedron*.

trisplanchnia (trī-splangk'ni-ạ̈), *n.* [NL.] Same as ⋆*trisplanchnitis*.

trisplanchnitis (trī-splangk-nī'tis), *n.* [NL., < Gr. *τρι-*, three, + *σπλάγχνα*, bowels, + *-ιτις*.] An obsolete name for cholera.

trisquare (trī'skwãr), *a.* [*tri-* + *square*.] Three-square; having three equally wide plane faces.

tristetrahedron (tris"tet-rạ-hē'dron), *n.*; pl. *tristetrahedra* (-drạ̈). [Gr. *τρίς*, thrice, + E. *tetrahedron*.] A twelve-faced solid of the tetrahedral class of the isometric system, the faces being arranged in groups of three so that the crystal resembles a tetrahedron. The name is usually given to the form having equal triangular faces and corresponding to the trapezohedron of the holosymmetric class, but it is also extended to that having trapeziform faces and corresponding to the trisoctahedron. The latter is then called a *tetragonal tristetrahedron* and the former a *trigonal tristetrahedron*.—**Tetragonal tristetrahedron.** Same as *deltoid* ⋆*dodecahedron*.

tristich (tris'tik), *n.* [Gr. *τρεῖς* (*τρι-*), three, + *στίχος*, row.] In *pros.*, a group of three lines; a three-line stanza.

tristigm (trī'stim), *n.* [Gr. *τρι-*, three, + *στίγμα*, a point.] In *geom.*, three non-costraight points, with their three connectors. Also *tristim*.—**Codot tristigm.** See ⋆*codot*.

tristim, *n.* Same as ⋆*tristigm*.

Tristychius (trī-stik'i-us), *n.* [NL.: properly *Tristichius*; < Gr. *τρίστιχος*, in three rows, < *τρι-*, three, + *στίχος*, row.] A genus of Carboniferous sharks, of the family *Cestraciontidæ*, in which the dorsal fin-spines have a few sharp longitudinal ridges distally.

trisubstituted (trī-sub'sti-tụ̄-ted), *a.* In *chem.*, noting compounds having in their molecule three atoms or radicals which have been introduced in place of three other atoms or radicals in the molecule of the parent substance. Thus chloroform ($CHCl_3$) is a trichlorsubstituted methane.

> Fatty acids and their derivatives show increasing polymerization with increasing concentration when dissolved in phenol. While the position and nature of the substituting groups affect the apparent molecular weight, *trisubstituted* acids are less associated than disubstituted acids, and these latter less than the monosubstituted acids. *Jour. Phys. Chem.*, April, 1904, p. 298.

trisulphate (trī-sul'fāt), *n.* [*tri-* + *sulph*(*ur*) + *-ate*¹.] A salt containing three combining-units of the radical of sulphuric acid (SO_4).

trisulphid (trī-sul'fid), *n.* [*tri-* + *sulphid*.] A compound containing three atoms of sulphur united to a relatively electropositive element or radical, as arsenic *trisulphid*, As_2S_3 (orpiment).

trisulphone (trī-sul'fōn), *n.* [*tri-* + *sulph*(*ur*) + *-one*.] A class-name applied, in organic chemistry, to compounds containing in their molecule three bivalent sulphone groups ($>SO_2$).

trisulphonic (trī-sul-fon'ik), *a.* [*trisulphon*(*e*) + *-ic*.] In *organic chem.*, noting compounds containing in their molecule three sulphonic-acid radicals ($-SO_3H$).

Triteleia (trit-e-lĕ'ạ̈), *n.* [NL. (Douglas, 1830), < Gr. *τρεῖς*, three, + *τέλειος*, perfected: because of the remarkable symmetry in the ternary arrangement of the floral organs.] A genus of small bulbous plants of the family *Liliaceæ*, natives of South America and western North America. From *Milla* the genus is distinguished by having the stamens inserted in two series in the tube of the perianth rather than in one series in its throat. From *Hookera* it is separated by the absence of articulation at the apex of the pedicel. *T. uniflora* (known also as *Milla uniflora*), a grassy-leaved, lilac-flowered plant, is grown in pots and sometimes in the hardy border. See ⋆*Brodiæa*.

trithiophosphate (trī"thī-ọ-fos'fāt), *n.* [Gr. *τρι-*, three, + *θεῖον*, sulphur, + E. *phosphate*.] A salt corresponding to the hypothetical trithiophosphoric acid, H_3PS_3O, which may be viewed as ordinary phosphoric acid having three of its four atoms of oxygen replaced by sulphur. This acid is not itself known in the free state.

triticality (trit-i-kal'i-ti), *n.* [*tritical* + *-ity*.] Triteness; a trite utterance or expression.

> Our Ex-Chancellor has been promulgating *triticalities* (significant as novelties, when he with his wig and lordhood utters them) against the Aristocracy; whereat the upper circles are terribly scandalized.
> *Carlyle*, in Correspondence of . . . Carlyle and . . . [Emerson, I. 71.

triticin (trit'i-sin), *n.* [L. *tritic*(*um*), wheat, + *-in*².] An amorphous hygroscopic carbohydrate contained in the rhizome of *Agropyron repens* or couch-grass.

tritocerebral (trī-tọ-ser'ẹ-brạl), *a.* [*tritocerebrum* + *-al*¹.] Of or pertaining to the tritocerebrum of an insect's brain.—**Viallanes' tritocerebral lobes of the brain.** See ⋆*brain*.

tritocerebron (trī-tọ-ser'ẹ-bron), *n.* Same as ⋆*tritocerebrum*.

tritocerebrum (trī-tō-ser'ẹ-brum), *n.*; pl. *tritocerebra* (-brạ̈). [NL., < Gr. *τρίτος*, third, + L. *cerebrum*, brain.] The third segment of an insect's brain, comprising the esophageal lobes. *A. S. Packard*, Text-book of Entom., p. 231.

tritocone (trī'tọ-kōn), *n.* The postero-external cusp of an upper premolar tooth. *Proc. Zool. Soc. London*, 1896, p. 563.

tritopene (trī'tọ-pēn), *n.* [Gr. *τρίτος*, third, + *ὄπιον*, opium, + *-ene*.] A colorless alkaloid, $C_{42}H_{54}O_7N_2$, contained in opium. It crystallizes in prisms or plates, melts at 182° C., and closely resembles laudanine and laudanosine in reactions and constitution.

tritor (trī'tôr), *n.* [NL., < L. *tritor*, a rubber, a grinder, < *terere*, rub, grind. See *trite*¹.] A specially white and hard part of the teeth of some fishes. In the *Chimæra* it appears as a slightly raised and rounded elevation of the dental plates. *Parker and Haswell*, Zoology, II. 178.

tritotoxin (trī-tō-tok'sin), *n.* [Gr. *τρίτος*, third, + E. *toxin*.] A derivative of a toxin which has the least marked affinity for the corresponding antitoxin, as compared with proto- and deuterotoxin.

tri-tri (trē'trē), *n.* [W. Indian.] A fish, *Sicydium plumieri*, belonging to the family *Gobiidæ*: found in fresh waters of the West Indies.

> The "*tri-tri*" or West Indian whitebait (Sicydium plumieri), although of small size, is one of the important food fishes of these islands. It is an inhabitant of the mountain streams, and occurs in the quiet pools and eddies formed by the back-water from rapids, from the lowlands well up into the highlands. Its range is about the same on St. Vincent as that of the "trout" (Agonostomus monticola), and, like that fish, it is absent from certain of the rivers. *Amer. Nat.*, May, 1905, p. 335.

Tritubercular theory. See ⋆*theory*.

Trituberculata (trī-tụ̄-bėr-kū-lā'tạ̈), *n. pl.* [NL.: see *trituberculate*.] A division of the polyprotodont marsupials containing those with trituberculate molars. It includes among extinct species *Amphitherium*, and among living forms the dasyures and opossums.

trituberculist (trī-tụ̄-bėr'kū-list), *n.* [*trituberculy* + *-ist*.] One who believes in the tritubercular theory of the origin of the molar cusps in mammals. [Rare.]

> What I desire to point out is that there is no evidence to show that this type of upper molar arose in the way suggested by *trituberculists*.
> *Proc. Zool. Soc. London*, 1896, p. 590.

trituberculosectorial (trī-tụ̄-bėr'kụ̄-lō-sek-tō"ri-ạl), *a.* [*tritubercular* + *sectorial*.] Said of a molar tooth adapted for cutting flesh, but having its principal cusps arranged in a definite triangular pattern. [Rare.]

trituberculy (trī-tụ̄-bėr'kụ̄-li), *a.* [*tritubercul*(*ar*) + *-y*³.] Noting that condition of the molar teeth in which they have three cusps or prominences. *Proc. Zool. Soc. London*, 1897, p. 714.

tritural (trit'ụ̄-rạl), *a.* [See *triturate*.] Adapted for grinding or triturating. [Rare.]

> The roof of the mouth between this *tritural* border is raised into a dome with the concavity downwards.
> *Proc. Zool. Soc. London*, 1901, I. 172.

trityl (trī'til), *n.* [?Gr. *τρίτος*, third, + *-yl*.] An old name for propyl.

triumf, triumfal, triumfant. Amended spellings of *triumph*, etc.

triumphator (trī-um-fā'tọr), *n.* [L., < *triumphare*, triumph.] In *Rom. antiq.*, a general to whom a triumph was accorded.

triungulin, *n.* **2.** The first larval stage of a stylopid insect.

> The behaviour of stylopised wasps towards their parasites is usually friendly, although it is probable that the males are attacked by the wasps whenever they attempt to copulate with the females. Their distribution and occurrence are erratic; due apparently to the fact that as "*triungulins*" they do not readily become transferred from one wasp to another and consequently to other nests. *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 494.

triungulus (trī-ung'gụ̄-lus), *n.*; pl. *triunguli* (-lī). [NL., < L. *tri-*, three, + *ungula*, claw.] Same as ⋆*triungulin*, 2.

Triuridales (trī-ụ̄-ri-dā'lēz), *n. pl.* [NL. (Engler, 1897), < *Triuris* (*Triurid-*) + *-ales*.] An order of monocotyledonous plants containing the family *Triuridaceæ* only.

trivariant (trī-vā'ri-ạnt), *a.* [*tri-* + *variant*.] In *phys. chem.*, having a variance equal to three. The variance (V) of a chemical system is expressed by the equation $V = C + 2 - \phi$, where C is the number of independent components and ϕ is the number of phases in which the system may exist.

> By removing one of the *n*-phases of the bivariant system we can form *n* different *trivariant* systems. Each of these systems can be in equilibrium at a series of temperatures and under a series of pressures. The temperature and the pressure can be chosen independently, but then the state of equilibrium of the *trivariant* system is completely determined.
> *Jour. Phys. Chem.*, Oct., 1904, p. 486.

trivirgate (trī-vėr'gāt), *a.* [*tri-* + *virgate*.] Marked with three transverse bands, or cross-stripes.

trocha (trō'chä), *n.* [Sp.] **1.** A narrow path.—**2.** *Milit.*, a strategic line of defenses, such as blockhouses or other fortifications across a given territory.

> A cordon of troops was stationed from north to south of the island [Cuba] between Mariel and Majana, trenches were thrown up, entanglements laid down, and blockhouses erected at short intervals. A corps of 20,000 men was stationed on this *trocha* or military cordon, and 10,000 troops were dispatched to Pinar del Rio, to march through the province and force a fight with the followers of Maceo whenever possible. *Encyc. Brit.*, XXVII. 306.

trochalopod (trọ-kal'ọ-pod), *n.* and *a.* **I.** *n.* A member of the *Trochalopoda*.

II. *a.* Having the characters of or belonging to the *Trochalopoda*.

Trochalopoda (trok-ạ-lop'ọ-dạ̈), *n. pl.* [NL., < Gr. *τροχαλός*, round, + *πούς* (*ποδ-*), foot.] One of the two main groups of the *Heteroptera*. It includes all of the terrestrial families except the *Saldidæ*, and it also includes the *Nepidæ* of the aquatic series. The posterior coxæ are nearly globose, partly embedded in cavities, and have a rotary motion.

trochalopodous (trok-ạ-lop'ō-dus), *a.* Pertaining to or having the characters of the *Trochalopoda*.

trocheidoscope (trō-kī'dọ-skōp), *n.* [Gr. *τροχός*, wheel, + *εἶδος*, form, + *σκοπεῖν*, view.] A rotating disk having colored sectors, used to exhibit combinations of colors.

trochelminth (trọ-kel'minth), *n.* [Gr. *τροχός*, wheel, + *ἕλμινς* (*ἑλμινθ-*), worm.] One of the *Rotifera*, or wheel-animalcules.

trochiferous (trọ-kif'ẹ-rus), *a.* [Gr. *τροχός*, wheel, + L. *ferre*, bear, + *-ous*.] In *zoöl.*, wheel-bearing; having a wheel-like organ, as many rotifers.

trochleariform (trok-lẹ̄-ar'i-fôrm), *a.* [NL. *trochlearis*, of a pulley, + L. *forma*, form. The proper form would be **trochleiform*.] Pulley-shaped; trochlear.

trochoblast (trok'ọ-blȧst), *n.* [Gr. *τροχός*, a round cake, a wheel, + *βλαστός*, germ.] In *embryol.*, one of the cells or blastomeres which give rise to the prototroch of the trochophore larva in marine annelids.

> In the details of the cleavage there is a striking agreement with that of the polychætous annelids. Cells arising from the first quartette identical in origin with the "primary *trochoblasts*" of the annelids, together with cells derived from the first and second quartettes, make up a cell row which very probably forms at least a part of the second ciliated band situated on the head of the adult, in a position corresponding with that of the prototroch of the annelid larva.
> *Amer. Nat.*, July-Aug., 1904, p. 500.

trochocephalic (trok-ọ-se-fal'ik), *a.* [*trochocephal*(*y*) + *-ic*.] In *anthrop.*, having that round form of skull which results from premature synosteosis of the middle part of the coronal suture.

trochocephaly (trok-ọ̄-sef′ạ-li), *n.* [Gr. *τροχός*, a round cake, a wheel, + *κεφαλή*, head, + *-y*³.] A state in which the head is spherical in shape, owing to early bony union of the parietal and frontal bones.

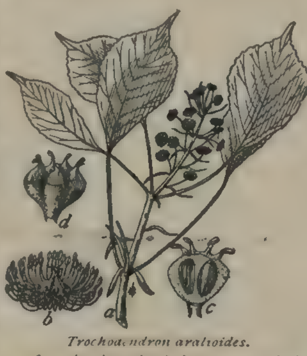
trochoceracone (trok-ọ̄-ser′ạ-kōn), *n.* [NL., < Gr. *τροχός*, a round cake, a wheel, + *κέρας*, horn, + *κῶνος*, a cone.] A nautiloid cephalopod shell which is loosely coiled in depressed asymmetrical spirals, as in the genus *Trochoceras*.

trochoceran (trọ̄-kos′ẹ-ran), *a.* Having the characters of the shell of *Trochoceras*, that is, of a loosely coiled depressed spiral nautiloid.

Trochoceras (trọ̄-kos′ẹ-ras), *n.* [NL., < Gr. *τροχός*, a round cake, a wheel, + *κέρας*, horn.] A genus of nautiloid cephalopods with shell loosely coiled in an asymmetrical depressed spiral. The coils are rounded or oval in section in adult and gerontic stages, and show traces of an impressed zone in nepionic and neanic stages. The surface is usually ornamented by oblique ribs or striations. The genus occurs in Silurian rocks.

Trochodendraceæ (trok″ọ̄-den-drā′sẹ̄-ē), *n. pl.* [NL. (Prantl, 1888), < *Trochodendron* + *-aceæ*.] A small family of dicotyledonous archichlamydeous (achlamydeous) plants of the order *Ranales*, typified by the genus ★*Trochodendron* (which see). There are four genera, trees or shrubs chiefly of China and Japan. *Eucommia ulmoides* yields the Chinese medicinal bark tu-chung. See *Cercidiphyllum*.

Trochodendron (trok-ọ̄-den′dron), *n.* [NL. (Siebold and Zuccarini, 1835), < Gr. *τροχός*, a wheel, a circle, + *δένδρον*, a tree. The name alludes to the circular grouping of the anthers and the insertion of the leaves in whorls.] A genus of plants, type of the family *Trochodendraceæ*. It contains but one species, *Trochodendron aralioides*, a Japanese tree with evergreen poplar-like leaves in whorls of four, and flowers in terminal racemes, devoid of calyx and corolla, with about 40 stamens and a 5- to 8-celled many ovuled ovary ripening into a capsule.



Trochodendron aralioides.

a, flowering branch; *b*, flower; *c*, vertical section of fruit; *d*, fruit.

trochoid, *n.* 1. In *geom.*: (*b*) The curve described by any point on a radius of the rolling circle, or on a radius produced when two circles are tangent either externally or internally and, while one of them remains fixed, the other rolls upon it without sliding.—**Common trochoid**, one neither curtate nor prolate.

trochoidal, *a.*—**Trochoidal theory of deep-sea wave.** See ★*wave*¹.

trochoides (trọ̄-koi′dēz), *n.* Same as *trochoid*, 2.

Trocholites (trok-ọ̄-lī′tēz), *n.* [NL., < Gr. *τροχός*, a wheel, a hoop, + *-l-* + *-ites*, E. *-ite*².] A genus of nautiloid cephalopods which have closely coiled shells with broad volutions and distinct impressed zone: found in the Silurian rocks of America.

Trochonema (trok-ọ̄-nē′mạ̈), *n.* [NL., < Gr. *τροχός*, a wheel, a hoop, + *νῆμα*, a thread.] A genus of rhipidoglossate gastropods which have pyramidal or turbinate, deeply umbilicate, carinate shells with striated surfaces and round apertures. They occur in the Silurian formation.

trochophore (trok′ọ̄-fōr), *n.* [Gr *τροχός*, a wheel, + *-φορος*, < *φέρειν*, bear.] A larval type found in many invertebrates and exhibiting many points of resemblance to an adult trochelminth or rotifer. Also termed *trochosphere*.

> Numerous features, e.g. a transitory metamerism of the mesoblastic bands, and of the nerve-cord in the *trochophore*, indicate close relationship between the Sipunculids and Annelids.
> *Jour. Roy. Micros. Soc.*, Feb., 1904, p. 64.

troctolite (trok′tọ̄-līt), *n.* [Gr. *τρώκτης*, a gnawer, a sea-fish (see *trout*), + *λίθος*, stone, = *-lite*².] In *petrog.*, a name given by von Lasaulx (1875) to a variety of gabbro composed of lime-soda feldspar and olivin, with a little diallage. Bonney has applied the name especially to the more or less serpentinized forms. Compare ★*forellenstein*.

trof, *n.* and *v.* An amended spelling of *trough*.

troglodytine (trog-lod′i-tin), *a.* [*Troglodytinæ*.] Resembling or having the characters of the wrens, or *Troglodytinæ*.

trogonine (trō′gọ̄-nin), *a.* [*trogon* + *-ine*².] Resembling or having the characters of the trogons, or *Trogonidæ*.

trogositid (trō-gọ̄-sit′id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Trogositidæ*.

II. *a.* Having the characters of or belonging to the family *Trogositidæ*.

troll-drum (trōl′drum), *n.* [*troll*² + *drum*.] A drum used by northern magicians in rites associated with trolls.

> In Lapland, where designs of this character ornamented the *troll-drums* of the magicians.
> *Jour. Hellenic Studies*, XIV. 270.

trolleite (trol′ẹ̄-īt), *n.* [Named after H. G. *Trolle*-Wachmeister, a Swedish chemist.] A hydrated aluminium phosphate occurring in pale-green compact forms.

trolley, *n.* 5. Hence, a street-railway car propelled electrically by current taken by a trolley from a conductor. [Colloq.]

> The service first performed by the *trolley* was purely local. It operated only in the streets of cities and their immediate suburbs. *N. Y. Tribune*, Dec. 23, 1901.

6. A hand-car used on the rails by workmen on a railroad.

> Fetch my *throlly*, an' six of the jildiest [smartest] men, and run me up in shtyle.
> *R. Kipling*, The Big Drunk Draf', in Soldiers Three, p. 52.

Bow trolley, a current-collecting device for electric railways employing the overhead supply, which uses instead of the revolving trolley-wheel a bow-like structure sliding along the overhead wire. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 111.—**Underground trolley**, a rolling-contact device used, on electric railways provided with an underground insulated trolley-wire, for conveying current to the motors of a moving car.

trolley, trolly (trol′i), *v. t.* and *i.*; pret. and pp. *trolleyed*, *trollied*, ppr. *trolleying*, *trollying*. **I.** *trans.* To convey by a trolley, as by a truck or car running upon a rail and driven mechanically or electrically.

> The same windlass that *trolleyed* the cars across the rivers was used to tow out the sediment gage cars.
> *Sci. Amer.*, Feb. 1, 1902.

II. *intrans.* To ride in an electrically-propelled car using the trolley system to transmit current to the motors.

trolley-car (trol′i-kär), *n.* A car used on an electric trolley-road.

trolley-hanger (trol′i-hang″ėr), *n.* In *elect.*, a device for supporting and properly insulating trolley-wires. *Houston*, Dict. Elect.

trolley-harp (trol′i-härp), *n.* The support or holder, at the free end of a trolley-pole, between the arms of which the trolley-wheel is supported. *Elect. World and Engin.*, June 18, 1904, p. 1167.

trolley-head (trol′i-hed), *n.* In *elect.*, the support which carries the trolley-wheel of an electrically driven car.

trolley-line (trol′i-līn), *n.* A line of electric cars run on the trolley system.

trolley-rail (trol′i-rāl), *n.* In *elect.*, a rail forming the trolley-circuit of an electric railway; a rail which serves to convey current to the motors of an electric railway. *Trans. Amer. Inst. Elect. Engin.*, 1897, p. 355.

trolley-scale (trol′i-skāl), *n.* See ★*abattoir scales*.

trolley-wheel (trol′i-hwēl), *n.* A metal wheel at the free end of the trolley-pole of an electric railway-car, by means of which contact with the overhead feed-wires is maintained.

tromomania (trom-ọ̄-mā′ni-ạ̈), *n.* [NL., < Gr. *τρόμος*, trembling, + *μανία*, madness.] Delirium tremens.

tromometrical (trom-ọ̄-met′ri-kạl), *a.* Same as *tromometric*.

tromometry (trọ̄-mom′e-tri), *n.* [Gr. *τρόμος*, trembling, + *-μετρια*, < *μέτρον*, measure.] The measurement of vibrations of the earth's crust; the scientific use of the tromometer.

Tromoptera (trọ̄-mop′tẹ-rạ̈), *n. pl.* [NL., < Gr. *τρόμος*, trembling, + *πτερόν*, wing.] A superfamily of dipterous insects including the families *Nemestrinidæ*, *Acroceridæ*, *Bombyliidæ*, *Therevidæ*, and *Scenopinidæ*.

trompe², *n.* 2. Same as *horn*, 4 (*b*) and (*c*).

trompette (trom-pet′), *n.* [F., a trumpet. See *trumpet*.] In the hurdy-gurdy, the highest of the open strings, usually tuned to middle C or to the D above it.

Trona red. Same as ★*dianthine*.

troostite, *n.* 2. A transition form between austenite and pearlite, in steel. See ★*sorbite*, 2.

> Austenite, *troostite*, sorbite, and other constituents [of iron] have also been described. *Encyc. Brit.*, XXIX. 572.

troostitic (trös-tit′ik), *a.* [*troostit*(*e*) + *-ic*.] Of or pertaining to troostite; resembling troostite; containing or composed of troostite.

trop. An abbreviation of *tropic*, *tropical*, or *tropically*.

tropacocaine (trō-pạ-kō′kạ̈-in), *n.* An alkaloid obtained from coca leaves and also formed synthetically; its properties are similar to those of cocaine, but it is far less poisonous. *Alien. and Neurol.*, Nov., 1907, p. 521.

Tropæolaceæ (trọ̄-pē-ọ̄-lā′sẹ̄-ē), *n. pl.* [NL. (Lindley, 1847), < *Tropæolum* + *-aceæ*.] A family of dicotyledonous choripetalous plants, the nasturtium family, of the order *Geraniales*, containing only the genus *Tropæolum* (which see).

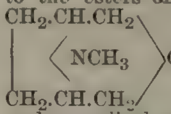
tropæolaceous (trō″pẹ̄-ọ̄-lā′shius), *a.* [NL. *Tropæolace*(*æ*) + *-ous*.] Belonging or pertaining to the plant family *Tropæolaceæ*.

tropæum, tropaion (trọ̄-pē′um, trō-pī′on), *n.*; pl. *tropæa*, *tropaia* (-ạ̈). See *trophy*, 1.

tropaxis (trop-ak′sis), *n.* [Gr. *τρόπος*, a turn, + L. *axis*.] In *bot.*, a theoretical transverse section of a stem at the point (not structurally marked) between upward and downward growth. *C. A. White*, in The Amer. Nat., Jan., 1908, p. 14.

tropeic (trọ̄-pē′ik), *a.* [Said to be (if so, irreg.) < Gr. *τρόπις*, a keel, < *τρέπειν*, turn.] Relating to or describing the ventral fold under the belly of the frilled shark and other sharks.

tropeine (trō′pẹ̄-in), *n.* [*trop*(*ine*) + *-e-* + *-ine*².] In *organic chem.*, a class-name applied to the esters of tropine and organic acids,



$$\left.\begin{array}{l} CH_2.CH.CH_2 \\ \qquad NCH_3 \\ CH_2.CH.CH_2 \end{array}\right\rangle CHOCOR$$

where R is a hydrocarbon radical such as methyl (CH_3). These substances are basic crystalline compounds which resemble atropin in constitution and some of them have a similar physiological action.

tropesis (trọ̄-pē′sis), *n.* [NL., < Gr. *τροπεῖν*, secondary form of *τρέπειν*, turn.] The unconscious will or inclination to which Haeckel attributes the activities of atoms.

> The different relation of the various elements towards each other, which chemistry calls "affinity," is one of the most important properties of ponderable matter; it is manifested in the different relative quantities or proportions of their combination in the intensity of its consummation. Every shade of inclination, from complete indifference to the fiercest passion, is exemplified in the chemical relation of the various elements towards each other, just as we find in the psychology of man, and especially in the life of the sexes. . . . It [this fundamental unity of affinity in the whole of nature] receives empirical confirmation from the interesting progress of cellular psychology. . . . On these phenomena we base our conviction that even the atom is not without a rudimentary form of sensation and will, or, as it is better expressed, of feeling (aesthesis) and inclination (*tropesis*)—that is a universal "soul" of the simplest character.
> *Haeckel* (trans.), Riddle of the Universe, p. 225.

trophæum (trọ̄-fē′um), *n.*; pl. *trophæa* (-ạ̈). See *trophy*, 1.

trophal (trō′fạl), *a.* [*trophus* + *-al*¹.] Of or pertaining to the trophi.

> The appendages of the posterior three, or *trophal*, segments become the parts of the mouth.
> *Encyc. Brit.*, XXIX. 500.

trophically (trof′i-kạl-i), *adv.* In a trophic manner.

trophilegic (trof-i-lej′ik), *a.* [Irreg. < Gr. *τροφή*, nourishment, + *λέγειν*, collect.] In *biol.*, pertaining to means for procuring nourishment.

trophocyte (trof′ọ̄-sīt), *n.* [Gr. *τροφή*, nourishment, + *κύτος*, a hollow (a cell).] One of the cells which together with the œnocytes make up the fatty or adipose tissue of adult insects.

> Imaginal adipose tissue in Muscidæ.—Ch. Pérez has made a study of this tissue, which consists of two kinds of elements—*trophocytes* and œnocytes. Their history shows that they are not due to old migratory elements nor to muscle-nuclei, but that, like other imaginal organs, they arise from independent and from the first specialised primordia. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 527.

trophology (trọ-fol'ọ-ji), *n.* [Gr. *τροφή*, nourishment, + *-λογια*, < *λέγειν*, speak.] The branch of science which deals specially with the nutrition of the body.

trophonema (trof-ọ-nē'mä̤), *n.*; pl. *trophonemata* (-ma-tä̤). [NL., < Gr. *τροφή*, nourishment, + *νῆμα*, thread.] One of the glandular villi which in viviparous sharks arise from the mucosa of the uterus and nourish the embryo.

> There arise from the whole surface of the mucosa of the uterus those glandular villi which are now destined to supply a new nutriment to the embryo, and which have been named *trophonemata*. *Encyc. Brit.*, XXIX. 396.

Trophonian cave, the cave of the oracle of Zeus Trophonius at Lebadeia, which inspired such awe that those who entered were said never to smile again; hence, a grave and serious person is said to have visited the cave of Trophonius.

trophonosus (trọ-fon'ọ-sus), *n.*; pl. *trophonosi* (-sī). [Gr. *τροφή*, nourishment, + *νόσος*, disease.] Any trophic disease, or disease resulting from disordered nutrition.

trophoplasm (trof'ọ-plazm), *n.* [Gr. *τροφή*, nourishment, + *πλάσμα*, anything formed.] In *biol.*, according to Nägeli, the passive matter of an egg, of a cell, or of an organism, as contrasted with its idioplasm (which see).

> The *trophoplasm* . . . is not really alive, but is the nutritive material upon which the idioplasm draws in order to grow and to make good its waste. *Buck*, Med. Handbook, VI. 647.

trophoplasmic (trof-ọ-plaz'mik), *a.* Of or pertaining to trophoplasm.

> Everything seems to point to the ooplasm as *trophoplasmic* in character, first from the gathering of substance around the coenocentrum and second from the effect of this structure on nuclei in the vicinity. *Bot. Gazette*, May, 1903, p. 340.

trophospongial (trof-ọ-spon'ji-a̤l), *a.* Of or pertaining to the trophospongia.

trophotaxis (trof-ọ-tak'sis) *n.* [NL., < Gr. *τροφή*, nourishment, + *τάξις*, disposition.] In *biol.*, the movement of organisms or of cells in relation to a source or supply of food. See the extract.

> Chemotaxis is, therefore, in some cases a response to the stimulus afforded by substances which can be employed by the organism as food; under which circumstances it can be called *Trophotaxic*. *C. B. Davenport*, Exper. Morphol., p. 89.

trophotropic, *a.* 2. In *biol.*, of or pertaining to the growth or bending of organisms in relation to a source of food; exhibiting trophotropism.

trophotropism, *n.* 2. In *biol.*, the growth or movement of organisms in relation to a source or supply of food; a form of chemotropism.

trophozoite (trof-ọ-zō'īt), *n.* [Gr. *τροφή*, nourishment, + *ζῷον*, animal, + *-ite*.] In sporozoans, as *Monocystis*, an individual parasite in the stage of development in which it is absorbing nourishment from its host and growing rapidly. When the trophozoite is ripe for reproduction it is called a *sporont*, or *gametocyte*.

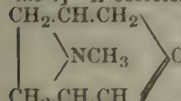
tropic[1], *a.* 2. Pertaining to or of the nature of the growing, bending, or moving of organisms in relation to external agents; exhibiting tropism.

> Another instinct that appears to be due to a *tropic* response is the definite time of day at which some marine animals deposit their eggs. *T. H. Morgan*, Evol. and Adapt., p. 399.

tropic[2] (trō'pik), *a.* [*trop*(*ine*) + *-ic*.] Related to tropine.—**Tropic acid**, a colorless compound, $C_6H_5CH(CH_2OH)COOH$, prepared by the action of barium hydroxid on atropin. It crystallizes in prisms or plates, melts at 117–118° C., and is physiologically inactive.

tropical, *a.* 5. In some radiolarians, as the *Acanthonida*, noting the position of certain spines which project in the region between the poles and the equator of the skeleton.—**Tropical botany, circulation.** See ★*botany*, ★*circulation*.—**Tropical region.** See *life* ★*zone*.—**Tropical ulcer.** See ★*ulcer*.

tropidine (trō'pi-din), *n.* [*trop*(*ine*) + *-id* + *-ine*[2].] A colorless oily alkaloid,



$$\begin{array}{l}CH_2.CH.CH_2\\ \mid \quad >NCH_3\\ CH_2.CH.CH\end{array}\!\!> CH$$

prepared by the action of dilute acids on tropine. It boils at 162–163° C.

Tropidoleptus (trop'i-dọ-lep'tus), *n.* [NL., erroneously formed < Gr. *τρόπις* (stem *τροπι-*, not *τροπιδ-*), a keel, + *λεπτός*, slender.] A genus of telotrematous, terebratelloid brachiopods which have planoconvex plicated shells with long, straight, narrow cardinal area and internal loop fused with the median septum. The genus first appears in the Lower Devonian of western Europe, occurs regularly in early Devonian stages in South Africa and South America, and does not appear in the New York region till the Middle Devonian, when it culminates and continues its existence to near the close of Devonian time, thus indicating by its successive appearances the course of its migration.

tropine (trō'pin), *n.* [Arbitrarily detached from *atropine*, atropin.] A colorless hygroscopic alkaloid,  $\begin{array}{l}CH_2.CH.CH_2\\ \mid \quad >NCH_3\\ CH_2.CH.CH_2\end{array}\!\!> CHOH$, prepared by the decomposition of many of the *Solanum* alkaloids. It crystallizes in plates, melts at 63° C., and boils at 233° C.

tropism (trō'pizm), *n.* [Nominally < Gr. *τροπή*, a turning, + *-ism*. But the word arose rather from compounds in *-tropism* (*-trop-ism*), as *chemotropism*, *geotropism*, *heliotropism*, etc.] 1. In *biol.*, growth, bending, orientation, or locomotion of organisms, or of parts of organisms, in relation to external agents. *Positive tropism* is growth or motion toward and *negative tropism* away from the external agent. Tropisms are physiological reactions called forth by an agent working locally and resulting in a definite orientation. In this wide sense *tropism* includes *taxis*, and the various terms designating forms of tropism (see extract under def. 2) are often used where strict usage would require the corresponding term ending in *-taxis*.

> Among the elements which compose these complicated instincts, the *tropisms* (heliotropism, chemotropism, geotropism, stereotropism) play an important part. These *tropisms* are identical for animals and plants. *J. Loeb*, Comp. Physiol. of the Brain, p. 7.

2. In a stricter use, the growing or bending of organisms, or of parts of organisms, in relation to external agents. Tropisms are reactions to agents that act from one side and produce modifications of direction of growth. Different forms of tropism are designated, not by the differences in the organs that are stimulated, whether sense-organs or simple protoplasm, but by the nature of the exciting agent. See the extract.

> All cases of pure *tropism* are cases of response to stimuli, such are chemotropism, hydrotropism, thigmotropism, traumatropism, rheotropism, geotropism, electrotropism, phototropism and thermotropism. *C. B. Davenport*, Exper. Morphol., p. 480.

Tropitida (trọ-pit'i-dä̤), *n. pl.* [NL., < *Tropites* + *-ida*.] A division of ammonoid cephalopods including costate and tuberculate *Anarcestes*-like shells with elongated sutures and completely digitated saddles and lobes. It includes the families *Tropitidæ* and *Haloritidæ* of Triassic formations.

tropometer (trọ-pom'e-tėr), *n.* [Gr. *τροπή*, a turning, + *μέτρον*, measure.] 1. An instrument for measuring the degree of rotation or of torsion in a part; one form is used to determine the amount of rotation of the eyeball, another to measure the torsion in one of the long bones.—2. In *horology*, a chronometer the dial of which is graduated according to a decimal system of time-notation.

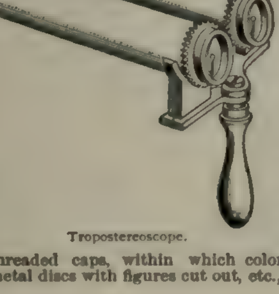
tropophil (trop'ọ-fil), *a.* Same as ★*tropophilous*. *Encyc. Brit.*, XXV. 439.

tropophilous (trọ-pof'i-lus), *a.* [Gr. *τροπή*, turning, change, + *φιλεῖν*, love.] In *phytogeog.*, adapted to a climate which has a season first moist, then dry or (which is physiologically equivalent) cold. See ★*tropophyte*. *A. F. W. Schimper*.

tropophyte (trop'ọ-fīt), *n.* [G. *tropophyte*, < Gr. *τροπή*, turning, change, + *φυτόν*, plant.] In *phytogeog.*, a plant suited to a climate alternately damp and dry or cold (the effect of cold being similar to that of dryness): used by Schimper (1898) in place of *mesophyte* (Warming), but with different connotation.

> In addition to the generally accepted classes of "hygrophytes" and "xerophytes," Schimper recognizes a third or intermediate type, which he calls "*tropophytes*." *Nature*, Oct. 13, 1904, p. 573.

tropostereoscope (trop-ọ-ster'ẹ-ọ-skōp), *n.* [Gr. *τρόπος*, a turn, + E. *stereoscope*.] A tube-stereoscope in which the stereograms may be rotated for conversion of relief.



Tropostereoscope.

> In Ludwig's *tropostereoscope* two metal tubes, blackened within, are attached to a handle in such a way that the near or open ends may be brought together or moved apart. The remote ends of the tubes are supplied with threaded caps, within which colored glass diagrams, metal discs with figures cut out, etc., may be fitted. The caps are geared together, so that the diagrams can be brought into the required stereographic positions, their relief converted, etc. The instrument requires far fixation. *E. B. Titchener*, Exper. Psychol., I. ii. 272.

trot-rope (trot'rōp), *n.* A rope securely fastened to the ground at each end and on which is a loose traveling-ring to which a horse is tethered. The sliding ring enables the horse to graze along the length of the rope. [U. S.]

trouble, *n.*—**To borrow trouble.** See ★*borrow*[1].

trouble-man (trub'l-man), *n.* An expert, familiar with the working of any apparatus or process, who is able to locate the cause of 'trouble' (unsatisfactory operation) and remedy it. [Colloq.]

trough, *n.* 7. In *mining*, an oblong tank of boards or metal in which ores are washed for the separation of metal and gangue; a rocker, serving as a hand-buddle.—8. In *coal-mining*, a passage cut through a supporting pillar of coal to connect one opened chamber with another. Also called *thirling*. [Eng.]—9. In *geol.*, the lowest portion of a synclinal fold.—**Connecticut trough**, in *phys. geog.*, the broad, shallow synclinal valley of southern New England, now occupied by the Connecticut river and extending to Long Island Sound.—**Hudson-Champlain trough**, the depression in which now lie Lake Champlain and the Hudson river from Fort Edward south. It is marked by Paleozoic strata, in contrast to the Archæan of the Adirondacks, and was a very early area of sedimentation.—**Mercury-trough.** See ★*mercury-trough*.—**Teeming trough**, a sluice or trough into which the water is delivered from a mine-drainage pump. [Eng.]—**Trough of a cyclone.** See ★*cyclone*.—**Trough roof.** See ★*roof*[1].

troughing (trôf'ing), *n.* A system of troughs; troughs collectively.

> The lines to the distributing mains are three-core, paper-insulated, steel-armored feeder cables, laid in wooden *troughing*, filled in with refined Trinidad bitumen, and covered with tiles. *Elect. Rev.*, Feb. 14, 1903, p. 247.

trouncer (troun'sėr), *n.* An old name for a waister on a British man-of-war.

trout[1], *n.*—**Blackiston's trout**, a large trout of the rivers of Japan, *Hucho perryi* (*Salmo blackistoni* Hilgendorf), named for Captain Blackiston, an English naturalist.—**Blue-backed trout of Crescent Lake**, *Salmo beardsleei*, of Crescent Lake, Washington.—**Coast Range trout**, *Salmo irideus*, found in coastwise streams of the western United States.—**Colorado River trout**, *Salmo mykiss pleuriticus*, of the Colorado river-basin.—**Columbia River trout**, *Salmo clarkii*, of coastwise streams from Puget Sound to northern California.—**Dublin Pond trout**, *Salvelinus fontinalis agassizii*, of Dublin Pond, New Hampshire.—**Golden trout.** (*b*) A small trout found in Volcano or Whitney Creek, near the head-waters of Kern river in California, chiefly restricted to the district above the waterfall known as Agua Bonita. It is remarkable for the brilliant orange color of its belly and lower fins; the scales are small and scarcely overlapping. The scientific name of the fish is *Salmo irideus agua-bonita*.—**Green-backed trout**, *Salmo clarkii stomias*, of the head-waters of the Arkansas and South Platte rivers.—**Jordan's trout**, *Salmo jordani*, of Lake Southerland, west of Puget Sound.—**Kamloops trout**, *Salmo gairdneri kamloops*, of the Fraser and upper Columbia rivers.—**Kern River trout**, *Salmo irideus gilberti*, of the Kern river.—**Lac de Marbre trout**, *Salvelinus oquassa marstoni*, of Lac de Marbre, Quebec.—**Long-headed trout**, a trout, *Salmo bathæcetor*, found in Crescent Lake, Washington.—**Mountain-trout.** (*c*) A species of *Galaxias*, small cylindrical fishes inhabiting the colder rivers of Australasia, southern Chile, Magellan Straits, and the Falkland Islands. *E. E. Morris*, Austral English.—**Nissuee trout**, *Salmo irideus stonei*, a trout of the Sacramento river-basin.—**Red-throated trout**, the cutthroat trout of the Columbia river region, *Salmo clarkii*.—**Speckled trout of Lake Crescent**, *Salmo gairdneri crescentes*, found in Crescent Lake, Washington.—**Sunapee trout**, *Salvelinus alpinus aureolus*, of certain ponds and lakes of New Hampshire and Maine.—**Truckee trout**, *Salmo clarkii henshawi*, of Lake Tahoe, Pyramid Lake, Humboldt river, and streams of the eastern slope of the Sierra Nevada range.—**Utah trout**, *Salmo mykiss virginalis*, found in the waters of the Great Basin.—**Von Behr trout**, *Salmo fario*, the brown trout of northern Europe, which has been introduced into the United States.—**Western Oregon brook-trout**, *Salmo masoni*, found in coastwise streams of Oregon and Washington.—**Yellow-finned trout**, *Salmo mykiss macdonaldi*, of Twin Lakes, Colorado.

trout-lily (trout'lil″i), *n.* See ★*lily*.

trouveur (trö-vėr'), *n.* [F., finder, inventor, < *trouver*, find. See *trouvère*.] An occasional synonym of *trouvère*.

trove (trōv), *n.* [An abbreviation of *treasure-trove*, which see.] Something of value found; a find.

trowel, *n.* 4. A surgical instrument of approximately trowel shape, used to push back protruding parts from the field of operation. *Buck*, Med. Handbook, IV. 829.

trowel-gage (trou'el-gāj), *n.* An instrument for setting the nippers on a cotton-combing machine at the proper distance from the cylinder- or combing-needles. *Thornley*, Cotton Combing Machines, p. 151.

trowlesworthite (troulz′wėr-thīt), *n.* [*Trowlesworth*, England, + *-ite*^{2}.] In *petrog.*, a granite, altered by fumarole action, composed of fluorite, orthoclase, tourmalin, and some quartz. The fluorite occupies the place of quartz in ordinary granite. *Worth*, 1884.

truantry (trö′ant-ri), *n.* Same as *truancy.* [Rare.]

> Well, now that I had found the boat, you would have thought I had had enough of *truantry* for once; but in the meantime I had taken another notion
> *R. L. Stevenson*, Treasure Island, xxii.

trucha (trö′chä), *n.* [Sp. *trucha*, < L. *tructa*, a trout. See *trout.*] A common name of *Agonostomus nasutus*, a mullet found in rivers on both coasts of Central America.

truck^{1}, *n.*—**To have truck with**, to have intercourse with; to have any sort of give and take with: usually in the negative. [Colloq.]

> A powerful bad thing is an ayah. Don't you niver *have* any *thruck wid* wan.
> *R. Kipling*, The God from the Machine, in Soldiers [Three, p. 20.

Truck economy, an economic system in which barter is the prevailing mode of exchange: contrasted with *money economy*, in which exchanges are, as a rule, effected by the use of money.

truck^{2}, *n.*—**Aërial truck**, a form of apparatus for the rescue of persons from burning buildings by means of ladders, which do not have to rest against the walls. It is a heavy four-wheeled vehicle, similar to the truck used in carrying fire-ladders, near one end of which is fitted a frame with powerful lever equipment by which extension-ladders can be quickly raised from their horizontal position on the truck and extended from 50 to 90 feet into the air. When the ladders are operated by air-pressure instead of by screws and gear, they are also known as *pneumatic extension-ladders* or *telescopic aërial ladders.*

truck^{2}, *v.* **II.** *intrans.* To drive or use a truck; transport goods by means of a truck.

> The management of the Metropolitan Street railways have complained, and with very good reason, that a prolific cause of the crowding of the cars on the main thoroughfares is the interference of *trucking* with the running of cars. *Sci. Amer.*, Jan. 10, 1903, p. 19.

truck-farming (truk′fär″ming), *n.* Market-gardening on a large scale, especially for distant markets; trucking. In the United States a large trucking industry has grown up in the way of supplying large cities with garden produce, often from remote points possessing some advantage, particularly that of earliness. The Atlantic coast from Massachusetts to southern Florida is lined with truck-farms supplying successively, according to latitude, the wants of Eastern cities, and a similar business exists inland and on the Gulf coast, where it is rapidly developing. [U. S.]

truck-garden (truk′gär″dn), *n.* A vegetable-garden, particularly one devoted to market-gardening. [U. S.]

truck-gardening (truk′gär″dn-ing), *n.* Market-gardening; the growing of truck or vegetables for market, particularly on a rather large scale; trucking; truck-farming. [U. S.]

truck-horse (truk′hôrs), *n.* A strong, heavily built horse, specially adapted for hauling heavy loads; a draft-horse.

trucking^{1} (truk′ing), *n.* [*truck*^{1} + *-ing*^{1}.] **1.** Exchanging; bartering; barter.—**2.** The selling of small commodities; petty trade.—**3.** The selling of garden-truck; truck-farming. [U. S.]

> The country about Norfolk was one of the first in this belt to adopt the *trucking* industry on a large scale.
> *U. S. Nat. Herb.*, V. 463.

trucking^{2} (truk′ing), *n.* [*truck*^{2} + *-ing.*] The act or the business of conveying goods by trucks or wagons.

truck-land (truk′land), *n.* Land given up to the cultivation of early vegetables and garden-truck. [U. S.]

truck-light (truk′līt), *n.* An electric signaling apparatus on United States war-ships fitted at the masthead on top of the truck. It consists of a double lantern, the upper half containing a red and the lower a white electric lamp. By suitable switches on deck, either the red or the white light can be shown and by successive displays (in a system similar in principle to the Morse telegraph code) letters and signals can be made. *Army and Navy Register*, XXIV. 277.

truck-patch (truk′pach), *n.* An area, particularly a circumscribed one, on which vegetables are grown; a truck-garden. [U. S.]

trucks (truks), *n. pl.* Trousers. [Eng. slang.]

truddo (tröd′dō), *n.* [It. dial., prob. Sardinian (cf. Sardinian *trudda* for It. *trulla*, pitcher). See *trullo.*] Same as ★*trullo.*

trudgen (truj′en), *n.* [So named after *Trudgen*, an English swimming amateur (1873).] In *swimming*, the double over-arm stroke.

> Another method of swimming which has helped to increase speed rates, especially over short distances, is that known as the "*Trudgen*," or double over-arm stroke. It is a modification of a style peculiar to Indians and those who get their living on surf-beaten shores, and was first brought into special prominence in England by an amateur named Trudgen in 1873.
> *Encyc. Brit.*, XXXIII. 120.

True, public, and notorious, in *eccles. law*, an expression formerly used at the end of each several article in the libel as descriptive of the charges therein contained.—**True-wool hair.** See ★*hair*^{1}.

true, *v. t.*—**To true up**, to true; adjust or fit accurately.

> The boring and mounting of the different cast-iron wheels is about equivalent to the "*truing up*" of the steel wheel. *Jour. Franklin Inst.*, May, 1904, p. 336.

Truing-up machine. See ★*machine.*

truffle, *n.*—**Black truffle**, a name sometimes applied to *Tuber griseum*, according to Hobbs.

truffle-beetle (truf′l-bē″tl), *n.* A European silphid beetle, *Anistoma cinnamomea*, whose subterranean larvæ feed on the truffle. *Cambridge Nat. Hist.*, VI. 222.

truffle-dog (truf′l-dog), *n.* A small dog trained to scent out truffles.

truistic (trö-is′tik), *a.* Of the nature of a truism; trite; commonplace.

> To a trained psychologist this statement looks *truistic* and commonplace, but definite quantitative tests are necessary to convince the mind biassed with the philosophy of natural science, and these tests are here provided.
> *Athenæum*, Jan. 11, 1902, p. 52.

truller (trul′ėr), *n.* [*trull*^{1} + *-er.*] One who trulls or trundles (a barrow); specifically, in Cornwall, one who wheels ore in a barrow.

trullo (tröl′lō), *n.* [It. dial. (appar.) the same as ML. *trullus*, *trullum*, a dome-shaped building, < L. *trulla*, a scoop, ladle. See *Trullan.*] A kind of prehistoric stone structure found in southern Italy.

trumbash (trum′bash), *n.* [Also *trombash*; African.] A throw-stick of hard wood, shaped somewhat like a boomerang, but which does not return to the thrower: used by certain tribes of the Sudan.

> There is a curious weapon, the *trombāsh*, that is used by these people [Tokrooris, a Negro tribe of Darfur], somewhat resembling the Australian boomerang; it is a piece of flat, hard wood, about two feet in length, the end of which turns sharply at an angle of about 30°. They throw this with great dexterity, and inflict severe wounds with the hard and sharp edge; but, unlike the boomerang, the weapon does not return to the thrower.
> *Sir S. W. Baker*, Nile Trib. Abyssinia, p. 528.

> The Africans have developed the slashing projectile in two forms, the bladed arrow and the thrown knife or *trumbash.* *Smithsonian Rep.*, 1893, p. 621.

trump^{3}, *n.*—**Losing trump**, a trump which is not the best, when only one or two remain in the adversaries' hands.

trumpet, *n.*—**Humming-birds' trumpet.** Same as *California* ★*fuchsia.*—**Respiratory trumpet**, one of two trumpet-shaped respiratory tubules on the thorax of the pupa of a mosquito or an allied dipterous insect.

trumpeter, *n.*—**Bastard trumpeter.** (*a*) A fish, *Latris ciliaris*, of the family *Latrididæ*, found in Australian waters. (*b*) In Tasmania, *Latris forsteri*, a fish belonging to the family *Cirritidæ.*—**Real trumpeter.** Same as *trumpeter*, 6.

trumpeter-whiting (trum′pet-ėr-hwī″ting), *n.* An Australian fish, *Sillago bassensis.*

trumpet-guide (trum′pet-gīd), *n.* Same as *trumpet*, 5.

trumpet-hypha (trum′pet-hī″fạ̈), *n.* The hypha-like cell of certain brown seaweeds which expands or bulges at each cross-wall.

truncate, *v. t.*—**Truncated cone** or **pyramid.** (*b*) The portion included between the base of a cone or pyramid and a plane meeting all the lateral edges or elements.—**Truncated cylinder**, the portion between a base and a non-parallel section.

truncoconical (trung″kọ̄-kon′i-kạ̈l), *a.* [L. *truncus*, trunk, + *conus*, cone.] Resembling a truncated cone.

> Experimental Studies on the Resonance of Conical, *Trunco-Conical* and Cylindrical Air-Columns.
> *Science*, May 24, 1901 (advt.).

truncule (trung′kūl), *n.* [L. *trunculus*, a bit cut off, dim. of *truncus*, stock, trunk. See *trunk.*] A very small branch of the main stem of a system, itself giving off ramifications.

trundle, *v. i.* **3.** In *cricket*, to bowl. *Hutchinson*, Cricket, p. 253. [Colloq.]

trundler (trun′dlėr), *n.* In *cricket*, a bowler. *Hutchinson*, Cricket, p. 80. [Colloq.]

trunk, *n.* **14.** A long conduit or system with grids through which cotton is forced to be cleared of dust and refuse in its passage from the opener to the scutcher or picker.—**15.** In *ship-building*, a large inclosed duct or passage through the decks or bulkheads of a vessel for coaling, ventilation, passing ammunition, etc.

> It may be added that, in all cases where openings have to be made in a watertight deck or platform, either watertight covers must be fitted to the openings; or watertight *trunks*, carried to a sufficient height above the load-line, must be built around them.
> *White*, Man. of Naval Arch., p. 31.

16. A trunk-line.—**Trunk hatchway**, a line of hatches united by a casing between the decks to form a trunk separating the hatchways from the deck space in the vicinity. See also ★*expansion-trunk.*—**Vascular trunk**, in the *Brachiopoda*, one of two main vascular sinuses which traverse the mantle from the perivisceral chamber to the anterior margin of the valves and which are much branched in their course. These frequently leave impressions in the substance of the shell which are retained in the fossil state. See *Brachiopoda.*

II. *a.* Chief; main; principal: as, the *trunk* mains of a system of water or gas distribution; a *trunk* railway line. *W. J. Dibdin*, Public Lighting, p. 442.—**Trunk valley**, the valley of a main stream.

> In dealing with the Pleistocene glaciation (chapter ii.), Mr. Gilbert discusses the origin of the "hanging valleys" so abundant in this region, and accepts the view that the discordance of level between the *trunk* and tributary *valley* is in most cases due to the deeper glacial excavation of the main trough. *Nature*, July 7, 1904, p. 217.

trunk-deck (trungk′dek), *n.* See ★*deck*, 2.

trunk-fish, *n.*—**Spotted trunk-fish.** Same as ★*chapin.*

trunking-jack (trung′king-jak), *n.* Same as ★*trunk-jack.*

> The new board [switchboard] is made up in any capacity, ranging from the small village sizes to those of one thousand lines, the larger equipments being provided with the necessary trunking, or transfer, systems, which may consist of the common method of equipping the various sections with *trunking jacks* and order-wire keys, or the more elaborate equipment of flash lights, trunking cords. *Elect. World and Engin.*, Feb. 6, 1904, p. 286.

trunk-jack (trungk′jak), *n.* In *telephony*, one of the jacks which form the terminals of trunk-lines. Also called ★*trunking-jack.*

trunk-leg (trungk′leg), *n.* In crustaceans, a leg or locomotor appendage attached to the thoracic region.

> Of the corresponding pairs of appendages thirteen belong to the head and trunk, two pairs of antennæ, one pair of mandibles, two pairs of maxillæ, followed by three which may be all maxillipeds or may help to swell the number of *trunk-legs* to which the next five pairs belong.
> *Encyc. Brit.*, XXX. 479.

trunklet (trungk′let), *n.* [*trunk* + *-let.*] In *anat.*, a branch of the main trunk of a nerve or blood-vessel which itself gives off branches, but proceeds some distance before losing its identity. *Buck*, Med. Handbook, II. 255.

trunk-lichen (trungk′lī″ken), *n.* Same as ★*tree-lichen.*

trunk-limb (trungk′lim), *n.* In crustaceans, as the *Isopoda*, a limb attached to the thorax or pereion.

trunk-line, *n.* **2.** In *elect.*, lines or wires which connect two telephone-exchanges, as distinguished from the wires which connect an exchange with its subscribers.

trunk-machine (trungk′mạ-shēn″), *n.* In *cotton-manuf.*, a pipe or conduit for the passage of cotton from one machine to another in the preparatory processes. See ★*trunk*, *n.*, 14.

trunk-plunger (trungk′plun″jėr), *n.* A plunger for a pump, in which the connecting-rod which actuates it is connected to a pin below the outer end, while for the vibratory motion of the latter a hole is left in the axis of the plunger, as in the trunk-engine. See *trunk*, 9.

trunk-valve (trungk′valv), *n.* A valve in which the ports of entrance to the two ends of the cylinder are near the heads of the latter, and the valve itself is of two pieces in effect joined together by the hollow tube which is called the trunk. The modern form of this valve is the hollow piston valve, in which the two pistons forming the valve proper are connected by a hollow rod. Also called *Murdock's slide-valve.*

trunnel-head (trun′l-hed), *n.* Same as *trundle-head*; specifically, in coke-making or metallurgy, the cast-iron or other ring which forms the keystone of the oven or the head of the furnace, serving as an opening for charging and for control of the operations within it.

> The *trunnel-head*, or ring, is a much more important part of a coke oven than most people imagine. It should be accurately gauged to the capacity of the oven. If the ring be too small, the draft of the oven will be choked; and if it be too large, there will be a great loss of heat.
> *Amer. Manuf.* LXII. 626.

trunnion, *n.*—**Trunnion ledge and level,** a small shelf on the trunnion of a large gun which was placed in a horizontal position by means of a spirit level so that the degree of elevation or depression might be indicated.

trunnion-band (trun′yo̤n-band), *n.* The band or hoop of a built-up cannon on which the trunnions of the cannon are formed in manufacture.

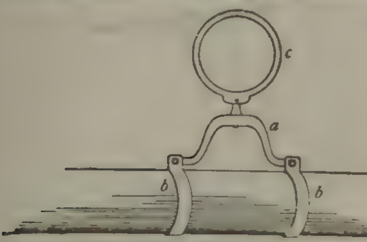
trunnion-level (trun′yo̤n-lev″el), *n.* A level placed on the trunnion of a gun to aid in ascertaining and adjusting its elevation for a required range.

trunnion-rule (trun′yo̤n-röl), *n.* A rule for measuring the distance from the trunnions to the base-ring of a gun.

trunnion-square (trun′yo̤n-skwãr), *n.* An instrument for determining whether the axis of the trunnions is perpendicular to the axis of the bore of the gun.

truqueur (trö-kėr′), *n.* [F., < *truquer*, fabricate antiquities.] One who fabricates so-called antiquities.

truss, *n.*—**Bridge truss,** an articulated frame or truss which forms or resembles one of the two or more trusses of a truss-bridge.—**Main trusses,** the iron arms which confine the main lower yard and the main lower topsail-yard to the mast. See *main-yard* ★*truss*.—**Main-yard truss,** the iron arms which hold the main lower yard to the mainmast, and on which the yard may be swung horizontally by the braces or vertically by the lifts.



a, truss ; *b*, *b*, truss-bands ; *c*, truss-parrel

trusser, *n.* **2.** Specifically, a machine for binding or trussing together the staves of a keg or barrel and giving to the latter its bulging form and to the former the deformation which shall keep the hoops tight in place. *Sci. Amer. Sup.*, Sept. 10, 1904, p. 23982.

truss-hoop, *n.* **2.** In *mast-making*, a heavy iron band placed about the mast, and to which the after end of the truss is confined.

truss-parrel (trus′par″el), *n.* That part of the truss-mechanism which encircles a mast; the iron band which goes about the mast, and to which the truss is secured.

trust[1], *n.* **7.** The term refers to the employment of trustees (see *voting* ★*trust*) in the original formation of trusts. As to the looser use of the word, see the following extracts.

> This broad use of the word "*trust*" to describe combinations which are not in the trust form, producing confusion and sometimes unwarranted prejudice, should be avoided.
>
> *Noyes*, Intercorporate Relations (1909), p. 555.

> A *trust* has been defined as a contract, combination, confederation, or understanding, express or implied, between two or more persons to control the price of a commodity or services for the benefit of the parties thereto, and to the injury of the public, and which tends to create a monopoly. . . . It seems that such unlawful combination may be formed orally, and that writing is not necessary to its illegality.
>
> *West Virginia Rep.* (1906), LX. 520.

Anti-trust law, or **Sherman anti-trust law,** a federal statute approved July 2, 1890, by which "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several states, or with foreign nations" was declared to be illegal and parties engaged in such to be liable to fine and imprisonment. The act further embraces monopoly of any part of interstate or foreign commerce. The Wilson Bill (Aug. 27, 1894) extended this definitely to monopoly of importations.—**Commercial trust,** one in which the possession of tangible property of any species is committed to others for management or disposal. *Anderson.*—**Corporate trust,** a combination of different corporations of similar character made by the majority of stockholders in each giving the power of their stock by assignment or proxy to a trustee or (trustees) to another corporation. See *trust*.—**Dry trust.** Same as *naked trust*.—**Presumptive trust.** Same as *resulting trust*; strictly, a trust created by the reverting of an estate to the grantor. The term is loosely applied to trusts that are implied in equity.—**Trust for value,** in *law*, a trust based upon a valuable consideration.—**Voluntary trust,** a trust created solely as a gift.—**Voting trust,** an accumulation, in the hands of an individual trustee or of a committee, of the stock of several shareholders in a corporation to the end that the aggregate vote of these holdings, used by the trustee, may control the corporation and direct it. Negotiable trust certificates are generally given to the original holders in return for their stock, retaining to them the beneficial value. It has been held to be against public policy that a stockholder irrevocably, for a stated period, part with his voting power, and that therefore any original holder may at will withdraw from a voting trust.

trust-buster (trust′bus″tėr), *n.* One who makes a business of breaking up or trying to break up trusts or industrial combinations in restraint of competition. [U. S. polit. slang.]

trust-busting (trust′bus″ting), *n.* The breaking up of 'trusts' or industrial combinations; the activities of a trust-buster. [U. S. polit. slang.]

> A blizzard had blanketed Kansas with snow, and the rural citizen had leisure to read the "*trust-busting*" literature left at his door every day by his mail-carrier.
>
> *Outlook*, May 6, 1905.

trust-company (trust′kum″pa̤-ni), *n.* **1.** A financial corporation organized under State laws, general or special, or both, to exercise the functions of a trustee. This power was first granted by special act in 1822 to the Farmers' Fire Insurance and Loan Company, of New York, the act authorizing the corporation to receive and take by deed or devise any effects and property both real and personal which might be left or conveyed to it in trust and to assume and execute any trust created or declared by the deed or devise.

2. Such a corporation with added financial and other functions, varying in character and extent with the statutes of the different States and with the individual charter of the corporation. Not all trust-companies have all the powers indicated in the following citation: "Trust-companies exercise, among other powers, those of trustee, executor, administrator, guardian, committee, receiver, assignee, transfer agent, registrar, investment agent, fiscal agent, promotor, underwriter, etc. They do also a guarantee, safe deposit and general banking business." *Cator*, Trust-Companies of the United States, p. 20. To these powers may be added those of depositary and escrow holder; also those of a savings-bank, usually exercised under the title "savings-fund department": but whether they have such a department or not trust-companies generally allow interest on considerable sums left on deposit for stated periods and a minimum interest on running balances. Except in a savings-bank department, trust-company interest is lower than that of savings-banks. The savings-fund feature is more common in the West than in the East. In the early companies their business as trustees was incidental to that of life-insurance and annuities, both of which have now nearly disappeared, and the examination and insurance or guarantee of real-estate titles have taken their place and become an important business. Fidelity insurance is also issued by many companies, which act as bondsmen for trustees and for officers and responsible employees, public and private. The later growth of trust-companies has been along the lines of banking and corporation trust business. In their banking business they are subject to the laws of the various States in the matter of official examinations, but they have greater freedom in the making of loans, and in most States are not required to hold as large cash reserves as banks are compelled to have. As bankers they are not, in many States, compelled to deposit security with the State officials, but the double liability law applies to their stockholders in nearly all States where it applies to bank stockholders. The tendency of legislation is to put banks and trust-companies acting as banks on the same footing. Trust-companies issue bills of exchange and letters of credit, but do not issue bank-notes. Usually, States allow within their borders the fiduciary business of trust-companies chartered by other States, though not always, but not their banking and other business. A trust-company may establish branches throughout its own State and also in foreign countries, and in the dependencies of the United States. Among the other countries besides the United States where the trust-company is encouraged are Canada, Mexico, Argentine Republic, Germany, France, Japan, South Africa, Australia, and New Zealand. In these latter the title 'trustee-company' prevails. The trust-company is the product of the increased scope of business enterprise as well as of the desire for responsible corporate, as against individual, care and investment of trust funds. It is not in any way to be confounded with the trust, which is an aggregation of business interests of a common character, for common profit. Following the first step taken in 1822, trust-companies were formed in Boston, Philadelphia, and New York. Statistics of 1875 showed 35 companies in the United States, all in the East, with resources of over $122,000,000. In 1889 the number had increased to 120, which were scattered among 14 States, east and west, and had resources of $441,000,000. In 1895 the total number was 569, in 42 States and territories, having aggregate resources of $962,000,000. In 1905, complete returns of 1115 companies showed resources and liabilities amounting to $3,802,000,000. The statistics of September, 1908, from 2240 companies showed resources and liabilities of $4,580,000,000.

Truth of being. See ★*being*.

trutine (trö′tin), *n.* [L. *trutina*, < Gr. *τρυτάνη*, a balance. See *trutinate*.] A balance.—**Trutine of Hermes,** in *astrol.*, a method of rectifying a nativity by ascertaining the place of the moon at the conception, which is supposed to indicate the degree ascending at birth.

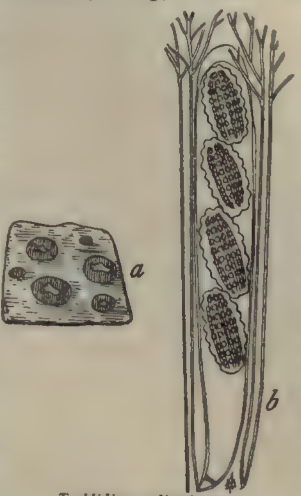
truxene (truk′sēn), *n.* [*trux*(*illine*) + *-ene*.] A colorless compound, $\begin{array}{l} C_6H_4C{:}C.CH_2 \\ \vert \qquad\qquad\quad \vert \\ CH_2{-}C{:}C.C_6H_4 \end{array}$, prepared by the action of phosphoric anhydrid on hydrindone. It crystallizes in plates and melts above 360° C.

truxillic (truk-sil′ik), *a.* [*truxill*(*ine*) + *-ic*.] Related to truxilline.—**Truxillic acid,** isatropic acid.

truxilline (truk-sil′in), *n.* [*Truxillo* (see def.) + *-ine*[2].] Any one of three compounds, $C_{38}H_{46}O_8N_2$, distinguished as *α*-, *β*-, and *γ*-. They are contained in coca from Truxillo, Peru, and may be prepared by the action of methyl alcohol and either one of the truxillic anhydrids on ecgonine. They are all amorphous, and melt at 80°, 45°, and 63° C. respectively. Also called *γ*-isotropyl-cocaine or cocamine, *δ*-isotropyl-cocaine or isococamine, and *ε*-isotropyl-cocaine.

Tryblidiaceæ (trī-blid-i-ā′sẹ-ē), *n. pl.* [NL., < *Tryblidium* + *-aceæ*.] A family of brown or black coriaceous discomycetous fungi named from the genus *Tryblidium*.

Tryblidium (trī-blid′i-um), *n.* [NL., < Gr. *τρύβλιον*, a cup, + dim. *-ιδιον*.] **1.** A genus of fossil patelloid gastropods with depressed oval shells which have anterior beaks, thick walls, horseshoe-shaped area with numerous muscular scars, and concentrically lamellate exterior surface. It occurs in Silurian rocks.—**2.** A genus of discomycetous fungi having black coriaceous ascocarps which are at first sunken in the substratum and closed, but finally rupture more or less irregularly. The spores are hyaline or yellowish and muriform. About 20 species have been described, most of which occur on the bark of trees. *T. cucurbitaria* is found on the white oak in North America and *T. caliciiforme* on beech in Europe. *Rebentisch*, 1805.



Tryblidium caliciiforme.

a, ascocarps on beech-bark; *b*, ascus with spores and paraphyses, highly magnified.

try-gun (trī′gun), *n.* A gun with an adjustable stock, used by some manufacturers of sporting arms to determine by trial the exact length and shape of stock which a purchaser may desire. *Forest and Stream*, Feb. 21, 1903.

tryker, *n.* Same as *tricerion*.

trypanolytic (trip-a̤-nọ-lit′ik), *a.* [NL. *Trypano*(*soma*) + Gr. *λυτικός*, that looses or dissolves.] Referring to or effecting the destruction of trypanosomes. *Nature*, Oct. 31, 1907, p. 680.

trypanon (trip′a̤-non), *n.*; pl. *trypana* (-nä̤). [Gr. *τρύπανον*, a borer, < *τρυπᾶν*, bore. See *trepan*[1].] In *Gr. antiq.*, a borer turned by hand or with a string.

> In a natural state, as we know, people, through laboriously acquired skill, kindle a fire by rubbing together two pieces of wood; in other words, they set free to that tension work, heat. The old Greeks used for the purpose the pyreion, the under piece of which, called the eschara, contained a bore, in which the rubbing piece, the *trypanon* or borer, was inserted and then turned by twisting the hands.
>
> *Smithsonian Rep.*, 1890, p. 716.

Trypanoplasma (trip-a̤-nọ-plas′mä̤), *n.* [NL., < Gr. *τρύπανον*, a borer, + *πλάσμα*, something formed. See *plasm*.] A genus of hæmoflagellates, of the family *Trypanosomatidæ*, parasitic in fishes, as the minnow, carp, and loach.

Trypanosoma fever. See ★*fever*[1].

trypanosomal (trip″a̤-nọ-sō′mal), *a.* [NL. *Trypanosom*(*a*) + *-al*[1].] Pertaining to, of the nature of, or caused by, trypanosomes. See ★*trypanosomiasis*.

> To obtain a knowledge of the prevalence of *trypanosomal* infection in any given district it is only necessary to examine the cervical glands of the domestic animals indigenous to the district to come to a positive or negative conclusion in regard to the prevalence of the disease.
>
> *Lancet*, May 2, 1908, p. 1285.

trypanosomatic (trip″a̤-nō-sọ-mat′ik), *a.* Relating to *Trypanosomata*; noting any disease caused by their presence.

> The cultivation of the organisms causing *trypanosomatic* diseases.
>
> *Science*, July 22, 1904, p. 112.

trypanosomatosis (trip″a̤-nọ-sō-ma-tō′sis), *n.* [NL., < *trypanosoma*(*t*-) + *-osis*.] Same as ★*trypanosomiasis*.

> It [chimpanzee] spontaneously suffers from ankylostomiasis, filariasis, and *trypanosomatosis*.
>
> *Lancet*, April 4, 1903, p. 945.

trypanosome (trip′a̤-nō̤-sōm), *n.* [NL. *Trypanosoma*.] An infusorian of the order *Trypanosomata*. See ★*trypanosomiasis*.

The *trypanosome* was shown by the last-named observers to be identical with the trypanosoma Gambiense and they also showed that the tsetse fly, glossina palpalis, is the principal transmitter of the disease. That other flies of this species, glossina fusca and glossina longipennis, are also capable of conveying the disease is certain, but so far the glossina palpalis is chiefly incriminated.
Lancet, May 2, 1908, p. 1285.

trypanosomiasis (trip″a̤-nō̤-sō̤-mī′a̤-sis), *n.* [*Trypanosom(a)* + *-iasis*.] A general term proposed by Salmon and Stiles (1902) to denote any infection of any warm- or cold-blooded animal by any species of the flagellate protozoan family *Trypanosomatidæ*. Such are the sleeping-sickness of man in Africa, caused by *Trypanosoma gambiense*; surra of horses and other animals in India and the Philippines, caused by *T. evansi*; nagana of horses in Africa, caused by *T. brucei*; mal-de-caderas of horses in South America, caused by *T. equinum*; rat trypanosomiasis, caused by *T. lewisi*. The parasites live in the blood-plasma and destroy the red blood-corpuscles; they are transmitted by insects.

In a letter addressed to Sir Alfred Jones by the expedition sent by the Liverpool School of Tropical Medicine to investigate the newly-discovered parasite of human *trypanosomiasis*, it is stated that a number of natives had been examined, but that the parasite had not been found in any. In two horses, however, a trypanosome was found, and it is stated that another horse had been infected with the human trypanosome. In a common species of horse fly that had fed on this last horse, numerous trypanosomes were found in the stomach. The letter was sent from McCarthy Island, 150 miles in the interior of Gambia.
Nature, April 23, 1903, p. 590.

trypanosomic (trip-a̤-nō̤-som′ik), *a.* [NL. *Trypanosom(a)* + *-ic*.] Relating to, or infected with, trypanosomes.

This water is then inoculated with the otherwise sterile *trypanosomic* blood.
Jour. Med. Research, July, 1906, p. 125.

Trypetheliaceæ (trip-ē-thē-li-ā′sē̤-ē), *n. pl.* [NL., < *Tripethelium*, the type genus, + *-aceæ*.] A family of pyrenocarpous lichens, named from the genus *Trypethelium*, having a crustaceous thallus and the perithecia united in a stroma.

trypethelioid (trip-ē̤-thē′li-oid), *a.* [NL. *Trypetheli(um)* + *-oid*.] Pertaining to, or resembling, lichens of the genus *Trypethelium*.

trypetid (trip′e-tid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Trypetidæ*.

II. *a.* Having the characters of or belonging to the family *Trypetidæ*.

trypsinogen (trip-sin′ō̤-jen), *n.* [*trypsin* + Gr. -γενης, -producing.] A substance excreted by the pancreas which becomes converted during intestinal digestion into trypsin.

The intestinal juice contains two other ferments which are engaged in the process of proteolysis, enterokinase, and erepsin. The former activates the pancreatic juice by transforming *trypsinogen* into trypsin.
H. W. Bettmann, in Med. Record, Aug. 3, 1907, p. 171.

Tryptic digestion, digestion (hydrolytic cleavage) of protein through the action of trypsin. This action of trypsin is similar and complementary to that of pepsin: trypsin, however, acts in slightly acid, neutral, or markedly alkaline solutions, while pepsin acts only in acid media.

tryptonemia (trip-tō̤-nē′mi-ä̤), *n.* [NL., < E. *tryptone* + Gr. *αἷμα*, blood.] A condition in which tryptone is present in the blood.

tryptophan (trip′tō̤-fan), *n.* [Gr. τριπτός, rubbed, + φαίνειν, appear.] Same as ★*proteinochromogen*.

trysail, *n.*—**Main trysail**, a fore-and-aft sail set on the main lower mast during heavy weather.

t. s. An abbreviation (*b*) of *till sale*.

tsavoah (tsä-vō′ä̤), *n.*; pl. *tsavaoth* (tsä-vä-ōt′). [Modern Heb., < *tsāvah*, command, charge, order.] 1. A will.—2. A charge or ethical will, among the Jews, of a father to his children or a rabbi to his congregation. It has almost fallen into disuse. Some of the tsavoath are excellent codes of ethics and piety. The letter of Rabbi Elias of Vilna to his son and the tsavoah of Rabbi Abraham of Danzig (1738–1821) are the most renowned. Pious young Jews in Russia commit them to memory.

tschawytscha, *n.* A German spelling of *chavicha*.

tschego, *n.* Same as *nschiego*.

Tscherkess (cher-kes′), *a.* and *n.* [A G. spelling of Russ. *Cherkesŭ*: see *Circassian*.] Same as *Circassian*.

tschernozom, **tschornosem**, *n.* German spellings of the Russian original of *chernozem*.

tserin, *n.* Same as *dzeren*.

Tsetse-fly disease. See ★*disease*.

Tsiganologist, *n.* Same as ★*Zinganologist*.

T-slot (tē′slot), *n.* A groove or slot cast or planed in the upper surface of a table, or plate, with an undercut below the plane of the table, or plate, which gives to the slot a section resembling in end view an inverted block-letter capital T. The form of this section enables square-headed bolts to be slid into the slot from the end; or T-headed bolts may be used which can be passed into the slot at any point and then turned through an angle of 90°. The slots instead of being continuous may be in short lengths and may be both longitudinal and transverse.

On the floor at the base of the tower is a massive plate 15 ft. square with a number of *T-slots* across its surface resembling those of a planer bed. To this the hoist to be tested may be quickly bolted.
Elect. World and Engin., Oct. 31, 1903, p. 734.

T. S. O. In the *Eng. postal service*, an abbreviation of *town suboffice*.

tsubaki (tsṳ-bä′kē), *n.* [Jap. *tszbaki*.] The *Camellia Japonica*, used extensively in Japanese decorative art. See *Camellia*.

tsubo (tsṳ′bō), *n.* [Jap. *tszbo*.] A Japanese measure of surface, being a square ken, or 35.6 square feet. *C. Hering*, Conversion Tables, pp. 44, 172.

Tsugaru lacquer. See ★*lacquer*.

tsunami (tsṳ-nä′mē), *n.* [Jap. *tsznami*.] A great tidal disturbance which may be caused by earthquakes, volcanic eruptions, or barometric depressions.

The great *tsunamis* which so often devastate the shores of Japan, in the greater number of instances proceed from the near-lying deep of the Pacific, which is known as Tuscarora Deep.
W. H. Hobbs, Earthquakes, pp. 253, 254.

tsung (tsöng), *n.* Same as ★*sung*².

Tsung-li-yamen. See *yamun*.

tsupa (tsö′pä̤), *n.* Same as *tsuba*.

tswam (tswäm), *n.* [Northwestern American.] A native name of *Chasmistes copei*, a minnow of the Klamath Lakes.

T. T. L. An abbreviation of *to take leave*.

Tu. 1. An abbreviation of *Tuesday*.—2. A chemical symbol (*a*) for tungsten, which, however, is much more commonly represented by W (from the name, *wolfram*, of the mineral in which tungsten chiefly occurs); (*b*) for thulium, for which, however, *Tm* is more common.

tuan (tū′an), *n.* [Native name.] The native name of the so-called 'flying-squirrels' of Australia, small marsupials, of the genus *Belideus*, which resemble flying-squirrels in form and habits.

tub, *n.* 8. (*d*) A lining for a mine-shaft made of staves of wood or steel. See *tubbing*.

tuba¹, *n.* 4. An ancient Roman trumpet with a straight tube of metal, like the Greek salpinx.

tuba² (tö′bä), *n.* [Malayan *tūba*.] 1. In the Philippine Islands, Guam, and the west coast of Mexico, the sap obtained from the immature inflorescence of the coconut, which is allowed to ferment and is used as a beverage, and from which a distilled liquor called *vino*, or *aguardiente*, is obtained.

He climbed a coconut-tree near the house and brought in a bamboo joint full of *tuba*, delicious as cider just beginning to turn sharp, which, after putting across the top some leaves to strain it, he offered us with the manner of a Spanish caballero.
W. E. Safford, in Amer. Anthropologist, 1902, p. 728.

2. In the peninsula of Malacca and the Malay Archipelago, a name applied to a number of fish-intoxicants, especially to *Deguelia elliptica*, and in the Philippine Islands to *Croton Tiglium*, *Jatropha Curcas*, and *Cocculus Cocculus*, used for the same purpose.

tubboe (tub′ō), *n.* [Prob. of African origin.] Frambœsia or yaws.

tub-butter (tub′but″ėr), *n.* Butter packed in tubs.

tube, *n.* 9. A city subway in the form of a tunnel. [Eng.]

Of *tube* railways with electric traction there are three now working in London, two between the City and the south side of the River Thames, using the ordinary two wire 500 volts continuous current system, and another (the Central London) extending from the City to Shepherd's Bush, using the composite system. This railway conveyed during the year 1902 no fewer than 45 million passengers. There are eight other *tube* railways now in course of construction in London. The recent terrible catastrophe in Paris must serve as a warning in the future equipment of such lines where currents at high tension are employed, and where short-circuiting may bring about disastrous results.
Nature, Sept. 24, 1903, p. 508.

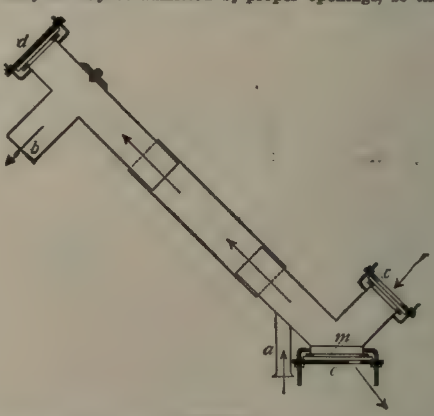
Acoustic tubes. See ★*acoustic*.—**Bourdon tube**, a coiled, elastic metallic tube which tends to straighten out when pressure is applied within it. The straightening in an elastic tube being proportional to the internal pressure, such a tube can be used for a pressure-gage, the motion of a free end being registered on a dial.

The Richard thermograph, with Teisserenc de Bort's insulating device, should be used, and the Hergesell instrument having a tube of German silver, instead of the *Bourdon tube* filled with alcohol, was also recommended on account of its sensitiveness and durability.
Nature, Dec. 11, 1902, p. 140.

Braun tube, a vacuum-tube designed for the investigation of cathode rays. The rays which proceed from the cathode sealed into one end must pass through an annular anode and a perforated screen before reaching the glass at the other end of the tube. A phosphorescent screen is sometimes placed within the tube to receive the rays. As the path of the rays is made quite long, the effect of static electricity or of a magnet on the rays may be readily studied.

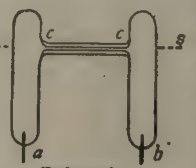
In the course of the experiments, however, it appeared that better results could be obtained by means of the *Braun tube*, and after making simultaneous determinations by the two methods the heat measurements were for the time being discontinued.
Physical Rev., May, 1904, p. 322.

Calcium-chlorid tube, a glass vessel, of varying shape, filled with porous calcium chlorid, an absorbent of watery vapor. The increase in weight shows the water absorbed. It is also used for drying gases. Modifications in form carry the names of the inventors, as Peligot, Schmitz, Wolf, etc.—**Color-tube**, a tube into which vapor and dusty air may be admitted by proper openings, so that one may study the colors of cloudy condensation; specifically, the color-tube devised by Carl Barus. *C. Barus*, U. S. Weather Bur., Bulletin 12, pp. 31–33.—**Conning-tower tube.** See ★*conning-tower*.—**Coronoidal tube.** See ★*coronoidal*.—**Critical tube**, a Röntgen-ray (Crookes) tube of moderately low vacuum which differentiates clearly between substances of unequal density.—**Crookes tubes.** See *vacuum-tube*.—**Desiccating tube.** See ★*desiccate*, *v. t.*—**End-on tube**, a vacuum-tube, for spectrum work, in which the glowing gases throughout the entire length of the capillary tube traversed by the electric discharge are brought into the field of the spectroscope. The discharge between the terminals (*a*, *b*) passes through the capillary tube (*cc*), and the line of sight (*ss*) is along the axis of the latter.—**Esmarch tube.** See *roll* ★*culture*.—**Faraday's tubes**, thick-walled tubes of well annealed glass, carefully sealed by fusion, as used by Faraday in his early experiments in the liquefaction of gases.—**Fractionating tube**, in *chem.*, a tube to be attached to a flask, which is designed to facilitate fractional distillation.—**Glinsky tube**, a glass tube having a number of bulbs blown upon it, each with a glass bead which serves as a valve between the successive bulbs, for use in the fractional distillation of liquids in the chemical laboratory.—**Hard tube**, in *elect.*, a Röntgen tube the vacuum of which is relatively high, so that the X-rays emanating from it possess great penetrating power.—**Hempel's palladium tube**, a glass tube of U shape containing either finely divided palladium, palladium sponge, or asbestos coated with pal-

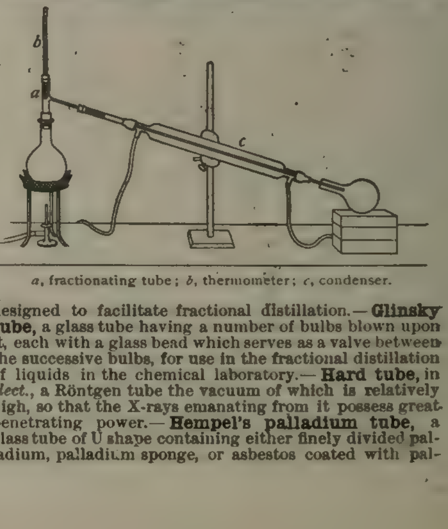


Color-tube.

Steam enters small tube *a* and passes out at *b*; the observer looks through clear plate of glass, *c*, at light coming through ground-glass plate *d*; a mirror is placed at *e* and a thin plate of water is parallel to the mirror at *m* to prevent clouding of the mirror. (After C. Barus, U. S. Weather Bureau.)



End-on tube.



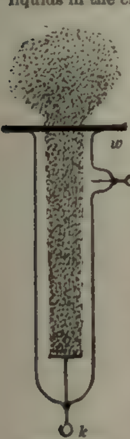
a, fractionating tube; *b*, thermometer; *c*, condenser.

ladium. It is used in gas-analysis for the absorption of hydrogen. It also causes a mixture of oxygen and hydrogen gases passed over it to unite slowly — **Intertentacular tube.** Same as *intertentacular organ of Farre* (which see, under *intertentacular*).—**Jamin's tube,** a capillary tube containing a large number of detached drops of liquid. Since each drop transmits a smaller pressure than it receives, an enormous difference of pressure can exist between the ends of the tube without any appreciable movement of the drops along the tube.

Jamin's Tube.

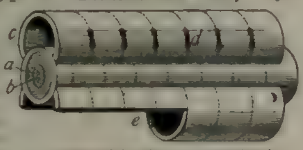
ab, *cd*, and *ef* are three consecutive drops along the tube; owing to the different curvatures of *ab* at *a* and *b*, the pressure in the air at *a* is greater than at *b*; the same is true of all other drops in the tube.

—**Lebel and Henninger tube,** a glass tube with a number of bulbs blown upon it, each containing a little basket of platinum-wire gauze, which serves to delay the passage of vapor: for use in the fractional distillation of liquids in the chemical laboratory.—**Lenard tube,** a special form of vacuum-tube, so constructed as to permit cathode rays generated within to pass through an aluminium diaphragm into the outer air. This form of tube was devised by Professor Philip Lenard for the study of the transmission of cathode rays by air at atmospheric pressure. It consists of a glass tube with a cathode (*k*) at one end and the other end closed by a sheet of aluminium (*w*), through which some of the rays pass out into the air. See *obscure* ★*rays*.—**Mercury-tube.** (*a*) A vacuum-tube which contains vapor of mercury and gives the spectrum of that metal when traversed by an electric discharge. (*b*) A glass tube which contains mercury *in vacuo* and emits a flash of light when shaken.—**Miescher's tube,** the earliest stage of a sarcosporidian parasite, *Sarcocystis*, found within the substance of a muscle fiber in the form of an elongated body.—**Morris tube,** a small-bore rifle-barrel capable of being inserted in a large-bore rifle or shot-gun for shooting practice: patented in 1881: named for its inventor, Richard Morris. *N. E. D.*—**O'Dwyer's tube,** a tube employed in intubation of the larynx.—**Palladium tube,** a glass tube which contains finely divided metallic palladium, used for the absorption of hydrogen in the volumetric analysis of gaseous mixtures.—**Peligot tube,** a glass tube having bulbs blown in its course and usually bent to a U: used in analytical work for the absorption of various elementary groups, as water, carbon dioxid, etc. *Amer. Chem. Jour.*, March, 1906, p. 232.



Lenard tube.

—**Perichordal tube,** a layer of cells which in craniote vertebrates incloses the chorda or notochord in the form of a tube, which sometimes, as in sharks, becomes cartilaginous. The perichordal tube in the higher vertebrates is replaced by the vertebral centra, which encroach on and all but completely obliterate the chorda.

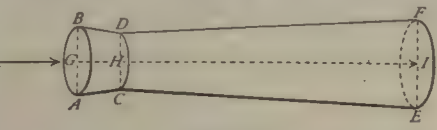


a, perichordal tube; *b*, notochord; *c*, neural tube; *d*, intervertebral foramen; *e*, hemal tube. Dotted lines indicate segmentation into vertebræ.
(From Parker and Haswell's "Zoology.")

—**Phosphorescent tube,** a glass tube containing mercury but exhausted of air. When shaken a phosphorescent glow fills the tube, due to frictional electricity. It is very old, being mentioned by Boerhaave.—**Pine-leaf tube-builder.** See ★*pine*1.—**Plücker tube.** (*a*) In spectrum analysis, a vacuum-tube with capillary bore. (*b*) A form of Geissler tube designed to exhibit certain phenomena of the electric discharge through high vacua.

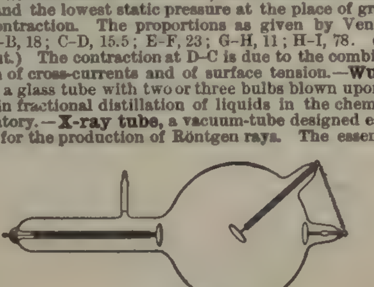
Plücker Tube.

—**Polarization tube,** a tube, usually of glass, of accurately determined length, closed at the ends by flat glass plates of uniform thickness, and having a small connecting tube at the side, through which can be introduced any liquid to be examined as to its rotatory-effect upon the plane of polarization of light. —**Puluj tube,** in *phys.*, a vacuum-tube of the same order as the Geissler and Crookes tubes, used for experiments upon radiant electrode-materials. Like the Geissler tube, the Puluj tube is often used in physiological and psychological experiments in which momentary light-stimulus is required.—**Reflex zenith-tube.** See *reflex*. It consists of a vertical tube permanently fixed, carrying at the upper end a large object-glass and at the lower a basin of mercury. The image of the star, after reflection, is formed at the upper surface of the object-glass (which is perforated in some instruments) upon the reticule wires, which are firmly attached to the lens. A small diagonal prism enables the observer to see them through an eyepiece at one side of the tube.—**Röntgen tube,** a vacuum-tube for the production of X-rays; an X-ray ★tube.—**Schroetter's tubes,** hollow tubes of graduated sizes, used for dilatation of the larynx in cases of adhesion of the vocal cords.—**Segmental tube.** Same as *nephridium*.—**Simple tube,** in musical instruments, a tube or pipe without valves or crooks.—**Soft tube,** in *radiography*, an X-ray tube with low vacuum and emitting in consequence rays of low penetrating power.—**Southey's tubes,** small hollow needles which are thrust into dropsical tissues and left there to drain away the fluid.—**Soxhlet tube,** a Soxhlet extractor made of glass and on a small scale, for laboratory use. **Sprengel tube.** Same as *Sprengel* ★*pipette*.—**Tube of flow,** in *phys.*, an imaginary tubular surface in any field of force made up of a series of stream-lines drawn through each point in a closed curve. The flux through the walls of a tube of force is zero, and the flux through the tube is therefore everywhere the same. A tube through which the flux is unity is called a *unit tube*. Tubes of force (of an electric or magnetic field) are special kinds of tubes of flow.—**Tube of force.** See ★*tube of flow*.—**Tube of induction.** See ★*induction*.—**Twopenny tube,** a subway railway in which the ordinary fare is twopence; specifically, the Central London Railway (underground). The name is said to have been first applied to it in a journal called the Londoner, June 30, 1900. *N. and Q.*, 9th ser., VII. 375. [Colloq., London.]—**Unit tube of force, flux,** or **induction.** See ★*tube of flow*.—**Vector tube,** one of a system of imaginary tubes by means of which the distribution of a vector in space is described. The vector tubes are considered as fitted together so as to entirely fill the space, and as having for the generating lines of their surfaces the vector lines.—**Ventral tube,** a curious ventral organ in the *Collembola* whose function is not understood. It may be a simple papilla on the venter of the first abdominal segment, or it may be a double organ protecting two long delicate tubes capable of protrusion.—**Venturi tube,** a tube whose internal dimensions correspond to the outer surface of a jet of water issuing horizontally under considerable pressure from the thin vertical wall of a reservoir; the tube that gives the maximum rate of flow, the maximum contraction, and the lowest static pressure at the place of greatest contraction. The proportions as given by Venturi are A–B, 18; C–D, 15.5; E–F, 23; G–H, 11; H–I, 78. (See the cut.) The contraction at D–C is due to the combined action of cross-currents and of surface tension.



Venturi Tube.

—**Wurtz tube,** a glass tube with two or three bulbs blown upon it, used in fractional distillation of liquids in the chemical laboratory.—**X-ray tube,** a vacuum-tube designed especially for the production of Röntgen rays. The essential features of X-ray tubes consist of a concave cathode which concentrates the cathode stream upon the face of a metallic target consisting usually of a sheet of platinum mounted in the center of a nearly spherical bulb of glass. The target sometimes serves likewise as the anode of the tube. The target when bombarded by the cathode stream becomes a source of X-rays, and these pass out through the walls of the tube in a divergent beam into the outer air. To prevent undue heating under the action of the cathode rays the target is frequently made of massive metal faced with a layer of platinum. The pressure in all vacuum-tubes in which cathode rays are generated gradually decreases during operation until the resistance becomes too great to permit of the passage of the current. To counteract this tendency various devices for the control of the vacuum are employed.



X-ray or Röntgen Tube.

tube-case (tūb'kās), *n.* A box or chamber which contains tubes, or to which tubes are connected or attached; specifically, in the surface-condenser of a steam-engine, the chamber or part of the condenser into which the tubes which form the cooling or condensing surface are all fastened air-tight, and into which the circulating water is passed by the pump in order that it may thence flow through the tubes. *D. K. Clark*, Steam Engine, IV. 683.

tube-condenser (tūb'kọn-den″sėr), *n.* A condenser in which the cooling surface is made up of tubes, either cylindrical or prismatic. Cooling may be by water or by air. The cooling medium more frequently passes within the bore of the tube and the material to be cooled over the external surface. *D. K. Clark*, Steam Engine, I. 641.

tube-drawing (tūb'drâ-ing), *n.* **1.** The manufacture of tubes from a solid ingot by drawing out the metal over a mandrel and without a longitudinal seam or joint. A central hole is drilled in the solid ingot, or is made in the casting by a core; the ingot is then rolled to reduce its thickness and give desired length; and, finally, the tube is finished to size and gage by drawing the metal through a plate. **2.** The manufacture of tubes by forcing a semifluid material through a die, with a mandrel or triblet in place to form the bore.—**3.** The removal of the tubes from a multitubular boiler for inspection and renewal. [Eng.]

tube-former (tūb'fôr″mėr), *n.* A forming-machine using small and often tapering rolls for making speaking-tubes, small cones, and other small pipes. See *forming-machine*.

tube-funnel (tūb'fun″el), *n.* Same as ★*funnel-tube*.

tube-furnace (tūb'fėr″nạs), *n.* See *electric* ★*furnace*.

tube-ignition (tūb'ig-nish″ọn), *n.* A method of igniting the combustible mixture of fuel and air in the cylinder of an internal-combustion motor, by which the mixture was allowed to enter by a timing-valve into a tube which communicated with the combustion- or compression-chamber. This tube was kept hot by an external flame and was able to raise the mixture within it to the temperature of ignition. The flame resulting from such local ignition was at once propagated through the entire mass, and the expansion of volume and increase of pressure caused the working stroke. The point or time of ignition can not be varied over wide limits by this system, and with lean mixtures it was not always reliable. The convenience of ignition by an electric spark has caused this latter system to predominate. *F. R. Hutton*, Gas Engine, p. 250.

tube-mill (tūb'mil), *n.* **1.** A building or plant where tubes are manufactured.—**2.** (*a*) A rolling-mill for rolling tubes, as by the Mannesmann process, which produces a tube with the fibers running in a helix so as to withstand internal pressures. (*b*) A grinding- or pulverizing-mill used for pulverizing cement clinker. It consists of a revolving tube in which is placed the material to be ground, together with a quantity of pebbles. As the tube turns, the action is very similar to the grinding of pebbles on a beach.

tuberaceous (tū-bẹ-rā'shius), *a.* [NL. *Tuberace(æ)* + *-ous*.] Belonging or pertaining to the *Tuberaceæ*.

tube-railway (tūb'rāl″wā), *n.* See ★*railway*.

Tuberales (tū-bẹ-rā'lēz), *n. pl.* [NL., < *Tuber* (see *Tuber*, 2) + *-ales*.] An order of tuber-like, subterranean ascomycetous fungi named from the genus *Tuber* and commonly known as 'truffles.' Written *Tuberineæ* by E. Fischer.

tubercle, *n.*—**Chassaignac's tubercle.** Same as *carotid tubercle* (which see, under *carotid*).—**Dorsal tubercle,** the tubercle formed in the pharynx of ascidians by the folding of the terminal dilatation of the duct which leads from the subneural gland to the cavity of the pharynx.—**Hippocampal tubercle,** an expansion of the hippocampus at its lower extremity, separating the fascia dentata from the fimbria. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 331.—**Marginal tubercle,** in medusoids, one of the slight prominences on the body-wall, frequently containing a prolongation of the cœlenteron, and often pigmented and provided with cnidoblasts.—**Mucous tubercle.** Same as *condyloma*.—**Nuchal tubercle,** the prominence formed by the spinous process of the vertebra prominens, or seventh cervical vertebra, in man.—**Nuptial tubercle,** horny tubercles developed on the head of the males of many cyprinoid fishes during breeding-time.

> Snout rounded, strongly projecting beyond the mouth, with numerous *nuptial tubercles*.
> *Proc. Zool. Soc. London*, 1903, p. 23.

Rabic tubercles, circumscribed collections of round cells around the nerve-cells, occurring in rabies.

> To these pericellular and perivascular focal accumulations of small round cells, more especially to the former, Babes has given the name of "*rabic tubercles*" or nodules, and he considers that these are so characteristic of rabies that, when due attention is given to their intensity and distribution, they can serve as a diagnostic criterion of the disease.
> *Jour. Exper. Med.*, Oct. 1, 1901, p. 582.

Root tubercle. See ★*root-tubercle*.—**Tubercle bacillus.** See ★*bacillus*.—**Tubercles of Montgomery,** elevations in the areola surrounding the nipple, marking the site of glands secreting a sebaceous material.

tuberculariaceous (tū-bėr-kū-lā-ri-ā'shius), *a.* Belonging or pertaining to the *Tuberculariaceæ*, a family of fungi.

tubercularization (tụ-bėr″kụ-lär-i-zā'shọn), *n.* Same as *tuberculization*.

tuberculide (tụ-bėr'kụ-lid), *n.* [L. *tuberculum*, tubercle, + *-ide*.] Any skin-lesion of tuberculosis.

> Is Lupus Erythematoides a *Tuberculide?*— A. Gunselt negatives this question and reports a case of disseminated lupus erythematoides in which, upon autopsy, no tuberculous lesions were found to be present anywhere in the body. *Med. Record*, March 28, 1903, p. 511.

Tuberculin test. When tuberculin is injected into a non-tuberculous subject no unusual symptoms develop. In tuberculous persons (or animals), however, a distinct elevation of temperature occurs within the twenty-four hours following the inoculation. This reaction is specific and serves as one of the most valuable methods of diagnosing the disease. The test is extensively utilized in the examination of cattle.

> The *tuberculin test* came into existence through the most careful and thorough scientific experimentation. In practice it is applied by first taking the temperature of the animal to be tested, at intervals of about two hours, a sufficient number of times to establish the normal temperature of the body under the ordinary conditions of life. The proper dose of tuberculin is then injected under the skin with a hypodermic syringe. The injection is generally made late in the evening, and the temperature is taken every two hours the following day, beginning early in the morning and continuing until

late in the evening, if the fullest information is desired. From average temperatures calculated by de Schweinitz in 1896 of about 1,600 tests of tuberculous cows, it appears that in general the rise of temperature begins from five and one-half to six hours after the tuberculin is injected, reaches its greatest height from the sixteenth to the twentieth hour, and then gradually declines, reaching the normal again by the twenty-eighth hour.
Yearbook U. S. Dept. Agr., 1901, p. 582.

tuberculinic (tụ-bėr-kụ-lin′ik), *a.* [*tuberculin* + *-ic.*] Noting an acid substance extracted from tubercle bacilli, which is regarded as a nucleinic acid.

tuberculitis (tụ-bėr-kụ-lī′tis), *n.* [NL., < L. *tuberculum*, tubercle, + *-itis.*] Inflammation of tubercles.

tuberculocide (tụ-bėr′kụ-lọ-sīd), *n.* [L. *tuberculum*, tubercle, + *-cida*, < *cædere*, kill.] Anything destructive to the tubercle bacillus. *Buck*, Med. Handbook, I. 461.

tuberculocidin (tụ-bėr″kụ-lọ-sī′din), *n.* [*tuberculocide* + *-in*^{2}.] An albumose obtained from tuberculin and used in the same manner as the latter: supposedly the active principle of tuberculin.

tuberculoderma (tụ-bėr″kụ-lọ-dėr′mạ̈), *n.* [L. *tuberculum*, tubercle, + Gr. δέρμα, skin.] Tuberculosis of the skin.

tuberculoma (tụ-bėr-kụ-lō′mạ̈), *n.*; pl. *tuberculomata* (-mạ-tạ̈). [NL., < L. *tuberculum*, tubercle, + *-oma.*] Any tumor caused by the presence of the tubercle bacillus, or an abscess of tuberculous origin.

tuberculome (tụ-bėr′kụ-lōm), *n.* Same as ⋆*tuberculoma*.

> If the tuberculous abscess or *tuberculome* is not too large, a cure may be effected by a simple washing with an antiseptic liquid containing iodoform, creosote, ether and olive oil. *Nature*, March 5, 1903, p. 431.

tuberculo-opsonic (tụ-bėr″kụ-lō-op-son′ik), *a.* Referring to the opsonin of the tubercle bacillus.

> In two cases the diagnosis was doubtful; in one of these the *tuberculo-opsonic* index was from normal to 0.7 below normal. *Med. Record*, Dec. 14, 1907, p. 987.

tuberculophobia (tụ-bėr″kụ-lọ-fō′bi-ạ̈), *n.* [NL., < *tuberculo(sis)* + Gr. -φοβια, < φοβεῖν, fear.] A morbid dread of tuberculosis. [Rare.]

> As Professor Brouardel observed in his address before the Tuberculosis Congress in London, "*tuberculophobia* must not be produced, the patient must not be made a pariah." *Lancet*, July 11, 1903, p. 76.

tuberculoplasmin (tụ-bėr″kụ-lọ-plas′min), *n.* [L. *tuberculum*, tubercle, + E. *plasm* + *-in*^{2}.] The protoplasm of tubercle bacilli, obtained by crushing a mass of bacilli mixed with sand. *Buck*, Med. Handbook, I. 692.

tuberculosamine (tụ-bėr″kụ-lọ-sam′in), *n.* [*tuberculos(is)* + *amine.*] A substance obtained from tubercle bacilli, which is possibly a protamine.

tuberculosectorial (tụ-bėr″kụ-lọ-sek-tō′ri-al), *a.* [L. *tuberculum* + E. *sectorial.*] Noting a type of molar characteristic of many of the existing *Carnivora*, the *Insectivora*, and the carnivorous marsupials, as well as many fossil forms, in which the constituent cusps of the crowns of the molar teeth are high, more or less conical, and trenchant.

> The quinquetubercular, or *tuberculosectorial* type of inferior molars is equally widely spread.
> *Proc. Zool. Soc. London.*, 1893, p. 197.

tuberculosis, *n.* It is a specific infectious disease, usually chronic in course. Any organ or tissue of the body may be the seat of the disease, but in the adult the lungs are the most frequently attacked. This form (pulmonary tuberculosis or consumption) is marked by emaciation, cough and expectoration, fever of a hectic character, rapid pulse, night sweats, and sometimes the expectoration of blood. The larynx may also be involved, in which case hoarseness or loss of voice and pain on swallowing are added symptoms. In children tuberculosis frequently invades the lymphatic glands of the neck, the spine (constituting Pott's disease), or one or more of the joints, especially the hip or the knee. This form, being often amenable to treatment by mechanical or operative measures, is called *surgical tuberculosis*. Tuberculosis of the skin is known as *lupus*. In the treatment of pulmonary and other forms of tuberculosis, the main reliance is upon fresh air, the patient passing the greater part of the day in the open air and sleeping at night by an open window or actually out of doors, sheltered from rain or snow by an awning. A dry but dustless climate at an elevation of 1000 to 3000 feet is beneficial, but is not essential. Rest is an important factor in the treatment, especially when fever is present. The food should be of the most nourishing character, consisting largely of eggs and milk, and it is important that the diet should include a large amount of fat. To avoid the dissemination of infection, the sputum (which usually contains large numbers of the tubercle bacilli) should be received in a pasteboard box or paper napkin and immediately burned. Care should be taken also, when coughing, to hold a paper napkin before the mouth to catch the droplets of moisture which almost always contain the bacilli of the disease. The acute form of the disease is called *miliary tuberculosis*, which see, under *tuberculosis*. —**Acute cestode tuberculosis.** See ⋆*beef-measles.*—**Basal tuberculosis,** tuberculosis involving the lower portion of the affected lung.—**Lymphoid tuberculosis,** a form of tuberculous infection in which the microscope reveals an embryonal cell-infiltration in lieu of the ordinary histological appearances.

> The typical histological features of tubercle tissue are often absent; in lieu thereof there may exist a diffuse embryonal cell infiltration, at times capable of simulating sarcoma (Pilliet); Courtillier applies the name "*lymphoid tuberculosis*" to the same condition.
> *Jour. Exper. Med.*, Nov. 29, 1901, p. 44.

Olive tuberculosis, a disease of the olive in which knots or galls of various sizes are formed on the twigs. It is attributed to *Bacillus Oleæ.*—**Surgical tuberculosis,** tuberculosis of the bones, joints, or other parts accessible to the knife of the surgeon.—**Tuberculosis cutis,** tuberculous disease of the skin, such as lupus vulgaris.—**Tuberculosis verrucosa cutis,** a skin-disease marked by wart-like growths and pustules on brownish patches of varying size.

tuberculotropic (tụ-bėr″kụ-lọ-trop′ik), *a.* [L. *tuberculum*, tubercle, + Gr. -τροπος, < τρέπειν, turn.] Having the property of turning toward and entering into chemical combination with the tubercle bacillus.

Tuberculum acusticum. Same as *acoustic tubercle* (which see, under *acoustic*).—**Tuberculum impar,** a slight prominence, the rudiment of the tongue, in the middle line of the pharynx in the embryo. See cut under ⋆*furcula.*—**Tuberculum Loweri,** a small tubercle occasionally found in the right auricle of the heart between the upper and the lower venæ cavæ.—**Tuberculum posterius,** the greater tuberosity of the humerus. See cut under *humerus.*—**Tuberculum retrolobulare of His,** a small projection or tubercle on the lower and back part of the external ear.—**Tuberculum supratragicum,** a slight prominence occasionally observed in the external ear just above the tragus.

tuberin (tū′bėr-in), *n.* [*tuber* + *-in*^{2}.] A globulin found in potatoes.

> The Connecticut State Agricultural Experiment Station has made a special study of the proteids of potatoes as well as of many other vegetable products. According to these investigations, the potato contains two proteids, a globulin, to which the name "*tuberin*" is given, and a proteose, the latter occurring only in very small amounts.
> *Yearbook U. S. Dept. Agr.*, 1900, p. 340.

tuberosity, *n.*—**Malar tuberosity,** the prominence of the malar bone.

tube-stay (tūb′stā), *n.* See ⋆*stay-tube.*

tube-union (tūb′ū″nyọn), *n.* The union or threaded metal collar used to connect the tube of a microscope or telescope with the eyepiece or object-lens.

tube-well, *n.*—**Abyssinian tube-well,** a driven pipe-well: so called in England because used in the Abyssinian campaign.

tube-wheel (tūb′hwēl), *n.* The plate, or wheel, that carries the sliver-tube of the coiler of a cotton-combing machine. *Thornley*, Cotton Combing Machines, p. 246.

tube-works (tūb′wėrks), *n.* A factory where tubes or pipes are made.

Tubicola (tụ-bik′ọ-lạ̈), *n. pl.* [NL., < L. *tubus*, tube, + *colere*, inhabit.] In *paleon.*, a group of indeterminate value comprising all the fossil tube-dwelling worms found in geological formations. These fossil worm-tubes are variously shaped, straight, curved, spirally coiled, and turreted, and are made up of cemented sand or mud particles or of membranous, leathery, or calcareous matter secreted by the worms. They are found in rocks of all ages, and the best known among them are included in the genera *Serpula*, *Terebellum*, *Spirorbis*, *Autodetus*, *Conchiolites*, and *Cornulites*.

tubigan (tö-bē′gan), *n.* [Tagalog, < *túbig*, water.] In the Philippine Islands, irrigated land.

tubinarine (tū-bi-nā′rin), *a.* Same as *tubinarial*.

tubing, *n.* 3. Specifically, a thin steel pipe or tube used to line the bore of a deep well for water, gas, or air to prevent the bore from getting out of line or caving in, and to keep water and other foreign matter from getting into the well from the sides of the hole. It is thinner in gage than boiler-tube or pipe.

tub-race (tub′rās), *n.* A race in which the contestants use tubs in the place of boats.

> The *tub race* evoked much laughter and amusement, there being about a dozen contestants who spared no effort to win, but victory was easy for Lewis Bonds, with W. Bowser a good second.
> *N. Y. Herald*, Aug. 15, 1903.

Tubular cancer. Same as *cylindroma*.

tubulate, *v. t.*—**Tubulated crucible.** See ⋆*crucible.*

tubule, *n.*—**Convoluted tubule,** one of the minute uriniferous tubules of the kidney.—**Miescher's tubules.** Same as *Miescher's* ⋆*tubes.*—**Respiratory tubule,** one of the breathing-tubes of an air-breathing, aquatic, dipterous larva or pupa. Each tube has at its tip a spiracle which enables the insect to breathe when the tube is thrust through the surface-film of the water in which it lives.

tubulosaccular (tū″bụ-lọ-sak′ụ-lạ̈r), *a.* [L. *tubulus*, tubule, + *sacculus*, a sack, + *-ar*^{3}.] Both tubular and saccular. *Buck*, Med. Handbook, VII. 10.

tubulostriate (tū″bụ-lọ-strī′āt), *a.* Having the surface striated with hollow ribs, as on some brachiopod and molluscan shells.

Tubulous boiler. Same as *water-tube boiler* (which see, under *water-tube*).

tubulus, *n.* 4. Same as *tubulure.*

> 100 c.c. of the liquid are introduced into a 200 c.c. flask, connected with a Liebig's condenser, the lower end of which communicates by an air-tight joint with a small tubulated receiver, from the *tubulus* of which a tube, bent twice at right angles, is in air-tight communication with one limb of a bulbed U-tube.
> *Buck*, Med. Handbook, IV. 784.

tuch, *v.* and *n.* A simplified spelling of *touch*.

tuchy, *a.* A simplified spelling of *touchy*.

tuck^1, *n.* 10. Same as ⋆*tang*^{6}.

tuckahoe, *n.* 3. [*cap.*] An inhabitant of lower Virginia.—4. The poor land in lower Virginia. *Bartlett*, Dict. Americanisms.

tucker^2, *n.*—**Best bib and tucker.** See ⋆*bib*2.

tuckernuck (tuk-ėr-nuk′), *n.* [Appar., like *Tuckernuck*, an island off Nantucket, of Amerindian origin. Cf. ⋆*squantum*, a picnic, etc.] In some parts of southeastern Massachusetts, a picnic. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 264.

Tucker porcelain. See *American* ⋆*porcelain.*

Tucker's system of circles. See ⋆*circle.*

tuck-plate (tuk′plāt), *n.* In *iron ship-building*, a sharply curved plate of the outside plating at the junction of the stern-post with the transom frame under the counter. Also called *oxter-plate*.

tuck-rail (tuk′rāl), *n.* In *ship-building*, the rail which is wrought well with the upper side of the wing transom, and which forms a rabbet for calking the butt-ends of the bottom planks.

tuf, tufen. Amended spellings of *tough*, *toughen*.

tuffaceous (tu-fā′shius), *a.* [*tuff* + *-aceous.*] In *petrog.*, having the properties of or composed of volcanic tuff: to be distinguished from *tufaceous*.

tuffeau (tu-fō′), *n.* [F. *tuffeau*, *tufeau*, tuff or tufa, < *tuf*, tuff.] In *petrog.*, a name employed in France and Belgium for a fine-grained argillaceous sandstone, frequently calcareous, colored green or gray by glauconite. Sometimes applied to a friable granular chalky limestone. *Geikie*, Text-book of Geol., p. 166.

tuff-lava (tuf′lä″vạ̈), *n.* [*tuff*^{3} + *lava.*] Same as ⋆*taxite.*

tuft^2, *n.*—**Ungual tuft,** a tuft of hairs beside the claw of a spider. *Proc. Zool. Soc. London*, 1897, p. 725.

tufting-needle (tuf′ting-nē″dl), *n.* A needle for passing a thread in a mattress or pillow which it is desired to tuft. The thread is drawn taut after being passed and so raises the tuft. See cut under *needle*.

tug-chain (tug′chān), *n.* In a harness for a horse, a short piece of chain at the end of the tug: sometimes the whole tug, when made of chain; sometimes it also serves to carry a coiled spring to relieve the sudden strain of starting; a trace-chain. See *tug*, 5.

tuladi (tö-lä-dē′), *n.* [Canadian F. *touladi*, *touradi*, from a Montagnais name of the fish (Clapin). The word gave name to the river *Touladi* (*Tuladi*), flowing into Lake Temiscouata.] A fish (*Salmo ferox*) found in the waters of eastern and northern Quebec. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 264.

tulare (tö-lä′rē), *n.* [Sp., < *tule*, tule.] A marsh occupied with tule or reeds. [Western U. S.]

Tularosa formation. See ⋆*formation.*

tule, *n.* 2. More broadly, other marsh plants, such as cattail.

> In others (cienagas), there is added the willow and clumps of *tule* (cat-tail) and other swamp plants.
> *E. W. Hilgard*, in Rep. Agr. Exper. Stations, Univ. [California, 1892-93, p. 185.

Tule land, marshland originally covered with tule, now extensively reclaimed and put in wheat. [California.]

tulip, *n.*—**Native tulip**, in Australia, same as *waratah*, 1.—**Tulip ware.** See *American* ★*pottery* (*b*).

tulipine (tū′lip-in), *n.* [*Tulipa* (see def.) + *-ine*^{2}.] An alkaloid of uncertain composition contained in *Tulipa Gesneriana.* It acts energetically on the nervous system, increases the salivary flow, and is an aperient and diuretic.

tulip-poppy (tū′lip-pop″i), *n.* See ★*Hunnemannia.*

tulip-wood, *n.* 2. (*d*) In Australia, a tree of the elm family, *Homoiceltis Philippinensis* (*Aphananthe Philippinensis* of Planchon).

tulisan (tö-lē-sän′), *n.* [Tagalog.] In the Philippine Islands, a robber or outlaw.

tullidora (töl-yē-dō′rā̤), *n.* [Mex. Sp.; Sp. *tullidura*, ‹ *tullir*, emit dung, mute (applied to birds).] Same as ★*tlalcapolin* (which see).

Tulostoma (tū-lọ-stō′mā̤), *n.* [NL. (Persoon, 1797), irreg. ‹ Gr. τύλος, a callus, + στόμα, a mouth. Referring to the thickened opening of the peridium.] A genus of stipitate gasteromycetous fungi having a double peridium with a small apical opening. About 40 species are known, many of which are found in the arid portions of the world. *T. mammosum* is frequently found in sandy soil in Europe, North America, and other parts of the world.

Tulostomaceæ (tū-lọ-stō-mā′sẹ-ē), *n. pl.* [NL., ‹ *Tulostoma* + *-aceæ.*] A family of stipitate gasteromycetous fungi named from the type genus, *Tulostoma.*

tulucana-oil, *n.* See *touloucouna*-★*oil.*

tulucunin (tö-lö-kö′nin), *n.* [*Tulucuna, Touloucouna* (see def.), + *-in*^{2}.] A pale-yellow amorphous compound, $C_{10}H_{14}O_4$, contained in the bark of *Carapa procera* (*Touloucouna*), from Guiana.

tum^3 (tum), *n.* [A corruption of *stomach.*] The stomach. [A child's word.]

tuman, *n.* See *toman.*

tumble-home, *n.* 2. The falling in or curvature inward toward the central plane of the side of a vessel from the water-line upward. Also called *tumbling-home.*

tumbler, *n.* 17. A wheel or drum with revolving paddles, used in tanning hides. *Sadtler*, Handbook of Indust. Chem., p. 329.

tumbler-bearing (tum′blėr-bãr″ing), *n.* A bearing used when traveling cranes are driven by a square shaft. As the crane travels along, it carries a bevel-gear which slides on the square driving-shaft and by means of which power is transmitted to the hoisting apparatus. Since the square driving-shaft is long, it has to be supported at intervals as well as at the ends. For this purpose bearings are used which automatically fall out of the way as the sliding-gear comes to them, and return to position when it has passed. These bearings are so named because of their falling or tumbling out of the way.

tumble-rose (tum′bl-rōz), *n.* A common name of *Scarus cæruleus*, one of the parrot-fishes found on the southern Atlantic coast of the United States and southward to Brazil.

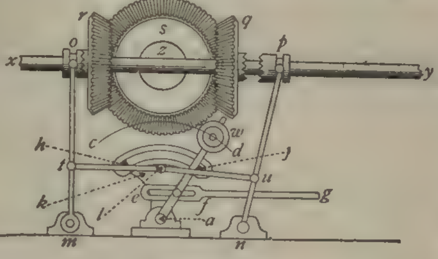
tumbling-mill (tum′bling-mil), *n.* In foundry practice, a rumble, tumbling-box or -barrel, or battery of tumbling-barrels.

tumbling-room (tum′bling-röm), *n.* In *founding*, a room in which castings are cleaned by being tumbled in a tumbling-barrel. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 562.

tumbling-shaft, *n.* 2. The transverse shaft in a Stephenson reversing link-motion from arms on which the link proper is suspended or controlled in position. When the engine is horizontal, the arms have a rocking or tumbling motion through the necessary angle to move the link from the position for full forward gear to full gear backward. In many large engines the tumbling-shaft is actuated by power; in smaller engines it is rocked by a hand-lever, or, in French practice, by a screw-gear and nut. *Thurston*, Manual of Steam-Engine, II. 356.

tumbling-star (tum′bling-stär″), *n.* A six-pointed iron casting used in a tumbling-barrel to keep the abradant or cleansing-material stirred up and intimately mixed with the things to be cleansed or polished.

tumbling-weight (tum′bling-wāt″), *n.* A mechanical device by which a movement is stopped or reversed by a part of the apparatus which is driven. As the moving part advances, it engages with a throw-out motion, tending to disconnect it from the driving force. In the motion of the driven part it comes to a point at which the throw-out motion has partly released it from the driving force, and the latter is unable to move it all the way so as to throw the driving force out of gear entirely, or to effect the further motion necessary to cause a reversal. With the tumbling-weight principle, the motion of the driven body moves a lever carrying the necessary weight, so that the latter is lifted to and past a central neutral position. It then falls or tumbles on the other side of this central position, and in its fall completes the required throw-out or reversing adjustment, and connects the driven body to the power for the reverse motion, or throws it out of gear entirely, as may be required. The tumbling-weight is used in slow-moving hydraulic machinery without fly-wheel control, in old forms of planers, some forms of textile machinery, and the like. *Nature*, Nov. 19, 1903, p. 68.



Tumbling-weight.

w, tumbling-weight, secured to a pivoted lever centered at *a* and free to rock between stops through the arc *cd*; *efg*, the rod which causes the weight-lever, *aw*, to rock through half of the arc *cd* by alternate push and pull of the ends of the slot *ef*. When the machine actuating *efg* has carried the weighted lever to the central position and a little past it, the weight is free to fall or tumble the rest of the way without effort from *efg*. In falling or tumbling, a stop or pin fitting the curved slot *hj* engages with the pivoted lever *k* by such slot and is carried to right or left by the tumble of the weight *w*. *k* is linked by a pin at *l* to two levers, *mo* and *np*, which throw the jaw or other clutch at *o* and *p* into gear with the complement of such half-clutch, forming part of the hubs of wheels *q* and *r* in gear with *s*. The release and engagement take place necessarily in succession, and with only the time between required for the tumble of the weight *w* and the actuating of the slot *hj*. The link *efg* can be actuated by the mechanism driving or driven by the shaft *xy*, if the wheel *s* or the shaft *x* is the driver and is turning constantly in one direction; and there will be no possibility of the clutches standing in the relation of one out and the other not yet in, unless the tumbling-lever is held from falling by an exterior action, or is intentionally placed in central position and latched there, if *w* is large enough to do the work allotted to it.

tumbo^1 (tụm′bọ̄), *n.* [A native name.] A name given in Peru and Bolivia to the edible fruit of the *Passiflora* or passion-flower.

tumbo^2 (tum′bō), *n.* [Native name in southwestern Africa.] A curious tree of the deserts of southwestern Africa, *Tumboa Bainesii.* See *Welwitschia.*

tumenol (tū′men-ol), *n.* [(*bi*)*tumen* + *-ol.*] A trade-name of a preparation obtained by the action of sulphuric acid on the unsaturated hydrocarbons of mineral oils. Its use is similar to that of ichthyol.

tumeri (tū′mė-ri), *n.* A Hindu double flute, having the tubes inserted in a gourd which serves as a reservoir for the air.

tumi (tö′mẹ̄), *n.* See ★*topo.*

tummy (tum′i), *n.* Same as ★*tum*^{3}.

tumor, *n.*—**Adenoid tumor.** See *adenoma.*—**Beet-root tumor.** The chytridiose of beet. See ★*chytridiose.*—**Butyroid tumor**, a tumor of the breast, with greasy, butter-like contents.—**Connective-tissue tumor**, any neoplasm belonging histologically to the connective-tissue group, such as fibroma, chondroma, myxoma, osteoma, etc.—**Fatty tumor.** Same as *lipoma.*—**Fibrocellular tumor.** Same as *fibroma.*—**Granulation tumor.** Same as *granuloma.*—**Heterologous tumor**, a growth composed of elements different from those forming the tissue from which the tumor arises.—**Homologous tumor**, a growth composed of the same kind of tissue as that from which it arises.—**Infiltrating tumor**, a new growth not distinctly marked off from the surrounding tissue.—**Mucoid tumor.** Same as *myxoma.*—**Rokitansky's tumor**, a multilocular ovarian cyst.—**Varicose tumor**, a purplish swelling formed by a mass of dilated venous radicles.

tum-tum^2 (tum′tum), *n.* [Chinook jargon.] The heart.

> *Tum-tum* is the heart, and, according to Mr. Hale, is intended to represent its beating, but we have a shrewd suspicion that it is just our own "tummy" [stomach].
> *J. Platt, Jr.*, in N. and Q., 10th ser., III. 107.

tun^3, *n.* An amended spelling of *ton*^{1}.

tuna^1, *n.* 2. The common eel of New Zealand, *Anguilla aucklandii.*

tuna-eel (tö′nä̤-ēl), *n.* See ★*tuna*^{1}, 2.

tund (tund), *v. i.* [Imitative.] To emit a dull, hollow sound. [Rare.]

> Play they did: drums *tunding* and bagpipes skirling as though Fort Carillon . . . would succumb like another Jericho to their clamour.
> *A. T. Quiller-Couch*, Fort Amity, I.

tundra, *n.* 2. A marshy moss-covered plain or rolling district, deeply frozen in winter and thawed at the surface in the summer. Such plains occupy large areas of arctic Asia and North America.

tune, *n.*—**Act tune**, music intended to be performed in a theater between the acts. See *entr'acte*, 2, and *playhouse* ★*tune.*—**Playhouse tune**, a piece of music sung or played between the acts of a drama or play; an intermezzo.

tune, *v. t.* 7. In *elect.*, to bring (two or more electric circuits) into resonance; adjust to syntony; make the natural frequency for electrical oscillations in (one circuit) equal to the frequency in another circuit by adjustments of inductance and capacity.

> The distance between the transmitter and receiver was varied from two meters to twenty meters. No effort was made to "*tune*" the circuits.
> *Elect. World and Engin.*, June 11, 1904, p. 1120.

8. In *psychophys.*, to adjust physiologically to respond in an individual way to determinate intensities of stimulus: said (in the passive) of the pressure, warmth, cold, and pain 'spots' of the skin.

> Emphasize the fact that the [cold] spots are not all equally sensitive, but are '*tuned*' or adjusted to respond to a given stimulation by sensations of varying intensity.
> *E. B. Titchener*, Exper. Psychol., I. ii. 84.

tuned, *a.* 2. In *elect.*, in resonance. See ★*resonance*, 4.

tung, tungd. Simplified, and former, spellings of *tongue, tongued.*

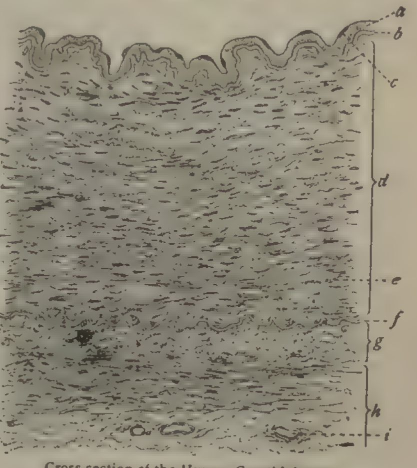
tungsten, *n.* Metallic tungsten has been obtained by means of the electric furnace in a fused state, though not quite compact, and probably not quite pure. It is of rather bright gray color, with metallic luster, specific gravity 18.7, hard, but not sufficiently so to scratch glass, of very high melting-point and softening gradually before fusion, so that it may be welded. It is little acted on by air or water at ordinary temperature, slowly attacked by hydrochloric, hydrofluoric, or sulphuric acid, rapidly by hydrochloric or hydrofluoric acid with addition of nitric acid, and when in powder burns in the air at a red heat.—**Tungsten bronze.** See ★*bronze.*—**Tungsten trioxid**, a bright-yellow powder, obtainable by gradually heating ammonium tungstate in the air until ammonia ceases to be given off. It has a density of 6.34, becomes darker in color on heating, returning to its canary-yellow tint on cooling again, and behaves as an acid oxid, from which tungstates and tungstic acid may be prepared.

Tungus (tung-gös′), *n.*; pl. *Tunguses* (tung-gö′sẹ̈z). [Also *Tungoos.* Siberian.] 1. One of a race of eastern Siberia related to the Manchus.—2. The language of this race.

Tungusian (tung-gö′si-a̤n), *a.* and *n.* **I.** *a.* Of the Tunguses or their language.

II. *n.* One of the Tunguses; also, their language.

Tunica elastica, the elastic middle coat of an artery. Also called *media* or *tunica media.*



Cross-section of the Human Carotid Artery.

a, intima; *b*, elastica interna; *c*, endothelium of the intima; *d*, media; *e*, fenestrated elastic membrane; *f*, elastica externa; *g*, inner layer of adventitia; *h*, outer layer of adventitia; *i*, one of the vasa vasorum.

(From Böhm-Davidoff Huber's "Textbook of Histology.")

tunicary, *n.* **II.** *a.* Relating to a tunic or enveloping membrane.

> The *tunicary* hernia of the jejunum, though covered on all sides by peritoneum, still lay entirely on one side of the mesentery. *Jour. Exper. Med.*, Jan. 15, 1901, p. 343.

Tunicary hernia. Same as *mucosal* ★*hernia.*

tuning, *n.* 2. In *elect.*, the adjustment of a circuit, as to capacity and inductance, so that electrical oscillations induced in it shall agree in frequency with those in another circuit or circuits.—**Intermediate tuning**, in *music*, tempered tuning. See *tempered*, 2.

tuning-hole (tū′ning-hōl), *n.* In *organ-building*, same as *tuner*, 3.

tuning-wrench (tū′ning-rench), *n.* Same as *tuning-hammer* or *tuning-key.*

tunket (tung′ket), *n.* A meaningless term euphemistically substituted for 'devil,' 'hell,' etc. [Prov.]

> "Hey? Did you speak to me?' asked the widow sweetly.
> "Did I speak? No, I screeched! What in *tunket*—"
> "I want you to see this picture of the mayor's house in Blazeton." *J. C. Lincoln*, Cy Whittaker's Place, xiv.
>
> "Who in *tunket* is it backs up the old creetur', anyways?" asked Master Fairway.
> *G. S. Wasson*, The Green Shav. iii.

tunki (tön'kẹ̄), *n.* [Quichua.] A name given in Bolivia and some parts of Peru to the cock of the rock.

tunnelism (tun'el-izm), *n.* [*tunnel* + *-ism.*] The theory and practice of tunneling. [Rare.]

> A complete system of *tunnelism.*
> *C. Clark*, Obs. on the Intended Tunnel beneath the River Thames, 1799, quoted in N. and Q., 10th ser., I. [27.

tunnelist (tun'el-ist), *n.* [*tunnel* + *-ist.*] An engineer who has devoted himself to the construction of tunnels. [Rare.]

> The *tunnelist* and his friends.
> *C. Clark*, Obs. on the Intended Tunnel beneath the River Thames, 1799, quoted in N. and Q., 10th ser., I. [27.

tunny, *n.*—**Little tunny**, a name of *Gymnosarda alleterata*, a scombroid fish found on both sides of the warmer parts of the Atlantic.

tuno (tö'nō), *n.* [Native name in Central America?] A tree of the fig family, *Castilla Tunu*, closely related to *C. elastica*, the tree producing Central American rubber. From its latex is obtained a sticky, resinous, nonelastic rubber, also called *tuno* or *tuno gum.*

tunta (tön'tä), *n.* [S. Amer.] See ★*chuñu.*

tupara (tö-pä'rä̤), *n.* [A Maori corruption of E. *two-barrel* (gun).] A double-barreled gun. *E. E. Morris.* [New Zealand.]

tupik (tö'pik), *n.* [Also *topek;* < Eskimo (of Alaska) *tupik, toopik, tupeq,* a tent.] A summer tent of the Eskimos, consisting of a single pole or a framework of poles supporting a cover of skins.

> These people [Eskimo] who live in *tupiks* (tents or huts of skin) in summer, and in *igloos,* partly excavated, partly stone-built dwellings, in winter.
> *Geog. Jour.* (R. G. S.), XII. 499.

tupong (tö'pong), *n.* [Aboriginal Australian.] The aboriginal name for a fish of southern Australia, *Aphritis bassii*, of the family *Notoheniidæ.* Also known as the *fresh-water flathead.* *E. E. Morris,* Austral English.

tupu (tö'pö), *n.* [Quichua *tupu, topu,* adopted by the Aymará of Bolivia.] A supposed standard of linear measure of the Incas. The value of the tupu was and is very uncertain. At present the Indians apply the name to the league, the mile, and any other unit of length introduced and brought to their knowledge by whites.

tupuna (tö'pö-nä), *n.* [Maori.] A parent or any ancestor, male or female. *E. E. Morris.*

tur^2 (tör), *n.* A common name of three species of wild goat found in the Caucasus, but more particularly of *Capra caucasica*, which inhabits the central Caucasus. This animal has horns, with a somewhat spiral curve, approaching one another at the tips.

Tur. An abbreviation (*a*) of *Turkey;* (*b*) of *Turkish.*

turacoporphyrin (tū"ra̤-kō-pôr'fi-rin), *n.* [*turac(in)* + *porphyrin.*] A substance supposedly identical with hematoporphyrin, obtained from turacin.

turanose (tū'ra̤-nōs), *n.* A hygroscopic, amorphous, dextrorotatory carbohydrate, $C_{12}H_{22}O_{11}$, prepared by the action of dilute acids on melezitose. It melts at 65–70° C.

turban-eye (tėr'ba̤n-ī), *n.* One of the dorsal pair of compound eyes of the males of certain may-flies (*Ephemeridæ*), as distinguished from the lateral or sessile pair. It is a pillar facetted at its summit, and is also called *pillared eye.*

> In the case of the "*turban-eye*" of Callibætis, the formation of a superposition image on the proximal and an apposition image on the distal retinulæ enables the eye with the superposition image to see, although perhaps indistinctly, in dim light where the small-facetted, deeply pigmented eye would be useless. As these *turban-eyes* are restricted to the males of these may-flies, which seek the females during flight in the gloaming, their use is obvious. *Nature*, April 4, 1907, p. 541.

turbarian (tėr-bā'ri-a̤n), *a.* [NL. **turbarianus*, < ML. *turbaria*, a peat-bog. See *turbary.*] Of or pertaining to peat-bogs.—**Turbarian epoch**, in *geol.*, a subdivision of the Pleistocene or glacial series of northern Europe. It is equivalent to the fifth and sixth glacial epochs, which are separated by the Upper Forestian or fifth interglacial epoch. The lower Turbarian or fifth glacial epoch is represented by certain peat deposits overlying the Lower Forest bed, by the carse clays and raised beaches of Scotland, and in part by the Littorina clays of Scandinavia; and the Upper Turbarian or sixth glacial epoch is represented by the deposits of peat which underlie the lower raised beaches.

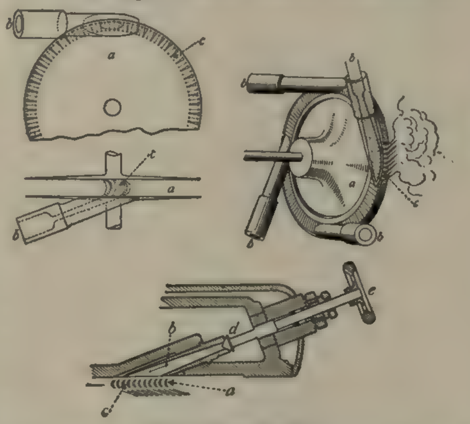
turbinal, *n.*—**Jacobson's turbinal**, a turbinal cartilage found in Jacobson's organ of the *Echidna* and *Ornithorhynchus.* *Proc. Zool. Soc. London*, 1894, p. 10.

turbinate, *a.*—**Turbinate body**, a turbinate bone with sponge tissue and mucous membrane covering it.

II. *n.* A turbinate body.

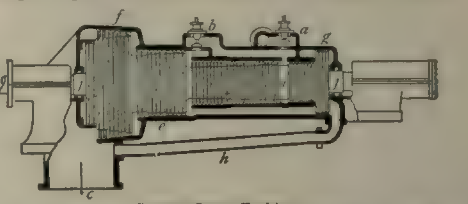
> Cases of asthma treated by removal of the middle *turbinate.* *Detroit Med. Jour.*, Feb., 1903, p. 733.

turbine, *n.*—**Double turbine.** (*a*) A turbine-wheel divided into two layers by a thin partition, usually midway in its height or depth. It has two sets of guide-blades, and when run at part gate, or half power, one set of guides and blades is full and running with solid water. (*b*) A pair of turbines fastened on one shaft, either back to back or face to face, an arrangement which balances the pressure due to the weight of the driving water-column, and releases the stresses on the footsteps or thrust-bearings: usual in modern high-powered installations.—**Downward-discharge turbine**, a form of turbine water-wheel in which the water is discharged from the buckets in a downward direction, parallel to the vertical axis of the wheel.—**Gas-turbine**, a turbine which uses the gas obtained by burning or exploding a fuel for its motive power.—**Girard impulse-turbine**, a form of radial-flow impulse-turbine named from Girard, its inventor.—**Multiple-expansion turbine**, a steam turbine in which the steam is expanded by stages and traverses an impulse-wheel at each expansion, instead of being allowed to expand directly from the initial to the exhaust pressure. Also called *multiple impact turbine.*—**Parsons turbine.** See *steam* ★*turbine.*—**Steam turbine**, a form of steam motor in which the energy of steam is applied directly to vanes or blades attached to the revolving shaft to cause it to rotate. High-pressure steam issuing with great velocity from nozles of proper form impinges upon receiving surfaces by which its kinetic energy is absorbed and utilized, rather than its pressure over an area. The turbine uses either impact or reaction or both; in modern forms, both. The advantages of the turbine principle are: (1) economy in steam, particularly in the smaller units: (2) no reciprocating masses; (3) no dead-center in starting; (4) no danger from water of condensation; (5) little lubrication of surfaces under pressure, in some forms none; (6) no wearing of contact surfaces metal to metal; (7) no vibration to be neutralized by massive foundations; (8) high speed; (9) small bulk or cubic space, and hence cheaper power-houses; (10) reduced construction and erection cost; (11) the smaller number of operators required in the engine-room. Among its disadvantages may be included: (1) the high speed, which makes accidents from centrifugal rupture possible and compels a reducing mechanism for many uses, with attendant loss of power; (2) the stored revolving energy, making the arrest of the motor a matter of some time; (3) the difficulties where the shaft must be occasionally reversed, necessitating either another motor for the purpose or some design which shall be equivalent thereto in complication; (4) the rapid wear from abrasion; (5) the loss of efficiency when run at part load; (6) the difficulty of running at varying speeds at full load or part load; (7) the difficulty of exact regulation to isochronism of speed at all variations of load. Turbines are most efficient when run condensing. The control of power is effected by having a number of steam-delivery nozles and adjusting the number in action to the magnitude of resistance to be overcome. The idea of the steam-turbine motor is historically very old. Hero of Alexandria, in B.C. 200, illustrated and made a reaction or Barker's mill motor, and Branca of Italy, in 1629, designed an impact motor. But the early machinery of this character was for slow-speed work and ineffective. Three types of turbine are at present in use: the Swedish design of Carl de Laval, the British design of Charles Algernon Parsons, and the American type known as the Charles G. Curtis design. *De Laval steam turbine.* In this type the total power of the steam is devoted to producing velocity in an expanding nozle, where pressure is transformed into motion. The jet at the end of these nozles is delivered against a curved bucket or vane on the periphery of a single disk or wheel. Such rim should turn at one half the linear velocity of the jet for best effect, but this linear velocity makes even a large disk turn at inconvenient speed, and a reduction from the speed of the disk to that of the shaft from which driving motion is taken off from the machine is effected by a ten-to-one gearing made of very carefully cut spiral gears running in oil. *Parsons steam turbine:* known in the United States also as the *Westinghouse turbine.* In this type the steam is carried in an axial direction through the space provided between a succession of internal revolving cylinders and external stationary cylinders which inclose them. Both the internal and external cylindrical surfaces are covered by many successive circles of vanes or blades so arranged that the steam has to pass alternately through rows of moving and stationary blades. The kinetic energy is absorbed by impact upon the moving blades, and expansion effect of reduction of pressure is secured by the successive expansion in steps. As the volume increases, the velocity to pass a given weight of steam in a given time must increase also. The axis turns at conveniently low speed due to the reduced peripheral velocity, but the multiplicity of parts is great, as are their attendant weight and their cost of construction. *Curtis steam turbine.* This turbine (patented in 1895) has expanding nozles designed to convert nearly all the expansive force of the steam into velocity; but, in addition, the steam passes subsequently through two or more lines of vanes on moving disks or elements which alternate with reversed vanes or guide-blades on stationary elements. The velocity acquired in the nozle is fractionally abstracted and imparted to the moving element, so that with a high initial velocity of steam the moving element can turn at a convenient speed. The nozle construction is made up of many sections, so that steam passes to the wheel in a broad belt or annulus; but of this ring any section may be closed off by valves, at will, to reduce the mass of steam in action when the load diminishes. The Curtis turbine as made for large sizes is arranged with its axis vertical instead of horizontal as in the other types.—



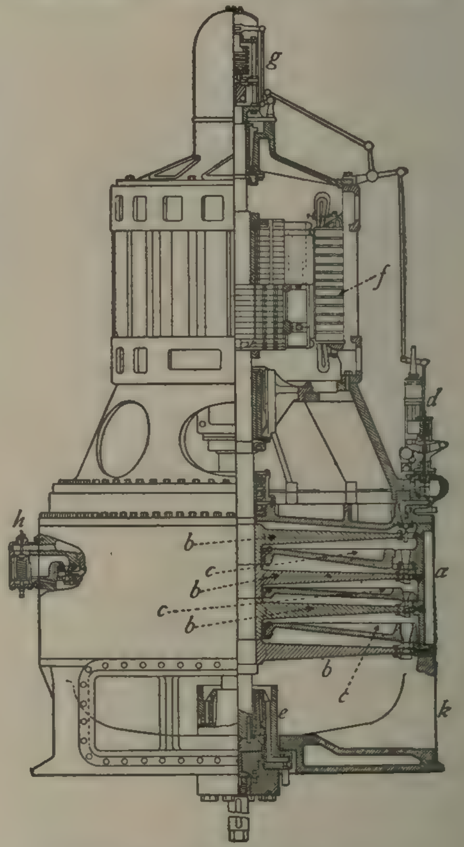
De Laval Steam Turbine.

a, turbine-wheel or -disk, forming the motor proper; *b*, nozle or jet, leading steam at high velocity on the vanes or buckets, *c*, and reducing the pressure; *d*, controlling-valve, admitting steam at will to the nozles, *b*, by movement of the exterior hand-wheel, *e*.



Parsons Steam Turbine.

a, steam-inlet and throttle-valve; *b*, overload-valve to admit additional high-pressure steam to second stage; *c*, exhaust-outlet to condenser; *d*, first stage of turbine-blades; *e*, second series; *f*, third series; *g*, balance-piston to equalize end-thrust pressure; *h*, low pressure equalizing pipe; *j*, *j*, hydraulic packing-chambers.



Curtis Vertical Steam Turbine.

a, turbine-chamber or -casing; *b*, *b*, *b*, *b*, revolving disks, or turbine-bucket elements of the rotor; *c*, *c*, *c*, guide-disks, or fixed elements of the stator forming the stages of the turbine; *d*, valves admitting steam to the nozles (these are controlled by linkage to the governor *g*); *e*, footstep, carrying the vertical weight of turbine, generator, and shaft; *f*, dynamo or electric generator; *g*, governor to control speed and power; *h*, by-pass adjusting-valve; *k*, outlet to condenser, carrying away used steam.

Turbine steamer, yacht, etc., any vessel propelled by steam turbines. At first adopted for torpedo-boats and yachts, the steam turbine is now applied to large transatlantic liners.

turbine-alternater (tėr'bin-al"tėr-nā-tėr), *n.* A combination of an alternating-current dynamo and a turbine to drive it, the two being mounted on a common shaft or connected through a clutch.

turbinectomy (tėr-bi-nek'tō-mi), *n.* [*turbin(ate)* + Gr. ἐκτομή, excision.] Excision of a turbinate body. *Buck*, Med. Handbook, IV. 273.

Turbinolia (tėr-bi-nō′li-ạ̈), *n.* [NL., < L. *turbo* (*-bin-*), a top.] A genus of aporose madreporarian *Anthozoa* having a free conical corallum with circular calice and septa produced outside the theca. The species range from Tertiary to recent.

turbinotomy (tėr-bi-not′ọ̄-mi), *n.* [*turbin*(*ate*) + *-o-* + Gr. -τομια, < ταμεῖν, cut.] Any cutting operation upon a turbinate body. *Lancet*, April 4, 1903, p. 969.

turbo (tėr′bō). [*turbine.*] **1.** A prefix (*turbo-*), used in composition to designate a machine in which the motive energy is derived from a steam turbine either directly connected, or on the same revolving shaft as the element designated by the other word of the compound: as, a *turbo-alternater*, an alternating-current dynamo the armature of which is the prolongation of the axis of the steam turbine; a *turbo-generator*, a dynamo either for direct or alternating current, similarly directly driven. See cut at *Curtis steam* ★*turbine.*—**2.** As a substantive: (*a*) A pump or ventilator in which the impeller revolves as a turbine, or as a top, and drives the fluid which it is to displace by a centrifugal or rotary action.

> Oil coolers are erected in the basement below the *turbos*, through which the lubricating oil is passed, and cooled by means of a cold water circulation.
> *Elect. World and Engin.*, July 30, 1904, p. 1651.

(*b*) A direct-connected turbine-driven generator; an abbreviation of *turbo-dynamo.*

> Generator.—Type, revolving field *turbo*, No. 235,686; rated capacity, 400 kw; voltage, 440, 3-phase; etc.
> *Elect. Rev.*, Sept. 14, 1904, p. 487.

Turbo unit, the combination of the steam turbine and the machine it drives directly upon a common base or foundation, or making one machine.

turbo-air-compressor (tėr″bọ̄-ãr′kọm-pres″-ọr), *n.* A machine for compressing and displacing air, in which the elements which compress the air or constitute the blowing-engine have a rotary instead of a reciprocating motion, and receive their motion and power from a steam turbine directly connected to their revolving shaft. When used for ventilating only it is called a ★*turbo-ventilator* (which see).

turbo-alternater (tėr-bō-al′tėr-nā-tėr), *n.* An alternating-current generator directly connected to and driven by a steam turbine.

> The station contains at present five *turbo-alternators* of 1,350 h.p. each. *Elect. World and Engin.*, XLI. 183.

turbo-dynamo (tėr-bō-dī′nạ̈-mō), *n.* A generator of electric currents which is directly connected to and driven by a steam turbine.

> The purpose of this paper is to outline the electrical and mechanical difficulties which arise in the design of *turbo-dynamos* (dynamo-electric generators directly connected to steam-turbines) of 500 to 4000 revolutions per minute. *Elect. World and Engin.*, March 19, 1904, p. 558.

turbo-electric (tėr″bō-ẹ̄-lek′trik), *a.* Designating a direct-connected dynamo-electric generator.

> Each of the 5,000-kw *turbo-electric* units is of the vertical type, General Electric make, has a weight of 260 tons and stands 29.5 ft. high above the floor.
> *Elect. World and Engin.*, May 21, 1904, p. 945.

turbo-exciter (tėr′bō-ek-sī′tėr), *n.* A small turbine-driven dynamo the current from which supplies the field-coils of other machines.

> There are also installed two groups of *turbo-exciters*, of 110 hp each, with a speed of 600 r. p. m.
> *Elect. World and Engin.*, July 25, 1903, p. 147.

turbo-generator (tėr″bọ̄-jen′ẹ-rạ̈-tọr), *n.* In *elect.*, a turbine-driven electric generator. See ★*turbo*, 2 (*b*).

> It is not too much to say that the economy in space of the *turbo-generator* ranks second only to its economies of operation, as it requires only one-fourth of the space necessary for the most modern, vertical type of direct-connected, reciprocating units of equal electrical output.
> *Sci. Amer.*, March 19, 1904, p. 230.

turbo-machine (tėr′bọ̄-mạ̈-shēn″), *n.* See the extract.

> As in the case of reciprocating steam engines, steam turbines are heat engines, converting the calorific energy of the steam into directly-available mechanical energy. From another point of view they are analogous to hydraulic turbines, and form part of the general class which the author [Professor Rateau] will call "*turbo-machines.*"
> *Sci. Amer. Sup.*, Sept. 26, 1903, p. 23185.

turbo-motor (tėr′bọ̄-mō″tọ̈r), *n.* A turbine; any air-, gas-, steam-, or water-motor acting on the principle of a turbine; specifically, a steam turbine; also, a combination of a turbine and the machine which it drives directly on the same shaft.

> A torpedo destroyer has been driven through the water at the rate of forty-three miles an hour by the use of the *turbo-motor* instead of reciprocating engines.
> *Geog. Jour.* (R. G. S.), XVI. 453.

turbo-pump (tėr′bọ̄-pump), *n.* A combination of a turbine, either hydraulic or steam, and a pump driven by it, mounted on the same base.

> Direct-coupled to ventilators, and centrifugal pumps, steam turbines, owing to their capability of producing great power at high speed, exhibit surprising results. Prof. Rateau has installed turbo-ventilators giving a pressure of half an atmosphere, and *turbo-pumps* with a lift of several hundred metres.
> *Elect. World and Engin.*, July 4, 1903, p. 17.

turbot, *n.* **5.** A New Zealand fish, *Ammotretis guntheri.* Also called *lemon-sole* or *yellow-belly.*—**Blue turbot**, a plectognathous fish, *Balistes vetula*, found in the tropical Atlantic.—**Greenland turbot**, a common name of *Rheinhardtius hippoglossoides*, a flounder found in arctic parts of the Atlantic and south to Finland and the Grand Banks.

turbo-ventilator (tėr″bọ̄-ven′ti-lā-tọ̈r), *n.* A ventilator or fan driven by a turbine. Steam turbines are frequently used for this purpose.

> Prof. Rateau has installed *turbo-ventilators* giving a pressure of half an atmosphere, and turbo-pumps with a lift of several hundred metres.
> *Elect. World and Engin.*, July 4, 1903, p. 17.

turca (tör′kä), *a.* [It.] In *music*, in the expression *alla turca*, in Turkish style, that is, with sharp accents, lively movement, and usually noisy effects.

Turcophobe (tėr′kọ̄-fōb), *n.* Same as *Turcophobist.*

ture-lure (tür-lür′), *n.* [F. See def.] An old French burden or refrain, like 'fa-la,' appended to or inserted in popular songs without special meaning: the source of many English forms, such as 'tooral-looral.'

turey (tö-rā′), *n.* [W. Indian.] **1.** A kind of stool or reclining-chair of wood or stone, formerly made by the Indians of the West Indies, fashioned with great care and frequently decorated.—**2.** A wooden stool with goatskin back used by the jibaros of Porto Rico.

turf-builder (tėrf′bil″dėr), *n.* In *phytogeog.*, a perennial plant which by its creeping rootstocks forms a turf. Turf-builders consist of monocotyledons, mainly grasses, but also include many sedges. They form the ruling type of vegetation in grass-land formations. *Pound and Clements.*

turgescence, *n.* **4.** In *bot.*, the becoming turgid or distended by a liquid content. See ★*turgid*, 3.

turgid, *a.* **3.** In *bot.*, distended by water or other liquid: said primarily of cells or cellular tissue.

Turgotine (tėr′gọ̄-tin), *a.* [*Turgot* (see def.) + *-ine.*] Of or pertaining to A. R. J. Turgot (1727–81), an eminent French statesman.

> He [Chemist Charles] soars, he dwindles upward; has become a mere glowing circlet like some *Turgotine* snuff-box, . . . like some new daylight moon!
> *Carlyle*, French Rev., I. ii. 6.

Turk, *n.* **7.** (*b*) A bark-beetle, *Tomicus typographus*, so called in old German works.

Turk. An abbreviation (*a*) of *Turkey*; (*b*) of *Turkish.*

turkey, *n.* **1.** Six standard varieties of domesticated turkeys are more or less grown in the United States, the bronze, the Narragansett, the buff, the slate, the white, and the black, the main differences being in size and color. The black is the smallest and the Narragansett the largest, the white and bronze now ranking near one another for second place.

3. A bag containing a lumber-jack's outfit.—**To hoist the turkey**, to take one's personal belongings and leave camp. [Slang.]

turkey-apple (tėr′ki-ap″l), *n.* A small tree, *Cratægus induta*, a native of Arkansas, sometimes 25 feet high, armed with stout spines, and bearing red or yellowish astringent subacid fruits.

turkey-foot (tėr′ki-fůt), *n.* Same as *Colorado* ★*sand-grass*; also, same as *big* ★*blue-stem.*

turkey-louse, *n.* (*b*) A mallophagous insect, *Lipeurus polytrapezius*, common on wild and domestic turkeys.

turkey-mullen (tėr′ki-mul″en), *n.* See ★*mullen.*

Turkey-red discharge style. See ★*style*^{1}.—**Turkey-red process.** See ★*process.*

turkey-shoot (tėr′ki-shöt), *n.* A rifle-shooting match in which a live turkey is the target and the prize: sometimes only the head of the fowl is exposed to the shooter.

Turkish bean. See ★*fire-bean.*—**Turkish gall.** See ★*gall*^{3}.

Turkomanic (tėr-kọ̄-man′ik), *a.* [*Turkoman* + *-ic.*] Of or pertaining to the Turkomans.

turmeric, *n.* **1.** (*b*) In Australia, either of two species of trees: (1) *Zieria Smithii*, the stinkwood of Tasmania, which see, under *stinkwood* (*b*); and (2) *Hakea dactyloides*, an evergreen shrub of the family *Proteaceæ.*—**Indian turmeric.** Same as *turmeric-root*, 2.

II. *a.* Noting an acid, a compound, $C_{11}H_{14}O_2$, formed by the oxidation of turmerol by means of potassium permanganate.

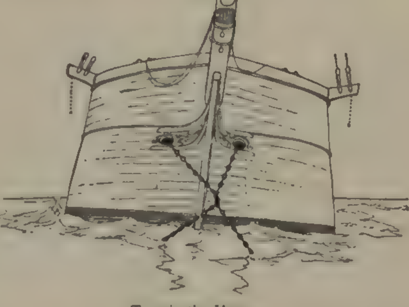
turn, *v.* **I.** *trans.* **23.** Specifically, to open off drifts or chutes in a mine at an angle with the main gangway. [British.]—**To turn over.** (*b*) Specifically, in foundry work, the process, used in molding with patterns divided at a meridian section, in which the molding-flask is made in upper and lower parts (cope and drag) and the pattern is extracted from each by turning or rolling it over so as to expose the half pattern at the parting.

> To make moulds well by the system of "bedding in" of patterns requires, on the whole, a higher measure of skill on the part of the moulder than does the "*turning over*" or "rolling over" of complete moulding boxes.
> *Engin. Mag.*, Feb., 1903, p. 695.

To turn under, to bury by plowing, as weeds, manure, etc.

II. *intrans.*—**To turn for**, in *type-setting*, to substitute one type for another type that is deficient in the case. The substitute is turned face down, to make an unmeaning mark and compel the notice of the proof-reader.—**To turn in all standing**, *naut.*, to turn into one's bunk or hammock without undressing; go to bed with all of one's clothes on.—**To turn out all standing**, *naut.*, to get out of one's berth or hammock fully dressed.—**To turn out crabs**, to throw two aces, the lowest cast at hazard; hence, to turn out a failure; prove a disappointment. See *crab*^{1}, 6. [Colloq.]—**To work and turn**, to print all the pages of a form of type on one side of a sheet of double size and turn the sheet end for end, and print on the other side—a method that produces two copies of the form: in opposition to the sheetwise method, in which two forms are separately printed on each side of a smaller sheet. See ★*sheetwise.*

turn, *n.* **21.** A manœuver by which troops, marching in line, change direction.—**22.** The stated period of the day during which a gang of men work; a shift.—**23.** In British *mining*, the number of cars which the miner is expected or allowed to fill during his shift or turn below.—**24.** In *forestry*, two or more logs coupled together end to end for hauling. [Pacific coast.]—**Dead turns.** (*b*) In an armature coil, turns in which no useful induction takes place and which therefore do not contribute to the production of electromotive force.—**Long turn**, in speculative dealings, as in stocks, bonds, wheat, or the like, a transaction that takes a long time to complete, on account of an adverse market or the like.—**Primary turns.** See ★*primary.*—**Series-turns**, the number of ampere-turns in the series-coil of the field-windings of a generator or motor.—**Shunt-turns**, the number of ampere-turns in the shunt-coil of the field-windings of a generator or motor.—**Three turns around the long-boat and a pull at the scuttle-butt**, a facetious description of the ordinary day's work on board a naval vessel.—**To catch a turn**, *naut.*, to make fast quickly a rope or line so as to snub it and prevent it from running out.—**Turn in the hawse**, *naut.*, said of anchor cables when they are crossed owing to the swinging of the ship in a tideway.



Turn in the Hawse.

turn-about, *n.* **3.** A small steamer, torpedo-boat, or launch in which the dead-wood astern is cut away and two rudders are fitted, one forward in place of the dead-wood and one in the usual place abaft the screws, to give ability to turn quickly. The design is known as the *turn-about system.*

> One of these (Rattlesnake class) had a straight keel and an ordinary rudder; a second was identical with the first, except that the after deadwood had been cut away, and the "*turn-about*" system applied.
> *White*, Manual of Naval Arch., p. 701.

turn-bat (tėrn′bat), *n.* A rod or lever placed between the legs of the massive tongs used in handling blooms (by hand) in the rolling-mill, that the piece may be turned through 90° or 180° in being presented to the guides or to the next pass in the rolls.

turnbuckle, *n.* **2.** A tongue of metal, pivoted above its center of gravity, used as a shutter-fastener.—**3.** A form of shutter-bolt with a hasp which when turned over a staple cannot be thrown back except by a reverse turning motion.

turn-button (tėrn'but″n), *n.* In *lock-making*, a latch having a pivoted rotating bolt operated by means of a knob or T-handle on the outside of the case.

turncock, *n.* 2. A plug-cock or faucet, in which the plug is turned around its axis, by a handle or a wrench, in order to open or close it.

turndun, *n.* Same as *tundun*.

turneraceous (tėr-nẹ-rā'shius), *a.* [NL. *Turnerac*(*æ*) + *-ous.*] Belonging or pertaining to the *Turneraceæ*.

turn-furrow (tėrn'fur″ọ), *n.* The mold-board of a plow.

> The mould-board or *turn-furrow* is placed obliquely behind the fin. *Penny Cyc.*, XVIII. 272.

turnhall (törn'hâl), *n.* [G. *turnhalle*, ‹ *turnen*, exercise, + *halle*, hall.] A building in which gymnasts practise; a gymnasium.

turning-engine, *n.* 2. A small engine and necessary transmissive machinery to enable a massive engine to be turned over slowly for inspection or adjustment without the use of motor steam in the large cylinders. If used to start the large engine under steam it is often called a *barring-engine*.

turning-glass (tėr'ning-glȧs), *n.* See the extract.

> After the negative [in half-tone engraving] is developed the film is stripped from the plate, reversed, and placed on another, called a *turning-glass*, thus becoming a positive. *Census Bulletin* 216, June 28, 1902, p. 64.

turning-lathe, *n.* 2. In *ceram.*, a lathe used by potters to trim and smooth the surface of the ware, which has been thrown and dried, before it is burned.

turning-machine, *n.*—**Boring-and-turning machine.** See ★*boring-machine.*

turning-plow (tėr'ning-plou), *n.* Any plow which has a mold-board and turns a furrow slice, as opposed to a plow of the shovel type. Also *turn-plow.*

turning-point, *n.* 3. In *graphics*, a maximum or minimum point on the graph or curve.

turnip, *n.*—**Brown rot of the turnip.** Same as *black rot of the cabbage.* See *black* ★*rot* (*c*).—**Indian turnip.** (*b*) Same as *prairie-turnip.*—**Turnip gall-weevil.** Same as *cabbage* ★*gall-weevil.*

turnip-beetle (tėr'nip-bē″tl), *n.* A beetle that infests the turnip.—**Red turnip-beetle**, a chrysomelid beetle, *Entomoscelis adonidis*, occurring in northern Europe and the northern United States and Canada, and feeding on turnip-leaves.

turnip-grass (tėr'nip-grȧs), *n.* See *alkali* ★*zacaton* (*a*).

turnip-jack (tėr'nip-jak), *n.* An English gardeners' name for the turnip flea-beetle. See *Phyllotreta* and *turnip-fly* (*c*).

turnip-louse (tėr'nip-lous), *n.* Same as *turnip-aphid.*

turnip-wood, *n.* 2. In Australia, the timber of either of two species of trees, *Dysoxylum Muelleri* and *Akania Hillii*, which when freshly cut has the odor of a turnip.

turnout, *n.* 8. A short side road, or a part of a road of greater width than the rest, which enables vehicles to pass one another.

turnover. I. *n.* 7. The amount of a material which is turned over, or on which some process is carried out: nearly equivalent to *output.*

> A high current-density being employed, the *turn-over* of gold is rapid—an essential factor of success when the costliness of the metal is taken into account. *Encyc. Brit.*, XXVIII. 110.

8. An essay or article that begins on the last column of a page of a newspaper and 'turns over' to the next page.

> Grant Allen and myself wrote most of the *turnovers*, and such men as Leslie Stephen contributed the book reviews. *Newcastle Daily Leader*, Sept. 22, 1903.

II. *a.*—**Turnover collar**, one which is folded over on itself: opposed to *standing collar*; also used as a noun: as, "he wore a narrow *turn-over.*"

turnover-gear (tėrn'ọ̄-vėr-gēr), *n.* A device for rolling or adjusting logs on a sawmill-carriage; a canting device. Also called a *nigger.*

turn-plow (tėrn'plou), *n.* Same as ★*turning-plow.*

turnpool (tėrn'pöl), *n.* [*turn*, *v.*, + *pool.*] See the extract. [Local, Eng.]

> It is not difficult to show the character of the flow at the bottom of a small river. . . . Later, I have employed lump sugar soaked in a strong alcoholic solution of magenta. On placing one of these cubes at the outer bend of a curve—the "*turnpool*"—it is found that the water there is almost stagnant. *Nature*, Dec. 5, 1907, p. 102.

turn-tree (tėrn'trē), *n.* The revolving drum of a horizontal wooden capstan or windlass.

Turnway society. See ★*society.*

turpentine, *n.*—**White turpentine**, a trade-name of turpentine from the long-leaved pine.

turpentine, *v.* II. *intrans.* To make or gather turpentine.

turpentine-gum (tėr'pen-tīn-gum), *n.* Same as *American thus* (which see, under *thus*²).

turpentine-substitute (tėr'pen-tīn-sub″sti-tūt), *n.* Same as ★*spiritine.* The term is also applied to rosin spirit or ★pinoline.

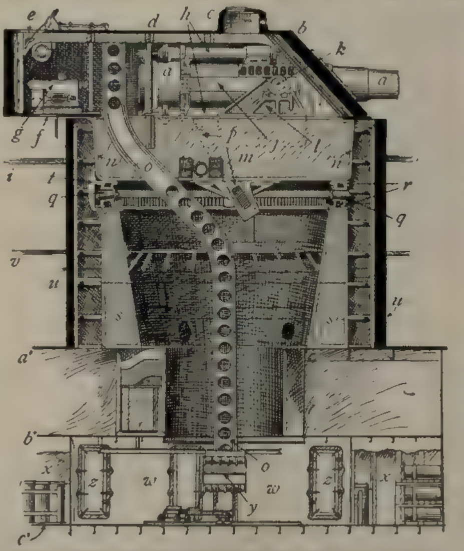
turpentine-tree, *n.* 3. The peebeen of northern Queensland, *Syncarpia Hillii.*—4. In New Zealand, same as ★*tarata.*

turpentining (tėr'pen-tī-ning), *n.* The process or business of obtaining resin or crude turpentine from living pine-trees. Also called *turpentine orcharding*, *turpentine tapping.*

turpethin (tėr'peth-in), *n.* [NL. *Turpeth*(*um*) (see def.) + *-in*².] A brownish-yellow amorphous glucoside, $C_{34}H_{56}O_{16}$, contained in the root of *Ipomæa Turpethum* from Ceylon and Malabar.

turquoise-berry (tėr-koiz'ber″i), *n.* A liliaceous plant of Tasmania, *Drymophila cyanocarpa*, bearing white flowers followed by blue berries.

turret¹, *n.* 3. In *naval construction*, a turret is a completely inclosed revolving armored structure above the deck of a war-ship containing one or more guns, mounted on the turn-table carrying the turret-structure, which project through gun-ports cut through the armor on the front side of the turret. Proposals for the emplacement of the guns of war-ships on armored turn-tables were independently made by Captain Coles of the British navy and by Ericsson. Captain Coles at first called his shield or turret a 'cupola' (which see). It was not until 1864, however, that the first British vessel with a turret was tried. In the United States, the first turret was fitted in 1862 on the original 'Monitor' invented by Ericsson. (See *monitor*, *n.*, 7). The turret of the original 'Monitor,' and of all subsequent vessels built during the Civil War, was carried on a heavy forged vertical central shaft by means of collars on the shaft. When not in use the turret rested on the deck. Before it could be rotated the shaft was wedged up at the bottom, or lifted up by hydraulic power, carrying the turret with it clear of the deck. It was then rotated on the shaft or spindle by steam-engines controlled from the turret, the pinions of which were geared to a large rack fastened under the floor of the turret. The large smooth-bore guns, when fired, recoiled entirely inside the turret, and an armored port-shutter could be closed while loading them. The British turrets were supported on a ring of iron rollers near the circumference so that they could be rotated without being lifted. This is the method by which all modern turrets are supported. The central spindle of the Ericsson turret was liable to be bent by the impact of projectiles on the turret, which caused the turret to jam. Modern turrets are turned by either hydraulic or electric motors. The mechanisms for elevating the guns, hoisting ammunition, and loading are very elaborate. The operations are performed largely by hydraulic or electric power. The deck-lugs carrying the guns are secured to girders forming part of the turn-table of the turret. See ★*gun-mount.* In the development of seagoing ships with high freeboard, the turrets necessarily were placed higher above the water. To protect the mechanism and the ammunition-hoists under them, it was necessary to provide a fixed cylinder of armor called a ★*barbette* (which see). All modern turrets are mounted above fixed barbettes (see cut). The top of the turret is armored, and above it project the armored sighting-hoods. There is usually a central sighting-hood for the trainer and one for the gun-pointer of each gun. The great length of modern guns causes them to project a considerable distance in front of the turret, and it is necessary to bring the body of the turret to the rear of the axis of rotation to provide room for loading the gun and to balance the rotating weight on the axis. The rear of the turret thus overhangs the barbette. The arrangement is called a *balanced turret.* The first turrets were circular cylinders of armor, but the modern turrets are of various forms; usually the turret armor is inclined in order to deflect projectiles. The first turrets each contained two guns, but in subsequent development, in some countries, a single gun has been mounted in each turret. The saving in weight of armor protection by placing two guns in one turret has, however, led to its universal adoption in the latest designs. In no country, except the United States, have more than two guns been mounted in one turret. See *superposed* ★*turret.*

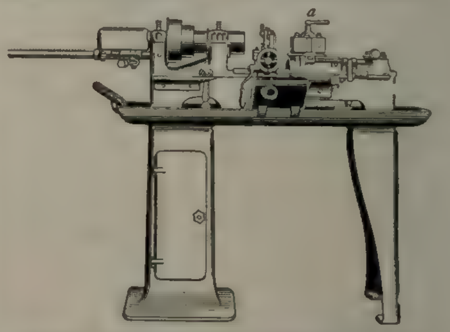


Vertical Section through a Turret and Barbette for 12-inch Guns.

a, turret-gun; *b*, turret-port armor-plate; *c*, sighting-hood; *d*, turret-roof; *e*, escape-scuttle; *f*, scuttle for access from deck; *g*, electric rammer; *h*, *h*, combined hydraulic recoil and spring return-cylinders; *i*, main deck; *j*, gun-sleeve; *k*, trunnions on gun-sleeve; *l*, deck-lug; *m*, turret-gun girder; *n*, turret-pan; *o*, ammunition-hoist guide-rails; *p*, gun-elevating gear; *q*, turret-rollers; *r*, *r*, upper and lower turret-roller paths; *s*, *s*, turret supports or foundations; *t*, holding-down clip; *u*, barbette armor; *v*, gun-deck; *w*, handling-room; *x*, *x*, magazines; *y*, ammunition-hoist carriage; *z*, water-tight doors from magazines and shell-rooms to handling-room; *a′*, protective deck; *b′*, upper platform; *c′*, lower platform.

(From "Scientific American.")

6. An attachment to a lathe, drill, boring-machine, or slotting-machine designed to hold and present to the work a series of boring-, drilling-, or cutting-tools, the object being to save the time lost in changing from one tool to another by hand. In a lathe it consists of a round or six- or eight-sided horizontal tool-holder placed between the two heads. It has a circular motion in a horizontal plane, or may have a tilting circular motion that may be controlled by hand or may be automatic, and may also have a feed-motion to advance the tool to the work. The presentation of one tool to the work, the feed, the withdrawal of the tool on the completion of the cutting, and the partial revolution of the turret to bring another tool into action, may be automatic and continuous. In the boring-mill the turret is suspended over the table on a horizontal axis. In the slotting-machine it may be carried on the cutter-head, moving with it. It may carry four cutters, each of which may be brought into use in turn. In the drill the turret is suspended on a horizontal axis and may carry six drills, each one of which may be brought into action in turn by revolving the turret, the drills not at work remaining motionless. The turret gives its name to the machine in which it is employed, as a *turret-lathe*, a *turret boring-machine*, etc. Machines employing turrets are usually automatic and perform a complete series of operations on the work, as in a screw-machine or screw-cutting machine or the turret forming-machine. A turret is sometimes called a *monitor* from its shape.—**Superposed turret**, a type of turret used only in the United States navy. It consists of an ordinary turret for two 12-inch guns on the roof of which is supported a smaller turret containing two 8-inch guns. The whole forms a single armored structure with four guns, whose axes are parallel. This type of turret is fitted on the 'Kearsarge' and 'Kentucky,' and on five battle-ships of the Virginia class.—**Turret boring-machine.** See ★*turret*¹, 6.

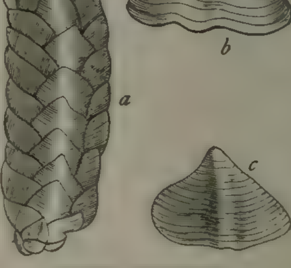


Turret-lathe, showing horizontal, automatic, and self-feeding tool-holder or turret at *a*.

turret-deck (tur'et-dek), *n.* See ★*deck*, 2.

turret-indicator (tur'et-in″di-kā-tọr), *n.* See ★*indicator*, 1 (*j*) (2).

Turrilepas (tu-ril'ẹ̄-pas), *n.* [NL., ‹ L. *turris*, a tower, + Gr. λεπάς, a limpet.] A genus of lepadoid cirriped *Crustacea* having an elongate body covered by from four to six rows of overlapping triangular plates which are concentrically striated and have radial or punctate ornamentation. The species range from Cambrian to Upper Devonian.



Turrilepas Wrightianus

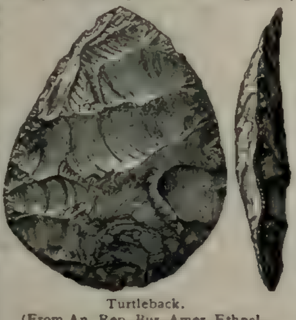
a, complete individual; *b* and *c*, individual plates: all enlarged.

(From Zittel's "Palæontology.")

turriliticone (tur-i-lit'i-kōn), *n.* [NL. *Turrilites* + Gr. κῶνος, a cone.] A turreted shell of certain ammonoid cephalopods, so called because of its resemblance to the shell of the ammonoid genus *Turrilites*. Such shells are developed as phylogerontic stages in the evolution of various races of ammonoids, and are specially common in the Upper Cretaceous formations.

turti (tör′ti), *n.* A Hindu oboe.

turtle², *n.*—**Horned turtle**, an extinct turtle, of the genus *Miolania*, distinguished by conical projections from the back part of the skull as in the horned 'toad.' The remains of these turtles occur in the Pleistocene of Patagonia, Australia, and Lord Howe's Island.—**Leathery turtle**, the trunk-turtle or leather turtle, *Dermochelys coriacea*.



Turtleback.
(From An. Rep. Bur. Amer. Ethnol., 1892.)

turtleback, *n.* **2.** (*a*) They are roughly chipped stone implements, usually of flint, quartzite, or argillite, rather thick in the center, somewhat rounded on one side, and usually leaf-shaped or almond-shaped in outline. Some of these may be finished implements of a rude type, others specimens which have been rejected because of some defect, but a great number are evidently merely roughly blocked-out implements, the finishing process being intended to be performed later. Caches containing great numbers of these objects have been found.

The singular name "*turtleback*" is suggested instantly on seeing a specimen of the class so designated by Abbott and others. As commonly used, it refers to rude or unfinished leaf-shape implements of any size, which may be found in great abundance almost anywhere.
Smithsonian Rep. (*Bur of Ethnol.*), 1892, p. 136.

3. In *mech.*: (*a*) A name given to rounded formations suggesting the carapace of the tortoise or turtle. (*b*) A rounded-back cover of any structure, as over the rear of a motor-car whose frame is designed for the rear seats of the tonneau construction, but in which only two front seats are installed.—**4.** See the extract.

Sir Samuel Baker suggests that the "*turtle backs*" of this region [Nile delta], patches of sand which appear like islands in the wide expanse of dark alluvium, may be parts of this original floor; but it is possible that they may be only lenticular masses of blown sand, alternating with the alluvial deposit. *Geog. Jour.* (R. G. S.), X. 540.

turtle-grass, *n.* **2.** See *Zostera*.

turtle-insect (tėr′tl-in″sekt), *n.* Same as *brown* ★*scale*. *E. G. Lodeman*, The Spraying of Plants, p. 10.

turtle-press (tėr′tl-pres), *n.* The type-revolving press of R. Hoe and Company (now disused) for which type was imposed on the segment of a cylinder called the turtle from its resemblance to the upper shell of a turtle. [Slang.]

turtlet (tėrt′let), *n.* [*turtl*(*e*) + *-et*¹.] A young turtle.

Many a *turtlet* probably sticks fast during the mending process. *Science*, Nov. 17, 1905, p. 638.

tusa (tö′sä), *n.* [Perhaps from Sp. *tusa*, fem. of *tuso*, a name for a dog, used as an exclamation in calling dogs or driving them away.] A name current in New Mexico and the southwestern United States, among the Spanish-speaking inhabitants of all classes, for the prairie-dog.

Tuscaloosa formation. See ★*formation*.

Tuscan capital, formation. See ★*capital*³, ★*formation*.

Tusculan (tus′kū-lan), *a.* [L. *Tusculan*(*us*).] Of or pertaining to Tusculum, an ancient city situated near the site of the modern Frascati, about 13 miles southeast of Rome: as, the "*Tusculan* Disputations of Cicero." Near it was Cicero's villa.

Tuscumbia limestone. See ★*limestone*.

tusilan (tū′si-län), *n.*; pl. *tusilanes* (-lä′nās). [Philippine Sp.] A robber; an outlaw.

There are ladrones still at large, but only a few, nearly all having been killed or are in prison serving long sentences, and the islands are now practically free from ladronism. Ladrones, or as they were formerly called, *tusilanes*, are simply robbers.
National Geog. Mag., March, 1904, p. 111.

tusk¹, *n.*—**Servant tusk**, that tusk of any animal, specifically of an elephant, that is most used.

The elephant . . . is said to use the right tusk more than the left, and this is accordingly called the '*servant tusk*.' *Buck*, Med. Handbook, IV. 48.

tusker, *n.* **2.** A wild boar with large tusks.

The hunter . . . may either lose the chase altogether, or be suddenly charged by an enraged *tusker*.
Sporting Magazine, July, 1827.

tusser, *n.* **3.** A kind of silk cloth woven from tusser-silk.—**4.** A dress or garment of tusser-silk.

I must say that a *tusser* always looks fresh.
F. H. Burnett, in The Century, June, 1901, p. 183.

tussicula (tu-sik′ū-lạ̈), *n.* [L., dim. of *tussis*, a cough.] A slight cough.

tussive (tus′iv), *a.* Of or relating to a cough.

tussocker (tus′ọk-ėr), *n.* [*tussock* + *-er*.] In New Zealand, a sundowner. See the extract. [Slang.]

Now, a "sun-downer," or "*tussocker*"—for the terms are synonymous—is a pastoral loafer; one who loiters about till dusk, and then makes for the nearest station or hut, to beg for shelter and food.
Vincent Pyke, Wild Will Enderby. Quoted by E. E. [Morris, Austral English.

tussock-moth, *n.*—**Old tussock-moth**, a liparid moth, *Notolophus antiqua*, common to Europe and the northern United States. To British collectors it is known as the *common vaporer*.—**Well-marked tussock-moth**, an American liparid moth, *Hemerocampa definita*, resembling the common white-marked tussock-moth, but having more distinct markings on the fore-wings of the male.

tussol (tus′ol), *n.* [L. *tussis*, a cough, + *-ol*.] A trade-name of antipyrin mandelate, $C_{11}H_{12}ON_2.C_8H_8O_3$: used in medicine, chiefly in the treatment of whooping-cough.

tussur (tus′ụr), *n.* Same as ★*tusser*.

tut-bargain (tut′bär″gạn), *n.* [Cf. *tut-work*.] A bargain to do work by the piece. [Prov. Eng.]

tutelary, *a.* **II.** *n.* A tutelary divinity; an animal regarded as a tutelary divinity: as, Anubis, the *tutelary* of sepulchers.

He carried a rattle or flute, used to imitate the voice of the *tutelary* or the sound of its movements, while he imitated its notes of alarm, fright, pain, and pleasure with his own voice, and mimicked its corresponding movements. *Smithsonian Rep.*, 1901, p. 80.

tuteur (tö-tėr′), *n.* [F., < L. *tutor*.] A tutor. The feminine is *tutrice*.

tutte corde (tö′tạ kôr′dạ). [It., 'all strings.'] In music for the pianoforte, a direction to relinquish the shifting pedal, so that all the strings may sound: opposed to *una corda*.

tutty-man, tuttiman (tut′i-mạn), *n.* [*tutty*¹ + *man*.] A tithing-man in the town of Hungerford, England, as a functionary in the ceremonies of hocktide. See the extracts.

The ancient hocktide customs are being observed in Hungerford this week. Yesterday the commoners were summoned by the blowing of a horn, and the proceedings opened with the despatch of tithing or *tutty men* on their arduous but pleasant duty. In accordance with a charter granted in the days of John of Gaunt, Duke of Lancaster, the duty of the *tutty men* includes a call at every house in the town and the demand of a toll from the male members. Furthermore, the women folk have to undergo the ordeal of being kissed by the *tutty men*.
Daily Mail (London), April 17, 1901, quoted in E. E. D.

The *tutti-men* went forth in the morning carrying floral staves, determined to do their duty by kissing every lady who crossed their path and exacting a penny from every male.
The Express (London), quoted in N. Y. Com. Adver- [tiser, May 21, 1903.

tutu (tö′tö), *n.* [Maori.] A poisonous New Zealand shrub, *Coriaria ruscifolia*. See *Coriaria*.

tutu-poison (tö′tö-poi″zn), *n.* A poison found in the tutu, a New Zealand shrub, especially in the seeds. Its physiological action greatly resembles that of strychnine; the best antidote is said to be belladonna.

Tuvalian (tụ̄-val′i-ạn), *a.* In *geol.*, noting the upper member of the Tirolian series of the upper pelagic Trias of the Mediterranean province.

Tuxedo (tuk-sē′dọ̄), *n.* Same as *Tuxedo* ★*coat*.—**Tuxedo coat.** See ★*coat*².

T. V. [An abbreviation of *tuberculin volutin*.] A symbol suggested by von Behring for a principle alleged to be present in the tubercle bacillus which exerts a catalytic and zymogenic action. *Nature*, Oct. 12, 1905, p. 581.

Tw. An abbreviation for *Twaddell*, indicating the use of the Twaddell hydrometer scale: as, 10° *Tw.* = specific gravity 1.050.

twelfth-second (twelfth′sek″und), *n.* The fraction $\frac{1}{10^{12}}$ of a second.

twelve, *n.*—**In twelves**, in *printing*, said of a form of type, or a sheet, or a section for binding, that has twelve pages only.

twenty-eight (twen′ti-āt′), *n.* **1.** Eight more than twenty.—**2.** The Australian yellow-collared parrakeet, *Platycercus semitorquatus*: so named from its note, which is sometimes repeated several times in successiou.

twice, *adv.*—**Twice gathered**, in *agri.*, doubly plowed in the manner known as gathering. See ★*gathering*.

They are then plowed, and the ridges '*twice gathered*'—to use a plowman's parlance—which means that a back furrow is made in the center of each of these secondary plots, and the furrows are thrown each way toward the back furrow until the ridge is completed.
H. Stewart, Irrigation for the Farm, p. 41.

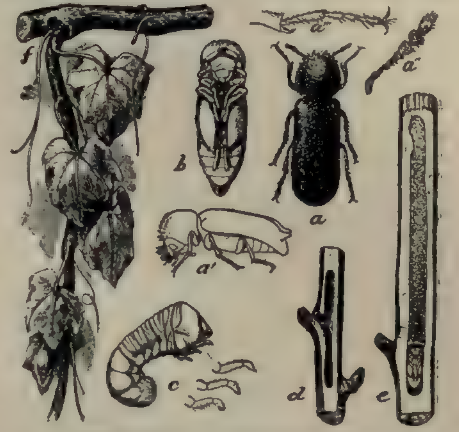
Twichell's acidimeter. See ★*acidimeter*.

twig¹, *n.* **4.** In *anat.*, one of the minute branches of a blood-vessel.

twig-beetle (twig′bē″tl), *n.* A twig-borer.—**Apple twig-beetle**, an American scolytid beetle, *Stephanoderes hispidulus*.

twig-blight, *n.* **2.** A blight of the apple, peach, and cherry caused by *Sclerotinia fructigena*; also a blight of the grape caused by *Botrytis cinerea*. See *Sclerotinia*.

twig-borer, *n.*—**Apple twig-borer**, an American bostrychid beetle, *Amphicerus bicaudatus*, which bores into the twigs of the apple- and other fruit-trees.—**Peach twig-borer**, the larva of a gelechiid moth, *Anarsia lineatella*, common to Europe and the United States. It bores into the young twigs of the peach.



Apple Twig-borer (*Amphicerus bicaudatus*).
a, *a′*, beetle; *a″*, *a‴*, antenna and leg of same, much enlarged; *b*, pupa; *c*, larva; *d*, *e*, larval galleries; *f*, grapevine, showing hole made by beetle. *a*, *a′*, *b*, and *c*, 2½ times natural size; *d*, *e*, *f*, reduced. (Marlatt, U. S. D. A.)

twig-gall (twig′gâl), *n.* An abnormal growth upon the twigs or branches of trees usually due to insects, fungi, or bacteria.—**Olive twig-gall.** Same as *olive* ★*tuberculosis*.

twig-girdler, *n.*—**Pear twig-girdler**, a beetle, *Oncideres cingulatus*.

twil, *v.*, *n.*, *prep.*, and *conj.* A simplified spelling of *twill*.

twild, *a.* A simplified spelling of *twilled*.

Twilight arc. Same as *twilight curve* (which see, under *twilight*).—**Twilight correction.** See ★*correction*.—**Twilight of the gods** [(= G. *götterdämmerung*) a translation of the ON. *ragna rökr*, which is an old error for *ragna rök*, the history (esp. the final judgment and end) of the gods and the world. See *Ragnarök*.], in *Norse myth.* See *Ragnarök*.

twill¹, *n.*—**Florentine twill.** Same as ★*cassimere-twill*.—**Prunella twill**, a variety of a three-harness twill. See ★*llama-twill*.—**Twill set.** See ★*set*¹.

twilley, twilly (twil′i), *v. t.*; pret. and pp. *twilleyed*, *twillied*, ppr. *twilleying*, *twillying*. Same as *willow*¹. *C. Vickerman*, Woollen Spinning, p. 117.

twilling-bar (twil′ing-bär), *n.* In *weaving*, a piece of mechanism in a twilling-machine; a modified form of the Jacquard loom invented in 1859. *T. W. Fox*, Mechanism of Weaving, p. 181.

twilling-hook (twil′ing-hůk), *n.* A hook for lifting a warp-thread in a Jacquard twilling-machine. *T. W. Fox*, Mechanism of Weaving, p. 181.

twin¹. **I.** *a.*—**Twin balance-rudders.** See ★*balance-rudder*.—**Twin condenser**, a condenser made in two parts, which may be either just alike or symmetrical with respect to a plane between them.

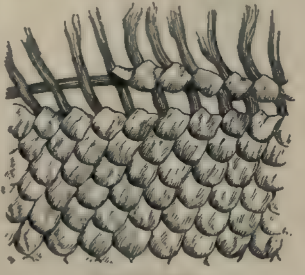
II. *n.* **3.** In addition to the common type of twins (*hemitropic twins*, *revolution twins*), the relation of whose parts can be explained by hemitropy, or a revolution of 180° about a *twinning axis* (see *twin*¹, 3), there is also a rare type, called *symmetric* or *reflection twins*, where there is no twinning axis but the twinned parts are in symmetrical position to each other with reference to some definite plane. This type is best illustrated by the so-called *Brazil* (or *Brazilian*) *twins* of quartz (common in crystals from Brazil), where two enantiomorphous crystals, one right-handed the other left-handed, are thus united, the plane of symmetry or reflection being a face of the prism of the second series. Further, in some cases, as in twins of sodium periodate, the orientation of the parts of the twinned crystal is explained by a rotation about an axis (of some multiple of 60°, as 180°), combined with reflection about a face which after the revolution is a plane of symmetry; this is a case of *alternating twinning*. Whatever the type of twin, the crystallographic law which defines the orientation of the parts of the twinned crystal is called the *twinning law* or *law of twinning*. An example is the *Brazil law*, which applies to Brazil twins (see above), also the *albite*, *pericline*, *Baveno*, *Carlsbad laws* among the feldspars, the *spinel law*, etc.; these belong respectively to *albite twins*, *pericline twins*, etc. (see *twin*^{1}). The *Manebach law* is that of the feldspar twins (*Manebach twins*) from Manebach and elsewhere, in which the base is the twinning-plane and usually also the contact or composition face. A *cyclic twin* is a repeated twin in which the axes of the twinned crystals are inclined to each other and usually at an angle which is an aliquot part of 360°, or nearly so, so that the compound crystal is often stellate in form. When the twinning of two crystals of lower symmetry results in a compound crystal having all the faces of the corresponding from the higher symmetry class, the result is a *complementary* (or *supplementary*) *twin*. Thus two pyritohedrons of pyrite twinned about the vertical axis form an interpenetrating twin of the complementary (supplementary) type; two twinned tetrahedrons of diamond form another example; also two hemimorphic crystals of pyrargyrite twinned about a vertical axis and united by a plane parallel to the base.—**Homologous twins, identical twins**, twins that are of the same sex and alike in form, in constitution, and in character. In the armadillo, *Tatusa hybrida*, and in the chalcid beetle, *Encrytus fuscicollis*, they are known to be the products of the separated blastomeres of a single ovum, and it is supposed that this is also true of human homologous twins.

> This suggestion . . . receives support . . . from the mode of formation of *homologous Twins* which are now shown, almost beyond doubt, to arise from the division of one ovum. *W. Bateson*, Study of Variation, p. 35.

Interpenetrant twin. Same as *penetration-twin* (which see, under *twin*^{1}, 3).

twin^1, *v. t.* **3.** To cut or form in pairs by cutters or chisels.

twine^1, *n.*—**Bird-cage twine**, a type of basketry consisting of a stiff warp and stiff cross-rods which are tied to the warp by a wrapping of pliable material.



Bird-cage Twine.
(From Rep. U. S. Nat. Museum, 1902.)

twine-binder (twīn′bīn″dėr), *n.* An attachment to a harvesting-machine by which the sheaf or truss is tied into a bundle with twine. See ★*wire-binder*. *Sci. Amer. Sup.*, Dec. 20, 1902, p. 22546.

twine-bush (twīn′bush), *n.* See *Hakea*.

twine-cell (twīn′sel), *n.* A peculiar structure in the eye of the pecten formed by a number of nerve fibers coiled in the form of a ball of twine. *Biol. Bulletin*, May, 1904, p. 317.

twinning^1, *n.*—**Multiple twinning**. Same as *repeated twinning*. See ★*twin*^{1}, 3.

twin-screw (twin′skrö), *a.* Having two screw-propellers: said of a vessel.

twirl, *n.*—**Morfit's steam twirl**, a contrivance used in soap-making to heat and stir the contents of the boiling-pans. It consists of a hollow vertical shaft through which, and through a series of convoluted tubes connected with it, steam is passed, while the whole system is rotated by means of gearing. The result is mechanical stirring, with 'dry steam' heat if the tubes are unperforated, but 'wet steam' may be used if the tubes are perforated with a number of small holes through which the steam escapes into the liquid contents of the pan.

twist, *n.* **1.** (*f*) *pl.* A commercial name of stringy crude rubber made up like balls of cord. See ★*rubber*^{1}, 3. **18.** (*c*) The entire angle through which one end of the rod has been twisted by the torsional effort, measured from a radius at the other or fixed end. The average twist per unit of length will be the whole twist divided by the length in such units. **19.** In Venetian and old English glasses, any one of the spiral lines, of various colors, frequently blown in the handles and other parts. See ★*air-twist* (with cut).—**Double and twist**. See ★*double*.—**Mano twist**, a variety of crude india-rubber, the product of *Landolphia florida*, brought in lumps, darker in color on the outside than inside, from Sierra Leone in Africa. Also called *Sierra Leone twist*.—**Reverse twist, reverse curve**, a twist or curve imparted to a ball in the opposite direction from that which is most natural. For instance, in base-ball and tennis it is easier for a right-handed man to make a ball curve from right to left, and a twist or curve in the other direction is therefore generally known as a *reverse*.—**Sierra Leone twist**. Same as *Mano* ★*twist*.—**Twist surface**. See ★*surface*.

twist-cop (twist′kop), *n.* A cop of warp-yarn spun on a mule.

twister, *n.* **1.** (*h*) A tornado or local whirlwind. [Colloq., U. S.]

> Their whirling winds are strong enough to blow down trees and overturn buildings. Violent local storms of this kind are often called cyclones, or prairie *twisters*, in the Mississippi valley, but the name tornado is to be preferred in order to distinguish them from the much larger and less violent cyclonic storms. *W. M. Davis*, Elem. Phys. Geog.

3. A twisting or zigzag movement of a horse. [Colloq.]

> This movement unseated many a rider during the recent contest, however, and it was a broncho named "E. A." (who used a combination of "sun-fish" and "*twister*") that proved the hardest to ride, and, according to some eye-witnesses, compelled even the champion to catch hold of his saddle-horn to save himself from falling, or, as the cowboys say, made him "hunt leather."
> *Wide World Mag.*, April, 1903, p. 548.

4. A somersault in which the body rotates or 'twists.' See ★*spotter*, 5. [Slang.]

> When he had them people just right he ran out and called their attention and showed them what he really could do; he done a spotter-*twister*, which is about the limit, and took a start and went back into that tent like a whirligig. *C. D. Stewart*, Partners of Providence, xix.

twist-frame (twist′frām), *n.* A throttle-frame for spinning cotton.

twist-gear (twist′gēr), *n.* A helical gear; a gear on which the teeth are helices, even though the two shafts connected by the gear and its mate are parallel. Also called *twist-wheel*.

twistical (twis′ti-kal), *a.* [Humorous, from *twist*, *v.*] Somewhat twisted or crooked, physically, mentally, or morally; odd; questionably honest. [Colloq., U. S.]

twisting-machine, *n.* **2.** A machine resembling a ring spinning-frame, for twisting two or more threads or yarns, as cotton, together by the rotation of a spindle or a similar device. *Nasmith*, Cotton Spinning, p. 224.

twist-joint, *n.*—**American twist-joint**, the connection between successive wire sections in an electric circuit, made either by soldered sleeves in a power circuit, or by twisting the wires around each other, as in an overhead telegraph circuit.

American Twist-joint.

twist-wheel (twist′hwēl), *n.* A gear on a roving- or spinning-machine by the changing of which the relation of the velocities of spindles and delivery-rollers is changed. *Nasmith*, Cotton Spinning, p. 198.

twist-yarn (twist′yärn), *n.* A cotton yarn used for warp. *Nasmith*, Cotton Spinning, p. 392.

twit, *n.* **2.** A thin, weak place in a thread of wool, cotton, etc. *C. Vickerman*, Woollen Spinning, p. 236.

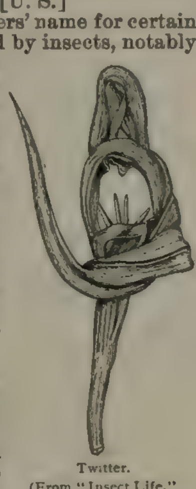
twitchety (twich′e-ti), *a.* [*twitch*, *v. i.*, in imitation of *fidgety*.] Fidgety; irritable; nervous. [Colloq., Eng.]

twitch-road (twich′rōd), *n.* A forest road or trail along which logs are dragged by horses from the place where they have been felled to the 'yard' where they are loaded upon sleds. [Maine.]

> This first real storm of the winter promised two feet on a level, and guaranteed the slipping on ramdowns and *twitch-roads*. *Holman Day*, King Spruce, xx.

twitch-up (twich′up), *n.* A slender sapling or branch, to the end of which a noose of wire or horsehair, etc., is attached, bent down and so held, in a snare, that if a grouse or other bird or small animal attempts to push through the noose it will release the sapling and be strangled by the noose. [U. S.]

twitter^1, *n.* **4.** A gardeners' name for certain plant-deformations caused by insects, notably a curious bunching and twisting of the carnation-plant caused by the work of anthomyiid larvæ. Some forms of twitter are caused by thrips and others by plant-lice.



Twitter.
(From "Insect Life," U. S. D. A.)

twitty (twit′i), *a.* [*twit*, *n.*, 2, + *-y*^{1}.] Irregular, with thin and thick places: said of wool or cotton yarn when in this condition. *C. Vickerman*, Woollen Spinning, p. 351.

two-bagger (tö′bag″ėr), *n.* In *base-ball*, a two-base hit. See ★*hit*^{1}. [Colloq.]

two-clang (tö′klang), *n.* In *acoustics*, a compound tone or clang, made up of two simple tones that differ in frequency.

> Similar simple periods are found to recur in the other harmonious *two-clangs*.
> *Wundt* (trans.), Human and Animal Psychol., p. 69.

two-cycle (tö′sī″kl), *a.* Completed in two phases or cycles; operating or completing a series of operations in two cycles or phases: as, a *two-cycle* gas-engine, one which completes the series of operations, namely, suction, compression, explosion, and exhaust, in two strokes or cycles.

two-group (tö′gröp), *n.* A rhythmized group of two sound-units; two ticks, syllables, etc., arranged as iambus or trochee. *Amer. Jour. Psychol.*, XII. 536. [Rare.]

two-grouping (tö′grö″ping), *n.* Arrangement by twos; the grouping of ticks, syllables, etc., in iambic or trochaic rhythm. *Amer. Jour. Psychol.*, XII. 535.

two-high (tö′hī), *a.* Having two rolls, one over the other, as distinguished from *three-high*: said of rolling-mills for iron or other metals. See ★*roll*, *n.*

two-on (tö′on), *a.* In *printing*, said of an arrangement of pages for presswork by which two copies in duplicate can be printed together on the same sheet by the same operation. This method utilizes a large machine, lessens the number of impressions, and saves needless presswork.

two-pair (tö′pãr), *a.* Being up two flights, namely, from the street door: as, the *two-pair* front chamber. [Eng.]

two-phase (tö′fāz), *a.* **1.** Two-cycle; having two phases or stages in a complete cycle, usually an expansion and a compression phase.—**2.** In *elect.*, of or pertaining to an alternating-current generator which produces two currents differing in phase by half a cycle, or to a circuit carrying such currents, or to a motor, transformer, or any electrical device used on a two-phase circuit. See ★*quarter-phase*.—**Two-phase alternater**, a generator for the production of two-phase alternating currents.—**Two-phase circuit**, in *elect.*, a circuit traversed by or intended for the distribution of two-phase currents.—**Two-phase generator**. See ★*two-phase alternater*.—**Two-phase system**, in *elect.*, a system for the production and distribution of two alternating currents differing from one another by half a cycle, and the utilization of such currents.

two-phaser (tö′fā″zėr), *n.* A generator of two-phase alternating currents, or a motor used on a two-phase circuit.

two-rhythm (tö′riᴛʜm), *n.* A rhythm of which the unit is bimembral; iambic or trochaic rhythm.

> There is no one principle which satisfactorily explains the preference for the *two-rhythm*.
> *Amer. Jour. Psychol.*, XII. 536.

two-sided (tö′sī″ded), *a.* **1.** Having two sides or aspects.—**2.** Of double orientation.—**3.** In *geom.*, bilateral: as, a *two-sided*, not a unilateral, surface.

twosome, *a.* **II.** *n.* In *golf*, a match between two persons.

two-step (tö′step), *n.* **1.** A round dance, danced by couples, the partners moving together in a series of sliding steps in two-two time, the first step of each measure being longer than the second and termed a 'slide.'—**2.** The music for such a dance, which is in duple or quadruple rhythm, not essentially different from a rapid march or quick-step.

two-storied (tö′stō″rid), *a.* **1.** Having two stories, and only two, as a house.—**2.** In *forestry*, comprising on the same area two classes, which vary considerably in height, composed of trees of different species. In a two-storied forest the taller trees form the *overwood* or *upper story*; the shorter trees form the *underwood* or *lower story*. The term is not applicable to forests under reproduction, in which the appearance of two stories is the temporary result of an incomplete process, but to those forests of which the two stories of growth are a natural and permanent feature.

two-way, *a.* **3.** Having the capacity to act in two ways: said of a fitting or fixture which has one inlet and one outlet.—**4.** Noting a fitting resembling a T, with one inlet and two outlets, but no control over the flow through them.

twyer, *n.*—**Bull's-eye twyer**, a twyer which discharges the air at the center of a hemispherical plate.—**Duck's-nest twyer**, a twyer or blast-pipe outlet in a forge in which the perforated end is cup-shaped or like a nest.—**Lurman's slag-twyer**, a water-cooled twyer of bronze, used for the removal of slag and placed below the plane of the blast-twyers. *Phillips and Bauerman*, Elements of Metallurgy, p. 226.—**Negro-head twyer**, a blast-nozle having a cubical block on its end built into the furnace.—**Nigger-head twyer**. Same as *negro-head* ★*twyer*.

twyer-box (twī′ėr-boks), *n.* **1.** A chamber or duct from which the separate twyer-pipes are led into the walls of the furnace proper.—**2.** In the Bessemer converting vessel, the chamber below the refractory bottom from which air passes into the molded twyer-blocks and so up into and through the molten metal. Air is supplied to the box from a pipe leading down from the hollow trunnion of the converter.

twyer-pipe (twī′ėr-pīp), *n.* 1. The pipe which supplies air from the blast-main to the individual twyers.—2. The twyer itself.

TX. [*T* an abbreviation of *tuberculin*, *X* representing an unknown substance.] A substance assumed by von Behring to result from the transformation of T. C., after it has been incorporated by and become an integral part of the cells of the body. See ★*T. C.* *Nature*, Oct. 12, 1905, p. 581.

Ty. An abbreviation of *territory*.

tychite (tī′kīt), *n.* [Gr. τύχη, fortune, chance, + *-ite*2.] A carbonate and sulphate of magnesium and sodium ($2MgCO_3.2Na_2CO_3.Na_2SO_4$) which occurs in colorless octahedral crystals at Borax Lake, San Bernardino County, California. It is associated with and similar to the related mineral ★northupite (which see), but out of several thousand crystals only four of tychite were discovered, hence the name.

Tychonian (tī-kō′ni-an), *a.* Same as *Tychonic*.

tychoparthenogenesis (tī″kọ-pär-the-nō-jen′-e-sis), *n.* [NL., < Gr. τύχη, chance, + NL. *parthenogenesis*.] Exceptional or occasional parthenogenesis. See *occasional* ★*parthenogenesis*.

tyee (tī′ē), *n.* [Chinook jargon.] 1. A chief; a person of wealth or distinction.—2. Same as *quinnat*. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 151.

tylhexactine (til-hek-sak′tin), *n.* [Gr. τύλη, a cushion, + ἕξ, six, + ἀκτίς (ἀκτιν-), a ray.] In the sponge-spicules, a hexactine with knobs at the end of each ray.

tylion (ti-lī′ọn), *n.*; pl. *tylia* (-ä̤). [NL. *tylīon*, < Gr. τυλεῖον, a cushion, dim. of τύλη, a cushion.] In *craniom.*, the median point of the limbus sphenoidalis. *Von Török.*

tyloma (tī-lō′mä̤), *n.*; pl. *tylomata* (-ma-tä̤) [NL., < Gr. τύλωμα, a callus (on the shoulder).] Same as *callosity*, 2.

Tylosaurus (tī-lọ-sâ′rus), *n.* [NL., < Gr. τύλος, a knot or callus, + σαῦρος, lizard.] One of the mosasaurs of the subfamily *Tylosaurinæ*, characterized by having the premaxillæ produced into a long rostrum in advance of the teeth: found in the Niobrara Cretaceous of Kansas, New Mexico, and Texas.

tylostyle, *n.* (*b*) In the sponge-spicules, a triode or three-rayed element in which one of the arms is long, straight, and sharp, and the other two are atrophied.

tympanal, *a.* **II.** *n.* 1. The posterior one of the pterygoid bones in fishes: it is usually between the hyomandibular and the mesopterygoid: same as ★*metapterygoid*, 2. *Starks*, Synonymy of the Fish Skeleton, p. 514.—2. The upper anterior bone of the gill-cover in fishes: not homologous with the bone called *tympanal* by Cuvier: same as *præoperculum*, 2. *Starks*, Synonymy of the Fish Skeleton, p. 515.

tympanectomy (tim-pa̤-nek′tọ-mi), *n.* [NL. *tympanum* + Gr. ἐκτομή, excision.] Excision of the drum-membrane of the ear.

Tympanic canal. Same as *Jacobson's* ★*canal*.

tympanicity (tim-pa̤-nis′i-ti), *n.* [*tympanic* + *-ity*.] The condition of being tympanitic, or of giving a hollow sound on percussion.

> The area of gastric *tympanicity* was only slightly enlarged. *Lancet*, July 11, 1903, p. 98.

tympanion (tim-pā′ni-on), *n.*; pl. *tympania* (-ä̤). [NL., < Gr. τυμπάνιον, dim. of τύμπανον, a drum.] In *craniom.*, the highest point (upper tympanion) and lowest point (lower tympanion) on the border of the annulus tympanicus. *Von Török.*

tympanitic, *a.* 2. Giving out a hollow or drum-like sound on percussion.

> The skin and subcutaneous tissues of the face, neck and chest were markedly swollen, and *tympanitic* on percussion. *Jour. Exper. Med.*, Oct. 25, 1900, p. 140.

tympanomalleal (tim″pa̤-nō-mal′ẹ̄-al), *a.* and *n.* Noting a bone in the head of fishes, lying between the hyomandibular and the quadrate; the symplectic. *Starks*, Synonymy of the Fish Skeleton, p. 513.

tympanomastoid (tim″pa̤-nō-mas′toid), *a.* [*tympanum* + *mastoid*.] Relating to the drum of the ear and the mastoid cells. *Buck*, Med. Handbook, III. 697.

tympanophonia, tympanophony (tim″pa̤-nọ-fō′ni-ä̤, tim-pa̤-nof′ọ-ni), *n.* [NL. *tympanophonia*, < Gr. τύμπανον, drum, + φωνή, sound.] Same as *tinnitus*. *Buck*, Med. Handbook, III. 660.

tympanotomy (tim-pa̤-not′ọ-mi), *n.* [Gr. τύμπανον, drum, + -τομια, < ταμεῖν, cut.] Incision through the tympanum of the ear. *Buck*, Med. Handbook, III. 672.

tympan-sheet (tim′pa̤n-shēt), *n.* In *printing*, the sheet of paper affixed to the outside or impressing-surface of the tympan.

tymp-arch (timp′ärch), *n.* The arch of refractory material, or of water-cooled metal, supporting the wall of a blast-furnace (for iron) over the opening to the forehearth (if the furnace has one). The name is often retained for the arch over the tapping-hole in modern blast-furnaces for iron. See *tymp*.

tyndallization (tin″da̤l-i-zā′shọn), *n.* [John *Tyndall*, a British physicist.] Sterilization of a fluid by heating it repeatedly to a point slightly below that of boiling. With each heating the bacteria which have developed from the more resistant spores are destroyed; when finally no undeveloped spores remain the fluid is sterile. *Buck*, Med. Handbook, I. 686.

Tyntlastes (tin-tlas′tēz), *n.* [NL., < Gr. *τυντλάστης, < τυντλάζειν, work in the mud, < τύντλος, mud.] A genus of gobioid fishes found on the Pacific coast of Central America.

typ. An abbreviation (*b*) of *typographic* or *typographical*.

type, *n.* 10. The four types first recognized and frequently referred to, namely, hydrochloric acid, water, ammonia, and marsh-gas, simply represent the first four degrees of valence, monad, dyad, triad, and tetrad.—**Apocentric type**, in *biol.*, a modified condition of an archecentral type. *P. Chalmers Mitchell.*—**Archecentral type**, in *biol.*, the most primitive type, from which all others have been derived. *P. Chalmers Mitchell.*—**Chaucer type.** See *golden* ★*type*.—**Crystal types.** See ★*symmetry*, 6.—**Disentis type**, in *anthrop.*, the type of man found in the valley of the Rhine, in the canton of Grisons. The type agrees with the Alpine type of Ripley. *Rütimeyer.*—**Extra condensed type.** See ★*condensed*.—**Five-line nonpareil type**, an old name for 30-point type.—**Golden type**, a name given to one of the three fonts of type designed by William Morris and used by him at the Kelmscott Press, the other two being the Troy and the Chaucer. The golden type is Roman, the others Gothic in style. The American reproduction is called *Jenson type*.

> In *golden type*, with ornamental initials but no borders, this edition is embellished with twelve full-page designs by Mr. A. J. Gaskin of the Birmingham School. *A. Vallance*, William Morris, p. 160.

GOLDEN TYPE
Golden Type

Ideational type. Same as ★*memory type*.—**Minikin type**, excelsior or 3-point type. [Eng.]—**Snellen's types.** Same as *test-types*.—**Supplementary type**, a specimen used in extending or correcting knowledge of a previously defined species.—**Troy type**, one of the three forms of type designed by William Morris, the other being the golden and the Chaucer. See *golden* ★*type*.—The American reproduction is called *Satanick type*.

TROY TYPE
Troy Type

Two-line double pica type, meridian or 44-point type. [Eng.]—**Type form, locality, museum.** See ★*form*, etc.—**Type material**, the material or specimens from which a new species has been described and named.—**Type specimen**, the actual specimen from which a species has been described and named. A typical specimen is a characteristic example of a given species, but a type specimen is one on which a species is based. See ★*cotype*, ★*genotype*, ★*holotype*, ★*metatype*, ★*paratype*, ★*topotype*.

type, *v.* **II.** *intrans.* To use a type-writer. [Colloq.]

> She had n't the brains to sing. She *typed* for a living, I believe. *F. W. Hume*, Crimson Cryptogram, viii.

type-body (tīp′bod″i), *n.* The metal base on which the face of a type is cast. 'Body' is used to describe the height of a type as it appears in print, as pica or 12-point body, or as nonpareil or 6-point body. It does not define the width of a type. The square or em-quadrat of a type is understood as its body.

type-composition (tīp′kom-pọ-zish″ọn), *n.* The setting up of type in proper order; type-setting. See *composition*, 1 (*c*).

type-life (tīp′līf), *n.* An organism which epitomizes or typifies the life and development of all the other organisms having the same line of descent; a typical form.

typer (tī′pėr), *n.* [*type*(*write*) + *-er*.] A type-writer. [Colloq.]

> In two consecutive advertisements which appeared on the front page of the 'Athenæum' for May 21, I notice the two different forms, typist, and *typer*, meaning a person who uses a type-writer. *N. and Q.*, 9th ser., VI, quoted in Encyc. Dict.

type-slug (tīp′slug), *n.* A line of composed type in one solid strip, as made by a linotype machine.

type-work (tīp′wėrk), *n.* In *printing*, the letterpress or body of printed matter on a page.

> The headband may be one third or sometimes one half of the page, but when it is very large the *type-work* below must be correspondingly reduced in size. *De Vinne*, Mod. Book Composition, p. 162.

type-writer, *n.* 1. Any machine printing letters by type. Type-writing machines are divided into two chief classes, the stamping-machines, in which the type stamps the letters on the paper by means of an inked ribbon, and the printing-machines, which employ inked type. A typical machine of the stamping or ribbon class consists of three parts, the keyboard, the carriage, and the action or printing mechanism. (See Fig. 1, *A*, *B*, and *C*.) The keyboard consists of several ranks of type-keys and two or more mechanical keys (*H*, *I*). The carriage is quite distinct from the rest of the machine, and has a traverse, right and left, across the top of the machine. Its essential features are the cylinder or platen (*E*) that supports the paper and the feed-motion that feeds the paper in two directions, across and down the page. The traverse of the carriage to the right by means of the carriage lever (*F*) stores power in a coiled spring, the traverse to the left being automatic and under the influence of the coiled spring. The carriage is fitted with adjustable stop-motions to control the traverse of the carriage, and with other fittings and parts for the complete and perfect control of its movements under the varying conditions of stamping letters on paper in the work of correspondence, reporting, dictation, and copying. The action includes all the levers and other moving parts placed between the keyboard and carriage and controlling the type, the feed-motion of the carriage, and the ribbon-operating mechanism. When the machine is ready for use, a sheet of paper is placed in the carriage and coiled round the cylinder and the carriage is moved to the extreme right of its traverse. A number of type-keys are touched in succession, each blow upon a key by the finger causing a type-bar, supporting a certain type, to rise and strike the under side of the cylinder. As the paper is wrapped round the cylinder it would be struck by the type were it not that the inked ribbon, stretched between two reels (*J*), comes between, the type forcing the ribbon against the paper and causing it to stamp on the paper an inked impression of the type. At the same time, this movement of the key also releases the feed-motion of the carriage and causes it to feed the paper one space to the left, giving a clean space for the next impression. When all the letters of a word are stamped on the paper, the mechanical key called the *space-key* (*H*) is touched and the feed-motion feeds the paper to the left one space to form the blank between the finished word and the next. When enough words are stamped upon the paper to fill a line, a lever on the carriage-lever is used to move the carriage back to its first position (at the beginning of the line) and at the same time to feed the paper down the proper distance to give the required space between the lines, the actual space being adjustable at will. Touching other mechanical keys, called *shift-keys* (*I*), shifts the cylinder slightly to bring the paper before one or the other of the two types on each type-bar and gives a selection between the two types (capital or small letters) marked on each type-key of the keyboard. This is the essential operation of most machines employing an inked ribbon, and explains in part the underlying principle on which all type-writers are built. It will be seen that the impression is made on the paper when under the carriage and out of sight of the operator. To read what has been done, the carriage must be tilted back to render the work visible. This has led to the invention of the so-called *visible writers* or type-writers in which the impressions are made on the front or on top of the cylinder and in plain view of the operator, producing visible writing. In the machines that use type which strike the front of the cylinder, the type-bars lie, when at rest, in a horizontal position in a segment of a circle, pressure upon a key throwing the type-bar upward and backward

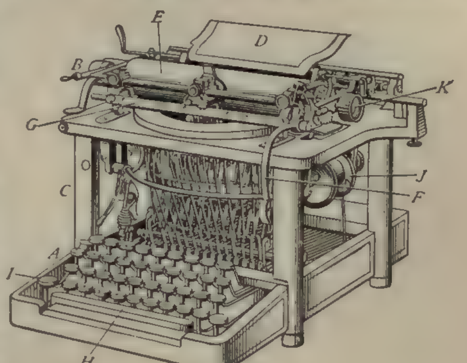


Fig. 1.

A, keyboard; *B*, carriage; *C*, action or printing mechanism; *D*, paper-shelf; *E*, cylinder or platen; *F*, carriage-lever; *G*, front scale; *H*, space-key; *I*, shift-key; *J*, ribbon-reel; *K*, thumb-wheel controlling cylinder. Type-bars and type are not visible.

against the cylinder. In the machines that strike a downward blow on top of the cylinder, the type-bars, when at rest, stand erect in two groups on each side of the machine (see Fig. 2) or stand in a half-circle between the keyboard and the carriage. The machines of the second class use inked type direct and are practically printing-machines. In some of these machines all the essential features of the machine shown in Fig. 1 are employed except the inked ribbon, the types, when idle, resting on an ink-pad that keeps them constantly wet with ink. Pressure upon a type-key causes the type-bar to lift the type from the pad and make a direct print on the paper. Some machines of this class are *visible writers*, or print in sight of the operator, giving the so-called *visible writing*. Still other printing type-writers employ a *type-wheel*, the motion of the type-key causing the wheel to revolve until the right letter is opposite the paper, when an impression is made on the paper. Another machine employs a type-shuttle, the touching of a key causing it to move until the right letter is brought before the paper, when an impression is made by means of an inked ribbon. The *book type-writer* is a ribbon-machine designed to print directly upon the pages of a book, such as a ledger or other account-book. The machine has no carriage, and consists of a keyboard and action having type-bars that strike downward, the entire machine having a traverse over the page itself. The book is laid open in a suitable platen or holder, and the machine travels on the platen, being fed across and down the page automatically by the operation of the keys.—**Electric type-writer**, a type-writing machine in which the depression of the key is transmitted to the proper letter and causes it to move, not by levers or cams, but by an electric device.

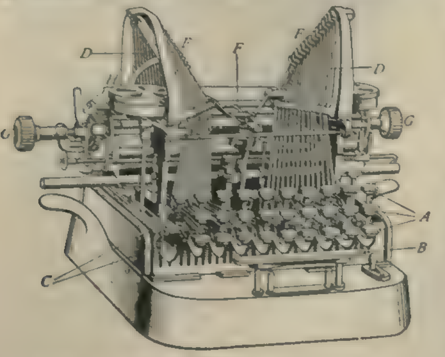

Fig. 2.

A, type-keys; *B*, space-key; *C*, shift-keys; *D*, type-bars; *E*, type; *F*, cylinder; *G*, thumb-wheel controlling cylinder; *H*, ribbon reel. The type-bars are of the shape of an inverted U and are supported at two points.

typhaceous (tī-fā'shius), *a.* [NL. *Typhace(æ)* + *-ous.*] Belonging or pertaining to the *Typhaceæ*.

typhic (tī'fik), *a.* [*typh(us)* + *-ic.*] Relating to typhus or typhoid fever. *Buck*, Med. Handbook, III. 358.

typhization (tī-fi-zā'shọn), *n.* [*typh(us)* + *-iz(e)* + *-ation.*] The production of a morbid state, not actually typhus fever, supposed to be the result of exposure to infection of that disease.

Typhlichthys (tif-lik'this), *n.* [NL., < Gr. *τυφλός*, blind, + *ἰχθύς*, fish.] A genus of small blind fishes of the family *Amblyopsidæ*, found in subterranean streams in Indiana, Kentucky, and neighboring States.

typhlodicliditis (tif-lọ-dik-li-dī'tis), *n.* [NL., < Gr. *τυφλός*, blind, + *εἶδος*, form, + *κλείς* (*κλειδ-*), means of closing, key, etc., + *-itis.*] Inflammation of the ileocæcal valve.

Typhlogobius (tif-lọ-gō'bi-us), *n.* [NL., < Gr. *τυφλός*, blind, + NL. *Gobius.*] A genus of gobioid fishes found under rocks and in crab-holes on the coast of southern California. Their eyes are reduced and covered with skin, being functional only in the young.

typhlolithiasis (tif″lọ-li-thī'ạ-sis), *n.* [NL., < Gr. *τυφλός*, blind, + NL. *lithiasis.*] The occurrence of calculi in the cæcum.

Typhlomolge (tif-lọ-mol'jē), *n.* [NL.] A genus of tailed amphibians. They have the tongue moderate, anterior border free; vomeropalatine teeth in a strong series; limbs excessively elongated; fingers four, toes five; eyes entirely concealed under the skin; gill-rami long, simple; and fimbriæ long and slender. The genus is related to the cave-dwelling *Proteus* of Europe, and the only known species, *T. rathbuni* Stejneger, is found in the water from an artesian well at San Marcos, Texas.

typhlostenosis (tif″lọ-stẹ-nō'sis), *n.* [NL., < Gr. *τυφλός*, blind, + *στένωσις*, narrowing.] Contraction of the cæcum.

typhlotomy (tif-lot'ọ-mi), *n.* [Gr. *τυφλός*, blind, + *-τομια*, < *ταμεῖν*, cut.] Incision into the cæcum. *Lancet*, May 30, 1903, p. 1511.

typhodeictor (tī-fọ-dīk'tọr), *n.* [E. *typh(oon)* + Gr. **δείκτωρ*, < *δεικνύναι*, point out.] An instrument for obtaining, by inspection, the bearing or position of a revolving storm, hurricane, or typhoon; a storm-card; specifically, an apparatus for this purpose devised by Lieutenant-Colonel J. A. Lloyd in 1849.

typhogenic (tī-fọ-jen'ik), *a.* [NL. *typhus* + Gr. *-γενής*, -producing, + *-ic.*] Causing typhus or typhoid fever.

typhohemia (tī-fọ-hē'mi-ạ̈), *n.* [NL. *typhus* + Gr. *αἷμα*, blood.] Putrefaction of the blood, formerly thought to occur in cases of typhus or so-called putrid fever.

Typhoid bacillus. See *Eberth's* ★*bacillus* and *typhoid.* —**Typhoid cholera.** See ★*cholera.*—**Typhoid spine.** See ★*spine.*

typholysin (tī-fol'i-sin), *n.* [*typho(id)* + *lysin.*] A bacteriolysin directed against the typhoid bacillus. *Buck*, Med. Handbook, App., p. 536.

Typhonian* (tī-fō'ni-an), *a.* Pertaining to or connected with Typhon or Set, an Egyptian deity.

typhopneumonia (tī″fọ-nụ-mō'ni-ạ̈), *n.* [NL.] Same as *typhoid pneumonia* (which see, under *pneumonia*).

typhosepsis (tī-fọ-sep'sis), *n.* [NL., < E. *typho(id)* + Gr. *σῆψις*, putrefaction.] Same as ★*typhohemia*.

Typhula (tī'fū-lạ̈), *n.* [NL. (Fries, 1818), < *Typha*, a genus of plants, which it is fancied to resemble in miniature, + dim. *-ula.*] A genus of small hymenomycetous fungi belonging to the family *Clavariaceæ* and closely related to *Pistillaria*, from which it differs chiefly in having four sterigmata to each basidium instead of two. The species usually grow on decaying herbaceous stems and arise from a small sclerotium. *T. gyrans* occurs in Europe and North America. *T. graminum* is said to be parasitic on wheat plants in Sweden.

Typhus siderans an extremely severe and usually rapidly fatal form of typhus fever.

typist (tī'pist), *n.* [*type*, *v.*, + *-ist.*] One whose occupation is writing with a type-writer. [Colloq.]

They do not aspire to swell the already-overcrowded labour market by going out as governesses, companions, clerks, *typists*. *The Grand*, Oct. 1, 1905, p. 455.

typo. An abbreviation of *typographic*, *typographical*, or *typography*.

typografer, typografical, typografy. Amended spellings of *typographer*, etc.

typogravure (tip″ọ-grạ-vūr'), *n.* [F. **typogravure*, < Gr. *τύπος*, type, + F. *gravure*, engraving.] A half-tone relief photo-engraved block which may be printed from simultaneously with type matter.—**Typogravure process**, in *photog.*, a process for obtaining half-tone pictures from copper relief-plates.

typologic (tip-ọ-loj'ik), *a.* [*typolog(y)* + *-ic.*] Of or pertaining to typology or the study of types.

It is only very seldom . . . that we can follow the *typologic* development. *Smithsonian Rep.*, 1890, p. 514.

typologist (tī-pol'ọ-jist), *n.* [*typolog(y)* + *-ist.*] One who is versed in typology; a student of types and symbols.

typometer (tī-pom'e-tėr), *n.* [Gr. *τύπος*, type, + *μέτρον*, measure.] A type-gage used by type-founders to test the dimensions of type-bodies. Different mechanisms are made for width or set, height to paper, and conformity to standards.

typometry (tī-pom'e-tri), *n.* [Gr. *τύπος*, type, + *-μετρια*, < *μέτρον*, measure.] The science or art of determining the proper sizes of type-bodies.

typoradiography (tī-pọ-rā-di-og'rạ-fi), *n.* [Gr. *τύπος*, type, + E. *radiography.*] The process of making photographic copies of a manuscript by placing it in contact with a package of sensitized printing-papers or films, exposing it to the action of X-rays, and subsequently developing the radiographs thus obtained.

Owing to the thin sensitized films of the printing paper, very unsatisfactory skiagraphs were obtained. Dr. Kolle now declares that he has overcome these difficulties and that the process of *typo-radiography* is not a theoretical dream, but is a self-evident and systematic method of procedure. *Sci. Amer.*, Jan. 28, 1899.

typoscribe (tī'pọ-skrīb), *n.* [Gr. *τύπος*, type, + L. *scribere*, write.] One who operates a type-writer. *The Writer.* [Rare.]

typoscript (tī'pọ-skript), *n.* [Gr. *τύπος* + E. *script.*] Writing produced by means of a type-writer. *The Writer.* [Rare.]

typotelegraph (tī-pọ-tel'ẹ-gråf), *n.* [Gr. *τύπος*, type, + E. *telegraph.*] A name given to the automatic printing telegraph of Cardwell.

typotelegraphy (tī″pọ-tẹ-leg'rạ-fi), *n.* [*typotelegraph* + *-y*^{3}.] Telegraphy in which the receiving instrument automatically reproduces the message in printed characters. *Elect. World and Engin.*, Oct. 3, 1903, p. 377.

Typotheria (tī-pọ-thē'ri-ạ̈), *n. pl.* [NL., < Gr. *τύπος*, type, + *θήρ*, wild beast.] A group of extinct ungulates, regarded as an order or suborder, having elongate, rodent-like teeth, the canines reduced or absent, and the rest of the tooth-series nearly always present. The humerus has an entepicondylar foramen; the propodials are complete and usually separate; and the digits are four or five in number. Species of moderate size have been found in the Miocene and Pleistocene of South America.

Tyrannosaurus (tī-ran-ọ-sâ'rus), *n.* [NL., < Gr. *τύραννος*, lord, master, + *σαῦρος*, lizard.] A great carnivorous dinosaur from the Upper Cretaceous (Laramie) of North America, characterized by its small fore limbs, greatly elongated hind limbs inclosing large hollow cavities, and huge serrated teeth of which thirteen are present in the upper jaw and twelve or thirteen in the dentary. This dinosaur walked erect, as a biped, supporting the weight of the body on the hind limbs and tail.

tyrant-fish (tī'rạnt-fish), *n.* A species of cutlas-fish, *Evoxymetopon tæniatus*, of the West Indies, known in Spanish as *tirante*.

tyrein (tī'rẹ-in), *n.* [Gr. *τυρός*, cheese, + *-e-in.*] Clotted casein.

tyroglyphid (tī-rog'li-fid), *n.* and *a.* **I.** *n.* Any mite or acarid of the family *Tyroglyphidæ*.

II. *a.* Of or pertaining to the *Tyroglyphidæ*.

tyroid (tī'roid), *a.* [Gr. *τυρός*, cheese, + *εἶδος*, form.] Cheesy; resembling cheese.

Tyrolian (ti-rō'li-ạn), *a.* Same as *Tyrolese*.

tyroma, *n.* 2. [pl. *tyromata* (-mạ-tạ̈).] A tumor containing cheesy matter.

tyromancy (tī'rọ-man-si), *n.* [Gr. *τυρός*, cheese, + *μαντεία*, divination.] Divination by means of cheese. [Rare.]

tyrosin, *n.* Tyrosin is p-oxyphenyl-propionic acid, $-C_6H_4(OH).CH_2.CH(NH_2)COOH$. It is obtained from nearly all albumins on hydrolytic decomposition by means of acids, alkalis, and the proteolytic ferments. It is supposed that a tyrosin radical exists as such in all those substances from which it is obtainable on decomposition.

tyrosinase (tī'rọ-si-nās), *n.* [*tyrosin* + *-ase.*] An oxidizing ferment which acts upon tyrosin and leads to the formation of various black substances which are known only in part. The formation of homogentisic acid (alkapton) is probably referable to a tyrosinase. The black pigment secreted by the octopus is produced in this manner.

tyrotoxin (tī-rọ-tok'sin), *n.* [Gr. *τυρός*, cheese, + *τοξ(ικόν)*, poison, + *-in*^{2}.] A poisonous substance producing the complex of symptoms referable to cheese-poisoning.

tyrotoxism (tī-rọ-tok'sizm), *n.* [*tyrotox(icon)* + *-ism.*] The aggregate of symptoms in poisoning by tyrotoxin or tyrotoxicon; cheese-poisoning. *Buck*, Med. Handbook, IV. 189.

tzin (zin), *n.* [Nahuatl *-tzin*, a suffix noting respect or distinction.] A lord; a prince.

Such was the *tzin* Guatamo, or, as he is more commonly known in history, Guatamozin.
Lew Wallace, The Fair God, i. 6.

U 3. An abbreviation (*a*) [*l. c.*] in a ship's log-book, of *ugly threatening weather*; (*b*) [*l. c.*] of *uncle*; (*c*) of *Unionist*.

uabain (wä′ba-in), *n.* [Appar. ‹ **uabä*, an African name (of the plant?), + *-in*².] Same as ★*acocantherin*.

uarana (wä-rä′nä), *n.* Same as *guarana*.

uarango (wä-rän′gō), *n.* [Also *guarango*. Peruvian?] A thorny tree, *Acacia macracantha*, abundant on the Peruvian coast, resembling the mesquite.

uaruar (wär-wär′), *n.* [Quichua of Peru.] Same as *floripondio*.

U. B. An abbreviation (*a*) of *United Brethren*; (*b*) of *United Brethren in Christ*.

ubiquity, *n.*—**Coefficient of ubiquity.** See ★*coefficient*.

U. C. An abbreviation (*a*) of *University College*; (*b*) of *Upper Canada*; (*c*) of the Latin *urbis conditæ*, from the founding of the city, meaning from the first year of Rome.

'ud (öd), *n.* An Arab lute or guitar, usually with seven pairs of strings, common in many Oriental countries. It was the prototype of the European lute of the sixteenth century: also *oud*. See *lute*.

udad (ö′dad), *n.* Same as *aoudad*. *Proc. Zool. Soc. London*, 1898, p. 352.

udell (ū-del′), *n.* [(*al*)*udel*.] A pear-shaped vessel, or cylinder tapered at one end, of glass or clay ware, open at both ends, used in the condensation of iodine vapor in the industrial preparation of iodine, the vapor being carried through several series of such vessels, which fit into one another successively in each series. See *aludel*. *Roscoe and Schorlemmer*, Treatise on Chem., I. 201.

udika-bread (ö-dē′kä-bred′), *n.* Same as *dika-bread*. In the preparation of this nutritious native food the roasted oily seeds of three West African trees are used: *Irvingia Gabonensis*, of the quassia family, *Fegimanra Africana*, of the cashew family, and *Pentaclethra macrophylla*, of the mimosa family. See *dika-bread*.

udo (ö′dō), *n.* [Jap.] An ornamental plant, *Aralia cordata*, cultivated in Japan and China as a vegetable. The edible portions of the plant are its young shoots, which are blanched by being covered with earth. In the winter the crisp, white stems are used for salad like celery. *Nature*, Aug. 15, 1907, p. 380.

udomograph (ū-dom′ō-gràf), *n.* [L. *udus*, moist, + *m*(*etrum*), measure, + Gr. γράφειν, write.] A recording pluviometer or rain-gage.

U. E. I. C. An abbreviation of *United East India Company*.

ugab (ö′gäb), *n.* [Heb. *'cugab*.] A Hebrew musical instrument, probably a syrinx, but possibly some simple pipe: translated 'organ' in the authorized version of the Bible. In modern Hebrew the term is applied to the organ and the piano.

Uganda bark-cloth, a felt-like material which consists of several layers of the inner bark of species of *Brachystegia*, especially *B. spicæformis* and *B. appendiculata*, forest-trees of tropical Africa: used by the natives of Uganda and other regions near the east coast for clothing, bags, and other domestic purposes. The bark is rendered very soft and pliable by being pounded with grooved mallets and it is usually dyed or superficially stained a brick-red color with the juice of the tree itself.

Ugrian, *a.* 2. Pertaining to that group of peoples which includes the Voguls, Ostiaks, and Magyars.

Ugro-Finnic (ö-grō-fin′ik), *a.* Same as ★*Finno-Ugrian*.

> The Finns belong to the *Ugro-Finnic* or Uralo-Altaic stock and are akin to the Magyar and Laplander. About a dozen different tribes of this *Ugro-Finnic* stock are recognized; they are scattered over northern and central Russia and Siberia. *Pop. Sci. Mo.*, Nov., 1903, p. 67.

Ugro-Slavonic (ö′grō-sla-von′ik), *a.* Both Ugrian and Slavonic (Slavic) in origin. *Keane*, Ethnology, p. 201.

U. G. R. R. An abbreviation of *underground railroad*.

ugui (ö′gö-ē), *n.* [Jap.] Same as ★*akahara*.

uhllo (öl′yō), *n.* [Also *üllo*; California Indian.] A variety of shell-money used by the Indians of California. It is made of oblong pieces of abalone shell from one to two inches long, strung edge to edge on a string. These strings, which usually consist of about ten pieces, are often used as necklaces.

uhuula (ö-hö-ö′lä), *n.* [Hawaiian.] A native Hawaiian name for species of scaroid or parrot-fishes.

Uintacrinidæ (ū-in-ta-krin′i-dē), *n. pl.* [NL., ‹ *Uintacrinus* + *-idæ*.] A family of flexible crinoids with pentamerous symmetry and stemless calyx, the basal plates inclosing a centrodorsal, two costals supporting a long series of arm-plates and numerous interbrachials, and arms very long and pinnulate. The single genus *Uintacrinus* occurs in the Upper Cretaceous of Kansas and Westphalia.

Uintacyonidæ (ū-in′ta-sī-on′i-dē), *n. pl.* [NL. *Uintacyon* (*Uintah* (mountains) + Gr. κύων, dog), the type genus, + *-idæ*.] A family of flesh-eating mammals, of the order *Creodonta*, but suggesting dogs in their appearance.

Uintah group. See ★*group*¹.

uintaite (ū-in′ta-īt), *n.* [*Uintah*, mountains in Utah, + *-ite*².] Gilsonite; a black, brilliant, and lustrous variety of bitumen giving a dark-brown streak, breaking with a beautiful conchoidal fracture, and having a hardness of from 2 to 2.5 and a specific gravity of from 1.065 to 1.07. It is easily fusible, dissolves in turpentine, and is used in making varnishes and in coverings for electric insulation. *G. P. Merrill*, in Smithsonian Rep. (Nat. Mus.), 1899, p. 450.

uintathere (ū-in′ta-thēr), *n.* A uintatherium.

Uintatherium beds. Same as *Bridger* ★*group*.

Uintornis (ū-in-tôr′nis), *n.* [NL., ‹ *Uintah*, mountains in Utah, + Gr. ὄρνις, a bird.] A fossil woodpecker from the Eocene Tertiary of Wyoming.

Uitenhage series. See ★*series*.

uitlander (oit′län-dėr), *n.* [D., a foreigner, = E. *outlander*.] 1. A term used in the late South African republics to denote any white man in the country who is not a Boer.

> The Witwatersrand and the Revolt of the *Uitlanders*.
> *Geog. Jour.* (R. G. S.), IX. 240.

2. More generally, an outsider.

> Any *Uitlander*, meaning thereby any unfortunate first-class, fire-tried physician of any one of the other forty-four sovereignties of the united United States, might just as well make up his mind, first as last, that he must live and die outside of this watched-over, Medically-Protected (from Albany) Happy Valley of Rasselas, i.e., New York. *Amer. Physician*, Jan., 1903, p. 29.

uitspan (oit-spán′), *v. t.* and *i.* [D. *uitspannen*, outspan.] Same as *outspan*. [South African.]

U. J. D. An abbreviation of the Latin *Utriusque Juris Doctor*, doctor of both laws, that is, the canon and the civil law.

U. K. A. An abbreviation of *Ulster king-at-arms*.

Ukrainian (ū-krā′ni-an), *n.* An inhabitant of the Ukraine; a Little Russian.

Ulæma (ū-lē′mä), *n.* [NL., ‹ Gr. οὖλος, entire, + αἷμα, blood. The interhemal is entire and not cup-shaped at its upper end.] A genus of fishes of the family *Gerridæ*, found in the West Indies.

ulæmorrhagia (ū-lē-mō-rā′ji-ä), *n.* [NL., ‹ Gr. οὖλον, gum, + αἱμορραγία, hemorrhage.] Same as *oulorrhagy*.

ulatrophia (ū-la-trō′fi-ä), *n.* [NL., ‹ Gr. οὖλον, gum, + ἀτροφία, atrophy.] Shrinking of the gums.

ulatrophy (ū-lat′rō-fi), *n.* Same as ★*ulatrophia*.

Ulca (ul′kä), *n.* [NL., ‹ Dan. Norw. *ulk*, a frogfish, *Cottus gobio*.] A genus of cottoid fishes found in Alaska.

ulcer, *n.*—**Annam ulcer,** an endemic ulcer of tropical Asia, probably the same as the Aleppo ulcer (which see, under *ulcer*).—**Cochin-China ulcer.** Same as *Aden ulcer* (which see, under *ulcer*).—**Cold-ulcer.** See ★*cold-ulcer*.—**Irritable ulcer,** an ulcer, usually of the leg, which is slow to heal and exceedingly painful.—**Jacob's ulcer.** Same as *rodent* ★*ulcer*.—**Peptic ulcer,** an ulcer of the stomach or duodenum, caused by the corrosive action of the gastric juice upon the mucous membrane.—**Perforating ulcer,** an ulcer of the stomach which extends down through the muscular and peritoneal layers of the viscus, allowing escape of the contents into the general abdominal cavity.—**Rodent ulcer,** a form of epithelioma, not very malignant in character, which occurs as an ulcer, gradually involving the deeper strictures.—**Round ulcer,** an ulcer of the stomach or duodenum, usually extending down to the peritoneal surface or perforating this membrane: so called because of its circular outline, which looks as if punched out with an instrument.—**Stercoral ulcer.** See ★*stercoral*.—**Tropical ulcer,** a contagious ulcerative affection which occurs in various parts of tropical Asia.

Ulcina (ul′si-nä), *n.* [NL.] A subgenus of *Aspidophoroides*.

ulcus (ul′kus), *n.* [L.] An ulcer.—**Ulcus durum** or **induratum,** hard (syphilitic) chancre.—**Ulcus molle,** soft (non-syphilitic) chancre.

ulero (ö-lā′rō), *n.* [Sp. *hulero*, ‹ *hule*, caoutchouc, rubber, ‹ Nahuatl *ulli*, rubber, sap of the rubber-tree.] One who collects caoutchouc or rubber.

> The *ulero* makes with his machete diagonal lines of gashes, extending nearly around the [rubber] tree, like the letter V, the point being downward.
> *National Geog. Mag.*, Nov., 1903, p. 413.

ulerythema (ū-ler-i-thē′mä), *n.* [NL., ‹ Gr. οὐλή, a scar, + NL. *erythema*.] A skin-disease marked by redness and the formation of scars.

uletic (ū-let′ik), *a.* [Gr. οὖλον, gum, + *-etic*.] Of or pertaining to the gums.

ulikon (ū′li-kon), *n.* A common name for the eulachon or candle-fish, *Thaleichthys pacificus*. See *candle-fish*, 1.

ulitis (ū-lī′tis), *n.* [NL., ‹ Gr. οὖλον, gum, + *-itis*.] Inflammation of the gums.

ulla-lulla (ul′ä-lul′ä), *n.* [Irish.] A funeral lament.

> Alas! my warrior's spirit brave,
> Nor mass nor *ulla-lulla* heard,
> Lamenting soothe his grave.
> *Campbell*, O'Connor's Child, st. 11.

uller (ul′ėr), *n.* [See *ullage*.] A device for filling up the ullage or wantage of a cask. See ★*ulling-can*.

ulling (ul′ing), *n.* [See *ullage*.] The process of filling up the ullage or wantage of a cask, as by means of an ulling-can.

ulling-can (ul′ing-kan), *n.* A can with a long spout designed for use in filling up the ullage or wantage of a cask.

Ulmer hound or **dog.** A strain of the Great Dane, or German mastiff, having a mottled black and white coat and blue eyes: named from the city of Ulm.

ulmic, *a.* 2. Noting an acid, a compound, $C_{20}H_{14}O_6$, contained in the red coloring-matter of beet-root juice and also found in sugar-cane juice. It may be prepared by the action of alkali on glucose.

ulnocondylar (ul-nō-kon′di-lär), *a.* [L. *ulna*, ulna, + E. *condylar*.] Relating to the inner or ulnar side of the condyle of the humerus. *Amer. Nat.*, Feb., 1904, p. 105.—**Ulnocondylar foramen,** a perforation in the inner or ulnar side of the humerus, just above the condyle. Same as ★*entepicondylar foramen*.

Ulocentra (ū-lō-sen′trä), *n.* [NL., ‹ Gr. οὖλος, entire, + κέντρον, sharp point.] A genus of percoid fishes found in fresh waters of the eastern United States.

uloid (ū′loid), *a.* [Gr. οὐλή, a scar, + εἶδος, form.] Having the appearance of a scar; like a scar.

uloncus (ū-long′kus), *n.*; pl. *ulonci* (-sī). [NL., ‹ Gr. οὖλον, gum, + ὄγκος, mass.] A tumor of the gums.

ulorrhagy (ụ-lor'a̤-ji), *n.* [Gr. *οὖλον*, gum, + *-ραγια*, < *ῥηγνύναι*, break.] Same as *oulorrhagy*.

ulosis (ụ-lō'sis), *n.* [NL., < Gr. **οὔλωσις*, < *οὐλοῦσθαι*, to be scarred, < *οὐλή*, scar.] Same as *cicatrization*.

ulotic (ụ-lot'ik), *a.* [*ulosis* (*-ot-*) + *-ic*.] Relating to a cicatrix, or causing cicatrization.

Ulotriches (ụ-lot'ri-kēz), *n. pl.* [NL.] Same as *Ulotrichi*.

ulsterette (ul-stė-ret'), *n.* [*ulster* + *-ette*.] A storm coat, not so large or so heavy as an ulster; a light ulster. [Colloq.]

ultimate, *a.* **4.** In *mech.*, final; 'breaking'; specifically, noting the strain required to break a piece of material.

ulto. [*l. c.* or *cap.*] A contraction of the Latin *ultimo*, 'last' (month).

ult. præs. An abbreviation of the Latin *ultimus præscriptus*, the last prescribed.

ultrabasic (ul-trạ̈-bā'sik), *a.* In *petrog.*, extremely rich in the base-forming elements and poor in silica: applied by Judd (1881) to peridotites, hornblendites, limburgites, and related igneous rocks. *Geikie*, Text-book of Geol., p. 863.—**Ultrabasic series.** See ★*series*.

ultrabrachycephalic (ul"trạ̈-brak"i-se-fal'ik), *a.* In *anthrop.*, having a cephalic index of 90 and more. *Deniker*, Races of Man, p. 58.

ultradolichocephalic (ul-trạ̈-dol"i-kọ-se-fal'ik), *a.* In *anthrop.*, having a cephalic index of 64 or less. *Deniker*.

ultragalactic (ul"trạ̈-ga-lak'tik), *a.* Lying beyond the Galaxy or Milky Way.

It is not possible here to discuss the reasoning by which the author [E. E. Fournier d'Albe] seeks to establish the existence of *ultragalactic* universes; the arguments he employs are simple and reasonable, and will appeal strongly to the reader who is willing to be guided by probability in a region where logical certainty is at present unattainable. *Nature*, Oct. 24, 1907, p. 633.

ultragangetic (ul"trạ̈-gan-jet'ik), *a.* Situated or living beyond the Ganges.

We had two audiences of the King, with an interchange of presents; but the Council, with the usual cautious and exclusive spirit of the *ultra-gangetic* nations, would not consent to any written treaty of commerce.
Davis, Chinese, I. 77.

ultramarine, *n.*—**Gahn's ultramarine,** a trade-name for cobalt aluminate used as a pigment.

ultramartian (ul-trạ̈-mär'shian), *a.* Being or existing beyond the planet Mars.

Prof. See's result, from physical considerations, is that it amounts to about 10h. 7m., and that [rotation] of Neptune to 12h. 51m., which is longer than that of any of the great *ultra-Martian* planets, and exceeds that of Saturn by more than two hours.
Athenæum, March 11, 1905, p. 312.

ultramaterial (ul"trạ̈-mạ-tē'ri-a̤l), *a.* In a state of subdivision involving the breaking up of the atom into still smaller particles: said of ions and of ionized gases.

Radium, like other radio-active bodies, gives off matter in three states—(1) an emanation having the mobility of a heavy gas, (2) positively charged particles of little penetrating power, and relatively large size, (3) *ultra-material* negative particles, of a size much smaller than atoms. A mica plate will screen off 1 and 2, therefore the globulin solutions are unaffected by the *ultra-material* negative particles. *Amer. Jour. Sci.*, Oct., 1903, p. 329.

ultramedian (ul-trạ̈-mē'di-a̤n), *a.* Same as *postmedian*. *Proc. Zool. Soc. London*, 1902, p. 115.

ultramicroscope (ul-trạ̈-mī'krọ-skōp), *n.* An instrument for rendering visible, by means of diffractive effects, bodies below the limit of the resolving-power of the microscope.

ultranutrition (ul"trạ̈-nụ-trish'ọn), *n.* Nutrition that goes beyond the needs of the individual and takes the form especially of reproduction. *L. F. Ward*, Pure Sociol., p. 291.

ultra-optimal (ul-trạ̈-op'ti-ma̤l), *a.* [L. *ultra*, beyond, + E. *optimal*.] In excess of the optimum or most favorable amount or degree.

Ultraoptimal light stops protoplasmic streaming.
Bot. Gazette, March, 1904, p. 233.

ultraparallel (ul-trạ̈-par'a̤-lel), *a.* and *n.* **I.** *a.* In *geom.*, coplanar, yet nowhere meeting, not even at infinity. *Lindemann*.—**Ultraparallel lines,** straights coplanar, yet nowhere meeting, not even at infinity.

II. *n.* In *geom.*, a straight line coplanar with another, yet nowhere meeting it, not even at infinity.

ultrapenetrating (ul-trạ̈-pen'ẹ̄-trā-ting), *p. a.* Having the power of penetrating to an unusual depth: said of certain X-rays and of other obscure rays which pass through substances opaque to most rays of the same kind.

There are several varieties of Röntgen rays, as there are of cathode rays. They form an entire scale, and may be distinguished from each other by their degree of penetration. Some are *ultrapenetrating*. Others are extinguished at a distance of a few millimeters from their origin. This depends upon the generating apparatus, on the current employed, and on other circumstances controlling their production.
Smithsonian Rep., 1901, p. 284.

ultraphysical (ul-trạ̈-fiz'i-ka̤l), *a.* Beyond the physical; non-physical; transcending what is immediately given in physical research.

It [modern cosmogony] deals with all that the skies hold, visibly or invisibly; draws unstintingly on time past and time to come; concerns itself equally with gradual transformations and sudden catastrophes, with the dissipation and concentration of energy, with the subtle interplay of matter and force, with physical and *ultra-physical*, chemical and electrical modes of action.
Knowledge, March, 1904, p. 30.

ultraplanetary (ul-trä-plan'e-tạ-ri), *a.* Being beyond the orbits of the planets.

ultraradical (ul"trạ̈-rad'i-ka̤l), *a.* Extremely radical; occupying the extreme radical position, as in politics.

So uncompromising were his [Virchow's] strictures on the authorities, together with his alliance to the *ultra-Radical* party, that he was compelled to resign his appointment at the Charité. *Nature*, Oct. 2, 1902, p. 551.

ultrarational (ul-trä-rash'ọn-a̤l), *a.* Pertaining to a disciplined scientific activity of mind; surpassing mere 'rationalism.' *L. F. Ward*, Pure Sociol., p. 144.

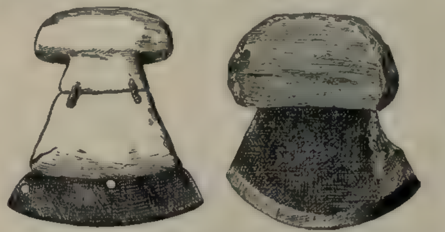
ultrastellar (ul-trạ̈-stel'ạ̈r), *a.* Lying beyond the stars: said of those remote portions of the universe which lie beyond the range of the telescope.

ultraterrestrial (ul"trạ̈-te-res'tri-a̤l), *a.* Being outside of the earth or its atmosphere; coming from beyond the earth.

If such an experimental result were obtained, it would strengthen the possibility of Lord Kelvin's speculation that the origin of life on the earth may have been *ultra-terrestrial*. *Nature*, Dec. 4, 1902, p. 104.

Ultra-violet light. See ★*light*[1].

ulu (ö'lö), *n.* [Also *ooloo*; Eskimo **ulu*.] A kind of semilunar knife used by Eskimo women.



Forms of Ulu.
(From Rep. U. S. Nat. Museum, 1890.)

ulua (ö-lö'ä), *n.* [Hawaiian.] See ★*Carangus*.

ulupica (ö-lö-pē'kä), *n.* [Native name in Bolivia?] A small green pepper, exceedingly strong but of a pleasant flavor, which grows wild on the eastern flanks of the Bolivian Andes and the Cordillera of Cuzco: used as a condiment in soups, and also eaten raw.

Ulvaria (ul-vā'ri-ạ̈), *n.* [NL., < *Ulva*, a genus of algæ, sea-lettuce.] A genus of blennioid fishes found in the North Atlantic.

Ulvicola (ul-vik'ọ-lạ̈), *n.* [NL., < *Ulva*, sea-lettuce, + *colere*, inhabit.] A genus of fishes of the family *Blenniidæ*, found on the coast of southern California.

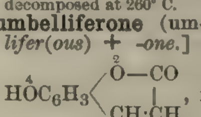
um, *n.* Same as *om*.

umangite (ö-mang'gīt), *n.* [*Umango* (see def.) + *-ite*[2].] A copper selenide, Cu_3Se_2, occurring in fine granular to compact masses of a dark cherry-red color: found in the Sierra de Umango, Argentina.

umbel, *n.* **3.** In the spicular elements of the hexactinellid sponges, a straight shaft or rhabd with rays at one end grouped together in the form of an umbel.

umbellic (um-bel'ik), *a.* [*umbell*(*iferone*) + *-ic*.] Pertaining to umbelliferone.—**Umbellic acid,** metadihydroxycinnamic acid; a yellowish, pulverulent, unstable compound, $\overset{2\,4}{(HO)_2}C_6H_3\overset{1}{C}H{:}CHCOOH$, prepared by the action of potassium hydroxid on its lactone, umbelliferone. It darkens at 240° C. and is completely decomposed at 260° C.

umbelliferone (um-be-lif'e-rōn), *n.* [*umbellifer*(*ous*) + *-one*.] A colorless compound,



$$H\overset{4}{O}C_6H_3\left\langle\begin{matrix}\overset{2}{O}-CO\\ \quad\;\;|\\ \underset{1}{C}H{:}CH\end{matrix}\right.$$

, formed by the distillation of resins from umbelliferous plants, particularly of asafetida resin, and also by the action of sulphuric acid on a mixture of resorcinol and malic acid. It crystallizes in slender needles and melts at 223–224° C.

umbellulic (um-bel'ụ-lik), *a.* [*Umbellul*(*aria*) + *-ic*.] Noting an acid, a colorless compound, $C_{11}H_{22}O_2$, contained, in combination with glycerol, in the nuts of the Californian bay-tree, *Umbellularia Californica*. It melts at 31–34° C. and boils at 275–280° C.

umbellulone (um-bel'ụ-lōn), *n.* [*Umbellul*(*aria*) + *-one*.] A colorless liquid ketone, $C_{10}H_{14}O$, contained in the essential oil of Californian laurel, *Umbellularia Californica*, which is also known as mountain-laurel, cajeput, spice-tree, California olive, California bay-tree, and sometimes pepperwood. It has a mint-like odor and a peculiar, characteristic pungency. It boils at 218° C.

umbilicate (um-bil'i-kāt), *v. i.*; pret. and pp. *umbilicated*, ppr. *umbilicating*. [*umbilicate*, *a.*] To become umbilicate. *Buck*, Med. Handbook, VII. 250.

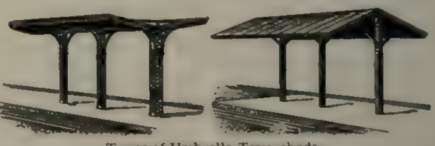
umbiliciform (um-bi-lis'i-form), *a.* Same as *umbiliform*.

The pulp extends through the *umbiliciform* pit, along the ventral side of the rhachis, to its tip.
Gadow, in Newton, Dict. of Birds, p. 248.

Umbilicus of the city of Rome, a cone-shaped brick structure at the northern end of the hemicyclium behind the Rostra, in Ancient Rome, a trace of which still remains. It marked officially the center of the city. Similar monuments existed in many ancient towns. *Huelsen*, Roman Forum, p. 80.

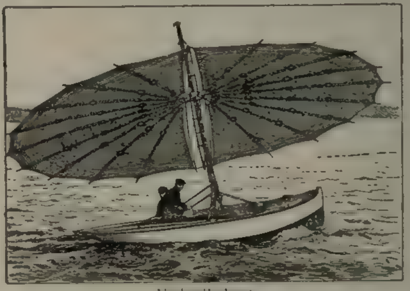
umbolateral (um-bō-lat'ẹ-ra̤l), *a.* Pertaining to the side or lateral portions of the beak or umbo, in the pelecypods and brachiopods.

Umbrella train-shed, in *railroading*, a broad hood supported on a single line of posts placed at the center of an island platform. The roof overhangs the tracks on each side of the platform and in the so-called *butterfly type* (left-hand figure) pitches toward the center, the rain-water running down to a gutter in the middle. See ★*island platform*.



Types of Umbrella Train-sheds.

umbrella-boat (um-brel'ạ̈-bōt), *n.* A boat propelled by a sail called, from its shape, an umbrella-sail. The pull of such a sail is at right angles to its mean surface, or in the direction of the mast, so that the wind-pressure has no effect whatever to incline the boat—that is, to heel her over. In changing course the mast and sail rotate by means of a turn-table to which the mast is secured, and the latter is raised and lowered by means of two tackles, a balance-weight being provided which assists in elevating the mast and balancing its dead-weight. The umbrella-sail is also and more generally known as a *cyclone-boat sail*, owing to its revolving motion.



Umbrella-boat.

umbrella-bush (um-brel'ạ̈-bůsh), *n.* In Australia, a small, bushy tree, *Acacia Oswaldi*, so called because of its value as a shade-tree.

umbrella-fern (um-brel'ạ̈-fėrn), *n.* Same as *eagle-★fern*.

umbrella-insulator (um-brel'ạ̈-in"sụ-lā-tọr), *n.* See ★*insulator*.

umbrella-sail (um-brel'ạ̈-sāl), *n.* See ★*umbrella-boat*.

umbrella-tree, *n.* **3.** In the southern United States, a cultivated flat-topped variety of the china-tree, *Melia Azedarach*, in which the branches radiate from the main stem like the ribs of an umbrella.—**4.** See ★*grass-tree*, 4 (*a*).

Umbro-Latin (um"brō-lat'in), *a.* and *n.* **I.** *a.* Pertaining to or designating that group of ancient peoples, speaking closely related languages, which occupied central Italy, and which included, among others, the Umbrians, Oscans, and Romans.

One of the settlements has been discovered in a peat moor at Mercurago, near Arona. This moor was formerly

> a shallow lake, in which a pile dwelling was built by some of the earliest settlers of the *Umbro-Latin* race.
> *Smithsonian Rep.*, 1890, p. 493.

II. *n.* An individual belonging to the Umbro-Latin group.

Umbrula (um-brö'lä), *n.* [NL., dim. of *umbra*, shade: see *umbra*¹.] A subgenus of *Menticirrus*.

uminta (ö-mēn'tä), *n.* [Bolivian Indian, Aymará or Quichua.] Same as *tamal*.

umla (öm'lä), *n.* [Native name in New Guinea.] A dark-brown vegetable arrow-poison, used by the Hattams in New Guinea.

> In the New Hebrides cadaveric poisons and euphorbia juice are used, while in New Guinea the Hattams smear their arrow-heads with a dark brown vegetable poison called *umla*. *Ratzel* (trans.), Hist. of Mankind, I. 234.

umptekite (ump'te-kīt), *n.* [*Umptek*, Finland, + *-ite*².] In *petrog.*, a variety of syenite composed of alkali feldspars in perthitic intergrowth, with little nephelite, arfvedsonite, and ægirite; a facies of nephelite-syenite. *Ramsay*, 1894.

umu (ö'mö), *n.* [Hawaiian, Samoan, Tahitian, Maori, and other Polynesian languages.] A native Polynesian oven. It consists of a hole or pit in the ground containing heated stones, on which the food is placed in baskets. Water is then poured on the stones and the whole covered up to keep in the steam till the food is sufficiently cooked.

unacademic (un″ak-a-dem'ik), *a.* Not academic in any sense of that word; particularly, unconventional in art or literature.

> The originality lay not in the central contention, but in the fervour, sincerity, and conviction, of a most *unacademic* sort, with which it was presented and enforced.
> *J. Morley*, Rousseau, I. 133.

unacclimated (un-a-klī'mā-ted), *a.* Not acclimated.

> Sunstroke occurs with greater frequency in the tropics amongst *unacclimated* individuals than amongst those of long residence. *Buck*, Med. Handbook, IV. 617.

una corda (ö'nä kôr'dä). [It.] In *piano-forte-playing*. See *shifting* ★*pedal*. See also *pedal*, 2 (*a*).

unagi (ö-nä'gi), *n.* [Jap.] A Japanese name of the common eel, *Anguilla japonica*, of the family *Anguillidæ*, found in the waters of Japan.

unar (ū'när), *n.* [L. *unus*, one, + *-ar*³.] In *photog.*, a trade-name of an anastigmatic objective, of Jena glass, for general use. *Photo-miniature*, Sept., 1901, p. 284.

Unartok series. See ★*series*.

uñas de gato (ön'yäs dā gä'tō), *n.* [Sp., 'cat's-claws.'] Same as ★*bayag-kambing*.

unassoiled (un-a-soild'), *a.* Not assoiled, in the sense either of *assoil*¹, *v.*, or of *assoil*², *v.*

unattenuated (un-a-ten'ū-ā-ted), *a.* Not attenuated; possessing toxicity not diminished from what may be considered the normal: said of a virus.

> Rabbits inoculated with *unattenuated* rabies virus.
> *Buck*, Med. Handbook, VI. 833.

unawful (un-â'ful), *a.* Not awful; not inspiring awe. [Rare.]

> I go . . . where wild men howl around
> Their blood-stain'd altars — to uplift th' unknown
> *Unawful* Crucifix.
> *Milman*, Anne Boleyn, iii.

unbalance¹, *v. t.*—**Unbalancing factor.** See ★*factor*.

unbehoving (un-bē-hö'ving), *n.* The state of being not proper, fitting, or incumbent. [Rare.]

> Unless you can dream that his faith is fast,
> Through behoving and *unbehoving*.
> *Mrs. Browning*, A Woman's Shortcomings, st. 5.

unc. An abbreviation of the Latin *uncia*, ounce.

unca (ung'kä), *n.*; pl. *uncæ* (un'sē). [NL., ‹ L. *unca*, fem. of *uncus*, adj., hooked.] In *musical notation*: (*a*) Same as *hook*, 4, or *pennant*, 3. (*b*) Same as *eighth-note*.

uncapping-knife (un-kap'ing-nīf), *n.* In *bee-keeping*, a knife with a broad, double-edged blade secured by an offset to a wooden handle: used to slice off the covers or caps of the honeycomb preparatory to extracting the honey. In using the knife, the honeycomb, in its frame, is held over an enameled vessel called an *uncapping-can*, the wax or cappings falling on a wire screen, and the honey passing through the screen into a second vessel below.

unchristly (un-krist'li), *a.* Not Christly or Christ-like.

> Ages have wrangled and fought over this subject until history points with scarlet finger to *unchristly* deeds and impotent creeds, all in His name.
> *Pop. Sci. Mo.*, Feb., 1901, p. 435.

unciliated (un-sil'i-ā-ted), *a.* In *bot.*, without ciliation; eciliolate.

uncin (un'sin), *n.* [L. *uncin*(*us*), a hook.] In the sponge-spicules, a long spindle-shaped diactine covered with barbs throughout its length and derived from the hexactine.

Uncinaria (un-si-nā'ri-ä), *n.* [NL., LL. *uncin*(*us*), a hook, + *-aria*.] Same as *Dochmius* and *Ancylostomum*; the hookworm. See ★*uncinariasis*.

uncinariasis (un″si-nä-rī'a-sis), *n.* [NL., ‹ *Uncinaria* + *-iasis*.] The aggregate of symptoms, the most marked of which is anemia, due to the presence in the intestine of the uncinaria or hookworm. Also called ★*ancylostomiasis* (which see), *dochmiasis*, *hookworm disease*, *miners' anemia*, *St. Gotthard disease*, *tunnel anemia*, etc.

> Prevalence of Ankylostoma in the United States.—At the meeting of the American Medical Association, May 5th, 1903, Dr. A. J. Smith described the distribution of *uncinariasis* in the United States. He found eight persons suffering from the disease out of eighty-eight supposed healthy persons examined in Texas. He also compared the Uncinarius duodenalis (man) and the U. stenocephala (dog), and drew attention to the distribution of the two worms in the same localities.
> *Jour. Trop. Med.*, June 15, 1903, p. 200.

uncinariatic (un″si-nā-ri-at'ik), *a.* Pertaining to or affected with uncinariasis.

uncinate, *n.* **2.** An uncinate process (processus uncinatus), such as is found on the ribs of birds and crocodiles. *Proc. Zool. Soc. London*, 1903, p. 274. [Rare.]

Uncites (un-sī'tēz), *n.* [NL., ‹ L. *uncus*, a hook.] A genus of spire-bearing brachiopods, belonging to the order *Telotremata*, which have an extended and rostrate ventral valve with concave and coalesced deltidial plates, and a pair of pouch-like plates just within the margin of the dorsal valve, which are the extension of the dental sockets. *Uncites gryphus* is a highly characteristic fossil of the Middle Devonian in Germany.

uncollapsed (un-ko-lapst'), *a.* Not collapsed.

> The portion of the ventricle which leads up to the aortic orifice is so strengthened by fibrous or fibro-cartilaginous tissue as to remain *uncollapsed* during diastole.
> *Buck*, Med. Handbook, IV. 571.

Unconditional convergence. (*a*) Convergence unaffected by any change in the order of the terms. (*b*) The convergence of a series the absolute values of whose terms make a convergent series.

Unconditionally convergent. (*a*) Convergent and having the same value, whatever the order of the terms. (*b*) Absolutely convergent.

unconformity, *n.* **2.** In *geol.*, same as *unconformability*.

> Again, the simple geological interpretation of a well-known *unconformity* between Archæan and Triassic rocks has made it extremely probable that many of the present landscapes, not only in the Midlands but elsewhere, may be really fossil landscapes, of great antiquity and due to causes quite different from those in operation there at the present day. *Science*, Oct. 9, 1903, p. 458.

unconvincing (un-kon-vin'sing), *a.* Not convincing; not such as to convince or to impress seriously.

> He [Watteau] is not conventional or *unconvincing* in his picturesqueness as Philip Wouverman and his fellows too often were. *C. Phillips*, in Portfolio, N. S., XVII. 28.

uncoössified (un-kō-os'i-fīd), *a.* Not united into one bone. See *coössify*.

> Mandibular symphysis *uncoössified*.
> *H. F. Osborn*, in Bulletin Amer. Mus. Nat. Hist., June [28, 1902, p. 191.

uncornified (un-kôr'ni-fīd), *a.* Not converted into horny tissue. *Buck*, Med. Handbook, III. 238.

uncorrectable, uncorrectible (un-ko-rek'ta-bl, -ti-bl), *a.* Incapable of being corrected.

> Finally the deformity becomes permanent and *uncorrectible*. *Buck*, Med. Handbook, IV. 528.

uncostliness (un-kôst'li-ness), *n.* The state or character of being uncostly. [Rare.]

> Utilitarian writers in general have placed the superiority of mental over bodily pleasures chiefly in the greater permanency, safety, *uncostliness*, etc., of the former.
> *J. S. Mill*, Utilitarianism, ii.

uncouple, *v. t.* **2.** In *organ-playing*, to separate or disjoin by throwing off the coupler between two keyboards which have been mechanically joined in action. See *organ*¹, 6.

uncoupled, *a.* **4.** In *organ-playing*, separated or disjoined; not united by means of a coupler: said of keyboards. See *organ*¹, 6.

unctorium (ungk-tō'ri-um), *n.*; pl. *unctoria* (-ä). [L.] An anointing-room in a Roman bath.

unda maris (un'dä mā'ris). [L., 'wave of the sea.'] See *vox angelica*.

undazzle (un-daz'l), *v. i.* To cease to be dazzled; become calm and clear. [Rare.]

> Slowly my sense *undazzled*. Then I heard
> A noise of some one coming thro' the lawn.
> *Tennyson*, A Dream of Fair Women, st. 45.

undecagon (un-dek'a-gon), *n.* [Irreg. ‹ L. *undec*(*im*), eleven, + Gr. γωνία, angle.] A polygon of eleven sides.

undecalcified (un-dē-kal'si-fīd), *a.* Not decalcified: said, in histology, of sections of bone in the natural state.

> Sections of *undecalcified* bone, teeth, etc.
> *Buck*, Med. Handbook, IV. 712.

undecane (un'dē-kān), *n.* [L. *undec*(*im*), eleven, + *-ane*.] A colorless hydrocarbon, $CH_3(CH_2)_9CH_3$, of the methane series, prepared by the action of hydriodic acid and phosphorus on undecylic acid. It melts at −26.5° C. and boils at 194.5° C. Also called *hendecane* and *normal undecane*.

undecoic (un-dē-kō'ik), *a.* Same as ★*undecylic*.

undecollic (un-dē-kol'ik), *a.* Pertaining to an acetylene derivative with eleven carbon atoms. Also called *hendecinoic*.—**Undecollic acid,** a colorless compound, $C_{10}H_{17}COOH$, prepared by the action of alcoholic potassium hydroxid on dibromundecylenic acid. It crystallizes in thin plates, melts at 59.5° C., and may be distilled under reduced pressure. Also called *hendecinoic acid*.

undecylenic (un″dē-si-len'ik), *a.* Pertaining to undecylene, or, in general, to an ethylene derivative containing eleven atoms of carbon.—**Undecylenic acid,** a colorless compound, $C_{10}H_{20}O_2$, probably $CH_2{:}CH(CH_2)_8COOH$, prepared by the distillation of castor-oil under reduced pressure. It crystallizes in large plates, melts at 24.5° C., and boils at 275° C. Also called *hendecenoic acid*.

undecylic (un-dē-sil'ik), *a.* [L. *undec*(*im*), eleven, + *-yl* + *-ic*.] Pertaining to a compound of the methane series which contains eleven atoms of carbon. Also called *hendecoic*, *hendecatoic*, or *undecoic*.—**Undecylic acid,** a colorless crystalline compound, $C_{11}H_{22}O_2$, of the acetic-acid series, prepared by the action of hydriodic acid and red phosphorus on undecylenic acid. It has a faint odor of caproic acid, melts at 28.5° C., and boils at 228° C. under 160 millimeters pressure. Also called *hendecoic*, *hendecatoic*, and *undecoic acid*.

underarm (un-dėr-ärm'), *a.* In *cricket*, delivered with the hand below the shoulder: said of bowling.

underbasal (un'dėr-bā″sal), *n.* In Carpenter's nomenclature of the calyx-plates in the crinoids, a plate of the lowest series in dicyclic forms. Also *infrabasal*.

underbody (un'dėr-bod″i), *n.* In *naval arch.*, that part of a vessel which is below the load water-line. Also called *under-water body*.

> The entire *underbody* and top sides of the cup defender Columbia, which successfully defended America's cup against the challenger yacht Shamrock, are constructed of Tobin bronze plates, approximately ½-inch thick, and weighing between 500 and 600 pounds each.
> *Army and Navy Jour.*, Oct. 28, 1898.

underbreeding (un-dėr-brē'ding), *n.* The condition of being underbred; underbred conduct or utterances.

underbright (un'dėr-brīt), *n.* A clear bright line of light on the horizon beneath a layer or bank of clouds.

undercasing (un'dėr-kā″sing), *n.* A circular grid, placed under the main cylinder of a cotton-carding machine, to render possible the emission of extraneous matter. *Nasmith*, Cotton Spinning, p. 112.

undercellar (un-dėr-sel'är), *v. t.* To provide with a cellar beneath, or with an open space in the form of a cellar beneath.

> The building is very solidly built, but *undercellared* only, and to the smallest extent on the eastern side.
> *Buck*, Med. Handbook, VIII. 142.

under-clearer (un'dėr-klēr″ėr), *n.* A small roller, covered with some suitable material, placed underneath the bottom front drafting-roller of a ring-spinning machine, to remove the short fibers, or fly, from the latter roller. *Nasmith*, Cotton Spinning, p. 329.

underclub (un'dėr-klub), *v. i.*; pret. and pp. *underclubbed*, ppr. *underclubbing*. In *golf*, to use a club of insufficient power to gain the desired distance. *W. J. Travis*, Practical Golf, p. 102.

under-compounded (un'dėr-kom-poun″ded), *p. a.* In *elect.*, said of a generator or motor in which the relation of the shunt and series field-coils is such that, with increasing load, the voltage diminishes.

under-consumption (un′dėr-ko̤n-sump″sho̤n), *n.* In *polit. econ.*, an abnormal condition of the market in which the general demand for commodities is inadequate to absorb the normal supply.

The root-evil of depressed trade is *under-consumption*.
Hobson, Evol. of Modern Capitalism, p. 182.

undercool (un-dėr-köl′), *v. t.* Same as ★*supercool*.

undercorrect (un′dėr-ko̤-rekt″), *v. t.* In *optics*, to apply a correction for the chromatic aberration of a lens such that the focal length for violet rays remains less than that for the longer waves of the spectrum. *C. S. Hastings*, Light, p. 105.

undercovering (un′dėr-kuv″ėr-ing), *n.* An underlying covering; specifically, the coat of soft hair, fur, or wool which forms the chief covering of many mammals, overlaid and hidden by long, coarse hairs. The fur of the beaver and otter, the woolly coat of the musk ox, and the fleece of the Cashmere goat are familiar examples.

The downy *undercovering* of the Cashmere goat furnishes the hairs or fibres that are used for the spinning of the yarn that is woven into alpaca cloth.
Hannan, Textile Fibres of Commerce, p. 213.

undercut, *v. t.* **2.** In *golf*, to hit (the ball), by baffing or otherwise, so that it rises high in the air, and will not, owing to its spin, roll far after alighting.—**3.** In *pugilism*, to hit with an upward blow.

undercut, *n.* **2.** In *lumbering*, the notch cut in a tree to determine the direction in which the tree is to fall and to prevent splitting. Also called *notch* and *nick*.—**3.** In *mining*, the opening along the vein which is made at the bottom of the seam or below the ore-body, so that the shot or blast, or any subsequent cutting, shall cause the ore to fall downward when loosened.—**4.** Any part of the pattern used in foundry-molding which is outside of perpendiculars or normals to the face of the parting plane of the flask, so that in drawing the pattern the sand would be unavoidably torn away by it, or which prevents the drawing of the pattern altogether. It is the reverse of *taper*.

II. *a.* **1.** Descriptive of a bookbinders' machine that cuts paper from the under side.—**2.** Noting a photo-engraved plate in which the acid has bitten too much under the lines.

undercutter, *n.* **2.** Specifically, a machine driven by power, either electrically or by compressed air, for mining or quarrying, by which an undercut or channel below the ore-body can be made. *Trans. Amer. Inst. Elect. Engin.*, 1899, p. 454.—**3.** A skilled woodsman who chops the undercut in trees so that they shall fall in the proper direction.

underdeterminant (un′dėr-dē-tėr″mi-na̤nt), *n.* In *math.*, the first minor of a symmetrical determinant.

underdevelopment (un′dėr-dē-vel″up-ment), *n.* A condition of incomplete or arrested development.

underdrainage (un″dėr-drā′nā̤j), *n.* Drainage of agricultural lands and removal of excess of water and of alkali by drains buried beneath the surface. See *underground* ★*drainage*.

The early Romans used to plant their crops in wet soils on high ridges in order to secure sufficient drainage and early maturity. The sea island cotton planters, in the early part of the century, used the same method in a modified form to insure the maturity of the long staple crop within the limits of the growing season. More recently the practice of *underdrainage* with poles, stones, and tile-drains has supplanted this crude method and has given much more effective results.
Yearbook U. S. Dept. Agr., 1899, p. 342.

underdry (un′dėr-drī), *v. t.*; pret. and pp. *underdried*, ppr. *underdrying*. To dry imperfectly or inadequately.

Because of the loss in weight from over-drying, there is a temptation to *underdry* them [vanilla beans], and many bundles, owing to this mistake, are found mouldy within, on being opened.
Buck, Med. Handbook, article 'Vanilla.'

underfeed (un′dėr-fēd), *a.* Noting apparatus which feeds or supplies fresh material from below; specifically, noting a form of mechanical feeder for fuel of boiler-furnaces, designed for bituminous coal rich in volatile components. The coal is fed through a tubular channel and enters the burning area from under the bed of ignited fuel. The gases first distilled off must pass up through the glowing bed above them and become heated enough to unite with oxygen and burn with little smoke. After the coking is completed the solid carbon begins to glow and burn, and its combustion is completed as it reaches the top of the fuel-bed and rolls outward toward the sides of the grate area proper. This feeder is particularly well adapted for pitchy or fat coals. *Jour. Franklin Inst.*, Dec., 1904, p. 439.

under-fired (un′dėr-fīrd), *a.* **2.** Noting a fire or furnace which is supplied with fuel by the underfeed system. See ★*underfeed*. *D. K. Clark*, Steam Engine, I. 74.

under-fleece (un′dėr-flēs), *n.* The downy growth of hair or wool next to the skin, and underneath a thick growth of coarser hair, in the camel, Tibetan goat, and similar animals.

underflow, *n.* **2.** The water which is now known to be often in transit beneath the apparently dry gravels of rivers in arid districts, such as the southwestern United States.

underframe (un′dėr-frām), *n.* **1.** A principal frame which supports a secondary one for a detachable unit. Thus, in a motor-vehicle the engine has its own frame and is self-contained, the latter being attached to the frame of the vehicle proper, which last is then the underframe.—**2.** Specifically, in *car-building*, the massive pressed steel or wooden framework which forms the base of a car and is designed to resist the strains to which the car is subjected in starting and stopping, and to support the car-body, which is rigidly attached to it and adds to its strength.

The locomotive's *underframe* has four axles, similar to those of the old experimental car. The gage is the standard German; the wheels have a diameter of 49 inches and meet with the requirements of the Prussian State Railways. *Sci. Amer.*, Dec. 13, 1902, p. 410.

underfur (un′dėr-fėr), *n.* The coat of soft, fine hair, or fur, found in many mammals, overlain by longer, coarser hairs. The underfur forms the principal furs of commerce, such as the beaver, otter, fur-seal, etc.

Underfur of back about 15 mm. in length, proximal half smoke-grey, light buffy yellow distally; long hairs about 25 mm. in length, black, with white subterminal ring and black tip.
Annals and Mag. Nat. Hist., June, 1904, p. 424.

underground, *a.*—**Underground water**, water lying below the earth's surface and stored in cavities in the rocks.

Accounts of floods, forest fires, and *underground waters*, and reports on iron, zinc and copper mining, and on the Portland cement industry.
Nature, May 26, 1904, p.86.

II. *n.* **2**†. An underground passage.

And yet those seas (as heavens please)
Return to Springs by *undergrounds*.
Kyd (tr. of Garnier's Cornelie), Cornelia, [ii. 377.

3. A contraction of *underground railway*. [Colloq.]

undergrowth, *n.* **3.** Short, fine under-hair on a skin. *Flemming*, Practical Tanning, p. 92.—**4.** Specifically, in *forestry*, the ground-cover, underbrush, and young trees below the large sapling stage.

underhammer (un′dėr-ham″ėr), *n.* In *pianoforte-making*, a lever mechanism intermediate between the jack and the hammer proper.

underhung, *a.* **3.** Suspended or hung in such a manner that the elements which carry the weight or load are below the load they carry, but the links connecting the two are in tension. Said of locomotives or motor vehicles in which the springs are below the frame and are hung from the axles, the spring-ends being connected to the frame by compression elements, instead of the reverse of this system, which exists in over-hung constructions. *D. K. Clark*, Railroad Mach., p. 207.

underlap (un′dėr-lap), *v. i.* To lap under or beneath; have the edge or border lying beneath the edge of some other object, as the clapboards of a house or the feathers of a bird.

The margin of the *underlapping* side is sutured to the deep surface of the overlapping side.
Buck, Med. Handbook, IV. 680.

underleaf, *n.* **2.** One of the amphigastria of some *Hepaticæ*.

The *underleaves* of Odontoschisma present peculiarities which have been strangely overlooked by writers on the genus. *Bot. Gazette*, Nov., 1903, p. 330.

underlearn (un-dėr-lėrn′), *v. t.* To learn incompletely. [Rare.]

If only 8 repetitions were taken at first, the line being "*underlearnt*," it probably appeared quite strange the next day. *Encyc. Brit.*, XXXII. 61.

underlet (un′dėr-let), *n.* In *brewing*, a pipe which serves to admit water below the false bottom of the mash-tun or mashing-vat, replacing with fresh water the wort when drawn off.

underley, *n.* See ★*underlye*.

underlie, *n.* **2.** See ★*underlye*.

underline, *n.* **2.** The lower line of the body: used in describing the "points" of a horse.

underload (un-dėr-lōd′), *v. t.* To place upon or in (something) a load less than the maximum load that it can carry.

But if the bottom current is *underloaded*, the material is carried slowly forward.
I. C. Russell, Rivers of North America, p. 68.

underlye (un′dėr-lī), *n.* In *soap-making*, the lower, watery layer which separates out from beneath the curd soap in the 'salting-out' process. It consists essentially of a strong brine, holding in solution the glycerin of the original fat unless a free fatty acid has been used. Also written *underlie* and *underley*.

under-mediant (un′dėr-mē″di-a̤nt), *n.* In *music*, same as *submediant*. See ★*undertone*, 4, and ★*under-scale*.

undernutrition (un″dėr-nṳ̄-trish′o̤n), *n.* **1.** Incomplete or imperfect nutrition.

Long-continued *undernutrition* of the body.
Buck, Med. Handbook, II. 225.

2. An economic condition in society in which large numbers of individuals are insufficiently fed. It is estimated that in the United States as many as 10,000,000 persons, though not technically paupers, are inadequately nourished. *Patten*, Development Eng. Thought, p. 382.

underofficer (un-dėr-of′i-sėr), *v. t.* To provide with an inadequate number of officers, as a regiment or a ship.

under-painting (un′dėr-pān-ting), *n.* Preparatory painting over which the finished work is done. In the early Italian schools, the under-painting was done probably for a long time in tempera, the dry quality of which was valuable under oil glazes.

underplant (un′dėr-plant), *v. t.* In *forestry*, to plant (young trees) under an existing stand.

underplate (un′dėr-plăt), *n.* A flat, round plate of glazed porcelain, used in chemical laboratories to place under acid bottles or other vessels from which corrosive liquids might drip upon a table.

underplight (un′dėr-plīt), *n.* [*under* + *plight*^{3}, *n.*] In *geol.*, a name given by F. C. J. Spurrell to contorted and folded clays, sands, and gravels upon which rest unsorted glacial materials called 'trail' (see ★*trail*^{1}, 6). The term is local in southern England. *J. Geikie*, The Great Ice Age, p. 393.

underpoled (un′dėr-pōld), *a.* In *metal.*, insufficiently treated with the pole; said of copper which is reduced from a condition of some oxidation in the melted state by being stirred by a pole of wood which furnishes carbon with a ready affinity for the oxygen present, and acts to reduce the oxids to the metallic state. Underpoled copper is brittle and unreliable.

underpressure (un′dėr-presh-ṳ̄r), *n.* Deficiency of pressure in any portion of a fluid, as compared with the pressure which exists in surrounding regions.

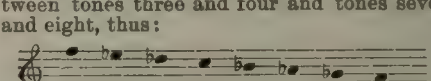
The foul air . . . makes a direct escape into the open and does not return to mix with the incoming fresh air, providing, of course, the proper outlets are free and unobstructed and it meets or passes no compartment on its way in which *underpressure* exists.
Buck, Med. Handbook, VI. 158.

underrun (un′dėr-run), *n.* An undercurrent.

The discovery of the *underrun* of the Hudson and its bearing on the feasibility of obtaining a water-supply for the towns along that river, may be mentioned as contributions in a special field of geography.
Geog. Jour. (R. G. S.), XI. 291.

The tide enters the (Long Island) Sound along its bottom, as an "*underrun*," one and a half hours before the ebb of the surface waters has ceased.
J. D. Dana, Manual of Geol. (4th ed.), p. 214.

under-scale (un′dėr-skāl), *n.* In *music*, a scale reckoned downward from a given tone by the same intervals as those of the ordinary upward major scale, the half-steps occurring between tones three and four and tones seven and eight, thus:



Such a scale is strongly minor, being practically the same as the Dorian mode of ancient Greek music. See ★*undertone*, 4.

underscore (un'dėr-skōr), *n.* [*underscore, v.*] A line drawn beneath a written or printed word or passage, as for emphasis.

In reply to F. W. M., the correct way of representing italicized words, when copying printed matter in typewriting, is to use the *underscore*.
Phonetic Jour., May 4, 1901, p. 288.

underscrub (un'dėr-skrub), *n.* Underwood; underbrush; scrub growing beneath taller trees.

At first the wood consisted principally of oaks, commingled with which were a few firs and still fewer pines —the *underscrub* being composed chiefly of hazels and occasional birches. *J. Geikie*, The Great Ice Age, p. 455.

undershut (un'dėr-shut), *a.* Shut by pressure or a force acting against gravity or from below, by an upward motion, as a valve.

undersighted (un'dėr-sī-ted), *a.* Myopic.

undersitter† (un'dėr-sit-ėr), *n.* In *old English law*, a kind of subtenant. Also *undersettle*.

[The jurors present] that strangers coming from without, who hire houses from divers persons and hold nothing of the lord, common in the few with their beasts and take other profits in the common, and such folk are called *undersettles*.
Publications of the Selden Society: The Court Baron, [p. 146.

It [Small Holdings Act, 1597] also provided against any inmate or *undersitter* being admitted to what was sacred to one family. *Encyc. Brit.*, XXV. 322.

undersluice (un'dėr-slös), *n.* A sluice or wasteway of an irrigating canal or similar work, so arranged that the water escapes beneath some other structure. *H. M. Wilson*, Irrigation Engineering, p. 471.

understain (un-dėr-stān'), *v. t.* To color less deeply than usual. *Jour. Exper. Med.*, Oct. 1, 1901, p. 560.

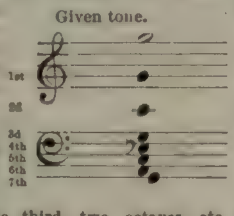
understanded† (un-dėr-stan'ded), *pp.* An obsolete, weak form of *understood*, past participle of *understand*.

underthrust (un'dėr-thrust), *a.* and *n.* **I.** *a.* In *geol.*, noting those strata which during compression are thrust under others, as in a reversed fault or in an overturned fold.

It seems possible, as the author [Dr. O. Ampferer] points out, that the whole highland of Triassic rocks rests upon an underfolded and *underthrust* knot of younger strata. *Nature*, Oct. 13, 1904, p. 593.

II. *n.* In *geol.*, the transmission of a compressive strain in the depths of the earth which may produce folds upon the surface.

undertone, *n.* 4. In *musical acoustics:* (*a*) Same as *combinational tone* (which see, under *tone*¹). (*b*) One of a series of tones reckoned downward from a given tone in exactly the same way that the series of overtones or harmonics is reckoned upward. The interval from the given tone to the first undertone is an octave; to the second, an octave and a fifth; to the third, two octaves, etc. (See cut.) While this series is not actually heard in any case, yet it is claimed by many theorists recently that the relations involved are sufficiently felt to explain the minor mode as in a true sense an inversion or polar opposite of the major. Hence has arisen a large number of terms beginning with *under-*, denoting intervals and chords regarded downward corresponding with the usual names of intervals and chords regarded upward. See cut under *harmonic*, *n.*, 1.



undertype (un'dėr-tīp), *a.* Having the armature below the field-coils.— **Undertype dynamo** or **motor,** a bipolar machine, with a field of the horseshoe form, in which the pole-pieces are bolted to the base so as to lower the armature as far as possible: opposed to ★*overtype* machines in which the armature is above the field-coils.

undervegetation (un'dėr-vej-ẹ-tā″shọn), *n.* The low growth in a forest; undergrowth, but including the herbaceous as well as the woody plants.

It often happens that this *undervegetation* is swept away by fire or devoured and trampled by sheep without immediate serious injury to the trees.
C. Hart Merriam, in Smithsonian Rep., 1901, p. 405.

underwing, *n.*—**Plum underwing,** an American noctuid moth, *Catocala ultronia*, whose leech-like grayish-brown larva feeds on plum foliage.

Underwriters' door. See ★*door*.

undeviated (un-dē'vi-ā-ted), *a.* Not deflected from its path: said of a beam of light.

We shall have a brilliantly colored strip, the end nearest the place where the *undeviated* light would fall being red. *C. S. Hastings*, Light, p. 41.

undine, *n.* 2. An apparatus for irrigating the eye in the operation of extracting cataract. *Buck*, Med. Handbook, II. 735.

undissociated (un-di-sō'shi-ạ-ted), *a.* In *phys. chem.*, not dissociated: said of that part of a dissolved electrolyte which is not electrolytically dissociated into its ions. See *Arrhenius's theory of electrolytic or ionic* ★*dissociation*.

The colour of any *undissociated* salt that may be present. *Encyc. Brit.*, XXVIII. 12.

Undulate cirrus. See ★*cirrus*.

undulater (un'dụ-lā-tėr), *n.* A receiving apparatus used as a substitute for the siphon recorder in submarine telegraphy. Also *undulator*.

undulation, *n.* 7. In playing musical instruments of the viol class, the wavy tone produced by oscillating or balancing the finger on a string that is being stopped.—**Point of undulation.** See ★*point*¹.

undulationism (un-dụ-lā'shọn-izm), *n.* [*undulation* + *-ism*.] The hypothesis of brain-waves; the theory that a person may be telepathically affected by a wave-emanation which expresses the will-power of another.

unduloid (un'dụ-loid), *n.* [*undul*(*ate*) + *-oid*.] In *geom.*, the surface of revolution of the elliptic catenary.

unearth, *v. t.* 4. In *elect.*, to break the ground connection of a circuit; to insulate from electrical contact with the earth.

unearthed (un-ėrtht'), *p. a.* In *elect.*, not earthed.

The high-tension voltage used by this company is, in a sense, the highest to be found in the United Kingdom— 10,000 volts on each of the two phases, with one end of each phase earthed—giving over 14,000 volts between the *unearthed* conductors.
Elect. World and Engin., Feb. 18, 1905, p. 339.

unegoist (un-ē'gō-ist), *a.* Not egoistical. [Rare.]

The youngest of the horrible family proposed to him . . . that they two should drink "a goblet of wine" together, each to the person that each loved most in the world. "I find your toast *unegoist*," said he [Mazzini] . . . , "and I accept it with pleasure."
Froude, Letters and Mem. of Jane Welsh Carlyle, p. 250.

unenumerable (un-ẹ-nū'mėr-a̤-bl), *a.* Not denumerable.

There is, as we have seen, no convincing reason for thinking that any *unenumerable* aggregate is capable of being normally ordered.
E. W. Hobson, Proc. Lond. Math. Soc., ser. 2, III. 182.

unerrancy, *n.* Same as *inerrancy*. [Rare.]

unessential, *n.* 2. Same as *unessential* ★*note*.

unexcitable (un-ek-sī'ta̤-bl), *a.* Not excitable; not responsive to a stimulus.

Regions in front of the motor area of head, neck, and eyes were found to be *unexcitable* with a current of equal strength. *Buck*, Med. Handbook, II. 311.

unexploited (un-eks-ploi'ted), *a.* Not exploited; not utilized; not developed.

There appears to be an *unexploited* field in the case of deposits of the so-called rare metals.
Athenæum, March 18, 1905, p. 439.

unfair, *a.* 1. (*f*) In recent trade-union literature, a term applied to employers or shops that do not submit to the trade-union regulations respecting hours, wages, and other conditions of employment: as, an *unfair* shop.

2. Not smooth, flowing, or regular in outline, or not properly regulated in place, specifically applied to two openings or holes which are intended to match in line when superposed, but by reason of error in adjusting are forced to overlap on the edges. *Thurston*, Manual of Steam-Boiler, p. 422.—**Unfair list,** in recent trade-union literature, a term applied to a list of employers who do not observe trade-union regulations: published in union journals with the purpose of depriving such employers of the patronage of trades-unionists.

The favorite method at present is to place the recalcitrant employer on an *unfair list* and spread the ban through the medium of the labor press.
New Int. Encyc., XVI. 859.

unfissured (un-fish'ụrd), *a.* Not marked by fissures. *Buck*, Med. Handbook, II. 187.

unfoveated (un-fō'vẹ-ạ-ted), *a.* Not marked by pits: said of the smooth scar following an unsuccessful vaccination. *Biometrika*, Feb., 1903, p. 136.

unfurnitured (un-fėr'ni-ṭụrd), *a.* Unprovided with furniture; unfurnished. [Rare.]

The place was dark, *unfurnitured*, and mean;
Yet there the freedom of a race began.
Lowell, To W. L. Garrison, st. 2.

ung. An abbreviation of the Latin *unguentum*, ointment.

ungeld† (un'geld), *n.* [*un-*² + *geld*², which see.] An outlaw; a person so far out of the protection of the law that if he were murdered no geld or fine should be paid by him that killed him. *Cowel.*

ungetatable (un-get-at'a̤-bl), *a.* Not accessible; not to be reached or got at. [Colloq.]

Where the leak was they had not a notion. Probably it was deep down under the cargo of grain, and quite *un-get-at-able.* *Cutcliffe Hyne*, A Master of Fortune, vii.

unglaciated (un-glā'ṣi-ā-ted), *a.* In *geol.*, not exhibiting the effects of glaciation: specially applied to boulders or rock-ledges, or even areas of land, which lie north of the limits of ice action in the Glacial Epoch.

Mention was made by others of the benches of boulders which lie on the side of Rigaud. It was brought out that they are coarse cobbles, entirely *unglaciated* and all of local origin. *Science*, Jan. 25, 1901, p. 137.

ungrammared (un-gram'a̤rd), *a.* Ignorant of the grammar of one's own language; illiterate. [Rare.]

ungual. I. *a.*—**Ungual bone,** the terminal or ungual phalanx of a digit.—**Ungual furrows.** See ★*furrow*.

II. *n.* An ungual phalanx or claw.

The *unguals*, which in the ground-sloths are large claws, in the other two orders are more or less hoof-like, completely so in the glyptodonts.
Science, June, 1903, p. 902.

unguentarium (ung-gwẹn-tā'ri-um), *n.*; *pl.* *unguentaria* (-a̤). [L.] In *class. antiq.*, a small club-shaped bottle made of alabaster, glass, or terra-cotta, used for holding unguents.

unguentum (ung-gwen'tum), *n.* [L.] An ointment; an unguent.

unguis, *n.* 6. The horny, nail-like covering of the tip of the bill found in ducks and geese.

In all the duck order the bill is likewise soft; but there it is always terminated by a hard, horny, *unguis*, or "nail," more or less distinct.
Coues, Key to North Amer. Birds, p. 102.

ungula, *n.*—**Spherical ungula,** the portion of a globe cut out by two planes through the center.

ungulated (ung'gụ-lā-ted), *a.* [See *ungulate*.] Having hoofs; ungulate.

ungumming (un-gum'ing), *n.* In the preparation of raw silk for use, same as ★*stripping*, 7.

unhandseled (un-hand'sẹld), *a.* Not handseled; not used; virgin. See *handsel*, *n.* [Rare.]

This was that earth of which we have heard, made out of Chaos and Old Night. Here was no man's garden, but the *unhandselled* globe. It was not lawn, nor pasture, nor mead, nor woodland, nor lea, nor arable, nor waste land. *Thoreau*, Maine Woods, p. 70.

unhaste (un-hāst'), *n.* Absence of haste; deliberation. *Encyc. Dict.* [Rare.]

unicalcarate (ū-ni-kal'ka̤-rāt), *a.* Having but one spur: said of the legs of certain arthropods.

Legs short, subequal, first tarsi "*unicalcarate*," the others bicalcarate.
U. S. Dept. Agr., Bur. Animal Industry, Rep., p. 442.

unicell (ū'ni-sel), *n.* An alga, or other plant, consisting of but a single cell; a unicellular plant.

unicellularity (ū-ni-sel-ụ-lar'ị-ti), *n.* [*unicellular* + *-ity*.] The condition or state of being unicellular or consisting of a single cell, like the *Protozoa* and *Protophyta*.

uniceps (ū'ni-seps), *a.* [LL. *uniceps*, one-headed, < L. *unus*, one, + *caput* (*capit-*), head.] Having one head or origin: noting a muscle. See *biceps*.

The biceps has been seen with as many as four and even five heads. The supernumerary heads, as a rule, have their origin from the bicipital groove, body of humerus, coracoid process, capsule of shoulder-joint, or tendon of the pectoralis major. . . . The long head is occasionally absent, the muscle being *uniceps* instead of biceps, as in some animals.
Buck, Med. Handbook, vi. 52.

uniceptor (ū-ni-sep'tọ̈r), *n.* [L. *unus*, one, + *-ceptor:* see ★*ceptor*.] A receptor which has a single combining group. See ★*immunity*, 5.

Ehrlich has recently suggested the name 'ceptor,' in place of 'intermediary body.' According to the manner of action he distinguishes '*uniceptors*' and 'amboceptors.' Bordet calls this body 'substance sensibilisatrice'; Metchnikoff 'fixator'; P. Mueller, 'copula.'
Jour. Exper. Med., March 17, 1902, p. 281, note.

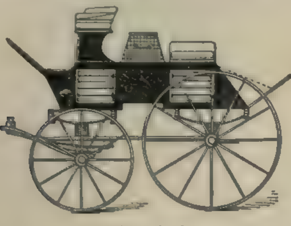
unicispinate (ū″ni-si-spī'nāt), *a.* [L. *unicus*, single, + *spina*, spine, + *-ate*¹.] Bearing undivided or simple spines, as the surface of certain brachiopod shells: contrasted with ★*duplicispinate*.

unicispinous (ū″ni-si-spī'nus), *a.* [L. *unicus*, single, + *spina*, spine, + *-ous*.] Same as ★*unicispinate*.

unicist, *n.* 2. One who believes in the unitary character or origin of something, as that a given group of animals or plants constitutes a single species.

Inclined to accept the *unicist* theory, or claim at least that the facts do not warrant the belief in the existence of distinct species; while . . . others actively uphold the existence of a single polymorphous species.
J. Ewing, in Jour. Exper. Med., March 25, 1901, p. 483.

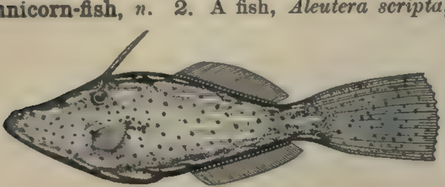
unicorn, *n.*—**Unicorn brake,** a brake designed for three horses driven 'unicorn fashion,' that is, one horse before the other two.—**Unicorn uterus.** See *uterus unicornis*, under *uterus*.



Unicorn brake.

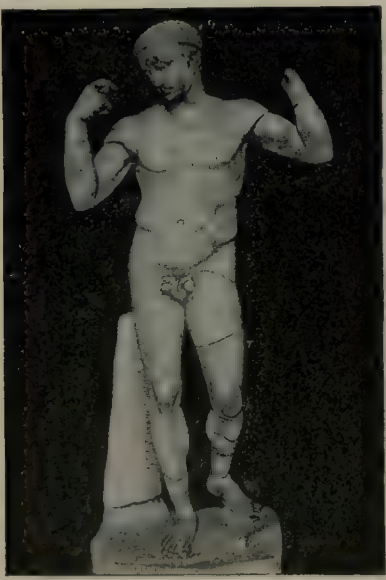
unicornate (ū-ni-kôr′nāt), *a.* [L. *unus*, one, + *cornu*, horn, + *-ate*.] Same as *unicornous*. *Buck*, Med. Handbook, II. 714.

unicorn-fish, *n.* 2. A fish, *Aleutera scripta*, belonging to the family *Monacanthidæ*, found in the West Indies and off the west coast of Mexico.



Unicorn-fish (*Aleutera scripta*).

unicrurine (ū-ni-krö′rin), *a.* [L. *unus*, one, + *crus* (*crur-*), leg, + *-ine*.] Noting the common position assumed in walking, when one foot stands firmly upon the ground and the other touches it lightly. [Rare.]



Unicrurine: the Vaison Diadumenos after Polycletus.
(In the British Museum, London.)

If the pace were slackened we should just have the so-called *unicrurine* attitude of the Polykleitan statues.
E. Sellers, in Jour. Hellenic Studies, XIII. 12.

Unicursal surface. See ★*surface*.

unidirectional (ū″ni-di-rek′shọn-ạl), *a.* [L. *unus*, one, + E. *direction* + *-al*¹.] Having, or moving in, only one direction; not subject to reversals or changes of direction: said of a direct electric current, or sometimes of a magnetic field of which the lines of force are fixed as to direction.

uniface (ū′ni-fās), *n.* [L. *unus*, one, + *facies*, face.] A coin struck on one side only. *W. C. Hazlitt*.

Unifacial surface. See ★*surface*.

uniform. I. *a.*—**Uniform convergence.** A series whose terms are functions of a variable x is said to converge uniformly within an interval if it is possible to choose n (say $n = m$) so that for every value of n equal to or greater than m and for every value of x within the interval the remainder r_n shall be less than any given positive quantity ϵ.—**Uniform manifold.** See ★*manifold*.—**Uniform motion.** See ★*motion*.

II. *n.*—**Full uniform,** a uniform prescribed to be worn on occasions of ceremony.

uniformation (ū″ni-fôr-mā′shọn), *n.* [*uniform* + *-ation*.] The act or process of making uniform.

uniformization (ū-ni-fôr-mi-zā′shọn), *n.* [*uniformiz(e)* + *-ation*.] The act of uniformizing or making uniform.

The *uniformisation* of real algebraic curves.
Nature, Nov. 21, 1907, p. 72.

uniformly, *adv.* 2. In *math.*, with uniform convergence.

unigenesis (ū-ni-jen′e-sis), *n.* [L. *unus*, one, + Gr. γένεσις, origin.] Same as *monogenesis*.

unigenist (ū-nij′e-nist), *n.* [L. *unus*, one, + Gr. -γενεια, < √ γεν, produce, + *-ist*.] Same as *monogenist*.

Prof. Kollmann draws another argument in support of the *unigenist* doctrine against polygenist views.
Keane, Ethnology, p. 156.

unigravida (ū-ni-grav′i-dạ̈), *n.* [L. *unus*, one, + *gravidus*, pregnant.] A woman who has been pregnant but once.

Unilateral surface. Same as *unifacial* ★*surface*.

unilobal (ū-ni-lō′bạl), *a.* [L. *unus*, one, + E. *lobal*.] Consisting of a single lobe.

unilobular (ū-ni-lob′ụ-lạ̈r), *a.* [L. *unus*, one, + NL. *lobulus*, lobule, + *-ar*³.] Possessing a single lobe or lobule.

The liver is much increased in size, the "*unilobular*" form, also of alcoholic origin. *Encyc. Brit.*, XXXI. 551.

unincised (un-in-sīzd′), *a.* Not incised or cut into.

Separating the *unincised* skin from larynx, hyoid bone, and muscles of the floor of mouth.
Buck, Med. Handbook, I. 659.

unincorporated (un-in-kôr′pọ-rā-ted), *a.* Not incorporated.—**Unincorporated association.** See *voluntary association*, under *association*.

unincubated (un-in′kụ-bā-ted), *a.* Not yet incubated: said of the freshly laid eggs of birds. *Buck*, Med. Handbook, I. 441.

uninfiltrated (un-in-fil′trạ-ted), *a.* Not infiltrated.

The whole process is superficial, the lesions springing from an *uninfiltrated* base.
Buck, Med. Handbook, III. 715.

uninhibited (un-in-hib′i-ted), *a.* Not inhibited, in any sense of that word. *Buck*, Med. Handbook, V. 44.

uninodal (ū-ni-nō′dạl), *a.* [L. *unus*, one, + *nodus*, node, + *-al*¹.] Having one node; having one point that remains at rest while adjacent points are vibrating.

This sort of seiche is therefore called a *uninodal* longitudinal seiche. *G. H. Darwin*, The Tides, p. 26.

Uninodal area, a region of the ocean where, according to R. A. Harris, it becomes possible for the water to oscillate as a mass about a single horizontal axis and give rise to uninodal tides. See the extract.

In brief, the tides are ascribed primarily to seiche-like oscillations sustained by the disturbing forces of the moon and sun, the free period of the body approximately agreeing with the period of the forces. A binodal area extends from northwestern Australia to Somali and Arabia, and a *uninodal area* from Mozambique Channel to Baluchistan and India; the tides in the latter area are, however, influenced by the tides south of the channel. The co-tidal lines are generally crowded together near the nodal lines, through straits, and in shallow arms of the sea, while they are generally spread apart at and near the loops of the oscillations. *Sci. Amer.*, May 9, 1903, p. 351.

uninominal, *a.* 2. Relating to one name only. See the extract.

An electoral bill for establishing *uninominal* voting—that is voting for single candidates in separate districts, instead of list voting. *Appleton's Ann. Cyc.*, 1899, p. 84.

uninucleated (ū-ni-nū′klẹ̄-ạ̄-ted), *a.* Same as *uninuclear*.

union. I. *n.* 9. In *mech.*: (*b*) A device for connecting the ends of two pipes in a line, without turning either. In the screwed union, a piece is screwed into the end of each of the pipes and these are then drawn together by a third piece which catches behind a collar on one of them and screws onto the other. A flange-union consists of two flanges which are screwed or otherwise fastened on the ends of the pipes and are then bolted together.—**Conjugated double unions,** two double unions in an organic compound separated by two atoms which are united singly, as $R_2C = CH–CH = CR_2$.—**Pan-American union,** the International Union of the American Republics. See the extract.

The International Union of the American Republics, popularly known as the *Pan-American Union*, has existed since 1890. It was established by the International Conference of 1889–90, with the Bureau of the American Republics as its organ. The reason for its creation was the fostering of the friendly relations between all the republics, the dissemination of more general knowledge of the social and economic conditions obtaining in the various portions of the Western Hemisphere and for improving business intercourse and trade relations. In 1893 the publication of a monthly bulletin was inaugurated.
Science, June 5, 1903, p. 892.

Primary union, in *surg.*, union of the edges of a wound directly, without granulation or suppuration. Also called *union by first intention*.—**Triple union,** in *chem.*, a union of two atoms, usually of carbon, in such a manner that two univalent atoms may be added to each. Thus acetylene, HC ⋮ CH, may give ethane, $CH_3.CH_3$. The term implies that three of the valences of each carbon atom are used to hold it to the other atom, but the actual nature of the union is uncertain.—**Vicious union.** See *vicious*.

II. *a.*—**Union black.** See ★*black*, *n.*—**Union goods,** a trade-name for textile fabrics made from two or more different fibrous materials, commonly cotton and wool. Care has to be taken in the selection of dyestuffs for use on such goods in view of the more or less different relations of the same dye to different fibers.—**Union label,** a label placed on goods or wares offered for sale, signifying that they have been made by members of a labor-union or in a union shop: used as a device for discriminating against workers who do not belong to the unions, or against independent shops.—**Union shop,** a shop in which only union workers are employed, or from which independent workers are excluded; a 'closed' shop.—**Union suit.** See ★*suit*.

union-coupling (ū′nyọn-kup″ling), *n.* A contrivance by which two sections of pipe may be joined so that connection and disconnection may be made without interfering with other joints; a union.

unionize (ū′nyọn-īz), *v. t.*; pret. and pp. *unionized*, ppr. *unionizing*. [*union* + *-ize*.] To give the character of a union, and specifically of a trade-union, to; transform into, organize as, or incorporate in a (trade-) union; cause to join a (trade-) union.

The rest of the world does n't care. So the shadow of the coal heap lies dark upon these "*unionized*" little ones as they grow up to be men and women. Within a few years the breaker boy will be a miner.
McClure's Mag., Feb., 1903, p. 444.

This year [1900] the strikes were notably successful—New England papers reporting that nearly every "*unionized*" town in that section has now the eight-hour workday for . . . building trades workmen.
Rev. of Revs., XXI. 651.

union-made (ū′nyọn-mād), *a.* Made by members of a labor-union.

union-nut (ū′nyọn-nut), *n.* An Australian tree of the rue family, *Bosistoa sapindiformis*, yielding a beautifully marked, close-grained, yellowish wood suitable for cabinet-work.

unioval (ū-ni-ō′vạl), *a.* [L. *unus*, one, + *ovum*, ovum, + *-al*¹.] Relating to, or springing from, a single ovum: as, *unioval* twins. *Buck*, Med. Handbook, I. 227.

uniovular (ū-ni-ō′vụ-lạ̈r), *a.* [L. *unus*, one, + E. *ovular*.] Relating to or derived from a single ovum. *Lancet*, May 23, 1908, p. 1481.

uniparental (ū″ni-pạ̄-ren′tạl), *a.* [L. *unus*, one, + *parens*, parent, + *-al*¹.] Relating to only one of the parents. *Buck*, Med. Handbook, IV. 639.

unipariens (ū-ni-pār′i-ẹnz), *a.* [NL., < L. *unus*, one, + *pariens*, ppr. of *parere*, bring forth.] Bearing one young at a time; uniparous.

Unipartite number. See ★*number*.

uniperiodic (ū″ni-pē-ri-od′ik), *a.* [L. *unus*, one, + E. *periodic*.] Having only one period: said of an alternating current which has a frequency of one cycle in a second of time.

uniphase (ū′ni-fāz), *a.* [L. *unus*, one, + Gr. φάσις, phase.] In *elect.*, same as ★*single-phase*.

uniphaser (ū′ni-fā-zėr), *n.* [*uniphase* + *-er*.] A single-phase electric generator or motor.

Uniplanar motion. See ★*motion*.

Uniplane kite. See *boys'* ★*kite*.

unipolar, *a.* 3. In *elect.*, pertaining to a unipolar or nonpolar electric machine, that is, a machine in which the armature rotates in a uniform magnetic field. Unipolar electric generators require high speeds and therefore were not used before the advent of the steam turbine.

unipotence (ū-nip′ọ̄-tẹns), *n.* [*unipotent*: on the analogy of *omnipotence*.] The character of being unipotent; power or efficiency in one way or direction only. [Rare.]

unipotent (ū-nip′ọ̄-tẹnt), *a.* [L. *unus*, one, + *poten(t)s*, powerful. See *omnipotent*.] Powerful or effective in only one way or direction. [Rare.]

unique, *a.* 3. In *math.*, unambiguous and singly determinate.

It is a fundamental theorem that every ideal can be resolved into the product of a finite number of prime ideals, and that this resolution is *unique*.
Encyc. Brit., XXXI. 286.

uniquely, *adv.* **2.** In *math.*, unambiguously and with single determinateness.

> It is clear that a large class of problems in permutations can be solved in a similar manner, viz., by giving special values to the elements of the determinant of the matrix. The redundant product leads *uniquely* to the real generating function. *Encyc. Brit.*, XXVII. 156.

uniqueness, *n.* **2.** In *math.*, freedom from ambiguity in its outcome.

> The *uniqueness* of the quadrilateral construction cannot be projectively proved without three dimensions, and hence there is no pure projective Geometry of spaces having only one or two dimensions.
> *Encyc. Brit.*, XXVIII. 671.

uniradial (ū-ni-rā′di-al), *a.* [L. *unus*, one, + *radius*, radius, + *-al*¹.] In *biol.*, not repeated independently. *P. C. Mitchell.*

unireme (ū′ni-rēm), *n.* [L. *unus*, one, + *remus*, oar. The word is a modern formation, in distinction from *bireme* and *trireme.*] In *Gr. antiq.*, a ship having a single bank of oars: the earliest form of Greek ship.

unirritable (un-ir′i-ta-bl), *a.* Not irritable, in any sense; that cannot be irritated or stimulated.

> Immediately after death the heart is found to be *unirritable* to electrical stimulation.
> *Buck*, Med. Handbook, II. 692.

uniserial, *a.* **3.** Arranged in a single series: specifically used of the arms of *Crinoidea* in which the component plates may be arranged in one vertical series, or in two such series (biserial), in which case the edges of the plates of each series are beveled to fit into the interspaces of the other series. The arms invariably begin with a uniserial arrangement, the biserial order when present being a secondary development.—**4.** In the art of decoration, being in a single series in which the elements either face in the same direction, or alternately to one side or the other, or alternately look away from or toward each other.

unisolated, *a.* **2.** In *chem.*, not separated from combination or freed from admixture: said of an element or definite compound the existence of which may be suspected, but which has not been obtained as a distinct substance.

> If a gas of the same series, still *unisolated*, may exist (as is not impossible), which has an atomic weight half that of helium, this gas, liquified in turn by the aid of liquid helium, would bring the experimenter still closer to that zero. *Encyc. Brit.*, XXX. 286.

unit, *n.* **3.** Any subdivision of an army having a distinct organization and defined duties.

> Two companies and two squadrons of their force proceeded toward Daliandiapu-Tse. Our cavalry and *units* withdrew toward Schlindjane. *N. Y. Herald*, May 9, 1904.

Ångström unit, in *spectroscopy*, a unit for the measurement of wave-lengths of light introduced by A. J. Ångstrom of Upsala in 1866 and largely used by spectroscopists. The Ångström unit is 0.0000001 mm. or $\frac{1}{10000}$ of a micron (μ). The wave-length of the longest visible rays of the spectrum (red) is about 7600 Ångström units; that of the shortest (violet) is about 3900.—**Astronomical unit**, in measuring astronomical distance, the mean distance of the earth from the sun. See *sun.*—**Board of Trade unit**, any unit, such as the so-called 'Board of Trade ohm,' or the kilowatt-hour, defined, authorized, or specified by the London Board of Trade: sometimes abbreviated as *B. T. U.*, but unfortunately so, since the same letters are commonly used to designate the British thermal unit.—**British thermal unit**, the amount of heat necessary to raise one avoirdupois pound of water one degree Fahrenheit. It is equivalent to 1054.9 joules, 778.104 foot-pounds, or 251.995 lesser calories. Abbreviated B. T. U.—**Circular unit**, a unit of surface equal to the area of a circle whose diameter is the linear unit. See *circular* ★*foot*, ★*cross-section unit.*—**Cross-section unit.** See ★*cross-section.*—**Fractional unit**, one of the parts of which the fraction itself denotes one or more: thus for $\frac{3}{4}$ it is $\frac{1}{4}$.—**Hefner unit**, a unit of light-intensity, emitted by the flame of a Hefner-Alteneck lamp, which burns amyl-acetate. See ★*light standard*, ★*hefner.*—**Imaginary unit**, the neomon, the square root of minus one, $\sqrt{-1}$, $(-1)^{\frac{1}{2}}$, i, ι.—**Integral unit**, 1, the unit for integers.—**Jacobi's unit of current**, the current which when passed through a water voltameter will generate one cubic centimeter of gas (at 0° C. and 760 millimeters pressure) per second.—**Jacobi's unit of resistance**, the resistance of a copper wire one meter in length and one millimeter in diameter.—**Manometric unit**, a unit employed in measuring the pressure of gases. The manometric unit commonly employed is the pressure exerted by a column of mercury one centimeter in vertical height.—**Metallic unit**, one per cent. of the valuable metal in the ton of ore from which it is extracted in the metallurgical process. The price of the ore per ton is based on the number of metallic units at an agreed price per unit.—**Multiple unit**, a system of electric railway-train control, devised by Mr. F. J. Sprague, in which two or more cars, each independently equipped with motors and controllers individual thereto, are combined into a train, without regard to end-relation or sequence of cars, and operated as a unit from one or more master switches through a secondary train line. *F. J. Sprague.*—**Natural unit of electricity.** See ★*electricity.*—**Photometric unit**, a unit of intensity of light employed in photometry. See ★*light standard.*—**Physical unit**, a unit in terms of which physical quantities are expressed.—**Physiological unit.** (*a*) The smallest portion of an organism which exhibits the characteristic activities of the whole. The conception of a physiological unit is not fixed, since it depends upon the standard with reference to which activities are measured. If capacity for sexual reproduction is the criterion, most of the higher animals are complete physiological units only in their adult condition. If capacity for generating the whole is the criterion, fertilized eggs and parthenogenetic eggs are physiological units. If capacity for restoring the whole from a part is the criterion, $\frac{1}{200}$ part of the body of a hydra and $\frac{1}{27}$ part of that of a stentor are physiological units, since smaller parts than these do not regenerate the whole. (*b*) According to the hypothesis of Herbert Spencer, an ultimate biological unit or element which, when joined to others like itself, possesses the power to become a specific organism. The body of each individual organism is held to consist of its own sort of physiological units which are all alike and nearly, but not completely, identical with those which compose the body of another individual of the same species. The physiological unit is held to be intermediate between the molecule or chemical unit and the cell or morphological unit, each cell being regarded as composed of innumerable physiological units each of which again consists of innumerable molecules. The physiological units are held to make each organism and each species what it is and to have the aptitude to contribute to the construction of the organism in virtue of their polarity. The hypothesis of physiological units is advanced as an explanation of the facts of inheritance in general, and, especially, the generation of living beings from eggs and the regeneration or replacement of lost parts. The organism is able to replace lost parts because the polarity of the units, it is said, causes them to restore the organism to its perfect condition under the directive influence of the whole, which forces the units to arrange themselves in just such a way as is necessary for the perfection of the part in the harmony of the whole. A germ-cell is held to contain small groups of these units which, by their polarity, give to it the power to reproduce the whole. (*c*) According to Bateson, an ultimate element or unit of inheritance, of unknown nature, of which an allelomorph or character-unit is the sensible manifestation.

> The units with which that science must deal, we may speak of, for the present, as character-units, the sensible manifestations of *physiological units* of as yet unknown nature.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., [1902, I. 159.

Pound-centigrade unit, a thermal unit; the heat necessary to raise one pound of water one degree centigrade. It is equal to 1898.81 joules.—**Siemens mercury unit**, in *elect.*, a practical unit of resistance equal to the resistance of a column of mercury one meter long and one square millimeter in cross-section, at a temperature of 0° C.—**Tactical unit**, a subdivision of an army which is made the basis of tactical instruction, and in which the strength of an army is expressed. The tactical units are the battalion, squadron, and battery.—**Unit angle.** (*b*) In the sexagesimal method, a degree. (*c*) In the centesimal method, a grade.—**Unit magnetic reluctance.** See ★*reluctance.*—**Unit moment of a couple.** See ★*couple.*—**Unit of acceleration.** See ★*acceleration.*—**Unit of angular acceleration.** See ★*acceleration.*—**Unit of angular velocity.** See ★*angular.*—**Unit of entropy**, the ★claus (which see).—**Unit of imaginaries**, the neomon, the square root of minus one, $\sqrt{-1}$, *i.*—**Unit of inductance**, that inductance which will produce one unit of electromotive force by a change of current taking place at the rate of unit current per second. When electromotive force and current are measured in c. g. s. units the unit of inductance thus defined is the c. g. s. unit of inductance. The practical unit of inductance usually employed is the henry. It is 1×10^9 c. g. s. units, or the inductance in a circuit when the electromotive force is one volt and the current changes at the rate of one ampere per second.—**Unit of luminous intensity**, the intensity of the light from a standard source, such as the Hefner lamp. See ★*light standard.*—**Unit of magnetic flux**, the flux which acts on a unit magnetic pole with a force of one dyne; a maxwell.—**Unit of magnetizing force**, a magnetizing force of one gilbert per centimeter. As practical units, the magnetizing forces of one ampere-turn per inch and of one ampere-turn per centimeter are frequently employed.—**Unit of magnetomotive force**, the magnetomotive force which corresponds to unit flux in a magnetic circuit having unit reluctance; a gilbert. A practical unit in common use is the magneto force due to one ampere flowing once around a magnetic circuit.—**Unit of photometric intensity**, the intensity of light sufficient to give an illumination of one lux at 1 meter's distance; a hefner. See ★*light standard.*—**Unit of power**, the power developed by the expenditure of energy at a rate corresponding to a unit of energy in a unit of time. The c. g. s. unit of power is one erg per second. The corresponding practical units are the watt or joule per second and the kilowatt.—**Unit of radioactivity**, a radioactive standard. A committee appointed by the council of the Rontgen Society of London has recommended that the γ-ray ionization from one milligram of pure radium be regarded as a standard, and called a unit of radioactivity. *Science*, Jan. 15, 1909.—**Unit of work**, the work done by unit force acting through unit distance. The c. g. s. unit of work is the erg, which is the work done by a dyne acting through one centimeter; the practical unit in the metric system is the joule, which is 10,000,000 ergs. The usual gravitational units are the kilogram-meter and the foot-pound; those involving power, the watt-hour (= 3600 joules) and the horse-power hour.—**Unit planes.** See ★*plane*1.—**Unit point.** See ★*point*1.—**Unit sect.** See ★*sect*2.—**Unit sect-carrier.** See ★*sect-carrier.*—**Unit strength**, the resistance to rupture expressed in the units of force in use or preferred, exerted by an area of cross-section having one unit of extent. The strength or resistance may be to stresses tending to pull apart—unit tensile resistance; or to stresses tending to crush—unit compressive resistance; or stresses tending to bend or flex—unit resistance to flexure.—**Unit tube.** See ★*tube of flow.*—**Unit vector.** See ★*vector.*—**Urotoxic unit**, the amount of urine, per kilogram of the animal's weight, necessary to kill a rabbit when injected into its veins.—**Varley's unit of resistance.** See ★*resistance.*—**Violle unit**, in *photometry*, the light emitted by one square centimeter of the surface of a mass of glowing platinum at the melting temperature of that metal. See ★*light standard.*—**Table of the units commonly used in measurements:**

Acre, = 43,560 square feet, = 4,046.87 square meters.
Acre-foot, a unit used in irrigation; the volume of water required to cover one acre to a depth of one foot, = 43,560 cubic feet, = 1,233.49 cubic meters.
Ampere, a practical unit of electrical current, = 0.1 c. g. s. unit.
Ampere (international), the ampere as defined for practical purposes by the International Congress at Chicago in 1893, as the current required to deposit 0.001118 gram of silver in a second of time. This value was subsequently legalized in the United States and was readopted by the Electrical Conference in England (1908), although the value 0.0011183 was known to be more nearly correct.
Ampere-hour, =3,600 coulombs, =360 c. g. s. units (electromagnetic).
Ampere-second, =1 coulomb.
Ampere-turn, a unit of magnetomotive force, =4 π/10 c. g. s. units, =1.256637 gilberts.
Ångström unit, =0.0000001 millimeter, =0.0001 micron.
Are, = 100 square meters, =1,076.387 square feet.
Atmosphere, a unit of fluid pressure, = the pressure of a column of mercury 76 centimeters in height, =1,013,240 dynes per square centimeter. Sometimes an atmosphere is defined as a pressure of 1 kilogram per square centimeter.
Bougie décimale, a unit of intensity of light originally defined as 1/20 of a violle; subsequently (by the Geneva Congress of Photometricians), as equal to 1 hefner.
Bougie de l'étoile, a unit of intensity of light used in France; the light from a stearin candle burning 10 grams per hour, =1/7 carcels (approximately).
British thermal unit, the heat required to raise one pound (avoir.) of water one degree Fahrenheit, = 1,054.90 joules, = 251.996 calories, = 778.104 foot-pounds, = 0.000392982 horse-power hour, = 0.293027 watt-hour.
Calory, a calorimetric unit; the heat required to raise one gram of water one degree centigrade (also called a *gram-calory* or *small calory*), = 4.18617 joules, = 3.08777 foot-pounds, =0.003968 British thermal unit, =0.00116282 watt-hour.
Candle (*British standard*), a unit of intensity of light; the light from a spermaceti candle of specified composition, size, and form (see *standard* ★*candle*), = 1.136 Hefner units.
Candle (*German*; G. *Vereinskerze*), a unit of intensity of light; the light from a paraffin candle having a diameter of 20 millimeters and a flame height of 50 millimeters, =1.16 . . . 1.224 Hefner units (approximately), =1.05 British standard candles (approximately).
Candle (*Munich*), a unit of intensity of light; the light from a stearin candle of conical form, =0.153 carcel (approximately), =1.17 British standard candles (approximately).
Candle (*star*). See *bougie de l'étoile* (above).
Candle-foot. See *foot-candle* (below).
Candle-meter. See *meter-candle* (below).
Carcel, a unit of intensity of light formerly used in France; the light from a lamp of Argand type with mechanical draft, =10.87 . . . 10.90 Hefner units (approximately), =9.53 British candles (approximately).
Centimeter, =0.01 meter, =0.393700 inch.
Centimeter (*cubic*), =0.001 liter, =0.0610234 cubic inch.
C. G. S. unit of acceleration, an acceleration of one centimeter per second per second, =0.00101979 of the acceleration due to gravity.
C. G. S. unit of capacity (*electromagnetic*), the capacity of a condenser the charge of which at unit potential (c. g. s.) is one c. g. s. unit of quantity or 10 coulombs, $=1 \times 10^9$ farads.
C. G. S. unit of capacity (*electrostatic*), $=1/9 \times 10^{-20}$ c. g. s. units of capacity of the electromagnetic system (approximately), $=1/9 \times 10^{-11}$ farads (approximately).
C. G. S. unit of electric charge (*electromagnetic*), the charge transferred by one c. g. s. unit of current in one second of time, =10 coulombs, =0.00277778 ampere-hour, $=3 \times 10^{10}$ electrostatic units (approximately).
C. G. S. unit of electric charge (*electrostatic*), the charge which in air exerts a force of one dyne on an equal charge at a distance of one centimeter, =1/v c. g. s. units (electromagnetic), =10/V coulombs or $1/3 \times 10^{-9}$ coulombs (approximately).
C. G. S. unit of electric current, the current which, flowing in a circular coil of one centimeter radius, produces at the center of the coil a magnetic field of 2μ units intensity, =10 amperes.
C. G. S. unit of electrical resistance, $=1 \times 10^{-9}$ ohms.
C. G. S. unit of electromotive force, $=1 \times 10^{-8}$ volts.
C. G. S. unit of energy, =1 erg, = 0.0000001 joule.
C. G. S. unit of force, =1 dyne, =0.00101979 of the force due to a gram, =0.000002248 of the force due to a pound, =0.00007233 poundal.
C. G. S. unit of inductance, the inductance which gives one c. g. s. unit of electromotive force when the current is changing at the rate of one c. g. s. unit per second, $=1 \times 10^{-9}$ henrys.
C. G. S. unit of magnetic flux, the flux which acts with a force of one dyne on a unit magnetic pole, = 1 maxwell, =1 line of force, =1/4 μ of the flux from a unit pole.
C. G. S. unit of magnetic induction (or *flux density*), a flux density of one line of force, or maxwell per square centimeter; the magnetic induction in a field which exerts a force of one dyne upon a unit pole placed in it, =1 gauss.
C. G. S. unit of magnetomotive force, the magnetomotive force that gives one c. g. s. unit of magnetic flux through one c. g. s. unit of reluctance, = 1 gilbert, = 10/4 μ ampere-turns.
C. G. S. unit of permeance (or *magnetic conductance*), the reciprocal of one unit of reluctance.
C. G. S. unit of power, =1 erg per second.

C. G. S. unit of reluctance (or *magnetic resistance*), that reluctance (or resistance) through which a c. g. s. unit of magnetomotive force gives a c. g. s. unit of magnetic flux, =1 oersted.

C. G. S. unit of velocity, a velocity of one centimeter per second.

Chain (*surveyors'*), = 66.00 feet, =20.117 meters.

Coulomb, a practical unit of electric charge, = 0.1 c. g. s. unit (electromagnetic), =1 ampere-second, =0.000277778 ampere-hour.

Coulomb (*international*), the charge transferred by one international ampere in one second of time.

Daniell, a former practical unit of electromotive force; the electromotive force of a Daniell cell, =1.08 to 1.10 volts.

Day (*astronomical*), the twenty-four hours from noon to noon (mean solar time).

Day (*calendar day*), the twenty-four hours from midnight to midnight (mean solar time).

Day (*civil*). Same as *calendar day* (above).

Day (*mean solar*), =86,400 mean solar seconds, =86,636.55 sidereal seconds, =1.002737 sidereal days.

Day (*sidereal*), =86,164.1 mean solar seconds, =86,400 sidereal seconds, =0.997269 mean solar day.

Degree (*of arc*), =0.0174533 radian.

Degree (*of latitude*), =60 nautical miles at equator (approximately), =69.00 statute miles at 40° lat.

Degree (*of longitude*), =60 nautical miles at equator (approximately), =53.05 statute miles at 40° lat.

Degree (*Celsius*). Same as a *degree centigrade* (below).

Degree (*centigrade*), =1/100 of the interval between the ice-point and the steam-point of a thermometer, =9/5 of a degree Fahrenheit.

Degree (*Fahrenheit*), =1/180 of the interval between the ice-point and the steam-point of a thermometer, =5/9 of a degree centigrade.

Degree (*Kelvin; K*), =one degree on the absolute scale of temperatures the intervals of which are the same as those of the centigrade scale while the zero is at −273° C.

Degree (*Réaumur*), =1/80 of the interval between the ice-point and the steam-point of a thermometer, =5/4 of a degree centigrade, =9/4 of a degree Fahrenheit.

Dyne, a unit of force; the force which, acting on a mass of one gram, produces an acceleration per second of one centimeter per second, =0.00007233 poundal. A dyne is equivalent to the following gravitational forces at sea-level in latitude 45°: =0.00101979 gram, =0.00000224825 pound.

Erg, the c. g. s. unit of energy; the work done by a force of one dyne acting through a distance of one centimeter, =0.0000001 joule.

Farad, a unit of electrical capacity, =9×10^{11} c. g. s. units of the electrostatic system (approximately).

Farad (*international*), the capacity represented by the ratio of one international coulomb divided by one international volt. The microfarad in common use is one millionth of this quantity.

Fathom (*British*), =0.001 nautical [mile, =6.080 feet, = 1.8532 meters.

Fathom (*United States*), =6.00 feet, =1.8288 meters.

Foot (*British*), =12 inches, =30.4801 centimeters.

Foot (*cubic*), =28,317.0 cubic centimeters, =7.48052 gallons (United States).

Foot-candle, a unit of illumination; the illumination from a candle at a distance of one foot, =12.2 luxes (approximately).

Foot-pound, a gravitational unit of work, =1.35573 joules, =0.323859 calory, =0.000376591 watt-hour, =0.000000505051 horse-power hour.

Furlong, =660 feet, =201.17 meters.

Gallon (*liquid; United States*), =3,785.43 cubic centimeters, =231 cubic inches.

Gallon (*imperial*), =4,545.9361 cubic centimeters, =277.410 cubic inches, =0.00594586 cubic yard.

Gauss, a unit of magnetic induction or flux density, = 1 c. g. s. unit, =1 maxwell or line of force per square centimeter, =6.45163 maxwells per square inch.

Gilbert, a unit of magnetomotive force, =1 c. g. s. unit, =10/4π=.7958 ampere-turn.

Grade, a unit of angular measure, =0.01 quadrant, = 0.015708 radian.

Grain, =0.0647989 gram.

Gram, =15.432356 grains, =0.0352740 oz. (avoir.), =0.0022046 pound (avoir.).

Gram (taken as a unit of force at sea-level in latitude 45°), =980.600 dynes, =0.0709265 poundal.

Gram-centimeter, a gravitational unit of work; the work required to lift one gram one centimeter against gravity, =980.60 ergs in lat. 45°.

Gram-molecule, that weight of a substance in grams which equals numerically its molecular weight.

Hand, a unit used in measuring the height at which horses stand, =4.0 inches.

Hectare, =10,000 square meters, =2.47104 acres.

Hectoliter, =100 liters, =26.4170 gallons (U. S.), =3.53145 cubic feet.

Hefner, the unit of intensity of light commonly accepted as the primary standard in photometry (see ★*hefner*), =0.88 British standard candle, =0.89 . . . 1.026 bougies décimales (approximately).

Hefner (*spherical*), a unit of flux of light; the total flux from a source of light of one hefner intensity, =12.5664 lumens.

Henry, a practical unit of inductance; an inductance such that the induced electromotive force is one international volt, while the rate of variation of the inducing current is one international ampere per second, =1 quadrant, =1 secohm, =1×10^{9} c. g. s. units.

Horse-power, = 745.650 watts, = 33,000 foot-pounds per minute, =42.4108 British thermal units per minute, = 10,687.3 calories per minute, = 1.01387 metric horse-power.

Horse-power (*metric*), = 0.735448 kilowatt, = 0.986318 horse-power.

Horse-power hour, = 2,684,340 joules, = 1,980,000 foot-pounds, =2,544.65 British thermal units, =745.650 watt-hours, =641,240 calories.

Hundredweight (*long*), =112 pounds (avoir.).

Hundredweight (*short*), =100 pounds (avoir.), =45.35924 kilograms.

Inch, =.083333 foot, =2.540005 centimeters.

Inch (*circular*), a unit of cross-section, =1,000,000 circular mils, = 0.785398 square inch, = 5.067090 square centimeters.

Inch (*miners'*), a unit of flow of water, =1.5 cubic feet per minute, =0.000707925 cubic meter per second.

Joule, a practical unit of energy, = 10,000,000 ergs, = 0.737612 foot-pound, =0.238882 calory.

Kapp line, a practical unit of magnetic flux =6,000 maxwells.

Kilo-calory (also called *large calory*), =1,000 calories.

Kilodyne, =1,000 dynes.

Kilogram, =1,000 grams, =35.2740 ounces (avoir.), =2.20462 pounds (avoir.).

Kilogram (taken as a unit of force at sea-level in latitude 45°), =980,600 dynes, =70.9265 poundals.

Kilogram-meter, a gravitational unit of work, = 9.80596 joules, = 7.23300 foot-pounds, = 2.34247 calories, = 0.00272388 watt-hour.

Kilometer, =1,000 meters, =3,280.83 feet, =0.621370 mile.

Kilowatt, = 1,000 watts, = 1.34111 horse-power, = 44,256.7 foot-pounds per minute, =56.8776 British thermal units per minute.

Kilowatt-hour, = 1,000 watt-hours, = 3,600,000 joules, = 3,412.66 British thermal units, = 859,975 calories, = 1.34111 horse-power hours.

Kine, a unit of velocity, =one centimeter per second.

Knot or *nautical mile*, =6,080.27 feet, =1,853.25 meters, = 1' of the earth's circumference.

Light-year, a unit of length used in expressing the distance of fixed stars from the earth, =9.467×10^{12} kilometers, =5.8825×10^{12} miles.

Line of force (*magnetic*), a unit of flux, =1 maxwell or c. g. s. unit.

Link, a unit of length used in surveying, =7.920 inches, = 20.117 centimeters.

Liter, =1,000 cubic centimeters, =1.05668 quarts (United States), =0.0013079 cubic yard.

Lumen, a unit of flux of light; the flux from a source of one hefner intensity per unit of solid angle; the flux from one hefner which is comprised within a cone which subtends a surface of one square meter at a radius of one meter, =0.079577 of the total flux from a hefner.

Lumen-hour, a unit of quantity of light (or more properly of luminous energy); one lumen of flux for one hour.

Lux, a unit of illumination; the illumination from one hefner at a distance of one meter, = 0.0818 foot-candle.

Matthiesen's unit of electrical conductivity, = 592,768 mho-cubic centimeter units.

Maxwell, a unit of magnetic flux, = 1 c. g. s. unit, = 1 line of force, =1/4 π of the flux from a unit pole.

Megadyne, =1,000,000 dynes.

Megamho, the reciprocal of a microhm.

Megaohm. Same as *megohm* (below).

Megavolt, =1,000,000 volts.

Megohm, a unit of electrical resistance, =1,000,000 ohms.

Meter, =100 centimeters, =39.37000 inches, =3.28083 feet.

Meter (*cubic*), = 61,023.4 cubic inches, = 264,170 gallons (United States), = 35.3145 cubic feet, =1.30794 cubic yards.

Meter-candle, a unit of illumination; the illumination from a candle at a distance of one meter, =1 lux (approximately), =0.0818 foot-candle.

Meter-kilogram, a practical unit of torque; the torque exerted by a force corresponding to the weight of one kilogram acting at the end of an arm one meter in length.

Mho, a practical unit of electrical conductance; for unvarying direct currents it is the reciprocal of the ohm, =1×10^{-9} c. g. s. units.

Mho (in alternating currents), a practical unit of admittance. Admittance in *mhos* is effective amperes divided by effective volts.

Mho (in alternating circuits), a unit of susceptance. Susceptance in *mhos* is wattless amperes divided by volts.

Mho-cubic centimeter unit (*Hering*). See *unit of electrical conductivity* (below).

Micro-ampere, =0.000001 ampere.

Microdyne, a unit of force, =0.000001 dyne.

Microfarad, the practical unit commonly used for the measure of electrical capacity, =9×10^{5} c. g. s. units of the electrostatic system (approximately), = 0.000001 farad.

Microhenry (*of inductance*), = 0.000001 henry, = 1,000 c. g. s. units.

Microhm, a unit of electrical resistance, =0.000001 ohm, =1,000 c. g. s. units.

Micron (μ), =0.001 millimeter, =10,000 Ångström units.

Microvolt, =0.000001 volt, =100 c. g. s. units.

Mil, =0.001 inch, =.002540 centimeter.

Mil (*circular*), a unit of cross-section, =0.000001 circular inch, =0.00050671 square millimeter.

Mile (*nautical*) or *knot*, =1.15155 statute miles, =6,080.27 feet, =1,853.25 meters.

Mile (*statute*), =5,280 feet, =1,609.35 meters.

Milliampere, =0.001 ampere.

Milligram, =0.015432 grain.

Millihenry (*of inductance*), =0.001 henry.

Millimeter, =0.1 centimeter, =0.039370 inch.

Millimeter (*circular*), a unit of cross-section, = 1.55000 circular mils, =0.785398 square millimeter.

Millimicron (μμ), =0.001μ, =0.000001 millimeter.

Millivolt, =0.001 volt.

Mol, =1 gram-molecule.

Month (*lunar*), averages 29.53059 mean solar days.

Month (*synodic*), an average lunar month.

Oersted, a unit of reluctance or magnetic resistance, =1 c. g. s. unit.

Ohm, a unit of electrical resistance, =1×10^{9} c. g. s. units.

Ohm (*B. A.*, or *British Association*), =0.986699 ohm.

Ohm (*Board of Trade*), =1.01358 B. A. ohms.

Ohm (*international*), a practical unit of resistance recommended by the International Congress at Chicago in 1893 and subsequently legalized by the United States Congress. It is the resistance at 0° C. of a column of pure mercury of uniform cross-section and 106.3 centimeters in length, weighing 14.4521 grams.

Ohm (*legal*), =0.997178 ohm.

Ohm (*true*), =1×10^{9} c. g. s. units.

Ounce (*avoir.*), =28.3495 grams, =437.500 grains, =0.062500 pound (avoir.)

Ounce (*fluid; British*), =28.41227 cubic centimeters, = 1.73381 cubic inches.

Ounce (*fluid; United States*), =29.5737 cubic centimeters, =1.80469 cubic inches.

Ounce (*troy*), =480 grains, =31.1035 grams.

Pint (*imperial*), =568.245 cubic centimeters, =34.6762 cubic inches, =1.20091 United States pints (liquid).

Pint (*dry; United States*), =1.16365 liquid pints (United States), =0.968972 imperial pint, =550.614 cubic centimeters.

Pint (*liquid; United States*), =473.179 cubic centimeters, =28.875 cubic inches, =0.859367 pint (dry; United States), =0.832702 imperial pint.

Poucelet, a unit of power, =100 kilogram-meters per second, =0.9806 kilowatt, =1.31509 horse-power.

Pound (*avoir.*), =7,000 grains, =453.5924 grams.

Pound (taken as a unit of force at sea-level in latitude 45°), =444,791 dynes, =32.1717 poundals.

Pound (*troy*), =5,760 grains, =373.242 grams.

Pound-foot, a practical unit of torque; the torque exerted by a force corresponding to the weight of one pound acting at the end of an arm one foot in length.

Poundal, a unit of force; a force which, acting upon a mass of one pound, produces an acceleration per second of one foot per second, =13,825.5 dynes. The poundal corresponds to the force exerted by 0.031083 pound or 14.099 grams at sea-level in latitude 45°.

Pyr, a unit of intensity of light, =1 bougie décimale.

Quadrant (*of arc*), =1.57080 radians.

Quadrant (*of inductance*), =1 henry.

Quart (*imperial*), =1,136.4908 cubic centimeters, =69.3525 cubic inches, =1.20091 quarts (liquid; United States).

Quart (*dry; United States*), =1,101.23 cubic centimeters, =1.16365 liquid quarts (United States).

Quart (*liquid; United States*), =946.359 cubic centimeters, =57.7500 cubic inches, =0.033420 cubic foot, =0.859367 dry quart (United States), =0.832702 imperial quart.

Radian, a unit of plane angular or circular measure, = 57.2958 degrees, =0.63662 quadrant, =0.159155 of the circumference.

Rod (*surveyors'*), =16.5 feet, =5.0292 meters.

Secohm (*of inductance*), =1 henry.

Second (*sidereal*), =0.997269 mean solar second.

Second (*mean solar*), =1.002738 sidereal seconds.

Siemens unit, a unit of electrical resistance; the resistance of a column of pure mercury one meter long and one square millimeter in cross-section, =0.940734 ohm.

Steradian, a unit of solid angle, =0.636620 of a spherical right angle.

Stone, =14 pounds (avoir.), =6.35029 kilograms.

Ton (*long*), =2,240 pounds (avoir.).

Ton (*metric*), =1,000 kilograms, =2,204.62 pounds (avoir.).

Ton (*short*), =2,000 pounds (avoir.), =45.35924 kilograms.

Unit of electrical conductivity, conductivity such that a column one centimeter long and one square centimeter of cross-section has a resistance of one ohm: called by Hering the *mho-cubic centimeter unit*.

Unit of pole strength. Same as *unit of magnetic induction* (see *maxwell*, above).

Unit of torque, the torque produced by one dyne acting at the end of an arm one centimeter in length.

Unit magnetic pole, a magnetic pole that, at a distance of one centimeter, exerts a force of one dyne on another unit pole. The flux from a unit pole is 4μ maxwells.

Vereinskerze. See *German candle* (above).

Violle, a unit of intensity of light; the light from one square centimeter of platinum at the melting-point, = 20 . . . 20.6 Hefner units (approximately), =20 bougies décimales (approximately), =19.8 British candles.

Volt, a practical unit of electromotive force, =1×10^{8} c. g. s. units.

Volt (*international*), the practical unit of electromotive force recommended by the international congress at Chicago in 1893; the electromotive force that will maintain one international ampere through one international ohm.

Volt (*true*), 1×10^{8} c. g. s. units.

Watt, a unit of power; the power required to do 10,000,000 ergs of work per second, =0.001 kilowatt, = 0.00134111 horse-power, = 0.101979 kilogram-meter per second, =0.737612 foot-pound per second, =0.238882 calory per second.

Watt-hour, a practical unit of work, =3,600 joules, = 2,655.40 foot-pounds, = 859.975 calories, = 0.00134111 horse-power hour.

Weber, a name formerly given to the unit of magnetic flux, =1 maxwell.

Yard (*British*), =36 inches, =91.4402 centimeters.

Yard (*cubic*), =0.764559 cubic meter, =201.974 gallons (United States).

Year (*calendar*), =365 mean solar days.

Year (*leap*), =366 days.

Year (*mean solar*), =365.24220 mean solar days.

Year (*sidereal*), =366.256399 sidereal days, =365.256360 mean solar days.

Unit. An abbreviation of *Unitarian*.

unit-character (ū′nit-kar″ak-tėr), *n.* In a cross-bred offspring of parents with antagonistic or mutually incompatible characters, or in the descendants of such offspring, one of the antagonistic parental characters manifested to the exclusion of the other; a character unit or the sensible manifestation of a physiological unit of as yet unknown nature. See the extract.

> Each such character, which is capable of being dissociated or replaced by its contrary, must henceforth be conceived of as a distinct *unit-character*; and as we know that the several *unit-characters* are of such a nature that any one of them is capable of independently displacing or being displaced by one or more alternative characters taken singly, we may recognize this fact by naming such *unit-characters* allelomorphs.
>
> *W. Bateson*, Mendel's Prin. of Heredity, p. 27.

United Labor party. See ★*labor*[1].

uniter, *n.* **2.** A solution for coating galvanized iron previous to its being painted, to prevent the peeling off of the paint.

uniterminal (ū-ni-tėr′mi-nal), *a.* [L. *unus*, one, + *terminus*, terminus, + *-al*^{1}.] In *mineral.*, pertaining to an axis of symmetry characterized by an unlike distribution of faces at the two extremities. *W. J Lewis*, Crystallography, p. 132.

unit-group (ū′nit-gröp), *n.* The group (of three, five, two-fours, etc.) which serves as unit in an auditory or tactual rhythm. *Amer Jour. Psychol.*, XIII. 96.

unit-stere (ū′nit-stēr), *n.* [*unit* + *stere.*] A name sometimes given to a certain very small volume used in computing the molecular volume of a solid or liquid from its chemical formula.

> The molecular volumes of complex paraffins and alcohols can be calculated very exactly by means of the formulæ . . . where S is a constant which has an average value of 2·970, and is called the *unitstere*.
> *Nature*, Jan. 10, 1907, p. 263.

unit-tube (ū′nit-tūb), *n.* A tube of magnetic induction throughout which the flux is equal to unity.

unituberculate (ū″nī-tū-bėr′kū-lāt), *a.* [L. *unus*, one, + E. *tuberculate.*] Bearing only one tubercle, as some of the plates in the test of certain echinoids.

unity, *n.*—**Law of mechanical-esthetic unity**, in *psychol.*, the principle (adopted by T. Lipps as explanatory of the geometrical-optical illusions) that "every spatial form is endowed by us, in idea, with a living personality, or is regarded as the scene of the interplay of opposing mechanical forces." *E. B. Titchener*, Exper. Psychol., I. i 152.—**Roots of unity.** See ★*root*^{1}.

univ. An abbreviation (*a*) of *universal*; (*b*) [*cap.*] of *Universalist*; (*c*) of *universally*; (*d*) [*l. c.* or *cap.*] of *university*.

univariance (ū-ni-vā′ri-ans), *n.* [*univariant.*] In *phys. chem.*, the possession, by a thermodynamic system, of only one degree of freedom. See *degree of freedom* and ★*phase rule*.

univariant (ū-ni-vā′ri-ant), *a.* [L. *unus*, one, + *varians* (*-t-*), variant.] 1. In *math.*, linearly variant.—2. In *phys. chem.*, having a variance equal to unity. The variance (V) of a chemical system is expressed by the equation $V = c + 2 - \phi$, where c is the number of independent components and ϕ is the number of phases in which the system may exist.

> The following properties of an *n*-component *univariant* system are well known: At a given temperature and under the corresponding equilibrium pressure $n + 1$ phases can coexist in equilibrium. At the given temperature and under the corresponding pressure, the *univariant* system of $n + 1$ phases admits of a continuous series of states of equilibrium in which the entropy and the volume of the system change while the total thermodynamic potential of the system and the concentrations of the phases remain unaltered. The state of equilibrium is completely determined if, in addition to the masses of the independent components, the volume or the entropy of the system be given.
> *Jour. Phys. Chem.*, June, 1904, p. 436.

universal, *a.* 5. In *mech.*, having feed-motions of the work against the cutter or tool in all possible directions (both right and left, forward and back, and up and down). Since tools of this type have usually a wide range of adaptable cutters, the term has been extended to mean having a very wide range of uses, or capable of doing nearly all kinds of work. It is the contradictory of *special* (in this use), which is applied to a tool that is designed for one class of work and no other.—**Universal algebra**, the calculus of generalizations of addition and multiplication.—**Universal consent.** See ★*consent*.—**Universal coupling.** (*b*) A universal joint; a Cardan joint. (*c*) A form of pipe-union in which the two pieces joined together, end to end, may be at an angle with each other, or not in line: effected by the use of a spherical surface of contact, one half male and the other female, pressed together by a nut forming part of the female half.—**Universal paper, system.** See ★*paper*, ★*system*.

universe, *n.*—**Island universe**, in *astron.*, a separate stellar system of limited extent, occupying a detached position in space and forming as it were an island in the ocean of illimitable space, in which other 'universes' exist. To such an 'island universe' our sun is by many supposed to belong.

universitize (ū-ni-vėr′si-tīz), *v. t.*; pret. and pp. *universitized*, ppr. *universitizing*. To convert into a university; add the character of a university to. [Rare.]

> The *universitized* college is encroached on from below till . . . would abandon the first one or two years, while the senior year is often given over to the professional school. *G. S. Hall*, Adolescence, II. 531.

university, *n.*—**University extension.** The movement was initiated by the University of Cambridge, England, in 1873, for the extension of university teaching by university instructors to those, chiefly, who desire the benefits of university training but who for any reason cannot reside at a university or even in a university town. The movement was taken up by the other universities and spread all over Great Britain, and in 1887 was taken up in the United States where it received new developments. The instruction is given principally by lectures, but class-work and class-reviews, home-work and correspondence are sometimes added.

univocal, *a.* 5. In *math.*, having only one result.—**Univocal operation.** See ★*operation*.

univoltine (ū-ni-vol′tin), *a.* [Appar. < L. *unus*, one, + It. *volta*, twin, + *-ine*^{1}.] Having but one generation annually: said of the ordinary races of the domestic silkworm to distinguish them from those races having two or more generations.

univore (ū′ni-vōr), *a.* and *n.* [*univor*(*ous*).] Noting a parasitic fungus which is restricted to a single host-plant.

> He [H. Klebahn] concludes that a fungus may suddenly choose a new host. Specialization may proceed from many hosts to one (plurivore fungus), or from living on a single host (*univore*) the rest may develop a capacity to infect several.
> *Jour. Roy. Micros. Soc.*, April, 1904, p. 222.

univorous (ū-niv′ǫ-rus), *a.* [L. *unus*, one, + *vorare*, eat, + *-ous.*] In *bot.*, living upon a single host: said of parasites. See ★*plurivorous*.

unleached (un-lēcht′), *a.* Not leached: as applied to wood-ashes, implying an important distinction, since such ashes when unleached, or not exhausted of soluble matter by the action of water, have notable manurial value on account of the potash salts which are present; but the value on this account is almost entirely lost after leaching.

> *Unleached* wood ashes spread about the trees after they are planted afford an excellent fertilizer.
> *Yearbook U. S. Dept. Agr.*, 1901, p. 396.

unlidded (un-lid′ed), *a.* Not covered by the eyelid. [Rare.]

> The *unlidded* eye of God, awake, aware.
> *Browning*, Ring and Book, iii. 1366.

unlikemindedness (un-līk-mīn′ded-nes), *n.* Dissimilarity of mind from mind, in feelings, ideas, or purposes; differences of language, religion, or knowledge in a population. *Giddings*, Elem. of Sociol., p. 290.

unlisted (un-lis′ted), *a.* Not listed; not placed in a (or the) list: as, *unlisted* securities—those not listed in the stock exchange.

unlithified (un-lith′i-fīd), *a.* Not converted into stone: as applied to volcanic ashes, the term means that these are still in loose form and have not become compacted by pressure, fusion, or cementing action. *Amer. Geol.*, Sept., 1903, p. 173.

unmechanical (un-mẹ-kan′i-kal), *a.* 1. Not mechanical.—2. Not in accordance with the observed laws or principles of mechanics, physics, or mathematics, conformity to which is necessary to success.—3. Not in accordance with practical experience in mechanical matters as respects convenient or continuous operation in practice.—4. Not designed in accordance with the methods or practice of the shop or factory which produces a successful commercial product.

unmediated (un-mē′di-ā-ted), *a.* Not mediated; unconnected; unrelated; lacking a common middle term.

> Living experience refuses to be sundered into the *unmediated* dualism of res cogitans and res extensa.
> *Encyc. Brit.*, XXXII. 66.

unmedullated (un-med′u-lạ̄-ted), *a.* Not having a medulla: said of a certain form of nerve-fiber. *Buck*, Med. Handbook, II. 320.

unmetered (un-mē′tėrd), *a.* Not measured by a meter, as a flow of water or gas of which no such measurement is taken.

unmold^2 (un-mōld′), *v. t.* [*un-*^{2} + *mold*^{4}, *n.*] To take out of its mold, as a frozen cream.

> To *unmold* creams.—Dip the mold into cold water, wipe it dry and invert it on the dish . . . hence the *unmolding* of creams requires great care.
> *Century Cook Book*, p. 493.

unnaturalist (un-nat′ū-ral-ist), *n.* One who is wanting in natural feeling. [Rare.]

> Me, a poor unit of humanity, to be treated like a polypus under the scissors of an experimental naturalist, or *unnaturalist*. *Southey*, Doctor, interchap. xiii.

unneutralized (un-nū′tral-īzd), *a.* Not rendered neutral.

> The *unneutralized* excess of bacterial toxins circulates in the blood serum. *Buck*, Med. Handbook, III. 535.

unofficial (un-ǫ-fish′al), *a.* Not official; specifically, in *med.*, not approved by an authoritative body.

unoperated (un-op′ẹ-rạ̄-ted), *a.* Not operated upon.

unordered, *a.* 4. In *math.*, without reference to or consideration of the order: as, an *unordered* pair.

unorganizable (un-ôr′gan-ī-za-bl), *a.* Incapable of becoming organized.

> The floor [of wound in plant] is covered by dead or dying *unorganizable* materials, without any layer of regenerative cells. *Encyc. Brit.*, XXXI. 515.

unoxidized (un-ok′si-dīzd), *a.* Not oxidized. As applied to portions of human food, the term signifies that these have not undergone chemical changes involving combination with oxygen, but not infrequently the expression 'imperfectly' or 'incompletely oxidized' would in such a case be more correct.

> The *unoxidized* materials excreted by the kidneys, intestines, and otherwise. *Encyc. Brit.*, XXVII. 444.

unpair (un-pãr′), *n.* Something that is not paired: the opposite of *pair*. *N. E. D.*

unparticipate (un-pär-tis′i-pāt), *a.* Having no part or share; unparticipating. [Rare.]

unperoxidizable (un-pėr-ok′si-dī-za-bl), *a.* Incapable of being converted into a peroxid, as some of the metals which do not form peroxids. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 465.

unpersuasive, *a.* 2. Specifically in art criticism, noting unreality in a painting, or failure to express the actual function of the thing represented.

> Were it not for the fatiguing series of *unpersuasive* waterfalls, which too often represent him, his real qualities would have more chance of making themselves felt.
> *L. Binyon*, in Portfolio, N. S., XXI. 49.

unphysiological (un-fiz″i-ǭ-loj′i-kal), *a.* Not in accordance with the laws of physiology.

> Sophists perpetuate *unphysiological* feeding, and the patent foods, their illogical writings being seized upon by traffickers and sent broadcast.
> *Med. Record*, March 7, 1903, p. 372.

unpigmented (un-pig′men-ted), *a.* Devoid of pigment.

> If we wish to see the early and *unpigmented* forms, we must look for them during the later stage of rigor or the earlier part of the stage of pyrexia.
> *Pop. Sci. Mo.*, Feb., 1901, p. 365.

unqueen, *v. t.* 2. To remove the queen bee from (a colony).

unsealer (un-sēl′ėr), *n.* One who, or that which, unseals.

> Smiling on him as Heaven smiles on Hell,
> With a sad love, remembering when he stood
> Not fallen yet, the *unsealer* of her heart,
> Of all her holy dreams the holiest part.
> *Lowell*, A Legend of Brittany, ii. 22.

unseen, *a.*—**To buy sight unseen**, to buy (something) without having seen it, taking it as it is; to buy 'a pig in a poke.' [Colloq.]

II. *n.* That which is unseen; something designed not to be seen.

> For example, Mr. H— is called in by an examiner for the Fortescue Scholarship at one of our great universities, who has incautiously left about in his rooms the proof of a Greek *unseen* in three long slips. A student has spied the paper, entered, and copied out the first slip, which takes him a quarter of an hour!
> *Athenæum*, April 1, 1905, p. 391.

unsegmented (un-seg′men-ted), *a.* Not divided into segments; noting the egg which has not undergone cleavage, or the embryo or parts of the embryo which show no metameric arrangement of their parts.

unself (un-self′), *v. t.* To separate or free from (one- or it-) self; transform into a different self. [Rare.]

> The whole sad strange plot, the grotesque intrigue
> To make me and my friend *unself* ourselves,
> Be other man and woman than we were!
> Think it out, you who have the time!
> *Browning*, Ring and Book, vii. 707.

unsense (un′sens), *n.* Lack of sense; folly.

> Fisherman I 've been since I seed the *unsense* of sea-dangerin'.
> *R. Kipling*, Their Lawful Occasions, in Traffics and Dis-[coveries, p. 127.

unsense (un-sens′), *v. t.*; pret. and pp. *unsensed*, ppr. *unsensing*. To deprive of sense or consciousness; render unconscious. [Rare.]

> One blow, given with the proper play of his athletic arm, will *unsense* a giant. *Borrow*, Lavengro, xxvi.

unshop (un-shop′), *v. t.* To dismiss from employment in a shop; throw out of employment. [Rare.]

unsilvered (un-sil′vėrd), *a.* Not coated with silver: said in optics of a mirror in which the reflecting surface is that of the glass itself and not that of a layer of silver deposited upon the glass to increase the reflecting power.

unsingable (un-sing′a-bl), *a.* In *music*, noting a piece or passage, actual or hypothetical, that cannot be sung.

unsoiling (un-soil′ing), *n.* The act or process of stripping the surface of dirt or soil from the top of a quarry or bed of clay or other valuable material: the first stage of an open-cut.

unspeakable, *a.* **3.** Not able to speak. [Rare.]

> With no company but that of Panks (my dog), who generously shares his dumbness with me and looks up at me as who should say, "You are become *unspeakable* as one of us, poor old fellow; I pity you!"
> *Lowell*, Letters, II. 415.

unstalked (un-stâkt′), *a.* Having no stem, as some genera of crinoids. *Encyc. Brit.*, XXVII. 618.

unsteady, *a.* (*f*) In *mech.*, having a motion which is not uniform or which does not take place with a constant angular velocity, or around a permanent axis through the center of gravity of the mass. Revolving bodies out of running balance have an unsteady motion.

unstow (un-stō′), *v. t.* To empty of its cargo or contents; unload.

> First and foremost, we have to *unstow* the hold, and deposit its contents in the storehouse on Butler Island. Brooks and a party are now briskly engaged in this double labor. *Kane*, Arctic Expl., I. 105.

unstraining (un-strā′ning), *n.* In *physics*, the process of release from strain.

> When the atoms are in motion these strain-forms produce straining and *unstraining* in the æther as they pass across it, which in its motional or kinetic aspect constitutes the resulting magnetic field; as the strains are slight the coefficient of inertia here involved must be great. *Encyc. Brit.*, XXV. 108.

unstring, *v. t.* **5.** In *archery*, to loosen or remove the bowstring from one end of (the bow), which is thus relieved of all tension and becomes quite or nearly straight: opposed to *brace* and *string*. Bows are kept unstrung when not in use, except among some primitive peoples.

unstriped (un-strīpt′), *a.* Same as *unstriated*.

> The three varieties of muscle—*unstriped*, cardiac, and striped. *Encyc. Brit.*, XXV. 395.

unstructural (un-struk′ţū-ral̤), *a.* Without regard to proper construction. [Rare.]

> Wood tied into different shapes in the most *unstructural* manner.
> *K. W. Clouston*, Chippendale Period in Eng. Furniture, [p. 37.

unsummered (un-sum′ėrd), *a.* No longer showing the characters of summer; autumnal or wintry. [Rare.]

> And, now to these *unsummer'd* skies
> The summer bird is still,
> Far off a phantom cuckoo cries
> From out a phantom hill.
> *Tennyson*, Pref. Poem to My Brother's Sonnets, iii. 1.

unterred†, *a.* Unburied; not interred.

> This treasure of thine eyes, if spent for those
> That lye *unterr'd*, wanting their funeral rites,
> And restless walk upon the Stygian strand,
> . . . .
> Would send them over to Elizium.
> *Marmion*, A Fine Companion, i. 1.

untoned (un-tōnd′), *a.* Not toned; not characterized by permanent distinctive tones as a part of the pronunciation.

> But agglutinating forms reappear in Karen, while a distinctly polysyllabic group of *untoned* languages, with Oceanic (Malayo-Polynesian) affinities, occupies a great part of Camboja and surrounding uplands (Khmer, Kuy, Charay, Stieng, Cham). *Keane*, Ethnology, p. 326.

unvoice (un-vois′), *v. t.*; pret. and pp. *unvoiced*, ppr. *unvoicing*. In *phonetics*, to deprive of voice, or sonant quality; render nonsonant or surd.

unwarrant (un-wor′an̈t), *v. t.* To deprive of warrant or guarantee; disallow the propriety or safety of (doing something). [Rare.]

> On the ground that the state of trade absolutely *unwarrants* it.
> *St. James's Gazette*, Dec. 31, 1902, p. 13, quoted in N. [and Q., 9th ser., XI. 387.

unyeaned (un-yēnd′), *a.* Not yeaned or born: said of a sheep or goat. *C. Vickerman*, Woollen Spinning, p. 46.

up, *adv.* **15.** In *printing*, finished; noting completion of a task: as, the chapter is *up*; the paper is *up*.—**One up,** in *golf*, one hole ahead: said of one's opponent.—**To be up to one,** to be for one to do; to be something one has to do. [Slang.]

> Why am I minus when it's *up to me*
> To brace my Paris Pansy for a glide [dance].
> *Wallace Irwin*, Love Sonnets of a Hoodlum, xiv.

U. P. An abbreviation (*b*) of *underproof*, as applied to alcoholic liquors.

upæthral, *a.* Same as *hypethral*.

upaithric (ūp-ī′thrik), *a.* Same as *hypethral*.

> I now understand why the Greeks were such great poets. . . . They lived in a perpetual commerce with external nature, and nourished themselves upon the spirit of its forms. . . . Their temples were mostly *upaithric*; and the flying clouds, the stars, or the deep sky, were seen above. *Shelley*, Letter XXXII. (from Naples).

up-bow (up′bō), *n.* In *violin-playing*, a stroke of the bow upward, beginning with the point: opposed to ★*down-bow*.

U. P. C. An abbreviation of *United Presbyterian Church*.

upcomer (up′kum-ėr), *n.* A term used, as synonymous with *upcast*, *upraise*, and *uptake* or *riser*, for a duct or tube or channel within which the flow of the contained fluid is upward from below.

> The water flows through the last bank of tubes from the rear steam drum, and the third bank of tubes from the mid steam drum into the rear water drum. That is to say, the third and fourth nests of tubes are downcomers, and the first and second banks *upcomers*.
> *Sci. Amer. Sup.*, Jan. 10, 1903, p. 22592.

up-end, *v.* **II.** *intrans.* To stand on end.

> A silvery-white ghost rose bolt upright from the oily water. . . . "Grampus," said [Dan]. "Beggin' fer fish-heads. They *up-eend* thet way when they 're hungry."
> *R. Kipling*, Captains Courageous, ii.

Upeneus (ū-pẹ̄-nē′us), *n.* [NL., said to be formed (irregularly for **Hypeneus*) from Gr. *ὑπήνη*, the upper lip, prop. the hair on the upper lip.] A genus of fishes of the family *Mullidæ*, containing numerous species which inhabit tropical seas.

upgrade (up-grād′), *v. t.* In *stock-raising*, to raise the grade of by the introduction of a higher strain of blood: as, to *upgrade* a herd.

> All these qualities must be blended as a strongly flowing stream in the heredity of the breed. These qualities must be so prepotent that in *upgrading* common stock they will predominate in the blood of males used for that purpose. *Yearbook U. S. Dept. Agr.*, 1901, p. 221.

up-grade (up′grād), *n.* An ascending grade.

up-keep (up′kēp), *n.* **1.** Maintenance; support; specifically, the process of keeping up an industrial 'plant,' a machine, an institution, etc., at its condition of maximum efficiency, as by repair and renewal.

> Multiple voltage and similar systems, although probably not increasing the cost of the motor itself, increase the cost of the installation as a whole, as well as the cost of *upkeep*. *Elect. World and Engin.*, Dec. 5, 1903, p. 930.

> Although the initial cost is heavy, still the cost of *upkeep* is lower than that for most of the other paving materials. *Nature*, Aug. 3, 1903, p. 316.

2. The cost of such keeping up, including all [elements of operating expense, deterioration, interest, and the like.

> The *upkeep* of the [arc] lamp, including carbons, labour for trimming and repairs, will be about £16 to £18 per annum. *Encyc. Brit.*, XXVIII. 86.

uplift, *n.* **3.** An elevation.

> These majestic forms usually depend as much on the deep erosion of great valleys by streams as on their lofty *uplift*. Unlike the simple tilted blocks of Oregon, or the orderly folds of the Jura, the greater ranges show little or nothing of their original form.
> *W. M. Davis*, Elem. Phys. Geog.

upokororo (ō″pō-kō-rō′rō), *n.* [Maori.] A name used by the natives of New Zealand for *Prototroctes oxyrhynchus*, a fresh-water food-fish of the family *Haplochitonidæ*.

upon, *prep.*—**Upon my word, soul,** etc., by my word, etc.

> *Upon my soul*, Jack, thou art a very impudent fellow!
> *Sheridan*, Rivals, iv. 2.

Upper deck. See ★*deck*, 2.—**Upper Pentamerus limestone.** See *Becraft* ★*limestone*.

uppercut (up′ėr-kut), *n.* In pugilism, an upward blow.

> He swung *uppercuts* and jabbed, and had M.—— a weary-looking individual by the end of the fifth round.
> *N. Y. Evening Globe*, July 28, 1904.

upperwing (up′ėr-wing), *n.* A British collectors' name for a European noctuid moth, *Orthosia croceago*.

upperwood (up′ėr-wu̇d), *n.* [*upper* + *wood*, translating G. *oberholz*.] The tall growth of a forest as opposed to the undergrowth. *Science*, May 23, 1902, p. 820.

upraise (up′rāz), *n.* [*upraise*, *v.*] In *mech.*, a riser; an up-take; specifically, in *mining*, a secondary shaft or mill-hole carried from one heading or gangway up toward another.

upright, *n.* **5.** In *golf*, the lie of a club. See ★*lie*[1].—**Virtual upright,** in *naval arch.*, the apparent direction of the vertical on a vessel rolling in the waves; differing from the true upright by the composition of the accelerations due to gravity and to the motion of the wave.

upset, *n.* **2.** See the extract.

> An "*upset*," or, as it may be termed, a "transverse shake" is much more rarely met with, and, so far as I know, is found exclusively in foreign hard-woods, grown chiefly in tropical or subtropical climates. It consists of a complete severence of the longitudinal fibers of the tree in certain spots; but, as a rule, the defect is not very extensive. *Sci. Amer. Sup.*, March 25, 1905, p. 24433.

Angle of upset. See ★*angle*3.

upsetting-press (up-set′ing-pres), *n.* See ★*press*[1].

upshoot, *n.* **2.** An upward curve, as of a pitched base-ball. *Sci. Amer.*, July 16, 1904, p. 42.

upsilon (ūp′si-lon), *n.* [Gr. ὖ + ψιλόν, neut. of ψιλός, bare.] The Greek letter Υ, *υ*, corresponding to the English *u* (and *y*).

up-slip (up′slip), *n.* In *geol.*, the passage upward of one side of a fault, according to a conception which assumes the rise of one wall instead of the fall of the other.

> The Wasatch Mountains are of immature age, and consequently are now rising. Raw scarps at the foot of a spur just northeast from the city, and similar scarps at the base of the main range a short distance to the southeast, tell of comparatively recent *up-slips* of these sections of the mountain mass. *Science*, Oct. 25, 1907, p. 556.

upstander (up′stand″ėr), *n.* One of two vertical pieces at the rear end of a dog-sledge.

> I had scarcely time to seize the *upstanders* when my dogs were off. As we neared the bear, all the dogs were loosened, and were at him like a cloud.
> *R. E. Peary*, in McClure's Mag., Feb., 1903, p. 919.

upstanding (up-stan′ding), *a.* **1.** Having an erect and vigorous body.

> Thin I wint downshtrame in the flat an' left him my blessin'. May the Saints carry ut where ut shud go, for he was a fine *upstandin'* young orficer.
> *R. Kipling*, The Taking of Lungtungpen, in Plain Tales [from the Hills, p. 117.

2. Standing well up from the ground; having comparatively long legs and an erect carriage: said of horses, pigeons, and other domesticated animals.

> The roadster is more *upstanding*, not so wide, and entirely lacks the massiveness of the drafter.
> *U. S. Dept. Agr.*, Bur. Animal Industry, Bulletin 37, [1902, p. 23.

> *Upstanding* birds, with wide shoulders, long bodies and legs. *Book of Pigeons.*

up-stroke (up′strōk), *n.* In *mech.*, the traverse of a piston, or of any reciprocating or rocking element of an engine or machine, in which the driving element is moving upward, or the principal driven element is coming up.

uptake, *n.* **3.** A pipe or duct or channel leading gas, water, steam, or other liquid upward from below: used of part of a boiler furnace flue-system, in the gas-producer, blast-furnace, and elsewhere; specifically, a flue leading hot gas from the combustion-chamber or smoke-box to the chimney, in gas-making or in boiler-settings.

upway (up′wā), *n.* Same as ★*upslip*.

> An Attempt to Detect and Measure any Relative Movement of the *Upway*, that may now be taking place at the Ridgeway Fault, near Strata Dorsetshire.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 52.

Ur. A chemical symbol of *uranium*, less commonly used than the single letter U.

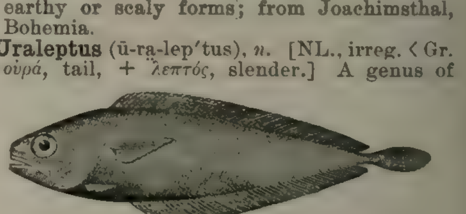
urachal (ū′ra̤-ka̤l), *a.* [*urachus* + *-al*[1].] Of or pertaining to the urachus.

urachovesical (ū″ra̤-kọ̄-ves′i-kal), *a.* [NL. *urachus* + *vesica*, bladder, + *-al*[1].] Relating to both the urachus and the bladder. *Buck*, Med. Handbook, VII. 708.

uracil (ū′ra̤-sil), *n.* [(*methylmercapto-*)*uracil*.] A colorless compound,  $\begin{array}{l}\mathrm{CO.CH{:}CH}\\ |\qquad\quad\ \ |\\ \mathrm{NH.CO.NH}\end{array}$, prepared by the action of hydrochloric acid on methylmercapto-uracil. It crystallizes in spherical masses of minute needles and melts at 338° C.

uraconite (ū′ra̤-kọ̄-nīt), *n.* [*ura*(*nium*) + Gr. *κονία*, powder, + *-ite*[2].] A hydrated uranium sulphate of a yellow color, occurring in earthy or scaly forms; from Joachimsthal, Bohemia.

Uraleptus (ū-ra̤-lep′tus), *n.* [NL., irreg. < Gr. *οὐρά*, tail, + *λεπτός*, slender.] A genus of fishes of the family *Gadidæ*, found in deep waters of the Atlantic.



Uraleptus malardi.
(From Bulletin 47, U. S. Nat. Museum.)

Uralian, *a.* **2.** In *geol.*, same as ★*Gshelian*.

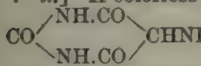
uraline (ū′ra̤-lin), *n.* [*ural* + *-ine*[2].] Same as *ural*.

uralite, *n.* **2.** The trade-name of a fire-proof building material, said to be made from disintegrated asbestos fiber with admixture of silicate of soda, carbonate of soda, chalk, mineral pigments, and glue, pressed into molded forms, dried, and baked. It is intended to replace wood where incombustibility is important, and in this capacity has been to some extent used in the internal fittings of ships of war.

uralium (ụ̄-rā'li-um), *n.* [NL. (in a F. spelling *ouralium*), named from the Ural Mountains in Russia.] A supposed new metallic element announced in 1879 as present in Russian native platina. Its existence has not been confirmed. Originally written (in French style) *ouralium*.

uralorthite (ū-rạl-ôr'thīt), *n.* [G. *Uralorthit* (1841), < *Ural* (mountains) + *orthite*.] A variety of allanite from the Ural Mountains, occurring in large prismatic crystals of a pitch-black color.

uramil (ū'rạ-mil), *n.* [*ur*(*ic*) + *am*(*monium*) + *-il*.] A colorless compound,



$\mathrm{CO}\begin{matrix}\diagup\mathrm{NH.CO}\diagdown\\ \diagdown\mathrm{NH.CO}\diagup\end{matrix}\mathrm{CHNH_2}$, prepared by the action of ammonium chlorid on alloxantin. It crystallizes in silky, lustrous needles. Also called *murexan* and *aminobarbituric acid*.

uramilic (ū-rạ-mil'ik), *a.* [*uramil* + *-ic*.] Pertaining to uramil or to uramilic acid.—**Uramilic acid**, a colorless compound, $C_8H_9O_7N_5$ (?), prepared by the action of dilute sulphuric acid on uramil. It crystallizes in slender needles or quadratic prisms.

uranalysis (ū-rạ-nal'i-sis), *n.* [NL., < Gr. *οὖρον*, urine, + *ἀνάλυσις*, analysis.] Analysis of the urine.

Urania, *n.* **4.** See the extract.

We learn that an "*Urania*," that is to say, an institution in which all the most interesting features of the various branches of science and technology will be exhibited to the public in a systematic manner, has lately been founded in Vienna. *Geog. Jour.* (R. G. S.), XI. 444.

uranic², *a.*—**Uranic acid**, a yellow powder obtained by boiling a solution of uranium nitrate in absolute alcohol, washing with water the precipitate formed, and drying it at a low temperature. Its composition is expressed by the formula H_2UO_4, and on being heated it is resolved into water and uranic oxid, UO_3. The name *uranic acid* has sometimes been incorrectly given to this oxid because on union with more electropositive metallic oxids it forms the salts known as uranates.

uranic³ (ụ̄-ran'ik), *a.* [Gr. *οὐρανός*, the palate (a particular use of *οὐρανός*, the sky), + *-ic*.] In *anthrop.*, relating to the palate.—**Uranic index**, the external width of the palate measured at the second molars expressed in per cents. of its length.

uranicentric (ū'rạ-ni-sen'trik), *a.* [Prop. **Uranocentric*, < *Uranus* + Gr. *κέντρον*, center.] Having Uranus as a center; as seen from the center of Uranus.

The *Uranicentric* motion [of the satellites] is retrograde, the planes of their orbits lying nearly perpendicular to the planet's ecliptic. *Chambers*, Descriptive Astron., p. 152.

Uranidea (ū-rạ-nid'ẹ̄-ạ̈), *n.* [NL., irreg. < Gr. *οὐρανός*, the sky, + *ἰδεῖν*, see.] A genus of cottoid fishes found in cold streams and springs of the United States.

uranidin (ụ̄-ran'i-din), *n.* [*uran*(*ic*) + *-id* + *-in*².] A coloring matter found by Krukenberg in different beetles and lepidopterous pupæ.

The melanosis or blackening of insect blood, for instance, is due to the oxidation of a chromogen, the pigment produced being known as a *uranidine*.
Encyc. Brit., XXVII. 151.

uraniid (ụ̄-rā'ni-id), *n.* and *a.* **I.** *n.* One of the lepidopterous family *Uraniidæ*.

II. *a.* Having the characteristics of or belonging to the *Uraniidæ*.

uranin¹, **uranine**¹ (ū'rạ-nin), *n.* The trade-name of the sodium salt of fluorescein or methylfluorescein, the solution of which in water exhibits a magnificent yellowish-green fluorescence like that of uranium glass. The name is also applied to the sodium salt of benzylfluorescein, used as a dyestuff, which is also known as *chrysolin*.

The esculin screen suppresses the ultra-violet and part of the violet spectrum rays; and the photograph, made chiefly by the blue rays, is a very good one. The *uranine* screen suppresses the blue spectrum rays and part of the violet; and the photograph, made chiefly by the ultra-violet rays, is very bad indeed.
Jour. Roy. Micros. Soc., Dec., 1904, p. 634.

uranin², **uranine**² (ū'rạ-nin), *n.* Same as *pitchblende* or *uraninite*. See *uraninite*.

uraninite, *n.* This mineral, in its different varieties (the crystallized kinds called *cleveite*, *bröggerite*, *nivenite*, etc., and the more abundant amorphous and impure *pitchblende*), has become of much importance as being the chief source of radium. See ★*radium* and ★*radioactivity*. From the investigation of it also has been derived a large part of our present knowledge of the transformation of uranium into radium and the further successive changes of the latter element with lead as the probable final step: all analyses have shown a small amount of this element whose presence was hitherto unexplained. It has also been found that many varieties of uraninite yield the gas helium, which is one of the early transformation products of radium.

uranium, *n.* Metallic uranium, as obtained in the fused condition by means of an electric furnace, is compact, white, and lustrous, capable of taking a high polish, of sp. gr. 18.7, melting at a very high temperature, and volatilizing more readily than iron, slowly acted upon by water at ordinary temperature, burning in oxygen or chlorin, and combining freely with nitrogen at 1000° C. The foundation was laid for the modern study of the phenomena of radioactivity when, in 1896, M. Henri Becquerel observed that a salt of uranium emits rays which affect a photographic plate screened by black paper opaque to ordinary light. This property proved to be common to all the salts of uranium and to uranium itself, and is exhibited continuously by uranium and its compounds even when they are kept in darkness. The intensity of the radiation is not materially affected by change of temperature within very wide limits. Not only are photographic effects produced by the radiation from uranium compounds, but positively or negatively electrified bodies, also, are discharged by ionization of the surrounding air. Subsequent investigation has shown that the uranium radiation is complex, and includes the emission of rays of the three types which have been designated as α, β, and γ respectively. No condensible gaseous emanation is given off, as in the case of radium and of thorium, but the radioactivity of uranium involves the constant production of a new kind of matter, itself temporarily active. See ★*uranium X*. The recent study of radioactive minerals has shown that the amount of radium in a mineral is proportional to the amount of uranium present. Uranium is believed to be the parent or generating substance of an extensive series of radioactive elements which are successively produced by the atomic disintegration of the uranium. This series of products includes ionium, actinium, radium, and polonium. The final substance remaining after the radioactive transformations are concluded is supposed to be ordinary lead.—**Uranium ocher.** Same as *uran-ocher*. All the substances described under this name appear to be more or less basic sulphates of uranium.—**Uranium X.** In 1900 it was shown by Sir William Crookes that if a solution of uranium nitrate is precipitated by ammonium carbonate and this reagent is added in excess so that the greater part of the precipitate is redissolved, there is left a very small amount of undissolved residue, which consists in large measure of impurities of common character. This residue includes in minute quantity a substance which, measured by its β-radiation, is several hundred times as radioactive, weight for weight, as the original uranium salt, while the larger part of this salt, which has been dissolved by ammonium carbonate in excess, has lost its β-ray activity. Other methods of separating the uranium of a compound into a highly radioactive and an inactive portion have since been discovered. In each case prolonged keeping of the products shows that in the course of weeks or months the highly active portion loses its activity and the inactive portion becomes again active. Hence it appears that the radioactivity of uranium and its compounds involves the continuous production of a new and chemically distinct kind of matter, of greatly enhanced but gradually lost radioactivity. To this immediate product from uranium the name 'Uranium X' has been given.—**Uranium yellow.** See ★*yellow*.

uranium-glass (ụ̄-rā'ni-um-glȧs''), *n.* Glass colored yellow by means of oxid of uranium. It exhibits a characteristic and beautiful greenish fluorescence.

uranniobite (ū-ra-nī'ọ̄-bīt), *n.* [*uran*(*ium*) + *niobite*.] A variety of uraninite from Norway which occurs in octahedral crystals.

uranochalcite (ū''rạ-nọ̄-kal'sīt), *n.* [*uranium* + Gr. *χαλκός*, copper, + *-ite*².] A sulphate of uranium, copper, and calcium which occurs in green incrustations of doubtful homogeneity: from Joachimsthal, Bohemia.

uranocircite (ū''rạ-nọ̄-sėr'sīt), *n.* [*uranium* + Gr. *κίρκος*, a falcon, + *-ite*². The name alludes to the place of origin, Falkenstein.] A phosphate of uranium and barium analogous in composition to autunite and similar in crystallization, from Falkenstein, Vogtland.

uranolith (ụ̄-ran'ọ̄-lith), *n.* Same as *uranolite*.

Nebular chemistry has very little in common with the chemistry of "*uranoliths*."
A. M. Clerke, Problems in Astrophysics, p. 534.

uranometria (ū''rạ-nọ̄-met'ri-ạ̈), *n.* [NL., < Gr. *οὐρανός*, heaven, + *μετρία*, measurement.] A list of stars which are visible to the naked eye, usually arranged according to constellations, and giving their names or other designations, their magnitudes, and their approximate positions. Same as *uranometry*, 2.

This ingenious form of photometer has enjoyed considerable reputation, but no astronomer has yet persevered in producing a complete '*uranometria*' by its aid.
Encyc. Brit., XXXI. 707.

uranophane (ụ̄-ran'ọ̄-fān), *n.* A hydrous silicate of uranium and calcium which occurs in radiated aggregates of acicular crystals having a bright yellow color: probably the same mineral as uranotil.

uranophotography (ū''rạ-nọ̄-fọ̄-tog'rạ-fi), *n.* [Gr. *οὐρανός*, the sky, + E. *photography*.] The photography of celestial spaces.

Urano-photography, the photography of celestial spaces. Chromo-photography, the direct obtaining of the reproduction of colors by photography.
Woodbury, Encyc. Dict. of Photog., p. 304.

uranopilite (ū-rạ-nop'i-līt), *n.* [*uranium* + Gr. *πῖλος*, felt, + *-ite*².] A hydrous sulphate of uranium and calcium occurring in yellow crystalline incrustations.

uranoplastic (ū''rạ-nọ̄-plas'tik), *a.* [*uranoplast*(*y*) + *-ic*.] Relating to uranoplasty or the operation for closure of a cleft palate. *Med. Record*, May 30, 1903, p. 884.

uranorraphia (ū''rạ-nọ̄-raf'i-ạ̈), *n.* [NL., < Gr. *οὐρανός*, the palate, + *ῥαφή*, sewing.] Same as *uraniscorraphy*.

uranoschisis (ū-rạ-nos'ki-sis), *n.* [NL., < Gr. *οὐρανός*, the palate, + *σχίσις*, cleaving.] The condition of having a cleft palate.

Uranoscopinæ (ū-rạ-nọ̄-skọ̄-pī'nē), *n. pl.* [NL., < *Uranoscopus* + *-inæ*.] A subfamily of stargazers (*Uranoscopidæ*), fishes found on both coasts of the warmer parts of America.

uranoso-uranic (ụ̄-ran''ọ̄-sọ̄-ụ̄-ran'ik), *a.* Noting a dark green oxid of uranium, of sp. gr. 7.2 or 7.3, and having the composition of uranyl-uranate, U_3O_8 or $UO_2.2UO_3$ or $(UO_2)_2UO_4$. It is one of the principal constituents of the mineral uraninite or pitchblende, though the proportions of uranium and oxygen vary widely in specimens from different localities.

uranosphærite (ū''rạ-nọ̄-sfē'rīt), *n.* [*uranium* + Gr. *σφαῖρα*, sphere, + *-ite*².] A hydrous bismuth uranate which occurs in semiglobular crystalline aggregations of an orange-yellow or brick-red color: from Schneeberg, Saxony.

uranospinite (ū''rạ-nọ̄-spī'nīt), *n.* [*uranium* + Gr. *σπίνος*, a siskin. The second part of the name alludes to the color of the substance.] A hydrous arsenate of uranium and calcium analogous to autunite in composition and similar in crystallization: from Neustädtel, near Schneeberg, Saxony.

uranotantalite (ū''rạ-nọ̄-tan'tạ-līt), *n.* [*uranium* + *tantalum* + *-ite*².] Same as *samarskite*.

uranothallite (ū''rạ-nọ̄-thal'īt), *n.* [*uranium* + Gr. *θαλλός*, a green shoot, + *-ite*².] A hydrous carbonate of uranium and calcium which occurs in scaly or granular crystalline aggregates of a siskin-green color: from Joachimsthal, Bohemia.

uranotil (ụ̄-ran'ọ̄-til), *n.* [NL., < *uranium* + Gr. *τίλος*, a fiber.] A hydrous silicate of uranium and calcium closely related to, and probably identical with, uranophane.

uranyl (ū'rạ-nil), *n.* [*uranium* + *-yl*.] Uranium dioxid, UO_2, when it occurs as a dyad radical in combination: as, for example, potassium and uranyl sulphate, $K_2.UO_2.(SO_4)_2.(H_2O)_2$, the salt with which Becquerel's first experiment in regard to radioactivity was made.

urapterygid (ū-rap-ter'i-jid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Urapterygidæ*.

II. *a.* Having the characteristics of or belonging to the *Urapterygidæ*.

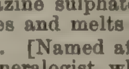
urase (ū'rās), *n.* [*ur*(*ic*) + *-ase*.] A ferment which decomposes urea with the formation of ammonium carbonate. It occurs in various bacteria and has also been demonstrated in the mammalian liver.

urasol (ū'rạ-sol), *n.* [*ur*(*ic*) + *-ase* + *-ol*.] The trade-name of a substance which occurs in minute crystals, insoluble in water but soluble in alcohol or ether, intended for medicinal use as a solvent of uric acid, and a remedy in the treatment of muscular rheumatism and gout: said to be a condensation product of formaldehyde with acetic and salicylic acids.

Uraspis (ụ̄-ras'pis), *n.* [NL., < Gr. *οὐρά*, tail, + *ἀσπίς*, a shield.] A subgenus of *Caranx*, carangoid fishes widely distributed in warm parts of the Atlantic.

uraturia (ū-rạ-tū'ri-ạ̈), *n.* [NL., < E. *urate* + Gr. *οὖρον*, urine.] The presence of an excessive amount of urates in the urine.

urazole (ūr-az'ōl), *n.* [*ur*(*ic*) + *azo-* + *-ole*.] A colorless compound,



$\mathrm{NH}\begin{matrix}\diagup\mathrm{CO.NH}\\ \quad\quad |\\ \diagdown\mathrm{CO.NH}\end{matrix}$, prepared by the action of hydrazine sulphate on urea. It crystallizes in plates and melts at 244° C.

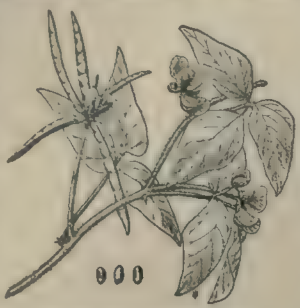
urbanite (ėr'bạ-nīt), *n.* [Named after *Urban* Hjärne, a Swedish mineralogist, who investigated it.] A member of the pyroxene group intermediate between diopside and acmite. It occurs in brown pyramidal crystals at Långban, Sweden.

urbanization (ėr″bạn-i-zā′shọn), *n.* The process of rendering urbane or urban in character: the state of being urbanized.

> Attention has been prominently directed, by the report of the Committee on Physical Deterioration, to what is there described as the "*urbanization*" of the people; and hence few portions of the volume now issued will be of more general interest than those which set forth the extent to which this process is actually being carried on. *Science*, Aug. 12, 1904, p. 220.

urbification (ėr″bi-fi-kā′shọn), *n.* The process of rendering, or the state of being, urban; concentration in urban communities. [Rare.]

Urd[1] (ėrd), *n.* [ONorth. *Urdhr.* See *weird, n.*] In *Scand. myth.*, one of the three Fates, the Norn of the past.



Urd (*Phaseolus Mungo radiatus*).

urd[2] (ėrd), *n.* [Hind. *urd, urad.*] In India, the most highly prized of all the pulses of the genus *Phaseolus*, a variety of *P. Mungo*, largely cultivated in all parts of India. It is a valued article of Hindu medicine, and as food is eaten in the form of bread, boiled whole, parched, or as spice-balls. Same as *mash*[4].

urdite (ėr′dīt), *n.* [*Urda*, a place in Norway, + *-ite*[2].] A variety of the mineral monazite, from near Nöterö, Norway.

urea, *n.* It is the most important nitrogenous waste product of the mammalian organism. It is an acid amide, its solutions presenting a neutral reaction. It can combine with acids to form crystalline, salt-like products, and is decomposed by sodium hypobromite and the hypochlorite with the liberation of carbon dioxid, nitrogen, and water. On heating the substance ammonia is given off and biuret formed.—**Acetylene urea.** See ★*glycoluril.*—**Squibb's urea apparatus,** a device for determining the quantity of urea in urine. A measured

unvoice (un-vois′), *v. t.*; pret. and pp. *unvoiced*, ppr. *unvoicing*. In *phonetics*, to deprive of voice, or sonant quality; render nonsonant or surd.

unwarrant (un-wor′ạnt), *v. t.* To deprive of warrant or guarantee; disallow the propriety or safety of (doing something). [Rare.]

> On the ground that the state of trade absolutely *unwarrants* it.
> *St. James's Gazette*, Dec. 31, 1902, p. 13, quoted in N. [and Q., 9th ser., XI. 387.

unyeaned (un-yēnd′), *a.* Not yeaned or born: said of a sheep or goat. *C. Vickerman*, Woollen Spinning, p. 46.

up, *adv.* 15. In *printing*, finished; noting completion of a task: as, the chapter is *up*; the paper is *up*.—**One up,** in *golf*, one hole ahead: said of one's opponent.—**To be up to one,** to be for one to do; to be something one has to do. [Slang.]

> Why am I minus when it's *up to me*
> To brace my Paris Pansy for a glide [dance].
> *Wallace Irwin*, Love Sonnets of a Hoodlum, xiv.

U. P. An abbreviation (*b*) of *underproof*, as applied to alcoholic liquors.

upæthral, *a.* Same as *hypethral.*

upaithric (ūp-ī′thrik), *a.* Same as *hypethral.*

> I now understand why the Greeks were such great poets. . . . They lived in a perpetual commerce with external nature, and nourished themselves upon the spirit of its forms. . . . Their temples were mostly *upaithric*; and the flying clouds, the stars, or the deep sky, were seen above. *Shelley*, Letter XXXII. (from Naples).

uredosorus (ụ-rē-dọ-sō′rus), *n.*; pl. *uredosori* (-rī). [NL., < *uredo*, a blight, + Gr. σωρός, a heap. See *sorus.*] A single fertile hyphal mass producing uredospores in uredineal fungi.

ureilite (ū-rē′i-līt), *n.* See ★*meteorite.*

urelcosis (ū-rel-kō′sis), *n.* [NL., < Gr. οὐρ(ήθρα), urethra, + ἕλκωσις, ulceration.] The presence of ulcers in the urethra.

uremia, *n.*—**Puerperal uremia,** uremic poisoning, causing convulsions or coma, occurring after childbirth.

Uremic coma. See ★*coma*[1].

ureometer (ū-rẹ-om′e-tėr), *n.* Same as *ureameter.*

ureometry (ū-rẹ-om′e-tri), *n.* Same as *ureametry.*

uresin (ū′re-sin), *n.* [*ur(ic)* + *-es-* + *-in*[2].] The trade-name of a double citrate of lithium and urotropin. It is used in medicine to dissolve gravel and diminish the excretion of uric acid.

uret (ū′ret), *n.* [*(carb)uret.*] A name occasionally applied, in organic chemistry, to the univalent radical $CONH_2$.

-uret. A chemical suffix, now entirely antiquated: same as *-id*[1], 2.

ureteralgia (ụ-rē-tẹ-ral′ji-ạ̈), *n.* [NL., < Gr. οὐρητήρ, ureter, + ἄλγος, pain.] Pain in one or both ureters.

ureterectomy (ụ-rē-tẹ-rek′tọ-mi), *n.* [Gr. οὐρητήρ, ureter, + ἐκτομή, excision.] Excision of one of the ureters.

ureterocystostomy (ụ-rē″tėr-ọ-sis-tos′tọ-mi), *n.* [Gr. οὐρητήρ, ureter, + κύστις, bladder, + στόμα, mouth.] The operative implantation of the ureter into the bladder elsewhere than at the natural opening. *Med. Record*, June 13, 1903, p. 958.

ureterodialysis (ụ-rē″tėr-ọ-dī-al′i-sis), *n.* [NL., < Gr. οὐρητήρ, ureter, + διάλυσις, separation.] Same as ★*ureterolysis.*

ureterolithotomy (ụ-rē″tėr-ọ-li-thot′ọ-mi), *n.* [Gr. οὐρητήρ, ureter, + λίθος, stone, + -τομια, < ταμεῖν, cut.] Removal of a stone impacted in the ureter.

ureterolysis (ụ-rē-tẹ-rol′i-sis), *n.* [NL., < Gr. οὐρητήρ, ureter, + λύσις, separation.] Rupture of one or both ureters.

ureteronephrectomy (ụ-rē″tėr-ọ-nef-rek′tọ-mi), *n.* [Gr. οὐρητήρ, ureter, + νεφρός, kidney, + ἐκτομή, excision.] Excision of a kidney with the corresponding ureter.

ureterophlegmasia (ụ-rē″tėr-ọ-fleg-mā′si-ạ̈), *n.* [NL., < Gr. οὐρητήρ, ureter, + φλεγμασία, inflammation.] Same as *ureteritis.*

ureteropyelitis (ụ-rē″tėr-ọ-pī-e-lī′tis), *n.* [NL., < Gr. οὐρητήρ, ureter, + πύελος, a trough (pelvis).] Inflammation of a ureter and the pelvis of the kidney.

ureteropyosis (ụ-rē″tėr-ọ-pī-ō′sis), *n.* [NL., < Gr. οὐρητήρ, ureter, + πύον, pus, + *-osis.*] Suppuration in a ureter.

ureterorrhagia (ụ-rē″tėr-ọ-rā′ji-ạ̈), *n.* [NL., < Gr. οὐρητήρ, ureter, + -ραγια, < ῥηγνύναι, break.] Hemorrhage from a ureter.

ureterorrhaphy (ū-rē-tẹ-ror′ạ-fi), *n.* [Gr. οὐρητήρ, ureter, + ῥαφή, sewing.] An operation for closing by sutures any abnormal opening in the urethra.

reterostenoma (ụ-rē″tėr-ọ-stẹ-nō′mạ̈), *n.*
NL., < Gr. οὐρητήρ, ureter, + στένωμα, a nar-
wea place, < στενοῦν, make narrow.] Stricture
upperw reter.
ors' na **ostomy** (ụ-rē-tẹ-ros′tō-mi), *n.* [Gr.
thosia cr ureter, + στόμα, mouth.] The opera-
upperwo ablishment of a permanent opening
translatin a ureter and some neighboring hol-
of a fores s or the surface of the body.
Science, Ma **uy** (ụ-rē-tẹ-rot′ọ-mi), *n.* [Gr. οὐρητήρ,
upraise (up -τομια, < ταμεῖν, cut.] Incision into
a riser; an
secondary sl **teral** (ụ-rē″tėr-ọ-ū-rē′tẹ-rạl), *a.*
heading or g two portions of a ureter; noting
e union of the two ends of a di-
upright, *n.*
★*lie*[1].—**Virtua ine** (ū-rē″tėr-ọ-ū′tẹ-rin), *a.* Re-
direction of the
differing from th h ureter and uterus.
accelerations du **al** (ụ-rē″tėr-ọ-vaj′i-nạl), *a.* Re-
wave. h ureter and vagina.
upset, *n.* 2. —**Piperidyl urethane.** See ★*piperidyl.*
An "*upset*,"
shake" is much **Crest of the urethra.** Same as *crista*
know, is found see, under *crista*).
chiefly in tropic (ū-rẹ-thral′ji-ạ̈), *n.* [NL., < Gr.
a complete sever hra, + ἄλγος, pain.] Pain in the
in certain spots;
extensive. *S*
Angle of upset. rē′thrizm), *n.* [Gr. οὐρήθρα, ure-

thra, + *-ism.*] Extreme sensitiveness and irritability of the urethra.

urethroblennorrhea (ụ-rē″thrọ-blen-ọ-rē′ạ̈), *n.* [NL., < Gr. οὐρήθρα, urethra, + NL. *blennorrhœa*, blennorrhea.] A mucous or purulent discharge from the urethra.

urethrocystitis (ụ-rē″thrọ-sis-tī′tis), *n.* [NL., < Gr. οὐρήθρα, urethra, + κύστις, bladder, + *-itis.*] Inflammation of the urethra and bladder.

urethrorectal (ụ-rē-thrọ-rek′tal), *a.* [Gr. οὐρήθρα, urethra, + NL. *rectum* + *-al*[1].] Relating to both urethra and rectum.

urethrorrhagia (ụ-rē-thrọ-rā′ji-ạ̈), *n.* [NL., < Gr. οὐρήθρα, urethra, + -ραγια, < ῥηγνύναι, break.] Hemorrhage from the urethra.

urethrorrhaphy (ū-rẹ-thror′ạ-fi), *n.* [Gr. οὐρήθρα, urethra, + ῥαφή, sewing.] An operation for closing a defect in the urethral wall by sutures.

urethrorrhœa (ụ-rē-thrọ-rē′ạ̈), *n.* [NL., < Gr. οὐρήθρα, urethra, + ῥοία, flowing.] Any discharge from the urethra.

urethroscopic (ụ-rē-thrọ-skop′ik), *a.* [*urethroscop(y)* + *-ic.*] Relating to urethroscopy.

urethroscopical (ū-rē-thrọ-skop′i-kạl), *a.* Same as ★*urethroscopic.*

urethrospasm (ụ-rē′thrọ-spazm), *n.* [Gr. οὐρήθρα, urethra, + σπασμός, spasm.] Spasmodic contraction of the muscular fibers of the urethra.

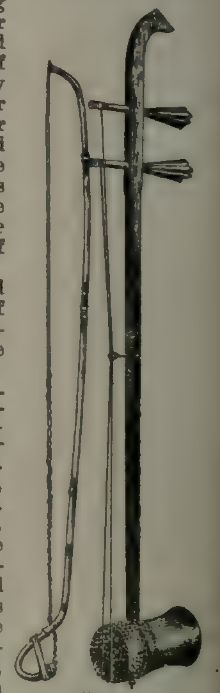
urethrostenosis (ụ-rē″thrọ-stẹ-nō′sis), *n.* [NL., < Gr. οὐρήθρα, urethra, + στένωσις, narrowing.] Stricture of the urethra.

urethrostomy (ū-rẹ-thros′tọ-mi), *n.* [Gr. οὐρήθρα, urethra, + στόμα, mouth, + *-y*[3].] The establishment of a permanent opening into the urethra through the perineum.

urethrovaginal (ụ-rē-thrọ-vaj′i-nạl), *a.* [Gr. οὐρήθρα, urethra, + L. *vagina* + *-al*[1].] Relating to both urethra and vagina.

urethrovesical (ū-rē-thrọ-ves′i-kạl), *a.* [Gr. οὐρήθρα, urethra, + L. *vesica*, bladder, + *-al*[1].] Relating to both the urethra and the bladder.

ur-hien (ör″hi-en′), *n.* [Chin.] A Chinese musical instrument of the viol class, usually with two strings, having a small cylindrical or cup-shaped body of wood or bamboo, the top of which is formed by stretched skin, and, for a neck, a simple shaft or strip of wood inserted through the body. The strings extend from pegs in the upper part of the neck over a small bridge that rests on the top of the body.



Ur-hien.
(In the Metropolitan Museum of Art, New York.)

urial (ū′ri-ạl), *n.* A wild sheep, *Ovis vignei*, of northern India, somewhat resembling the bighorn.

uric, *a.*—**Uric-acid diathesis.** See ★*diathesis.*—**Uric-acid shower.** See ★*shower*[1].

uricacidemia (ū″ri-kas-i-dē′mi-ạ̈), *n.* [NL., < E. *uric acid* + Gr. αἷμα, blood.] Same as *lithemia.*

uricidin (ụ-ris′i-din), *n.* [*uric* + *-id* + *-in*[2].] The trade-name of an alkaline diuretic prepared from lemon-juice. It is a granular substance containing sodium sulphate, sodium chlorid, sodium citrate, lithium citrate, and other salts, and is used in cases of gout and rheumatism.

uricolytic (ū″ri-kọ-lit′ik), *a.* [*uric* + *-o-* + Gr. λυτικός, loosing, dissolving.] Relating to a tissue-ferment which has the power of destroying uric acid.

> In a later communication of Schittenhelm, devoted entirely to the so-called *uricolytic* ferment, the author states that he has found this enzyme in the kidney, liver, muscles, and possibly in the bone marrow, but not in the spleen, lungs, and intestines — which can form but not destroy uric acid. *Jour. Med. Research*, Dec., 1906, p. 311.

urinable (ū′ri-nạ-bl), *a.* [*urin* + *-able.*] Capable of being excreted in the urine. *Buck*, Med. Handbook, III. 543.

Urinary fever. Same as *urethral fever* (which see, under *fever*1).—**Urinary reflex.** See ★*reflex.*

urine, *n.* The daily elimination of solids in the urine normally varies between 40 and 60 grams, of which almost 40 per cent. consists of mineral salts, the remainder of organic bodies. Of the mineral salts chlorids predominate, the amount, varying between 10 and 15 grams, being largely dependent upon the quantity ingested. As this in turn is greatly influenced by the appetite, the elimination of chlorids is, generally speaking, a fair index of the latter. Of other mineral salts sulphates and phosphates of the alkalis and the alkaline earths predominate; in addition there are traces of fluorides and nitrates. Among the organic waste products which appear in the urine of man urea is the most important. Fully 85 per cent. of the nitrogenous tissue-waste appears in this form. The daily amount varies to a great extent with the appetite and accordingly with the quantity of nitrogenous food consumed, but is on the whole fairly constant for one and the same individual: 20–30 grams per day may be regarded as a fair average, but, as overeating is on the whole very common, an elimination of 40–50 grams is not infrequently noted. In some of the lower animals, notably in birds and reptiles, uric acid is the principal nitrogenous component of the urine, while urea is found only in small amounts. In man it is unusual to meet with larger quantities than 0.6–1.0 gram in the twenty-four hours. In birds and reptiles it is formed synthetically in a manner quite analogous to the production of urea, but in man this mode of formation has not been satisfactorily demonstrated. Its origin here is to be sought in the destruction of nucleins, the resultant xanthin bases giving rise to uric acid on oxidation. Xanthin bases, comprising xanthin, hypoxanthin, guanine, carnin, paraxanthin, heteroxanthin, and episarcine, are found normally only in very small quantity; generally speaking, this represents about 10 per cent. of the amount of uric acid. Theobromine and caffein (derived from cocoa and coffee and tea, respectively) are partly eliminated in the urine as such, while in part they appear as methyl-xanthin (heteroxanthin). Among other organic components which are normally found in the urine are oxalic and oxaluric acid, creatinine, allantoin, hippuric acid, phenol, cresol, pyrocatechin, hydroquinone, indican, scatoxyl sulphate, glycuronic acid, various fatty acids, certain neutral sulphur bodies, such as sulphocyanides, oxy- and alloxy-proteinic acid, various pigments, ferments, etc. Collectively, these bodies are only present in very small amounts: they are in part of tissue origin, that is, metabolic waste products, and in part products of albuminous putrefaction, formed in the intestinal canal. Among the latter indican and scatoxyl sulphate merit especial attention. The mother-substances of the two are indol and skatol, respectively, which, after oxidation to indoxyl and scatoxyl, unite with sulphuric acid, and are then eliminated as the corresponding sodium and potassium salts. Both indoxyl and scatoxyl are chromogens and on oxidation give rise to various pigments, of which the indigo blue derived from indican is the most abundant. The amount of the latter is, roughly speaking, an index of the degree of intestinal putrefaction. Under certain conditions, which are as yet but little understood but which can scarcely be classified as pathological, still other substances appear in the urine, among which cystin and alkapton (homogentisinic acid) are the most noteworthy. Both cystinuria and alkaptonuria are the expression of curious metabolic anomalies. Both may occur in families, and commonly appear early in life and persist throughout. In the case of alkaptonuria it has been shown that consanguinity of the parents may be an etiological factor, but in cystinuria this is not the case. Neither condition *per se* is pathological, but, owing to the readiness with which cystin separates from the urine in solid form, and the resultant disturbances in the course of the urinary tract, cystinuria in a general way tends to shorten life. Associated with cystinuria there is at times diaminuria (appearance of putrescin and cadaverin). Under pathological conditions marked quantitative variations occur both in the amount of urine *per se*, as also in its various normal components, depending to a great extent upon diminished ingestion of food and increased tissue-waste. Of abnormal constituents which may be met with in disease, the most notable are the serum albumin and serum globulin of the blood, blood as such, albumoses, sugar (dextrose), diacetic acid, beta-oxybutyric acid, lactic acid, biliary constituents, chyle, certain abnormal chromogens, pigments, etc. Traces of albumin may be met with in some individuals who are apparently in perfect health (physiological albuminuria), but, generally speaking, albuminuria is a pathological phenomenon, though not necessarily the indication of a nephritis. The renal epithelium responds to any abnormal stimulus with albuminuria, and it is thus readily understood that the condition may be merely temporary and of comparatively little significance. Long-continued albuminuria, however, especially when occurring in individuals who have reached maturity, and in whom a direct cause of the anomaly is not at once apparent, should always be viewed with anxiety. The amount of albumin which may appear in the urine varies from just discernible traces to 1.5–3 per cent. The largest amounts of albumin are met with in a comparatively rare disease, multiple myelomatosis, in which a peculiar albuminous substance, differing from the common albumins of the blood, is met with, the so-called albumin of Bence Jones. The daily elimination may here equal the entire amount of the blood albumins. The elimination of glucose (glucosuria), like that of albumin, is essentially an abnormal phenomenon, and is observed in a large number of pathological conditions, but may also follow the ingestion of excessive amounts of sugar in normal individuals. In disease it may be either temporary or permanent. The latter occurs in diabetes mellitus. In such cases, particularly when advanced, acetone, diacetic, and beta-oxybutyric acid are also present, but may likewise occur in other conditions. The ensemble, however, is especially characteristic of the disease in question. Biliary constituents are met with whenever the outflow of bile through the natural channels is impeded. Of the pathological chromogens, finally, one merits especial consideration. It is met with notably in typhoid fever, and on treatment with diazobenzene sulphonic acid, in the presence of ammonia, such urine gives rise to a garnet-red color. Its presence, though observed in other pathological conditions also, is especially constant in typhoid fever and of distinct diagnostic importance. In cases of pulmonary tuberculosis, where the reaction is also encountered, its occurrence is generally viewed as a symptom of grave prognostic import. The chemical nature of the substance in question has not been satisfactorily established.—**Crude urine,** watery, light-colored urine, which throws down little or no sediment.—**Febrile urine,** high-colored urine of strong odor, excreted when fever is present.—**Hysterical urine,** light-colored, watery urine excreted in large amount.—**Milky urine.** See *chyluria.*—**Nervous urine.** Same as *hysterical* ★*urine.*

urinilic (ū-ri-nil'ik), *a.* [*urine* + *-il* + *-ic.*] Noting a colorless compound, $C_8H_7O_6N_7$, called *urinilic acid*, prepared by the action of nitrous acid on uric acid. It crystallizes in short, thick prisms.

urinogenous (ū-ri-noj'e-nus), *a.* [L. *urina*, urine, + *-genus*, -produced.] Of urinary origin.

urinologist (ū-ri-nol'ọ-jist), *n.* [*urinolog*(*y*) + *-ist.*] Same as *urologist.*

urinomancy (ū'ri-nọ-man-si), *n.* [L. *urina*, urine, + Gr. *μαντεία*, divination.] Same as *uromancy.* *G. S. Hall*, Adolescence, I. 116.

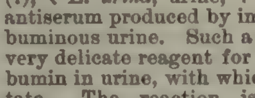
urinserum (ū'rin-sē"rum), *n.* [G. **urinserum* (?), < L. *urina*, urine, + *serum*, serum.] An antiserum produced by immunization with albuminous urine. Such a serum constitutes a very delicate reagent for the detection of albumin in urine, with which it forms a precipitate. The reaction is referable to the production of a precipitin. *Vaughan and Novy*, Cellular Toxins, p. 117.

urisolvent (ū-ri-sol'vent), *a.* [*uri*(*c*) + *solvent.*] Dissolving, or facilitating the solution of, uric acid.

> Quinate of lithia. *Urisolvent.*
> *Phil. Med. Jour.*, Jan. 31, 1903, p. 7.

urisolvin (ū-ri-sol'vin), *n.* [*urisolv*(*ent*) + *-in*2.] The trade-name of a mixture of lithium hydrogen citrate and urea. It is used in medicine as a diuretic and a solvent of uric acid.

uritone (ū'ri-tōn), *n.* [*uri*(*c*) + *tone.*] The trade-name of hexamethylene tetramine,



, a colorless compound, prepared by the action of ammonia on formaldehyde. It crystallizes in lustrous rhombohedra, which may be sublimed in vacuo. It is used in medicine to remove uric acid and to render the urine antiseptic. Also called *urotropin* and *formin.*

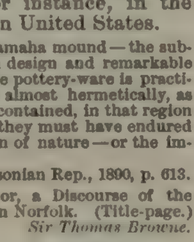
urn, *n.*—**Ciliated urns,** in *Holothuroidea*, cup-shaped organs, of obscure function, attached by stalks to the epithelium of the mesentery and sometimes to the inner surface of the body-wall.—**Hut urn.** See *hut-urn.*—**Mortuary urn,** an urn or jar in which are placed the ashes or remains of the dead.

urn-burial (ėrn'ber"i-ạl), *n.* A method of burial in which the remains, after cremation or without cremation, were placed in an urn. Such urns are found, for instance, in the mounds of the southeastern United States.

> The *urn-burial* from the Altamaha mound—the subject of this paper—is original in design and remarkable for its ingenious simplicity. The pottery-ware is practically imperishable; and sealed almost hermetically, as were the ashes of the dead they contained, in that region where frost is scarcely known, they must have endured forever but for some convulsion of nature—or the implements of civilization.
> *J. F. Snyder*, in Smithsonian Rep., 1890, p. 613.
>
> Hydriotaphia, *Urne-Buriall*, or, a Discourse of the Sepulchrall Urnes lately found in Norfolk. (Title-page.)
> *Sir Thomas Browne.*

urn-stand (ėrn'stand), *n.* A stand or small table designed to hold a tea-urn.

> Quaint little *urn-stands* for the breakfast table, with small slides at the side to rest the teapot on.
> *K. W. Clouston*, Chippendale Period in Eng. Furniture, [p. 171.



Urn-stand.

Urobacillus (ū"rọ-ba-sil'us), *n.* [NL., < Gr. *οὖρον*, urine, + NL. *bacillus.*] An invalid generic name which has been applied to certain bacteria occurring in urine, as *Bacillus* (*Urobacillus*) *Pasteuri.*

urobilinogen (ū-rọ-bil'i-nọ-jen), *n.* [*urobilin* + *-o-* + *-gen.*] The colorless mother-substance or chromogen of urobilin.

urobilinoid (ū-rọ-bil'i-noid), *a.* [*urobilin* + *-oid.*] Resembling urobilin.

urocanic (ū-rọ-kan'ik), *a.* [Gr. *οὖρον*, urine, + L. *canis*, dog, + *-ic.*] Same as ★*urocaninic.*

urocanin (ū-rọ-kā'nin), *n.* [*urocan*(*ic*) + *-in*2.] A base obtained from urocaninic acid, $C_{11}H_{10}N_4O$.

urocaninic (ū"rọ-kạ-nin'ik), *a.* [Gr. *οὖρον*, + L. *caninus*, of dogs, + *-ic.*] Noting an organic acid of the composition $C_{12}H_{12}N_4O_4$, found in the urine of dogs.

Urocentrus (ū-rọ-sen'trus), *n.* [NL., < Gr. *οὐρά*, tail, + *κέντρον*, spine.] A subgenus of fishes under the genus *Pholis*, belonging to the family *Blenniidæ*, found in Bering Sea.

urocerid (ụ-ros'ẹ-rid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Uroceridæ.*

II. *a.* Having the characteristics of or belonging to the family *Uroceridæ.*

urochloralic (ū"rọ-klọ-ral'ik), *a.* [Gr. *οὖρον*, urine, + E. *chloral* + *-ic.*] Noting a conjugate glycuronic acid which appears in the urine after the administration of chloral.

Uroconger (ū-rọ-kong'gėr), *n.* [NL., < Gr. *οὐρά*, tail, + NL. *conger.*] A genus of conger-eels, *Leptocephalidæ*, found in deep seas.

urocrisis (ū-rọ-krī'sis), *n.* [NL., < Gr. *οὖρον*, urine, + *κρίσις*, crisis.] Any crisis in a disease which is accompanied by the discharge of a large amount of urine.

urocyanin (ū-rọ-sī'ạ-nin), *n.* [Gr. *οὖρον*, urine, + *κύανος*, blue, + *-in*2.] Urinary indigo blue. See ★*urine.*

urocystitis (ū"rọ-sis-tī'tis), *n.* [NL., < Gr. *οὖρον*, urine, + *κύστις*, bladder, + *-itis.*] Inflammation of the urinary bladder.

urodæum (ū-rō-dē'um), *n.*; pl. *urodæa* (-ä̤). [NL., < Gr. *οὖρον*, urine, + *ὁδαῖος*, by the way, < *ὁδός*, way.] In *anat.*, the median division of the cloaca in such animals as birds, receiving the openings of the urinary and genital organs. Correlated with *cryptodæum* and *proctodæum.* *Parker and Haswell*, Zoology, II. 368.

urodynia (ū-rọ-din'i-ä̤), *n.* [NL., < Gr. *οὖρον*, urine, + *ὀδύνη*, pain.] Pain experienced in urinating.

urofuscohematin (ū"rọ-fus-kọ-hem'ạ-tin), *n.* [Gr. *οὖρον*, urine, + L. *fuscus*, brown, + *αἷμα*(*τ-*), blood, + *-in*2.] A brown pigment, $C_{68}H_{106}N_8O_{26}$, which was found by Baumstark in the urine of a leprous patient.

Uroglena (ū-rō-glē'nä̤), *n.* [NL., < Gr. *οὐρά*, tail, + *γλήνη*, cavity, socket.] A genus of flagellate protozoans, living as free-swimming colonies in fresh water, of which they are said to affect the taste and odor.

urohematin (ū-rọ-hem'ạ-tin), *n.* [Gr. *οὖρον*, urine, + *αἷμα*(*τ-*), blood, + *-in*2.] A urinary chromogen, which is probably related to indoxyl, and which gives rise to a red pigment, indoxyl red.

urohematoporphyrin (ū"rọ-hem"ạ-tọ-pôr'fi-rin), *n.* [Gr. *οὖρον*, urine, + E. *hematoporphyrin.*] Hematoporphyrin, occurring in the urine. This is normally found in traces; larger amounts are especially met with following the long-continued use of sulphonal, trional, and tetronal.

urohyal, *n.* **2.** In *ichth.*, a median bone of fishes between the hypohyals and extending back under the gills.

uroleucinic (ū"rọ-lụ-sin'ik), *a.* [Gr. *οὖρον*, urine, + *λευκός*, white, + *-in* + *-ic.*] Noting an acid, trioxyphenyl propionic acid, C_6H_2-$(OH)_3.(CH_2)_2.COOH$. This acid has been found in one case of alkaptonuria, where it apparently took the place of homogentisinic acid.

urolith (ū'rọ-lith), *n.* [Gr. *οὖρον*, urine, + *λίθος*, stone.] A urinary calculus.

urolithic (ū-rọ-lith'ik), *a.* [*urolith* + *-ic.*] Relating to urinary calculi.

Urolophinæ (ū"rọ-lọ-fī'nē), *n. pl.* [NL., < *Urolophus* + *-inæ.*] A subfamily of sting-rays having a short stout tail provided with a rayed caudal fin.

Urolophus (ụ-rol'ọ-fus), *n.* [NL., < Gr. *οὐρά*, tail, + *λόφος*, crest.] A genus of sting-rays belonging to the family *Dasyatidæ*, found in warm seas.

uromantia (ū-rọ-man'ti-ä̤), *n.* [NL.] Same as *uromancy.*

uronephrosis (ū"rọ-nef-rō'sis), *n.* [NL., < Gr. *οὖρον*, urine, + *νεφρός*, kidney, + *-osis.*] Same as *hydronephrosis.*

uropatagium (ū″rọ̄-pat-ā̤-jī′um), *n.*; pl. *uropatagia* (-ä). [NL., < Gr. *οὐρά*, tail, + NL. *patagium*.] 1. One of a pair of plates on either side of the anus in many insects.

> Wings hairy for about half an inch on each side of the body, above and below; base of *uropatagium* thinly haired, its free edge quite without fringe. Toes with tufts of hair overhanging the claws.
> *Annals and Mag. Nat. Hist.*, May, 1904, p. 383.

2. That portion of the membrane of a bat which lies between the hind legs and includes the tail; the interfemoral membrane. This is subdivided by Harrison Allen into the endopatagium and mesopatagium, the two being divided by a line drawn from the elbow.

> Thumbs short, with thickened but not enlarged basal pad. Wings from the base of the toes. Calcars about equal in length to the free border of the *uropatagium*.
> *Annals and Mag. Nat. Hist.*, March, 1904, p. 207.

urophanic (ū-rọ̄-fan′ik), *a.* [Gr. *οὖρον*, urine, + *-φανης*, appearing, + *-ic*.] Appearing in the urine.

uropherin (ụ̄-rof′e-rin), *n.* [Gr. *οὖρον*, urine, + *φέρειν*, bear, + *-in*².] A lithium compound of diuretin, used as a diuretic.

Urophycis (ū-rō-fī′sis), *n.* [NL., < Gr. *οὖρον*, urine, + NL. *Phycis*.] A genus of fishes of the family *Gadidæ*, taken in rather deep water in the Atlantic. See cut at *white* ★*hake*.

uropittin (ū-rọ̄-pit′in), *n.* The chief constituent of a red substance of resinous appearance, a product of decomposition of Thudicum's 'urochrome,' believed by him to be the only normal urinary pigment.

uropodous (ụ̄-rop′ọ̄-dus), *a.* [NL. *Uropod*(*a*) + *-ous*.] Same as *uropodal*.

Uropterygius (ū″rop-tẹ̈-rij′i-us), *n.* [NL., < Gr. *οὐρά*, tail, + *πτερύγιον*, wing, fin.] A genus of small moray eels containing several species.

urorhodin (ū-rọ̄-rō′din), *n.* A more correct form of *urrhodin*.

urorosein (ū-rọ̄-rō′zẹ̄-in), *n.* [Gr. *οὖρον*, urine, + L. *rosa*, rose, + *-e-in*.] A rose-colored pigment present in the urine as a colorless chromogen, from which it can be obtained by oxidation. Probably related to indoxyl or skatoxyl red.

uroroseinogen (ū-rọ̄-rō-zẹ̄-in′ọ̄-jen), *n.* [*urorosein* + *-gen*.] The chromogen of urorosein.

urorubin (ū-rọ̄-rö′bin), *n.* [Gr. *οὖρον*, urine, + L. *rubeus*, red, + *-in*².] A cherry-red pigment, occasionally obtainable from the urine of disease by boiling with dilute hydrochloric acid and extracting with ether. Apparently similar to, if not identical with, urorosein.

urorubrohematin (ū-rọ̄-rö-brọ̄-hem′ạ-tin), *n.* [Gr. *οὖρον*, urine, + L. *ruber*, red, + Gr. *αἷμα*(*τ-*), blood, + *-in*².] A red pigment, $C_{68}H_{94}N_8O_{30}Fe$, found by Baumstark in the urine of a patient suffering from leprosy.

urosepsis (ū-rọ̄-sep′sis), *n.* [NL., < Gr. *οὖρον*, urine, + *σῆψις*, putrefaction.] A constitutional state resulting from the infiltration of urine into the tissues.

uroseptic (ū-rọ̄-sep′tik), *a.* [*urosepsis* (*-sept-*) + *-ic*.] Relating to urosepsis.

uroserrial (ū-rọ̄-ser′i-ạl), *n.* [Gr. *οὐρά*, tail, + L. *serra*, saw, + *-i-al*¹.] A small bone in the head of a fish connecting the hyomandibular with the quadrate. Same as *symplectic*. *Starks*, Synonymy of the Fish Skeleton, p. 513.

urosome, *n.* (*c*) In certain crustaceans, as the amphipods, the last three segments of the pleon or abdomen. Compare ★*mesosome* and *metasome*.

urotheobromine (ū″rọ̄-thē-ọ̄-brō′min), *n.* [Gr. *οὖρον*, urine, + E. *theobromine*.] A colorless, poisonous compound, $C_7H_8O_2N_4$, contained in human urine. It crystallizes in silky needles or monoclinic plates, melts at about 284° C., resembles caffein and theobromine in physiological action, and is also called *paraxanthin*.

Urotoxic coefficient, the number of urotoxic units per kilogram of weight formed in the twenty-four hours.—**Urotoxic unit.** See ★*unit*.

urotoxicity (ū″rọ̄-tok-sis′i-ti), *n.* [*urotoxic* + *-ity*.] The toxic condition of the urine. See *urotoxic* ★*unit*. *Amer. Jour. Psychol.*, XII. 267.

urotoxin (ū-rọ̄-tok′sin), *n.* [Gr. *οὖρον*, urine, + E. *toxin*.] Any toxic substance of basic character found in the urine.

urotoxy (ū′rọ̄-tok-si), *n.* [Gr. *οὖρον*, urine, + *τοξ*(*ικόν*), poison, + *-y*³.] The toxicity of urine; the amount of urine necessary to kill one kilo of an animal by intravenous injection. *Vaughan and Novy*, Cellular Toxins, p. 469.

urotropin (ụ̄-rot′rọ̄-pin), *n.* Same as ★*uritone*.

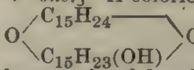
uroxanic (ū-rok-san′ik), *a.* [*ur*(*ic*) + *ox*(*ygen*) + *-an* + *-ic*.] Noting an acid, a colorless compound, $C_5H_8O_6N_4$, prepared by the prolonged action of potassium hydroxid and air, free from carbon dioxid, on uric acid. It crystallizes in short prisms or tetrahedra.

uroxanthinic (ū-rok-san-thin′ik), *a.* [*uroxanthin* + *-ic*.] Pertaining to uroxanthin.—**Uroxanthinic acid**, the supposed active principle to which the specific reactions of alkapton urine are due. See ★*homogentisic acid*.

urpethite (ėr′pe-thīt), *n.* [*Urpeth* + *-ite*².] A yellow to brown hydrocarbon which constitutes the larger part of the ozocerite obtained from the Urpeth colliery, England.

urrhodinic (ū-rọ̄-din′ik), *a.* Pertaining to urrhodin.—**Urrhodinic acid.** Same as ★*uroxanthinic acid*.

ursone (ėr′sōn), *n.* [(*uva*)*urs*(*i*) (see def.) + *-one*.] A colorless compound,



$O\begin{matrix}/C_{15}H_{24}\text{——}\backslash\\ \backslash C_{15}H_{23}(OH)/\end{matrix}O.2HO$

contained in the leaves of red bearberry, *Arctostaphylos Uva-ursi*. It crystallizes in slender, lustrous needles and melts at 264–266° C.

Urticales (ėr-ti-kā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Urtica* + *-ales*.] An order of dicotyledonous, archichlamydeous (chiefly apetalous) plants embracing the families *Ulmaceæ*, *Moraceæ*, and *Urticaceæ*, or the elm, mulberry, and nettle families.

urticant (ėr′ti-kạnt), *a.* [ML. *urticans* (*-ant-*), ppr. of *urticare*, sting, nettle. See *urticate*.] Stinging; producing an itching sensation.

urticaria, *n.*—**Giant urticaria.** Same as ★*angioneurotic edema*.—**Urticaria pigmentosa**, a form of urticaria in which the wheals are at first pinkish in color, leaving patches of a yellowish or brownish discoloration after their disappearance.—**Urticaria tuberosa**, a form of urticaria in which somewhat persistent nodes are formed.

urticate, *v. t.*—**Urticating organ**, a nettling-organ or nematocyst. *Proc. Zool. Soc. London*, 1903, p. 169.

urtite (ėr′tīt), *n.* [Named from Lujavr-*Urt*, Kola, Finland.] In *petrog.*, a phaneric, granular, igneous rock composed almost wholly of nephelite, with a small amount of ægirite and apatite. *Ramsay*, 1896.

Uru. An abbreviation of *Uruguay*.

urunday (ö′rön-dī), *n.* [From the Tupi name.] A large tree of the family *Anacardiaceæ*, *Astronium Urundeuva*, native to Argentina and Paraguay. Its very hard wood is heavier than water and is used for telegraph poles, building construction, etc. *Elect. World and Engin.*, Oct. 31, 1903, p. 727.

urushi (ö-rö′shẹ̄), *n.* [Jap.] Japanese lacquer; varnish. See ★*lacquer*.

urushic (ö-rö′shik), *a.* [*urushi* + *-ic*.] Noting an acid, a dark, pasty compound, $C_{14}H_{18}O_2$, contained in urushi, the sap of *Rhus vernicifera*, which is used in making Japanese lacquer. It decomposes above 200° C.

urusite (ū′rụ̄-sīt), *n.* [*Urus* (see def.) + *-ite*².] Same as *sideronatrite*: from the Urus plateau, Cheleken Island, in the Caspian Sea.

urvölgyite (ör-völ′gi-īt), *n.* [G. *urvölgyit* (1879), named from *Urvölgy* (Herrengrund), in Hungary.] Same as *herrengrundite*.

Ur. X. The chemical symbol of *uranium X*. See ★*uranium X*.

U. S. An abbreviation (*b*) of *Uncle Sam*; (*c*) of *United Service*; (*d*) [*l. c.* or *cap.*] of the Latin *ut supra*, as above.

usage, *n.*—**Immemorial usage**, prescription; existence of a custom so long that the memory of man runneth not to the contrary. The time of memory was fixed by Edward I. to commence from the beginning of the reign of Richard I. A man might, after 1276, offer in evidence what his father had told him respecting real property. *Pollock and Maitland*, Eng. Law, I. 168.

usar (ö′sä̤r), *n.* [Hind. *ūsar*, *ōsar*, also *ūshar*, < Skt. *ūshara*, impregnated with salt, barren land, < *ūsha*, alkaline earth.] In northern India, barren land; an alkali desert: applied to land with a saline soil bearing only hardy, low growths.

usar-grass (ö′sä̤r-grȧs), *n.* [*usar* + *grass*.] A wiry creeping perennial rush-grass, *Sporobolus orientalis*, with short rigid leaves and spreading panicles. It is native to the usar tracts of northern India, often constituting the entire vegetation. It endures saline and alkali soils and affords a supply of fodder where other plants cannot exist.

U. S. C. C., U. S. C. Ct. Abbreviations of *United States Circuit Court*.

U. S. D. C., U. S. Dist. Ct. Abbreviations of *United States District Court*.

use¹, *n.* 9. *pl.* Rough iron forgings sold to be subsequently worked down into finished shapes in the forge, or heating furnace, by hammer or press. They are used also for porter-bars, or to build up larger forgings not made from an ingot. [Eng.]

use-inheritance (ūs′in-her″i-tạ̈ns), *n.* See ★*inheritance*.

U-shaped (ū′shāpt), *a.* Having the shape of the capital letter U; in *phys. geog.*, said of valleys whose cross-profile resembles the letter U.

Usherian, Ussherian (u-shē′ri-ạ̈n), *a.* Of or pertaining to Archbishop Usher (1580–1656) or to his biblical chronology of the world.

> The *Ussherian* chronology, formerly inserted in the margins of our Bibles. *Nature*, Oct. 22, 1903, p. 594.

usine (ū-zēn′, F. ü-zēn′), *n.* [F. *usine*, OF. *uisine*, < L. *officina*, shop, factory. See *officinal*.] In sugar-producing regions, an establishment in which the sugar-cane from any number of plantations is ground and the sugar extracted, thus enabling the planters to devote their whole time to cane cultivation; a central sugar-house. The usines are generally owned by companies, and the cane is either bought outright or worked up for a fixed price, or for a percentage of the product. Called also *sugar-usine*.

using-grounds (ū′zing-groundz), *n. pl.* Places where grouse or quail gather.

> The sportsman will, too, often come to bobwhite's aid when the country is covered with forbidding coats of snow and sleet. The "*using-grounds*" of the coveys are generally known or suspected by the farmer who is fond of shooting and on these wintry occasions he scatters "tailings"—a poor quality of wheat—where the starving quail can find them.
> *C. D. Lanier*, in Harper's Mag., Oct., 1893, p. 681.

U. S. L. An abbreviation of *United States legation*.

U. S. M. A. An abbreviation of *United States Military Academy*.

U. S. N. A. An abbreviation of *United States Naval Academy*.

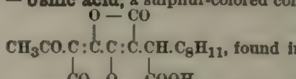
usnarin (us′nạ̈-rin), *n.* [*Usn*(*ea*) + *-ar-* + *-in*².] A colorless compound contained in the lichen *Usnea barbata f. dasypoga* and *U. barbata f. hirta*, from Java.

usneaceous (us-nẹ̄-ā′shius), *a.* Pertaining or belonging to the lichen family *Usneaceæ*.

usneoid (us′nẹ̄-oid), *a.* [NL. *Usnea* + *-oid*.] Pertaining to or resembling the lichen genus *Usnea*, or the family *Usneaceæ*.

usnetic (us-net′ik), *a.* [*Usn*(*ea*) + *-et-* + *-ic*.] Pertaining to or derived from lichens.—**Usnetic acid**, a colorless compound, $C_9H_{10}O_3$, contained, in small quantity, in the lichen *Usnea barbata*. It crystallizes in prisms and melts at 172° C. Also called *decarbousnic acid*.

usnic (us′nik), *a.* [*Usn*(*ea*) + *-ic*.] Pertaining to, or derived from, *Usnea* or other lichens.—**Usnic acid**, a sulphur-colored compound,



$$\begin{matrix} & O - CO & \\ CH_3CO.C:C.C:C.CH.C_8H_{11} & & \\ CO-O & COOH & \end{matrix}$$

found in many lichens such as *Parmelia perlata*, *P. caperata*, *Cladonia silvatica*, *C. alpestris*, etc. It is known in three forms, namely, levorotatory, dextrorotatory, and optically inactive. It crystallizes in monoclinic prisms and melts at 195–196° C.

U. S. P. An abbreviation of *United States Pharmacopœia*. Also written *U. S. Pharm.*

U. S. Pharm. An abbreviation of *United States Pharmacopœia*. Also written *U. S. P.*

U. S. R. An abbreviation of *Usher of the Scarlet Rod*.

U. S. S. C., U. S. S. Ct. Abbreviations of *United States Supreme Court*.

U. S. Sig. Serv. An abbreviation of *United States Signal Service*.

U. S. S. S. An abbreviation of *United States steamship*.

ustilaginaceous (us-ti-laj-i-nā′shius), *a.* Same as *ustilagineous*.

Ustilaginales (us-ti-laj-i-nā′lēz), *n. pl.* [NL., < *Ustilago* (*Ustilagin-*) + *-ales*.] An order of parasitic fungi containing the two families of smuts, *Ustilaginaceæ* and *Tilletiaceæ*.

ustilagine (us-til′ạ̈-jin), *n.* [*ustilago* (*-gin-*).] A colorless, bitter, crystalline alkaloid contained in corn-smut.

usucapion (ū-zụ̄-kā′pi-ọn), *n.* [L. *usucapio* (*-n-*).] Same as *usucaption*. *Poste*, tr. of Gaius, ii. 42.

usufruct, *n.*—**Perfect usufruct,** in *law*, a usufruct in which the beneficiary has the right to use the property of another without altering its substance, though it is subject to ordinary diminution in value through use.

usurpative (ū-zėr'pa̤-tiv), *a.* Same as *usurpatory.*

> The *usurpative* control of their nutrition by the fungus suggests that these phenogams did not originate as symbionts by a predilective departure from a self-supporting condition. *Amer. Nat.*, Jan., 1908, p. 16.

u. s. w. An abbreviation of the German *und so weiter*, and so forth.

Ut. An abbreviation of *Utah.*

uta^2 (ö'tä̤), *n.* [A native name in Peru.] A Peruvian name for a skin-disease analogous to, if not identical with, ★*espundia*, considered to be a kind of lupus. It is attributed to the sting or bite of some insect, and is curable, but may become fatal in case of excesses or neglect. It is limited to warmer districts.

utahite (ū'tä-īt), *n.* [*Utah* + *-ite*^{2}.] A hydrous ferric sulphate ($3Fe_2SO_4.4H_2O$) occurring in aggregates of orange-yellow scales, rhombohedral in crystallization: from the Tintic district, Utah.

utahlite (ū'tä-līt), *n.* [*Utah* + Gr. *λίθος*, stone.] A variety of variscite from Utah occurring in compact, nodular masses of a bright green color.

uteralgia (ū-te̤-ral'ji-ä̤), *n.* [NL., ‹ L. *uterus*, uterus, + Gr. ἄλγος, pain.] Same as *metralgia.*

uterin, *a.* A simplified spelling of *uterine.*

Uterine appendages, the ovaries and oviducts.—**Uterine colic.** See ★*colic.*—**Uterine croup.** See ★*croup*^{1}.—**Uterine elevator.** In *surg.*, same as *repositor.*—**Uterine glands.** See ★*gland.*—**Uterine positor.** See ★*positor.*

uteritis (ū-te̤-rī'tis), *n.* [NL., ‹ L. *uterus*, uterus, + *-itis.*] Same as *metritis.*

uterocervical (ū″te̤-rō̤-sėr'vi-ka̤l), *a.* [L. *uterus*, uterus, + *cervix* (*cervic-*), neck, + *-al*^{1}.] Relating to the neck of the womb.

uterofixation (ū″te̤-rō̤-fik-sā'shon), *n.* [L. *uterus*, uterus, + E. *fixation.*] Same as ★*hysteropexy.*

utero-ovarian (ū″te̤-rō̤-ō̤-vā'ri-a̤n), *a.* [L. *uterus*, uterus, + *ovarium*, ovary, + *-an.*] Relating to both the uterus and the ovaries.

uteropexy (ū'te̤-rō̤-pek-si), *n.* [L. *uterus*, uterus, + Gr. *πῆξις*, fastening.] Same as ★*hysteropexy.*

uteroplacental (ū″te̤-rō̤-plā̤-sen'ta̤l), *a.* [L. *uterus*, uterus, + NL. *placenta*, placenta, + *-al*^{1}.] Relating to the uterus and the contained placenta.

uterosacral (ū″te̤-rō̤-sā'kra̤l), *a.* [L. *uterus*, uterus, + *sacrum*, sacrum, + *-al*^{1}.] Relating to the uterus and the sacrum: noting certain folds of peritoneum, the recto-uterine folds (which see, under *recto-uterine*).

uterotomy (ū-te̤-rot'ō̤-mi), *n.* [L. *uterus*, uterus, + Gr. *-τομία*, ‹ *ταμεῖν*, cut.] Same as *hysterotomy.*

uterotubal (ū″te̤-rō̤-tū'ba̤l), *a.* [L. *uterus*, uterus, + *tubus*, tube, + *-al*^{1}.] Relating to both the uterus and the oviducts.

uterovaginal (ū″te̤-rō̤-vaj'i-na̤l), *a.* [L. *uterus*, uterus, + *vagina*, vagina, + *-al*^{1}.] Relating to both the uterus and the vagina.

uterovesical (ū″te̤-rō̤-ves'i-ka̤l), *a.* [L. *uterus*, uterus, + *vesica*, bladder, + *-al*^{1}.] Relating to both the uterus and the bladder.

Uterus arcuatus, a deformity of the uterus marked by a depression at the fundus; the first degree of uterus bilocularis: called also *saddle-shaped uterus.*—**Uterus bipartitus.** Same as *uterus bilocularis.*—**Uterus incudiformis,** a form of uterus bicornis in which the fundus is broad and level between the two horns, the organ having a resemblance to an anvil.—**Uterus planifundalis.** Same as ★*uterus incudiformis.*—**Uterus septus,** a septate uterus; uterus bilocularis.—**Uterus subseptus,** an incomplete uterus bilocularis.—**Uterus triangularis.** Same as ★*uterus incudiformis.*

Utica shale. See ★*shale*^{2}.

utility, *n.* **4.** In *polit. econ.*, the capacity of an object for the satisfaction of a human want.—**Effective utility,** the relative capability of like kinds and quantities of a commodity to afford satisfaction under varying conditions of want.—**Final utility,** in *polit. econ.*, the utility, or want-satisfying power, of that unit of a commodity which is put to the least important use. Also called *marginal* ★*utility.*—**Initial utility,** in the modern theory of economics (Cournot, Jevons, Walras), the satisfaction due to the consumption of a first necessary portion of any useful commodity: contrasted with *final* ★*utility.*—**Marginal utility,** the utility of a final increment of any commodity in process of consumption, for example, a final mouthful of food at the end of a meal. The conception of marginal utility, suggested by Bentham, Cournot, and Gossen, and developed by Jevons, Menger, Walras, and Wieser, is the foundation of the modern theory of economic value.—**Objective utility,** the conception of utility as an "inherent fitness or capability of certain things to satisfy the various wants of mankind." *J. B. Say.*—**Subjective utility,** the conception of utility as varying with the mental state of the consumer of goods.

> *Subjective utility* is pleasurable feeling combined with knowledge that the pleasure is consequent upon an external condition or thing, namely, an objective utility. It is pleasure attributed to an external cause.
> *Giddings*, Prin. of Sociol., p. 41.

utilization, *n.*—**Arnold utilization process.** See ★*process.*

Uto-Aztecan (ū″tō̤-az'tek-a̤n), *a.* and *n.* [*Ute* (Indians) + *Aztec* + *-an.*] A linguistic family of North American languages, which, according to certain authors, includes the languages grouped by others under the three separate families Shoshonean, Piman, and Nahuatlecan. The relationship between these three groups is at least very distant. *Brinton.*

Utopistic (ū-tō̤-pis'tik), *a.* [Gr. *οὐ*, not (no-), + *τόπ*(*ος*), place (-where), + *-istic.* See *Utopia.*] Same as *Utopian.* *Gumplovicz* (trans.), Outlines of Sociol., p. 156.

Utricular glands. Same as *uterine* ★*glands.*

utriculitis (ṳ̄-trik-ṳ̄-lī'tis), *n.* [NL., ‹ *utriculus* + *-itis.*] Inflammation of any utricle.

utriculus, *n.*—**Utriculi breviores,** the short utricles of the seminal vesicles of insects.—**Utriculi majores,** the large utricles of the seminal vesicles of insects.

utropine (ū'trō̤-pin), *n.* The trade-name of hexamethylene tetramine, $(CH_2)_6N_4$. It is prepared by the action of ammonia on formaldehyde and is used as a urinary antiseptic.

utsubo (öt-sö-bō'), *n.* [Jap. *utszbo*, a quiver.] A fish, a moray, of the family of *Murænidæ*, *Gymnothorax kidako*, found in the waters of Japan: also known as *kidako* and *kichigaiunagi.*

ut sup. An abbreviation of the Latin *ut supra*, as above.

utu (ö'tö), *n.* [Maori.] **1.** An equivalent, compensation, or satisfaction for injuries received; the payment or return which every Maori expected and demanded for any injury or injustice.

> *Utu* or payment is invariably expected for any injustice committed, and is exacted in some shape, the sufferer feeling debased in his own opinion until he obtains satisfaction. The *Utu*, similar to the tapu, enters into everything connected with this people.
> *J. S. Polack*, Manners and Customs of New Zealand, II. [63. Quoted in E. E. Morris, Austral English.

2. Any compensation for services; wages.

> Besides that, for such shining service done,
> A splendid claim, he reckoned, would arise
> For '*utu*'—compensation or reward.
> *A. Domett*, Ranolf, p. 470. Quoted in E. E. Morris, [Austral English.

Utznach lignites. See ★*lignite.*

U-valley (ū'val″i), *n.* A valley which has a U-shaped cross-profile; especially that part of a valley which has been given such a form by glacial erosion.

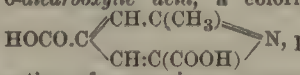
uveïtis (ū-vē̤-ī'tis), *n.* [NL., ‹ *uvea* + *-itis.*] Inflammation of the uvea.

uvic (ū'vik), *a.* [L. *uva*, a grape, + *-ic.*] Pertaining to or derived from grapes.—**Uvic acid,** a colorless compound, $HOOC.C{:}C(CH_3).O.C(CH_3){:}CH$, prepared by heating racemic acid with sodium acetate and acetic anhydrid. It crystallizes in needles or rods, melts at 135° C., is volatile with steam, and may be sublimed. Also called *pyrotritaric acid* and *2,5-dimethylfurfurane-3-carboxylic acid.*

uviol (ū'vi-ol), *n.* [Trade-name. See the def.] A glass of special composition which is more completely transparent to ultra-violet light than are ordinary glasses, transmitting wave-lengths as short as $0{\cdot}25\mu$. Uviol glass is used in the construction of spectrographs and for other apparatus where transmitting power in the extreme ultra-violet is essential. The word is an arbitrary abbreviation of *ultraviolet.*—**Uviol lamp,** a mercury-arc lamp in which the vacuum-tube is made of uviol glass. The light from such lamps has greater actinic activity than the light from those in which ordinary glass is used, on account of the transparency of uviol glass for radiation of the shorter wave-lengths.—**Uviol prism,** a prism of uviol glass, which affords a spectrum extending further into the ultra-violet than can be obtained with prisms of ordinary flint glass.

uvitic (ṳ̄-vit'ik), *a.* [L. *uva*, grape, + *-it* + *-ic.*] Noting an acid, 1-*methylisophthalic acid*, a colorless compound, $\overset{1}{C}H_3.C_6H_3(\overset{3.\ 5}{CO}OH)_2$, prepared by the oxidation of mesitylene with nitric acid. It crystallizes in slender needles, melts at 287–288° C., and may be sublimed.

uvitonic (ū-vi-ton'ik), *a.* [*uvit*(*ic*) + *-on-* + *-ic.*] Noting an acid, 2-*methylpyridine-4, 6-dicarboxylic acid*, a colorless compound,



$$\mathrm{HOCO.C}\left\langle\begin{array}{l}\mathrm{CH.C(CH_3)}\\ \mathrm{CH{:}C(COOH)}\end{array}\right\rangle\mathrm{N}$$

, prepared by the action of ammonia on pyroracemic acid. It forms trimetric crystals and melts and decomposes at 274° C.

uvulatomy (ū-vṳ̄-lat'ō̤-mi), *n.* An erroneous form for ★*uvulotomy.*

uvulitis (ū-vṳ̄-lī'tis), *n.* [NL., ‹ *uvula* + *-itis.*] Inflammation of the uvula.

uvuloptosis (ū″vṳ̄-lop-tō'sis), *n.* [NL., ‹ *uvula* + Gr. *πτῶσις*, falling.] Elongation of the uvula.

uvulotome (ū'vṳ̄-lō̤-tōm), *n.* [*uvula* + Gr. *-τομος*, ‹ *ταμεῖν*, cut.] An instrument used in amputation of the uvula.

uvulotomy (ū-vṳ̄-lot'ō̤-mi), *n.* [*uvula* + Gr. *-τομία*, ‹ *ταμεῖν*, cut.] An operation for the removal of a portion of the uvula.

V 3. Also an abbreviation (*a*) of *rector*; (*b*) [*l. c.*] in *electrotechnics*, of *velocity*; (*c*) of Latin *venerabilis*, *venerandus*, venerable; (*d*) of *version*; (*e*) of *vicar*; (*f*) of *vice*; (*g*) [*l. c.* or *cap.*] of Latin *vide*, see; (*h*) [*l. c.* or *cap.*] of *village*; (*i*) [*l. c.* or *cap.*] of *violin*; (*j*) of *viscount*; (*k*) of *visus*, acuteness of vision; (*l*) [*l. c.* or *cap.*] of *vocative*; (*m*) [*l. c.* or *cap.*] of *volume*; (*n*) of *volunteers*; (*o*) in *elect.*, of *volt*, the unit of electromotive force or electric pressure, equal to 100,000,000 absolute or c. g. s. units.—5. In *meteor.*, a V-shaped depression; an area of low pressure bounded by V-shaped isobars and differing from an oval secondary cyclone.—6. In *mach.*, a raised ridge upon the bed of a lathe or of a planer, having sloping sides resembling an inverted capital letter V. On these V's the carriage rests by gravity, and self-centers itself upon them without adjusting gibs or wedges. The objection to them is the effect of sidewise pressure upon the traveling bed or carriage, by which the latter may be forced up the slope of the V under heavy work, and the carriage-travel become out of line.

Va. An abbreviation (*a*) [*l. c.*] of *viola*; (*b*) of *Virginia*.

V. A. An abbreviation (*a*) [*l. c.*] of *verb active*; (*b*) [*l. c.*] of *verbal adjective*; (*c*) of *Vicar Apostolic*; (*d*) of *Vice-Admiral*; (*e*) of *Victoria and Albert* (*Order of*); (*f*) [*l. c.*] of the Latin *vixit annos*, lived [so many] years.

vaal (väl), *n.* [D., = E. *vale.*] A valley. [South Africa.]

vaca (vä'kä), *n.* [Cuban use of Sp. *vaca*, a cow, ＜ L. *vacca*, a cow.] See ★*cataphebe*.

vacation, *n.*—**Long vacation,** in England, the summer vacation at the law-courts and universities, which is longer than those at Christmas and Easter.

vacational (vā-kā'shon-al), *a.* [*vacation* + *-al*^{1}.] Of or pertaining to, or of the nature of, a vacation.

vacationing (vā-kā'shon-ing), *n.* The going on a vacation. [Rare.]

In many instances the child now spends most of his time in school and in *vacationing*.
L. H. Bailey, Outlook to Nature, p. 153.

vaccine, *n.*—**Glycerinated vaccine.** See ★*glycerinate*.—**Haffkine's vaccine.** Same as *anti-plague* ★*serum*.

vaccinic, *a.* 2. Noting an acid, a substance now known to consist of a mixture of butyric and capric acids.

vacciniculturist (vak"sin-i-kul'tūr-ist), *n.* [*vaccine* + *-i-* + *culture* + *-ist.*] One who conducts a vaccine-farm. *Buck*, Med. Handbook, VII. 605.

vacciniform (vak-sin'i-fôrm), *a.* [*vaccine* + L. *forma*, form.] Resembling in any way, especially in the eruption, cowpox.

vaccinostyle (vak-sin'ō-stīl), *n.* [*vaccine* + *-o-* + L. *stilus*, *stylus*, a style.] A small metallic lance used for vaccinating. *Buck*, Med. Handbook, VIII. 119.

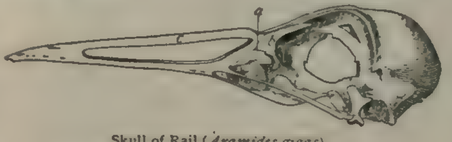
vacherie (väsh-rē'), *n.* [F. *vacherie*, cow-house. See *vachery*.] An island in the swamps bordering the lower Mississippi raised four or five feet above the general level. [Louisiana.]

The soil of the *vacherie* is a calcareous loam of a chocolate color.
U. S. Dept. Agr., Farmers' Bulletin No. 60, p. 14.

Vachette clasp. See ★*clasp*.

vacrome (vak'rōm), *n.* A trade-name for a preparation, containing a salt of chromium, used in mineral tanning. *Flemming*, Practical Tanning, p. 223.

vacuity, *n.*—**Infra-orbital vacuity,** an opening in the bones of the cranium, behind and below the orbit, typically found in the skull of pterodactyls. Also known as *inferior temporal vacuity*, in distinction from the larger supratemporal vacuity commonly present.—**Interorbital vacuity,** in *ornith.*, an opening in the bony plate which separates the orbits or eye-sockets.—**Interpterygoid vacuity,** a space or opening between the pterygoids, characteristic of some groups of reptiles.—**Lacrymonasal vacuity,** in *ornith.*, the space between the lacrymal and the descending process of the nasal.—**Laterotemporal vacuity** or **fenestra,** the lower or outer of the two openings back of the orbit in such a skull as that of *Hatteria*. See cut under ★*Diapsida*.



Skull of Rail (*Aramides gigas*).
a, lacrymonasal vacuity; *b*, lacrymal bone; *c*, nasal bone.

vacuole, *n.*—**Oral vacuole,** in choanoflagellate protozoans, a vacuole-like elevation of the body protoplasm at the base of the collar, serving for the ingestion of food-particles.

vacuolide (vak'ū-ō-lid), *n.* [*vacuole* + *-ide.*] A semifluid granule of photogenic, or light-producing, matter given off by certain phosphorescent mollusks such as *Pholas dactylus*.

These semifluid granulations, which I have called *vacuolides* because of the appearance that they present under the microscope, and which are found in all photogenic elements, must be the plasmatic or microsomic corpuscles of the luminous cells.
Smithsonian Rep., 1895, p. 427.

vacuometer (vak-ū-om'e-tėr), *n.* [*vacuum* + Gr. *μέτρον*, measure.] 1. A device for measuring vacua or low pressures.—2. An instrument used in comparing barometers.—**Voege's vacuometer,** an instrument for the measurement of low gas-pressures, based upon the fact that the sensitiveness of thermojunctions to radiation is increased in vacuo.

vacuum, *n.*—**Absolute vacuum,** a region within which no matter exists. An absolute vacuum has never been even approximately attained by mechanical means, for although it is possible to reduce the quantity of gas in a closed vessel to about $\frac{1}{100,000,000}$ of that present at a pressure of one atmosphere, there still remain several millions of molecules in each cubic centimeter of volume.—**Crookes's vacuum,** in *elect.*, a vacuum high enough to suppress the Geissler discharge and to permit of the free formation of cathode rays and of the production of the various phenomena characteristic of Crookes's tubes.—**Geissler's vacuum,** in *elect.*, a partial vacuum in which the pressure is sufficiently reduced to permit of the Geissler discharge, but not low enough for the production of cathode rays or of the other phenomena characteristic of high vacua.—**High vacuum,** a vacuum in which the attenuation of the gas is extreme and in which the various phenomena associated with a long mean free path of the particles may occur.—**Low vacuum,** a partial vacuum in which the pressure is considerable and the mean free path of the gaseous particles very small. See *high* ★*vacuum*.—**Vacuum correction,** the correction of the readings of a mercurial barometer necessitated by the presence of an imperfect vacuum in the upper part of the tube. The correction is determined by Arago's method and consists in determining the apparent pressure of the atmosphere several times in succession, when the mercury is screwed up in the tube so that the vacuum-chamber is small, and again when the mercury is low in the tube and the vacuum-chamber is large. The Arago method is limited in its application by our ignorance of the variation of capillarity in different parts of the barometer tube and the adhesion of gas to the glass tube. The perfection of the vacuum may roughly be tested by passing an electric discharge through it.—**Vacuum distillation.** See ★*distillation*.—**Vacuum dredging-machine.** See ★*dredging-machine*.—**Vacuum effect.** See ★*effect*.—**Vacuum fan.** See ★*fan*^{1}.

vacuum-chamber (vak'ū-um-chām"bėr), *n.* The space above the summit of the mercury column in any barometer. This space should be a (relatively) perfect vacuum: if it is not, then the correction or reduction to a vacuum should be determined by Arago's method.

vacuum-cone (vak'ū-um-kōn), *n.* A small conically shaped vacuum which is created in a jet-condenser.

vacuum-line (vak'ū-um-līn), *n.* The line in the diagram which would be traced by the steam-engine indicator if the pistons were exposed at that end to the pressure of a perfect vacuum. On account of the fact that heat remains in the condenser, this line is rarely drawn by the instrument itself; but if the atmospheric line of no pressure is drawn by the indicator-pencil, the vacuum-line can be drawn by hand by taking the reading of an aneroid or mercurial barometer, translated into pounds per square inch, and laying off the distance below atmosphere on the scale the spring of the indicator demands.

vacuum-pot (vak'ū-um-pot), *n.* A chamber within which pressures less than that of the atmosphere and approximating a vacuum are maintained; specifically, a form of steam-engine condenser having the shape of a pot, in which a vacuum is maintained by placing it at the upper end of a water-column 32 feet or more high, so that water drains out of it by gravity and without a pump, maintaining a vacuum which would be Torricellian except for the vapor of warm water and the air entrained with the steam and injection-water, or present from leakage. *Thurston*, Stat. Steam-engine, p. 24.

vacuum-vessels (vak'ū-um-ves"lz), *n. pl.* Same as *Dewar's* ★*flasks*.

The introduction of the now well-known *vacuum-vessels* by Dewar has rendered the manipulation of gases a matter of comparative simplicity.
M. W. Travers, Exper. Study of Gases, p. 207.

vadose (vā'dōs), *a.* [L. *vadosus*, shallow.] Shallow: specifically applied to those ground waters which seep into rocks and soil from the surface, as opposed to the construction waters which were built into the rocks at the time of their formation.

Another lecture of great interest was that delivered by Prof. Suess, of Vienna, on the nature of hot springs. The mineral springs which are due to infiltration from surface water go by the name of "*vadose*" springs; they may be either cold or hot, according to their depth.
Nature, Nov. 6, 1902, p. 20.

These considerations tend to restrict the activities of the meteoric waters to the *vadose* region, as Pośepný calls it, i.e., that belt of the rocks which stands between the permanent water level and the surface.
Smithsonian Rep., 1906, p. 200.

Vagabond's disease or **pigmentation.** See ★*disease*.

vagile (vaj'il), *a.* [NL. **vagilis* (cf. L. *motilis*, E. *motile*), ＜ *vagus*, wandering. See *vague*.] Wandering; vagrant; not sedentary; not fixed.

While it is already difficult to understand how these giants could have balanced themselves upon their apex, it would appear still more unintelligible that they should have striven to raise themselves so high above the sea bottom when their recent descendants find it so much more advantageous to lie low in the mud and to prey upon the much richer fauna of the *vagile* benthos.
Amer. Geol., April, 1903, p. 214.

vaginalectomy (vaj"i-na-lek'tō-mi), *n.* [NL. *vaginalis* + Gr. *ἐκτομή*, excision.] Excision of the tunica vaginalis.

vaginectomy (vaj-i-nek'tō-mi), *n.* [L. *vagina*, vagina, + Gr. *ἐκτομή*, excision.] Excision of the vagina.

Vaginoceras (vaj-i-nos'e-ras), *n.* [NL., ＜ L. *vagina*, a sheath, + Gr. *κέρας*, horn.] A genus of nautiloid cephalopods having a structure quite similar to that of ★*Endoceras* (which see) and occurring in rocks of the same age.

vago-accessorius (vā-gō-ak-se-sō'ri-us), *n.*; pl. *vago-accessorii* (-ī). [NL., ＜ *vagus* + *accessorius*.] The pneumogastric (vagus) and spinal accessory nerves regarded as one.

vagosympathetic (vā"gō-sim-pa-thet'ik), *a.* [NL. *vagus* + *sympathetic*(*us*).] The vagus and cervical sympathetic nerve, forming one trunk in the dog. *Med. Record*, March 7, 1903, p. 388.

vagotomy (vā-got'ō-mi), *n.* [NL., ＜ *vagus* + Gr. *-τομια*, ＜ *ταμεῖν*, cut.] Division of the vagus or pneumogastric nerve.

vagrantism (vā'grant-izm), *n.* Vagrancy. *G. S. Hall*, Adolescence, I. 296. [Rare.]

Vagus foramen. See ★*foramen*.

vagus-pulse (vā'gus-puls), *n.* A full, slow pulse.

vaidya (vīd'yä), *n.* [Skt. *vaidya*, one versed in science, ＜ *vidyā*, knowledge, science, ＜ √ *vid*, know: see *veda*, *wit*.] In India, one of the caste of hereditary physicians, accounted a mixed caste.

vaiseshika (vī-sā′shi-kạ̈), *n.* [Skt. *vaiseshika* (*vaiçeṣika*), special, specific, peculiar, < *visesha* (*viçeṣa*), difference, specific property, special distinction (cf. *visishta* (*viçiṣta*), distinguished, particularized), < *vi*, away, off, + √ *sish* (*çis*), leave, be left.] The second school of Hindu philosophy distinguished by its doctrine of atoms.

vaka (vä′kä), *n.* [Also *vakka.* Tongan and Marquesan *vaka* = Tahitian *vaa* = Samoan *va'a* = Hawaiian *waa* = Maori *waka.*] A canoe or boat.

val. An abbreviation of *value.*

Valachian, *a.* Same as *Wallachian.*

Valanginian (val-an-jin′i-ạn), *a.* and *n.* [*Valangin*, a district in Switzerland, + *-ian.*] In *geol.*, the lowest substage of the Cretaceous system in the Jura, represented by limestones and marls and overlain by the Hauterivian substage.

valdivin (val′di-vin), *n.* [NL. *valdivia* (see def.) + *-in*2.] A colorless, very bitter glucoside, $C_{18}H_{24}O_{10}.2\frac{1}{2}HO$, contained in the fruit of *Simaba valdivia.* It crystallizes in hexagonal prisms and melts at 230° C.

Valenciennellus (vā-len″si-e-nel′us), *n.* [NL., named for the noted ichthyologist Achille *Valenciennes.*] A genus of deep-sea fishes of the family *Maurolicidæ.*

valene (val′ēn), *n.* [*val*(*eric*) + *-ene.*] Same as ⋆*valerone.*

valent (vā′lent), *a.* [See *valence*2.] Having a certain valence or valency.

valenton (vä-len-tōn′), *n.* [Amer. Sp. use of Sp. *valentón*, an arrogant, vainglorious person.] A characinoid fish of the Orinoco.

> The Orinoco is full of fish of many varieties, amongst them the "*valenton,*" a kind of tarpon, the voracious carib fish. *Geog. Jour.* (R. G. S.), XIII. 47.

valeral (val′ẹ-ral), *n.* [*valer*(*ic*) + *-al*3.] A colorless, mobile liquid, $CH_3(CH_2)_3CHO$, prepared by the distillation of a mixture of calcium normal valerate and calcium formate. It boils at 103.4° C. Also called *normal valeraldehyde, normal valeric aldehyde* or *pentanal.*

valeraldehyde, *n.*—**Normal valeraldehyde.** See ⋆*valeral.*

valeramide (val-ėr-am′id), *n.* [*valer*(*ate*) + *amide.*] A colorless compound, $CH_3(CH_2)_3$-$CONH_2$, prepared by heating ammonium valerate. It crystallizes in pearly, lustrous plates, melts at 114–116° C., and may be sublimed. Also called *normal valeric amide.*

valerene (val′ẹ-rēn), *n.* [*valer*(*ic*) + *-ene.*] Same as *amylene.*

Valerianales (vạ-lē-ri-a-nā′lēz), *n. pl.* [NL. (Britton, 1898), < *Valeriana* + *-ales.*] An order of dicotyledonous sympetalous plants characterized by having the flowers more or less aggregated in heads and the stamens fewer than the lobes of the corolla. It embraces the *Valerianaceæ* and *Dipsacaceæ*, or the valerian and teazel families.

valeric, *a.*—**Normal valeric amide.** See ⋆*valeramide.*

valeridine (va-ler′i-din), *n.* [*valer*(*al*) + *-id* + *-ine*2.] A colorless alkaloidal compound, $C_{10}H_{19}N$, prepared by the action of alcoholic ammonia on valeral.

valerin (val′ẹ-rin), *n.* [*valer*(*ic*) + *-in*2.] The general name for the three compounds formed by the action of valeric acid on glycerol. They are all colorless, oily, neutral liquids, $C_3H_7O_2(OCOC_4H_9)$, $C_3H_6O(OCOC_4H_9)_2$, and $C_3H_5(OCOC_4H_9)_3$, respectively.

valerine (val′ẹ-rin), *n.* [*valer*(*ic*) + *-ine*2.] Same as *amylene.* A trade-name.

valeritrine (va-ler′i-trin), *n.* A colorless, mobile liquid, $C_{15}H_{27}N$, prepared by heating valeral with alcoholic ammonia.

valero-. A combining form used, in organic chemistry, to denote the presence, in the molecule of a compound, of the valeryl radical $-CH_2(CH_3)CH_3$, or to indicate derivation from a compound of the methane series with five atoms of carbon.

valerol (val′ẹ-rol), *n.* [*valer*(*ian*) + *-ol.*] The name formerly applied to a mixture of substances obtained by the distillation of valerian oil.

valerone (val′ẹ-rōn), *n.* [*valer*(*ian*) + *-one.*] A colorless, mobile liquid, $[(CH_3)_2CHCH_2]CO$, prepared by the distillation of calcium isovalerate. It boils at 181–182° C. Also called *2,6-dimethyl-4-heptanone, diisobutyl ketone,* or *diisopropylacetone.*

valeroxyl (val-ėr-ok′sil), *n.* [*valer*(*ian*) + *ox*(*ygen*) + *-yl.*] Same as *valeryl:* an obsolete term.

valerylene (va-ler′i-lēn), *n.* [*valeryl* + *-ene.*] Same as 3-⋆*pentine.*

vali (vä′lē), *n.* [Turk. *wālī*, < Ar. *wālī*, a governor, < *walla*, appoint as governor or ruler.] The governor-general of a vilayet, or government, one of the primary divisions of the Turkish Empire.

> Travelling the next year with an open order to the *Valis* of Salonica and Monastir, supplied by the Ministry of the Interior. *Geog. Jour.* (R. G. S.), XVI. 215.

validol (val′i-dol), *n.* [L. *validus*, strong, + *-ol.*] The trade-name of a menthol valerate, $C_5H_9CO_2C_{10}H_{19}$, a clear, oily liquid with an aromatic odor. It has numerous medicinal uses.

valinch (val′inch), *n.* [Also formerly *valentia* (used in Suffolk): origin obscure.] Same as *thief-tube.*

valleite (va-lā′īt), *n.* [Named after Dr. la *Vallée*-Poussin.] A silicate near anthophyllite occurring in colorless and pale red crystals with the pink tremolite of Edwards, New York.

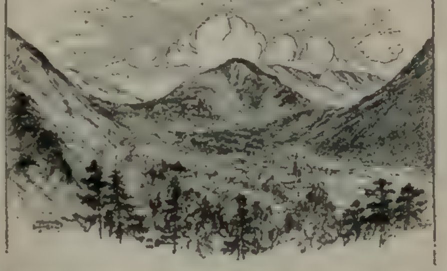
Vallet's mass. See ⋆*mass*2.

valley, *n.* **4.** The depression between two ridges of a tooth, typically shown in such molars as those of the tapir and mastodon: correlated with *lake*, which is a depression surrounded by a raised ridge of enamel such as occurs in the molars of a horse. *Amer. Jour. Sci.*, Feb., 1904, p. 134.—**Blind valley,** a valley inclosed at its lower end where the stream escapes by an underground passage.

> There are many *blind valleys* and hollows, the drainage water escaping underground.
> *Geog. Jour.* (R. G. S.), XVI. 681.

Cataclinal valley. See ⋆*cataclinal.*—**Dendritic valley.** See ⋆*dendritic*, 3.—**Diaclinal valley.** See ⋆*diaclinal.*—**Discordant valleys,** valleys that do not join each other at an even grade. The higher one of two such valleys is called a *hanging* ⋆*valley.* Valleys of this kind characterize mountains that have been strongly glaciated.

> The streams from the side valleys plunge down the rocky walls of the deepened main valley, forming fine waterfalls. *Discordant* side *valleys* of this kind are called hanging valleys. *W. M. Davis*, Elem. Phys. Geog.



Hanging valleys, at right and left, opening into main valley.

Hanging valley, a lateral valley which opens in the side wall and above the floor of the main valley, so that the lateral stream cascades into the main valley. Hanging valleys are particularly characteristic of mountains that have been strongly glaciated; their discordant relation to the open main valley is there explained by the excess of glacial erosion in the main valley. They occur exceptionally on the sides of narrow cañons, where a small lateral stream has not yet worn down its valley so as to join the master stream at accordant grade; also on bold coasts where the sea has worn away the lower ends of small valleys.—**Schroeter's valley,** a deep cleft on the moon's surface near the bright crater Aristarchus.—**Structural valley,** a valley which is a direct result of the geological structure of a region, such as one produced by a syncline.—**Tectonic valley,** a valley formed by movements of the earth's crust, instead of by the erosive action of rivers.—**Through valley.** See the extract.

> A prominent feature in regions of former glaciation, both of continental glaciers and mountain-valley glaciers, is the presence of *through valleys*, that is, valleys in which there is now no pronounced divide. Such valleys abound in the Finger Lake region of central New York, and they are common also in Alaska, and, as Penck has shown, in the Alps. The evidence points to the conclusion that many of these through valleys owe their characteristics to the passage of ice across divides, and the consequent lowering of the divides by glacial erosion.
> *Pop. Sci. Mo.*, Feb., 1907, p. 119.

Valley glacier. See ⋆*glacier.*—**Valley of solution,** valleys excavated by the dissolving power of water, almost always in limestone.

> '*Valleys of Solution* in Northern Arkansas' are discussed by A. H. Purdue. They are described as steep and bilaterally symmetrical, with remarkable straightness, due, no doubt, to their connection with jointing planes. *Science*, March 22, 1901, p. 466.

valley-floor (val′i-flōr), *n.* The flat bottom of a valley as excavated during an earlier drainage cycle. It may then be buried under a cover of later silts and gravels.

> The full depths of the silt deposits that cover these remnants of the *valley floors* were not determined, as all the wells examined were very shallow, reaching a sufficient water supply very near the surface.
> *W. G. Tight*, in U. S. Geol. Surv., Prof. Paper 13, p. 59.

valley-train (val′i-trān), *n.* Stratified glacial debris occurring in a narrow belt along the axis of a valley, outside the region occupied by a glacier.

> The stratified drift assumed different forms in different positions. Outside the moraine it was sometimes deposited in the form of plains (overwash plains), as from Plainfield to Metuchen, and sometimes in the form of narrow belts along valleys (*valley trains*). Within the area covered by the ice, it sometimes assumed the form of hillocks (kames), especially where the water issued from beneath the ice.
> *R. D. Salisbury*, in Geol. Surv. New Jersey, 1894, p. 144.

vallum, *n.* **3.** A name given, incorrectly, to a ditch with earthworks on either side, which follows the line of Hadrian's wall in northern England. See the extract.

> The "*vallum*" can no longer be explained as of old, but it is still a puzzle. Many of its features have been elucidated by recent excavations. . . . The "*vallum*" is one of the largest of extant Roman earthworks; speculation has busied itself about it for two centuries, and excavation for some years. It remains unexplained, a proof of the imperfection of our knowledge of antiquity.
> *Encyc. Brit.*, XXXII. 281.

valorization (val″ọr-i-zā′shọn), *n.* [L. *valor*, value (see *valor*), + *-ize* + *-ation.*] The act of placing a value upon (something); valuation; the act of fixing the price of (some commodity). See the extract.

> To help coffee planters, Brazil will, in accordance with the provisions of the law of August 6, 1906, purchase coffee at about eight and one-half cents a pound. . . . It is proposed to purchase coffee on account of the three coffee producing Brazilian States, whenever the price of coffee falls below about eight and three-eighths cents a pound. Since 1901 the price of coffee has, with very few exceptions, been below the cost of production. The financing of the *valorization* scheme is provided for by the issuing of bonds by the three coffee producing States, guaranteed by the general government.
> *Amer. Political Sci. Rev.*, Feb., 1907, p. 249.

valsoid (val′soid), *a.* [*Valsa* +*-oid.*] Resembling or pertaining to the genus *Valsa* (which see).

valuate (val′ụ̄-āt), *v. t.*; pret. and pp. *valuated*, ppr. *valuating.* To place a value on; compute the value of; appraise.

> I am, if you will excuse a rather technical pleasantry, an encumbrance on the estate. The actual harm I can do, I leave you to *valuate* for yourself.
> *Stevenson and Osbourne*, The Wrecker, xix.

valuation, *n.*—**Valuation area,** a forest area of known size upon which measurements or other detailed studies are made for the determination of the stand or yield. See ⋆*experiment area.* Also called *sample plot, sample area.*—**Valuation survey,** the measurement or other detailed study of the stand upon a valuation or experiment area. Two kinds of valuation survey are distinguished: (*a*) The *strip survey* comprises the measurement of a stand, or a given portion of it, upon strips usually one chain wide. (*b*) The *plot survey* comprises the measurement of the stand, or a given portion of it, upon isolated plots not in the form of strips.

value, *n.*—**Absolute value of a complex number.** See ⋆*number.*—**Absolute value of a real number.** See ⋆*number.*—**Book value.** See ⋆*book.*—**Calorific value.** See ⋆*calorific.*—**Cardinal value,** in *psychophys.*, the value of the stimulus or of sensation at the cardinal point. *G. T. Fechner* (trans.), Psychophysik, II. 49.

> Wundt conjectures that the maximal pleasure coincides with this *cardinal value* of sensation.
> *O. Külpe* (trans.), Outlines of Psychol., p. 250.

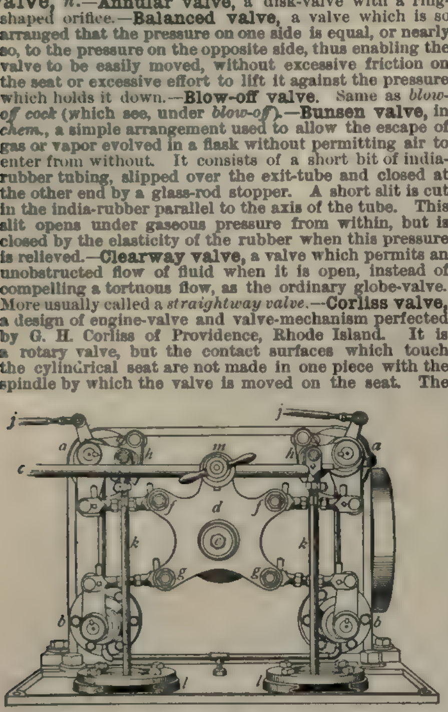
Critical value, a value of the variable at a critical point of a function.—**Economic value,** the capacity of a commodity or service to increase human well-being either through the direct satisfaction of wants, or through the power of producing, or commanding in exchange, commodities or services which directly satisfy wants.—**Effective value,** in *elect.*, that mean value of an alternating current, electromotive force, etc., which gives the same average effect or power as the periodically varying actual current, etc. It is the square root of the mean square of instantaneous values, and is the value recorded by all alternating-current instruments, meters, etc. See ⋆*alternating.*—**Ether value.** See ⋆*ester number.*—**Final utility theory of value,** in *polit. econ.*, the theory that the value of any commodity is determined by the utility, or want-satisfying power, of that unit of the supply which is put to the least important use.—**Intrinsic value.** (*a*) Inherent usefulness of a commodity, as contrasted with its market value. Thus diamonds are sometimes said to have little intrinsic value, though commanding a high price. This use is practically obsolete. (*b*) Value which is socially recognized, in contrast with purely personal valuation. Thus an heirloom may be said to be of small *intrinsic value*, although highly valued by its possessor. (*c*) Value as determined by ordinary market conditions, as contrasted with value with which an object is endowed by virtue of convention or governmental fiat. Thus paper money is often said to be devoid of intrinsic value.—**Most frequent value,** that value which occurs most frequently in the course of a series of observations, or that value toward which the others seem to crowd most thickly. Also called the *most crowded value*, the *favorite* *value*, the *median value*, and the *prevailing value*. The German term *scheitelwerth* is also sometimes used by English writers. —**Saponification value,** in the analysis of fats, the number of milligrams of potassium hydroxid required completely to saturate the free and combined acids of one gram of a fat. Also called *saponification number* or *Koettstorfer's number*.—**Turning value.** (*a*) In *graphics*, the ordinate of a turning point. (*b*) In *math.*, the value of the function represented by the ordinate of a turning point.—**Value in use,** in classical *polit. econ.*, the capacity of an object for the satisfaction of human wants. In modern political economy, the term *utility* is employed instead.

value, *v. t.* **II.** *intrans.* See ★*cruise*¹, 2.

valuer, *n.* **2.** See ★*cruiser*, 2.

valv, *n.* A simplified spelling of *valve*.

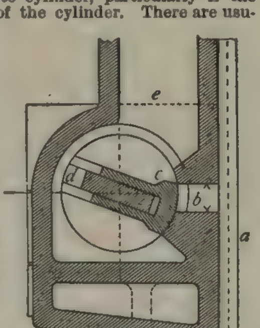
valve, *n.*—**Annular valve,** a disk-valve with a ring-shaped orifice.—**Balanced valve,** a valve which is so arranged that the pressure on one side is equal, or nearly so, to the pressure on the opposite side, thus enabling the valve to be easily moved, without excessive friction on the seat or excessive effort to lift it against the pressure which holds it down.—**Blow-off valve.** Same as *blow-off cock* (which see, under *blow-off*).—**Bunsen valve,** in *chem.*, a simple arrangement used to allow the escape of gas or vapor evolved in a flask without permitting air to enter from without. It consists of a short bit of india-rubber tubing, slipped over the exit-tube and closed at the other end by a glass-rod stopper. A short slit is cut in the india-rubber parallel to the axis of the tube. This slit opens under gaseous pressure from within, but is closed by the elasticity of the rubber when this pressure is relieved.—**Clearway valve,** a valve which permits an unobstructed flow of fluid when it is open, instead of compelling a tortuous flow, as the ordinary globe-valve. More usually called a *straightway valve*.—**Corliss valve,** a design of engine-valve and valve-mechanism perfected by G. H. Corliss of Providence, Rhode Island. It is a rotary valve, but the contact surfaces which touch the cylindrical seat are not made in one piece with the spindle by which the valve is moved on the seat.



Corliss Valve.

a, *a*, live-steam inlet-valves; *b*, *b*, exhaust-steam outlet-valves; *c*, valve-rod from eccentric rocker-arm actuating the valve-gear; *d*, wrist-plate, having an oscillatory or rocking motion around its center *e*; *f*, *f*, attachment of steam-rods, which open *a*; *g*, *g*, attachment of exhaust-rods, which open and close *b*; *h*, *h*, dogs or catches or claws which can be unhooked from the valve-stems or spindles of *a* by the governor-rods *j*, *j*; *k*, *k*, dash-pot links, attached to the valve-spindle and acting to close the valves *a* when catches *h* are released by *j* by means of weights of pistons in *l*; *l*, *l*, dash-pots acting to cushion the descent of *k* and prevent undue shock; *m*, wrist-plate pin by which *c* can be released from *d* for starting.

The valve also does not fill the cylindrical hollow completely. These features preclude the seizing of the valve by the casing on unequal expansion by heat. The valve-port is transverse to the cylinder axis. The passage can be very short from valve-chest to cylinder, particularly if the valves are in the heads of the cylinder. There are usually four of these valves, one for the inlet of steam and one for exhaust at each end. The valves for letting in steam are made to close by having the mechanism which opens them released or tripped, so that the valve may drop shut quickly by the action of a weight. To prevent slamming or shock when the weight acts, the rod which carries the weight is fitted with a dash-pot, or cylinder in which fits an air-piston, which cushions the fall. Atmospheric pressure may be used on these dash-pot pistons to help quick closure. The point of trip or release is controlled by the governor. The exhaust-valves are not tripped but are positively connected to the wrist-plate which drives all four of the valves. This wrist-plate or spider is given a rocking motion round its axis by an eccentric-rod from the engine-shaft.



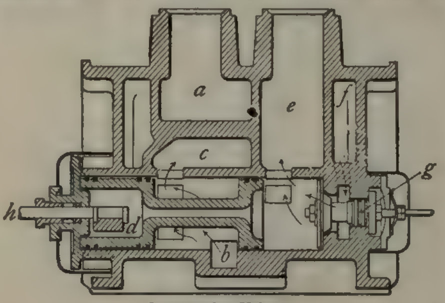
Corliss Valve.

a, bore of cylinder; *b*, steam-port or passage leading from steam-chest *e* to *a*. *c*, shell or valve proper, opening *b* to *e* when revolved around its axis; *d*, valve-spindle or -stem, revolved by the valve mechanism without from the wrist-plate, but not forming one piece with *c*; *e*, passage from steam-chest full of live steam, ready to pass into *b* and *a* when valve is opened.

The steam-valve rods are attached near the vertical diameter through the axis of the plate, and the exhaust-valves nearer the horizontal diameter. This gives a holding open to the exhaust-valves, and a quick opening to the steam-valves. The Corliss gear gives a variable admission as the load varies, but a constant release of the exhaust, and a constant compression to act as a cushion for the reciprocating mechanism. It gives high initial pressure in the cylinder and a sharp cut-off.—**Cornish valve,** a double-beat or double-seat lifting- or disk-valve, in which the pressure on the upper disk is balanced by an equal pressure on the lower disk in the opposite direction: used first in the Cornish pumping-engines for mines, for the water-valves at the foot of the ascending water-column.—**Cowburn valve,** a dead-weight safety-valve; a form of safety-valve to which the weight is applied by placing it directly on top of the valve without the interposition of any lever or spring. The advantage of this is that the weight on the valve is a direct multiple of the pressure at which it will blow off.—**Cut-off valve.** See ★*cut-off*.—**Double-beat valve,** a lift-valve having two disks, each with a seating-face, so that the steam-pressure acts to open the valve as well as to close it, thus making practically a balanced valve. Such a valve is easily moved and does not wear rapidly, as the valve lifts off the seats instead of sliding. Also called a *Cornish valve*, because of its extensive use on Cornish pumping-engines.—**Double-face valve,** a valve intended to seat, as desired, upon one of two seats which are opposite to each other in the casing inclosing the valve. The valve seats, therefore, either upon its upper or upon its lower face, according to its position.—**Double-seat valve,** same as Cornish, or double-beat valve, or the balanced puppet-valve with two disks on a single spindle.—**Ectal valve,** the outer of the two folds or valves by means of which the branchiopore, or external opening of the water-tube, of a lamprey is closed.

Synchronously with the forwardly directed current there is a closure of the external branchiopore by means of the *ectal* and ental *valves*. *Science*, Feb. 5, 1904, p. 219.

Electric valve, an electric apparatus which permits currents to pass in one direction only, and therefore can be used to rectify alternating currents. See ★*rectifier*. Such valves are: (*a*) the aluminium cell, consisting of an aluminium and a carbon or lead plate in an electrolyte; (*b*) metal arcs, especially the mercury arc.—**Ental valve,** the inner of the valves, or folds of membrane, with which the water-tube of a lamprey is provided. See the extract under *ectal* ★*valve*.—**Flat valve.** (*a*) A valve which slides upon a flat or plane surface, as a face or contact surface. (*b*) A lifting-valve in which the contact with the top surface above the opening in the seat has a plane or flat area, as distinguished from one in which a part of the surface of a cone fits into a conical edge in the opening.—**Full-way valve,** a gate-valve; a valve which gives the full straightway opening, and causes no constriction of the passage through which the fluid is to pass.—**Hanging valve.** (*a*) A valve which is hinged and falls by gravity or by a spring-pressure so as to form an abutment in a rotary engine. It is lifted by the piston as it passes. (*b*) A clack- or flap-valve.—**Induction valve.** (*a*) A valve through which a fluid is admitted. (*b*) Specifically, in an internal-combustion motor cylinder, the valve through which the combustible mixture of fuel and air enters, having been previously proportioned by proper mixing apparatus, usually also valves.—**Intercepting valve,** a valve used in compound engines, and particularly in the compound locomotive, to enable the engineer to start the engine with boiler-steam in the low-pressure as well as in the high-pressure cylinder, or with the engine operating as a two-cylinder simple engine. Sometimes called a *simpling valve*.



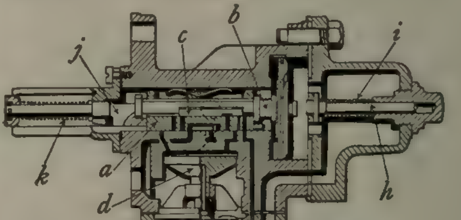
Intercepting Valve.

a, high-pressure steam from boiler dry-pipe; *b*, exhaust from high-pressure cylinder; *c*, passage to open air for high-pressure exhaust. In the position shown of the piston intercepting valve *d*, the exhaust-steam passes freely from *b* to *c* through the ports, as shown by arrows. *e*, passage to receiver by pipe leading to low-pressure cylinder; *f*, chamber fed by live boiler-steam through an independent pipe, with valve under control of engine-man; *g*, reducing-valve, permitting live steam at reduced pressure to pass directly from *f* to *e* and reach low-pressure piston without going through the high-pressure cylinder; *h*, rod leading to engine-man's cab, either to independent lever or by connections to the lever of cut-off and reversing motion. In the position shown, the engine is working simple, the high cylinder exhausting to the atmosphere, the low receiving boiler-steam directly through *f* and *g* through *e*. When *d* is moved to the right as far as it will go, the ports leading from *b* to *c* are closed by the cylindrical surface at the left-hand part of *d*, but steam can pass directly from *b* to *e*, and so from high- to low-pressure cylinders through the receiver. At the same time the valve *g* is forced shut by the position of *d* and no live steam passes from *f* to *e*. The engine now works compound.

In its simplest form, boiler-steam is admitted through it to the passage from the high to the low cylinder, and hence acts to drive the low piston, with a back pressure upon the exhaust side of the high. In better forms, the high-pressure exhaust is cut off from the passage to the low-pressure cylinder and turned into the exhaust-pipe directly, when pressure is let into the low cylinder from the boiler. The intercepting valve is also made either automatic or non-automatic. In the automatic type, after a few strokes as a simple engine, the pressure accumulating in the receiver between the cylinders will cause a piston attached to the valve to move and close it, and the engine becomes compound, even against the will of the engineer. In the non-automatic types, the engineer controls the change from simple to compound at his will. He can bleed live steam into the low-pressure cylinder, if he desires, on grades or when he wants to make up time, sacrificing some economy thereby, but keeping up to his time-schedule. Motor-cars using compound steam-engines have also an intercepting valve for use in starting, or on bad ground.—**Lapless valve,** a slide- or other valve having no lap on the end, but just covering the opening from end to end, when in mid-position.—**Monkey-tail valve,** a name used at sea for what is elsewhere called the *by-pass valve*, whereby live steam from the pipe leading from the boiler can be bled into the passage or port of the low-pressure cylinder of a compound engine for starting, or warming, the cylinder, or to increase the power of the engine for a short time, although at the expense of loss of economy.—**Mushroom valve,** a form of lifting-valve having a circular thick flat disk on the end of a guiding and lifting valve-stem. The combination suggests a mushroom or toadstool in shape: much used in internal-combustion motors for inlet of gases to the combustion and compression chamber and for outlet of exhaust or waste gases.—**Nodon valve,** in *elect.*, a form of electrolytic rectifier using aluminium as negative terminal, designed by Nodon. See ★*rectifier*.

The *Nodon valve* is an application of a peculiar property of aluminium which causes it to resist the passage of a current when it is made the positive pole of an electrolytic cell, while offering little or no resistance when it is the negative pole. *Lancet*, April 18, 1903, p. 1108.

Non-advancing stem valve. See ★*spindle-valve*.—**One-way valve,** a valve so constructed that flow through it is possible in one direction only, and it closes under a reverse of the flow; a check-valve.—**Pneumatic valve,** a valve used to make an opening air-tight or to stop the flow of air. It may be a clack-valve, a disk-valve, or a slide-valve, and is made light or strong according to its use.—**Pulverizing valve,** a valve with an opening of small diameter, through which the liquid must pass at high velocity, so as to be broken up or atomized to form a mist of very small particles, or in a fine state of division: used for liquid fuel, that the mixture of atomized fuel and air may be readily combustible, and the combustion may be smokeless because complete. *The Engineer* (London), 1903, p. 111.—**Rectal valves,** transverse folds or rugæ in the mucous membrane of the rectum.—**Retaining valve,** a valve designed to prevent back-flow in pumps or water-columns should the usual valves leak: particularly used in pumping in series or by successive lifts to prevent water which has been delivered to the ascending column from working back. The foot-valve at the bottom of a suction-pipe in a well or cistern is a retaining valve.—**Rotating valve.** (*a*) A flat valve, usually a circular disk, which rotates around its axis to open and close ports or openings made in the flat face against which it is pressed. (*b*) A cylindrical valve, fitting a cylindrical casing, controlling openings or ports made in the cylindrical surface by a rotation of the cylinder around its axis. When the valve is a cone fitting a conical surface it is a plug-valve.—**Screw-down valve,** a form of valve, for opening and closing a passage, in which a disk, ball, or cone is raised and lowered off and on a seat by a spindle having a screw-thread fitting a nut: distinguished from a gate or any sliding valve, whatever the position of the axis.—**Straight-through valve,** one in which the flow of the material which it controls is not deflected or resisted by the construction of the seat of the valve: the gate-valve is of this type. Called also *straightway valve*.—**Straightway valve.** Same as *clearway* ★*valve*.—**Test-valve.** (*a*) A valve, or an opening closed by a valve, through which a sample may be taken of the material flowing through the pipe or passage, for purposes of test or experiment. (*b*) A valve held shut by a determined force, such as a weight or spring, so that by it the pressure in the duct or passage may be tested.—**Triple valve,** in a continuous brake system for railway trains, in which compressed air supplies the power, the valve between the brake-pipe, the car (auxiliary) reservoir, and the brake-cylinder under each car, by means of which the engineer can, at will, (*a*) charge the auxiliary reservoir with compressed air, (*b*) apply the brake, and (*c*) release the brake. Its essential elements are a balanced piston, on one side of which is the pressure in the brake-pipe and on the other side the pressure in the auxiliary reservoir; a slide-valve, on top of which is the pressure in the auxiliary reservoir; and a graduating-valve, which opens or closes certain ports in the slide-valve. When charging the system, air from the brake-pipe passes through a feed-groove around the piston of the triple valve and so into the auxiliary reservoir, charging it with compressed air, the slide-valve meanwhile connecting the brake-cylinder to the exhaust port and atmosphere through ports in its face.



Diagrammatic Section of Triple-Valve, Standard Freight Type.

a, slide-valve; *b*, main piston; *c*, graduating-valve; *d*, emergency-piston; *e*, emergency-valve; *f*, check-valve spring; *g*, check-valve; *h*, graduating-stem; *i*, graduating-spring; *j*, retarding-stem; *k*, retarding-spring.

When the pressure in the brake-pipe falls below that in the auxiliary reservoir, the balance of pressure on the piston is destroyed and the piston moves toward the now lower brake-pipe pressure, carrying with it the graduating- and slide-valves which (*a*) cut off the auxiliary reservoir from the brake-pipe, (*b*) cut off the brake-cylinder from the atmosphere, and (*c*) connect the auxiliary reservoir with the brake-cylinder, thus admitting compressed air to the brake-cylinder, which forces the piston in this cylinder outward, and, through the connecting levers and rods, sets the brake. For any definite reduction in brake-pipe pressure short of the point at which the brake-cylinder and auxiliary reservoir pressures equalize, the increase of brake-cylinder pressure continues until the auxiliary reservoir pressure falls slightly below that remaining in the brake-pipe when the triple-valve piston returns in the direction of the now lower auxiliary reservoir pressure, carrying with it the graduating-valve, until the latter cuts off the flow of air from the auxiliary reservoir to the brake-cylinder, when all communication through the triple valve is closed. When the pressure in the brake-pipe is then increased above that in the auxiliary reservoir sufficiently to overcome the resistance of both the piston and slide-valve, the parts return to their first position, charging the auxiliary reservoir anew and connecting the brake-cylinder to the atmosphere, which releases its charge and allows the release-springs to return its piston with the attached levers, rods, and brake-shoes to their original positions and releasing the shoes from the wheels. Various improved types of triple valves are now in use, providing for differentiating between service and emergency brake-cylinder pressures, for graduating the release of all brakes in the train, for a rapid serial service application of all the brakes in long trains, for uniform releasing and uniform recharging of all the brakes in long trains, and so on.—**Two-port valve**, a valve having two ports or openings. These may be designed to control admission and secure admixture of two fluids, as in the mixing valves for gas and air in internal-combustion engines; or the valve in its motion may open two ports or openings, together or in succession, for the passage of the controlled fluid. *Elect. Rev.*, Sept. 24, 1904, p. 517.—**Valve of Gerlach**, a fold of mucous membrane sometimes present, like a valve, at the entrance of the vermiform appendix.—**Velar valve**, the valve formed by the velum, or fold of membrane around the mouth opening of a lamprey: an important part of the sucking apparatus by which the animal adheres to its prey.—**Vibrating valve**, a plug-cock which has an oscillating motion to admit steam to and exhaust it from a steam-cylinder.

valve-box (valv′boks), *n.* 1. See ★*gate-box.* —2. Same as ★*valve-chest.*

valve-cage (valv′kāj), *n.* A lattice or grid construction over a lifting-valve of the ball type, intended to prevent the ball-valve from rising too far in the flow of the fluid past it, and to compel it to return to its place on the valve-seat when the flow tends to reverse.

valve-casing (valv′kā″sing), *n.* 1. The shell or chamber around a rotating cylindrical valve, or a conical plug-valve, in which the ports or openings are formed which the valve is to control.—2. The shell or body of the valve in globe- or gate-valves, within which are formed the contact areas or seating of the valve.

valve-chest (valv′chest), *n.* The casing or box inclosing the valve of a steam-engine. See ★*steam-chest*, 1.

> Taking boiler and *valve-chest* pressures and vacuum pressures on the roof and in the engine-room.
> *Nature*, Sept. 25, 1902, p. 535.

valve-face (valv′fās), *n.* The finished surface or face on which the valve, by sliding or lifting, moves and fits to open and close the passage or passages which it is to control. In sliding-valves this face is a plane; in lifting-valves it is a plane or a segment of the surface of a cone.

valve-gear, *n.*—**Trip valve-gear**, an engine valve-gear in which the cut-off is effected by the tripping or releasing of a lever which holds the steam-valve open, as in the Corliss or Green engines.

> The engines are vertical, cross-compound, condensing engines with Corliss *trip-valve gear* driven by separate eccentrics. *Elect. Rev.*, Aug. 8, 1903, p. 197.

valve-head (valv′hed), *n.* That part of the valve which closes the opening; the valve proper as distinguished from the stem.

valve-hook (valv′hu̇k), *n.* The hook on the rod which actuates a valve and which engages with a pin on the valve-stem or other element of the gear to drive it. See *gab*[4]. *Trans. Amer. Inst. Elect. Engin.*, 1904, p. 638.

valve-key (valv′kē), *n.* 1. A form of socket-wrench having a T-head, or other shape resembling the winding-key of a clock, which fits the squared or prismatic shape on the end of a valve spindle. It is designed for use where the valve should not be opened or shut except by one duly authorized and possessing such a key or wrench.—2. A key fitting the lock which is on the casing surrounding a safety-valve or other valve, and by which tampering with the valve is prevented.

valve-line (valv′līn), *n.* A line fastened to the valve at the top of a balloon, by pulling which the valve is opened.

valve-plate (valv′plāt), *n.* 1. A flat plate forming part of the seat of a valve, usually the contact portion, so that it can be renewed on wear or leakage without discarding or refinishing the entire casting.—2. A plate fitting over the end of the casing of a cylindrical valve, serving to guide the valve and close the opening.—3. A plate covering an opening into a valve-chest. Usually called a *bonnet.*

valve-port (valv′pôrt), *n.* One of the openings on a valve-seat, by which the passages to the cylinder or chamber are put into communication with the pressure-fluid; also any one of the similar openings through which pressure is relieved and the fluid escapes.

valve-ring (valv′ring), *n.* A packing-ring used on the back of a valve under pressure, so as to prevent such pressure from gaining access to the entire area of the valve and forcing it to its seat so that it will be hard to move. The ring slides upon a finished surface, and is held thereto by springs.

valve-rod (valv′rod), *n.* The rod which actuates or drives a valve-stem; the rod which is fastened to a valve to move it back and forth.

valve-seat (valv′sēt), *n.* The finished contact area upon which the lifting-valve rests when closed, and the sliding-valve slides to open and close the ports. In lifting-valves it is usually annular, and either flat or conical in form.

valve-sector (valv′sek″tor), *n.* 1. A link with a slot struck with an arc of a circle as center-line, used in the operation of certain valve-gears. Called also a quadrant.—2. A special name for a link in the valve-gear of certain types of oscillating engines.—3. The notched sector into which the latch catches on the levers which operate throttle-valves, so that the lever can be locked in position.—4. The notched sector or quadrant in which the lock or latch of the reverse lever in Stephenson link-motions can be engaged to hold the lever in desired positions.

valve-spindle (valv′spin″dl), *n.* The stem or axis on which a valve is fastened and which transmits motion from outside of the steam or valve-chest to the valve proper within it. In sliding- and lifting-valves the spindle or stem slides in and out through a stuffing-box; in rotating valves it turns around its own axis. 'Spindle' is not correctly applied to the stems of screw-valves for pipe.

valve-stem, *n.* 1. When the spindle or stem raises and lowers the valve by drawing the latter as a nut on a screw, the stem is said to be *non-advancing*, since it does not move in and out. When the nut is in the casing and the stem is threaded, the construction is called an *advancing stem*, since it moves in and out.
2. Any rod by which a gate or valve is lifted, as in sluice- or weir-gates at dams, or for water-wheels.

valve-strip (valv′strip), *n.* A straight piece acting as the valve-ring and used on rectangular balanced valves instead of a ring, to serve as a distance-piece and packing-strip between the valve and the pressure-plate.

valve-trumpet (valv′trum″pet), *n.* A trumpet with valves and keys.

valvolene (val′vọ-lēn), *n.* A trade-name for a lubricating-oil of high boiling-point suitable for use on the valves and other working parts of a steam-engine which are exposed to contact with the steam.

valvotomy (val-vot′ọ-mi), *n.* [L. *valva* (see *valve*) + Gr. τομή, a cutting, < τέμνειν, ταμεῖν, cut.] In *surg.*, operation for the division of any valve, and specifically for division of the rectal valves.

valvula, *n.* 2. In *entom.*, same as ★*uropatagium.*

Valvular insufficiency. See ★*insufficiency.*

valvule, *n.*—**Cardiac valvule.** See ★*cardiac.*

valylene (val′i-lēn), *n.* [*val*(*erian*) + *-yl* + *-ene.*] A colorless, oily compound, $CH:C(CH_3)C\vdots CH$, or $CH_3CH:CHC\vdots CH$, prepared by the action of alcoholic potassium hydroxid on valerylenedibromide. It has an odor of garlic and boils at 50° C.

vamp-skiver (vamp′skī″vėr), *n.* In *shoe-manufacturing*, a special form of skiving-machine for trimming vamps. One type employs a rotary knife. See *skiving-machine.*

van[1], *v. t.*—**Vanning jig**, in *mining*, a movable sieve jig with a combined vertical and endwise movement. These machines are built of large size and have large capacity, treating several hundred tons of ore per day, the vanning movement facilitating the travel of the ore through the machine.

van[3], *n.* 4. The small store in a logging-camp in which clothing, tobacco, and medicine are kept, to supply the crew.

vanadio-. See ★*vanado-.*

vanadiotungstate (vạ-nā″di-ọ-tung′stāt), *n.* A salt which contains the radicals of both vanadic and tungstic acids. A number of such compounds have been obtained and described. Also called *vanadotungstate.*

vanadious, *a.* 2. More specifically, containing vanadium as a constituent with apparently triad valence: as, *vanadious* oxid, V_2O_3. Vanadious salts in solution have a green color; they have not been much examined. Also *vanadous.*

vanadium, *n.* Metallic vanadium in a compact state has been obtained by fusion in an electric furnace. It has a gray color, is lustrous, and, as thus far observed, brittle, though perhaps this may be due to impurity of the metal; it is with difficulty freed from oxygen, carbon, and nitrogen.—**Vanadium steel.** See ★*steel*[1].

vanado-. In *chem.*, a prefix to the name of a compound, signifying the presence of vanadium as a constituent: as, for instance, potassium *vanadofluoride*, K_2VF_5. Also written *vanadio-.*

vanadyl (van′a̤-dil), *n.* [*vanad*(*ium*) + *-yl.*] In *chem.*, hypovanadious oxid, V_2O_2, or rather VO, when it occurs as a triad radical in combination, as in normal vanadyl sulphate, $(VO)_2(SO_4)_3$.

Vancouver system. See ★*system.*

vandal-root (van′da̤l-röt), *n.* See ★*root*[1].

Vandemonian (van-dē-mō′ni-a̤n), *a.* and *n.* [Humorously from *Van Diemen's* (Land).] I. *a.* Of or pertaining to Van Diemen's Land (now Tasmania); Tasmanian.

II. *n.* An inhabitant of Van Diemen's Land (Tasmania); a Tasmanian; specifically, one of the early convict settlers of Tasmania. [Obsolete in all uses.]

> The *Van Diemonians*, as they unpleasingly call themselves, or permit themselves to be called, are justly proud of their horse-flesh.
> *G. C. Mundy*, Our Antipodes, p. 533. Quoted in E. E. [Morris, Austral English.

> "I never wanted to leave England," I have heard an old *Vandemonian* observe boastfully. "I was n't like one of these 'Jemmy Grants' (cant term for 'emigrants'); I could always earn a good living; it was the Government as took and sent me out."
> *Cassell's Magazine*, 1867, p. 440. Quoted in E. E. Mor- [ris, Austral English.

Vandemonianism (van-dē-mō′ni-a̤n-izm), *n.* [*Vandemonian* + *-ism.*] Rowdy conduct like that of an escaped convict. See ★*Vandemonian.* *Austral English.* [Obsolete.]

> Mr. Houston looked upon the conduct of hon. gentlemen opposite as ranging from the extreme of *vandemonianism* to the extreme of nambypambyism.
> *Victorian Hansard*, April 22, 1863, p. 701. Quoted in [E. E. Morris, Austral English.

Van der Waal's equation. See ★*equation.*

van-john (van-jon′), *n.* A corruption of *vingt-et-un*, current in England in the middle of the nineteenth century. *N. and Q.*, 9th ser., IX. 384.

vanman (van′ma̤n), *n.*; pl. *vanmen* (-me̤n). [*van*[3] + *man.*] A man who drives a van.

> A *vanman* who was near at the time was knocked down [by lightning], and a florist working in his garden was enveloped in a ring of flame and whirled several yards, while the spade with which he was working was hurled over the hedge. *Nature*, April 18, 1907, p. 589.

vanmost (van′mōst), *a.* Foremost in the van; leading the van. [Rare.]

> Ziethen, *vanmost* of all, finds Nadasti and his Austrian squadrons drawn across the Highway.
> *Carlyle*, Frederick the Great, XVIII. iv.

Vannic (van′ik), *a.* and *n.* [*Van* (see def.) + *-ic.*] Of or pertaining to the language of the cuneiform inscriptions of the Lake Van district; also, to the kingdom in which this language was used, and whose capital was at Van; the language itself.

> These inscriptions are the records of kings whose capital was at Van, and who marched their armies in all directions during the ninth, eighth, and seventh centuries before our era. The latest date that can as yet be assigned to any of them is B.C. 640. At this time there were still no speakers of an Indo-European language in Armenia. The language of the inscriptions has no connection with those of the Indo-European family, and the personal and local names occurring in the countries immediately surrounding the dominions of the *Vannic* kings, and so abundantly mentioned in their texts, are of the same linguistic character as the *Vannic* names themselves.
> *A. H. Sayce*, in Smithsonian Rep., 1890, p. 483.

vantage, *n.*—**Vantage in**, in *lawn-tennis*, vantage scored by the serving side.—**Vantage out**, in *lawn-tennis*, vantage scored by the receiving side.—**Vantage set**, in *lawn-tennis*, when deuce sets have been called, a single set above deuce.

Van t'Hoff's dilution law. See *Ostwald's* ★*dilution law.*

Vaphio cups. See ★*cup.*

vapor, *n.*—**Capacity for vapor,** in *meteor.*, the maximum quantity of vapor that can be contained in a unit volume of space or of air. The presence of the air within that space is supposed not to affect the capacity for vapor.—**Elastic force of vapor,** the pressure exerted by saturated vapor in rising from, or separating from, its mother liquor at a given temperature. When there is not sufficient vapor within a given space to saturate it at the given temperature, the elastic force is diminished in the ratio of the volumes, and the vapor does not resist compression until it has been reduced to the volume of saturation.—**Vapor actinometer.** See ★*actinometer.*—**Vapor density.** See ★*density.*

vapor-bound (vā′po̤r-bound), *a.* Filled with water-vapor or air the expansion of which prevents the atmospheric pressure from filling the chamber with water on the sucking or aspirating stroke: said of a pump.

vapor-bridge (vā′po̤r-brij), *n.* The name sometimes given to the column of hot conducting gases between the terminals of an electric arc.

vapor-cure (vā′po̤r-kūr), *n.* A manufacturers' name for a method of vulcanizing india-rubber at one time in use. It consisted in exposing the articles to be treated to the action of the vapor of sulphur monochlorid in specially arranged chambers.

vapor-dust (vā′po̤r-dust), *n.* The smallest globules of water that have condensed from the aqueous vapor of the atmosphere and are floating in the air without being sufficiently numerous to form visible fog or haze, but are appreciable by other optical effects. Also called *dust-vapor.*

vapor-engine, *n.*—**Series vapor-engine,** a motor driven by a secondary vapor which is vaporized by the heat from the exhaust of a primary engine.

vaporer, *n.*—**Common vaporer.** Same as *old* ★*tussock-moth.*

vapor-glaze (vā′po̤r-glāz), *n.* A deposit of glaze or gloss, produced by volatilization, as a salt-glaze or smear-glaze.

vaporization, *n.*—**Heat of vaporization, latent heat of vaporization.** See ★*heat.*—**Molecular heat of vaporization.** See ★*heat.*

vaporizer, *n.* **2.** Specifically, a carbureter, or device by which liquid hydrocarbon, moving rapidly in a fine state of division in a current of air, becomes an explosive mixture with the air, or makes an air-gas mixed with the necessary air for combustion. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 95.

vaporizing-burner (vā′po̤r-ī-zing-bėr″nėr), *n.* A burner suitable for fluids, such as crude oil, which must first be broken up or atomized into vesicles or made into a vapor which is burned with admixture of air.

vapor-jacket (vā′po̤r-jak″et), *n.* A device of glass surrounding the bulb of a gas thermometer and enabling it to be heated by the vapors of pure liquids to definite temperatures. *M. W. Travers*, Exper. Study of Gases, p. 150.

vapor-lamp, *n.* **2.** See ★*mercury lamp.*

vaporless (vā′po̤r-les), *a.* [*vapor* + *-less.*] Devoid of vapor, as a perfect vacuum.

vapor-pressure (vā′po̤r-presh″ụr), *n.* See ★*pressure.*—**Vapor-pressure curve.** See ★*curve.*

varec, *n.* In the original French use of this word it applies to the seaweed itself before burning, but it is now commonly applied to the ash which results from the burning, utilized for the extraction from it of iodine and salts of potassium, as formerly of sodium carbonate. Also *vareck.*

variability, *n.*—**Coefficient of variability.** See ★*coefficient.*—**Relative variability,** in *statistics*, a measure of variability defined as $rv = \frac{A\ D \times 100}{M}$, where M is the mean of the series of observations, and AD is the average deviation or mean variation. Also termed *variation coefficient. Psychol. Bulletin*, I. 141.

variable. **I.** *a.*—**Variable nebula.** See ★*nebula.*

II. *n.*—**Cluster variable,** a variable star found in star-clusters some of which have already been found by photography to contain a great number of these objects, as, notably, the cluster known as ω Centauri, in which 122 have been detected.—**Long-period variable,** a variable star the period of which exceeds about two months, the interval between maxima being generally somewhat irregular. Mira, ο Ceti, is a typical example.—**Punctual variable,** a variable star which is perfectly regular in the interval between successive maxima or minima. The short-period variables of the β Lyræ type and the Algol variables are all punctual.—**Short-period variable,** a variable star characterized by continuous change of brightness, the maxima and minima following at regular intervals, and the period in most cases being short (from 5 hours to 6 or 8 weeks). β Lyræ is the type of the class. The changes are probably determined by the orbital revolution of two or more stars, but in just what way is still a problem.—**State variable,** one of the 3 variables, pressure (*p*), volume (*v*), and temperature (*θ*), which occur in the equation of state. See ★*equation.*

variance, *n.* **5.** In *phys. chem.*, that property of a chemical system which is expressed by the equation $V = c + 2 - \phi$, where V is the variance, c the number of independent components, and ϕ the number of phases in which the system may exist. Systems are said to be *invariant, univariant, bivariant, multivariant,* etc., according to the value of V.

variant, *n.* **2.** In *biol.*, a term introduced by Barrande to express a departure from the type of a species showing contemporaneous secondary modification of form and surface features, and contrasted with the *variety*, in which the principal characters of the species are retained accompanied by departures in one or more primary modifications. The distinction is obscure and has not been generally adopted.

variate, *a.* **II.** *n.* A single magnitude-determination of a character or quality common to a number of individuals.

> We see accordingly that the chance of an outlying observation being reasonable or not,—the observation consisting of a complex of *n variates,*—can be readily found, if the incomplete normal moment functions have once been tabled, and the constants of the correlation surface be known.
> *K. Pearson*, in Biometrika, March, 1908, p. 61.

variation, *n.* **8.** Specifically: (*a*) The diversity which is found in organisms, their parts, or their activities, when carefully compared, considered without reference to their succession in time, and without referring them to any fixed standard; the individuality of living beings.

> No two plants are indistinguishable, and no two animals are without differences. *Variation* is coextensive with heredity. *H. Spencer*, Prin. of Biol., § 85.

(*b*) The difference of offspring from the parent.

> To this phenomenon, namely the differences between the structure, the instincts, or other elements which compose the mechanism of the offspring and those which were proper to the parent, the name *Variation* has been given. *W. Bateson*, Study of Variation, p. 3.

(*c*) Statistical or formal abnormality in living beings, or the departure of individual organisms from the mean, average, or rule for the race, considered as a fixed standard or logical species which individual animals approach or from which they recede.

> To the biometrician . . . *variation* is a quantity determined by the class or group without reference to its ancestry. *H. H. Ellis*, in Pop. Sci. Mo., Jan., 1903, p. 252.

(*d*) A change in a living being which is due to its own activity as an individual, as contrasted with a change which is inherited. See the extract.

> Some authors use the term *variation* in a technical sense, as implying a modification directly due to the physical conditions of life; and *variations* in this sense are supposed not to be inherited.
> *Darwin*, Origin of Species, p. 25.

(*e*) A congenital or germinal change in a living being, which is not due to its own activity and is transmitted to descendants, as contrasted with a change which comes about in it by its own activity and is not transmitted to descendants. [Rare.]

> In a lucid paper he [Professor Lloyd Morgan] brought forward his useful distinction between *variations*, which are of germinal origin and congenital, and modifications which are impressed upon the organism by its environment. *Nat. Sci.*, Nov., 1896, p. 287.

Accidental variations, those differences from the average or mean value of any element that are not represented by any known law and must be treated as the result of pure chance until their cause or law has been discovered. Accidental variations introduce into the study of nature an element of doubt or uncertainty that must be evaluated by the laws of chance and probability. See *chance, probability, variation.*—**Analytical variation,** diversity among individuals which is attributed to the decomposition and unequal inheritance of compound parental characters; allelomorphic variation.

> To the variations which thus arise by resolution of compound characters we propose to give the name of *Analytical Variations.* There can be no doubt that a very large proportion of the discontinuous variations in colour at all events, met with both in wild and domesticated species, are of this nature.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc.,
> [1902, I. 148.

Coefficient of variation. See ★*coefficient.*—**Coincident variation,** the appearance, in a race of organisms, of a characteristic which is transmitted to descendants and is adapted for some purpose which has been served previously by a modification produced by or in accordance with the conditions of life and not transmitted to descendants. See *adaptation*, 3, ★*self-adaptation*, ★*modification*, 7.

> *Coincident variations* . . . : variations which coincide with or are similar in direction to modifications.
> *Baldwin*, Development and Evolution, p. 151.

Continuous variation, the sort of diversity among the individuals of a race or species in which the differences are minimal and inconspicuous.

> The fact that *Continuous Variations* exist is also none the less a fact. *W. Bateson*, Study of Variation, p. 18.

Definite variation, the exhibition by many members of a race or species of the same feature of difference from other members.

> The centrifugal encroachment of a darker upon a lighter colour in blossoms is . . . one of the commonest lines of *definite variation.* *Nat. Sci.*, June, 1897, p. 375.

Determinate variation, the alleged modification of the members of a race or species in a definite line independently of the survival of the fittest and the extermination of the unfit.

> The latter [Professor Lloyd Morgan], moreover, was one of the first among English selectionists to consider '*determinate variation*' as a fixed problem which must be included in any evolution theory.
> *Baldwin*, Development and Evolution, p. 338.

Differentiant variation, mutation; discontinuous variation; a distinct and hereditary change of type.

> Either they are distinguishable, in which case his criticism of my memoir is idle, or they are not distinguishable, in which case his theory of evolution by "*differentiant variation*" is also idle.
> *Biometrika*, April, 1903, p. 323.

Discontinuous variation, the sort of diversity among the individuals of a race or species which is characterized by lacunæ or gaps unfilled by transitional forms.

> It may be stated at once that the evidence of such *Discontinuous Variation* does exist.
> *W. Bateson*, Study of Variation, p. 18.

Diurnal variation, the amount of change in one day, or a periodic change with a period of one day. Compare *hourly* ★*variation.*—**Embryogenic variation,** variation that arises during the early stages of embryonic development. *H. F. Osborn*, Biol. Lectures, 1895, p. 87.—**Extrinsic variation,** a characteristic which makes its appearance during the life of the individual organism, either during its embryonic development or when it is in its mature condition; an acquired character. See the extract.

> The former two sets of variations are generally spoken of as "acquired characters"—new characters acquired during the lifetime of the individual—but their nature would be more clearly indicated by calling them *extrinsic variations*, as contrasted with the intrinsic variations forming the last group.
> *Parker and Haswell*, Zoology, II. 622.

Fortuitous variation, the diversity or individuality of living beings considered as a part of the diversity of nature. The use of the term does not imply belief that the phenomena in question are accidental, or due to chance, or disorderly; but only the belief that certain purposes, such as an account of the origin of species, are best served by concentrating attention upon the diversity or individuality of living beings, to the temporary neglect of the order which they, like everything else in the natural world, exhibit.—**Fraser-Mortimer variation,** in *chess*, an obsolete variation in the Evans gambit.—**Gametic variation,** germ-variation; the diversity of germ-cells in an individual organism. *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, I. 127.—**Gamogenic variation,** variation which arises during the maturation and fertilization of germ-cells.

> *Gamogenic*, i.e., those (ontogenic *variations*) arising during maturation and fertilization.
> *H. F. Osborn*, Biol. Lectures, 1895, p. 87.

Geographical variation. (*a*) The diversity which is often found in comparing representatives, from different regions, of a widely distributed species. (*b*) A change that may take place in an individual or a variety or species when its habitat changes.—**Germ variation,** the diversity of germ-cells considered as the cause or reason for the inheritance by offspring of the characteristics in which their parents differ or vary from each other or from other members of the race.

> I am entirely of (the) opinion that polydactylism is due to a *germ-variation*; this must be so whenever it is hereditary, for it would not otherwise be transmissible.
> *Weismann* (trans.), Germ-plasm, p. 430.

Gonogenic variation, variation which has its origin in germ-cells. *H. F. Osborn*, Biol. Lectures, 1895, p. 87.—**Homœotic variation,** variation or individual diversity characterized by homœosis or the substitution in the body of an organism of one member of a meristic series for another.

> *Homoeotic Variation* in the spinal column consists in the assumption by one or more vertebræ of a structure in which the type is proper to vertebræ in a different ordinal position in the series.
> *W. Bateson*, Study of Variation, p. 107.

Hourly variation. (*a*) A variation which completes its cycle of increase and decrease in an hour. (*b*) The amount of change which a quantity suffers in an hour: as, the *hourly variation* of the sun's declination.—**Individual variation,** the diversity which is exhibited by the individuals of a species.

> It is a matter of common observation that no two individuals of a species are ever exactly alike. . . . *Individual variations* of this kind are of universal occurrence.
> *Parker and Haswell*, Zoology, I. 2.

Intrinsic variation, individual diversity which is the result of the diversity in germ-cells; germinal variation. See the extract under *extrinsic* ★*variation.*—**Kenogenic variation,** variation which has to do only with the present or individual, or with the future, history of an organism, as contrasted with *palingenic* ★*variation.*—**Meristic variation,** diversity among the individual organisms of a race or species in the number, position, or arrangement of parts that form a regular pattern, such as the right and left halves of a bilateral organism or the series of vertebræ in a vertebrate. *W. Bateson*, Study of Variation, p. 23.—**Mortimer's variation,** in *chess*, an old-fashioned attack in the Evans gambit.—**Negative variation,** reduction in the amount of the current in an excised muscle or nerve when the same is tetanized.—**Ontogenic variation,** variation which arises during individual life-history or ontogeny.

> Let *ontogenic variation* include all variations from the type which have their cause in any stage of individual development. *H. F. Osborn*, Biol. Lectures, 1895, p. 85.

Palingenic variation, variation which has its origin, either directly or indirectly, in past or ancestral history.

> The most profound gap in time is between '*palingenic variations*,' springing from the past history of the individual, and 'cenogenic variations,' which have to do only with present and future history.
> *H. F. Osborn*, Biol. Lectures, 1895, p. 84.

Parallel variation. (*b*) The exhibition, by the individuals of two species, of the same sort of diversity in color or in some other characteristic. See the extract.

> There can be no doubt that a very large proportion of the discontinuous variations in colours, at all events, met with both in wild and domesticated species, are of this nature. The fact that similar component forms are similarly related to each other and to the type, in various species, thus provides the true account of the numerous phenomena of "*parallel*" *variation*.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, [I. 148.

Pathologic variation, the phenomena of teratology considered as deviations from an established norm or type.—**Perfect variation.** See *total* ★*variation.*—**Phylogenic variation,** variation which has been inherited from near or remote ancestors.

> Let *phylogenic variation* include those departures from type which have become constant hereditary characters in certain phyletic series, or even in a few generations.
> *H. F. Osborn*, Biol. Lectures, 1895, p. 86.

Progressive variation, the appearance of characters that are new in the history of a species.—**Residual variations,** the remainder after subtracting from a phenomenon the part due to causes already established. The *method of residual variations* is one of the four canons of the inductive method.—**Retrogressive variation,** the exhibition by a race, variety, or individual organism of ancestral characteristics; reversion.—**Saltatory variation,** in *biol.*, variation by leaps or bounds; discontinuous as opposed to continuous or gradual variation; mutation in the sense in which De Vries uses that word. See ★*mutation*, 8.—**Seminal variation.** Same as ★*seed variation.*—**Similar variation,** the modification of meristic parts in the same way, either in one individual organism or in different ones. See the extract.

> The phenomenon of the *Similar Variation* of parts that are repeated Meristically in Series is a fact which will be found to have important bearings on several distinct departments of biological study.
> *W. Bateson*, Study of Variation, p. 26.

Simultaneous variation, the modification of two or more meristic parts of an individual organism in the same way. In Bateson's terminology, the presence of extra fingers on the hands of two children, or on the hand of parent and child, is *similar*, but not *simultaneous variation*; while the presence of extra fingers on both hands, or of extra digits on hands and feet, is both similar and simultaneous variation. *W. Bateson*, Study of Variation, p. 26.—**Skew variation,** diversity among the individuals of a species, race, or population, of such a character that equal deviations from the mode in opposite senses are not equally frequent. *Pearson.*—**Somatogenic variation.** (*a*) Variation which has its origin in the soma or body as contrasted with the germ-cells.

> It is an inevitable consequence of the theory of the germ-plasm . . . that *somatogenic variations* are not transmissible. *Weismann* (trans.), Germ-plasm, p. 392.

(*b*) Variation which arises during the larval and later stages of development, as contrasted with variation which arises during the early embryonic stages.

> (*d*) *Somatogenic*, i.e., those (ontogenic *variations*) occurring during larval and later development.
> *H. F. Osborn*, Biol. Lectures, 1895, p. 87.

Substantive variation, variation or diversity among individuals in the constitution or substance of parts, as contrasted with diversity in the number and arrangement of parts. *W. Bateson*, Study of Variation, p. 23.—**Synthetical variation,** diversity among individual organisms brought about by the addition of something new, as contrasted with *analytical* ★*variation.*—**Taxonomic variation,** a term introduced by Baldwin to designate determinate variation which is due to external causes.—**Total** or **perfect variation,** in *biol.*, a complete and yet perfectly symmetrical departure from the system of symmetry which is characteristic of the species.

> The resulting form possesses the character of division into four no less completely and perfectly than its parent possessed the character of division into three. The change from three to four is thus perfected: from the form with perfect division into three is sprung a form with perfect division into four. This is a case of *total* or *perfect Variation*. *W. Bateson*, Study of Variation, p. 61.

Variation-diagram. See ★*diagram.*—**Variation of latitude.** See ★*latitude.*

variative (vā′ri-ā-tiv), *a.* [*variat*(*e*) + *-ive.*] Same as *variational.*

> The hypothesis that this *variative* improvement is capable of being continued indefinitely.
> *Winchell*, Doctrine of Evolution, p. 48.

variator, *n.* 2. In *exper. psychol.*, the device which secures uniform change of pitch in Stern's tone-variator; in the old pattern of the instrument, the mercury trough; in the new pattern, a metal cam. See ★*tone-variator. Scripture*, Exper. Phonetics, p. 102.—3. A device for producing desired variations, usually in power or in speed; specifically, in the practice of motor-drawn trains of vehicles on the highway, each unit of which has its own propelling motor, a device attached to the leading and guiding vehicle, by which the limits of speed in each change-gear of the following vehicles may be reduced between determined limits without a resetting of the change-gear lever on each. *Sci. Amer. Sup.*, May 14, 1904, p. 23710.

varical (var′i-kal), *a.* [L. *varix* (*varic-*), a varicose vein, + *-al*¹.] Pertaining to the varices on the surface of certain molluscan shells. See *varix.*

varicella, *n.*—**Varioloid varicella,** a term applied occasionally to an exanthematous affection resembling chicken-pox, but believed to be varioloid. *Lancet*, Aug. 29, 1903, p. 628.

varicomphalus (var-i-kom′fa-lus), *n.*; pl. *varicomphali* (-lī). [L. *varix* (*varic-*), a dilated vein, + Gr. ὀμφαλός, the navel.] A varicose swelling at the umbilicus.

varicoseness (var′i-kōs-nes), *n.* [*varicose* + *-ness.*] The state of being varicose; a condition of dilatation and tortuousness.

varicosis (var-i-kō′sis), *n.* [NL., < L. *varix* (*varic-*), a varicose vein, + *-osis.*] The occurrence of varicose veins; varicosity.

varicotomy (var-i-kot′ō-mi), *n.* [L. *varix* (*varic-*), a varicose vein, + Gr. -τομια, < ταμεῖν, cut.] An operation for the division of varicose veins.

varié (vä-rē-ā′), *a.* [F., pp. of *varier*, vary, change.] In *music*, treated in variations: said of an air or theme.

varietal, *a.* 2. In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), having the character of or producing a variety of a mode.

variety, *n.* 6. (*c*) In *agri.* and *hort.*, a group of cultivated plants which have the same characteristics. All plants which have been widely cultivated have given rise to many different forms and these are in general known as varieties. Illustrations are the varieties of strawberries, apples, corn, wheat, cotton, etc. 'Variety,' in this sense, is thus a generic word including races, strains, and clons. See ★*race*³, 5 (*c*), ★*strain*², 1 (*b*), and ★*clon.*—7. In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*¹), a division of a mode which recognizes the presence of subordinate mineral components.—**Analytical variety,** a variety which is supposed to have been produced by the decomposition and unequal inheritance of a compound parental character; an allelomorphic variety.

> The conception of Species, however we may formulate it, can hardly be supposed to attach to allelomorphic or *analytical varieties.*
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., [1902, I. 148.

Cultural variety. See ★*cultural.*—**Reversed variety,** a variety which exhibits inverse symmetry, such as a læotropic variety of a dexiotropic mollusk. See *inverse* ★*symmetry.*

varigradation (vā″ri-grā-dā′shon), *n.* [L. *varius*, various, + E. *gradation.*] In *phys. geol.*, alternate aggradation and degradation by a stream in successive parts of its course.

variola, *n.* 3. The pustular apothecium occurring on certain lichens.—**Variola equina,** a contagious, infective fever of horses characterized by the eruption of pocks similar to those of smallpox in man. Also called *horsepox.*—**Variola miliaris,** a form of smallpox in which the eruption is for the most part in the form of minute vesicles which dry up into scabs that fall off leaving no mark.—**Variola pemphigosa,** a form of smallpox in which the vesicles develop into large blebs with seropurulent contents but do not form the typical eruption of the disease.—**Variola siliquosa,** a form of smallpox or varioloid in which the contents of the pustules are absorbed leaving the walls standing empty.—**Variola verrucosa,** an abortive form of smallpox or varioloid in which the eruption consists of papules capped with minute vesicles, which leave wart-like elevations on the skin: called also *wart-pock* or *wart-pox.*

variolarin (vā″ri-ō-lā′rin), *n.* [*Variolaria* + *-in*².] A compound said to be present in the lichen *Pertusaria* (*Variolaria*) *dealbata.*

variolate, *a.* 3. In *pathol.*, marked as if by smallpox.

variolate (vā′ri-ō-lāt), *v. t.*; pret. and pp. *variolated*; ppr. *variolating.* [*variola* + *-ate*².] To inoculate with the virus of smallpox.

varioliform (vā-ri-ol′i-fôrm), *a.* [NL. *variola* + L. *forma*, form.] Resembling smallpox. *Lancet*, July 11, 1903, p. 103.

variolose (vā-ri′ō-lōs), *a.* [*variola* + *-ose.*] In *entom.*, same as *variolous. Annals and Mag. Nat. Hist.*, April, 1901, p. 407.

variolo-vaccination (vā-ri″ō-lō-vak-si-nā′shon), *n.* Inoculation of the human subject with variolo-vaccinia.

variotinted (vā″ri-ō-tin′ted), *a.* [L. *varius*, various, + E. *tinted.*] Of various tints or colors.

> With the telescope nothing more distinctive than a silvery shimmer corresponds to the dazzling *variotinted* fireworks disclosed by the prism.
> *A. M. Clerke*, Problems in Astrophysics, p. 44.

varisse (va-ris′, va-rēs′), *n.* [Appar. for F. *varice*, < L. *varix* (*varic-*), an enlarged vein. See *varix.*] Blood-spavin in the horse; an enlargement or varicose condition of the vein on the inside of the hock-joint.

Varix racemosum. Same as *aneurismal varix* (which see, under *aneurismal*).

var. lect. An abbreviation of the Latin *varia lectio*, different reading.

varletaille (vär-le-tāl′), *n.* [A nonce-formation < *varlet* + F. *-aille*, in imitation of *canaille.*] Varlets collectively; varletdom. [Nonce-word.]

> "I had deemed it dishonouring in a brave soldier, a well-born gentleman (now from his valiantness, merit, and wisdom, become a puissant and dreaded lord), to sink into that lackeydom and *varletaille* which falsehood and cringing have established in these walls, and baptized under the name of 'courtiers.'"
> *Bulwer*, Last of the Barons, iv. 6.

varnish, *n.* 5. In *etching*, any resinous coating used to cover parts of the plate which have become exposed: to be distinguished from the *ground*, which is the original coating applied to the entire plate. *P. G. Hamerton*, Etching and Etchers, p. 323.—**Balloon varnish,** a flexible varnish consisting of a solution of india-rubber in chloroform, carbon disulphid, etc., used for coating balloons, bags, and other articles requiring flexibility.—**Bookbinders' varnish,** the best French varnish diluted with alcohol to suit the different materials to be varnished.—**Crystal varnish,** or **paper-varnish,** Canada balsam thinned with spirits of turpentine, or mastic dissolved in alcohol. *Thorpe*, Dict. Applied Chem., I. 623.—**Desert varnish.** See ★*desert*¹.—**Paper-varnish.** Same as *crystal* ★*varnish.*—**Spirit varnish,** a quick-drying varnish made by dissolving gum shellac in alcohol. Usually called *shellac varnish.*—**Zapon varnish,** a solution of celluloid in amyl acetate and acetone, used as a lacquer on brass, bronze, or ironwork, on the last of these especially as the means of causing bronze-powders to adhere. Also known as *banana liquid*, in consequence of the smell of the amyl acetate. There are several other varnishes of analogous character. *Sci. Amer. Sup.*, Jan. 13, 1900.

Varolian (va-rō′li-an), *a.* Of or pertaining to Costanzo Varoli (1543 (?)–1575), an Italian anatomist, or to the pons Varolii (see *pons*) named for him.

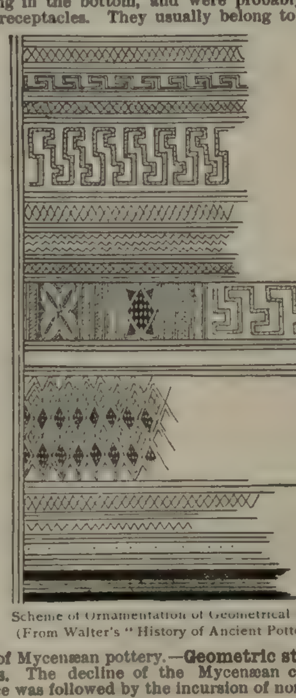
varvicite (vär′vi-sīt), *n.* [*Varvic*(*us*), a Latinized form of *Warwick*, + *-ite*².] An ore of manganese, resembling wad in composition, apparently a product of the alteration of manganite, from Warwickshire, in England.

vas, *n.*—**Vasa propria of Jungbluth,** vessels lying beneath the amnion in early embryonic existence.—**Vasa serosa,** capillary blood-vessels.

Vascular reflex, trunk. See ★*reflex*, ★*trunk.*

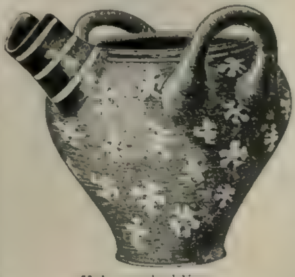
vasculitis (vas-kū-lī′tis), *n.* [NL., < L. *vasculum*, vessel, + *-itis.*] Inflammation of a lymph- or blood-vessel.

vase, *n.*—**Auldjo vase,** a Pompeian vase, many fragments of which were bequeathed by Miss Auldjo to the British Museum in 1859. It is an oinochoe, 9 inches high, which was found in the House of the Faun at Pompeii. It is made of dark blue glass overlaid with white and cut in a cameo like the Portland vase.—**Dipylon vases,** a name especially applied to a series of Greek vases in the geometric style discovered in 1871, in excavations carried on by Joannis Paleologos, in the outer Ceramicus, to the northeast of the Dipylon gate at Athens. In each of the graves excavated was found, broken, a large vase of good manufacture and decorated with characteristic geometric patterns. Pottery which resembles these vases has taken the name 'Dipylon.'—**Filler vase,** a peculiar type of vase found frequently in recent excavations in Crete and elsewhere in the Levant. Filler vases are funnel-shaped with single handles and an opening in the bottom, and were probably used to fill other receptacles. They usually belong to the Kamares class of Mycenæan pottery.—**Geometric style in Greek vases.** The decline of the Mycenæan civilization in Greece was followed by the incursion of northern people,

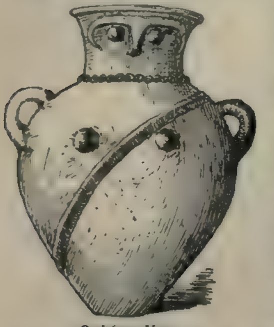


Scheme of Ornamentation of Geometrical Vases.
(From Walter's "History of Ancient Pottery.")

chiefly Dorian and Ionian. Contemporaneous with this there existed a definite style in the decoration of pottery, which from its peculiar conventionalism is called 'geometric.' Remains of work of this character have been found in all parts of the Hellenic world. There is much variety in the specimens, but the fundamental characteristics remain the same. The vases are usually of considerable size and well baked. The ornamentation, dark on a light ground, is distributed in horizontal bands. It is usually conventional, but the human figure and various animals often appear represented in a peculiarly rigid and primitive way. A large deposit of this ware found near the Dipylon gate at Athens has given the name Dipylon to a class of geometric vases. See *Dipylon* ★*vases*.—**Hole-mouthed vase**, in *Gr. antiq.*, in Kamares and Cretan ware generally, a vase having a deeply curved beak or spout and one or two handles.—**Owl-face vases**, terra-cotta vases, found by Dr. Schliemann in his excavations at Troy, which have eyes and a beak marked upon them, giving the appearance of an owl's face.—**Prothesis vase**, in *Gr. antiq.*, a monumental vase carved in marble, sometimes placed over the grave of an unmarried person. These vases were tall and slender and resembled the loutrophoros or lecythus. They are usually decorated with a funeral scene. See ★*loutrophoros*.



Hole-mouthed Vase.
(From "Annual of the British School at Athens.")



Owl-face Vase.
(From Schliemann's "Troy and Its Remains.")

> We find a whole set of interesting vases, called *prothesis* vases from the subject upon them, which is usually the "laying out" of the corpse surrounded by mourners.
> *Gardner*, Ancient Athens, p. 173.

Sosias vase, a vase made by Sosias, a Greek potter and vase-painter of the fifth century B.C. He frequently associated with the painter Peithinos. It is customary to classify the signed vases according to their makers, as Duris vase, Euphronius vase, etc.

vasectomize (vạ-sek'tọ-mīz), *v. t.*; pret. and pp. *vasectomized*, ppr. *vasectomizing*. [*vasectom(y)* + *-ize*.] To excise the vas deferens of a person or animal.

vasectomy (vạ-sek'tọ-mi), *n.* [L. *vas*, vessel, + Gr. *ἐκτομή*, excision.] Excision of the vas deferens. *Buck*, Med. Handbook, II. 749.

vaselene (vas'e-lēn), *n.* [See *vaseline*.] A general term for various petroleum products of soft, pasty, or gelatinous character, including that to which the name *vaseline* (so spelled) was originally applied as a proprietary trade-name.

vaseline-oil (vas'e-lin-oil), *n.* See ★*oil*.

vasicine (vas'i-sin), *n.* [NL. *vasica* + *-ine*^{2}.] An alkaloid contained in the leaves of *Adhatoda vasica Nees*, from the Panjab. It is intensely poisonous to the lower forms of animal life, but has no appreciable effect on normal animals of higher orders. The natives use the leaves of the plant as a remedy in affections of the respiratory organs.

vasite (vā'sīt), *n.* Same as ★*wasite*.

vasoconstriction (vas"ọ-kọn-strik'shọn), *n.* Contraction of the blood-vessels; a narrowing of the lumen of the veins or arteries. *Buck*, Med. Handbook, III. 118.

vasocorona (vas"ọ-kọ-rō'nạ̈), *n.* [L. *vas*, vessel, + *corona*, crown.] The system of blood-vessels supplying the spinal cord which pass from the surface toward the center.

vasodilatation (vas-ọ-dil-ạ-tā'shọn), *n.* [L. *vas*, vessel, + E. *dilatation*.] Dilatation of the blood-vessels.

> As increase of lymph-formation and *vasodilatation* must, in the long run, go hand in hand, it would seem reasonable to suppose that the nerve fibres going from the capillaries to the arteries and veins may exert an inhibitory influence on the vasoconstrictors, or a stimulating one on the vasodilators, whereby a larger supply of blood is furnished to the irritated part.
> *C. Sihler*, in Jour. Exper. Med., March 25, 1901, p. 496.

vasogen (vas'ọ-jen), *n.* [*vas(eline)* + *-o-* + *-gen*.] An easily absorbable ointment base capable of retaining in perfect emulsion a large quantity of water: made by the action of compressed air upon vaseline under pressure and heat; oxygenated vaseline. *Buck*, Med. Handbook, I. 549.

vasohypertonic (vas-ọ-hī-pėr-ton'ik), *a.* [L. *vas*, vessel, + E. *hypertonic*.] Same as *vasoconstrictor*.

vasohypotonic (vas-ọ-hī-pọ-ton'ik), *a.* [L. *vas*, vessel, + E. *hypotonic*.] Same as *vasodilator*.

vasomotor, *a.*—**Vasomotor wave**, a recurrent fluctuation in the volume of blood supplied to some bodily organ or group of organs: it may be recorded by means of the plethysmograph. *Amer. Jour. Psychol.*, XIII. 13.

vasoneurosis (vas"ọ-nụ-rō'sis), *n.* [NL., < L. *vas*, vessel, + Gr. *νεῦρον*, nerve, + *-osis*.] Same as *angioneurosis*. *Buck*, Med. Handbook, IV. 530.

vasospasm (vas'ọ-spazm), *n.* [L. *vas*, vessel, + Gr. *σπασμός*, contraction.] Spasmodic contraction of the blood-vessels. *Buck*, Med. Handbook, V. 74.

vasotonic (vas-ọ-ton'ik), *a.* [L. *vas*, vessel, + Gr. *τόνος*, tone, + *-ic*.] Relating to the tone or elasticity of the blood-vessels.

vasotribe (vas'ọ-trīb), *n.* [L. *vas*, vessel, + Gr. *τρίβειν*, rub, crush.] Same as ★*angiotribe*. *Lancet*, May 30, 1903, p. 1520.

vasotrophic (vas-ọ-trof'ik), *a.* [L. *vas*, vessel, + *τροφή*, nutrition.] Relating to the nutrition of the blood-vessels.

vasque (väsk), *n.* [F., < It. *vasca*.] In a fountain, a bowl, usually quite flat and shallow, which receives the water.

vassalize (vas'a̤l-īz), *v. t.*; pret. and pp. *vassalized*, ppr. *vassalizing*. To render vassal or a vassal; make a vassal or vassals of.

vat, *n.*—**Beating vat.** See ★*beating-vat*.—**Steeping vat.** See ★*steeping-vat*.—**Vat indigo, process.** See ★*indigo*, ★*process*.—**Vat waste.** Same as ★*alkali waste*.—**Woad vat**, an indigo vat of the fermentation type in which woad is used. The woad not only acts as a fermentation medium, but aids somewhat in the coloring process.—**Zinc-powder vat**, in *dyeing*, with indigo, a bath made up with water, indigo, lime, and zinc-dust or zinc-powder, in which the reducing action of the last-named material is employed to render the dyestuff soluble as indigo white or hydrindigotin, from which indigotin or indigo blue is precipitated again on the fibers of cloth which has been steeped in the 'vat' and afterward exposed to the air.

Vat. An abbreviation of *Vatican*.

vaticinatory (vạ-tis'i-nạ-tō-ri), *a.* [*vaticinate* + *-ory*.] Prophetic; vaticinating. [Rare.]

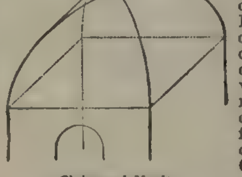
> We will not dispute her *vaticinatory* utterances [on the Resubjection of Women]. *N. and Q.*, 9th ser., III. 357.

vatman (vat'ma̤n), *n*; pl. *vatmen* (-me̤n). One who works at a vat, as in paper-making.

> "We went on from 1838 to 1872, giving these three or four rises, and, in 1872, a rise of sixpence per day was conceded by the employers without any great fuss"; the pay of a first-class *vatman* for a "day's work" in a Kentish mill being now 6s. 5d., as compared with 4s. 7d. in 1840.
> *Webb*, Indust. Democracy, I. 421.

vat-net, *n.* **2.** A laundry-net used to hold fabrics suspended in a bluing vat.

vault^1, *n.* **5.** In crinoids, same as ★*disk*, 5 (*e*).—**Cloistered vault**, a vault the shape of which is the reverse of a groined vault, that is, one of which the curved surfaces rise from the whole length of the wall on either side. In the case of a square or parallelogram the four curved surfaces meet at a curved line which has everywhere a reëntrant angle the reverse of a groin. Also called *coved* ★*vault*, the four curving surfaces being considered as coves.—**Coved vault.** (*a*) A vault the general character of which is that of a nearly flat middle part and a decided curve at the edges, as of a flat ceiling with a cove between it and the wall. This form can only be used on a very small scale. (*b*) Same as a *cloistered* (or *cloister*) ★*vault*.—**Fan vaulting.** Same as *fan-tracery vaulting* (which see, under *fan-tracery*). The characteristic of this form of vaulting is that it consists of a series of cones springing from columns, or half-cones springing from vaulting shafts or corbels. These cones have a more or less concave curve. The faces between them above are filled by flat stone slabs resting upon the cones and half-cones, and closing the vault at the top. The whole surface may be covered with fine tracery, but this is quite arbitrary, since the ribs have no constructive function: the vaulting is not ribbed vaulting in a strict sense.



Cloistered Vault.

vb. An abbreviation of *verb*.

vb. a. An abbreviation of *verbal adjective*.

vb. n. An abbreviation of *verbal noun*.

V. C. An abbreviation (*b*) of *Vice-Chairman*; (*c*) of *Vice-Chancellor*.

V-connection (vē'kọ-nek"shọn), *n.* A connection of the parts of a three-phase electric circuit sometimes employed, in which one of the three coils of the generator or transformer is omitted from the circuit and the other two carry the entire load.

Vd. A chemical symbol of *vanadium*. More usually the single letter V is employed.

v. def. An abbreviation of the Latin *verbum defectivum*, defective verb.

v. dep. An abbreviation of the Latin *verbum deponens*, deponent verb.

V. D. L. An abbreviation of *Van Diemen's Land*.

V. D. M. An abbreviation of the Latin *verbi dei minister*, minister of the word of God.

veal (vēl), *v. t.* [*veal*, *n.*] To raise (calves) for sale as veal. [Colloq.]

> Male calves, if worthy of it, are reared for breeding purposes, but none is ever *vealed*.
> *W. J. Spillman*, in Yearbook U. S. Dept. Agr., 1903, p. 364.

> One who can afford to *veal* the male produce.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 9.

vealiness (vē'li-nes), *n.* The character of being vealy; immaturity. [Colloq.]

veal-skin, *n.* **2.** A large and heavy calfskin, obtained from older animals than calfskin proper. *Modern Amer. Tanning*, p. 164.

vecht-generaal (fekt'gen-e-räl"), *n.* [D.] Literally 'fighting general'; in the Boer army, an officer formerly nominated in time of war, by the government or Council of War, who as lieutenant of the generalissimo had charge of two or more commandos, and whose tenure of office began and ended with the hostilities. *United Service Mag.*, June, 1902, p. 303.

vector. **I.** *n.*—**Axial vector**, a vector whose components do not change sign for a reversal of direction of the rectangular, coördinate axes. *W. Voigt*.—**Distributed vector**, a vector having reference to the condition of an entity (as to the velocity of a liquid) as indicative of which it has a value at each point.—**Gibbs's vector method**, a method of computing orbits based upon Gibbs's vector-analysis.—**Polar vector**, a vector whose components on rectangular axes change sign for a reversal of direction of the axes. *W. Voigt*.—**Polygon, triangle, of vectors.** See ★*polygon of vectors*.—**Radiant vector**, a vector which indicates the rate at which energy is transferred through space and the direction of propagation.—**Resolution of a vector.** See ★*resolution*.—**Resultant vector**, the quantity obtained by the addition of two or more vectors. The vectors in question may be forces, velocities, accelerations, etc., and the method used is in each case the vector diagram of the form known as the parallelogram of forces, which is applicable to the composition of vector quantities whatever their nature. The resultants obtained are called respectively the *resultant force*, *resultant velocity*, *resultant acceleration*, etc.—**Unit vector**, a directed unit sect.

II. *a.*—**Vector algebra**, vector analysis, the algebra of directed magnitudes.—**Vector diagram**, a graph of the relations of vector quantities.—**Vector formula**, one containing vector quantities.—**Vector quantity.** (*b*) See ★*quantity*.—**Vector sum**, the geometrical sum of vector quantities.

Vectorial product. Same as *outer* ★*product*.

vector-product (vek'tọ̈r-prod"ukt), *n.* A vectorial product. *Heaviside*.

Vedaic (vē-dā'ik), *a.* Same as *Vedic*.

Vedaism (vā'da̤-izm), *n.* [*Veda* + *-ism*.] The ideas or doctrines of the Vedas.

Vedantism (vạ-dän'tizm), *n.* [*Vedanta* + *-ism*.] The doctrines or system of the Vedanta.

Vedda (ved'ạ̈), *n.* [Also *Veddah*, *Vaddah* (in F., D., and G. forms *Bedda*, *Beda*, *Weddah*), said to mean 'hunter,' and perhaps from Tamil *vedu*, hunting.] One of an aboriginal people in Ceylon, classed as of Dravidian stock.

Veddan (ved'a̤n), *a.* [*Vedda* + *-an*.] Of or pertaining to the Veddas.

> The highest recorded capacity for the latter [anthropoid crania] is about 590 c.c. while the lowest for the former [crania of man] is that of a normal *Veddan* skull of 950 c.c. *Buck*, Med. Handbook, IV. 39.

Vedic, *a.* **II.** *n.* Vedic Sanskrit; Sanskrit of the earliest recorded form preserved in the Vedas.

vedro (ve-drō'), *n.* [Russ. *vedró*, a pail, a liquid measure.] A Russian liquid measure, containing 30 Russian pounds of distilled water at 16⅔ degrees C., as weighed in vacuo. It is equal to 12.299 liters, or to 3.249 United States gallons.

Vegetable down. Same as ★*Bombax cotton*.—**Vegetable pottery.** See ★*pottery*.—**Vegetable wool.** See ★*wool*.

vegetable-caterpillar (vej'ẹ-ta-bl-kat"ėr-pil-ä̤r), *n.* Same as ★*plant-caterpillar*.

vegetalin (vej'ẹ-ta̤l-in), *n.* [*vegetal* + *-in*^{2}.] The trade-name for an acid liquor obtained as a by-product in the manufacture of sauerkraut. After concentration and filtration it is utilized in tanning and in the textile industries.

vegetate, *v. i.* **3.** In *pathol.*, to grow in the form of an excrescence.—**4.** Same as ★*sprout*, 5.

vegetation, *n.* **4.** In *phytogeog.*, the sum total, or a local aggregate, of plant individuals, often of many species, viewed with reference to their ecological adjustment to each other and to all the efficient factors of their environment: contrasted with *flora*, which denotes a scheme of species rather than a sum of individuals.

Heat determines the flora, climatic humidity the *vegetation.* *A. F. W. Schimper* (trans.), Plant-Geog., p. 160.

vegetational (vej-ẹ-tā'shọn-ạl), *a.* [*vegetation* + *-al*¹.] Pertaining to, or of the nature of, vegetation.

If we ascend a high tropical mountain we shall find the same change of *vegetational* formation [as in receding toward the poles]. *Buck*, Med. Handbook, III. 148.

vegetation-form (vej-ẹ-tā'shọn-fôrm), *n.* A type of plant development viewed with reference to its gross biological (not taxonomic) character. The groups mentioned in the quotation include many subdivisions, as the cushion-form (see ★*cushion-plant*), the rosette-form, the sod-form. See ★*life-form.*

In consequence of what has been said elsewhere, *vegetation-forms* are to be regarded as biological groups whose members possess similar plant-bodies. They fall into seven main groups: woody plants, half shrubs, pleiocyclic herbs, hapaxanthous herbs, water plants, hysterophytes, and thallophytes. *F. E. Clements*, Phytogeog. Nebraska, p. 97.

Vegetative hemisphere, pole. See ★*hemisphere*, ★*pole*².

veguero (vā-gā'rō), *n.* [Cuban Sp., < Cuban *vega*, a tobacco-field, < Sp. *vega* (see *vega*¹).] The superintendent of a tobacco-farm; a tobacco-farmer. [Cuba.]

According to the best opinions admitted among *vegueros*, one man can take care of 12,000 tobacco plants. *C. G. W. Locke*, Tobacco, p. 53.

vehicle, *n.* **2.** (*d*) In *chem.*, a liquid used to carry sensitive salts for coating glass or paper for use in photography.

vehicle-mile (vē'hi-kl-mīl″), *n.* A distance of one mile run by a vehicle; the equivalent of 'car-mile,' but applied to road vehicles instead of to cars which run on rails.

The boiler is of the vertical cylindrical tubular type, with a burner using kerosene oil with a vaporizer, consuming about 5½ gallons of oil per *vehicle mile* with a four-ton load. *Hiscox*, Horseless Vehicles, p. 92.

vehiculary (vē-hik'ụ̄-lạ̄-ri), *a.* Same as *vehicular.*

veil, *v. t.*—**Veiled woman,** in some parts of the East, a married woman, never seen in public without a veil: hence a supposedly respectable woman.

Azizum is a *veiled woman* somewhere near Bareilly. *R. Kipling*, Indian Tales, p. 570.

vein, *n.*—**Ambient vein,** in *entom.*, the costal or marginal vein or nervure when it extends entirely around the wing, as in certain *Diptera.*—**Banded veins,** mineral veins in which the constituent minerals are arranged in parallel bands, of which the outermost correspond, then the next inner ones, and so on to the center, affording a symmetrical filling. Evidently the solutions from which the layers crystallized circulated in an open fissure. When one pair of layers was deposited on the walls, a change in composition caused a new one. At the center the opposing growths of crystals may project into each other, giving the *comb-in-comb* structure. If the growths do not completely fill the fissure but the layers of crystals project into cavities, these are called vugs (vuggs, or vughs). Vugs are the chief sources of fine crystals. If after a fissure has been filled a movement of the wall rock opens a new crevice at one side, a new series of bands may result whose combination with the older is *unsymmetrical* wall to wall. Banded veins show clearly the order of formation or paragenesis of the minerals, but they are less common than was once believed.—**Brecciated veins,** mineral veins which fill the interstices in the broken or brecciated rock along a line of faulting. Much barren rock or gangue is then mixed with the ore. An older vein may be brecciated and filled by a second deposition.—**Caudal vein,** in lower vertebrates such as the fishes, the vein which returns the blood from the tail.—**Chambered veins.** See ★*chambered.*—**Contact vein.** Same as *contact deposit* (which see, under *contact*).—**Cuvierian veins.** Same as *cardinal veins* (which see, under *vein*).—**Drusy vein,** a mineral vein having cavities coated with small crystals.—**Eruptive vein,** an occasional name for a dike: properly speaking, a contradiction, since veins are deposited from solution. *Geikie*, Text-book of Geol., p. 738.—**Exudation vein,** in *geol.*, relatively coarse or fine crystallizations which are sometimes seen in granite or other massive rocks, and which formed or segregated during the cooling stages, and along some special line or around some center. *Geikie*, Text-book of Geol., p. 130.—**Hemorrhoidal veins,** sets of veins forming a plexus at the lower portion of the rectum. The superior empty into the inferior mesenteric vein, the middle and inferior into the internal iliac vein.—**Infiltration vein,** in *geol.*, a vein deposited from waters which have percolated through cavities in the wall-rock and have brought in the vein-filling in solution.—**Interosseous veins,** veins of the hand and foot corresponding in location to the interosseous arteries.—**Linked veins,** in *geol.*, a series of overlapping or imbricating veins: an expression originally suggested by G. F. Becker as a translation of the German *gangzug.*—**Massive** or **compact veins,** mineral veins which fill the fissure wall to wall, chiefly with one mineral and not in banded arrangement.—**Metasomatic vein.** See *substitution* ★*vein.*—**Mineral vein,** in *geol.*, a deposit of minerals from solution or sublimation, in a fissure in rocks or along one with replacement of the walls. The term is much used for an important and frequent form of ore-body.—**Replacement vein.** See *substitution* ★*vein.*—**Reticulated veins,** mineral veins in relatively narrow but extended cracks along a line of brecciation, so that the total makes a network in the rock.—**Simple vein,** a vein filled with a single mineral.—**Substitution vein,** an ore-body produced by the replacement of some preëxisting rock: more commonly called a *replacement* or *metasomatic vein.* Limestones are most frequently so affected.—**Veins of Burow,** veins in the anterior abdominal wall where the urachus formerly existed, connecting the deep epigastric and the umbilical veins.—**Vitelline veins,** embryonic veins draining the area vasculosa.

The two allantoic veins in the chick . . . unite in the body of the embryo, becoming there a single allantoic vein, which passes forward on the left side and joins the left *vitelline vein.* *Buck*, Med. Handbook, I. 190.

White veins, a condition sometimes assumed by tobacco-leaves in which the lateral veins become superficially whitish. It occurs chiefly in the process of curing after continued dry and warm weather. It reduces the value of wrappers but not of fillers.

vein-miner (vān'mī″nėr), *n.* One whose work lies in veins or fissures of the earth-rock, as distinguished from one working in placers, or in metalliferous sands. [Rare.]

The *vein-miner* should be well up in faulting and all the geometrical problems associated with it, and he should have an exhaustive acquaintance with the vein and metalliferous minerals. *Science*, Oct. 9, 1903, p. 459.

vein-quartz (vān'kwârts), *n.* Quartz in veins, often carrying valuable metallic minerals. See ★*quartz.*

Velar valve. See ★*valve.*

veld-cornet (felt'kôr″net), *n.* [S. Afr. Dutch, < *veld*, field, + *cornet*, a cavalry officer. See *veldt.*] Same as *field-cornet.*

veldheer (felt'hãr), *n.* [D. *veld*, field, + *heer*, master.] A general; a general commandant. [South Africa.]

veldwachter (felt'väch-tėr), *n.* [D. *veld*, field, + *wachter*, watchman.] A rural guard. [South Africa.]

velleda-moth (vel'ẹ-dạ̈-môth″), *n.* Same as *velleda* ★*lappet-moth.*

vellericorn (ve-ler'i-kôrn), *a.* [L. *vellus* (*veller-*), a fleece, + *cornu*, a horn.] Having horns covered with skin, as does the giraffe.

The '*vellericorn*,' or skin-covered type presented by the former, is evidently the most primitive. *Nature*, May 21, 1908, p. 66.

vellosine (vel'ọ-sin), *n.* [NL. *Vellosii* (see def.) + *-ine*².] A colorless, dextrorotatory, poisonous alkaloid, $C_{21}H_{22}O_2N_2(OCH_3)_2$, contained in Brazilian pereira-bark, *Geissospermum Vellosii*. It crystallizes in trimetric plates, melts and darkens at 189° C., and resembles brucine in general physiological effect.

velo (vē'lō), *n.* [*velo*(*city*).] In *physics*, a proposed unit of linear velocity; a velocity of one foot per second of time.

velocipede, *n.* **2.** An electric jib-crane which runs on a single track and is held upright by the post running between two rails at the top. *The Engineer* (London), 1903, p. 89.

velocity, *n.*—**Areal velocity,** the area inclosed in the triangle described in a unit of time by the radius vector of a body moving on a straight line.—**Coefficient of velocity.** See ★*coefficient.*—**Critical velocity.** (*a*) In the mechanics of fluids, the velocity at which the viscosity of a fluid, through which a small spherical body is falling, just balances the weight of the sphere so that the latter will fall at a uniform speed. Also called *terminal velocity.* (*b*) The velocity at which the mode of flow of a liquid, in a pipe or channel, is modified by the setting up of eddy-motion and the consequent interruption of the stream lines.—**Curve of velocity.** See ★*curve.*—**Group velocity,** the velocity of a group of waves, taken as a whole, which in a dispersive medium differs from the velocity of a given single wave-length.—**Justifying velocity,** in *meteor.*, a wind-velocity that is regarded by the United States Weather Bureau as having warranted or justified the display of some warning signal or telegram. Justifying velocities vary from 30 to 50 miles, depending on the temperature above or below freezing, the direction of the wind, the nature of the coast, and the character of the warning given.—**Linear velocity,** velocity expressed in terms of a length divided by a time: opposed to *angular velocity*, which is expressed in terms of an angle divided by a time.—**Maxwell-Boltzmann law of the distribution of velocities.** See ★*law*¹.—**Mean velocity** of a moving body, during any period of time considered, the quotient obtained by dividing the distance traversed by the body in the given period by the length of the period, the distance being expressed in terms of a unit of length, and the duration of the period in terms of some unit of time.—**Parallelogram, polygon** or **triangle of velocities.** See ★*polygon of vectors.*—**Peripheral velocity,** the linear velocity of the periphery of a rotating body.—**Relative velocity,** velocity measured with reference to some point which may itself be in motion.—**Resultant velocity.** See *resultant* ★*vector.*—**Striking velocity,** the velocity of a projectile or other body at the instant it strikes. This factor combined with the weight determines the penetration of a projectile.—**Terminal velocity.** (*a*) See *terminal.* (*b*) Same as *critical* ★*velocity* (*a*).—**Uniform velocity,** the velocity of a body which is not acted upon by unbalanced forces and which consequently traverses equal spaces in equal times.—**Unit of angular velocity.** See ★*angular.*—**Velocity gradient, head.** See ★*gradient*, ★*head.*—**Velocity of light.** See ★*light*¹.—**Velocity ratio.** See ★*ratio.*—**Wave velocity.** (*a*) The velocity of propagation of any wave or wave system. (*b*) The velocity of a given individual wave-length of light as opposed to the group velocity of a complex beam taken as a whole.

velodrome (vel'ọ-drōm), *n.* [F. *vélodrome*, < L. *velo*(*x*), swift, + Gr. δρόμος, a running.] **1.** A race-course for bicycles and the like.

The interesting programme of events down for decision at the Buffalo *Vélodrome* attracted an enormous crowd of spectators, who enjoyed a capital day's sport. *N. Y. Herald* (Paris ed.), June 2, 1903.

There are one or two of the many rinks where women in high life do resort for want of a better place; such is the *Vélodrome* Buffalo, near Neuilly, and the *Vélodrome* de la Seine. *A. Alexandre*, in Scribner's Mag., Aug., 1895, p. 198.

2. A hollow cone (or frustum of a cone) of thin boards or slats, within which a bicycle-rider exhibits feats of riding and dynamic support of the weight of wheel and rider. The centrifugal acceleration generated by rapid wheeling keeps the rider from falling even when the wheel is nearly horizontal as it runs. The resultant of the centrifugal and gravity reactions is normal to the inclined elements of the cone. When the cone is suspended in the air it is called an *aërial velodrome.*

velograph (vel'ọ-gråf), *n.* [L. *velo*(*citas*), velocity, + Gr. γράφειν, write.] An instrument for recording the rate of speed of a vehicle and also the number and duration of stops. *Cycle and Auto Trade Jour.*, Oct., 1904, p. 99.

Velouté sauce. See ★*sauce.*

velum, *n.* **10.** [*cap.*] One of the subdivisions of the constellation Argo Navis. See *Argo*, 2.—**Velum penis,** a plate, flap, or hood concealing the penis in the male *Acridiidæ.*

velvet, *n.*—**Beggar's velvet.** See ★*beggar.*

velvet-fish (vel'vet-fish), *n.* A name given in Tasmania to the fish *Holoxenus cutaneus* Günther, of the family *Cirrhitidæ.* The skin is covered with minute appendages, so soft to the touch as to suggest velvet; the color is deep purplish red. *E. E. Morris*, Austral English.

velvet-plant (vel'vet-plant), *n.* See ★*Crassocephalum.*

velvril (vel'vril), *n.* The trade-name of a substance proposed as a substitute for india-rubber and gutta-percha in many of their uses, especially in electrical insulation. It is an intimate mixture of the soluble variety of nitrocellulose with nitrated linseed-oil or castor-oil, preferably the latter.

Ven. An abbreviation of *Venerable.*

venanzite (ve-nan'zīt), *n.* [San *Venanzo*, Umbria, Italy, + *-ite*².] In *petrog.*, a name given by Sabatini (1898) to a lava composed of olivin, leucite, and melilite, with black mica, a little pyroxene, nephelite, and magnetite. Called *euktolite* by Rosenbusch (1899).

vending-machine (ven'ding-mạ-shēn″), *n.* A mechanical device for displaying and delivering to the purchaser candy or other small articles; a slot-machine. It is adapted to the sale of a great variety of articles and is made in many forms. The actuating mechanism of the machine consists of a system of balanced levers connected with a slot or opening in the casing of the machine in which a coin may be deposited. The weight of the coin, when dropped into the slot, causes the levers to move, releasing one article in the magazine and delivering it upon a shelf within reach of the purchaser. The same movement deposits the coin in the cash-box and restores the machine to its normal position, ready for the next purchase. The term properly includes all slot-machines, slot gas-meters, slot weighing-machines, card-printing machines, and musical and moving-picture machines.

Venefica (vẹ-nef'i-kạ̈), *n.* [NL., < L. *venefica*, fem. of *veneficus*, poisoning, < *venenum*, poison, + *facere*, make.] A genus of deep-sea eels of the family *Nettastomidæ.*

venene (vẹ-nēn'), *n.* [L. *venenum*, poison. See *venom.*] The poisonous principle of snake venom. Also *venin* and *venine.*

venenific (ven-e-nif'ik), *a.* [L. *venenum* + *facere*, make.] Producing poison; poison-making.

venenosalivary (ven″ẹ-nọ-sal'i-vạ-ri), *a.* Pertaining to the salivary poison-glands of a mosquito, or to the product of these glands. *Sci. Amer. Sup.*, Dec. 13, 1902, p. 22533.

veneriform (vẹ-ner′i-fôrm), *a.* [L. *Venus* (*Vener-*), a genus of mollusks, + *forma*, form.] Having the form of the shell in the recent pelecypod genus *Venus*.

Venetian. **I.** *a.*—**Venetian cake.** See ★*cake*1.—**Venetian door.** See ★*door.*

II. *n.* **6.** A kind of soft woolen cloth with a closely finished face.

> *Venetian.*—An all-wool material of a broadcloth construction, except that the face is twilled.
> *Dry Goods Economist*, June 13, 1908.

Venetic (vẹ-net′ik), *a.* Of or pertaining to the Veneti, or to the Venetians.

> Even in Crete, and universally on the mainland, the modern population betrays by its brachycephaly a large admixture of Albanian, *Venetic*, or Slav intruders.
> *Nature*, Oct. 29, 1903, p. 635.

Venez. An abbreviation of *Venezuela.*

venin, venine (ven′in), *n.* See ★*venene.*

venipuncture (vē′ni-pungk″tṳ̄r), *n.* [L. *vena*, vein, + *punctura*, puncture.] Puncture into a vein.

venogen (ven′ọ-jen), *n.* [*ven*(*in*) + *-gen.*] An antecedent of venin.

Venom agglutination. See ★*immunity*, 5.

venomization (ven″um-i-zā′sho̤n), *n.* [*venomize* + *-ation.*] The process of treating a substance, such as red blood-corpuscles, with snake venom. *Jour. Exper. Med.*, April 25, 1905, p. 201.

venomize (ven′um-īz), *v. t.*; pret. and pp. *venomized*, ppr. *venomizing.* [*venom* + *-ize.*] To treat with snake poison.

venomotor (vē′nọ-mō-to̤r), *a.* Causing change in the lumen of a vein; noting the nerve-fibrils distributed to the muscular tissue in the walls of the veins. *Buck*, Med. Handbook, III. 116.

Venous cachexia. Same as *venosity*, 3.

vent1, *n.*—**Back-air vent**, in *plumbing*, a pipe, or other connection with the open air, placed on the crown of a trap to prevent the loss of seal in the trap by siphonage.

vental (ven′ta̤l), *a.* [NL. **ventalis*, ‹ *ventus*, wind.] Of or pertaining to the wind.

vent-drill (vent′dril), *n.* An instrument used for clearing the vent of a gun when it has been obstructed with caked powder, or with a fragment of metal from a primer.

venter2, *n.* **6.** In the coiled nautiloid cephalopod shell, such as *Nautilus* and the ammonites, the outer or peripheral portion of the whorls. The determination of the ventral side or venter is based on the presence of the hyponomic sinus or the curved lines which represent the position of that sinus. The siphuncle in a great majority of cases is ventral, but there are exceptions in the mature state, as in *Clymenia*, where it is dorsal, and it may be dorsal in early growth stages, changing its position to the venter in later growth. In the straight or curved shells of the *Tetrabranchiata*, such as *Orthoceras*, the venter can rarely be determined and only by the indication of the hyponomic sinus of its curves.

ventilagin (ven-til′a̤-jin), *n.* [NL. *Ventilago* (see def.) + *-in*2.] A reddish-brown amorphous compound, $C_{15}H_{14}O_5$, the characteristic coloring matter of the root bark of *Ventilago maderaspatana.*

ventilating-grate (ven′ti-lāt-ing-grāt″), *n.* An open fireplace, stove, or heater having double walls at the back and sides, with an open hearth or basket-grate for wood or coal. The space between the walls of the stove is open above and below. When in use the air in this space becomes heated, expands, and escapes at the top into the room, fresh cold air entering continuously below, with a great economy of the heat of the fire.

ventilating-jack (ven′ti-lā-ting-jak″), *n.* **1.** A hood or cowl of sheet-iron, or some other thin metal, placed over the opening of a fresh-air inlet and directed toward the flow of the air in order to catch and induce a flow of it into the opening and so into the space to be ventilated.—**2.** A similar hood or cowl over the outlet for foul or vitiated air, directed in the direction toward which the outer air-current is moving, so that a current shall be induced outward from the space to be ventilated.

ventilation, *n.*—**Coefficient of ventilation.** See ★*coefficient.*—**Natural ventilation**, in *mining*, ventilation due to movements of air caused by a difference in temperature within the mine and outside of it.—**Thermometric ventilation**, a ventilating apparatus operated by a thermostat or by the variations in temperature of a fluid.

venting (ven′ting), *n.*—**Back-air venting**, in *plumbing*, making a pipe-connection with the open air and the crown of a trap to prevent loss of water-seal by siphonage.

Ventral chain. Same as *ventral chord* (which see, under *ventral*).—**Ventral lobe.** See ★*lobe.*—**Ventral plate**, a thickening of the blastoderm in the arthropod and especially in the insect embryo: so called because it is formed on the ventral surface of the yolk. It gives rise to the body of the embryo.

ventran (ven′tra̤n), *a.* [L. *venter*, belly, + *-an.*] Having the position of the venter; at the venter or ventral: used in descriptive biology, especially with reference to the shells of the *Cephalopoda.*

ventricle, *n.*—**Optic ventricle**, in *neurol.*, the cavity of an optic lobe of the midbrain; an optocœle.—**Ventricles of Morgagni**, the depression in the larynx just above the vocal cords. In some monkeys this is greatly enlarged, forming a sac or resonator that adds to the volume of the voice. Also *sinus of Morgagni.*

ventricosity (ven-tri-kos′i-ti), *n.* [*ventricose* + *-ity.*] The character of being ventricose; the condition of being strongly convex, as in gastropod shells. *Proc. Zool. Soc. London*, 1901, p. 391.

ventro-axial (ven-trọ-ak′si̤-a̤l), *a.* [L. *venter* (*ventr-*), belly, + E. *axial.*] Relating to the trunk or body, or to the dorsal and ventral portions considered collectively.

> These muscles may be divided into two series — those of the trunk (*ventroaxial*), and those of the limb (appendicular).
> *Encyc. Brit.*, XXV. 399.

ventro-axillary (ven-trọ-ak′si-lā-ri), *a.* Relating to the ventral surface of the body and the axilla.

ventrodorsal (ven-trọ-dôr′sa̤l), *a.* Relating to both ventral and dorsal surfaces; in relation to the human body, the same as *anteroposterior* or *sagittal.*

ventromedial (ven-trọ-mē′di-a̤l), *a.* Same as ★*ventromedian.*

ventromedian (ven-trọ-mē′di-a̤n), *a.* Both ventral and median.

ventromyel (ven-trọ-mī′el), *n.* [L. *venter*, belly, + Gr. *μυελός*, marrow.] The ventral (anterior) portion of the spinal cord.

ventropodal (ven-trop′ọ-da̤l), *a.* [L. *venter* (*ventr-*), belly, + Gr. *πούς* (*ποδ-*), foot, + *-al*1.] Walking or moving with the breast touching the ground: specifically, applied to the locomotion of loons and grebes on land. *Shufeldt.*

ventroposterior (ven″trọ-pos-tē′ri-o̤r), *a.* Lying on the lower, hinder portion of any organ or part: noting the ventral and hinder portion of any organ.

> The region where the *ventro-posterior* limit of the proton passes into the ordinary epithelium of the foregut.
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 62.

ventrose (ven′trōs), *a.* [LL. *ventrosus*, L. *ventriosus*, ‹ *venter*, belly. See *venter.*] Corpulent; having a large abdomen; also ventricose.

ventrosuspension (ven″trọ-sus-pen′sho̤n), *n.* Same as *ventrofixation. Med. Record*, Dec. 29, 1906, p. 1028.

Venturia (ven-tū′ri-ạ̈), *n.* [NL. (De Notaris, 1844), ‹ A. *Venturi*, an Italian botanist.] A genus of pyrenomycetous fungi having mostly sunken dark-colored membranous perithecia furnished with bristles about the apex. The ascospores are uniseptate and hyaline or olive-green. Over 50 species have been described. They occur chiefly on dead stems and fallen leaves. *V. ditricha* is frequently found on birch-leaves, in Europe and America. The conidial condition of some species belongs to the form-genus *Fusicladium.*

Venus's-purse (vē′nus-iz-pėrs″), *n.* Same as *Venus's flower-basket, Euplectella aspergillum.*

Vera di pozzo. See *pozzo.*

verantin (ver′an-tin), *n.* A resinous substance accompanying alizarin that has been produced from rubian. It is not a coloring matter.

verascope (vē′ra̤-skōp), *n.* [L. *verus*, true, + Gr. *σκοπεῖν*, view.] In *photog.*, an apparatus for short-distance stereoscopic photography. As devised by Richard and Colardeau the errors due to the separation of the images of the central part from each other on the negative, and the effort of the eyes to bring the images of the positive print into proper focus when looking through the stereoscope, are overcome by the optical and mechanical arrangement of the camera.

Verasper (ve-rȧs′pėr), *n.* [NL., ‹ *verus*, true, + *asper*, rough. The name was suggested by *Veratrum.*] A genus of flounders found in Japan and the Kurile Islands.

veratria (vẹ-rā′tri-ạ̈), *n.* [NL.] Same as *veratrine.*

veratridine (vẹ-rat′ri-din), *n.* [*veratr*(*ine*) + *-id* + *-ine.*] An alkaloid, isomeric with veratrine and occurring along with it in the so-called veratrine of ordinary medical use, differing however from it in being amorphous instead of crystallizable and being much more soluble in water.

veratrinized (vẹ-rā′trin-īzd), *a.* [*veratrine* + *-ized.*] Under the influence of veratrine.

> The continuous response of a *veratrinized* muscle.
> *Smithsonian Rep.*, 1899, p. 347.

veratrol (vẹ-rā′trol), *n.* [*veratr*(*ate*) + *-ol.*] A colorless, crystalline compound, $C_6H_4(\overset{1}{O}\overset{2}{C}H_3)_2$, prepared by heating barium veratrate. It melts at 15° C. and boils at 205–206° C. Also called *pyrocatechol dimethyl ether* or 1,2-*dimethoxybenzene.*

verb, *n.*—**Active verb.** See ★*active.*—**Verb function.** See ★*function.*

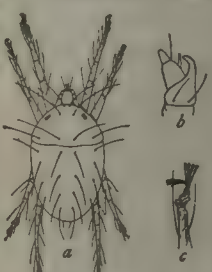
Verbal agraphia. See ★*agraphia.*

verbal-motor (vėr-ba̤l-mō′to̤r), *a.* **1.** Tending to think, remember, imagine, etc., in verbal ideas, and to experience these ideas in tactual, motor, or kinesthetic terms.

> The *verbal-motor* type stands, in the author's experience, next in order of frequency to the visual.
> *E. B. Titchener*, Exper. Psychol., I. ii. 393.

2. Having a verbal form, with tactual or kinesthetic contents: as. *verbal-motor* imagery.

verbena-mite (vėr-bē′nạ̈-mīt), *n.* A leaf-mite, *Tetranychus bimaculatus*, or 'red spider,' found on greenhouse plants in the northern United States and on vegetables and weeds in the South.



Verbena-mite (*Tetranychus bimaculatus*).
a, adult; *b*, palpus; *c*, claws: all highly magnified.
(After Banks, U. S. D. A.)

verbigerate (ver-bij′ẹ-rāt), *v. i.*; pret. and pp. *verbigerated*, ppr. *verbigerating.* [L. *verbigerare*, talk, chat.] In *pathol.*, to utter repeatedly certain words or phrases, without regard to their sense.

verdalite (ver′da̤-līt), *n.* [Irreg. ‹ OF. *verd*, green, + *-lite.*] Same as *verd-antique.*

verdet (ver-dā′), *n.* [F., ‹ *verd*, *vert*, green.] Dibasic cupric acetate or common blue verdigris as used to spray plants as an insecticide. The name is also applied to normal cupric acetate.

> *Verdet* is an acetate of copper. There are many such combinations, all being known under the general name of verdet, or verdigris. The form used by Bencker was that technically known as the dibasic acetate of copper. It requires to be soaked in water three or four days before it is used, so that as much as possible will dissolve.
> *E. G. Lodeman*, The Spraying of Plants, p. 44.

Verdet's constant. See ★*constant.*

Verdhandi (ver′ᴛʜan-di), *n.* [ON. *Verdhandi*, from the ppr. of *verdha*, be. See *worth*, *v.*] In *Norse myth.*, one of the three Fates, the Norn of the present.

verdict, *n.*—**Perverse verdict** a verdict in which the jury have been influenced by their own interpretation of the law rather than by the law as charged by the court; a verdict contrary to law.

verdigris-green, *n.* **2.** A green color imparted to the lead glaze of common earthenware by the use of verdigris, as in the tulip ware of the old Pennsylvania-German potters.

verein (fe-rīn′), *n.* [G.] Union; a union, association, or society.

vergery (vėr′jėr-i), *n.* [*verger* + *-y*3.] Same as *sacristy.*

veridic (vē-rid′ik), *a.* [L. *veridicus*, ‹ *verus*, true, + *dicere*, speak.] Same as *veridical.*

Verilus (vẹ-rī′lus), *n.* [NL., ‹ Sp. *veril*, a border, edge.] A genus of fishes belonging to the family *Lutianidæ*, found in deep water in the West Indies.

verine (ver′in), *n.* [*ver*(*atridine*) + *-ine*2.] A yellow, amorphous compound, $C_{28}H_{45}O_8N$, prepared by the action of alcoholic sodium hydroxid on veratridine. It melts at 130° C., and closely resembles cevin, with which it may be identical.

veriscope (ver′i-skōp), *n.* See *vitascope.*

veritism (ver′i-tizm), *n.* [*verit*(*y*) + *-ism.*] The methods or work of the veritists. See ★*veritist.*

> "*Veritism*," as illustrated in Spinelli's "A basso Porto, runs out into declamation of commonplace over noisy and frequently cacophonous music; and such a combination will not make an art work even with the admixture of a widely gesticulating chorus and well contrived pictures and groupings.
> *N. Y. Tribune*, Jan. 29, 1900.

veritist (ver′i-tist), *n.* [F. *véritiste*, ‹ *verité*, E. *verity*.] A recent name for a form of realism which takes pleasure in portraying what is debased or abnormal.

> And now we have the latest efforts of the "*veritist*" school, which seeks to employ the language of the ideal to express not the real alone, but that form of the real which is least deserving of presentation in any form. Mascagni set an example with "Cavalleria Rusticana," and his hot-blooded melody, like peppers "hot i' the mouth," ravished the blasé world. Then came "I Pagliacci," "La Festa Marina," "A Santa Lucia," all based on the notion that artistic motive (it is hard to remain English in a discussion like this) of a lyric drama are to be found in the social barnyard.
> *N. Y. Tribune*, Jan. 29, 1900.

verity, *n.*—**The four verities** or noble truths of Buddhism, the four fundamental principles evolved by Gautama the Buddha as he sat in rapt meditation under the bo-tree pondering on the problem of life and its miseries. They are: (1) that suffering exists wherever sentient being exists; (2) that the cause of suffering is desire or a craving for existence and its pleasures; (3) that deliverance from suffering can be effected only by the eradication of desire; and (4) that this can be accomplished only by walking in the noble eightfold path (1) of right views in regard to life; (2) of right aims; (3) of right words; (4) of right conduct; (5) of right means of livelihood (celibate mendicancy); (6) of right effort; (7) of right-mindfulness (that is, freedom from error in recollecting the law); and (8) of right meditation and tranquillity. See ★*nidana*.

Verm. An abbreviation of *Vermont*.

Verma (vėr′mạ̈), *n.* [NL., altered from L. *vermis*, a worm.] A genus of eels belonging to the family *Ophichthyidæ*, and found in rather deep water off the Florida coast.

Vermalia (ver-mā′li-ạ̈), *n. pl.* [NL., neut. pl. of NL. **vermalis*, ‹ L. *vermis*, a worm.] In Haeckel's system of classification (1896), a phylum of unsegmented, worm-like animals including the *Rotifera*, *Nemathelminthes*, *Molluscoidea*, and *Rhynchocœla*.

vermetoid (vėr′me-toid), *a.* and *n.* [L. *vermis*, a worm, + *-t-* + *-oid*.] Worm-like; resembling the *Vermetidæ*; a worm-like organism.

> Each must be considered as a separate genus whether it has one or more species, but 1 and *a*, 2 and *b*, 3 and *c*, 4 and *d*, can each be classed as a distinct genus, with a turritelloid and a *vermetoid* species, or all species of *vermetoids* may be classed as Turritella.
> *Amer. Nat.*, Oct., 1907, p. 638.

vermian, *a.* **2.** In *anat.*, relating to the vermis of the cerebellum. *Buck*, Med. Handbook, II. 158.

vermicular, *a.* **5.** Noting limestone, sandstone, or shale rocks from which minerals have been dissolved leaving round holes or cavities which give the rock the appearance of having been worm-eaten.

> The '*vermicular* limestones' have given geologists much trouble as to a satisfactory explanation of their formation. That sodium chloride was the original occupant of these cavities seems doubtful. But celestite is soluble in water containing small quantities of sodium, calcium or magnesium-chloride. *Science*, April 15, 1904, p. 620.

Vermicularia (vėr-mik-ụ̄-lā′ri-ạ̈), *n.* [NL. (Tode, 1790), ‹ L. *vermiculus*, a worm; referring to the cylindrical spores of some species.] A large genus of *Fungi Imperfecti*, having mostly superficial, black, membranous pycnidia provided with stiff dark bristles. The spores are elongate, unicellular, and hyaline. Over 125 species have been described. *V. Dematium* is a common species throughout the northern hemisphere, occurring on dead herbaceous and woody plants. *V. circinans* is the cause of onion-scab.

vermiculation, *n.* **5.** A color-marking of fine, wavy lines: a term frequently used in describing the plumage of birds.

vermicule, *n.* **2.** A motile, worm-like stage in the development of some sporozoans. See ★*pseudovermiculus*. *Proc. Roy. Philos. Soc.* (London), March 6, 1902, p. 76.

vermiculus, *n.* **3.** Same as ★*vermicule*, 2.

> MacCallum's observations on Halteridium, a crescentic parasite of birds, indicate that these crescentic bodies are of two varieties, one, the male, producing flagella, the other, the female, uniting with a free flagellum and developing into a motile form called the "*vermiculus*."
> *J. Ewing*, in Jour. Exper. Med., March 25, 1901, p. 467.

vermidom (vėr′mi-dom), *n.* [L. *vermis*, a worm, + *dom*(*us*), house.] A colony or aggregated group of tubicolous worms. *Encyc. Dict.*

vermilion, *n.*—**American vermilion.** Same as *Austrian* ★*cinnabar*.

vermilionette (vėr-mil-yo̤n-et′), *n.* [*vermilion* + *-ette*.] A trade-name for a red pigment made by precipitating a solution of eosin with sodium carbonate in water by means of lead acetate. The precipitation may be effected in the presence of red lead or basic lead chromate, or white zinc may be used as the material on which to fix the eosin. Any such product is of little value because of its fugitive character as a pigment.

Verminous bronchitis, cachexia. See ★*bronchitis*, ★*cachexia*.

Vermontese (vėr-mon-tēs′), *n. sing.* and *pl.* [*Vermont* + *-ese*.] An inhabitant, or the inhabitants, of Vermont.

> The refusal of Congress to welcome the new State was a cause of estrangement which the British government hoped to use in efforts to induce a return of the *Vermontese*, as the fashion of speech then went, to their allegiance.
> *Winsor*, Narrative and Critical History of America, VII. [188, note.

Vernal catarrh. See ★*catarrh*.

vernal^2 (vėr′nal), *n.* [? *vern*(*in*) + *-al*^{3}.] The trade-name of diethylmalonylurea,  $\mathrm{CO}\left\langle\begin{matrix}\mathrm{NHCO}\\ \mathrm{NHCO}\end{matrix}\right\rangle\mathrm{C}(\mathrm{C}_2\mathrm{H}_5)_2$, a colorless, crystalline powder, used in medicine as a soporific.

vernicose (vėr′ni-kōs), *a.* [NL. *vernicosus*, varnished, ‹ F. *vernis*, varnish.] In *bot.*, having a shiny surface as though freshly varnished.

Vernier chronoscope. See ★*chronoscope*.

vernier-compass (vėr′ni-ėr-kum″pas), *n.* **1.** A form of compass for surveyors' use in which the horizontal limb carrying the sights is fitted with a vernier for close-reading of the angles from the compass-needle as a zero point.—**2.** A form of dividers for shop use in which the vernier principle is applied for setting or for reading the distance apart of the points. One arm has the fixed scale, and the other has the movable one. The two scales are laid out from the common center of the pivot of the compass, and slide past each other as the two legs are adjusted.

vernier-gage (vėr′ni-ėr-gāj″), *n.* **1.** A gage or measuring and calipering apparatus to which the principle of the vernier is applied. It usually has the measuring element in two parts which slide past each other in measuring and carry on the contact edges the two graduations of the vernier type.—**2.** A form of pressure-recording apparatus in which the indicating needle or arm is fitted with one graduation of the vernier and the fixed dial carries the other.

vernin (vėr′nin), *n.* [? L. *vern*(*alis*), of the spring, + *-in*^{2}.] A colorless alkaloid, $C_{16}H_{20}O_8N_8.3H_2O$, contained in the young shoots of the vetch, the clover, and the gourd, in hazel and pine pollen, in germinated barley, and in the sugar-beet. It crystallizes in slender, lustrous, microscopic prisms.

vernis Martin (ver-nē′ mär-taṅ′), *n.* [F. *vernis*, varnish, + *Martin*, a personal name.] A colorless lac varnish, peculiarly adapted for fixing the finest water-color paintings on thin ivory or wood surfaces, invented by Martin, a coach-painter of Paris, in the reign of Louis XIV.

vernonin (vėr′nọ̄-nin), *n.* [*Vernonia* + *-in*^{2}.] A colorless, pulverulent compound, $C_{10}H_{24}O_7$, contained in the root of *Vernonia Nigritiana*. It is used on the west coast of Africa as a febrifuge and is a cardiac poison, 80 parts of it producing the same effect as one part of digitalin.

Vernon shale. See *Salina* ★*beds*.

veronal (ver′ọ̄-nạl), *n.* [*ver*(*nin*) + *-on-* + *-al*^{3}.] A trade-name for diethylmalonylurea, used medicinally as a hypnotic. *Buck*. Med. Handbook, VIII. 221.

verriculated (ve-rik′ụ̄-lā-ted), *a.* Same as *verriculate*.

verriculose (ve-rik′ụ̄-lōs), *a.* Same as *verriculate*.

verriculum (ve-rik′ụ̄-lum), *n.*; pl. *verricula* (-lạ̈). [NL.] Same as *verricule*.

verruca, *n.*—**Verruca necrogenica.** Same as *anatomical tubercle* (which see, under *tubercle*).—**Verruca plana**, a broad, flat wart, usually on the face or back.—**Verruca senilis**, a form of wart, usually verruca plana, occurring in the aged.

Verrucariales (ver-ŏ-kā-ri-ā′lēz), *n. pl.* [NL., ‹ *Verrucaria*, the type genus, + *-ales*.] An order of pyrenocarpous lichens, the *Pyrenocarpeæ* of Zahlbruckner's classification, in Engler and Prantl's *Natürlichen Pflanzenfamilien*. The *Verrucariaceæ* are one of the principal families.

verrucosis (ver-ŏ-kō′sis), *n.* [NL., ‹ *Verruc*(*aria*) + *-osis*.] Same as *lemon*-★*scab* and *orange*-★*scab*.

verrugato (ver-ŏ-gä′tō), *n.* [Sp., warty, ‹ *verruga*, ‹ L. *verruca*, a wart.] A name of *Micropogon furnieri* of the West Indies, of *Micropogon ectenes* of the Pacific coast of Mexico, and of *Menticirrhus elongatus* of the Pacific coast of Central America, fishes of the family *Sciænidæ*; also of the Mexican flasher, *Lobotes pacificus*.

versatile, *a.* **7.** In *ichth.*, capable of being turned either way: describing a spine, a tooth, or any organ that may not be usually so turned. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 540.

verse^2, *n.*—**Intensity-verse**, in *phonetics*, verse the rhythm of which depends primarily upon differences of intensive accentuation, and not upon the alternation of long and short syllables: opposed to ★*time-verse*. *Scripture*, Exper. Phonetics, p. 538.

verse-group (vėrs′gröp), *n.* The verse considered as the unit of rhythm.

> The rhythm on which he lays most stress has as its unit the verse, or line (average duration, 2.69 sec.; but where the rhythmic effect is most marked, average 1.67 sec.). . . . This 1.67 sec. *verse-group*, he feels, tallies fairly well with the normal attention-time.
> *G. M. Stratton*, Exper. Psychol. and its Bearing upon [Culture, p. 236.

versicler (vėr′si-klėr), *n.* [*versicle*, *n.*] One who writes versicles or little poems. [Rare.]

> "I 'll read your *versicler* to-morrow morning early." The latter expressed a fear that the hour was too critical for poetry. *G. Meredith*, Diana of the Crossways, xxx.

versiera (ver-si-ā′rä), *n.* [It., 'the wife of the Adversary,' a female goblin, ‹ L. *adversaria*, fem. of *adversarius*, an adversary. See *adversary*.] In *math.*, a certain curve, 'the witch of Agnesi.' See *witch*^{1}.

versine (vėr′sīn), *n.* [*ver*(*sed*) + *sine*.] Same as *versed sine*. See *sine*^{2}.

versionize (vėr′sho̤n-īz), *v. t.*; pret. and pp. *versionized*, ppr. *versionizing*. [*version* + *-ize*.] To make a version of; translate. [Rare.]

> Wace's poem, already taken from Geoffrey of Monmouth, as Geoffrey had taken it, or pretended to take it from the older chronicle, was soon again, as we shall see, to be *versionized* into English. *H. Coppée*, Eng. Lit., p. 52.

versor, *n.*—**Quadrilateral versor**, in *math.*, a versor the rotatory effect of which upon a vector is equal to a right angle.

verst, *a.* A simplified spelling of *versed*.

vert^1, *n.*—**Vert sablé** (F. 'sanded green'), a sandy or speckled green color used on Sèvres porcelain.

vert^2, *v.* **II.** *trans.* To turn: noting the movements of the eyeball.

> For instance, all of the muscles of the eyes may be relatively weak. The ducting or *verting* power is not as great as it should be. *Med. Record*, Feb. 7, 1903, p. 210.

Vert. An abbreviation (*a*) of *Vertebrata*; (*b*) of *vertebrate*.

verteber (vėr′tẹ̄-bėr), *n.* An obsolete English form of *vertebra*.

vertebra, *n.*—**Anticlinal vertebra**, a vertebra, near the center of the dorsolumbar series, having a vertical spinous process toward which the spinous processes of the vertebræ on either side incline. The typical form of anticlinal vertebra is found in members of the cat family. —**Caudal vertebræ**, in *ichth.*, that portion of the vertebral column behind the abdominal cavity which bears hemapophyses and is without ribs. See *abdominal vertebræ*, under *abdominal*.—**Complex vertebra**, a name given by Ramsay Wright to the elongate second vertebra of catfishes, which is really a complex structure formed by the fusion of the second, third, and fourth vertebræ.

> For convenience in descriptive anatomy we venture to propose for the confluent, 2nd., 3rd., and 4th. vertebræ the term *complex vertebra*.
> *Philos. Trans. Roy. Soc.* (London), 1893, ser. B, p. 70.

Naked vertebræ, the imperfectly ossified vertebræ of some ganoid fishes (the older *Crossopterygii*, the *Heterocerci*, the pycnodonts, etc.), in which the interior of the arches and spinous processes is cartilaginous, while the outer coating of bone forms a hollow cylinder.—**Ring vertebra**, a vertebra composed of two half vertebræ and hollow within, such as occur in some fishes. See ★*hemivertebra*.

vertebral, *n.* **3.** One of the unpaired horny plates which cover the median dorsal portion of the carapace of a turtle.

vertebralia (vėr-tẹ̄-brā′li-ạ̈), *n. pl.* [NL., neut. pl. of *vertebralis*. See *vertebral*.] The horny plates which run along the central portion of the carapace, or upper shell, of a turtle; the vertebrals. See ★*vertebral*, *n.*, 3. Same as ★*neuralia*.

vertex, *n.* **2.** (*b*) In *geom.*, the point at which concurrent straights meet.—**Vertex of a cone**, the apex.—**Vertex of a curve**, any point in which a diameter meets the curve.—**Vertex of an angloid** the common origin of the rays.—**Vertex of a pencil or sheaf**, in *geom.*, the cointersection point of the system of concurrent straights.

vertical. **I.** *a.*—**Vertical circle.** (*c*) A telescope moving in a vertical plane with a large circle attached upon which vertical angles are read. The instrument is not confined to the meridian but is free to turn around a vertical axis.—**Vertical equation, trace.** See ★*equation*, ★*trace*^{1}.

II. *n.*—**Angle of the vertical.** See ★*angle*^{3}.

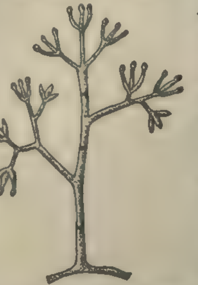
verticibasal (vėr′ti-si-bā′sa̤l), *a.* [L. *vertex* (*vertic-*), top, + *-i-* + E. *basal.*] In *bot.*, characterized by a base and vertex.

All the higher plants and also most algæ are bipolar (*verticibasal*). *Pfeffer* (trans.), Physiol. of Plants, II. 155.

verticibasality (vėr″ti-si-bā-sal′i-ti), *n.* [L. *vertex* (*vertic-*), top, + *-i-* + E. *basal* + *-ity.*] In *bot.*, the character of being verticibasal; the fact of being organized with base and apex. See ★*polarity*, 1 (*c*).

Flowering plants possess, therefore, a relatively stable *verticibasality*.
Pfeffer (trans.), Physiol. of Plants, II. 155.

Verticillium (vėr-ti-sil′i-um), *n.* [NL. (Nees von Esenbeck, 1816), < L. *verticillus*, a whorl.] A genus of hyphomycetous fungi, having erect branched conidiophores with the terminal branches in whorls and bearing unicellular hyaline or bright-colored conidia. Over 50 species have been described. *V. Candelabrum* is a common species on decaying wood in Europe and North America.



Verticillium Candelabrum, showing branched conidiophore with conidia: much magnified.

vertigo, *n.*—**Laryngeal vertigo,** a neurosis marked by vertigo, preceded by a feeling of fulness in the throat and coughing, and followed by loss of consciousness.—**Ophthalmic vertigo,** dizziness due to ocular defects, especially the insufficiency of the muscle of the eye.

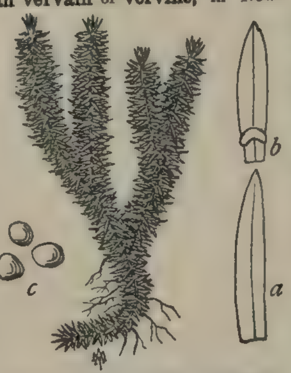
vervain, *n.*—**Indian vervain** or **vervine,** in Newfoundland, the shining club-moss or swamp evergreen, *Lycopodium lucidulum.* See *shining* ★*club-moss.*

vervine (vėr′vīn), *n.* A common corruption of *vervain.*

Very lord, tenant. See *very* ★*lord.*

ves. Abbreviation of Latin *vesicatorium* (a blister).

vesanic (vē-san′ik), *a.* [L. *vesanus*, insane, + *-ic.*] Insane; of or pertaining to insanity. *Buck*, Med. Handbook, V. 87.



Indian Vervain (*Lycopodium lucidulum*). *a*, leaf; *b*, sporophyll with sporangium; *c*, spores.

vesbium (ves′bi-um), *n.* [NL., < It. dial. *Vesbio*, < L. *Vesuvius*, Vesuvius.] A supposed new chemical element announced in 1879 by Scacchi as present in lava from Vesuvius. It was afterward shown to be vanadium.

vesical, *a.*—**Vesical crises,** attacks of violent pain in the bladder, with tenesmus, occurring sometimes in the course of locomotor ataxia.—**Vesical reflex.** Same as *urinary reflex* (which see, under ★*reflex*).

vesicle, *n.* 1. (*d*) In *petrog.*, a cavity in lava formed by the expansion of escaping gas-bubbles, chiefly of steam.—**Accessory vesicle,** in certain polyclads, a backward prolongation of the vagina as a blind sac beyond the point of entrance of the duct from the uteri.—**Anal vesicle,** in gephyreans, one of the branching structures, of supposed excretory function, which unite into a common stem opening into the intestine close to the anus.

The study of the development of the Gephyrea, according to Korschelt and Heider, proves that these organs "do not arise, as was supposed, from the intestine, but are formed in the somatic layer of the mesoderm"; and further that "their entire mode of origin proclaims the *anal vesicles* to be nephridia which only secondarily entered into connection with the hind gut." If this is so, their function must be excretory; and the observations of many zoologists lend support to this theory.
Trans. Linn. Soc., Zool., Dec., 1900, p. 88.

Caudal vesicle. See ★*caudal.*—**Chlorophyl vesicle.** See ★*chlorophyl.*—**Racemose vesicle,** in starfishes, one of the small rounded glandular bodies projecting inward from the circumesophageal canal. There is a pair in each interradius except the one containing the stone-canal; in this there is only a single vesicle. Also known as *Tiedemann's body* or *Tiedemann's vesicle.*—**Tiedemann's vesicle.** Same as *racemose* ★*vesicle.*

vesicorectal (ves″i-kō-rek′ta̤l), *a.* [L. *vesica*, bladder, + *rectum*, rectum, + *-al*¹.] Relating to both the bladder and the rectum.

vesicospinal (ves″i-kō-spī′na̤l), *a.* [L. *vesica*, bladder, + *spina*, spine, + *-al*¹.] Having relation to both the bladder and the spinal cord: noting the nerve-center for the act of urination, located in the spinal cord. *Ribot* (trans.), Psychol. of Emotions, p. 116.

vesico-urachal (ves″i-kō-ū′ra̤-ka̤l), *a.* [L. *vesica*, bladder, + NL. *urachus* + *-al*¹.] Relating to the bladder and the urachus.

vesico-urethral (ves″i-kō-ụ-rē′thra̤l), *a.* [L. *vesica*, bladder, + NL. *urethra* + *-al*¹.] Relating to both the bladder and the urethra. *Buck*, Med. Handbook, I. 777.

Vesicular structure. See ★*structure.*

vesiculate, *v.* **II.** *trans.* To fill or cover with vesicles; render vesiculate or vesicular.

Baking Powder *vesiculates* the dough by mechanical means, and affects or changes the constituents of the flour. *Med. Record*, Feb. 7, 1903.

vesiculectomy (vẹ-sik-ụ-lek′tọ-mi), *n.* [L. *vesicula*, vesicle, + Gr. ἐκτομή, a cutting out.] Excision of a portion of the seminal vesicle on either side, with the object of producing sterility.

vesiculitis (vẹ-sik-ụ-lī′tis), *n.* [NL., < L. *vesicula*, vesicle, + *-itis.*] Inflammation of a vesicle, specifically of the seminal vesicles.

vesiculopapular (vẹ-sik″ụ-lō-pap′ụ-lä̤r), *a.* [L. *vesicula*, vesicle, + *papula*, papula, + *-ar*³.] Marked by both vesicles and papules. *Buck*, Med. Handbook, III. 720.

vesp. An abbreviation of the Latin *vespere*, in the evening.

vesper, *n.* **3.** A vesper hymn or song. [Rare.]

Heartless things
Are done and said i' the world, and many worms
And beasts and men live on, and mighty Earth
From sea and mountain, city and wilderness,
In *vesper* low or joyous orison,
Lifts still its solemn voice.
Shelley, Alastor, l. 694.

vespertine, *a.* **6.** In *astrol.*, setting after the sun: said of a planet.

vespid (ves′pid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Vespidæ.*

II. *a.* Having the characteristics of or belonging to the family *Vespidæ.*

vespoid (ves′poid), *n.* and *a.* **I.** *n.* A member of the hymenopterous superfamily *Vespoidea.*

II. *a.* Having the characteristics of or belonging to the superfamily *Vespoidea.*

Vespoidea (ves-poi′dē-ä̤), *n. pl.* [NL., < *vespa* + *-oidea.*] The old family *Vespidæ* considered as a superfamily.

vessel, *n.*—**Bast vessel.** Same as *sieve-cell.*—**Cardiovisceral vessel.** See ★*cardiovisceral.*—**Supraspinal vessel,** in *entom.*, a ventral sinus lying on the nerve-cord and closed by a pulsating diaphragm.

Vestalia (ves-tā′li-ä̤), *n.* [NL., neut. pl. of *Vestalis*, Vestal.] In *Rom. antiq.*, the yearly festival of Vesta, which occurred on the ninth of July.

Vested school. See ★*school*¹.

Vestibular canal. Same as *urogenital sinus.*

vestibule, *n.* **3.** (*c*) In *Bryozoa* of the suborder *Cryptostomata*, a tubular shaft which lies above and leads to the mouth of the zoœcium. This vestibule or vestibular shaft may be crossed by diaphragms or hemisepta and is surrounded by vesicular tissue or a solid calcareous deposit.—**4.** In *car-building*, a car-platform inclosed above and on two sides and connected by a bellows-like extension with the similarly inclosed platform of the next car. Each extension carries an iron door-frame called a *face-plate.* When two cars are coupled together the opposing face-plates are pressed together by springs, which at the same time allow them to slip over one another with the motion of the cars. The permanent structure of the vestibule includes doors on each side, at the steps, and hinged platforms to cover the steps when the doors are closed.

vestibule-latch (ves′ti-būl-lach″), *n.* In *lock-making*, a lock for an outside door, having a bolt operated from the outside by a key and from the inside by the door-knob, the outer knob being fixed or controlled by a stop.

vestibulotomy (ves-tib-ụ-lot′ọ-mi), *n.* [L. *vestibulum*, forecourt, vestibule, + Gr. τομή, a cutting.] Operative opening into the vestibule of the inner ear.

Of these combinations the most important is that of superior with inferior *vestibulotomy*, constituting what we have called "double *vestibulotomy*."
Lancet, May 9, 1908, p. 1341.

vestige, *n.*—**In vestige,** as a vestigial organ or structure.

The fundus of a pouch whose opening remains *in vestige* on the back of the tongue, as in the foramen cæcum.
Encyc. Brit., XXV. 403.

vestigially (ves-tij′i-a̤l-i), *adv.* In a vestigial or rudimentary way.

This conception [of the sentience of environing bodies] persists up through barbarism, albeit *vestigially*, into civilization.
Amer. Anthropologist, Jan.-March, 1902, p. 33.

vestium (ves′ti-um), *n.* [NL., < L. *Vesta*, Vesta.] See ★*sirium.*

vestry, *n.* **3.** (*b*) The identity of ecclesiastical and secular powers and duties in the English parish represented by the vestry has now quite disappeared. The important acts tending to this result were the Public Health Act of 1875, which virtually made each urban civil parish, outside the metropolitan area, a distinct 'urban district'; the Local Government Act of 1894, which gave rural civil parishes certain powers of self-government; and the London Government Act of 1899, which substituted municipal boroughs for the former civil parishes of London.

By the London Government Act, 1899, twenty-eight boroughs were created in substitution for the old vestries, boards, commissioners, etc. The general administrative powers of these boroughs are but little larger than those of the vestries which they have superseded.
J. F. Stephen, Laws of England (14th Ed.), III. 33.

veszelyite (ves′zel-yīt), *n.* [Named after one *Veszely*, a mining engineer.] A hydrous phosphate and arsenate of lead and zinc occurring in crystalline granular incrustations of a greenish-blue color: from Morawitza in the Banat.

Vet. An abbreviation (*a*) of *veteran;* (*b*) of *veterinary.*

veter. [*l. c.* or *cap.*] An abbreviation of *veterinary.*

vetitive (vet′i-tiv), *a.* [L. *vetitum*, pp. of *vetere*, forbid.] Of the nature of or pertaining to a veto; that forbids or prohibits.

The only case in which our executives have a real *vetitive* power is the case of pardon.
F. Lieber, Civil Liberty, p. 202.

Vet. Surg. An abbreviation of *veterinary surgeon.*

vexillatio (vek-si-lā′shi-ō), *n.* [L., < *vexillum*, a standard.] In *Rom. antiq.*, a body of troops marching under a single vexillum or battle-flag.

veziga (ve′zi-gä̤), *n.* [Russian.] The prepared spinal cord of the sturgeon.

Twenty-five of the common sturgeon of Russia being required to furnish 1 pound of "*veziga*" or viaziga (prepared spinal cord), as the product is commonly known in the European markets.
Bulletin U. S. Fish Com., XVIII. 417.

V-gear, *n.* **2.** A friction-gear which has V-grooves turned in its face, to give a large gripping surface, and allow the gear to wedge slightly into the grooves on the gear with which it works.

V-hut (vē′hut), *n.* A hut shaped like the letter V. See the extract. [Australasia.]

In case my readers may not know what a '*V*' *hut* is like, I will describe one:—It is exactly as if you took the roof off a house and stood it on the ground, you can only stand upright in the middle.
C. L. Innes, Canterbury Sketches, p. 20. Quoted in E. [E. Morris, Austral English.

via¹, *n.*—**Secundæ viæ,** the second passages for nutrient material, namely, the lacteals, blood-vessels, and lymphatics, whereby the digested material is carried to the tissues.

viagram (vī′a̤-gram), *n.* [L. *via*, way, road, + Gr. γράμμα, a writing.] The diagram or trace made by the recording pen of a viagraph.

In the experiments the viagraph must play a conspicuous part; and if the speed, pull, and vibration could be autographically recorded to correspond with the '*viagram*' the different conditions could be seen at a glance, while a scale of measurements would give definite results.
Rep. Brit. Ass. Ad. Sci., 1901, p. 414.

viagraph (vī′a̤-gråf), *n.* [L. *via*, way, road, + Gr. γράφειν, write.] An instrument designed to indicate and usually to record the resistances offered by the roadway to a wheeled vehicle running over it. It gives the grades, the inequalities of surface and the resistances to traction caused by these, particularly with varying quality of road-making material. When made a recording instrument, the trace of the pen or pencil is called a *viagram*, and its ordinates give the values of the desired factors or elements under observation, while the abscissas are distances upon the road from the starting-point.

An instrument called the *viagraph* is described by the author, which takes an automatic record of the inequalities of the street surface and gives the sum of all the vertical depressions found in paving over a mile.
Pop. Sci. Mo., Feb., 1901, p. 438.

vial, *n.*—**Bologna vial,** in *glass-manuf.*, a glass vial which has been suddenly cooled in the making. It has a thick bottom and open mouth, and will resist a smart blow, but will fly in pieces if a sharp grain of sand is dropped into it.

viatorial (vī-a̤-tō′ri-a̤l), *a.* [L. *viator*, a traveler, + *-al*¹.] Of or pertaining to traveling.—**Viatorial privilege.** See ★*privilege.*

vibrancy (vī′bran-si), *n.* [*vibran*(*t*) + *-cy.*] The character of being vibrant; capability or fact of vibration.

vibration, *n.*—**Circular vibration,** the resultant of two plane vibrations, equal in amplitude and frequency, but at right angles to one another and having a difference of phase of 90°.—**Damped vibration,** a simple harmonic motion with a decreasing amplitude.—**Elliptical vibration,** the periodic motion of a particle or medium which results from the composition at right angles of two plane vibrations of equal frequency and having a difference of phase other than a quarter of a wave-length.—**Forced vibration,** vibration of a body or system produced by the periodic application of a force the frequency of which differs from the free vibrational frequency of the body. Forced vibrations correspond to the frequency of the applied force and not to the frequency of free vibration of the body or system. *Encyc. Brit.*, XXV. 53.—**Isochronous vibration,** a vibration the frequency of which is independent of the amplitude. In isochronous vibrations, the time consumed by each oscillation remains constant, as the vibration diminishes in intensity, until the motion ceases altogether.—**Rectilinear vibration,** a vibration in which the path of the oscillation is along a straight line. See *simple harmonic motion*, under *motion*.—**Stationary vibration,** a vibration in which the position of the nodes and loops is fixed. The vibration of a standing-wave system in which interference causes the permanence of the nodes in space is a stationary vibration.—**Synchronous vibrations,** vibrations having the same frequency and the same phase.—**Vibration form,** in *optics*, the path or curve described by the end of the line representing the light vector at any point.—**Vibration galvanometer,** a galvanometer with light moving parts and a free period of oscillation such as to permit to follow, by its deflections, the rapid fluctuations of a vibratory current. One of the most sensitive forms is the string-galvanometer of Einstoven.—**Vibration magnetometer.** See ★*magnetometer*.

vibration-ratio (vī-brā′shǫn-rā″shi-ō), *n.* In *acoustics*, the ratio of the pitch-numbers of tones, more especially of the tones composing the musical intervals: as, the *vibration-ratio* of the octave, etc. *E. B. Titchener*, Exper. Psychol., I. i. 35.

vibrator, *n.* **4.** Any arm or lever pivoted at one point and free to swing or vibrate between stops, usually adjustable in position; in general uses, such a device operating at high speeds or frequency.—**5.** An appliance with a rubber or other tip of variable shape which is made to oscillate very rapidly by means of electricity or some mechanical device: employed in mechanicotherapy to give vibratory massage to a part.—**Ribbon vibrator,** in *elect.*, an interrupter consisting of a vibrating ribbon or strip of steel the frequency of which is adjusted by varying the tension with which it is stretched.—**Righi vibrator,** an apparatus, devised by Professor Righi of Bologna, for the production of very short electric waves. It consists essentially of a series of three spark-gaps between small balls of metal. *Elect. World and Engin.*, Feb. 13, 1904, p. 203.

vibrio, *n.*—**Koch's vibrio.** Same as *Koch's comma* ★*bacillus*.—**Metchnikoff's vibrio,** a species of bacteria, *Microspira* (*Vibrio*) *Metchnikovi*, said to be the cause of an intestinal disease of chickens. See ★*Microspira*.

vibrioid (vib′ri-oid), *a.* [NL. *Vibrio* + *-oid.*] Pertaining to or resembling *Vibrio*, a genus of bacteria.

vibrograph (vī′brǫ-gráf), *n.* [L. *vibrare*, swing, + Gr. *γράφειν*, write.] An instrument designed to record photographically vibrations, as of a building, the ground, etc. *Nature*, Feb. 25, 1904, adv.

vibrometer (vī-brom′e-tėr), *n.* [L. *vibrare*, vibrate, + Gr. *μέτρον*, measure.] A device for imparting vibrations to the membrana tympani in the treatment of tinnitus aurium and deafness. *Buck*, Med. Handbook, III. 653.

vibrophone (vī′brǫ-fōn), *n.* [L. *vibrare*, vibrate, + Gr. *φωνή*, sound.] A device for inducing movements of the drum-membrane of the ear by means of sound-waves directed into the auditory meatus. *Buck*, Med. Handbook, III. 653.

vibroscopic (vī-brǫ-skop′ik), *a.* [*vibroscop*(*e*) + *-ic.*] Pertaining to, or obtained by means of, a vibroscope.

vibrotherapeutics (vī′brǫ-ther-ą-pū′tiks), *n.* [L. *vibrare*, vibrate, + E. *therapeutics*.] The employment of mechanical vibration in the treatment of disease.

viburnin (vī-bėr′nin), *n.* [*Viburn*(*um*) + *-in*^{2}.] A substance, probably consisting of a mixture of compounds, extracted from the black haw, *Viburnum prunifolium*. It is used medicinally in certain uterine affections.

Vic. Ap. An abbreviation of *Vicar Apostolic*.

vicar, *n.*—**Vicar capitular,** an ecclesiastic governing a diocese during the interregnum between the death of a bishop and the instalment of his successor.—**Vicar-general.** (*b*) A priest deputized by a bishop to assist him in the administration of a diocese, but without episcopal jurisdiction or functions.

vicarious, *a.* **5.** In *paleon.*, said of representative, closely related species or genera of fossil organisms occurring in homotaxial formations of different faunal provinces. Examples are afforded by the Silurian trilobites *Deiphon americanus*, of the American Niagaran, and *Deiphon forbesi*, of the British Wenlock beds; and by the brachiopods *Orthis striatula*, of the European Upper Devonian, and *Orthis tulliensis* and *O. impressa*, of the homotaxial North American formations.

vice-kingdom (vīs′king″dǫm), *n.* The territory ruled by, or the jurisdiction of, a vice-king or viceroy; a viceroyalty.

vice-reine (vēs-rān′), *n.* [F., < *vice-*, vice-, + *reine*, < L. *regina*, queen.] **1.** A nominal title of the wife of a viceroy.

> The first photo taken of the *Vicereine* during the State tour in Burma. *Black and White*, Jan. 4, 1902, p. 4.

2. The female governor of a state or colony, who rules in place of the king. [Rare.]

> "Brussels . . . at the time that it belonged to Austria and had his sister the Archduchess Mary Christine for *Vice-Reine*. *Jerningham Letters*, II. 391.

3. An American nymphalid butterfly, *Basilarchia floridensis*, found in Georgia and Florida, and resembling the viceroy although much darker in color. *Comstock*, How to Know the Butterflies, p. 173.

Vic. Gen. An abbreviation of *Vicar-General*.

vichy (vish′i), *n.* An abbreviation of *Vichy water*. See *water*.

vicilin (vis′i-lin), *n.* [L. *vicia*, vetch, + *-l-* + *-in*^{2}.] A globulin found in the horse-bean, *Vicia faba*; also in lentils, peas, etc.

vicinage, *n.*—**Jury of the vicinage.** See ★*jury*.

vicinal, *a.* **2.** In *organ. chem.*, noting the proximity, in the molecule of a cyclic compound, of two or more substituting groups or atoms. It is used especially of derivatives of benzene having groups in the positions 1,2,3.

vicine^{1}, *a.* **2.** In *phytogeog.*, naturalized from a neighboring formation: opposed to ★*adventitious*. See ★*adventitious*, 4. *F. E. Clements*.

vicine^{2} (vis′in), *n.* [L. *vicia*, vetch, + *-ine*^{2}.] A colorless compound, $(C_8H_{15}O_6N_3)_x$, contained in the seeds of the horse-bean, *Vicia faba*, *V. faba minor*, and in the sugar-beet root. It crystallizes in aggregates of needles.

vicinity, *n.* **4.** In *geom. topics*, a place, A, is said to be in the vicinity of a place, B, within a place, C, which contains both A and B, and in a given respect, if, and only if, an object instantaneously filling A can by an ordinary motion move to B without ever leaving C, and without at any instant during its motion occupying any place which differs from A in the given respect.—**Immediate vicinity,** in the *theory of functions*, a part of a continuum so near to a point (or other element) that there is no change material for the purpose in hand between its outmost verge and that point (or element).

Vicious circle. See ★*circle*.

Vicksburg beds. Same as *Vicksburg group*.

Victoria black. See ★*black*.—**Victoria green.** (*b*) Same as *malachite-green*, 2.

victorium (vik-tō′ri-um), *n.* [NL., named from Queen *Victoria* of Great Britain.] The second name given by Sir William Crookes to a supposed new chemical element of the yttrium group which he had at first called *monium*. The oxid was obtained as the result of long-continued fractionation of what had been considered an yttrium salt, and the chief evidence of its being distinct was afforded by study of the phosphorescent spectrum. The question of the independent existence of this, as of sundry other supposed constituents of the group of the rare earths, remains to be cleared up. See ★*monium*.

vid (vid), *n.* In *math.*, a letter or unit in Benjamin Pierce's linear algebras.

vid. [*l. c.* or *cap.*] An abbreviation of the Latin *vide*, see.

Vidal black. See ★*black*.

vidduy (vid′ö-ē), *n.* [Heb., < *ỹadah*, confession of sin, prayer for pardon (Jastrow).] A name especially applied to the confession called *'al-het*, which is repeated four times during the services of the eve and day of atonement; also applied to the confession of a sick Hebrew when he is approaching death.

vide^{2} (vēd), *a.* [F. *vide*, empty, unoccupied. See *void*.] **1.** In *music*, especially in orchestral scores, an indication of an omitted passage or cut.—**2.** In *violin music*, a direction to play a note upon an open, unstopped string.

vieja (vẹ-ā′hä), *n.* [Cuban Sp., < Sp. *vieja*, fem. of *viejo*, old, < L. *vetulus*, old.] A common name of fishes of the genus *Sparisoma*.—**Vieja colorada,** *Sparisoma flavescens*, a scaroid fish found from Key West to Rio Janeiro.—**Vieja muger.** Same as ★*Vieja colorada*.

Vienna blue. See ★*blue*.—**Vienna green,** cupric arsenite or aceto-arsenite, used as a pigment.—**Vienna lime.** See ★*lime*^{1}.—**Vienna porcelain.** See ★*porcelain*^{1}.

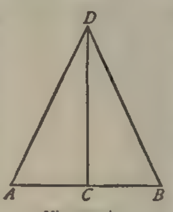
vierer (fēr′ėr), *n.* [G., < *vier*, four.] A small coin of the Swiss canton of Berne, equal to four deniers or denarii, introduced in 1828.

vierin (vī′ẹ-rin), *n.* An amorphous, white, bitter principle of aromatic odor obtained from the bark of *Remizia velozii*: used as a substitute for quinine.

vierkleur (fēr′klėr), *n.* [D., < *vier*, four, + *kleur*, color.] The four-colored (red, white, blue, and green) flag of the former South African Republic (Transvaal).

vietinghofite (fē′ting-hōf-īt), *n.* [Named after M. de *Vietinghof*.] Essentially a ferruginous variety of samarskite, from near Lake Baikal, Siberia.

view-angle (vū′ang″gl), *n.* In *photog.*, the angle included by a lens, determined from the relation of the focal length to the diameter of the field. If, in the figure, AB equals the diameter of the field and CD the focal length, then the angle ADB is the view-angle. When the ratio between the diameter of field and focal length is known, reference tables give the angle sought.



View-angle.

> In so far as we depart from this normal *view-angle* of 50°, whether from choice or necessity, we will obtain perspectives to which the eye is unaccustomed, and which will therefore be spoken of as unnatural, exaggerated, etc. *Photo-miniature*, Sept., 1901, p. 249.

view-finder (vū′fīn″dėr), *n.* Same as *finder* (*f*).

vigesimal, *a.* **2.** Based upon twenty.

> The *vigesimal* system flourished in America, but was rare in the Old World. *F. Cajori*, Hist. Elementary Math., p. 4.

Vigesimal notation, system. See ★*notation*, ★*system*.

vigesimoquarto (vī-jes″i-mō-kwâr′tō), *a.* Said of a section of twenty-four pages in a book, on a sheet, or in form of type. Usually called *twenty-four-mo*.

vigilambulism (vij-il-am′bū-lizm), *n.* [L. *vigilia*, a waking, + *ambulare*, walk. Cf. *somnambulism*.] See the extract.

> Another form of natural somnambulism . . . is "day-time" somnambulism, or *vigilambulism*. It concerns hysterical patients who possess, besides their normal and regular life, another psychological existence or second state, so to speak, of which they retain no memory in their normal condition. The peculiar characteristic of this second state is that it constitutes a complete psychological existence; the subject lives the everyday life, his mind is alive to all ideas and perceptions, and he is not delirious. *A. Binet* (trans.), Alterations of Personality, p. 3.

vigilist (vij′il-ist), *n.* [*vigil* + *-ist.*] One who keeps a vigil in the ecclesiastical sense of the word; in general, one who keeps watch.

vigneron (vi-nye-roṅ′), *n.* [F., < *vigne*, vine. See *vine*.] A wine-grower; one who cultivates grapes.

vignin (vig′nin), *n.* [NL. *Vigna* (see def.) + *-in*^{2}.] A globulin found in the cow-pea, *Vigna sinensis*.

vigogne (vi-gōny′), *n.* [F. *vigogne*, vicuna.] A soft woolen dress material. *Dry Goods Economist*, June 13, 1908.

vigorite (vig′ǫ-rīt), *n.* [*vigor* + *-ite*^{2}.] The trade-name of an explosive, one grade of which consists of 30 per cent. nitroglycerin, 49 per cent. potassium chlorate, 7 per cent. potassium nitrate, 9 per cent. wood-pulp, and 5 per cent. magnesium carbonate.

Vigoureux printing. See ★*printing*.

Villafranchian (vil-ä-fran′chi-ąn), *a.* and *n.* **I.** *a.* In *geol.*, noting a stage or group of the Pliocene Tertiary in the northern Apennines of Italy, constituted of fluviolacustrine sands and clays, with shells indicating a moist, warm climate, and with remains of *Rhinoceros* and *Mastodon*. Below it lies the Astian group with marine or estuarine fossils.

II. *n.* The Villafranchian stage or group.

Village settlement. See ★*settlement*^{1}.

Villarius (vi-lā′ri-us), *n.* [NL., < L. *villus*, hair.] A genus of catfishes found in Mexico.

Villavecchia test. See ★*test*^{1}.

Villeroi sauce. See ★*sauce*.

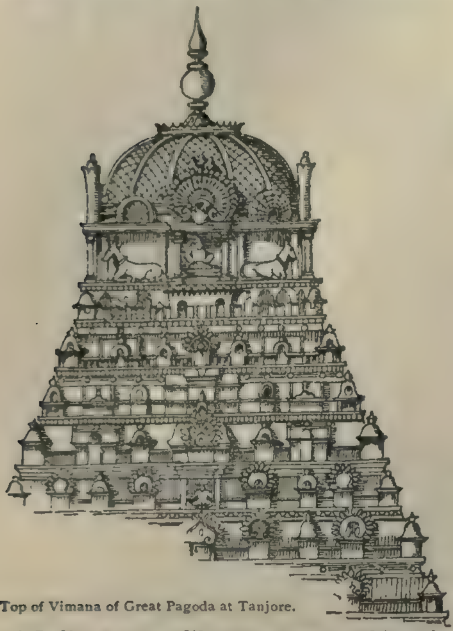
villiaumite (vil-i-ō′mīt), *n.* [After M. *Villiaume*, who collected the material.] Sodium fluoride, occurring in small grains of a carmine color and isometric crystallization in the nepheline-syenite of the Los Islands.

villiferous (vi-lif′ẹ-rus), *a.* [NL. *villus* + *-ferous*.] Provided with villi, or minute finger-like projections, such as occur typically on the walls of the intestine.

villosin (vil′ǫ-sin), *n.* [NL. *villosus* (see def.)

+ *-in*².] A colorless glucoside of unknown composition, contained in the root of *Rubus procumbens* (*R. villosus* of Aiton). It crystallizes in silky, lustrous needles and melts at 173–175° C.

vimana (vi-mä'nä), *n.* [Skt. *vimāna*, a car, chariot, palace, tower.] In the architecture of India, a tower-like structure marking the principal or central part of a temple. It is usually pyramidal or spire-like in shape, several stories high, and elaborately sculptured, and is assumed to contain the central and most sacred shrine.



Top of Vimana of Great Pagoda at Tanjore.

v. imp. An abbreviation of the Latin *verbum impersonale*, impersonal verb.

vinaconic (vin-ạ-kon'ik), *a.* [L. *vinum*, wine, + *aconic* (?).] Noting an acid, a colorless compound,  $\left.\begin{matrix}CH_2\\|\\CH_2\end{matrix}\right>C(COOH)_2$, prepared by the action of ethylene bromide on diethyl sodiomalonate. It crystallizes in slender prisms or needles, melts at 140° C., and is also called *ethylenemalonic acid*, or 1,1-*trimethylenedicarboxylic acid*.

vincetoxin (vin-sẹ̄-tok'sin), *n.* [NL. *Vincetox*(*icum*) (see def.) + *-in*².] The name given to two yellow, amorphous, pulverulent compounds, $C_{16}H_{12}O_6$, contained in powdered asclepias root, *Cynanchum Vincitoxicum*. They melt at 59° C. One dissolves in water, the other does not.

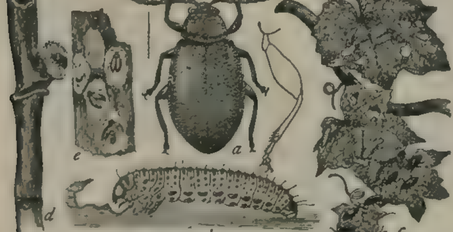
Vinciguerria (vin-si-ger'i-ạ̈), *n.* [NL., named after Decio *Vinciguerra*, an Italian naturalist.] A genus of fishes of the family *Maurolicidæ*, found in the open Atlantic.

Vinculum matrimonii, in *law*, marriage; the bond of matrimony. The expression is usually used in the phrase *divorce a vinculo matrimonii*, to indicate an absolute divorce as distinguished from a *divorce a mensa et thoro*, or limited divorce. See these phrases under *divorce*.

vine, *n.*—**Macquarie Harbor vine.** Same as *Macquarie Harbor* ★*grape*.

vine-aphis (vīn'ā″fis), *n.* Same as ★*grape-vine aphis*.

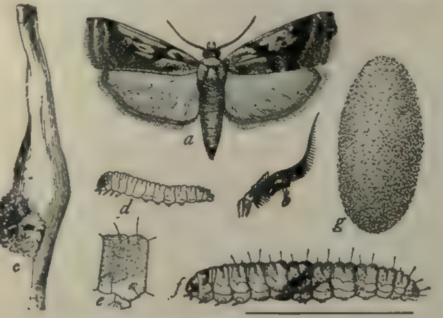
vine-beetle (vīn'bē″tl), *n.* Any one of several beetles which attack the vine, as the grape-vine flea-beetle, the grape-vine fidia, and others.



Grape-vine Flea-beetle (*Haltica chalybea*).

a, adult beetle, with enlarged leg at right; *b*, larva; *c*, larvæ and beetles on foliage; *d*, injury to buds; *e*, beetles killed by fungus. (After Marlatt, U. S. D. A.)

vine-borer, *n.*—**Bean vine-borer.** (*a*) The larva of a phycitid moth, *Monoptilota nubilella*, which bores the stems of beans in the United States from Maryland southward. (*b*) The smaller corn-stalk borer, the larva of another phycitid moth, *Elasmopalpus lignosellus*, which sometimes bores into bean-stalks in the southern United States.—**Lima-bean vine-borer**, the larva of an American phycitid moth, *Monoptilota nubilella*. It bores into the stems of Lima beans.—**Melon vine-borer.** Same as *squash* ★*vine-borer*.—**Squash vine-borer**, the larva of an American sesiid moth, *Melittia satyriniformis*. It bores into and excavates the stems of squash-vines, especially near the roots.



Bean Vine-borer (*Monoptilota nubilella*).

a, female moth; *b*, antenna of male; *c*, gall of larva; *d*, young larva; *e*, first abdominal segment of same from side; *f*, mature larva; *g*, cocoon: *b* and *c* much enlarged. (Chittenden, U. S. D. A.)

vine-chafer (vīn'chā″fėr), *n.* **1.** An American scarabæid beetle, *Pelidnota punctata*.—**2.** The rose-chafer, *Macrodactylus subspinosus*. See cut at *rose-bug*.—**Spotted vine-chafer**, a large American scarabæid beetle, *Pelidnota punctata*, which feeds on the leaves of the grape. Its larvæ live in decaying wood.

vine-disease, *n.*—**California vine-disease.** See ★*disease*.

vinegar, *n.*—**Chilli vinegar.** See ★*chilli*.—**Double vinegar.** See *vinegar* ★*essence*.—**Quick vinegar process**, a method, introduced into practical use in Germany in 1823, for making vinegar in a shorter time than had previously been required. A vat is used, having above the true bottom a false one perforated with holes, the space above being filled with a porous material, usually beech-shavings, sometimes charcoal in small lumps. Air is admitted from beneath by a number of holes, and the alcoholic liquid to be fermented, divided into many small streams, is allowed to trickle downward over the shavings, which gradually become coated with the special ferment organism, *Mycoderma aceti*. The formation of acetic acid in the liquid is greatly expedited by the large surface of contact with the air, oxygen from which is taken up. The process is widely in use in Germany for spirit-vinegar, and in England and the United States for malt-vinegar. *Thorpe*, Dict. of Applied Chem., III. 327.—**Vinegar essence.** See ★*essence*.

vinegar-lamp (vin'ẹ̄-gär-lamp), *n.* An apparatus for oxidizing alcohol to acetic acid through the agency of platinum-black or of spongy platinum.

vinegaroon, *n.* A corruption of *vinegerone*.

vinegary, *a.* **2.** Figuratively, sharp; sour-tempered.

> *Vinegary* spinsters and buxom kindly matrons.
> *Athenæum*, July 15, 1905, p. 74.

vine-maple, *n.* **2.** See ★*maple*¹.

vine-mildew (vīn'mil″dū), *n.* See *grape-mildew*, ★*grape-fungus*.

vine-peach (vīn'pēch), *n.* A variety of the melon, *Cucumis Melo*, bearing fruits of the size, shape, and color of an orange or lemon. These are not edible in their natural state, but are useful for making preserves and pickles. Called also *orange-melon* and *vegetable orange*.

vine-scale (vīn'skāl), *n.* In *entom.*: **1.** *Pulvinaria*, a large, brown, naked scale-insect with a large white egg-mass.—**2.** A diaspine scale-insect, *Aspidiotus uvæ*, which lives under the loose outer bark of grape-canes.

vine-sphinx (vīn'sfingks), *n.* See ★*sphinx*.

vine-worm (vīn'wėrm), *n.* Same as *black head* ★*cranberry-worm*.

vingtième (vaṅ-tyām'), *n.* [F. (*adj.*) twentieth, (*n.*) a twentieth, < *vingt*, twenty.] A twentieth; specifically, one of the many special taxes imposed on the French peasantry before the Revolution. *Kidd*, Social Evolution, p. 222.

vino (vē'nō), *n.* [Sp. *vino*, wine. See *wine*.] A native drink in the Philippines. See ★*buri* and ★*tuba*², 1.

> Insanity, crime, and frequently death in a few days result from the use . . . of *vino*.
> *Army and Navy Jour.*, Dec. 7, 1901.

vinolentia (vin-ọ̄-len'ṭi-ạ̈), *n.* [L.: see *vinolency*.] Drunkenness.

vint² (vint), *n.* A very complicated Russian game, something like bridge, in which the players bid for the privilege of naming the trump, and the scores are for various combinations held, for under and over tricks, honors, etc. It is very common for the winnings or losings on one hand to run over 20,000 points.

> After dinner the Czar generally enjoys the Russian gambling game called *vint*.
> *Rev. of Revs.*, Sept., 1904, p. 342.

vinta (vēn'tă), *n.* [Bisaya *binta*.] A small sailing-boat with outriggers, much used by the Moros. [Philippine Is.]

vinyard, *n.* A simplified spelling of *vineyard*.

vioform (vī'ọ̄-fôrm), *n.* [L. *vio*(*la*), violet, + E. *form*(*aldehyde*).] The trade-name of iodochlorhydroxyquinoline, $C_9H_4NIClOH$. It is an antiseptic powder and is used in surgery as a substitute for iodoform. *Buck*, Med. Handbook, VIII. 238.

viol¹, *n.*—**Arched viol**, a form of hurdy-gurdy. *Pepys*, Diary, Oct. 5, 1664.

viola-emetin (vī″ọ̄-lạ̈-em'e-tin), *n.* Same as *violin*².

violaite (vī'ọ̄-lạ̈-īt), *n.* [Irreg. < L. *viola*, violet, + *-ite*².] A variety of pyroxene from the Kedabeg copper mines, in Russia, peculiar in its strong pleochroism.

violamine (vī-ọ̄l-am'in), *n.* [L. *viola*, violet, + E. *amine*.] A name given to a number of artificial dyestuffs of the xanthene group. They dye violet and bluish red.—**Violamine B.** Same as *fast* ★*acid-violet B*.—**Violamine 3B.** Same as *fast* ★*acid-blue*.—**Violamine G.** Same as ★*acid-rosamine*.—**Violamine R.** Same as *fast* ★*acid-violet ARR*.

violan (vī'ọ̄-lan), *n.* [L. *viola*, violet, + *-an*.] A violet-blue variety of pyroxene from Saint-Marcel, Piedmont: essentially identical with diopside.

violantin (vī-ọ̄-lan'tin), *n.* A yellowish-white, granular, pulverulent compound, $C_4H_3O_5N_3.C_4H_3O_4N_3.4H_2O$, prepared by mixing solutions of nitroso- and nitrobarbituric acid. It decomposes at 120° C. Also called *nitrosonitrobarbituric acid*.

violaquercitrin (vī″ọ̄-lạ̈-kwėr'sit-rin), *n.* A yellow glucoside, $C_{27}H_{28}O_{16}$, contained in *Viola tricolor var. arvensis*. It crystallizes in slender needles.

viola-zither (vē-ō'lạ̈-zith″ėr), *n.* See *bow* ★*cithern*.

violet¹, *n.*—**Acid-violet.** See ★*acid-violet*.—**Alizarin violet.** Same as *gallein*.—**Alkali violet**, an acid dyestuff of the triphenyl-carbinol, sulphonic-acid type: so-called because it is best dyed in a slightly alkaline bath. Compare *alkali blue*, under *blue*.—**Anthracene violet.** Same as *gallein*.—**Azo violet**, a direct cotton-color of the disazo type derived from dianisidine. It dyes unmordanted cotton a bluish violet from a soap bath.—**Benzyl violet**, one of the methyl-violets.—**Chytridiose of violet.** See ★*chytridiose*.—**Cresyl fast violet**, a basic coal-tar color of the oxazin type but of uncertain composition. It dyes tannin-mordanted cotton violet.—**Diamine violet**, a direct cotton coal-tar color of the disazo type derived from benzidine. It dyes unmordanted cotton violet in an alkaline salt bath.—**Ethyl violet**, a basic coal-tar color of the triphenyl methane type. Same as *ethyl purple* (which see, under *purple*).—**Fast violet.** Same as *gallocyanine*.—**Fast violet B**, an acid coal-tar color of the disazo type derived from para-toluene-azo-α-naphthylamine. It dyes wool bluish violet in an acid bath.—**Fast violet R**, an acid coal-tar color of the disazo type derived from benzene-azo-naphthylamine. It dyes wool a reddish violet in an acid bath.—**Gallanil violet**, a mordant coal-tar color of the oxazin type prepared by the action of nitrosodimethyl- or ethylaniline upon the anilide of gallic acid. It dyes chromium-mordanted wool reddish purple.—**Gentian violet**, an aniline dye extensively used in the study of bacteria. It is sometimes used in combination with saturated aniline water, as so-called *gentian aniline water*; the aniline enforces the staining power of the dye.—**Guinea-violet**, an acid coal-tar color. It dyes wool violet in an acid bath.—**Hessian violet**, a direct cotton coal-tar color of the disazo type derived from diamido-stilbene. It dyes unmordanted cotton bluish red in a soap bath.—**Kongo violet**, a direct cotton coal-tar color of the disazo type derived from benzidine. It dyes unmordanted cotton a vinous-red color from a neutral salt bath. Also called *Bordeaux extra*.—**Lanacyl violet**, an acid coal-tar color of the monoazo type prepared from diazotized amidonaphtholdisulphonic acid. It dyes wool dark violet in an acid bath.—**Lauth's violet**, one of the coal-tar colors, used as a dye. It is a salt of thionin, containing sulphur as one of its constituent elements.—**Methylene violet**, one of the coal-tar dyes, of reddish-violet color.—**Neutral violet**, a basic coal-tar color of the azin type, prepared by the action of nitroso-di-methyl-aniline on meta-phenylene-diamine. It dyes tannin-mordanted cotton a reddish violet.—**Oxamine violet**, a direct cotton coal-tar color. It dyes unmordanted cotton a reddish violet in an alkaline salt bath.—**Red violet**, one of the acid violets; a name by which Hoffmann's violet is sometimes designated.—**Root-rot of the violet.** See ★*root-rot*.—**Victoria violet**, an acid color of the monoazo type, which is prepared by the reduction of chromatrope 2B. It dyes wool a bluish violet.

violet d'évêque. [F., 'bishop's violet.'] In *ceram.*, a violet glaze of Oriental porcelain. Also called *bishop's purple*, or *aubergine* ★*purple* (which see).

violet-disease (vī'ọ̄-let-di-zēz″), *n.* Same as ★*leaf-spot of violet*.

violet-midge (vī′ǫ-let-mij), *n.* See ★*midge.*

violet pensée (vyo-lā′ poṅ-sā′). [F., 'pansy violet.'] A delicate shade of violet color, obtained from manganese, sometimes seen in the soft-paste porcelain of Sèvres.

violetta (vē-ō-let′ạ̈ or vī-ǫ-let′ạ̈), *n.* [It. dim. of *viola*¹.] A form of large viola, invented by Stelzner of Wiesbaden, in 1891, intermediate in size and range between the viola proper and the violoncello.

violin¹, *n.*—**Alto violin.** See *viola*1, 2.

violin-case (vī-ǫ-lin′kās), *n.* A case or box in which a violin is kept.

violin-maker (vī-ǫ-lin′mā″kėr), *n.* One whose trade or occupation is to make violins and similar instruments; a luthier.

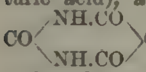
violin-making (vī-ǫ-lin′mā″king), *n.* The process, trade, or art of making violins and similar instruments. It includes many details, such as the selection and preparation of materials, the making and manipulation of patterns, the shaping and fitting of parts, and the application of carving, purfling, and varnish. It reached its perfection in northern Italy about 1700.

violin-player (vī-ǫ-lin′plā″ėr), *n.* A violinist.

violle (vi-ol′), *n.* [Named from M. *Violle,* a French physicist.] A unit of photometric intensity, equal to the light radiated perpendicularly from a square centimeter of surface of platinum at the temperature of solidification.

> The bougie décimale is defined as $\frac{1}{20}$ of a violle and the latter, according to the determinations of Professor Violle, after whom this unit has been named, is equal to 19.8 British standard candles. See ★*light standard.*

violuric (vī-ǫ-lū′rik), *a.* [L. *viola,* violet, + E. *uric.*] Noting an acid (nitrosobarbituric acid), a yellowish compound,



$$CO\left\langle\begin{matrix}NH.CO\\NH.CO\end{matrix}\right\rangle C{:}NOH.H_2O,$$

prepared by the action of potassium nitrite on barbituric acid. It forms lustrous, trimetric crystals.

viper, *n.*—**Russell's viper,** an extremely poisonous snake, *Daboia russelli,* of India, ranking next to the cobra in its deadly character. It is of a pale brown with three rows of dark spots, edged with lighter color.

Virchow's crystals. See ★*crystal.*

vireo, *n.*—**Bahama vireo,** a subspecies of vireo, *Vireo altiloquies barbatulus,* found in Cuba and the Bahamas.

Vireux slates. See ★*slate*².

virgate¹, *a.* **2.** In *geol.,* noting a system of faults, the minor members of which branch from a central one as twigs from a bough.

virgate¹ (vėr′gāt), *v. i.* [L. *virga,* branch, twig, + *-ate.*] To branch off, like a twig, or diverge like a system of twigs. [Rare.]

virgation (vėr-gā′shǫn), *n.* [L. *virga,* a branch, twig, rod, + *-ation.*] The act of branching or diverging; a branching form or arrangement; specifically, in *geol.,* a branching system of faults.

> The Western Balkans form in their southern part six ranges, the orographical expression of a geological "*virgation.*" *Geog. Jour.* (R. G. S.), IX. 87.

virgin. I. *n.*—**Offices of the Virgin.** See ★*office.*

II. *a.*—**Virgin wax,** white wax.

> Take an ordinary glass slip 3 in. by 1 in., give it a few strokes with *virgin wax* (white wax), hold the slip over a Bunsen burner, or spirit lamp, until the wax melts, which may then be spread with the finger, then sprinkle the sand over the melted wax, to which it adheres.
> *Jour. Roy. Micros. Soc.,* Aug., 1904, p. 462.

virgula (vėr′gụ̄-lạ̈), *n.*; pl. *virgulæ* (-lē). [NL., dim. of L. *virga,* a rod.] A solid strengthening rod in the graptolites which originates in the wall of the sicula and extends through the nema into the rhabdosomes. It is characteristic of the *Axonolipa,* an order of the *Graptoloidea.*

viridarium (vir-i-dā′ri-um), *n.*; pl. *viridaria* (-ạ̈). [L. *virid(is),* green, + *-arium.* See *-arium.*] A plantation of trees; a pleasure-garden.

viridiaëneous (vir-i-di-ạ̄-ē′nẹ̄-us), *a.* [L. *viridis,* green, + *aëneus,* of copper, + *-ous.*] Greenish aëneous. *Annals and Mag. Nat. Hist.,* June, 1903, p. 604.

viridic (vi-rid′ik), *a.* [L. *viridis,* green, + *-ic.*] Noting an acid a brown, amorphous compound of uncertain composition. The calcium salt is found in coffee-beans and imparts to them their green color.

viridine, *n.* **2.** An obsolete green basic dyestuff.—**Alizarin viridine,** a mordant dyestuff related to anthraquinone. It is used in calico-printing and -dyeing to produce very fast shades of green.

virify (vir′i-fī), *v. t.*; pret. and pp. *virified,* ppr. *virifying.* [L. *vir,* man, + *-i-* + *-fy.*] To render masculine. [Rare.]

> Why are females *virified* and males feminized in their gerontic stages as if the secondary qualities of each were latent in the other but were suppressed during the reproductive period? *G. S. Hall,* Adolescence, II. 57.

virilism (vir′i-lizm), *n.* [*viril(e)* + *-ism.*] Hermaphrodism in which the individual is a female but has certain genital organs resembling those of the male.

v. irr. An abbreviation of the Latin *verbum irregulare,* irregular verb.

virtual, *a.* **4.** In *elect.,* in alternating currents, effective: said of the value which is to be used in computing energy or power relations of a current.—**Virtual amperes,** in *elect.,* effective amperes; amperes of alternating or fluctuating current as determined by finding the amperes of an unvarying direct current that would give the same heating effect.—**Virtual current,** alternating or fluctuating current expressed in virtual amperes.—**Virtual electromotive force.** (*a*) Effective electromotive force in an alternating circuit; where the wave form is sinusoidal, the maximum induced electromotive force divided by the square root of two. (*b*) In synchronous alternating-current machines, the induced electromotive force corresponding to the resultant of the magnetomotive forces of field-flux and armature-flux.

> The *virtual E.M.F.* and the real induced E.M.F. differ from each other by the E.M.F. of armature self-induction.
> *Steinmetz,* Elements of Electrical Engineering, p. 128.

Virtual value, in alternating currents, the intensity of a current as determined by finding the value of a steady direct current which would produce the same heating effect. Where the wave-form is sinusoidal the virtual value of a current equals 0.707 times the maximum value.—**Virtual volts** (or **voltage**). See ★*virtual electromotive force.*

virulin (vir′ǫ̈-lin), *n.* [L. *virul(entus),* full of poison, + *-in*².] A hypothetical substance produced by the pneumococcus which counteracts the action of opsonins upon the organisms in question, and in the absence of which phagocytosis would take place. *Science,* April 24, 1908, p. 658.

virus, *n.*—**Attenuated virus.** Virus can also be attenuated by heat. Attenuated virus is extensively used in active immunization, as, for example, against anthrax and rinderpest.—**Dehumanized virus,** vaccine virus obtained originally from man, but modified by passage through a heifer.—**Fixed virus,** antirabic virus, the toxicity of which has been increased by repeated passage through animals (rabbits), to a point beyond which it is impossible to go. Such virus kills in about six days. This form is the standard. Fixed virus is distinguished from *street virus,* or that inoculated through the bite of a rabid dog, which is of uncertain strength and virulence.—**Street virus,** the ordinary virus of rabies, as it occurs in mad dogs; not intensified by being passed through a series of animals. See *fixed* ★*virus.*

vis³, *n.*—**Vis a tergo,** a force acting from behind; a pushing or impelling force.—**Vis major** [L. 'greater force'], in *law,* an irresistible natural force, exempting one, barring special contract or fraud, from contract obligation. In both the civil and the common law the term has nearly the meaning of "act of God."

Vis. An abbreviation of *viscount.* Also written *Visc., Visct.*

Visaya (vē-sä′yä), *n.*; pl. *Visayas* (-yäs). [Another spelling of *Bisaya,* in which the *b* is pronounced, in Spanish mouths, nearly like *v.*] One of a Malay people who occupy the north and east coasts of Mindanao and most of the islands lying between Mindanao and Luzon. They are the most numerous of the various peoples which occupy the Philippines, numbering some 2½ millions, and are now largely Christianized.

Visayan (vẹ̄-sä′yan), *a.* and *n.* [*Visaya* + *-an.*]

I. *a.* Of or pertaining to the Visayas.

II. *n.* **1.** The language of the Visayas.—**2.** Same as ★*Visaya.*

visceral, *a.*—**Visceral bar,** a general term applied to the rod-like cartilaginous structures in the mandibular, hyoid, and branchial arches of sharks, or of the embryos of higher vertebrates.—**Visceral reflex.** See ★*reflex.*

viscero-inhibitory (vis″ẹ̈-rō-in-hib′i-tō-ri), *a.* Restraining the functional activity of the viscera: noting certain nerves. *Buck,* Med. Handbook, VII. 574.

visceroptosis (vis″ẹ̈-rop-tō′sis), *n.* [NL., < L. *viscera,* viscera, + Gr. πτῶσις, falling.] Same as ★*splanchnoptosis.*

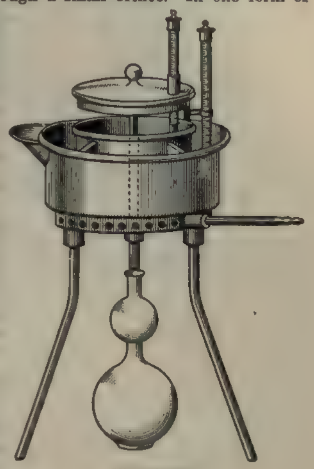
viscerosensory (vis″ẹ̈-rǫ-sen′sǫ-ri), *a.* [L. *viscera,* viscera, + E. *sensory.*] Relating to sensation in the viscera. *Buck,* Med. Handbook, VII. 591.

viscogen (vis′kǫ-jen), *n.* [L. *viscus,* bird-lime (a viscous substance), + *-gen,* -producing.] The trade-name of a thickening material used to adulterate milk.

viscoid (vis′koid), *a.* [*visc(ous)* + *-oid.*] Slightly viscid.

viscose (vis′kōs), *n.* [L. *viscosus,* sticky. See *viscous.*] The trade-name of a plastic material made from cellulose (cotton fiber) by treatment with a solution of caustic soda, addition of carbon disulphid, and digestion at ordinary temperature until a homogeneous liquid is produced, a solution of cellulose thiocarbonate, from which a structureless jelly-like coagulum of cellulose is formed by spontaneous decomposition. Cellulose tetra-acetate may also be used to obtain viscose. Mineral pigments, hydrocarbons, and other substances may be incorporated with viscose before it is molded into special shapes for use. A fiber imitating silk in luster has also been prepared from this material. *Sci. Amer. Sup.,* Feb. 27, 1904, p. 23535.

viscosimeter, *n.* The viscosity is determined by the rate of efflux through a small orifice. In one form of this apparatus the oil to be tested is placed in an inner vessel, the cover of which is lined with a thick pad of non-conducting material. It is kept at a temperature of 50° C. by means of a water-jacket and the coil is heated by a spirit-lamp. The volume of oil which flows through a central orifice, in the bottom of the inner vessel, in a given time, indicates the degree of viscosity.



Viscosimeter.

viscosimetry (vis-kǫ-sim′e-tri), *n.* [*viscosimeter* + *-y*³.] The measurement of viscosity; the scientific use of the viscosimeter; viscometry.

> The spectrophotometry, *viscosimetry,* and electric signs of solutions. *Nature,* Jan. 9, 1908, p. 239.

viscosity, *n.*—**Coefficient of viscosity.** See ★*coefficient.* **Maxwell's law of viscosities.** See ★*law*1.

Viscous spheroid. See ★*spheroid.*

vise¹, *n.*—**Coachmakers' vise,** an iron vise with one stationary jaw and a movable jaw attached to a square slide-bar through which the screw operates in closing or opening the jaws.—**Dog-nose vise,** a form of vise in which the jaws are long and tapering from the base to the grip, like the tapering nose of the hound: used to hold work in which the grip should come some distance from the end of the piece.—**Jewelers' vise,** a small vise fitted with a hollow handle or tail; a tail-vise, for use with fine wire or similar delicate material.—**Pig-nose vise,** a form of holding vise with long tapering jaws, resembling the snout of the pig, adapted for work within which the jaw must enter, and the grip must come at some distance from the end.

vision, *n.*—**Center of vision.** (*b*) See ★*center*1.—**Facial vision,** perception of objects near the face when one is blindfolded or in the dark.

> The paper supplements and in three respects aims to correct the reports of previous experiments on *facial vision.* In the perception of objects in proximity to the face independently of the sense of sight, the nature of the sensory impression upon which perception depends is not commonly discriminated.
> *Science,* April 10, 1903, p. 589.

Helmholtz theory of vision, or **of visual sensation.** See *Young-Helmholtz theory of color,* under *color.*—**Hemisphere of vision.** See ★*hemisphere.*—**Hering's theory of vision.** See *Hering's theory of* ★*color.*—**Multiple vision.** Same as *polyopia.*—**Recurrent vision,** the phenomenon of periodically oscillatory persistence of vision, first described by C. A. Young and sometimes called the *Young effect.* When an object is subjected to a single instantaneous illumination, as by a powerful electric spark, it is seen several times; first vividly, then more and more faintly at intervals of about a fifth of a second.

visionnaire (vi-zyo-nãr′), *n.* [F.] One who sees visions; a visionary.

> On the other hand there are some things which it is a virtue to doubt, and superstition has no ranker, grosser forms than those due to the attempts long ago described by Kant to explain the dreams of *visionnaires* by those of metaphysicians.
> *Amer. Jour. Relig. Psychol. and Education,* May, 1904, [p. 58.

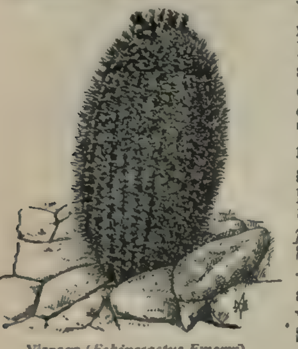
visita (vi-sē′tä), *n.* [Sp., visit, visitation. See *visit.*] In the Philippine Islands, a village or hamlet which is without a priest, and depends on the visits of a neighboring priest for religious ministrations.

visitandine (viz-i-tan′din), *n.* Same as *visitant,* 3.

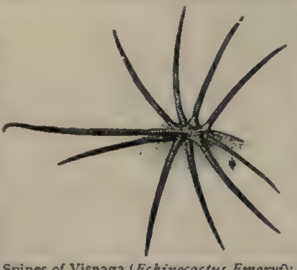
visitate† (viz'i-tāt), *v. t.*; pret. and pp. *visitated*, ppr. *visitating*. To visit for the purpose of examining, inspecting, surveying, or the like.

> Our lords
> Lie blistering 'fore the *visitating* sun.
> *Fletcher* (and another), Two Noble Kinsmen, i. 1. 6.

visnaga, viznaga (vis-nä'gä, vēth-nä'gä), *n.* [Sp. *viznaga*, *biznaga*, < Ar. *bashnāqa*, a dialectal form of *bastinākh*, < L. *pastinaca*, a parsnip or a carrot. See *parsnip*.] **1.** A name applied in the Mediterranean region to *Ammi Visnaga*, a carrot-like plant, the peduncles of which become dilated into disks which bear the umbel-rays. These harden into spines and become erect and connivent. They are used for toothpicks, giving to the plant the name *toothpick*, or *picktooth-plant*. See *picktooth*, 2. —**2.** In Mexico and the southwestern United States, a name applied by the Spanish colonists to species of *Echinocactus* and *Coryphantha*, fleshy, cylindrical plants which bear stout spines and contain a watery pulp. In the desert of Arizona *Echinocactus Wislizeni* and *E. Emoryi*, sometimes called *barrel-cactus*, yield a refreshing substitute for drinking-water; and in Mexico the pulp of several species, including *E. ingens*, is cut into slices and made into sweetmeats. Also written *bisnada* and *bisnaga*.



Visnaga (*Echinocactus Emoryi*).



Spines of Visnaga (*Echinocactus Emoryi*): less than one third natural size.

vistascope (vis'tạ-skōp) *n.* [*vista* + Gr. σκοπεῖν, view.] An apparatus for viewing distant objects in spite of intervening obstructions. It consists of an aërial camera obscura, so attached to a kite-sustained cable that an image of distant objects is thrown on a horizontal ground-glass plate or on thin paraffined paper acting as the screen of the camera. The observer on the ground views the image by the aid of a field-glass. It was invented by W. A. Eddy.

Vistulan (vis'tū-lạn), *a.* [*Vistula*, a river of northern Europe, + *-an*.] Of or relating to the Vistula.—**Vistulan race**, in *anthrop.*, one of the European races or types, in Deniker's classification, characterized by fair complexion, mesocephalic head, and short stature: found in Poland and Silesia.

Vistulian (vis-tū'li-ạn), *a.* Same as ★*Vistulan*.

visual. **I.** *a.*—**Broca's visual plane**, a plane passing through the axes of the two orbits.—**Visual adaptation, aphasia.** See ★*adaptation*, ★*aphasia*.—**Visual area**, the area of vision; the surface of the eye, especially of the compound eye of insects and crustaceans, which carries the corneal lenses and admits the light, irrespective of separation of the lenses by parts of the test.—**Visual cone.** See ★*cone*.—**Visual doubles.** In *astron.*, see ★*double*, 18.—**Visual space.** See ★*space*.

II. *n.* One who is eye-minded, that is, one who thinks, remembers, imagines, etc., predominantly in terms of sight.

> This division of men into *visuals*, audiles, motiles and indifferents . . . is of great interest.
> *Mind*, July, 1886, p. 415.

visualism (viz'ū-al-izm), *n.* [*visual* + *-ism*.] The character of being visual; also, the habit of visualizing; power or tendency to form visual images mentally.

visualist (viz'ū-al-ist), *n.* [*visual* + *-ist*.] **1.** One who holds that we gain our perceptions and ideas of space through the sense of sight, and that touch is a mere time-sense: opposed to ★*tactualist*. *G. M. Stratton*, Exper. Psychol. and its Bearing upon Culture, p. 128. [Rare.] —**2.** One who is eye-minded; a visualizer. *Amer. Jour. Psychol.*, XIII. 544.

visualize, *v. t.* **2.** Hence, in *literature*, to make (a character) appear real by vividness and force of description.

> The best *visualized* character is that of a Norwegian girl, a singer. *Athenæum*, April 15, 1905, p. 469.

visualizer, *n.* **2.** One who habitually associates colors with sounds; a person endowed with colored hearing. [Rare.]

> Such subjects are highly impressionable. . . . This I have ascertained in the four pupils and one teacher who were found to be "*visualizers*" out of thirty five . . . who were examined.
> *L. Waldstein*, The Subconscious Self, p. 150.

visual-kinesthetic (viz"ū-al-kin"es-thet'ik), *a.* Compounded of sensations of sight and touch (kinæsthesis); noting the concurrence or association of visual and kinesthetic elements. Same as ★*visual-motor*. *Psychol. Rev. Mon. Sup.*, III. xiv. 60.

visual-motor (viz"ū-al-mō'tor), *a.* Compounded of sensations of sight and touch (kinæsthesis); noting a concurrence or association of visual and kinesthetic elements. *E. B. Titchener*, Exper. Psychol., I. ii. 397.

visual-verbal (viz"ū-al-vėr'bal), *a.* **1.** Characterized by a visual memory or imagination of words or verbal ideas; tending to represent words mentally in terms of sight.

> The *visual-verbal* mind reads from a memory manuscript or printed page, lying open before the mind's eye.
> *E. B. Titchener*, Exper. Psychol., I. i. 197.

2. Having a verbal form, with visual contents: as, a *visual-verbal* idea.

visuo-psychic (viz"ū-ō-sī'kik), *a.* Concerned in, or related to, the higher, associative, or conceptual functions of vision: as, the *visuo-psychic* area of the cerebral cortex. *Philos. Trans. Roy. Soc.* (London), 1900, ser. B, p. 168.

visuo-sensory (viz"ū-ō-sen'sō-ri), *a.* Concerned in, or related to, the sensory functions of vision: as, the *visuo-sensory* area of the cerebral cortex. *Philos. Trans. Roy. Soc.* (London), 1900, ser. B, p. 168.

vitaceous (vī-tā'shius), *a.* [NL. *Vitace*(*æ*) + *-ous*.] Belonging or pertaining to the *Vitaceæ*.

vitagraph (vī'tạ-gråf), *n.* [L. *vita*, life, + Gr. γράφειν, write.] A trade-name for a moving-picture machine or kinetoscope. *Optical Jour.*, Dec., 1903, p. 801.

Vital dynamics. See ★*dynamics*.—**Vital staining.** Same as ★*intra-vitam staining*.

vitality, *n.*—**Vitality classes.** See ★*class*.

vitascope (vī'tạ-skōp), *n.* [L. *vita*, life, + Gr. σκοπεῖν, view.] An apparatus, based on the principle of the zoëtrope, for projecting a great number of pictures of the same object in rapid succession upon a screen, thus producing the appearance of motion. *Cinematograph*, *electroscope*, *kinographoscope*, and *veriscope* are names applied to various machines essentially like the vitascope.

> The *vitascope*, a far more complicated and powerful structure [than the kinetoscope], takes this same ribbon which has been prepared by the kinetoscope, and coils it up on a disc at the top of the machine, from which it is passed over a system of wheels and through a narrow, upright clamp-like contrivance that brings it down to a strong magnifying lens, behind which there is an electric burner of high capacity. The light from this carbon burner blazes fiercely through the translucent ribbon, and projects the images on the negatives there, blended, to a distant screen, with great clearness, for the benefit of the audience. *N. A. Rev.*, CLXIII. 377.

vitelligerous (vit-e-lij'ẹ-rus), *a.* [L. *vitellus*, yolk, + *gerere*, bear, + *-ous*.] Yolk-bearing, or yolk-laden: said of certain eggs. *Proc. Zool. Soc. London*, 1898, p. 555.

vitellinate (vī-tel'i-nāt), *n.* [*vitellinic* + *-ate*1.] A salt of a vitellinic acid.

Vitelline furrow. See ★*furrow*.—**Vitelline gland.** See ★*gland*.

vitellophag (vī-tel'ọ-fag), *n.* [L. *vitellus*, yolk, + Gr. φαγεῖν, devour.] In *embryol.*, one of the primary endoderm or yolk-cells which in the arthropod egg liquefy or act upon the yolk in such a way as to facilitate its assimilation by the growing embryo.

> To any one who is at all familiar with the developmental stages under discussion, Petrunkewitsch's figures suggest anything but what he attempts to prove. Even in his first paper there is no satisfactory evidence to show that the cells regarded as derivatives of the polar bodies in the figures on plate 4 are really such, and not dividing cleavage cells or possibly *vitellophags*.
> *Science*, April 8, 1904, p. 588.

vitellophagocyte (vī-tel"ọ-fag'ọ-sīt), *n.* [L. *vitellus*, yolk, + Gr. φαγεῖν, devour, + κύτος, hollow (cell).] Same as ★*vitellophag*.

vitellose (vī-tel'ōs), *n.* [*vitell*(*in*) + *-ose*.] An albumose derived from vitellin.

vitexin (vī-tek'sin), *n.* [*Vitex* (see def.) + *-in*2.] A canary-yellow, pulverulent coloring matter, $C_{15}H_{14}O_7$ or $C_{17}H_{16}O_8$, contained, in the form of a glucoside, in puriri, the wood of *Vitex littoralis*, from New Zealand.

viticetum (vit-i-sē'tum), *n.*; pl. *viticeta* (-tạ̈). [NL., < *vitis*, vine, + *-etum*, denoting place of growth. Cf. *arboretum*.] A place where vines are cultivated; a vineyard. [Rare.]

> The *viticetum* is along the western edge of the forest.
> *D. T. MacDougal*, in Pop. Sci. Mo., June, 1900, p. 176.

vitiliginous (vi-ti-lij'e-nus), *a.* [*vitiligo* (*-gin-*) + *-ous*.] Pertaining to, affected with, or characteristic of, vitiligo.

> He also referred to the *vitiliginous* squamous dermatosis which had been observed by Jeanselme on the coast of Annam and other parts of Indo-China.
> *Med. Record*, Oct. 12, 1907, p. 622.

vitin (vī'tin), *n.* [L. *vitis*, a grape-vine, + *-in*2.] A compound, $C_{20}H_{32}O_2$, found in the epidermis of grapes and apples. It crystallizes in silky needles which melt at 250–255°. It is a weak acid.

vitium (vish'i-um), *n.*; pl. *vitia* (-ạ̈). [L. See *vice*1.] Vice; defect.

vitrage (vi-träzh'), *n.* [F., glazing, glass windows, < *vitrer*, glaze.] A curtain made from a material of light texture, designed to be fastened to a window or a glass door.

vitreocapsulitis (vit"rẹ-ō-kap"sū-lī'tis), *n.* [NL., < L. *vitreus*, vitreous, + *capsula*, capsule, + *-itis*.] Same as *hyalitis*.

vitreograph (vit'rẹ-ọ-gråf), *n.* [L. *vitreus*, of glass, + Gr. γράφειν, write.] A photographic or other print on glass.

vitreoperforate (vit"rẹ-ọ-pėr'fọ-rāt), *a.* [L. *vitreus*, vitreous, + *perforatus*, perforate.] Having a perforated silicious shell or test, as certain *Foraminifera*.

Vitreous chamber. See ★*chamber*.

vitreously (vit'rẹ-us-li), *adv.* In *physics*, in a manner analogous to that observed in the case of glass: as, a *vitreously* charged body or a *vitreously* reflected beam of light.

> "Vitreous selenium" reflects blue and violet light metallically and the longer wave-lengths *vitreously*.
> *Physical Rev.*, April, 1904, p. 194.

vitri-. [L. *vitrum*, glass.] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*1), a prefix used to indicate that a rock is microscopically glassy. Compare ★*vitro-*.

vitriol, *n.*—**Brown vitriol**, the English trade-name for sulphuric acid or oil of vitriol, stained by soot and dust from the flues, when it has been concentrated in leaden pans heated from the top.—**Cyprian vitriol**, crystallized cupric sulphate, $CuSO_4.5H_2O$. So-called Cyprian vitriol made at Chessy in France from mixed ores of copper and zinc was found to contain the sulphates of both metals, with even much more zinc than copper.—**Eagle vitriol**, the trade-name for an impure mixture of iron and copper sulphates, sometimes containing zinc sulphate: used by tanners in coloring leather.—**Martial vitriol**, in *chem.*, an antiquated name for crystallized sulphate of iron or ferrous sulphate ($FeSO_4.7H_2O$), also known as *green vitriol* and *copperas*.—**Nitrous vitriol**, strong sulphuric acid charged with nitrosulphonic acid. It runs off from the bottom of the Gay-Lussac absorbing-tower in the manufacture of sulphuric acid by the lead-chamber process.—**Rectified vitriol**, in the manufacture of sulphuric acid, a trade-term applied to the product concentrated to a strength of about 95 per cent. real acid: also written *rectified O. V.* (oil of vitriol).—**Rose vitriol.** Same as *bieberite*.—**Salzburg vitriol**, a mixture of blue and green vitriols.—**Spirit of vitriol**, an old name for sulphuric acid.—**Vitriol ocher.** Same as ★*glockerite*.—**Vitriol shale**, a shale or slate which contains a considerable proportion of intimately mingled iron pyrites. The weathering of such shale gives rise to the production of ferrous sulphate and sulphuric acid, and the latter usually acts on the earthy matter present to form more or less aluminium sulphate. On leaching with water a solution is obtained, which by evaporation to dryness leaves a cake, consisting chiefly of ferrous and ferric sulphates, aluminium sulphate, and some free sulphuric acid. This cake constitutes the so-called *vitriol stone* from which fuming sulphuric acid may be made.—**Vitriol stone**, the solid mass obtained by leaching with water pyritous shale which has been weathered by atmospheric exposure and evaporating the liquor to dryness. The residue contains as its principal ingredient ferric sulphate, and from it by heating in clay retorts fuming sulphuric acid may be obtained, while a residue of colcothar is left. See ★*vitriol shale*.

vitriol (vit'ri-ọl), *v. t.*; pret. and pp. *vitrioled*, ppr. *vitrioling*. To cleanse from grease, dirt, or loose oxid scale on a metal surface by dipping in a bath of dilute sulphuric acid; pickle.

vitriolate, *a.* **II.** *n.* An antiquated name for a sulphate.

vitrite (vit'rīt), *n.* [L. *vitrum*, glass, + *-ite*.] A variety of hard glass or other substance used for electric insulation.

vitro-. [L. *vitrum*, glass.] In *petrog.*, a prefix used to signify that a rock is glassy; in the quantitative system of classification of igneous rocks (see ★*rock*^{1}), indicating that the rock is megascopically glassy. Compare ★*vitri-*.

vitrophyro-yukonose (vit′rọ̄-fī-rō-ū′kọ-nōs), *n.* In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*^{1}), a yukonose which has a megascopically porphyritic and glassy texture; a glassy porphyry with the composition of yukonose. See ★*yukonose.*

vitrotype (vit′rọ̄-tīp), *n.* [L. *vitrum*, glass, + Gr. *τύπος*, type.] A photographic picture made with a collodion film on glass or earthenware and fired in an oven. *Stand. Dict.*

Vittaria (vi-tā′ri-ạ̈), *n.* [NL. (J. E. Smith, 1793), ‹ L. *vitta*, a ribbon, + *-aria*, in allusion to the narrow fronds of the fern.] A genus of polypodiaceous ferns, usually epiphytic. The fronds are closely clustered and pendent, linear and often grass-like, leathery in texture or somewhat membranous, and mostly fertile; and the sori are borne in a continuous line at or near the margin, usually within a groove formed in part of the unaltered edge of the leaf and somewhat protected by this, but without special indusia. There are about 50 species, of wide distribution in tropical or subtropical regions. *V. lineata*, the grass-fern, occurs in Florida, usually on the palmetto, and throughout most of tropical America.

vivacious, *a.* 3. Perennial: sometimes applied to plants which live from year to year.

Viverravidæ (viv-e-rav′i-dē), *n. pl.* [NL. *Viverravus* (the type genus) + *-idæ.*] A family of extinct mammals of the order *Creodonta*, with long bodies and short legs, suggesting the existing *Viverridæ*.

vizard^2† (viz′ạ̈rd), *n.* 1. A vizard-mask; a vizor.

> Together with all *vizards* for the Day I prohibit all Masks for the Night, made of Oil'd Skin and I know not what. *Congreve*, Way of the World, iv. 6.

2. One who wears a vizard-mask.

> *Med.* Who in the devil's name can this be?
> *Dor.* Why the *vizard*—that very *vizard* you saw me with. *Etheredge*, Man of Mode, i. 1.

V. L. An abbreviation of *Vice-Lieutenant.*

vladika (vlad′i-kạ̈), *n.* [Bulg. Bohem. *vladyka*, bishop, OBulg. *vladyka*, lord, ‹ *vlada*^{n}, *vlasti*, rule.] A bishop of the Church of Montenegro, who at the same time exercises temporal rule.

> The Church of Montenegro has from early times been independent under its bishops, who from 1516 to 1851 were also the temporal rulers, under the title of *Vladikas*, or prince-bishops. *Encyc. Brit.*, XXXI. 383.

vley, *n.* Same as *vly*.

> On the edge of a small *vley* (lake) . . . due east from Wynberg station. *Proc. Zool. Soc. London*, 1897, p. 340.

V. M. An abbreviation (*a*) in *electrotechnics*, of *voltmeter*; (*b*) of the Latin *Veterinarius Medicus*, veterinary physician.

v. n. An abbreviation of the Latin *verbum neutrum*, neuter verb.

Vo. An abbreviation of *verso* (left-hand page).

vocabularian (vọ̄-kab-ụ̄-lā′ri-ạn), *n.* [*vocabulary.*] One who is master of a large or unusual vocabulary. [Rare.]

> Mr. —— indulges in no conceits, he is not a *vocabularian*; he uses, as none but a poet can, the old poetic materials. *Pall Mall Gazette*, July 20, 1899, p. 4. *E. D.*

vocabulation (vọ̄-kab-ụ̄-lā′shọn), *n.* Selection of a vocabulary; choice of words or phrases. [Rare.]

> A rich-toned voice responsive to her feelings, and a mind not exactly intellectual, but felicitous in *vocabulation* and ingenious in the construction of sentences. *E. Eggleston*, Faith Doctor, xiii.

Vocal nodules. See *singers'* ★*nodes.*—**Vocal reaction.** See ★*reaction.*

vocalion (vọ̄-kā′li-ọn), *n.* [NL., ‹ L. *vocalis*, vocal, + *-on.*] A form of reed-organ gradually perfected from experiments begun in England about 1870. Its tones are produced from large free reeds so connected with special resonance-cavities and supplied with wind under heavy pressure that their quality is strikingly full and mellow, and also capable of considerable variation of timbre. Vocalions are often made with three manuals and pedals, and with many stops, so as to fulfil something of the function of a pipe-organ.

vocalise (vō-kạ̈-lēz′), *n.* [F., ‹ *vocaliser*, vocalize.] An exercise or study for singers, usually without words. Compare *solfeggio.*

voce (vō′chạ̄), *n.* [It., ‹ L. *vox* (*voc-*), voice. See *voice.*] Voice; used in the expressions *voce di petto*, the chest-voice, *voce di testa*, the head-voice, and *voce velata*, the veiled voice.

voces. Plural of *vox.*

voetganger (fōt′gäng″ėr), *n.* [D., 'foot-goer.'] A name given by the Boers in South Africa to the young of the migratory locusts so destructive in that country.

vogesite (vō′ge-sīt), *n.* [G. *Vogesen*, Vosges Mountains, + *-ite*^{2}.] In *petrog.*, a dark-colored porphyry, with panidiomorphic granular texture, composed chiefly of orthoclase, with some lime-soda feldspar, and prismatic crystals of hornblende and diopside. *Rosenbusch*, 1887.

voglianite (vōg′li-a-nīt), *n.* [Named after J. F. *Vogl*, who analyzed it.] A hydrous sulphate of uranium occurring in green earthy coatings: found in Joachimsthal, Bohemia.

voice, *n.* 12. In *music*, a singer or the voice-part that a singer sings.—13. In *voice-building*, same as ★*voice quality.*—14. The sound made by the stridulation of an insect.—**Accessory voices.** See ★*accessory.*—**Active voice.** See ★*active.*—**Boy voice**, the male voice before mutation, closely resembling the mature female voice.—**Cavernous voice.** See ★*cavernous.*—**Chamber voice**, a voice suitable for private or parlor singing, rather than for concert singing.—**Falsetto voice.** See *falsetto.*—**Outer voices.** See *outer* ★*parts.*—**Voice quality**, the specific quality or timbre of the tones of a voice, either in general or in particular applications. It is *pure* when unrestricted and smooth, *guttural* when cramped in the throat, *nasal* when resonated in or emitted through the nose, *veiled* when obscured or made indistinct either voluntarily or involuntarily, *breathy* or *aspirated* when accompanied by the emission of unvocalized breath, *forced* when made with undue effort or with apparent difficulty, etc.

voice-builder (vois′bil″dėr), *n.* A teacher or trainer in voice-building

voice-building (vois′bil″ding), *n.* The act or process of developing vocal ability by systematic discipline. It is properly a specialized form of gymnastics, designed to bring every part of the vocal apparatus under control and to make it efficient for numerous practical purposes. It includes not only detailed training in the management of the breath and of the various adjustments of the larynx, pharynx, and mouth that are demanded in facile and effective phonation, but also the stimulus of correct mental conceptions as to ideal vocal tone, finished pronunciation, expressive and forcible delivery, etc., which constitute the basis of both speaking and singing in an artistic manner. It is strictly the preliminary discipline for both elocution or oratory on the one side and singing on the other. Incidentally, it is also of distinct hygienic value.

voice-formation (vois′fôr-mā″shọn), *n.* Same as ★*voice-building.*

voice-key (vois′kē), *n.* In *exper. psychol.*, a reaction key which is opened by the expulsion of the breath in speaking. *Scripture*, Exper. Phonetics, p. 154.

voice-placing (vois′plā″sing), *n.* In *voice-building*, the act or process of adjusting the breath and the resonance-cavities of the pharynx and mouth so that vocal tones are apparently located, that is, resonated, in certain points in the mouth. In general it is most satisfactory when the center of resonance is high and forward.

voice-production (vois′prọ̄-duk″shọn), *n.* 1. Same as ★*voice-building.*—2. Specifically, the actual use of the voice in producing particular effects either in speaking or singing.

voice-stop (vois′stop), *n.* In *phonetics*, a sonant stop (mute); a voiced stop.

voice-trainer (vois′trā″nėr), *n.* Same as ★*voice-builder.*

voice-training (vois′trā″ning), *n.* Same as ★*voice-building.*

Void of course. See ★*course*^{1}.

voile (vwol), *n.* [F. *voile*, veil. See *veil*, *n.*] A fabric similar to the old-fashioned nun's-veiling, but made with somewhat heavier yarns. *Dry Goods Economist*, June 13, 1908.

voiture, *n.*—**Voiture légère** [F., 'light carriage'], a motor-car designed to carry four or five persons and made lighter in weight and shorter in length than the ordinary touring-car: usually also of less motor capacity than the heavier cars, to reduce cost both of manufacture and of operation.

voiturette (vwo-tụ̄-ret′), *n.* [F., dim. of *voiture.* See *voiture.*] A name given in France to a light motor-car, usually for two persons, or for two more in an extra or folding seat. The voiturette is lighter, shorter, and less highly powered, and therefore cheaper than the larger cars.

> Light [automobile] cars of the "*voiturette*" type. *Encyc. Brit.*, XXXI. 13.

voiturier (vwo-tü-ryā′), *n.* [F.] One who drives a voiture or carriage.

> If you could have seen him going round and round the coach that brought them, as a preliminary to paying the *voiturier* to whom he could n't speak, in a currency he did n't understand, you never would have forgotten it. *Dickens*, quoted in Forster, Life of Charles Dickens, [II. 294.

voiturin (vwo-tü-raṅ′), *n.* [F.] One who keeps a voiture for hire or drives one.

Vol. An abbreviation (*a*) [*l. c.* or *cap.*] of *volume*; (*b*) of *Volunteer* or *Volunteers.*

volad (vō′lad), *adv.* [L. *vol*(*a*) (see *vola*) + *-ad*^{3}.] In a direction toward the palm or sole. *Trans. Linnean Soc. London*, Zoöl., Nov., 1899, p. 506.

volador (vō-lä-dōr′), *n.* [Sp., a flier, a flying-fish, ‹ *volar*, ‹ L. *volare*, fly.] A flying-fish, *Exocœtus californicus*, found on the coast of California.

voladora, *n.* 2. A muller. *Phillips and Bauerman*, Elements of Metallurgy, p. 740.

volante (vọ̄-län′tạ̄), *a.* [It., ‹ L. *volans*, flying. See *volant.*] In *music*, in a light, rapid manner.

volatic (vọ̄-lat′ik), *a.* [L. *volaticus*, ‹ *volare*, fly. See *volant.*] Of short duration; transitory.

volatile, *a.* 5. Having the power of being readily converted into gas or vapor. Sometimes applied, in chemistry, to those constituents, or that portion, of a substance which is driven off by heating at a specified temperature.—**Volatile combustible matter**, that portion of an organic substance other than water which is expelled by heating to bright redness in a closed crucible: applied especially in the analysis of coal.

Volcanalia (vol-kạ-nā′li-ạ̈), *n. pl.* [L., neut. pl. of *Volcanalis*, of Vulcan, ‹ *Volcanus*, *Vulcanus*, Vulcan.] In *classic myth.*, the annual festival of Vulcan, held on August 23, when certain fish were thrown into the fire on the hearth and a red heifer and a boar pig were sacrificed.

volcanello (vol-kạ̄-nel′ō), *n.* [It., dim. of *volcano*, volcano.] A small volcano.

volcanic. I. *a.*—**Volcanic chimney.** See ★*chimney*, 4 (*e*).—**Volcanic pipe.** See ★*pipe*^{1}.—**Volcanic vapors and sublimates**, vapors and volatilized minerals given off from volcanic centers, especially in their expiring stages The former are chiefly steam, carbonic acid, sulphureted hydrogen, and compounds of fluorin and boron; the latter are commonly native sulphur, realgar, orpiment, and ferric chlorid, which last often oxidizes to specular hematite.

II. *n.* 2. In *petrog.*, a volcanic rock: generally used in the plural.

> A paper on "The Humboldt region; a study in Basin Range structure," in which the fact was brought out that the upper beds in the region are *volcanics* which were originally level upon folded rocks. *Sci. Amer. Sup.*, Jan. 16, 1904, p. 23446.

volcanite (vol′kạ-nīt), *n.* [*Volcano*, on the island of Vulcano, Lipari, + *-ite*^{2}.] In *petrog.*, a glassy lava, forming bombs at Vulcano, containing soda-orthoclase or soda-microcline and augite, and having the chemical composition of dacite. *W. H. Hobbs*, 1893.

volcanization (vol″kạn-i-zā′shọn), *n.* [*volcaniz*(*e*) + *-ation.*] The act, process, or result of volcanizing.

volcanize (vol′kạn-īz), *v. t.*; pret. and pp. *volcanized*, ppr. *volcanizing* [*volcan*(*ic*) + *-ize.*] To subject to the action of volcanic forces; modify by volcanic action; render volcanic in character.

volcano, *n.* 1. Volcanoes originate either in the development of a fissure in the earth's crust which releases pent-up forces within, or in the bursting of these accumulated forces through a less elongated passage and the consequent establishment of the vent. Once released these forces build up about the vent a conical heap of ejected materials which in the end may yield a mountain of great altitude and extent. Cones usually consist both of loose materials and of solid flows and dikes which have come forth as molten rock; but some cones are known which are almost if not entirely the former (*cinder cones*, *tuff cones*), and others which are chiefly the latter. The loose materials roll down from the rim both outwardly and inwardly and eventually establish themselves at their angles of repose. Thus the cross-section of a cone exhibits layers of which the outer dip away from the vent and the inner toward it. The coarser fragments are necessarily nearer the vent, and yield agglomerates and breccias. The finer materials (*tuffs*) lie farther out and sift down at flatter angles until gradually the slope dies out in the general surrounding level. Around the immediate vent there is thus developed a space like an inverted cone, or a bowl, the crater, which is prolonged downward in the vent or chimney, the whole being funnel-shaped in outline. The upper edge of the annular mountain surrounding the crater is called the *rim*; the outer portions are the *slopes* or *flanks*. The loose materials are also much carved and modified by the rains, but where they predominate they yield the symmetrical volcanic peaks such as Fuji-yama in Japan. When outbreaks of molten rock (lava) are superadded to the fragmental materials, they seldom pour out over the rim of the crater, but burst through the flanks. If they enter cracks and congeal in them, they furnish dikes, which serve like ribs to stiffen the loose materials. If they pour forth as a flood down the sides they furnish surface flows or sheets. All these become afterward buried in later outbreaks of fragmental materials until the structure of the cone is very complex. The activity of Mont

Pelée, in Martinique, in 1902, was at first explosive but by March, 1903, a columnar mass of hot rock had been protruded as a great spine 500 meters above the vent, evidently starting below as a viscous mass, cooled as it emerged until it practically yielded a solid eruption called a *pelélith.* It disintegrated in the course of months and fell away. When lava enters very largely into the materials of the mountain, the outline is affected in a notable degree. Some lavas which have high percentages of silica (rhyolites, trachytes) are relatively infusible and are at most ropy and viscous. They well up and congeal with steep slopes and do not move far from the vent. Others which have low percentages (basalts) are very fusible and flow like water for miles. The Hawaiian cones are good examples of the latter and in consequence have very flat slopes; whereas in the Auvergne the 'puys,' which belong under the former, are very steep and may have no crater at all. Volcanic vents break out through the floor of the ocean (submarine eruptions) no less than on the land, and are a fruitful cause of oceanic islands. The activity of the cones is variable, and on the basis of this they are classified under several types as follows: (1) continuously active but of corresponding moderation; (2) intermittently active, with quiescent periods of relatively short duration and with outbreaks of notable but not maximum violence; (3) intermittently active, with long periods of rest, followed by excessively violent eruptions. Volcanoes exhibit a marked linear distribution upon the earth's surface, and they favor continental borders more than the interiors. The greatest series of vents encircles the Pacific Ocean and reaches its culmination in Java. A location near the sea is, however, not essential, as was once the prevailing opinion, since the great Mexican cones are on the central plateau, and Kilimanjaro, an active volcano, has been discovered in Africa. Volcanic areas have shifted from time to time. Old and long extinct centers may be detected, as in Maine and southeastern Pennsylvania, which were active before the Cambrian period, while the Hebrides were the scene of enormous outbreaks in the Tertiary. The cause of volcanoes is very obscure. They are obviously connected with the internal heat of the earth. Some refer this to heat still retained from the early nebulous condition of the earth (nebular hypothesis); others to heat produced by mechanical pressure in a globe of accumulating small, cold particles (planetesimal hypothesis); while still others are increasingly inclined to look with favor upon radioactive phenomena below the surface. The localized outbreaks have been referred to contractions of the crust through loss of heat; to readjustments from the shifting of sediments; and to strains caused by the attractions of the sun and moon when in positions favorable to deformation of the globe. In a vent once established there is reason to think that the last named causes affect the periodicity of eruptions. As volcanic activity expires many important after effects are manifested, such as fumaroles, solfataras, hot springs, geysers, and the formation of mineral deposits.—**Air-volcano,** a miniature crater resembling a true volcano in shape and often provided with a cone: produced by the explosion of gases in mud. Compare *salse*^{2} and ★*maccaluba.*—**Bedded volcano,** a volcano whose crater consists of stratified tuffs and lava-sheets: the commonest type of cone.—**Dome volcano,** a name suggested by von Seebach for those volcanoes which are built up of lava-flows, with little or no breccias and tuffs. The Hawaiian volcanoes are good examples.—**Dormant volcano,** a volcano which is inactive but not necessarily extinct.—**Explosive volcano,** in *geol.*, a volcano whose outbreaks are marked by explosions (such as Mont Pelée, Martinique) and whose products are fragmental tuffs and breccias rather than molten lavas.

volcanologist (vol-kạ-nol'ọ̈-jist), *n.* [*volcanolog*(*y*) + *-ist.*] A student of volcanology. Also *vulcanologist.*

> The tendency of the fluid nucleus to increase in ellipticity might produce a result worthy of examination by *volcanologists.* *Smithsonian Rep.*, 1890, p. 216.

vole-mouse (vōl'mous), *n.* [< Norw. **voll-mus*, lit. 'field-mouse,' < *voll*, earlier *vall* = Dan. *vold* (obs. or dial.) = Sw. *vall* = Icel. *völlr*, a plain, an open field (= AS. *weald*, a forest, E. *wold*, *weald*, open country), + *mus* = E. *mouse.* The same first element occurs in *wallop*, *n.*] The short-tailed field-mouse; the vole.

> *Vole-mouse*, the short-tailed field mouse, O. and S. [Orkney and Shetland islands].
> *Edmondston*, An etym. gloss. of the Shetland and Ork- [ney dialect, p. 140.

volgerite (fōl'gėr-īt), *n.* [From O. *Volger*, its discoverer.] A form of antimony ocher, $Sb_2O_5.4H_2O$, from near Constantine, Algeria.

Volgian (vol'ji-an), *a.* and *n.* [*Volga*, a river in Russia, + *-ian.*] In *geol.*, a term introduced by Nikitin for a division of the Jurassic rocks of northern Russia, correlated with the Portlandian of western Europe.

volipresence (vol-i-prez'ens), *n.* [Irreg. < L. *volo*, I will, I wish (inf. *velle*), + *præsentia*, presence.] The multipresence of Christ, that is, the belief that with his humanity Christ is able to be present wherever he wills. This doctrine is held by the Saxon churches generally.

Volitional action. See ★*action.*

Volkmann's canal, contraction. See ★*canal*^{1}, ★*contraction.*

volkslied (fōlks'lēt), *n.* [G.] A folk-song. See *lied* and *folk-song.*

Volksraad (fōlks'räd), *n.* [D., 'people's council.' See *folk* and *rede*^{1}, *n.*, ★*raad*^{2}.] A legislative assembly or a house of parliament in South Africa.

> Meanwhile the emigrant farmers had established what they called the Republic of Natalia, elected a *Volksraad*, and founded the town of Pietermaritzburg.
> *Encyc. Brit.*, XXXII. 716.

volley, *n.* **4.** In *cricket:* (*a*) A full-pitch. (*b*) A ball so bowled as to reach the batsman without touching the ground.—**5.** In *mining*, the ignition and explosion of several blasts in the rock at one time, or of groups of such blasts in sections.

volley, *v. t.* **3.** In *cricket*, of the bowler: (*a*) To bowl a ball which reaches the batsman before pitching. (*b*) To bowl a full-pitch.

volley-ball (vol'i-bâl), *n.* A gymnasium game, played with a white leather ball, consisting in keeping the ball in motion over a high net from one side to the other.

volost (vō'lost), *n.* [Russ. *vólostŭ*, a district, bailiwick.] A small administrative division in Russia.

> Several communes united compose a *volost* or canton, of which there are 10,530 in European Russia. To the cantonal and provisional assemblies, each composed of duly elected delegates, is applied the name, of late become so familiar, of the zemtsvo. The mir or *volost* decides all questions of local nature, such as concern roads, schools, health, justice, and acts as a peasants' court in cases not involving more than 60 dollars. But over every act or meeting impends the shadow of the Tsar. His delegate or commissioner is always near and may, though he seldom does, reverse all the proceedings.
> *National Geog. Mag.*, July, 1905, p. 512.

Vols. [*l. c.* or *cap.*] An abbreviation of *volumes.*

volt^2, *n.*—**Reichsanstalt volt,** the practical unit of electromotive force adopted by the Imperial Physicotechnical Institute in Charlottenburg; a unit based upon the electromotive force of the Clark cell taken as 1.43285 volts.

voltage^2, *n.*—**Anode voltage,** in electrolysis, the difference of potential between the anode and the electrolyte. *Electrochem. Industry*, July, 1903, p. 374.—**Cathode voltage,** in electrolysis, the difference of potential between the cathode and the electrolyte. *Electrochem. Industry*, July, 1903, p. 374.—**Critical voltage,** in electrolysis, the decomposition voltage or voltage of polarization.

> This *critical voltage*, or voltage of "polarization," is the number of pounds at which the nature of the electrochemical system, cathode-electrolyte-anode, sets our electrochemical safety-valve.
> *Electrochem. Industry*, July, 1903, p. 373.

Decomposition voltage, in an electrolytic cell with one electrolyte of uniform concentration, the algebraic sum of the cathode voltage and the anode voltage.—**Delta-voltage,** in *elect.*, in a three-phase machine, the voltage between any two collector-rings.—**Electrode voltage,** the difference of potential between one of the electrodes of an electrolytic cell and the electrolyte. It is termed 'cathode voltage' in the case of the cathode and 'anode voltage' in the case of the anode.—**Floating voltage,** in *elect.*, the voltage of a storage-battery when neither charging nor discharging.—**Impedance voltage,** in an alternating-current circuit, the total loss of electromotive force due to impedance. It is the resultant of the e. m. f. consumed by resistance and that consumed by reactance.—**Multiple voltage system.** Same as ★*multivoltage system.*—**Open-circuit voltage,** in *elect.*, the voltage at the terminals of a generator when the external circuit is broken.—**Primary voltage.** See ★*primary.*—**Receiver voltage,** in *elect.*, the voltage at the receiving end of a circuit over which alternating currents, or the current impulses used in signaling, are transmitted.—**Star voltage,** in an alternating-current, polyphase, star-wound machine, the voltage between any collector-ring and the common neutral.

voltage-changer (vōl'tāj-chān″jėr), *n.* **1.** In *elect.*, a device by which the voltage or electrical pressure in a circuit may be altered either up or down. More usually from a lower to a higher voltage.—**2.** A motor-driven dynamo or generator whose windings are so related in each machine that the current which drives the motor shall generate one of a different voltage in the dynamo: used in regulating-systems. Sometimes called a *booster*, when the voltage is to be raised. *Elect. Rev.*, Sept. 24, 1904, p. 548.

Voltaic alternatives. See ★*alternative.*

voltameter, *n.*—**Copper voltameter,** a voltameter in which the metal deposited by the current is copper: usually from a solution of copper sulphate.—**Differential voltameter,** a voltameter for measuring electrical resistance by comparing the volume of gases set free by the decomposition of water by the current passing through the circuit to be measured with that from a current in a circuit of known resistance.—**Richards voltameter,** in *elect.*, a silver voltameter with a porous cup around the (silver) anode. *Physical Rev.*, Aug., 1904, p. 140.—**Silver voltameter,** an instrument for the measurement of electric currents by weighing the silver deposited by them in a known time: the form of voltameter chiefly employed in accurate determinations of the electric current and specified by the International Electrical Congress in their practical definition of the ampere. Under the best conditions it is capable of an accuracy of one part in ten thousand.—**Volume voltameter,** a voltameter in which the products of electrolysis are determined volumetrically; specifically, a water voltameter the out-put of which is thus ascertained.—**Water voltameter,** a voltameter in which oxygen and hydrogen are made by the electrolytic decomposition of water and in which the current through the instrument is determined by the amount of gas generated in a unit of time.—**Weight voltameter,** a voltameter in which the electrolytic product is determined by weighing instead of by volumetric methods; specifically, a water voltameter in which the output is thus determined.—**Zinc voltameter,** a voltameter in which the metal deposited by the current to be measured is zinc. The zinc voltameter has been used to some extent in commercial practice under the name of the 'chemical meter.'

voltampere, *n.* **2.** The product of volt and ampere, that is, of electromotive force and current which in an alternating-current electric circuit may be greater than the true power, and is called *apparent* ★*power* (which see).

volt-box (vōlt'boks), *n.* A specially wound resistance-box used as an adjunct to a potentiometer, and serving to adapt the instrument to the measurement of differences of potential above its normal range.

volte-face (vōlt-fäs'), *n.* [F., < It. *voltafaccia*, < *voltare*, turn, + *faccia*, face.] A sudden change from one position, in a matter of principle, policy, or politics, to its direct opposite.

> Rochefort, instead of returning to his resuscitated creation, founded "L'Intransigeant" and drew "La Lanterne's" clientele. Viviani thereupon justified his radicalism in making a radical *volte-face.* From a fierce and destructive republican he became, overnight, a conservative. *Cosmopolitan Mag.*, XXX. 269.

volt-face (vōlt-fās'), *n.* [F. *volte-face*, Englished, < *volt*^{1} + *face.*] Same as ★*volte-face.*

voltivity (vōl-tiv'i-ti), *n.* [*volt*(*age*) + *-ivity.*] The line integral of electric force; the voltage.

voltmeter, *n.* It is a direct-reading instrument for the measurement of difference of potential between two points in an electric circuit, as between the terminals of a generator, battery, or electric lamp, or between the mains of a distributing circuit. Voltmeters for use on direct-current circuits are frequently strong-field galvanometers of high resistance, in which case the difference of potential between their terminals is proportional to the current flowing in the voltmeter circuit and is measured by the deflection of a coil suspended in a fixed magnetic field, or sometimes by the movement of a magnet in the field of a fixed coil. Various special forms of electrodynamometer are also used as voltmeters and such instruments are applicable alike to direct- and to alternating-current circuits. In cases where it is preferable to have no flow of current in the voltmeter circuit, *electrostatic voltmeters* are employed. These are usually modifications of the quadrant electrometer of Lord Kelvin, in which a pointer attached to the needle of the instrument moves over a calibrated, direct-reading scale. Electrostatic voltmeters are equally serviceable on direct- and on alternating-current circuits and are especially adapted to measuring high voltages, from 1,000 to 20,000 volts.—**Alternating-current voltmeter,** an instrument for measuring differences of potential in alternating-current circuits.—**Direct-current voltmeter,** a voltmeter for use on circuits where the difference of potential is always in the same direction.—**Gravity voltmeter,** a voltmeter in which the magnetic or electrostatic forces acting on the moving part of the instrument are balanced against the force of gravity. Many electrostatic voltmeters are gravity voltmeters.—**Hot-wire voltmeter,** a voltmeter in which the current passing through the instrument heats a fine wire, and the expansion of the wire produces and controls the movement of a pointer along a scale calibrated to indicate the voltage at the terminals of the heating circuit.—**Hydrostatic voltmeter,** an early form in which an iron rod or core was attached to a float similar to the body of a hydrometer. The cylindrical vessel containing the liquid in which this core was thus vertically suspended was surrounded with a coil of fine insulated wire. Current in the coil caused the core to be more deeply submerged and its position, as indicated by the movement of a pointer along a vertical scale, measured the difference of potential between the terminals of the fixed coil.—**Recording voltmeter,** a voltmeter which makes an automatic record, usually in the form of a curve traced upon a cylinder or disk, of fluctuations in the voltage of an electric circuit.—**Spring voltmeter,** a voltmeter in which the magnetic or electrostatic forces acting on the moving part of the instrument are balanced by the tension of a spring.—**Static voltmeter,** an electrostatic voltmeter.—**Switchboard voltmeter,** an indicator of voltage permanently mounted as an attachment to the switchboard of a central station. Such instruments are commonly provided with an open scale easily read at a distance and covering only a small range on either side of the normal voltage of the circuit on which the instrument is to be used.—**Weight voltmeter,** a gravity voltmeter.

volubility, *n.* **3†.** Easy, swift, rolling motion; the property of moving in an easy, rolling manner.

> Touching such Creatures as we termed gliding, . . . Some move more slowly, but others with a certain *Volubility* and flexible Agitation of the Body.
> *Guillim*, Heraldry, xviii.

volume, *n.* **4.** (*b*) A measure of the relative quantity of a substance as determined by its bulk.

> A *volume* of acetylene needs approximately twelve *volumes* of air, forming as products of combustion carbon dioxide and water vapour. *Encyc. Brit.*, XXV. 37.

Combination by volume. See ★*combination.*—**Contraction volume,** the volume of blood which leaves the heart at each systole. **Critical volume,** the specific volume of a liquid at its critical temperature, that is, the volume occupied by a unit mass of the liquid at the critical pressure.—**Elasticity of volume.** Same as *elasticity of bulk* (which see, under *elasticity*).—**Measure of volume.** See ★*measure.*—**Merchantable volume,** in *lumbering*, the total volume of that portion of the tree which can be used under given conditions: sometimes called *possible merchantable volume.*—**Molecular volume,** the molecular weight of a substance divided by its density.—**Volume-entropy diagram.** See ★*diagram.*—**Volume growth.** See ★*increment*, 6.—**Volume resistivity.** See ★*resistivity.*—**Volume rotation.** See ★*rotation.*

volume-blower (vol′ūm-blō″ėr), *n.* A blowing-machine designed to furnish a large volume of air or gas at low pressures, as distinguished from the pressure-blower, which delivers less volume of air at higher pressure. *Elect. World and Engin.*, Jan. 31, 1903.

volumenometer, *n.*—**Becquerel's volumenometer,** a gas-pyrometer which measures the changes of pressure resulting from a given variation of the gaseous mass contained in the bulb, which may be of iron, or porcelain, or platinum.

Volume-pressure diagram. See ★*diagram.*

volumescope (vọ-lū′me-skōp), *n.* [Irreg. < *volume* + Gr. *σκοπεῖν*, view.] A graduated glass tube for demonstrating the difference in volume of the components of a compound, especially when they are set free by chemical action.

volume-table (vol′ūm-tā″bl), *n.* A table of volumes; specifically, in *forestry*, a tabular statement of the volume of trees in board feet or other units upon the basis of their diameter breast-high, their diameter breast-high and height, their age, or their age and height.

> Ever since the sustained annual yield became a factor in forest management every method of reducing the labor involved in taking an inventory of the stock on hand has been welcomed by the forest manager. One of the greatest of these labor savers is the *volume-table* by means of which it is possible, with a minimum of measurement and calculation, to obtain the cubic content of a stand in a very satisfactory manner.
> *Forestry Quart.*, I. 6.

volumeter, *n.* **2.** Same as *stereometer.*

voluntarism (vol′un-tā-rizm), *n.* [*voluntar*(*y*) + *-ism.*] **1.** The metaphysical opinion that all existence and all actual happening is of the nature of an individual effort (against a resistance) which has on each occasion a peculiar conscious quality and is also discriminative or, at least rudimentally, purposive, and so cognitive. In so far as this opinion makes cognition essentially purposive, it agrees, in effect, with pragmatism from which, however, it differs in being a metaphysical hypothesis founded on arguments drawn from psychology, instead of being a maxim of logic deduced from an analysis of the nature of signs.—**2.** A type of psychological theory, which regards the will as fundamental, and accordingly emphasizes the volitional rather than the intellectual aspect of our nature: ordinarily opposed to *intellectualism.*

> Psychology of the inner sense commonly tends toward intellectualism. . . . The psychology of immediate experience, on the other hand, tends toward *voluntarism.*
> *W. Wundt* (trans.), Outlines of Psychol., p. 13.

> *Voluntarism*, we say, is right in every respect except in believing itself to be a psychology.
> *Harvard Psychol. Stud.*, I. 642.

voluntarist (vol′un-tā-rist), *n.* and *a.* **I.** *n.* One who, in metaphysics or psychology, accepts the theory of voluntarism.

> There are psychologists who recognize both [views] and keep them separated, others who hold to the one or the other as the only possible view: they are phenomenalists or *voluntarists.* *Harvard Psychol. Stud.*, I. 642.

II. *a.* Same as ★*voluntaristic. Jour. Philos., Psychol. and Sci. Methods*, Dec. 20, 1906, p. 717.

voluntaristic (vol″un-tā-ris′tik), *a.* [*voluntarist* + *-ic.*] Pertaining to, or characteristic of, the metaphysical or psychological theory of voluntarism.

> In all these respects, *voluntaristic* psychology is opposed to intellectualism.
> *W. Wundt* (trans.), Outlines of Psychol., p. 14.

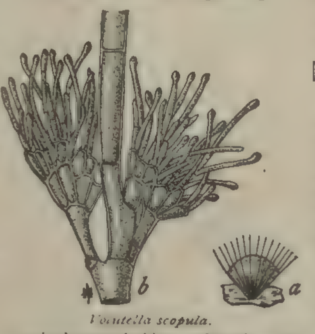
> As if, for instance, the phenomenalistic study dealt with perceptions and ideas, the *voluntaristic* with feelings and volitions. *Harvard Psychol. Stud.*, I. 643.

> The general movement which rightly or wrongly is coming to be designated as pragmatism is away from an intellectualistic and transcendental, toward a *voluntaristic* and empirical metaphysics.
> *Jour. Philos., Psychol. and Sci. Methods*, Aug. 4, 1904, [p. 427.

volunteer. **I.** *n.* **4.** In *hort.*, a plant that comes up of itself from naturally scattered seed, in distinction from one that comes from sowing by the horticulturist.

II. *a.*—**Volunteer crop,** a spontaneous growth of a useful plant in quantity for harvesting: for example, of crab-grass, which in the southern United States covers fields after the removal of the regular crop.—**Volunteer growth.** See ★*growth.*

Volutella (vol-ū-tel′ạ̈), *n.* [NL. (Tode, 1790), < L. dim. *voluta*, a spiral.] A large genus of hyphomycetous fungi having rather regular, disk-like sporodochia with bristles about the margin. The conidia are unicellular and terminal. Over 60 species have been described. They are widely distributed and occur on decaying vegetable matter. *V. ciliata* is a common species in Europe and America. *V. scopula* is found on decaying hyacinth bulbs in France.



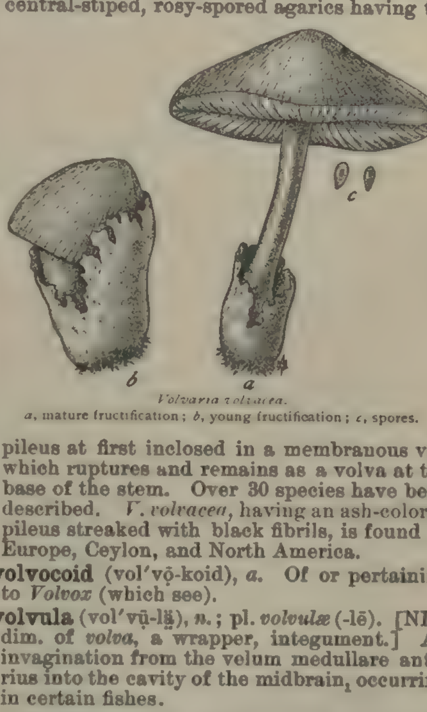
Volutella scopula.

a, single sporodochium, enlarged; *b*, portion of the conidia bearing hyphæ: highly magnified.

volute-pump (vọ-lūt′pump), *n.* See ★*pump*^{1}.

volute-spring, *n.* **2.** A coiled spring in which the band of steel is wound in a double volute, the bases of two cones being joined together.

Volvaria, *n.* **2.** [Fries, 1821.] A genus of central-stiped, rosy-spored agarics having the pileus at first inclosed in a membranous veil which ruptures and remains as a volva at the base of the stem. Over 30 species have been described. *V. volvacea*, having an ash-colored pileus streaked with black fibrils, is found in Europe, Ceylon, and North America.



Volvaria volvacea.

a, mature fructification; *b*, young fructification; *c*, spores.

volvocoid (vol′vọ-koid), *a.* Of or pertaining to *Volvox* (which see).

volvula (vol′vụ-lạ̈), *n.*; pl. *volvulæ* (-lē). [NL., dim. of *volva*, a wrapper, integument.] An invagination from the velum medullare anterius into the cavity of the midbrain, occurring in certain fishes.

> The velum medullare anterius . . . from which there is developed in many fishes a remarkable invagination into the cavity of the midbrain known as the *volvula.*
> *Buck*, Med. Handbook, II. 271.

vomer, *n.* **3.** A genus of carangoid fishes found in warm seas.—**Caudal vomer.** Same as *pygostyle.*

vomero-palatine (vō″mẹ-rō-pal′ạ̈-tin), *n.* A bone in the ganoid fishes formed by the fusion of the palatine and vomerine plates and usually bearing five longitudinal series of round or oval grinding teeth.

vomit, *n.*—**Barcoo vomit.** See *Barcoo* ★*disease.*—**Coffee-ground vomit,** dark brown or blackish granular matter, suspended in fluid (blood changed in appearance by the action of the gastric juice), vomited in cases of cancer or ulcer of the stomach, yellow fever, or other diseases in which gastric hemorrhage occurs.

vomiting-boiler (vom′i-ting-boi″ler), *n.* In *bleaching*, an arrangement by which water or a weak alkaline lye contained in an iron boiler is forced upward, under pressure of the steam formed through a central pipe and discharged over the cloth to be washed, and gradually percolates back to the boiler, to be again forced up and discharged, thus securing continued circulation of the liquid. An injector is sometimes used as the source of the necessary pressure.

vonitra (vō-nē′trä), *n.* [Malagasy.] The Madagascar name for a palm, *Dictyosperma fibrosum*, and for the fiber obtained from it. See *Madagascar* ★*bass.*

voorlooper (fōr′lō-pėr), *n.* [S. Afr. D.] Same as *fore-looper.*

> Only a wave to our troopers,
> Only our flanks swinging past,
> Only a dozen *voorloopers*,
> Only we 've learned it at last.
> *R. Kipling*, Two Kopjes, st. 7.

voortrekker (fōr′trek-ėr), *n.* [S. Afr. D.] One who treks in advance; a pioneer.

voraz (vọ-räth′), *n.* [Sp. (adj.), < L. *vorax* (*vorac-*), voracious.] A common name of *Aprion macrophthalmus*, of the family *Neomænidæ*, of the West Indian fauna. *Jordan and Evermann*, Fishes of N. and M. America, p. 1280.

vorhand (fôr′hänt), *n.* [G., < *vor*, fore, + *hand*, hand.] In *skat*, the eldest hand, the leader for the first trick; the one to whom bids are first made.

vorschlag (fôr′shlaċh), *n.* [G., < *vor*, fore, + *schlag*, stroke.] In *music*, same as *appoggiatura:* opposed to ★*nachschlag.*

vorspiel (fôr′shpēl), *n.* [G., < *vor*, fore, + *spiel*, play.] In *music*, a prelude or overture.

vortex, *n.*—**Magnetic vortex,** a magnetic whirl.—**Strength of a vortex.** See ★*strength.*—**Vortex sheet.** See ★*sheet*^{1}.—**Vortex spiral,** a spiral fluid vortex. *W. M. Hicks*, 1895.

vortex-atom (vôr′teks-at″ọm), *n.* An atom supposed to be formed by the rotational or vortex motion of a portion of an incompressible fluid free from viscosity. A vortex-atom may be regarded as a vortex-ring in the ether, a body which, as was shown by Helmholtz and by Kelvin, possesses many of the properties which it is necessary to assign to an atom. See *vortex.*

vortex-fringe (vôr′teks-frinj), *n.* The vortex-ring generated by the fall of a horizontal disk through the air. [Rare.]

> There is at first a circulation of air around the edge of the plate . . . forming a kind of *vortex fringe.*
> *Lanchester*, Aerodynamics, p. 145.

vortex-ring (vôr′teks-ring), *n.* See *vortex.*

vorticity (vôr-tis′i-ti), *n.* [L. *vortex* (*vortic-*), vortex, + *-ity.*] The state or condition of the rotating portions of a fluid in which vortex-motion occurs.

> This seems to be J. J. Thomson's view—though it is not clear that he regards the *vorticity* as anything more than an analogy—his view is that the lines of force or vortex fibres actually exist, radiating from corpuscles, constituting electric lines of force, generating magnetic fields when they move, and conferring mass on the particle by reason of the amount of ether entangled inextricably in each filament. *Nature*, May 26, 1904, p. 75.

vorticosely (vôr′ti-kōs-li), *adv.* In a whirling or verticose manner: applied to the movements of the atmosphere.

> The law being that air always moves *vorticosely* from where the pressure is high to where it is low.
> *Geikie*, Text-book of Geol., p. 431.

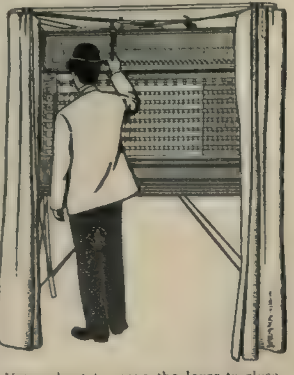
Vosgean (vō′zhẹ-ạn), *a.* Of or pertaining to the Vosges, a range of mountains in eastern France and western Germany. See ★*Vosgian. Geog. Jour.* (R. G. S.), XI. 441.

> The glaciers of the Pamirian phase worked back like rivers by expediting the erosion of the cirques at their head, and so in time greatly narrowed the mountain belt, and retired from their early moraines. Keeping pace with the erosion, the glaciers, preserving approximately their original length, crept back from north and south towards the present central line of the Alps, leaving their moraines as a measure of their erosion. Thus the Alpine phase was reached. Later, the eating back reduces the height of the central line, and a Pyrennean phase is produced, leading still later to a *Vosgean* phase, when, the summits being worn away below the snow-line, glaciers become impossible.
> *Geog. Jour.* (R. G. S.), XI. 441.

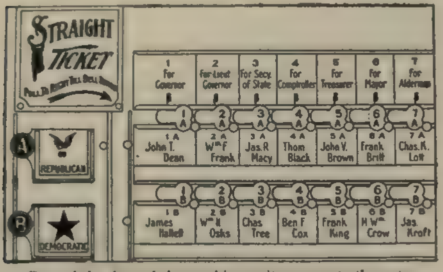
Vosgian (vō′zhi-ạn), *a.* and *n.* **I.** *a.* [*Vosg*(*es*) + *-i-an.*] Of or pertaining to the Vosges Mountains.

II. *n.* In *geol.*, the Bunter sandstone of the Triassic system as developed in the Vosges Mountains, consisting of a lower division of unfossiliferous red sandstone, the Grès des Vosges, and an upper red sandstone, the Grès bigarré, with *Myophoria* and reptilian remains.

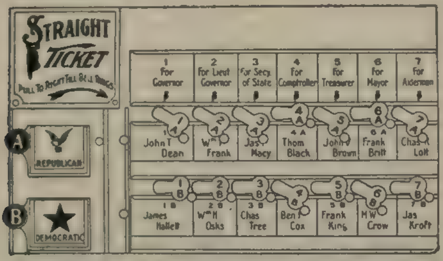
voting-machine (vō′ting-mạ-shēn″), *n.* A machine for recording, counting, and registering votes at an election. It is essentially a combined adding and registering machine, and is mechanically related to the arithmometer and cash-register (which see). It consists of an adding-machine inclosed in a casing about four feet high and four wide and ten inches deep, supported on iron legs and inclosed in a curtained booth. At the front or operating side is a metal frame in which may be placed sheets of paper or labels upon which are printed the party signs and names of all the candidates and any questions to be submitted to the voters at any particular election. When the labels are in place and the curtains of the booth are opened and the counting and registering parts of the machine are at zero or blank, the machine is ready for use. On the front of the machine are the levers which are to be moved by the voter when indicating his vote. They are arranged in two groups, one group having a large key for each of the political parties, and a larger group having small keys arranged in horizontal lines, corresponding to the names of the candidates and the questions to be answered. When the first voter enters the booth he stands before the machine and moves an operating lever at the top of the machine. This causes the curtains to close, insuring secret voting, and, at the same time, unlocks the machine. If he wishes to vote a straight party ticket he moves the party lever, indicated by its emblem. Up to this point no record is made and the voter can reconsider his action and move another party lever, the first being then thrown out of action. Having decided and moved the party lever he wishes to move, he reverses the operating lever at the top of the machine. This records and counts a straight party vote, opens the curtains, and locks the machine. No other vote can be recorded until the next voter enters the booth and moves the operating lever to close the curtain and unlock the machine. This voter may wish to vote a split ticket and answer "yes" or "no" to one or more questions. He can move any one or more of the small keys to indicate, according to the printed labels, the exact choice he wishes to exercise among the candidates or the exact answer (yes or no) he wishes to give to one or more of the questions. Levers not moved record a failure to answer any particular question. If he wishes to add the name of a new candidate he can write it in pencil on a ribbon of paper exposed on the front of the machine at the top, and his written selection of a new candidate's name is recorded in the machine by the act of opening the curtains and locking the machine. The machine registers the number of voters using it, the exact vote, whatever its character, for each of the candidates selected by each voter, and the total vote cast for each party and for each and every candidate properly added up and permanently recorded, together with the total answers, yes or no, and all failures to vote on any or all questions and candidates. It is capable of recording the votes of one hundred and twenty voters an hour.



Voter about to move the lever to close the curtains of the booth.



Part of the face of the machine as it appears to the voter before he has begun to vote.



Part of the face of the machine showing a split or scratch vote finished, ready to be registered by opening the curtain. As indicated by the pointers turned downward, the voter has, in this instance, voted for the Republican candidates for all offices except Comptroller and Mayor; for these two he has chosen the Democratic candidates, Cox and Crow, respectively.

votometer (vō-tom′e-tėr), *n.* [L. *votum* (see *vote*) + Gr. *μέτρον*, measure.] A voting-machine. *Appleton's Cyclo.*, VIII. 202.

votress² (vō′tres), *n.* [*vot*(*e*) + *-r-* + *-ess.*] A female voter. [Rare.]

> The *votress* insisted that she must plump for "Annie Sinclair." *Daily Telegraph*, Nov. 23, 1894.

voupristi (vö-prēs′ti), *n.* [NGr. **βούπρηστι*, < Gr. *βούπρηστις*. See *Buprestis.*] A large yellow blister-beetle, having an offensive odor, and said by the monks on Mount Athos so to affect plants which it has touched that horses or cattle feeding on these plants are poisoned. *Kirby and Spence*, Entomology, p. 84.

vowel, *n.*—**Harmonic sequence of vowels.** See ★*sequence.*—**Hebrew vowels.** The Hebrew alphabet consists of twenty-two letters, all of which are consonants. The vowels, long and short, are ten in number, viz.:

(ָ) KÁMETS = *ä* in father.
(ֵ) TSÉRE = *ai* in main.
(ִי) ḤIRIK GADOL (long ḥirik) = *ee* in bee.
(וֹ) ḤOLEM = *o* in vote, or *ou* in house.
(וּ) SHURUK = *oo* in moor, pool.
(ַ) PÁTAḤ = *a* in pat.
(ֶ) SÉGOL = *e* in bet.
(ִ) ḤÍRIK KÁTON (short ḥirik) = *i* in bit.
(ֳ) KÁMETS ḤÁTOPH = *o* in lot.
(ֻ) KÍBUTS = *u* in pull.

The vowel-points, except holem and shuruk, are written below the consonants. The ḥolem is placed above the letter, and the dot of the shuruk within the letter vau to the left (וּ).—**Round vowel**, a vowel sound uttered with rounding of the lips, as *o*, *u*.—**Vowel gradation**, the appearance, in different inflections or derivates of the same root, of several different vowels (derived, theoretically, from one original vowel) which fall into definite grades, including back and front vowels, and long, short, weak or obscure, and lost ('zero grade') vowels, the differences having been produced by variations of accent, stress, emphasis, etc., following the changes of inflection, contractions, etc., in the earlier stages of the language. Examples are, in Greek: λείπω, λέλοιπα, λιπεῖν, οἶδα, ἰδεῖν, etc.; in Latin, *tollo*, *tuli*, (*t*)*latum*, *facio*, *feci*, *frango*, *fregi*, etc.; in English, *sing*, *sang*, *sung*, *song*, *speak*, *spake*, *spoken*, *speech*, etc. Vowel gradation plays a great part in the development of the Indo-European languages, and is the sole key to many etymological problems. See *ablaut.*—**Vowel instrument.** See ★*instrument.*

vowel, *v. t.* 2. To pay (debts) by an "I O U." [Humorous.]

> Capot me, but those lads abroad are pretty fellows, let 'em say what they will. Here, sir, they will *vowel* you from father to son, to the twentieth generation. They would as soon now-a-days pay a tradesman's bill as a play debt. All sense of honour is gone. *Foote*, The Minor, i.

vox, *n.* 2. [*pl.*] In the expressions *voces Aretinæ*, *voces Belgicæ*, etc., same as *syllable*, 2.—**Vox cholerica**, the faint voice noted in states of extreme prostration, as in the algid stage of cholera.—**Vox populi**, the voice of the people; the will and wish of the people.

vraic (vrāk), *n.* [Dial. form of *wrack*¹, *n.* See *varec.*] Same as *wrack*¹, 1 (*a*). [Island of Jersey.]

> There is not much seaweed burned at the present time, and *vraic* ashes are now difficult to obtain. *Daily Cons. and Trade Rep.*, May 8, 1908, p. 6.

V. R. et I. An abbreviation of *Victoria Regina et Imperatrix*, Victoria Queen and Empress.

V. Rev. An abbreviation of *Very Reverend.*

vril-food (vril′föd), *n.* [An abbreviation of *bovril* (a kind of beef extract).] A commercial beef extract or some preparation of it.

> We also took dried boiled potatoes, pea-soup, chocolate, *vril-food*, etc. *Nansen*, Farthest North, II. 126.

vrouw (frou), *n.* [D.] Same as *frow*¹, 1.

V-shaped, *a.* 2. Having a cross-profile in the form of the capital letter V; in *phys. geog.*, said of young valleys that have been eroded by normal stream-action.

Vt. An abbreviation of *Vermont.*

vuelta (vö-el′tä), *n.* [Sp., a turn, change. See *vault*, *n.*] In *silver-refining*, the moment when all impurities have been removed from the silver under treatment. *Coal and Metal Miners' Pocketbook.*

Vul. An abbreviation of *Vulgate.*

Vulcanian² (vūl-kä′ni-a̤n), *a.* [*Vulcano*, in the Lipari Islands, + *-i-an.*] See the extract.

> An altogether different type [of volcanic action] was realized in 1888–89 at Vulcano for which Mercalli has proposed the name *Vulcanian.* It is produced when at the moment of explosion the magma is very viscous or wholly consolidated; in the first case, the bombs have the bread-crust structure with a pumiceous center and a glassy exterior; in the second case, they are formed of angular blocks which on cooling become fissured by contraction. The clouds accompanying the *Vulcanian* explosions are very dense, opaque, gray or black, with outlines extremely well defined, and lightning is frequent among them. The solid matter transported by them, whatever its dimensions, is formed of fragments or dust of rock entirely consolidated. Perfect examples of *Vulcanian* clouds have been furnished by Vulcano (trachitic), Mount Pelée (andesitic), and by the recent eruption (April, 1906) of Vesuvius (leucitic). *Smithsonian Rep.*, 1906, p. 224.

vulcanoid (vul′ka̤-noid), *n.* [NL. *vulcanus*, volcano, + *-oid.*] A name given by Shaler to those numerous 'craters' upon the moon which seem to have been produced by volcanic action, and resemble terrestrial craters except in being much larger.

> The craters are so different in size from those of the earth, many being over a hundred miles in diameter, and so numerous, overlapping and irregularly distributed that the causes leading to their formation must be very different from those of volcanoes upon the earth, and for these forms Shaler proposes the name of *vulcanoids.* The maria, or great plains, evidently belong to a category distinct from the vulcanoids, being characterized by their larger size, smoother and darker floors, and it is suggested that they may be caused by the infalling of large meteors. *Amer. Jour. Sci.*, Oct., 1904, p. 314.

vulcanologist (vul-ka̤-nol′ǭ-jist), *n.* Same as ★*volcanologist.*

> Within the memory of man all volcanic action has been subaërial, but many *vulcanologists* seem to think that some of the older eruptions have been submarine. *Geog. Jour.* (R. G. S.), X. 414.

vulgarization, *n.* 3. Popularization; the act of popularizing. [Rare.]

> We have here another of those popularizations—or, as the French might say, *vulgarizations*—of an ancient poem [Vision of Piers the Plowman] which are owing to Prof. Skeat. *N. and Q.*, 10th ser., III. 319.

vulgarizer (vul′ga̤-rī-zėr), *n.* [*vulgariz*(*e*) + *-er*¹.] 1. One who or that which makes common, coarse, or gross: as, a *vulgarizer* of popular taste.—2. One who popularizes, or makes attractive to the people. [Rare.]

vulpic (vul′pik), *a.* [NL. *vulp*(*ina*) (see def.) + *-ic.*] Noting an acid, a yellow compound, $CH_3O.COC(C_6H_5):C.C(OH):C(C_6H_5)CO.O$, contained in *Letharia vulpina* and in various other lichens. It crystallizes in thin, monoclinic plates, or in thick, transparent prisms, and melts at 148° C. Also called *methyl pulvate.*

vulpinic (vul-pin′ik), *a.* [NL. *vulpina* (see *vulpic*) + *-ic.*] Same as ★*vulpic.*

Vulsiculus (vul-sik′ṳ̄-lus), *n.* [NL., so called in allusion to the reduced number of the barbels, dim. < L. *vulsus*, pp. of *vellere*, pluck.] A genus of fishes belonging to the family *Peristediidæ*, found in deep water of the Gulf of Mexico.

vulsinite (vul′sin-īt), *n.* [L. *Vulsinii*, an ancient Etruscan tribe, + *-ite*².] In *petrog.*, a name given by H. S. Washington (1896) to lava intermediate in composition between trachyte and andesite. A trachyte containing nearly as much labradorite as orthoclase. The lava equivalent of monzonite. Compare ★*latite*, ★*trachyandesite*, and ★*trachydolerite.*

vulva, *n.*—**Vulva cerebri**, an opening into the third ventricle of the brain, beneath the anterior crus of the fornix and at the junction of the optic thalami.

vulval (vul′va̤l), *a.* Same as *vulvar.* *Buck*, Med. Handbook, IV. 321.

vulvocrural (vul-vǭ-krö′ra̤l), *a.* Relating to the vulva and the thigh; noting the crease between these two parts. *Buck*, Med. Handbook, III. 725.

vutu, *n.* See ★*futu.*

VV. An abbreviation of *violins.*

V-valley (vē′val″i), *n.* A valley whose cross-profile resembles the capital letter V.

vv. ll. An abbreviation of the Latin *variæ lectiones*, various readings.

V. W. An abbreviation of *Very Worshipful.*

W 3. An abbreviation (*h*) [*l. c.*] in a ship's log-book, of *wet dew*; (*i*) of *Western Postal District, London*; (*j*) [*l. c.*] of *wife*; (*k*) of *Wolfram*; (*l*) [*l. c.* or *cap.*] in *electrotechnics*, of *work*; (*m*) in *elect.*, of *watt*, the unit of electric power; (*n*) *naut.*, of *winter free-board line*. See ⋆*free-board*².

W. A. An abbreviation (*a*) of *West Africa*; (*b*) of *West Australia*.

waapa (wä-ä'pä), *n.* [Hawaiian, ‹ *waa*, canoe, + *pa*, a board.] A canoe made of boards; a skiff or boat.

wabash† (wâ'bash), *v. t.* [In allusion to the river *Wabash* (which means 'dirty white').] To cheat. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 264. [Illinois, Indiana, etc.]

wabbler, *n.* (*c*) A flexible coupling used in rolling-mills for the purpose of connecting the rolls in one pair of housings to those in the next and the gears next the engine to the first bench of rolls. The gears must revolve at a definite center-distance apart, in order that the teeth may mesh at their respective pitch-lines; but the rolls must be capable of adjustment at varying center-distances to allow for variations in thickness of raw and finished stock. Hence positive connection is inconvenient. These wabblers couple the ends of the rolls by the breaking pieces, which fail if too massive a piece comes into the pass between the rolls, and save the latter.

wabbles (wob'lz), *n. pl.* [*wabble*, *v.*] **1.** A disease of cattle characterized by the loss of coördination and irregular gait, caused by eating certain toxic plants.—**2.** The lesion or swelling which appears under the skin of cattle at various parts of the body caused by the warble of the ox gadfly. Also called *warbles*.

wabbling-disk (wob'ling-disk), *n.* A disk the plane of whose face is at an angle with the shaft-axis around which it revolves. It can be used as a cam-plate by causing a roller to bear upon the face of the disk so that a linear motion is produced. Called also, in England, a *swash-plate*.

wabeno (wâ-bē'nō), *n.* [Ojibwa.] A sort of juggler or sleight-of-hand performer.

waddy (wad'i), *v. t.*; pret. and pp. *waddied*, ppr. *waddying*. [*waddy*, *n.*] To strike with a waddy or club. See *waddy*. [Australian.]

> When the white thieves had left me, the black thieves
> appeared,
> My shepherds they *waddied*, my cattle they speared.
> *R. Lowe* (Viscount Sherbrooke), Songs of the Squatters, ii. 7. Quoted in E. E. Morris, Austral English.

waddy-wood (wad'i-wůd), *n.* The cheesewood, *Pittosporum bicolor*, from the wood of which chiefly the Tasmanian aborigines made their waddies. See ⋆*cheesewood* and *Pittosporum*.

wad-mill (wod'mil), *n.* In *ceram.*, a small pug-mill with a perforated bottom, through which the plastic clay 'wads,' which are used in the kiln to seal the saggars, are pressed. See *wad*¹, *n.*, 3.

wafer, *n.* (*g*) In *photog.*, chemicals employed in developing, compressed into a flat cake to be dissolved in water for use.

waffle-cutter (wof'l-kut'ėr), *n.* In *candy-making*, hinged and pivoted knives used in cutting candies into various forms resembling waffles, etc. A buttercup or satinette press is essentially the same except in the shape and size of the knives.

waffle-powder (wof'l-pou"dėr), *n.* A special large-grained powder, designed by Commodore Jeffers of the United States navy.

wage, *n.*—**Living-wage**, in *polit. econ.*, such a rate of remuneration for labor as will enable the workman, without an amount of exertion that is injurious to health or unduly burdensome, to procure whatever is necessary to maintain himself and his family in a degree of comfort which is fitting for persons of their class. The term is exceedingly flexible, sometimes referring to a wage which merely affords somewhat more than the necessities of physical existence, sometimes to a wage which would make possible a high degree of intellectual, social, and moral development.

waging-table (wā'jing-tā"bl), *n.* Same as *waging-board*.

Wagneriana (väg-nē-ri-ā'nä), *n. pl.* [*Wagner* (see def.) + *-i-* + *-ana*.] Items, details, and collections of all kinds relating to Richard Wagner, or to his theories of music and the other arts. *Athenæum*, Feb. 3, 1906, p. 147.

wagon, *n.*—**Bracket-front wagon**, a buggy made with brackets and a foot-board, which takes the place of the high dash.—**Brewster wagon**, a square box-buggy with the body suspended on cross springs attached to side-bars; notable for its lightness and simplicity.—**California wood-spring wagon**, a buggy hung upon wooden springs and thorough-braces, introduced throughout the Pacific States about 1867.—**Gospel wagon**, a large covered wagon used in open-air mission work as a vehicle of travel, and at meetings as a platform for the speaker and his assistants.—**Hurry-up wagon**, a wagon provided with extension-ladders and other equipment for the quick repairing of the overhead wires of an electric railway. [Slang.]—**Jagger wagon**, a buggy with bolsters like a farm wagon and a seat supported by two wooden springs running the full length of the body, the ends resting upon the ends of the corner posts. It takes its name from the original builder and was the first light wagon to use wooden springs of the side-bar type. Used chiefly by farmers in New Jersey.

wagon-cage (wag'ọn-kāj), *n.* A kind of box-truck for carrying cloth to be run into a bleaching-keir and elsewhere about the bleach-works.

wagon-dump (wag'ọn-dump), *n.* A machine for unloading a wagon. It consists essentially of two tilting tracks, pivoted at the center, and placed on the edge of a dock or hatchway. In their normal position the tracks are flush with the floor and are locked in place, the out-board ends being at the edge of the dock or hatchway. The tracks are of the gage of the wagon-wheels and may form a part of the platform of a weighing-scale. The wagon is backed upon the tracks and then, by means of gearing controlled by a hand crank, the tracks are unlocked and tilted up, causing the wagon to dump its load.

wahoo, *n.* **4.** A common name of *Acanthocybium solandri*, a scombroid fish of tropical seas.

Wahsatch group. See ⋆*group*¹.

wah-wah (wä'wä), *n.* [From the animal's cry.] The Bornean gibbon, *Hylobates leuciscus*. The name is used as a book-name and is frequently applied to other species of gibbons.

> As I was walking under the tree to see where my *wah-wah* was, down it came with a heavy 'thud' within two feet of me. *Hornaday*, Two Years in the Jungle, p. 418.

waibling (vīb'ling), *n.* [An abbreviation of G. *Waiblinger*, a Ghibelline (which see).] A Ghibelline. [Rare.]

Waihao series. See ⋆*series*.

Waipara formation. See ⋆*formation*.

waipiro (wä-ē-pē'rō), *n.* [Maori, ‹ *wai*, water, + *piro*, stinking.] Spirits; alcoholic drink. *E. E. Morris*, Austral English.

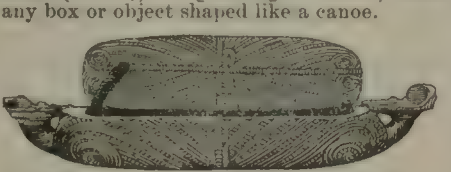
wairepo (wä-ē-rā'pō), *n.* A common name in New Zealand of *Dasybatis brevicaudatus*, a sting-ray.

waist, *n.* **5.** (*d*) In *archery*, the narrow middle or handle in a broad flat bow. Bows of this double-paddle shape are used by some primitive peoples.

waisted, *a.* **2.** Specifically, in fine English glass-ware, noting a bell-shaped cup in which the bell is slightly constricted, with a bulbous termination at the point of attachment to the stem. *Burlington Mag.*, III. 67.

waiv, *v.* and *n.* A simplified spelling of *waive*.

waka (wä'kä), *n.* [Maori.] A canoe; hence any box or object shaped like a canoe.



Waka, for holding ornaments or feathers for the hair.

wakan (wä-kän'), *a.* and *n.* [Sioux *wakan*, sacred, supernatural.] Same as ⋆*wakanda*.

wakanda (wä-kän'dä), *a.* and *n.* [Dakota *wakanda*, consider sacred.] **I.** *a.* Possessed of supernatural power; awe-inspiring; sacred.

II. *n.* Something possessed of supernatural power.

Wake percentage. See ⋆*percentage*.

wakeness (wā'kn-es), *n.* [*wake*, *a.*, + *-ness*. The fuller form would be *wakenness*. Compare *forgiveness*.] The state or time of being awake. [Rare.]

> I feele my thoughts vnknit, mine eyes vnstaied, my hart I know not how affected, or infected, my sleepes broken and full of dreames, my *wakenesse* sad and full of sighes, my selfe in all thinges vnlike my selfe. If this be loue I woulde it had neuer beene deuised.
> *Lyly*, Gallathea, iii. 1.

wakiup (wak'i-up), *n.* Same as *wickiup*.

Wal. An abbreviation of *Walloon*.

waldmeister (vält'mīs"tėr), *n.* [G., 'master of the forest.'] The German name of *Asperula odorata*, a plant used in the making of a 'maitrank' and other summer drinks, and now somewhat cultivated in the United States.

wale¹, *n.* **8.** In *wood ship-building*, one of the strakes of heavy outside planking above the turn of the bilge. In wooden war-ships, the main wales extended from the lower gun-port sills to the bottom plank, the middle wales between the main-deck ports and the gun-deck ports, and the channel wales, sometimes called *strings*, between the spar- and main-deck ports. See *bend*¹, 3 (*d*).

wale², *v. t.* Specifically, to sort or pick (coal) by hand at the mine or breaker.

wale-shore (wāl'shōr), *n.* Same as ⋆*breast-shore*.

walk, *v.* **I.** *intrans.*—**To walk away from.** See ⋆*away*.

II. *trans.*—**To walk the pegs**, in *cribbage*, a slang phrase for a method of picking up the front peg and advancing it while lifting out the back peg to score.

walk, *n.* **8.** (*d*) The process of training puppies for sporting purposes. A puppy in training is said to be *at walk*.

> The judges select the best puppies that come in from *walk*. *Eyre Hussey*, Miss Badsworth, M. F. H., xxii.

14. In the West Indies, a plantation of coffee, cinnamon, cacao, pimento, or other trees yielding valuable fruits or spices.

> In the cultivation of a young *walk*, the general and most approved system is to keep the trees perfectly clear of suckers, and to rear one stem only from one root.
> *Bryan Edwards*, A Hist. of Brit. W. Indies, II. 342.

Walking weeder. See ⋆*weeder*.

walking-stick, *n.*—**Thick-thighed walking-stick**, an American phasmid insect, *Diapheromera femorata*. See cut under *walking-stick*.

walk-out (wâk'out), *n.* A laborers' strike. [Colloq., U. S.]

wall¹, *n.*—**Anticlinal walls.** See ⋆*anticlinal*.—**Baffle wall**, a wall or partition built partly across a channel, its purpose being to retard the flow, to produce a uniform intermingling of the different portions of the flowing stream, or to detain solid matter which may be floating on the surface or rolling on the bottom. For the latter purpose the wall or partition is built to extend a short depth into the flowing stream from above, as in sewage tanks, or from the bottom upward, as in mining-sluice riffles.—**Cold wall**, the northwestern side of the Gulf Stream, east of the United States, where the warm current is bordered by much colder water.

> Between the Kuro Siwo and the Asiatic coast a band of cold water, with a slight movement to the southward, known as the Oya Siwo, forms the analogue of the "*Cold Wall*" of the Atlantic. *Encyc. Brit.*, XXXI. 405.

Dry wall, a wall built of dry masonry, that is, without mortar. It may be rough, like a wall between fields, or may be made of carefully cut ashlar with almost invisible joints, as in the naos of a Greek temple.—**Top wall**, in *mining*, a roof or hanging wall; the country rock on the top of the vein or gangway, or on the side geologically superior.—**Wall of the nail.** See ⋆*nail*.—**Walls of Troy**, a continuous pattern composed of fretwork in straight lines, used as a border decoration on pottery. See *meander*, 2.

> The body of the vessel is covered with a series of diagonal lines, between which the meander, or "*walls of Troy*" design forms the embellishment.
> *E. A. Barber*, Pottery and Porcelain of the U. S., p. 38.

Wall., Wallach. Abbreviations of *Wallachian.*

walla^2 (wol′ạ̈), *n.* [Amerindian?] One of the common names applied to a small variety of *Oncorhynchus nerka*, the blueback salmon of the Pacific coast.

wallaby, *n.*—**Agile** or **red wallaby,** *Macropus agilis*, a species common in North Australia, of a sandy gray color, and about six feet in length.—**Bennett's wallaby,** *Macropus bennetti*, the common kangaroo of Van Diemen's Land, of a dark gray color and five feet, or a little more, in total length. *Nature*, Aug. 7, 1902, p. 352.—**Red-necked wallaby,** *Macropus ruficollis*, a species of a rusty-gray color with a brighter spot on the back of the neck. It is about five feet in total length and occurs in New South Wales.—**Rock wallaby.** See ★*rock-wallaby.*

wall-brown (wâl′broun), *n.* Same as ★*gatekeeper*, 2.

wall-campimeter (wâl′kam-pim″e-tėr), *n.* In *exper. psychol.*, a large vertical campimeter for preliminary exploration of the retina: so called because hung upon a wall, in distinction to the smaller campimeters, which are constructed for use upon a table. *Amer. Jour. Psychol.*, XI. 257.

waller^3 (wâ′lėr), *n.* [G. *waller.*] A catfish, *Silurus glanis*, found in fresh waters of Europe.

wall-fountain (wâl′foun″tạn), *n.* A fountain attached to a wall and forming part of an architectural scheme.

walling^1, *n.* **3.** [*wall*^{1}, *v.*] The process of reinforcing the sides of a vertical shaft with tubbing or staves to prevent displacement sidewise by pressure of the earth. It is done either with planks or steel, or, in important and permanent workings, with brick.

> Much time can also be saved when sinking and *walling* are carried on simultaneously by the method used in several deep sinkings in South Wales.
> *Encyc. Brit.*, XXVII. 117.

4. In *billiards*, same as ★*bricole*, 4.—**Walling cribs,** cribs or massive frames, usually of oak, in the vertical shaft of a mine, upon which the walling is built or by which the tubbing is kept in place.

wall-link (wâl′link), *n.* The walking-leaf or walking-fern, *Camptosorus rhizophyllus.* See *Camptosorus.*

wall-map (wâl′map), *n.* A large map designed to be hung upon the wall of a room and to be read while in this position.

> The famous *wall-maps* in Sala dello scudo in Venice.
> *Geog. Jour.* (R. G. S.), XIII. 406.

Walloon, *n.* **4.** [*l. c.*] A disease of the tobacco-plant in which the leaves assume an abnormal erect position, regarded as due to an excess of moisture followed by drought.

wall-sculpture (wâl′skulp″tụ̄r), *n.* Sculpture carved upon a wall in relief as in the compositions to be found on Egyptian monuments.

wall-tracery (wâl′trā″sėr-i), *n.* Tracery like that of a Gothic window, but used as surface decoration for a wall, pew-end, or the like, carved in stone or wood.

walnut, *n.* **4.** In the West Indies, a name often applied to the angelin or cabbage-tree, *Vouacapoua Americana*, from its resemblance in leaf and fruit to the English walnut. See *cabbage-tree*, 2, and *Andira.*—**California black walnut,** the species *Juglans californica*, found on bottom-lands in the coast-plain of California. It is a graceful round-topped tree, reaching 60 feet in height, and is often there cultivated for shade and as a grafting-stock for the European walnut. **Dwarf walnut.** See *Mexican* ★*walnut.* -**Little walnut.** See *Mexican* ★*walnut.*—**Mexican walnut.** Same as *rock-walnut* (which see, under *walnut*). The name 'rock-walnut' is merely a translation of the systematic name, and is not found in use in any of the areas in which the tree grows. It is called *dwarf*, *little*, and *western walnut* in Texas, but farther west it is simply known as the walnut. Since, however, it ranges south into Mexico, it is sometimes called *Mexican walnut*, and as it is common in New Mexico, this seems to be an appropriate name.—**Walnut clay.** See ★*clay.*—**Western walnut.** See *Mexican* ★*walnut.*

walnut-borer (wâl′nut-bōr″ėr), *n.* Any one of several beetles similar to or identical with those affecting hickory and oak.

walnut-caterpillar (wâl′nut-kat″ėr-pil-ạ̈r), *n.* The larva of the walnut-moth. Sometimes called *royal horned walnut-caterpillar.*

walnut-weevil (wâl′nut-wē″vl), *n.* An American curculionid beetle, *Conotrachelus juglandis*, which attacks walnuts and butternuts.

walnut-worm (wâl′nut-wėrm), *n.* Any one of several lepidopterous larvæ which feed on walnut, as the larva of the royal moth, the larva of the black-walnut sphinx, *Cressonia juglandis*, the larva of the luna moth, and many others.

waltz, *v. i.*—**Waltzing mouse.** See ★*mouse.*

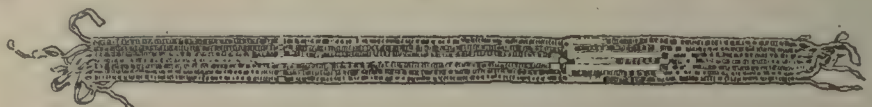
waltzer, *n.* **2.** A waltzing mouse, one of a breed whose members have the habit of spinning rapidly round and round.

> In those cases in which pictures of the *waltzers* were made, a classification of them has been made into (α) *waltzers* with less colour than Fig. 7, and (β) *waltzers* with more colour than Fig. 7.
> *A. D. Darbishire*, in Biometrika, Jan., 1904, p. 6.

waly^3, *n.* Same as ★*vali.*

wammikin (wä′mi-kin), *n.* [Prob. from a Maine Indian dialect (Passamaquoddy?). Compare also ★*wanigan* and ★*wangan*, which are forms of the same word.] A raft of square timber or long logs, on which is built a shanty with cooking and sleeping facilities, used by lumbermen in Maine. *Bartlett.*

wampum-belt (wom′pum-belt), *n.* A belt or girdle made of wampum by the Indians of the North Atlantic region, the purple and white beads being generally so arranged as to form designs. These belts were exhibited at times when important tribal events took place and thus became mnemonic records of the events.



Remembrance belt of the Iroquois, recording the treachery of a French missionary at Onondaga, who sought to summon the French army from Canada.
(In New York State Museum, Albany.)

wan^1, *a.* **II.** *n.* A wan tint or complexion; paleness. [Rare.]

> Melissa, tinged with *wan* from lack of sleep,
> Or grief, and glowing round her dewy eyes
> The circled Iris of a night of tears.
> *Tennyson*, Princess, iii.

wan^3 (vän), *n.* [G., = E. *weld*^{1}.] The German name, sometimes used in English, of the dyestuff weld (not woad).

Wanaka series. See ★*series.*

wananish (wä-nä-nish′), *n.* See *winninish*, ★*ouananiche.*

wander, *v. i.* **6.** In *phys. chem.*, to move hither and thither in every direction: said of the molecules of a liquid or of the molecules of two miscible liquids in contact with each other. *W. Ramsay*, in Findlay, The Phase Rule, p. xli.—**Wandering ants,** the ants of the family *Dorylidæ.* They lead a nomadic social life and have imperfect sight. The subfamily *Ecitoninæ* inhabit the New World and the *Dorylinæ* the Old World. *Cambridge Nat. Hist.*, VI. 175.

wanderer, *n.* **3.** An American lycænid butterfly, *Feniseca tarquinius*, wide-spread in the United States east of Kansas. Its larvæ feed upon plant-lice on alder. *Comstock*, How to Know the Butterflies, p. 237.

wanderlust (vän′der-löst), *n.* [G., < *wandern*, wander, + *lust*, desire. See *lust.*] A natural impulse to change of place; a craze for travel.

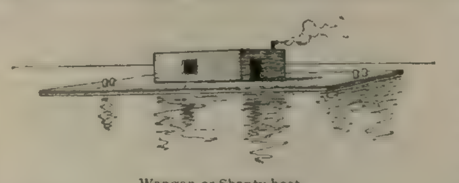
> Among these "neuroses of excitement' which at times seize upon the souls of communities, none is more inexplicable, and none more fraught with consequences to world-history than the goading restlessness which has driven single tribes or groups of tribes into aimless roving. This *Wanderlust* arises as an emotional epidemic, not by a process of reasoning. It drives communities from fixed seats and comfortable homes, transforming them into migratory and warring hordes.
> *Brinton*, Basis of Social Relations, p. 113.

wander-year (won′dėr-yēr), *n.* [Trans. of G. *Wander-jahr.*] A year of travel which it was formerly the custom, in Germany, for a journeyman to take before settling down to his employment.

> Few . . . of those to whom the romantic *wander-years* and heroic death appeal, have leisure and training to grapple with the technical Latin and hard Italian of the versatile and stormy Nolan. *Nature*, May 24, 1900, p. 77.

W. and M. An abbreviation of *William and Mary* (King and Queen).

wangan (wäng′gan), *n.* [Also *wanigan*, *wangin*; from an Algonkian dialect in Maine. A related word is *wangun.* The same word apparently appears as *wammikin.*] A boat (especially a house-boat) used chiefly by lumbermen for carrying provisions, tools, etc. [Maine.]



Wangan or Shanty-boat.

> And when the great blow was at its height the *wangan* camp, built upon the roots of the splay-foot spruces, swayed with the writhing of the roots, creaked in its timbers, and seemed to toss like a craft on a crazy sea.
> *Holman Day*, King Spruce, xvi.

Wanganui system. See ★*system.*

wanghee (wang-hē′), *n.* [Chin.] Same as *wanghee-cane.* See under *Phyllostachys.*

wanigan (wän′i-gan), *n.* Same as ★*wangan.*

wantage-rod (won′tạ̄j-rod), *n.* A scale for measuring the wantage, or empty part of a barrel or cask.

wanza (wän′zạ̈), *n.* Same as ★*auhi.*

war^1, *n.*—**Black War.** See ★*black.*—**Opium War,** a war between China and Great Britain (1840-42), which arose from the efforts of the Chinese government to stop the opium trade with India. It ended with the Treaty of Nangking, by which the five treaty ports, Canton, Amoy, Fu-chau, Ningpo, and Shang-hai, were opened to foreign trade and Hong-Kong was ceded to England with a large indemnity.—**Pastry War,** a quarrel between France and Mexico which occurred in 1838. See the extract. France sent a fleet to enforce its claims, which blockaded the coast.

> A conflict broke out, the Guerrerists were victorious, and the pillage of foreign shops in Mexico city (1828), among them that of a French baker, gave a basis for the foreign claims which, ten years later, caused the "*Pastry War*" with France. *Encyc. Brit.*, XXX. 731.

waral (wä′räl), *n.* [Ar.] See the extract.

> There are two species of lizards in Eastern Arabia—one is called dabb (Uromastix acanthinurus), and feeds only on desert vegetation; the other is called *waral* (Weranus arenarius), and eats insects, birds' eggs, etc. The latter is considered forbidden but the former lawful food. *Bulletin Amer. Geog. Soc.*, Oct., 1907, p. 601.

war-arrow (wâr′ar″ō), *n.* An arrow used in warfare.

warble-mark (wâr′bl-märk), *n.* A defective spot in a hide as delivered to the tanner, due to the attack of the bot-fly during the life of the animal from which the hide has been taken.

war-bonnet (wâr′bon″et), *n.* A head-dress which consists of a skin bonnet set with feathers of the golden eagle and often provided with a long trailer decorated with feathers, worn by the Indian warriors of North America.

war-bow (wâr′bō) *n.* In *archery*, a bow for use in war.

war-cloud (wâr′kloud), *n.* Something that portends war as a cloud portends rain.

war-club (wâr′klub), *n.* A club of wood, bone, or other material used in warfare. Such clubs show great variety in form and workmanship, and are found among nearly all primitive peoples.

ward^2, *n.* **10.** (*g*) A territorial division in the Mormon Church for purposes of ecclesiastical government. It is the administrative unit, with an executive head called a *bishop.*—**Court of Wards and Liveries.** See ★*court.*

ward^3 (wârd), *n.* [*ward*^{3}, *adv.*] A name, proposed by the Scottish engineer James Thomson, for a directed quantity as expressed graphically by the length and direction of a line.

warden^1, *n.* **5.** In Australia, a government officer, with magisterial and executive powers, in charge of a gold-field. *E. E. Morris*, Austral English.—**6.** In *freemasonry*, one of the officers of a lodge.—**Prime warden,** the chief warden.

> The *prime warden* of the Fishmongers' Company.
> *Science*, July 18, 1902, p. 118.

wardite (wârd′īt), *n.* [Named after Professor Henry A. *Ward* (1834–1906).] A hydrated aluminium phosphate which occurs as a light green incrustation in cavities of the variscite from Cedar valley, Utah.

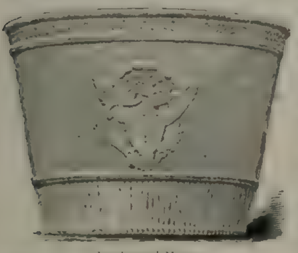
wardman, *n.* **2.** A precinct detective, particularly in New York city. On September 16, 1894, the office was abolished during an investigation of the police department of that city by the State senate in which witnesses testified to the collection by wardmen of hush money or tribute from those engaged in unlawful callings.

Ward-room news. See ★*news.*

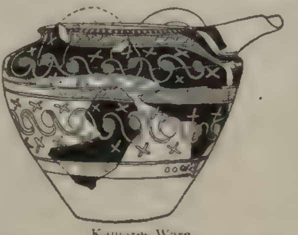
war-drum (wâr′drum), *n.* A drum used in war; especially, in Africa, a large wooden drum used to summon the warriors in case of war or sudden attack.

> An enormous *war-drum*, made entirely of wood, carved and hollowed from a single trunk, and borne by two men on a shoulder-pole. *Geog. Jour.* (R. G. S.), X. 160.

ware^{2}, *n.* — **Albert and Albertine ware**, a fine-grained, unglazed terra-cotta of a light buff color, usually seen in vases and other decorative shapes. — **Albion ware**, pottery with underglaze paintings in slip-colors, in which the greens predominate, made in Baltimore, Maryland. The subjects were Oriental, such as tiger hunts, hawking scenes, elephant rides, etc. — **Anatolian ware**, tin-enameled faïence made at Kutahia, Anatolia: usually pieces of small size with brightly colored decorations. — **Astbury ware**, earthenware made by John Astbury, an English potter, in the early part of the eighteenth century, characterized by relief ornaments stamped in white pipe-clay on a red or brown body covered with lead glaze, or a wash of white clay on the red body covered with salt glaze. — **Awaji ware**, a coarse porcelain or stoneware made in Awaji (Awadsi) Province, Japan. Also modern pottery with green and yellow glazes, made extensively for the foreign markets. — **Barbotine ware**, pottery ornamented with flowers, etc., in barbotine or slip. — **Belleek ware**, in *ceram.*, a soft-paste porcelain, closely resembling Parian, cast in molds and usually of exceeding thinness, frequently possessing a nacreous or lustrous glaze. The body was invented by William Henry Goss, a potter at Stoke-on-Trent, England. Some of his workmen afterward manufactured it at Belleek, County Fermanagh, Ireland, where it has been brought to great perfection. The Irish Belleek is characterized by a grayish-white, pearly glaze. The relief decorations are usually modeled after marine shells and other creatures. In 1882 workmen from the Belleek factory came to Trenton, New Jersey, and introduced the manufacture of egg-shell porcelain there. — **Brocaded ware.** Same as *nishikide* ★*ware.* — **Brocade painted ware.** Same as *nishikide* ★*ware.* — **Burlington white ware.** See *American* ★*pottery* (*b*). — **Camares ware.** See *Kamares* ★*ware.* — **Castleford ware**, earthenware made at Castleford, England, from about 1800 to 1820; specifically, a white ware, resembling Parian, with relief decorations. Black or Egyptian ware was also produced there at one time. — **Castor ware**, ancient Roman pottery found near Castor, England, having relief and indented decorations, somewhat similar to Samian ware. Also called *Durobrivian ware.* — **Cauliflower ware**, a cream-colored ware with embossed ornamentation colored with green glaze, in imitation of the cauliflower. This characteristic ware was produced in great abundance by English potters in the eighteenth century, in the form of cauliflower tea-pots, etc. — **Chemical ware**, in *ceram.*, ware used for chemical purposes; specifically, stoneware which, on account of its vitreous nature and great hardness, is not affected by the action of acids. — **Durobrivian ware.** See *Castor* ★*ware.* — **Eastwood ware**, earthenware of various kinds made at Eastwood, Hanley, England, by William Baddeley, among which was the black basalt, previously introduced by Josiah Wedgwood. — **Elers ware**, a red ware resembling porcelain, produced in England in the seventeenth century by the Elers brothers. — — **Etruria ware.** (*a*) The various products of the Etruria pottery, established by Josiah Wedgwood in England in 1766. (*b*) The wares produced at the Etruria pottery, Trenton, New Jersey. — **Flint-enameled ware.** See *Bennington* ★*pottery*, under *American* ★*pottery* (*b*). — **Fulham ware**, stoneware made at Fulham, England, from about 1671, by John Dwight, in the style of the old German grès cérame. Among the Continental designs which he reproduced were Bellarmine jugs, or graybeards, and pieces bearing the portraits and monograms of English kings and queens. See *old Fulham ware*, under *ware*^{2}. — **Gombroon (also Gombron, Gomron) ware**, a rather indefinite name applied to pottery supposed to have been made formerly at the town of Gombroon, or Bander-Abbas, on the Persian Gulf. Authorities differ as to the character of this ware. Some assert that it was pottery of soft body which was rubbed away from the interior, leaving only the harder shell or outside glaze ("shell-ware"); others assert that it was a creamy white pottery with perforated decorations filled in with translucent glaze; while some writers describe it as a sort of semi-porcelain of white and semi-translucent body, of Perso-Chinese origin. — **Gustafsberg ware**, pottery made at Gustafsberg, Sweden, from about 1820. Among the later productions are Parian of a fine quality, imitations of Wedgwood's jasper ware in cameo effects, mainly blue and white, and a characteristic style of carved decoration, in low relief, in which the designs appear in a different color from the ground. — **Henri II. ware**, a fine white or cream-colored pottery, beautifully inlaid with colored clays in intricate patterns, and embellished with reliefs, supposed to have been made at Oiron, France, in the sixteenth century. It was so called because some of the pieces bore the cipher of Henri II. Only sixty-seven genuine examples are known to exist. Also called *faïence d'Oiron*, which see, under *faïence*, ★*faïence à nielluro*, and *Saint-Porchaire* ★*faïence.* — **Herculaneum ware**, earthenware and porcelain made at the Herculaneum pottery, Liverpool, England, between 1794 and 1841. Among the various products of this pottery were Liverpool cream-ware pitchers with black-printed designs (see cut at *Washington* ★*pitcher*), blue-printed ware, and a fine quality of soft-paste porcelain. A marked piece of the latter, decorated in the 'Lowestoft' style, is in the Pennsylvania Museum, Philadelphia. — **Ivory-white ware**, a variety of cream-colored ware with an ivory-white glaze, made extensively in the United States for table- and toilet-services. — **Jackfield ware**, pottery made at Jackfield, Shropshire, England, in the eighteenth century; specifically, a red ware coated with a brilliant black glaze, sometimes ornamented with gilding, now much prized by collectors. — **Jet ware**, pottery, usually of a red body, covered with a brilliant black glaze. — **Kaga ware**, pottery and porcelain of the Province of Kaga, Japan. The modern Kaga pottery is of cream-colored clay with red and gold decorations. The Kaga porcelain is usually very thin, and similarly colored. — **Kamares ware**, the name given to a peculiar style of prehistoric or Mycenæan pottery which was first discovered in the excavation of the cemetery of Kamares in Crete. Its leading characteristic is a black lustrous glaze which covers the body of the vase, the decoration being in white relieved by frequent use of yellow and red, giving a fine polychromatic effect. — **Kutani ware**, pottery and porcelain first made at Kutani, Japan, but afterward produced at other places. Its most characteristic style of decoration is in red and gold. — **Lambeth delf ware.** See *Lambeth* ★*delf.* — **Leeds ware**, a fine cream-colored earthenware made at Leeds, England, in the eighteenth century, resembling the queen's-ware of Josiah Wedgwood. Among the best productions are openwork dishes, trays, and basket-work. The name is also somewhat questionably applied by collectors to a class of earthenware of light, porous body with a glaze which shows a greenish tint in the thicker parts, supposed to have been made in the Leeds district. — **Liverpool ware**, pottery or porcelain made at Liverpool, England; specifically, cream-colored earthenware produced from about 1780 to 1810. — **Lotus ware**, a soft-paste porcelain made at East Liverpool, Ohio, characterized by a beautiful white body and brilliant glaze and elaborate relief ornaments consisting of little bosses and raised network. It is usually devoid of surface coloring, being made especially for decorators. — **Lustered ware.** Same as *luster-ware*: applied also to the iridescent lustered ware of a decorative character. — **Marieberg ware**, tin-enameled faïence and soft-paste porcelain made at Marieberg, Sweden, from 1750 to 1780. The principal characteristics of this ware are rustic handles, modeled figures, relief ornaments and feet, and a purple or purplish red color in the enamel. One of the distinguishing marks is composed of three crowns above the initials MB. — **Mi Shima ware**, a variety of pottery having a characteristic style of decoration which was introduced into Japan by Korean potters.



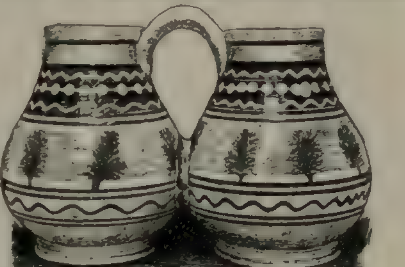
Castleford Ware
Sugar bowl, with American eagle in relief.
(In the Pennsylvania Museum, Philadelphia.)



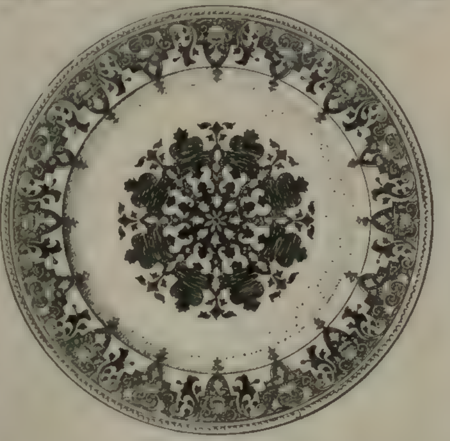
Kamares Ware.
(From "Journal of Hellenic Studies," by permission of The Council.)

> One class of Korean tea-bowls is known to the Japanese by the name of *Mishima ware*, because the formal lines of its decoration resemble at a distance the printed columns of the almanac which is issued from a famous temple at Mishima on the Tokaido, the great route from Kioto to Yedo. *S. W. Bushell*, Oriental Ceramic Art, p. 682.

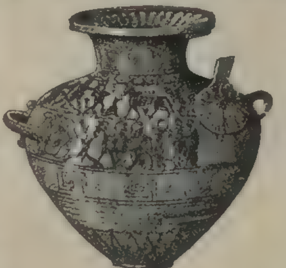
Mocha ware, a common white pottery or cream-ware decorated with dendritic or tree-like designs in black or other color, on tinted ground, first made in England in the latter part of the eighteenth century. See *Mocha stone*, under *stone*, and ★*dip-ware.* — **Moustiers ware**, a faïence made at Moustiers in southern France. The manufacture of faïence with white glaze and blue decoration was initiated at Moustiers in the latter part of the seventeenth century by one Pierre Clérissy. Later several colors were employed. The manufacture of faïence at Moustiers and elsewhere in France was much stimulated by the sumptuary laws of 1672 (Louis XIV.) which placed a heavy tax on the manufacture of plate. — **Ninsei ware**, pottery made by Ninsei, the greatest ceramic artist of Japan, whose work extended through the first half of the seventeenth century. — **Nishikide ware.** [Jap. *nishiki*, a rich brocaded silk, + *de*, a postposition, of.] A variety of Satsuma pottery with decorations resembling brocade, made by Japanese potters in the latter part of the eighteenth century. Also called *brocaded ware* and *brocade painted ware.* — **Nottingham ware**, a brown stoneware with a smooth, lustrous glaze and incised decorations, made at Nottingham, England, and its vicinity during the eighteenth century. — **Oiron ware.** Same as *faïence d'Oiron*, which see, under *faïence*; also *Henri II.* ★*ware*, ★*faïence à nielluro*, and *Saint-Porchaire* ★*faïence.* — **Oribe ware**, earthenware and porcelain made by Shino Oribe, in the Province of Owari, Japan. See *Shino* ★*pottery.* — **Owari ware**, pottery and porcelain made in Owari Province, one of the principal ceramic centers of Japan. — **Pearl ware**, a variety of white pottery invented by Josiah Wedgwood, containing more flint and china clay, and of a whiter tint, than his queen's-ware. — **Pie-crust ware**, a form of earthenware dish made by Wedgwood and his successors, having a cover representing the top crust of a pie, elaborately crimped, fluted, and decorated in relief. — **Pineapple ware**, glazed pottery made by Thomas Whieldon and his imitators in England in the eighteenth century, simulating in texture and coloring the surface of a pineapple. Compare *cauliflower* ★*ware.* — **Polledrara ware**, the name given to a peculiar form of ancient pottery found on the Polledrara estates at Vulci, Italy. It is polychromatic and resembles Bucchero Nero and Naucratic ware. — **Porto Bello ware**, red pottery stamped with white designs commemorating the Vernon expedition to Porto Bello, Panama, in 1739, made by John Astbury, an English potter of that period; also earthenware made at the Portobello pottery, near Edinburgh, Scotland, at a later period. — **Printed ware**, pottery decorated by transfer-printing. See *printed china*, under *print, v. t.* — **Red ware**, a coarse, unglazed pottery.



Mocha Ware. — English double water-jug, about 1800.



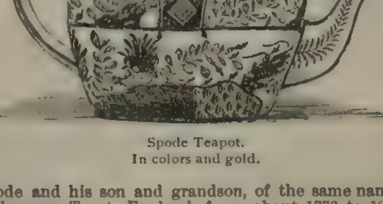
Moustiers Ware.



Polledrara Hydria.
(From "Journal of Hellenic Studies," by permission of The Council.)

> Leafield has been noted for some time for its *red-ware* pottery. *Hist. Co. Oxford*, p. 856.

Rockingham ware, earthenware and porcelain produced at a pottery on the estate of the Marquis of Rockingham, near Swinton, in England, about the end of the eighteenth century; specifically, a common yellowish-white pottery covered with a brown manganiferous and yellow mottled glaze, first made there and now manufactured extensively in England and the United States. See *flint-enameled* ★*ware.* — **Rörstrand ware**, ware made at Rörstrand, in the suburbs of Stockholm, Sweden, from about 1727. The earlier faïence produced there was similar to that made at Marieberg. The modern wares are porcelain and white stoneware. They are characterized by a bold style of relief modeling. Pâte-sur-pâte painting beneath the glaze is also practised successfully, and underglaze decoration in the style of the modern Danish porcelain. — **Seiji** (sē-i'ji) **ware**, Japanese stoneware or porcelain having a neutral gray or celadon glaze. — **Seto ware**, pottery, stoneware, and porcelain made in the village of Seto, Province of Owari, Japan. Among the most common varieties are a stoneware with celadon or pale green glaze, and a porcelain with blue decorations. — **Siderolite ware.** See ★*siderolite*, 3. — **Southwark white ware.** See *American* ★*pottery* (*b*). — **Spode ware**, earthenware and porcelain produced by Josiah Spode and his son and grandson, of the same name, at Stoke-upon-Trent, England, from about 1770 to 1833. — **Staffordshire ware**, pottery made in Staffordshire, England. The abundance of clay and coal makes it probable that this region has long been used by potters. In the ware made in the seventeenth century several varieties of clay were used and the pieces were usually decorated with slip, a creamy fluid made of clay softened in water. Lead ore, sometimes calcined, which the potters called smithum, was used in glazing. The chief coloring materials were manganese, called magnus, and oxid of copper. — **Swinton ware**, pottery and porcelain made at Swinton, England, in the latter half of the eighteenth century, particularly *Rockingham* ★*ware* (which see). — **Teco ware.** See *American* ★*pottery* (*b*). — **Toft ware**, red earthenware crudely decorated with liquid



Spode Teapot.
In colors and gold.

clay or slip poured through a quill: largely produced by the Toft family in England in the seventeenth century; hence the name. See ★*slip-decorated.*—**Tulip ware.** See *American* ★*pottery* (*b*).—**Whieldon ware,** earthenware produced in England by Thomas Whieldon in the eighteenth century, characterized by a mottled or variegated glaze resembling the coloring and marking of tortoise-shell. Also called *tortoise-shell ware* and *agate-ware.*—**White ware,** in *ceram.*, any earthenware of a white body and transparent glaze, used for table and toilet purposes, including the various grades of cream-colored ware, white granite, or ironstone china.—**Willesden ware,** the trade-name for all products resulting from the treatment described under the title *Willesden* ★*paper.* Cordage, netting, canvas, cotton cloth, and other materials consisting essentially of cellulose fibers are so treated. See also *Willesden* ★*canvas.*—**Wrotham ware,** slip-decorated ware: first made in England at Wrotham, Kent, near the beginning of the seventeenth century. See ★*slip-decorated.*—**Yellow ware,** earthenware of a yellow color, covered with a lead glaze. The body is identical with that of Rockingham ★ware (which see).

THOMAS TOFT

Toft Ware.
Eighteen-inch plaque with heads of Charles II.
(In the Pennsylvania Museum, Philadelphia.)

war-eagle (wâr′ē-gl), *n.* The golden eagle: so called because its feathers are used by North American Indian warriors in decorating their bodies, weapons, and garments. See ★*eagle.*

warehou (wä′re-hö), *n.* [Maori.] 1. The Maori name for the fish *Neptomenus brama*, called *snotgall-trevally* in Tasmania, and also *sea-bream.* *E. E. Morris*, Austral English.—2. A name in New Zealand of a carangoid fish, *Seriolella brama.*

war-game (wâr′gām), *n.* 1. See ★*kriegspiel.*—2. Military strategy; war.

> Soldier, soldier, . . . fresh from the fray,
> What of the last strategic views?
> What do you know of the *war-game's* way,
> Feint and cover and counter-ruse?
> *O. Seaman*, A Harvest of Chaff, p. 65.

war-god (wâr′god), *n.* A god of war; a deity who personifies or presides over war.

war-head (wâr′hed), *n.* The explosive head of a locomotive torpedo. It is packed with guncotton or other high explosive and provided with a detonating primer. The war-head is placed on the torpedo only when it is to be exploded, as in time of war.

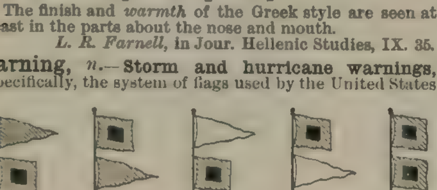
wariatu, *n.* Same as ★*warryato.*

warming-house (wâr′ming-hous), *n.* A name given (in modern times) to a heated room in medieval monasteries where the community assembled for the purpose of reading or recreation.

warmth, *n.* 5. In other fine arts, freshness, vigor, and sympathetic treatment of material, as in fine sculpture. [Rare.]

> The finish and *warmth* of the Greek style are seen at least in the parts about the nose and mouth.
> *L. R. Farnell*, in Jour. Hellenic Studies, IX. 35.

warning, *n.*—**Storm and hurricane warnings,** specifically, the system of flags used by the United States Weather Bureau to indicate the expected occurrence of strong winds. See *storm-signal*, under *signal.*—**Warning character.** See ★*character.*



U. S. Weather Bureau Storm and Hurricane Warnings.
Diagonal-lining represents the color red. A red flag with black center indicates that a storm of marked violence is expected: two red flags with black centers, displayed one above the other (right-hand figure), indicate the expected approach of a tropical hurricane or one of those extremely severe and dangerous storms which occasionally move across the Great Lakes and northern Atlantic coast. The pennants displayed with the flags indicate the direction of the wind: red, easterly (from northeast to south); white, westerly (from southwest to north). The pennant above the flag indicates that the wind is expected to blow from the northerly quadrants; below, from the southerly quadrants. By night a red light indicates easterly winds, and a white light below a red light, westerly winds. No night hurricane warnings are displayed.

warp, *n.*—**To loom the warp.** See ★*loom*1.—**To pace the warp.** See ★*pace*1.

warp-easer (wârp′ē″zėr), *n.* A bar or rod fixed at the back of a loom that is weaving leno fabrics, to ease the delivery of the crossing (or leno) warp-threads sufficiently to prevent injury to the other warp-threads. Also called *warp-slackener.* *R. Marsden*, Cotton Weaving, p. 147.

warping-cone (wâr′ping-kōn), *n.* A capstan, usually with a conical or hyperboloidal outline, used to take the hawser-chain or cable when a vessel or a load is being warped along. See *warp, v. t.*, 8. Known also as a *surging-drum* or a *warping-end;* but the latter is properly restricted to horizontal capstans, or warping-cones on the ends of motor-driven horizontal shafts. *Lockwood*, Dict. Mech. Engin. Terms.

warp-net (wârp′net), *n.* Lace made by the interlacing of bobbin- and warp-threads.

warp-reel (wârp′rēl), *n.* A cylindrical frame, usually 54 inches in circumference, for winding warp-yarn into hanks.

warp-slackener (wârp′slak″n-ėr), *n.* Same as ★*warp-easer.*

warragal, *n.* 2. A native Australian.—3. A wild horse. [Australian in all uses.]

warrant, *n.*—**Deposit warrant,** a warehouse receipt used as security for a loan.—**Escape-warrant,** in *law*, a legal process directed generally to any peace-officer to rearrest an escaped prisoner.—**Peace-warrant.** See ★*peace-warrant.*

warrant-machinist (wor′ant-ma-shē″nist), *n.* One of a corps of warrant-officers in the United States navy, established in 1899, with the same rank as boatswains, gunners, and carpenters, whose duties relate to the care and management of the propelling machinery on shipboard.

warranty, *n.*—**Express warranty,** in *law*, a warranty distinctly set forth in the terms of a contract, as distinguished from *implied* warranty.

warre2, *n.* Same as ★*whare.*

warree3, *n.* Same as ★*whare.*

warrener2 (wor′en-ėr), *n.* [Corruption of Tasmanian *yawarrenah*, the ear-shell.] A name in Tasmania of certain large marine shells, such as species of *Haliotis* and *Turbo.* See ★*mariner*2. *E. E. Morris*, Austral English.

warriater, *n.* See ★*warryato.*

warrina, *n.* Same as ★*warrener*2.

warryato (wä-ri-ä′tō), *n.* [Tamil *warra-ádú*, or *warri-átú.*] The Nilgiri ibex, *Hemitragus hylocrius*, a small species of a dark sepia brown color, with a reddish-brown saddle patch. Also *wariatu* and, incorrectly, *warriater.*

Warsaw limestone, shales. See ★*limestone*, ★*shale*2.

wart1, *n.*—**Mucous wart,** a moist, slightly elevated patch on the mucous membrane or near one of the orifices of the body. Also called *condyloma* and *mucous patch.*—**Post-mortem wart,** a wart-like growth which sometimes appears on the hands of those who make many dissections or post-mortem examinations.

wartern (wâr′tėrn), *n.* An English (Yorkshire) dialectal form of *quartern.*

wart-hog, *n.*—**Pallas's wart-hog,** *Phacochœrus æthiopicus* or *pallasi*, the species of southeastern Africa, distinguished from its northern relative by a shorter head, pendent warts, and reddish color.

wartlet, *n.*—**Dahlia wartlet.** See ★*dahlia.*

warty-back (wâr′ti-bak), *n.* A river-mussel, *Quadrula pustulosa*, used in the manufacture of pearl buttons.

warve (wârv), *n.* [A dial. form of *wharve.*] A grooved pulley on a spinning-spindle, to which power is transmitted by a band. Also called *whirl, wharre, whorl.* Same as *wherve*, 1. *Nasmith*, Cotton Spinning, p. 242.

wasabi (wä′sä-bē), *n.* [Jap.] A plant of the mustard family, *Alliaria wasabi*, cultivated in Japan for its roots, which taste like horse-radish. The grated root is served with the raw fish which forms such a prominent part of a Japanese meal.

wash, *v.* I. *trans.* 10. In *chem.*, to purify (a gas) by causing (it) to bubble through water, or some other liquid, or some special solution, by means of which foreign substances are removed. Thus hydrogen gas may be washed free of sulphureted hydrogen by passing it through a solution of lead acetate.

> The method of *washing* the gas with acid solutions of copper has been patented by Herr A. Frank of Charlottenburg, who finds that a concentrated solution of cuprous chloride in an acid, the liquid being made into a paste with kieselgühr, is the most effective.
> *Encyc. Brit.*, XXV. 39.

11. To subject, as stock, to a wash or fictitious sale. See *wash, n.*, 14. [Brokers' slang.]
II. *intrans.* 8. To both sell and buy the same stock at the same time. [Stock Exchange slang.]

wash, *n.* 15. A stony or gravelly slope of gentle declivity formed of debris washed from mountains by occasional torrential rains. [Western U. S.]

> Boulder channels or *washes* which extend . . . across the valley. *F. H. Newell*, Irrigation in U. S., p. 237.

16. An eroded or washed-out depression.

> The immediate result is a gully or *wash.*
> *Chamberlain and Salisbury*, Geol., I. 60.

> As we entered the valley (called by the Mormons a "*wash*") we were struck with its weird and desolate appearance, stretching, as it does, as far as the eye can see, naked of all vegetation except stunted sage-brush and greasewood, hemmed in on the east by high precipitous cliffs of red sandstone, with curious knobs and needles jutting upward and weathered into fantastic shapes and designs. *Amer. Inventor*, Feb. 15, 1904, p. 82.

17. The dry bed of an intermittent stream.—**Dry wash,** the dried-up bed of a stream; a watercourse unoccupied in the dry season. [Western U. S.]—**Lime, sulphur, and salt wash,** an insecticide preparation, largely used in treating trees attacked by the San José scale, made by boiling 10 pounds of lime, 6⅔ pounds of sulphur, and 5 pounds of salt, with water made up to 20 gallons.—**Oregon wash,** an insecticide preparation used for spraying plants, made by boiling 100 gallons of water with 100 pounds of sulphur and 80 pounds of lime until the sulphur is dissolved, dissolving 8 pounds of sulphate of copper in hot water, adding to 20 pounds of slaked lime, and mixing the whole together. One pound of the mixture is added to 2½ gallons of hot water for winter use, applying the liquid lukewarm, or 1 pound of the mixture to 8 or 10 gallons of water for summer use.—**Wash coat.** See ★*coat*2.

Wash. An abbreviation of *Washington* (State).

wash-book (wosh′bůk), *n.* Same as ★*flogger*, 3.

wash-drill (wosh′dril), *n.* A boring-apparatus for sand or loose earth in which a jet of water under high velocity is forced through a tube and issuing at the open lower end in the soil washes the latter from the path of the tube as it is pressed forward by its own weight or by a mechanical pressure. The water escapes around the outside of the tube and carries the loosened material to the surface with it. Also called a water-jet and similar to the latter when used in hydraulic mining.

> The borings through the alluvium were made by the "*wash drill*" or "water jet" method, and when samples were taken from time to time only the coarse material was collected, the finer being held in suspension and carried off with the water flowing from the holes.
> *Contrib. to Econ. Geol.*, U. S. Geol. Surv., Bulletin, [1907, p. 648.

wash-drum (wosh′drum), *n.* A wheel or drum with shelves or wooden projections upon its interior circumference, in which skins are cleaned or washed; a cleaning-drum.

washer, *n.*—**Blind washer.** Same as *blind* ★*flange.*—**Log washer,** in *mining*, an inclined trough in which a thick timber-shaft with projecting teeth or blades slowly revolves: used in the washing of ores containing a large proportion of clay.—**Triangular washer,** a washer or circular disk, for use under a bolt or tie-rod, cut from a cylinder by a plane which makes an angle with the base, so that one side is thicker than the other: used where the axis of the bolt is inclined to the face upon which the stress comes.

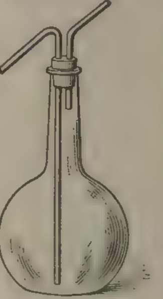
washer-wire (wosh′ėr-wīr), *n.* A special grade of brass wire cloth used in straining and cleaning paper-pulp. See ★*paper-machine.*

washery (wosh′e-ri), *n.*; pl. *washeries* (-riz). [*wash* + *-ery.*] A place where coal is sorted and sized by the use of flowing water, and by the same process is concentrated and freed from dirt and incombustible gangue.

> All the mines in the district were idle to-day, and three *washeries* which were in operation the greater part of last week were not in operation to-day.
> *N. Y. Times*, Sept. 25, 1900.

washing, *n.* 4. The purification of molten cast-iron by additions to the bath of metal in the hearth of a furnace; specifically the oxidization of phosphorus and sulphur by the addition of ores of pure oxid of iron, or those that contain manganese oxid.

washing-bottle (wosh′ing-bot″tl), *n.* A simple piece of apparatus in constant use in chemical laboratories; a wash-bottle. It consists of a glass bottle fitted with a cork or india-rubber stopper, through which pass two tubes, arranged as shown in the figure. Air blown in by the operator through the upper tube forces water out in a fine stream through the other tube, which reaches nearly to the bottom, and is drawn out to a slender jet at the outside extremity. This fine stream of water is especially useful in washing precipitates on filters. By removing the bottle from the mouth and inverting it a much larger stream can be obtained, air passing in through the jet and water running out through the tube, which is not contracted in bore. Alcohol, ether, or any other liquid may be substituted for



Washing-bottle.

water, and by using a thin-bottomed flask the liquid may be heated over a lamp-flame; in this form the arrangement is called a *washing-flask*.

washing-bulb (wosh′ing-bulb), *n.* An arrangement suggested by Liebig for washing a gas on the small scale in a chemical laboratory. It consists of a glass tube bent to the shape of the letter U, with a bulb at the bottom of the curve to contain the washing liquid, and a smaller bulb on each side to receive any of this liquid accidentally splashed over.

washing-flask (wosh′ing-flȧsk), *n.* See ★*washing-bottle*.

Washington pie, pitcher. See ★*pie*^{1}, ★*pitcher*^{2}.

Washita formation. See ★*formation*.

wash-mill (wosh′mil), *n.* A mill for washing skins after liming. *C. T. Davis*, Manuf. of Leather, p. 377.

washout, *n.* **2.** In *geol.*, a channel, eroded in one stratum and subsequently filled with material of a different character, such as the channels of shale which meander through coal-seams, cutting out the coal. *Geikie*, Text-book of Geol., p. 639.

washout-plug (wosh′out-plug), *n.* A valve in a tank or boiler or elsewhere by means of which the vessel may be cleansed by a current of water, or by outflow of the fluid contents.

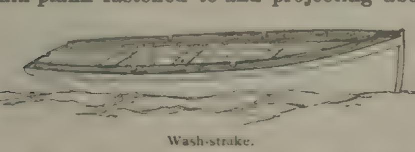
wash-pan (wosh′pan), *n.* A pan or hand jig for washing mined ore with water to concentrate the valuable part and eliminate dirt and waste.

wash-plain (wosh′plān), *n.* In *geol.*, a plain of gravel and sand washed forward from a glacier; an overwash-plain.

wash-reel (wosh′rēl), *n.* A vat or tank for washing skins. *Modern Amer. Tanning*, p. 257.

wash-room (wosh′röm), *n.* A room in which washing is done; either a laundry or a lavatory or bath-room.

wash-strake (wosh′strāk), *n.* A length of thin plank fastened to and projecting above the gunwale of a boat, or of a small, low-sided vessel, to keep out spray by thus increasing the freeboard; a wash-board. A boat's row-locks are cut in the wash-boards.



Wash-strake.

washt, *a.* A simplified spelling of *washed*.

wash-warmer (wosh′wâr″mėr), *n.* In the distillation of alcoholic liquors, a vessel to contain the wash or fermented liquid to be distilled, through which passes the pipe by which vapor is carried off from the still. This vapor undergoes partial condensation and thereby heats up the wash surrounding the pipe and allows of its being run into the still in an already hot state, thus economizing fuel. *Sadtler*, Handbook of Indust. Chem., p. 220.

wash-wheel (wosh′hwēl), *n.* A washing wheel for washing hides or skins. *C. T. Davis*, Manuf. of Leather, p. 331.

wash-work (wosh′wėrk), *n.* In water-color painting, those portions of the picture which are laid on in flat washes; also this method of painting or drawing.

wasite (wā′sīt), *n.* [*was*(*ium*) + *-ite*^{2}.] A hydrous and much-altered variety of allanite from Rönsholm, near Stockholm. It was supposed to contain a new element called ★*wasium*.

wasium (wā′si-um), *n.* [Named for Gustavus *Vasa* (*Wasa*).] A supposed new chemical element announced in 1862 by Bahr as present in a Swedish mineral resembling orthite. Its supposed oxid was probably thoria, though it may have been a mixture of earths of the yttria and ceria groups.

wasp, *n.*—**Parasitic wasps**, those true wasps which are parasitic in their habits. They belong especially to the families *Sapygidæ*, *Scoliidæ*, *Myzinidæ*, *Tiphiidæ*, *Chrysididæ*, and *Bethyllidæ*. **Thread-waisted wasp**, any member of the hymenopterous family *Sphecidæ*.—**White-faced wasp**, the large American *Vespa maculata*, which builds very large paper nests. More commonly called *white-faced hornet*.

wasp-ant (wosp′ȧnt), *n.* A member of the family *Mutillidæ*. See *Mutillidæ* and *velvet ant*, under *velvet*.

wasp-waist (wosp′wāst), *n.* A waist so tightly laced as to resemble the nearly divided body of a wasp.

> The cylinder in question, which first saw the light in Lajard's 'Culte de Mithra,' shows a person tightly cinctured, and with a *wasp-waist*, resembling the men on Mycenæan monuments.
>
> *Athenæum*, March 18, 1905, p. 344.

wassail-bowl, *n.* **2.** A rudely decorated pottery bowl, usually having slip-traced ornaments, made by English potters in the seventeenth and eighteenth centuries.

waste^1, *n.* **13.** In *phys. geog.*, detritus derived by the superficial disintegration of rock-masses and in process of removal by transporting agencies; rock-waste.—**Cop waste.** See weavers' ★*waste*.—**Old waste**, in *mining*, old or abandoned workings. *Barrowman*, Glossary.—**Weavers' waste**, the tangled clippings and broken ends of imperfectly formed thread from the spinning-room of a cotton-mill. This is the form of waste preferred in the United States as material for the manufacture of gun-cotton. Also called *cop waste*.

waste^1, *v. t.* **5.** In *stone-cutting*, to take off projecting irregularities of, as in preparing the stone for crating and transportation. Usually with *off*.

waste-block (wāst′blok), *n.* A mold or plaster flask from which a reverse mold is made. The waste-blocks receive the form of the original or pattern. The reversed molds are produced from them, and when this has been done they are of no further use; hence the name. *Lockwood*, Dict. Mech. Engin. Terms.

waster^1, *n.* **4.** (*c*) A term applied by fanciers to birds or other animals which have not bred true, but have varied from the colors of the parents and reverted more or less to the colors of the original stock.

> But now let him breed from his '*wasters*' and he will find that the extracted blacks are pure and give blacks only, that the splashed whites similarly give only whites, or splashed whites. *Nature*, Aug. 25, 1904, p. 408.

5. A cow or other animal which is wasting away in consequence of tuberculosis. [Slang.]—**6.** A marasmic infant.

waste-valve (wāst′valv), *n.* **1.** A valve through which water or other fluid may be blown out or drained away.—**2.** The blow-off valve in a steam-boiler through which water and mud, or precipitated solids in the water, can be blown to waste.—**3.** The valve or gate in the waste-weir or sluice of a dam, through which water may be wasted or allowed to flow out of the pond above the dam to relieve the latter.

waste-yarn (wāst′yärn), *n.* Yarn made from (textile) mill-waste, reworked. *Nasmith*, Cotton Spinning, p. 386.

wat^7 (wot), *n.* [*Siamese?*] A Siamese temple or monastery.

> A grove of palms about a *wat*, or monastery.
>
> *Geog. Jour.* (R. G. S.), XI. 488.

watch, *n.*—**Decimal watch**, a watch of which the dial indicates decimal fractions of an hour: used in industrial cost-keeping, etc.—**Deck watch**, an easily portable form of chronometer frequently used by travelers and explorers.—**Forecastle watch**, the watch kept at night on the topgallant forecastle, when the vessel is under way.—**Gravy-eye watch**, the deck-watch from midnight to 4 A.M., during which time the members of the crew are sleepier than at any other time, and are prone to nod over their work at the wheel or on the lookout. [Nautical slang.]—**Middle watch.** See *watch*, 6.—**Saloon watch**, the lookout maintained at night in the saloons, stewards' pantry, etc., when the vessel is either in port or at sea.—**Scuttle-butt watch**, the watch kept over the drinking barrels to see that nothing is allowed to foul the water, or that the water is not wasted.—**To keep a good watch**, to maintain vigilance and alertness.—**To keep a watch**, to be in charge of the deck; be officer of the deck; be one of the watch.—**To set the watch.** See ★*set*^{1}.—**Water-cask watch.** Same as *scuttle-butt* ★*watch*.

watch, *v. t.* **6.** To assign to a watch.

> The crew as a whole are equally divided into two watches, starboard and port. In ordinary types of cruising vessels the working force on deck is distributed as forecastlemen, fore, main and mizzen topmen, and afterguard. . . . The mechanics, musicians and servants are generally *watched* in the afterguard. [Applicable only to the old navy.] *Luce*, Seamanship, pp. 291, 293.

watch-barometer (woch′ba̤-rom″e-tėr), *n.* A pocket aneroid barometer.

watch-book (woch′bůk), *n.* A book in which is entered the time expended in the several smaller operations which together make up the time of completing a manufactured article. *Engin. Mag.*, July, 1904, p. 617.

watch-lock (woch′lok), *n.* An obsolete form of gun-lock, so named because supposed to be always ready to fire and hence used by watchmen.

watchman-beetle (woch′ma̤n-bē″tl), *n.* The European dor-beetle, *Melolontha vulgaris*.

Watchspring climber. See ★*climber*^{1}.

watchwise (woch′wīz), *adv.* In the direction of the movement of the hands of a watch; with the sun.

water, *n.* **9.** A wavy or marbled effect produced on a textile fabric, as grosgrain silk, by pressure and moisture. See *watered*.—**10.** A sheen or surface given to metal, by heat and pressure, resembling the ripples or the play of light on water.—**Acidulous water.** See ★*acidulous*.—**Blue, casual, compensation, conductivity water.** See ★*blue*, etc.—**Bottom water.** Same as *ground water* (under *water*).—**Capillary water.** See ★*soil moisture*.—**Dead water.** (*a*) See *dead-water*. (*b*) See ★*dead-water*. (*c*) Standing water, as contrasted with running or circulating water.

> If the ridge exceeded a certain height, there would be *dead water* on the lee side, and the trough would therefore silt up, diminishing the amplitude.
>
> *Geog. Jour.* (R. G. S.), XVIII. 200.
>
> Specially interesting is the discovery of quantities of sulphuretted hydrogen in the "*dead water*" at the bottom of the Frier and Drammen fjords, a condition only known to exist in the Black sea.
>
> *Geog. Jour.* (R. G. S.), XVIII. 85.

Duty of water. See ★*duty*.—**Entrained water**, in *steam-engineering*, water of condensation, spray, and water from the boiler swept along in a steam-pipe by the steam, mechanically suspended in the steam, or running along the bottom of the pipe with the steam.—**Florida water**, a perfume or toilet water similar to cologne.—**Fossil water.** See ★*fossil*.—**Gravitation water**, hydrostatic water. Same as *ground water* (under *water*).—**Hygrometric water**, that portion of the water contained in a mineral or other substance which can be driven off by heating to 100° C.—**Hygroscopic water.** See ★*soil moisture*.—**Meter of water.** See ★*meter*^{1}.—**Micellian water**, a term used by a few writers to signify the water which is produced by the union of hydrogen and oxygen existing as constituents of an aluminium acid silicate and is driven off as aqueous vapor in the so-called 'burning' of clay in the manufacture of pottery and bricks, thus permanently destroying the plasticity of the original clay.

> Only one sort of water of combination (the so-called *Micellian water* of Nageli and Van Bemmelen) is in any way a measure of plasticity. *Science*, Feb. 6, 1903, p. 213.

Physical water, in *phytogeog.*, the water or moisture actually present in a plant-formation, as distinguished from the *physiological water*. See ★*xerophyte*.—**Physiological water**, in *phytogeog.*, the water which a plant is capable of appropriating, as distinguished from the *physical water*. See ★*xerophyte*.—**Slack water.** (*c*) In *river-driving*, the temporary slackening of the current caused by the formation of a jam.—**To get first water**, to be the first to have its hose attached and water playing at a fire: said of a fire-engine: of the first importance to the reputation of an engine company. [Colloq.]

> Hence while these boats and their pipe lines are most powerful and valuable auxiliaries to the street forces, they can no more be depended upon for quick work at a remote point inland than can a steam fire engine be expected "*to get first water*" on a vessel anchored in midstream. *Sci. Amer.*, Jan. 21, 1899, p. 39.

To hang its water, in *mining*, said of a pump which fails to work on account of a defective clack-valve, or because of air above the clack, the column of water above preventing the bucket lids from opening. *Barrowman*, Glossary.—**Water friction-brake.** See ★*friction-brake*.—**Water hemisphere, itch.** See ★*hemisphere*, ★*itch*.—**Water of hydration.** See ★*hydration*.—**Water of imbibition.** See ★*imbibition*.—**Water of saturation**, in *geol.*, water which entirely fills the voids in rocks. It is contrasted with *water of* ★*imbibition*, which adheres to the particles and will not drain away.—**Water reserve.** See ★*reserve*.

water-bag, *n.* **3.** A bag of leather, rubber, or other suitable material for holding water.

water-ballast (wâ′tėr-bal″a̤st), *n.* See *ballast*, 1.

water-bearing^2 (wâ′tėr-bãr″ing), *a.* Provided with water, as a stratum which will yield an artesian flow or a series of springs.

> On the *water-bearing* rocks of Ohio.
>
> *Geog. Jour.* (R. G. S.), XVI. 371.

water-blast, *n.* **2.** In *mining*, an escape of air from an ascending working in which it has been confined and compressed by a head of water in some connecting passage with a seal at its foot.

water-blister (wâ′tėr-blis″tėr), *n.* A blister which contains a clear serous fluid, as distinguished from a blood-blister, in which the fluid is sanguineous.

water-block (wâ′tėr-blok), *n.* A hollow block, usually of iron, copper, or bronze, cooled by circulation of water in its interior, and used for forming parts of furnaces. *Phillips and Bauerman*, Elements of Metallurgy, p. 291.

water-bok (wâ′tėr-bok), *n.* Same as *water-buck*.

water-borne, *p. a.* **2.** *Naut.*, supported or sustained by the pressure of the water: said of a vessel or other object partly in and partly out of water. A vessel is partly water-borne when some part of it rests on the bottom so that its weight is supported partly by the ground and partly by its buoyancy in the water; a vessel completely water-borne is afloat.

> A vessel partially *water-borne* and partly aground loses stability as compared with her condition when afloat.
> *White*, Manual of Naval Arch., p. 124.

water-bosh (wâ′tėr-bosh), *n.* [*water* + *bosh*³.] A cistern in which puddling tools are cooled. See *puddling*, 2. *Phillips and Bauerman*, Elements of Metallurgy, p. 311.

water-bottom (wâ′tėr-bot″um), *n.* See *double* ⋆*bottom.*

water-bug, *n.*—**Creeping water-bug,** any one of the aquatic, predatory heteropterous insects of the family *Naucoridæ* (which see).

water-bush (wâ′tėr-bůsh), *n.* An Australian shrub or small tree, *Myoporum acuminatum angustifolium*, belonging to the family *Myoporaceæ.* It yields a soft, light, tough wood used for building purposes.

water-calorimeter (wâ′tėr-kal-ọ̄-rim″ė-tėr), *n.* See ⋆*calorimeter.*

water-cart, *n.* **2.** Same as ⋆*water-wagon*, 2. —**To fall off the water-cart,** to drink intoxicating liquor; to become drunk. [Slang.]

> Last night I tumbled *off the water cart* —
> It was a peacherino of a drunk.
> *Wallace Irwin*, Love Sonnets of a Hoodlum, ix.

water-cartridge (wâ′tėr-kär″trij), *n.* A form of cartridge for use in mining, in which the chamber carrying the explosive is surrounded with a water-jacket. The effect of the water is to diminish the volume of flame when ignition takes place, and lessen the chances of an explosion of gas in the workings.

water-cement (wâ′tėr-sẹ̄-ment″), *n.* Hydraulic cement. See *cement.*

water-chamber (wâ′tėr-chām″bėr), *n.* Same as ⋆*rolling-chamber.*

> Above the protective deck in that vessel a "*water-chamber*" was built, 16 feet long fore and aft, with a height of about 7 feet; its breadth could be varied (by bulkheads) from the entire breadth of the vessel at that part (67 feet) to either 51 feet or 43 feet.
> *White*, Manual of Naval Arch., p. 180.

water-cloud (wâ′tėr-kloud), *n.* A cloud that indicates the presence of water in the midst of ice- or snow-covered land.

water-color, *n.* **1.** Water-color is painting in some medium that is soluble in water. Pure water will not hold the color. Some binding substance, such as the yolk of egg or mucilage, must be added. In the form of tempera (which see), in which the medium is a solution of yolk of egg, water-color is one of the oldest forms of painting known, having been employed upon Egyptian monuments. In the middle ages and Renaissance, tempera was often used like modern water-color upon paper and absorbent canvas. In such work the representation of local color was limited. Tinted drawings were made rather than paintings. The color, moreover, always retained the opacity of the earths used and of the medium. During the seventeenth and eighteenth centuries the painters of Europe, and especially of Holland, used water-color abundantly, but always in the opaque form, the opacity being sometimes increased by the addition of white earth, forming the medium called *gouache.* The improvement of water-color has proceeded, first, in the direction of securing more transparency in the material, so that the luminosity of the underlying surface, usually white paper, becomes valuable; and, second, in the free use of local quality of color. The great advance, and indeed the perfection of the art, has been due almost entirely to the color-makers and artists of England. English water-color painting began early in the eighteenth century. There was an exhibition of such paintings in 1760 in London. The English pictures were for a long time, however, simply tinted drawings, quite monochromatic, like the Dutch. The forms were first carefully drawn with a pen; the lights and darks were then washed in with India ink, and the transparent local color was passed over. In 1780 the Messrs. Reeves of London began the preparation of water-colors commercially. This was followed by the improvement of papers by the Messrs. Whatman, and later by the still further improvement of the colors by Winsor and Newton, who as early as 1832 prepared soft colors in tubes. In this way the betterment of materials made possible the then great advances of the English painters in artistic expression and representation. In more modern times the material and method of water-color have become perfectly responsive to the impressions of nature and to the sentiment of the artist. The art has received additional impetus from the introduction of Japanese and Impressionist influences.

water-cooled (wâ′tėr-köld), *a.* Cooled by contact with circulating water. Gas-engine cylinders are frequently water-cooled. Main bearings and cross-head guides of marine engines are usually water-cooled by having water circulated through holes in the metal which surrounds the bearing.

water-cooler, *n.* (*b*) A coil of pipes, similar to a brine-cooler, for cooling distilled water by means of fresh cold water, preparatory to freezing it in making ice.

water-cow, *n.* **2.** In British Guiana, the manatee, *Trichecus inunguis.*

water-cycle (wâ′tėr-sī″kl), *n.* A boat driven by means of pedals, like a bicycle or tricycle. The power may be applied either to a paddle or to a screw-shaft, the former being the commoner arrangement, since it is more direct and less affected by friction.

waterd, *a.* A simplified spelling of *watered.*

water-devil, *n.* **3.** The predatory larva of any species of water-beetle of the genus *Dytiscus.*

water-dipper (wâ′tėr-dip″ėr), *n.* In the British West Indies, any dragon-fly.

water-dock, *n.* **2.** The goldenclub, *Orontium aquaticum.* See *Orontium.*

water-drum (wâ′tėr-drum), *n.* In *mech.*, a chamber which is filled with water while the boiler, to which it is connected or of which it is a part, is in operation; a chamber or tank at the lower end of the tubes in a water-tube boiler.

water-dwelling (wâ′tėr-dwel″ing), *n.* Same as *pile-dwelling.*

> One curious feature of the lake [Chiuta], which doubtless has been mentioned before, is the piles in the water, which still remain to mark the existence of lake dwellings. They are clustered towards the east side, and are generally situated about 50 to 200 yards from the shore. The water is now about 6 to 8 feet deep around them. These *water-dwellings* were, of course, a means of safety against raids and warfare.
> *Geog. Jour.* (R. G. S.), XV. 613.

water-elm, *n.* **2.** *Ulmus pedunculata* of central Europe. See *Ulmus.*—**3.** The planer-tree, *Planera aquatica.* See *planer-tree.*

water-fence (wâ′tėr-fens), *n.* A fence extending from a shore out into a lake or other body of water so that animals in pasture may not pass around its end.

Water-fennel oil, the volatile oil or essence obtained by distillation with water of the fruit of *Œnanthe Phellandrium.* It consists chiefly of a terpene, phellandrene, but contains also an aldehyde, phellandral, isomeric with citral.

water-fern, *n.* **3.** Same as *floating-*⋆*fern.* See ⋆*Ceratopteris.*

water-flag, *n.* **2.** The common blue flag, *Iris versicolor*, which grows in wet places or even in water.

water-floor (wâ′tėr-flōr), *n.* An arrangement of open troughs on the bottom of a room or vault for sweating hides. *C. T. Davis*, Manuf. of Leather, p. 122. [Rare.]

waterfront (wâ′tėr-frunt), *n.* Frontage upon water, as upon a river or bay; land abutting upon any considerable body of water: commonly applied to a part of a town or city that so abuts.

water-fungus (wâ′tėr-fung″gus), *n.* Same as ⋆*water-mold.*

water-gas, *n.* Two reactions may occur, represented by the formulæ $C + 2H_2O = CO_2 + 2H_2$ and $C + H_2O = CO + H_2$—the former of these chiefly at a temperature of about 500° C. and the latter at about 1000° C. Hence the product usually consists of both the oxids of carbon, mixed with hydrogen. If the incandescence of the carbon is maintained by the continuous combustion of a part of it, requiring the continuous supply of air, the nitrogen of this air is also found in the product, thus diluting it with incombustible matter. Such a mixture is used as fuel in gas-fired furnaces. If, however, the intermittent process is adopted, the supply of air being cut off as soon as the mass of coke or anthracite is glowing brightly, and steam already at a high temperature introduced, the presence of nitrogen is avoided, until by the gradual cooling down of the mass it again becomes necessary to cut off the steam and turn on the air. Water-gas made by this intermittent process is largely used as a source of artificial light, especially in cities of the United States, but, having of itself but poor illuminating power, it requires to be "carbureted" by mixture with the vapor from hydrocarbon oils and strongly heating the mixture.—**Semi-water gas,** gas made in a water-gas apparatus, but having a calorific value equal to about one half that of true water-gas.

water-glass, *n.* **4.** A glass water-gage to indicate to the eye the level of the water in a steam-boiler.

water-gnat (wâ′tėr-nat), *n.* A popular name in England of *Limnobates stagnorum*, a true aquatic bug.

water-gowan (wâ′tėr-gou″an), *n.* Same as *meadow-gowan* (which see, under *gowan*).

water-grate (wâ′tėr-grāt), *n.* A grate having hollow bars through which water circulates. [Rare.]

water-gum, *n.* **2.** See ⋆*gum*² (*b*).

water-haul (wâ′tėr-hâl), *n.* In *fishing*, a haul with nothing in the net but water: as, to make a *water-haul*, that is, catch no fish. Hence, a failure; a fruitless operation.

water-heater, *n.* **2.** A gas or gasolene heater for supplying hot water to a bath, lavatory, or kitchen boiler. It consists of a system of pipes or vessels, through which a stream or film of water may pass and be exposed to a large heating surface, and one or more Bunsen gas-burners, the whole being inclosed in a suitable casing and connected with a supply of water and gas.

water-horizon (wâ′tėr-họ̄-rī″zọn), *n.* A series of porous strata which yield a supply of water to wells.

> The wells in the red sandstone are generally deeper, but no *water-horizons* are as yet recognized. There are many wells in the valley of the Passaic from Paterson south to Newark, and particularly in the vicinity of Passaic and in the city of Newark, which supply large manufacturing establishments and individual home consumption.
> *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1900, [p. xx.

water-horsepower (wâ″tėr-hôrs′pou-ėr), *n.* The unit used in British India to describe the work-capacity of falling water, in streams and water-courses. If water is considered as weighing 62.5 pounds per cubic foot, then 8.8 cubic feet falling one foot in one second will develop 550 foot-pounds per second or one horse-power in a perfect motor. In round figures, the actual motor is assumed to have a practical efficiency of nearly 60 per cent., so that 15 cubic feet of water will actually give a net horse-power, and this is the figure used.

water-hyacinth (wâ′tėr-hī″ạ̈-sinth), *n.* See ⋆*Piaropus.*

water-ice, *n.* **2.** Ice formed by freezing part of a body of water: contrasted with *snow-ice*, ⋆*glacier-ice, névé, firn.* *Geikie*, Text-book of Geol., p. 189.

watering-town (wâ′tėr-ing-toun″), *n.* A watering-place. [Rare.]

> The Caucasian railway, . . . went south-westwards across North Caucasia to Vladikavkáz, and to the *watering towns* around Pyatigórsk.
> *Geog. Jour.* (R. G. S), XVI. 224.

watering-trough, *n.* **2.** In *railroading*, a portion of a railroad track fitted with a very long, shallow iron trough placed on the ties between the rails. This trough is kept full of water and furnishes a supply for passing locomotives. The tender is fitted with a curved, hinged pipe, which has an open scoop-like mouth, and which, on being lowered into the water in the trough, serves as a scoop, lifting the water into the tank of the tender by the motion of the tender as it passes over the trough. The engine is said to 'pick up' its water at the watering-trough.

water-jacket (wâ′tėr-jak″et), *v. t.*; pret. and pp. *water-jacketed*, ppr. *water-jacketing.* To surround or fit with a water-jacket.

> The cylinder [of gas engine] is shown as *water-jacketed.*
> *Encyc. Brit.*, XXVIII. 183.

water-jags (wâ′tėr-jagz), *n.* Varicella. [Prov.]

water-jar (wâ′tėr-jär), *n.* A jar for holding water.

water-jet (wâ′tėr-jet), *n.* **1.** A device for the propulsion of vessels consisting of a jet of water expelled forcibly from the stern. The reaction in the chamber from which the jet issues is a force acting to send the hull in the direction opposite to that of the motion of the jet. The same mechanical energy used to create this unbalanced pressure is more effective if applied to direct propulsion by screw or paddle-wheel.

> The *water-jet* or hydraulic propeller cannot be regarded as a serious competitor with the screw or paddle-wheel, but it has attracted so much attention and been so strongly recommended that it cannot be left unnoticed.
> *White*, Manual of Naval Arch., p. 572.

2. A boring-apparatus using a jet of water from a nozle at high velocity, for excavating holes in soft earth or removing soil from the face of a bluff or bank. The flowing water erodes the loosened earth, and the latter flows away as silt suspended in the water. Used in hydraulic mining. When used for boring vertical holes it may also be called a ⋆*wash-drill* (which see).

water-kibble (wâ′tėr-kib″l), *n.* A water-bucket used in mines or shafts for hoisting water by the water-bucket system. The bucket is of sheet-steel with a valve in the bottom opening inward, so as to allow the bucket or skip to fill automatically when dropped into the sump or pocket at the bottom of the hoisting shaft. In many places the water-bucket system of draining the mines is cheaper and more efficient than the pumping system. [Eng.]

water-ladder (wâ′tėr-lad″ėr), *n.* A contrivance composed of pole-guides up and down which a barrel slides in filling a sprinkler by horse-power. [U. S.]

waterlaid, *a.* 2. In *geol.*, deposited in or by water: contrasted with *Æolian*^{1}, 2.

Soon after the skeleton was embedded in the stony debris, or lay exposed on its surface, the geologic conditions that appear to have long prevailed were somewhat suddenly changed, and there ensued a more rapid deposition of the very fine *waterlaid* loess, deeply enveloping the bones before they had time to be generally removed by decay under the influences of the weather and infiltrating air and water.
Sci. Amer. Sup., Feb. 14, 1903, p. 22679.

water-level, *n.* 3. In *mining*, a heading or gangway so nearly horizontal that drainage water in it flows very sluggishly or hardly at all.

water-lily, *n.*—**Little water-lily,** the water-shield or water-target, *Brasenia Schreberi.*

water-lime, *n.*—**Bertie water-lime.** See *Salina* ★*beds.*

water-logging (wâ′tėr-log″ing), *n.* The act or process of becoming water-logged; specifically, in *irrigation*, the saturation of the soil by an excess of water, generally accompanied by an excess of so-called alkali or earthy salts. *H. M. Wilson*, Irrigation Engineering, p. 38.

water-mallow (wâ′tėr-mal′ō), *n.* See ★*mallow.*

water-mama (wâ″tėr-mä′mä), *n.* In British Guiana, a water-sprite: a name given by the English colonists to mythical beings, supposed by the Carib and Arawak Indians to live in secluded streams and pools, into which they entice passers-by to their destruction. The water-mamas are of both sexes and are described as resembling the Indian men and women. Similar myths are common in other South American tribes.

Waterman calorimeter. See ★*calorimeter.*

water-maple, *n.* 2. The silver maple.—3. The mountain-maple.

water-master (wâ′tėr-mås″tėr), *n.* The superintendent or other officer in charge of the distribution of water from an irrigating canal or ditch. Locally named in California *zanjero*, and in New Mexico *majordomo. F. H. Newell*, Irrigation in U. S., p. 107.

water-mica (wâ′tėr-mī′kä), *n.* See ★*mica*^{2}.

water-millet (wâ′tėr-mil″et), *n.* See ★*millet*^{1}.

water-mold (wâ′tėr-mōld), *n.* An aquatic fungus, especially a member of the family *Saprolegniaceæ.* The water-molds grow mostly on decaying animal matter lying in the water. Compare *Saprolegnia.*

water-moth, *n.* 2. Any pyralid moth of the genus *Nymphula* whose larvæ are aquatic or subaquatic.

water-nymph, *n.* 4. Any dragon-fly.

water-oak, *n.* 3. See ★*oak.*

water-opal (wâ′tėr-ō″pal), *n.* Same as *hyalite.*

water-packed (wâ′tėr-pakt), *p. a.* Packed wet: applied to a cotton-bale which has been packed with wet cotton and is therefore more or less unmerchantable.

Cotton that is *water-packed* is liable to foster the growth of mildew, and this is probably the cause of the musty scent that sometimes emanates from such *water-packed* bales.
Hannan, Textile Fibres of Commerce, p. 112.

water-pan (wâ′tėr-pan), *n.* A slough.

Abdulla, our taciturn Midgan guide and tracker, points across a long dull-red depression, evidently in better times of rain a *water-pan*, to a distant cluster of brown irregular mounds. *Geog. Jour.* (R. G. S.), XI. 41.

water-pipe, *n.* 3. A narghile or hooka.

water-piston (wâ′tėr-pis″ton), *n.* 1. The piston of a pump by which the water is actuated.—2. A system for exhausting or compressing air or gases in which the level of water in a chamber is alternately raised and lowered mechanically. The increase of volume above the surface of the water, as it is lowered, causes an inflow into the chamber above such surface; and the rise of the surface expels the air or gas, less only so much as the water absorbs. The same result can be attained with oil, or with a liquid which does not absorb the gas even under pressure. The surface of the water is raised and lowered by the intrusion and withdrawal of a displacing plunger below the level of the water at its lowest point. The volume of the plunger would be displaced at each traverse. *G. Lunge.* Sulphuric Acid, III. 77.

water-plane, *n.* 2. The irregular surface of the underground water usually forming an inclined plane toward the sea or other system of drainage. The oscillations of the water-plane as recorded by a float and revolving drum at Maghull, eight miles northeast of Liverpool, by Isaac Roberts, seem to show that it is influenced by the sun, moon, tide, atmospheric pressure, temperature, and rainfall. 3. The level which marks the height of a body of water and often is indicated, after the water's departure, by beaches. Such water-planes may afterward be tilted by earth-movements.

The various elements are projected, with exaggeration of heights, on a vertical plane running a little west of south, or parallel to the direction of greatest inclination of old *water-planes.*
G. K. Gilbert, in Smithsonian Rep., 1890, p 241.

water-pocket (wâ′tėr-pok″et), *n.* 1. A cavity or mass of porous rock containing water; a water-hole. Chiefly current in the southwestern United States, where the Spanish equivalent *bolson* is often also used.—2. Same as ★*pocket*, 12.—3. Any depressed point or place in which water or other liquid may gather.

This system not only drains the piping itself, but also the *water-pockets* in the various valves.
Elect. World and Engin., Feb. 27, 1904, p. 397.

water-polo (wâ′tėr-pō″lō), *n.* A game, played in a swimming-tank, in which the contestants, in the water, toss a large rubber ball similar to a foot-ball. There are goals at either end against which the ball must be placed to score.

water-poppy (wâ′tėr-pop″i), *n.* See ★*Hydrocleys.*

water-port (wâ′tėr-pôrt), *n.* An opening or area in a surface through which water may pass, as in the valve-chamber of a reciprocating water-motor.

water-pouch (wâ′tėr-pouch), *n.* One of the large pockets, or cells, of the first and second compartments of the stomach in camels: so called because they retain water for a considerable period.

water-prairie (wâ′tėr-prā″ri), *n.* A saline playa; a salina. [Southwestern U. S.]

water-prick (wâ′tėr-prik), *n.* A slight imperfection on the grain of skins caused by too much soaking in water. *Modern Amer. Tanning*, p. 247.

Water-reel process. See ★*process.*

water-rheostat (wâ′tėr-rē″ọ-stat), *n.* A rheostat in which the resistance is due to a mass of water of fixed dimensions.

water-right (wâ′tėr-rīt), *n.* The legal right to the use (of a specified quantity or body) of water; in particular, the right to the use of water for the purpose of irrigation. See ★*right, n.*

Among] the classes of contracts which have been productive of either discontent or abuses are, first, perpetual *water-rights.* Under these contracts the user pays a certain amount per acre for all the land on the canal, whether he irrigates it or not. These contracts usually specify a certain duty which has been fixed before the needs of the lands or the crops to be cultivated were known. *Yearbook U. S. Dept. Agr.*, 1899, p. 39.

water-rocket (wâ′tėr-rok″et), *n.* 3. See the extract.

All waterfalls tend to break up into conical masses called *water-rockets*, and in rare cases a fall may be seen which consists of a slow procession of well-separated "rockets" ranged in roughly horizontal lines. A case is described in which this beautiful appearance was due to the formation of roll-waves above the fall.
Nature, April 18, 1907, p. 597.

water-rolled (wâ′tėr-rōld), *a.* Rolled along by water: specially applied to boulders or pebbles which, beginning as angular masses, have had their corners worn off by being rolled along in a current of water. Rounded water-rolled pebbles may thus be contrasted with angular glacial pebbles.

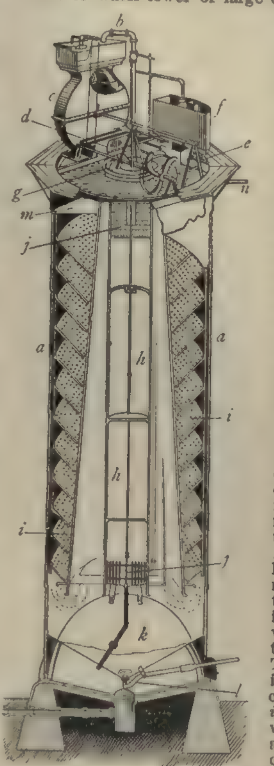
watershed, *n.* 2. The area drained by a river and all its tributaries.

water-shot (wâ′tėr-shot), *a.* Said of a ship when its position is such that it is moored midway between cross-tide and up and down stream.

water-sick (wâ′tėr-sik), *a.* A colloquial term, not in common use, applied to irrigated land which has received an excess of water, causing it to be heavy or soggy and not adapted to cultivation. *L. M. Wilcox*, Irrigation Farming, p. 439.

water-slide (wâ′tėr-slīd), *n.* A trough partly filled with water through which logs are slid from the rolling-bank to the mill. *Dialect Notes*, II. vi.

water-softener (wâ′tėr-sôf″nėr), *n.* An arrangement for removing from a natural water the salts of calcium and magnesium so as to fit it for use in steam-boilers without producing scale. The water to be treated is passed through a tank or water-tower of large dimensions, in which it receives an automatically regulated addition of the necessary chemicals, slaked lime and soda-ash, remains long enough to become clear by subsidence of the precipitate formed, and is run off by an outlet pipe at the top of the tank in a purified or softened condition. See ★*hardness*, 2. The figure shows a cross-section of a water-softener used to supply soft water to a railroad water-tank, the house on top of the tall cylindrical tank having been removed. At the top is the pipe which delivers the raw water to the tank at the left. From this tank the water flows down to a water-wheel, inclosed in the cylindrical casing, the power thus obtained being used to operate the water-mixing machinery, and then flows into a deep central well in the tower. At the right is the tank holding the chemical reagents, and in front, the scoop-wheel for taking up the softened water used in mixing the chemical solutions. The raw water flowing into the well in the center, called the *mixing-chamber*, is mixed with the dissolved reagents that are kept constantly agitated by the stirring-machine shown at the bottom and top of the mixing-chamber. When saturated the water overflows at the top into the cone-shaped annular space surrounding the mixing-chamber and flows in a solid stream down to the bottom where it turns upward in the outside annular space and rises through the perforated baffle-plates. During this downward and upward flow through the machine the raw water parts with its impurities, and the precipitates fall to the bottom of the tower. The reaction is most rapid at the start and the larger part of the now solid impurities fall at once. All that remains is caught and removed by the baffle-plates; and the now soft water passes upward through a filter, that removes any matter mechanically suspended in it, and fills the annular tank shown at the top of the tower, from which it is led away by the pipe at the right to the storage-tank. Other types of water-softening machines employ the same general principles, with somewhat different arrangement of tanks and mixing-chambers, and reach the same results by slightly different methods of practice.



Water-softener.

a, a, steel tower; *b*, in-take; *c*, water-motor for operating machinery; *d*, mixing-tank; *e*, scoop-wheel delivering soft water to tank; *f*, tank for chemical reagents; *g*, saturated water flowing into top of conical down-take where impurities settle; *h, h*, down-take; *i, i*, up-take, with baffle-plates; *j, j*, stirring-machinery; *k*, settling-tank; *l*, dump-valve; *m*, filters; *n*, outlet to railroad tank. Average height of tower, forty feet; capacity, from 10,000 to 30,000 gallons an hour.

water-spread (wâ′tėr-spred), *n.* Spread or expanse of water. [Rare.]

The *water-spread* of ancient times, however, appears to have been very great, possibly almost double that of to-day. *Bulletin Amer. Geog. Soc.*, Oct., 1907, p. 584.

water-sprout (wâ′tėr-sprout), *n.* In *hort.*, a vigorous, sappy, adventitious shoot in a tree or bush, usually arising because of heavy pruning or other unbalance of the plant.

As soon as the rainy season begins the trunk and larger branches put forth numerous *water sprouts*, which grow rapidly and at first seem to be perfectly healthy.
U. S. Dept. Agr., Div. Veg. Physiol. and Pathol., Bulletin 8, 1896, p. 10.

waterstone (wâ′tėr-stōn), *n.* 1. Marly limestone capable of yielding hydraulic cement. Compare *water-lime.*—2. pl. [*cap.*] In *English geol.*, a division of the Keuper.

water-strider, *n.*—**Broad-shouldered water-strider,** any one of the aquatic heteropterous insects of the family *Veliidæ*; so called on account of the broad prothorax. *Comstock*, Manual of Insects, p. 134.

water-stroke (wâ′tėr-strōk), *n.* Same as *water-brain fever.*

water-struck (wâ′tėr-struk), *a.* Said of bricks which have been dipped in water after leaving the mold and before firing. Interesting texture is produced in this way.

water-stuff (wâ′tėr-stuf), *n.* A translation and adoption of the German name (Wasserstoff) for hydrogen.

water-table, *n.* 4. In soil investigations, the upper surface of the gravitation or ground water; the upward limit of soil and rock saturation. See ★*soil moisture.*

[The] level, below which the rock and subsoil (down to

unknown depths) are full of water, is known as the ground-water level, ground-water surface, or *water-table*.
Chamberlin and Salisbury, Geol., I. 67.

5. In *car-building*, a window ledge.

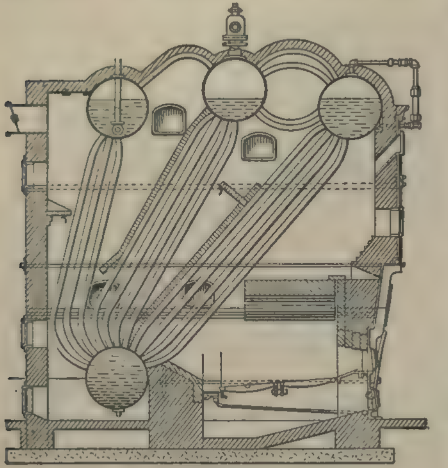
water-tender (wâ′tėr-ten′dėr), *n.* *Naut.*, a person whose duty it is to see that the proper level of water is maintained in the boilers and to regulate the supply of feed-water for that purpose.

Water-tight deck. See ★*deck*, 2.

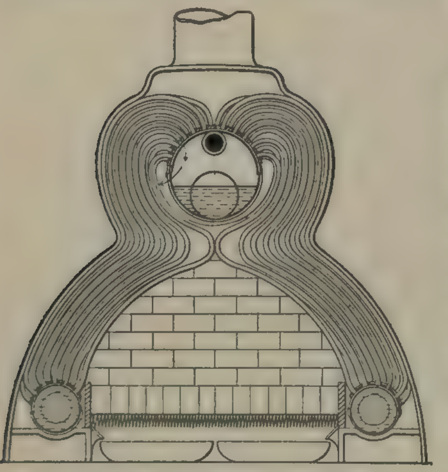
water-tower, *n.* 2. A tower, in a system of water-supply, in which water is kept to maintain a constant head or pressure and also to permit a considerable draft of water to be made from the system, in case of fire, before the pumping-engines are speeded up to the increased demand.—3. A tower in which a spray of falling water cools and cleanses an ascending current of gas.

water-tree, *n.* 2. In Australia, a tree of the family *Proteaceæ*, *Hakea leucoptera*, so called from the fact that in the arid districts which it frequents good drinking water may be obtained from its fleshy roots. It yields a soft, coarse-grained wood. Called also *needle-bush* and *pin-bush*. See ★*needle-bush*.

Water-tube boilers. Water-tube boilers are made in many forms. The tubes may be in long or short coils, or they may be straight, connected into headers at their two ends; they may be inclined at angles from the vertical line or from the horizontal line; and they may be sectional boilers or non-sectional. They may be used on the flash principle, or semi-flash, or they may be worked as continuous generators with a reserve content of heated water. Water-tube boilers are particularly well adapted for high pressures and temperatures of steam, and lend themselves easily to combination with superheating apparatus.



Inclined Vertical Water-tube Boiler.



Curved-tube Water-tube Boiler.

water-valve (wâ′tėr-valv), *n.* 1. A valve for controlling water.—2. Specifically, the feed-valve controlling entry of feed-water into a boiler. [Eng.]—3. A relief-valve, or cylinder-cock, or automatic snifting-valve, designed to let out water from the cylinder of a steam-engine.

water-vein (wâ′tėr-vān), *n.* A crevice containing water, and capable of yielding it to a well or other excavation.

water-wagon (wâ′tėr-wag″ọn), *n.* 1. A cart, such as a sprinkling-cart, designed to carry water.—2. Figuratively, total abstinence. [Slang.]

"To be on the *water wagon*," to abstain from hard drinks.
Dialect Notes, II. vi.

water-wheel, *n.*—**Impulse water-wheel,** one in which the impact of a jet of water striking on the revolving wheel is made to do work. Same as *impulse-wheel* (which see, under *wheel*1).—**Reaction water-wheel,** a form of rotating water-motor in which the pressure and velocity due to a head of water are directed upon curved vanes or buckets whose shapes utilize not only the impulse effect of the water, but also enable the latter to work by reaction as the direction of flow through the motor is changed, thus making both water and motor more effective.

watt, *n.*—**False watts.** Same as *phantom* ★*watts*.—**Phantom watts,** in alternating-current circuits, with lagging or leading current, the difference between the apparent watts (or the product of volts and amperes) and the true watts (or the above product multiplied by the power-factor). Also *false watts*.

wattage (wot′ạj), *n.* [*watt* + *-age*.] The rating in watts, of any electrical machine or device, of the power required to operate it: as, the *wattage* of a glow-lamp.

Dividing the kilowatt-hours mentioned by said number of lamps shows an average per lamp at station of 463.8 watts, deducting from which 9 per cent. for line loss, shows a net *wattage* per lamp at lamp terminal of 422.
Elect. World and Engin., June 27, 1903, p. 1095.

Watteau (vä-tō′), *n.* The name of a celebrated French painter, sometimes used to designate costume such as appears in his pictures: as, a *Watteau* bodice; a *Watteau* mantle.

wattevillite (vät′vil-īt), *n.* [Named after M. de *Watteville*, of Paris.] A hydrous sulphate of calcium and sodium which occurs in fine fibrous crystalline aggregates: derived from the alteration of pyrite at Bischofsheim, Bavaria.

watt-hour (wot′our), *n.* The energy derived from an activity or power of one watt maintained for one hour: a practical unit of energy.—**Watt-hour meter,** in *elect.*, an instrument for the measurement of energy, reading directly in watt-hours.

Wattled lapwing. Same as *wattled plover* (which see, under *wattled*).

wattless (wot′les), *a.* In *elect.*, consuming no power. A wattless alternating current is a current differing in phase by 90 degrees from the electromotive force; a wattless electromotive force is an electromotive force differing in phase by 90 degrees from the current. A better term is *reactive*.

wattman (wot′man̈), *n.* [*watt* + *man*: English in form but not in use.] See the extract.

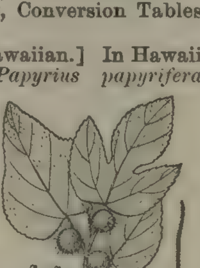
"*Wattman.*"—This term is employed in France to designate the engineer-driver of an electric carriage.
F. P. Marchant, in N. and Q., 9th ser., XII. 147.

wattmeter, *n.*—**Induction-wattmeter,** a wattmeter so constructed that no current is supplied to the moving parts, the armature, which is usually a metal disk, revolving under the direct inductive action of the currents in the fixed coils.—**Recording wattmeter,** an instrument for recording the power developed in an electric circuit. See *wattmeter*. *Trans. Amer. Inst. Elect. Engin.*, 1900, p. 657.

watt-minute (wot′min″it), *n.* The work done in one minute of time by the expenditure of one watt of power; one sixtieth of a watt-hour.

watt-second (wot′sek″ọnd), *n.* The work done in one second of time by the expenditure of one watt of power; one sixtieth of a watt-minute. *C. Hering*, Conversion Tables, p. 74.

wauke (wou′kā), *n.* [Hawaiian.] In Hawaii, the paper-mulberry, *Papyrius papyrifera*, the inner bark of which was used for making the paper cloth or kapa of the natives. It was formerly much cultivated. Called also *waoke*. See *Broussonetia*, ★*kapa*, 1, and *tapa*.



Wauke
(*Papyrius papyrifera*).
a, branch with pistillate inflorescence; *b*, pistillate flower; *c*, staminate flower.

wauregan (wâ-rē′gạn), *a.* [Mohican *wauregan*, Massachusetts *wunnegan*, good, fine, pleasant, delightful, *wunnegik*, *wanegik*, that which is good.] Good; fine; showy.

Wauregan. A word which, according to Bartlett, was in the last quarter of the nineteenth century "still local in and about Norwich, Conn.," in the sense of "fine, showy." It appears frequently in the earlier literature of New England. It is best known from the epitaph (by Dr. Elisha Tracy) on the tombstone of Uncas, the Mohegan Indian, in the burying-ground at Norwich:—

For courage bold, for things *wauregan*,
He was the glory of Moheagon.

The word is derived from the Mohican (Mohegan) *wauregan* (Massachusetts *wunnegen*), "good, fine, pleasant, delightful," the radical being the Algonkian *wan* (*wun*, *war*, etc.), "good, beautiful." As a place-name it appears in Wauregan, Conn.
Jour. Amer. Folk-lore, Oct.–Dec., 1902, p. 265.

wave1, *n.* 10. A manufacturers' name for a defect in articles of glass, consisting in a slightly protuberant ridge on the surface due to the glass having cooled irregularly and too much before blowing.—**Capillary wave,** a surface wave on a liquid such as water, the wave-length of which is so small that the principal force acting to restore the liquid to equilibrium is that due to surface tension. Same as ★*ripple*3, 3.—**Compressional wave,** a wave in an elastic medium due to the sudden application of a pressure which does not produce shearing. In such waves the vibratory motion of the individual particles is perpendicular to the wave front. Sound-waves in air and other media are compressional waves.—**Concentric waves,** waves which start from a common source and consequently have parallel fronts.—**Condensational wave,** a wave of compression.—**Cosmic wave,** a wave traversing interplanetary or interstellar space.—**Electromagnetic waves,** the method by which energy is supposed to be transferred from the sun to the earth, or from the transmitter to the receiver in the systems of wireless telegraphy, namely, by vibrations in planes perpendicular to the lines of propagation.—**Extraordinary wave,** that one of the two waves in a doubly refracting medium which undergoes extraordinary refraction. See *refraction*.—**Fessenden wave,** an electric oscillation which follows a conductor and for which the electrostatic and electromagnetic energies coincide as to time.—**Gravitational wave,** a water wave of which the wave-length is so great that the effect of surface-tension is inappreciable.—**Hertz wave.** See *Hertzian* ★*wave*.—**Hertzian wave,** an electromagnetic disturbance of the ether similar to a light-wave but of much greater wave-length: so named from Heinrich Hertz, who, in 1888, first showed experimentally how such waves may be produced and made a thorough investigation of their properties. See *wave*1, 3.

We see references to what are called "*Hertzian waves.*" These are waves identical in nature with light waves, but of much lower pitch or period. Red light consists of about four hundred millions of millions of electrical waves in the ether per second; blue or violet light about double that number. Hertz showed in his experiments that electric sparks between polished balls, under proper conditions, were attended by ether waves of the same nature as those of light, but having a pitch represented by some millions of vibrations per second. These waves, however, could be reflected, could be refracted, could be polarized, and be dealt with as if they were light waves.
E. Thomson, in Smithsonian Rep., 1900, p. 356.

High-frequency wave, a wave due to the vibrations of a body or medium the oscillations of which are very rapid. The term 'high frequency' is purely relative. Thus the waves of the ultra-violet portions of the spectrum are high-frequency waves compared with those of the infra-red; the sound-waves giving tones near the upper auditory limit are high-frequency waves compared to waves corresponding to the lower auditory limit; and the electric oscillations in a Tesla coil send out high-frequency waves in contrast to those from an ordinary induction-coil. See ★*frequency*, 3.—**Lodge wave,** an electric oscillation which follows a conductor and for which the electrostatic energy is a maximum at the instant when the electromagnetic energy is a minimum: named for Sir Oliver Lodge.—**Plane wave,** in *physics*, a wave the front of which is a plane. The wave reflected from a concave mirror is a plane wave when the source from which the incident wave reaches the mirror is at the principal focus of the latter.—**Pole of a wave.** See ★*pole*2.—**Slab wave.** See ★*slab-wave*.—**Solitary wave,** a translatory wave of water in which the water actually moves forward but does not produce other waves.—**Spherical wave,** in *phys.*, a wave, as a light-wave or sound-wave, the front of which forms part of the surface of a sphere. All waves coming from a single point and transmitted through an isotropic medium are spherical waves.—**Standing wave,** the form of undulatory disturbance produced by the interference of wave trains under conditions such as to form a system of nodes and antinodes that are stationary in space, as in an organ-pipe.—**Stationary wave,** the sinusoidal curve in which a particle of fluid moves after being forced out of its original rectilinear motion by the presence of some obstacle and left free to return to equilibrium. According to Margules the areas of high pressure and low pressure in the atmosphere may be the summits and troughs of stationary waves. A series of clouds marks the summits of a series of stationary atmospheric waves to the leeward of a mountain.—**Tonal wave.** Same as ★*tone-wave*.—**Trochoidal theory of the deep-sea wave,** in *naval arch.*, a theory in which the sea is supposed to be of unlimited extent and depth, and the water a frictionless incompressible liquid. Supposing a permanent uniform system of deep-sea waves to have been set up in the water, the dynamical and mathematical conditions of wave-motion are satisfied by considering each fluid particle to be moving with uniform velocity in a vertical circular orbit the plane of which is parallel to the direction of motion of the wave. The radius of the orbit of any particle diminishes rapidly with the depth from the surface in accordance with a certain formula. If we consider a circle the circumference of which is equal to the length of the wave from crest to crest to roll on a horizontal line at its top, any fixed point in the interior of the circle will describe a trochoid which will be the profile of the wave-surface or of a wave-subsurface. If we suppose the water originally at rest to be divided into horizontal layers, then the particles on the surface layer are all on the trochoidal wave-surface and each subsurface layer will be in a corresponding trochoidal wave-subsurface. The radius of the tracing-point of a trochoid in the interior of the rolling circle is the radius of the orbit of any particle in the wave-subsurface considered. The height of the wave is the vertical distance from trough to crest, equal to the diameter of the orbit of the particles in the surface layer. The period of the wave is the uniform time each particle takes to make one revolution in its orbit, which is also the time required for the crest of the wave to travel its own length. The speed of advance of the wave crest, in feet per second, is equal to 2¼ times the square root of the length approximately. The complete statement of the theory requires elaborate mathematical treatment. It is to be remarked that while the form of the wave has a continuous motion of translation, the particles forming the wave only rotate around a fixed center. It is obvious that a compound wave can be formed by the superposition of several simple trochoidal waves upon one another. Experience shows that in the ocean a long regular series of waves approximates closely to the motions called for by the trochoidal theory. To retain such practical conformity, the depth of water must not be less than the wave-length. In water of less depth the orbits of the particles become ellipses with the major axes horizontal.— **Water wave,** a wave of which the medium of propagation is water. The term *water wave* is frequently confined to surface waves on water, waves of the nature of sound-waves, which are transmitted through the interior of the fluid, being excluded.— **Wave indicator,** a device, such as an oscillograph, for showing the wave-form of an alternating electric current.— **Wave of displacement,** the wave set up by the bow of a vessel moving through the water or by a projectile moving through a fluid.— **Wave of explosion,** the propagation of an explosion from particle to particle through an explosive mixture, either radially from a center or longitudinally from one end to the other of a train of particles. The velocity depends on the chemicals, the size of the particles, the temperature, the closeness of packing or density, etc. The velocity of propagation through a mixture of oxygen and hydrogen is 28.14 meters per second, whereas the velocity of a sound-wave is 514 meters per second. The intensity of any explosion depends largely on the velocity of the wave of explosion.— **Wave of replacement,** the wave having its origin at the stern of a vessel or a projectile which is moving through a fluid. *White,* Manual of Naval Arch., p. 458.— **Wave velocity.** See ★*velocity.*

wave-crest (wāv′krest), *n.* The highest part of a wave or the line along the top of a wave.

wave-cut (wāv′kut), *a.* In *geol.*, a term applied to forms produced by the erosive action of waves.

> Vertically, the waves cut in a narrow zone like a horizontal saw. If the material above this zone of cutting is undermined, it may fall of its own weight, leaving a cliff at the shoreward margin of the cut. This cliff is called a *wave-cut* cliff or sea-cliff.
> *R. D. Salisbury,* in Geol. Surv. of New Jersey, 1893, p. [232.

wave-cylinder (wāv′sil″in-dėr), *n.* A hollow metal cylinder for use in the wave-siren. Two wave-forms are set out as curves around the periphery of the cylinder, above and below, and the edges are then cut away along the line of the curves. Several such cylinders may be mounted upon the same vertical axis.

wave-detector (wāv′dẹ̄-tek″tọ̈r), *n.* A ★coherer.

> The centre of interest in wireless telegraphy seems to be shifting from the *wave-detector* or coherer to the means of producing the energy required to act upon it.
> *Athenæum,* March 18, 1905.

wave-disk (wāv′disk), *n.* A metal disk for use in the wave-siren. The wave-form required is set out as a curve around the periphery of the disk, and the edge is then cut away along the line of the curve. *Smithsonian Rep.*, 1890, p. 349.

wave-form (wāv′fôrm), *n.* The form assumed by oscillations, as in water, sand, etc.

> The Gill Memorial to Mr. Vaughan Cornish, for his researches on sea-beaches, sand-dunes, and on *wave-forms* in water. *Geog. Jour.* (R. G. S.), XV. 639.

wave-mark (wāv′märk), *n.* The small ridge of sand heaped up by a wave at the limit of its advance when rolling in on a beach. Wave-marks are often preserved when the sand subsequently is buried and consolidated into rock. *J. D. Dana,* Manual of Geol. (4th ed.), p. 94.

wave-marked (wāv′märkt), *a.* Ripple-marked.

> This stratum has an extension of at least ten miles. About five and a half miles south of Versailles, the top of the Lorraine is formed by a *wavemarked* layer of limestone. *Amer. Geol.*, June, 1903, p. 356.

wave-marking (wāv′mär″king), *n.* A ripple-mark; ripple-marks collectively.

> The lowest Richmond beds at Lebanon, Ohio, are wave-marked. Numerous other instances of *wavemarking* at this horizon might be given.
> *Amer. Geol.*, June, 1903, p. 356.

wave-motor (wāv′mō-tọ̈r), *n.* A machine or apparatus designed to render the energy in the waves of a body of water, as the sea or a bay, available as a source of power. Such motors are of several forms: some use the impact of the breaking wave against a surface; others the rise and fall of floating masses as the waves pass under and lift them; others the rush of masses of water up a sloping beach. Such motors have difficulty with the variation of the tides and they are liable to wreckage in storms. The waves are not uniform in their action, and the power is not subject to control. They are more used on the Pacific coast than on the Atlantic, but are not reliable or long-lived anywhere.

wave-rate (wāv′rāt), *n.* In *acoustics,* vibration-rate; pitch-number.

> Two musical notes whose *wave-rates* do not differ at least a fifth of a vibration a second, seem to the most delicate ear to be of identical pitch.
> *G. M. Stratton,* Exper. Psychol. and its Bearing upon [Culture, p. 83.

wave-siren (wāv′sī″ren), *n.* [Translation of F. *sirène à ondes.*] A siren in which a current of air is driven through a narrow slit against an undulatory curve, of determinate form, cut in a metal plate: very much as, in the ordinary siren, the current is driven through circular orifices against holes of circular form. *Smithsonian Rep.*, 1890, p. 353.

wave-slope (wāv′slōp), *n.* In *naval arch.*, the angle of inclination of the surface of a wave at any point to the horizontal. *White,* Manual of Naval Arch., p. 212.—**Effective wave-slope.** The slope of the surface of a wave at any point is its inclination to the true horizontal at that point, and the instantaneous direction of the resultant fluid pressure on the outer wave-surface is normal to the wave-slope. In the similar subsurfaces in the interior of the wave, the direction of the resultant pressure differs less from the true vertical. A rigid body like a ship is affected by the fluid pressures in all the surfaces to which it penetrates, and the average resultant direction of the pressures is normal to the average or effective wave-slope in the part considered.

wave-train (wāv′trān), *n.* A series or succession of equidistant waves, sent out along the same path by a vibrating body.

waw^5 (wou), *n.* [Heb. *wāw.*] The sixth letter (ו) of the Hebrew alphabet, corresponding to the English *w* (*v*) or the Latin *v* (whence it appears as modern *v* in the English form of the Hebrew words. Its numerical value is VI.

wax^2, *n.*— **Andaquies wax,** a wax, produced by a wild bee found in the Orinoco and Amazon valleys in South America, used in making candles.— **Arjun wax.** Same as *Indian* ★*wax.*— **Balanophore wax,** a wax of the consistency of natural beeswax obtained from the parenchymatous tissue of *Langsdorffia hypogæa,* a native of Brazil.— **Bayberry wax.** Same as *myrtle-wax.*— **Becuiba-wax.** Same as *becuiba-tallow,* which see, under *tallow.*— **Black wax.** (*a*) Beeswax mixed with rosin and coal-tar, formerly in use in arsenals in making cartridges. (*b*) Black sealing-wax. (*c*) A local name in Texas for sticky clay containing much black-colored humus.— **Candleberry wax.** Same as *myrtle-wax.*— **Cane-sugar wax.** Same as *cerosin,* $C_{24}H_{18}O$.— **Cochineal wax.** See ★*cochineal.*— **Cork-wax.** Same as *cerin,* 2.— **Cow-tree wax.** See ★*cow-tree.*— **Earth-wax.** Same as *ozocerite* or *mineral wax.*— **Fig wax,** a vegetable wax, obtained from the sap of the wax fig-tree, *Ficus ceriflua* or *cerifera,* found in Java and Sumatra. Used in making candles. Also known as *Java wax* or *getah wax.*— **Indian wax,** an insect wax from *Ceroplastes ceriferus.* Also known as *Arjun wax.* — **Insect wax,** wax secreted by the Chinese wax-insect, *Ericerus pela* (*Coccus sinensis* or *C. pela*). Also known as *Chinese wax* and *pehla* or *pe-la wax.*— **Java wax.** Same as *fig* ★*wax.*— **Milk-tree wax,** a resinous, yellowish, waxy solid contained, to the extent of 30-35 per cent., in the sap of the South American cow-tree, milk-tree, or *palo de vaca, Brosimum galactodendron.* It is used by the natives for making candles.— **Myrtle-berry wax.** Same as *myrtle-wax.*— **Opium wax,** a white crystalline substance, a mixture of ceryl cerotate and palmitate, from the seed-vessels of the poppy, *Papaver somniferum.*— **Sugar-cane wax,** a white crystalline substance found on the surface of the stem of the sugar-cane, particularly the violet cane, which can easily be scraped off, and is sometimes seen in the melted state floating on the surface of evaporating cane juice. It appears to consist chiefly of ceryl cerotate and palmitate.— **Yellow wax,** a manufacturers' name for the last distilled product obtained from petroleum when the bottom of the still begins to be red-hot. It consists of impure anthracene, chrysene, picene, and other hydrocarbons of high molecular weight.

wax^3 (waks), *v. t.* [*wax*^{3}, *n.*] To beat; thrash. [Colloq.]

wax-butter (waks′but″ėr), *n.* A semisolid substance produced by the destructive distillation of beeswax. It consists mainly of the hydrocarbons cerotene and melissene with palmitic acid.

wax-extractor (waks′eks-trak″tọr), *n.* In *bee-keeping,* an appliance for melting empty honeycomb to extract and clarify the beeswax. The most simple form is a wooden box having a glass cover and containing a tray for the comb and a vessel to catch the melting wax. Exposed to bright sunlight, the comb under the glass readily melts and runs down the tray into the vessel. A larger appliance consists of a sheet-metal vessel fitted with a wire basket and screw-press. The comb is placed in the basket and a little water is put in the bottom of the vessel; when this is placed on a stove, the steam from the water melts the wax, causing it to run out through a spout, the press assisting the process by squeezing the wax out of the melting comb.

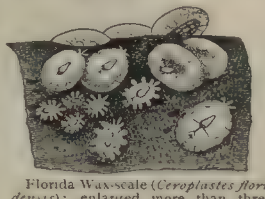
wax-gland (waks′gland), *n.* A minute unicellular dermal gland which secretes wax. Wax-glands are found in the abdominal integument of certain bees and are variously scattered over the surface of the body in very many homopterous insects.

wax-hair (waks′hãr), *n.* One of the long hairs which occur on the bodies of the young of the *Psyllidæ* or flea-lice. *Cambridge Nat. Hist.*, VI. 580.

wax-leather (waks′leᴛʜ″ėr), *n.* Leather finished on the flush side. *Flemming,* Practical Tanning, p. 264.

wax-press (waks′pres), *n.* See ★*wax-extractor.*

wax-scale (waks′skāl), *n.* 1. See *wax-insect,* 1. —2. One of the plates of wax in a wax-pocket of a wax-insect.— **Florida wax-scale,** a wide-spread scale-insect, *Ceroplastes floridensis,* which occurs in most of the warmer parts of the world and lives on many tropical and subtropical plants, including some of economic importance, as orange, lemon, fig, tea, guava, mango, and pomegranate.



Florida Wax-scale (*Ceroplastes floridensis*): enlarged more than three diameters. (Marlatt, U. S. D. A.)

> The *Florida wax scale* is three-brooded, development not being very rapid and extending over three or four months. The adult female insect, covered as it is with its waxy secretion, measures from 2 to 3 millimeters in length, is oval in form, and is characterized by a large central waxy prominence surrounded by six or eight smaller prominences, all, owing to the melting and cooling of the wax, much less distinctly limited than with [the species to be next considered. The waxy secretions give an appearance to the young insect of an oval stellate object. *Yearbook U. S. Dept. Agr.*, 1900, p. 277.

waxt, *p. a.* A simplified spelling of *waxed.*

way^1, *n.*— **Combust way.** See ★*combust.*— **Four-foot way.** See *six-foot* ★*way.*— **Maintenance of way,** in *railroading,* the business of caring for, repairing, guarding, and maintaining in a safe and efficient condition the road-bed, bridges, culverts, embankments, and tracks that form the permanent way. It is generally a department under the control of a division superintendent.— **Right of way.** (*d*) A lane.

> In England the word indicates a legal right to use a particular passage. In Australia it is used for the passage or lane itself. *E. E. Morris,* Austral English.

Six-foot way, a local railroad term for the foot-path or space between two tracks left for safety in passing trains and for convenience in repairing the tracks. Sometimes called *four-foot way.* [Rare.]— **Sun's way.** See ★*sun*^{1}. — **Way enough,** an order to stop rowing.— **Way of the wine,** movement or passage from left to right, as wine is circulated at table.

> We caught only a hurried glimpse as we passed on; for the order in which the sights of a Buddhist temple may be visited is invariable, and we took care not to offend the susceptibilities of the lamas by deviating from the orthodox left-to-right course which forms part of their religious observances. The '*way of the wine*' is a custom which would need no explanation to a Buddhist.
> *P. Landon,* The Opening of Tibet, p. 389.

wayang (wä′yäng), *n.* [Javanese and Malay *wāyang,* a stage play, with puppets or with living actors.] The shadow-play of Java, played with colored marionettes cut out of flat pieces of leather.

way-gone (wā′gôn), *a.* Wearied by travel; exhausted by walking. [Rare.]

> Who halts at prospect of the pinnacle
> That gives him note his journey's end is nigh,
> Except with fever of inquietude?
> *Way-gone* and crippled, rather would he on,
> Than lay him down and rest another night.
> *J. S. Knowles,* The Secretary, iii. 1.

way-surface (wā′sėr″fạ̄s), *n.* A bearing surface or track along which the laterally moving part of any mechanism slides: as, the *way-surface* of a milling-machine or of a dividing-engine.

> Only one of the three *way-surfaces* used to be accurately straight.
> *A. A. Michelson,* in Physical Review, June, 1905, p. 390.

W. B. An abbreviation (*a*) of *Water Board;* (*b*) of *way-bill.*

W. B. M. An abbreviation of *Woman's Board of Missions.*

W. C. An abbreviation (*a*) [*l. c.* or *cap.*] of *water-closet;* (*b*) of *Wesleyan Chapel;* (*c*) of *Western Central* (*London Postal District*); (*d*) [*l. c.*] of *without charge.*

W. C. A. An abbreviation of *Women's Christian Association.*

W. C. T. U. An abbreviation of *Woman's Christian Temperance Union.*

We. An abbreviation of *Wednesday.*

weakfish, *n.*—**Bastard weakfish.** Same as *white weakfish* (which see, under *weakfish*).

wealth-flow (welth′flō), *n.* Income; the amount of wealth which comes into existence in a fixed period of time. *Baldwin,* Dict. of Philos. and Psychol., I. 155. [Rare.]

wealth-fund (welth'fund), *n.* The aggregate of wealth which exists at a given moment, as contrasted with the income which comes into existence in a given time. The wealth-fund is regarded by some economists as capital, rightly conceived. *Baldwin*, Dict. of Philos. and Psychol., I. 155.

weaner (wē'nėr), *n.* A metal guard fastened to the nose of a sucking calf to wean it; a calf-weaner.

wear¹, *v. t.*—**To wear ship**, to put the helm up and bring the vessel around to a new tack by changing the wind across the stern. This is done in a heavy sea when tacking is not advisable owing to the danger of missing stays, and the accompanying chance of getting sternboard on the vessel.

weather, *n.*—**Broken weather**, unsettled weather.—**Falling weather**, rainy or snowy weather; weather which threatens rain, hail, or snow.—**Radiation weather**, the general atmospheric conditions peculiar to the clear dry atmosphere which prevails within areas of high pressure or descending air when terrestrial radiation of heat has its maximum influence.—**Weather forecaster.** See ★*forecaster.*

weather-card (weᴛʜ'ėr-kärd), *n.* A diagram showing the average or typical weather conditions as to pressure, temperature, wind, cloud, rain and local thunder-storms, tornadoes, and waterspouts on each side of the moving areas of high or low barometric pressure.

weather-case (weᴛʜ'ėr-kās), *n.* A case or small cupboard containing aneroids, thermometers, and hygrometers, and instructions for their use in making local forecasts: originally furnished by the United States Signal Service to voluntary observers.

weather-cloth, *n.* (*c*) The tarpaulin or sail sometimes exposed in the after weather rigging to keep a ship's head forced up to the sea and wind when she is hove to.

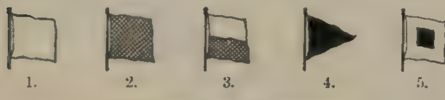
weather-cycle (weᴛʜ'ėr-sī″kl), *n.* The periodic recurrence of any feature of the weather. Such cycles are rarely definite enough to allow judicious forecasts to be based upon them. The ordinary weather may be regarded as complexly compounded from innumerable unknown cycles.

weather-deck (weᴛʜ'ėr-dek), *n.* *Naut.*, an uncovered deck exposed to the weather.

weather-door (weᴛʜ'ėr-dōr), *n.* **1.** A storm-door.—**2.** A swinging door or trap-door in an air-passage or gangway of a mine, designed to be closed in winds or storms. *Coal and Metal Miners' Pocketbook.*

Weathered clay. See ★*clay.*—**Weathered crust.** See ★*crust.*

weather-flag (weᴛʜ'ėr-flag), *n.* A flag used as a weather signal; specifically, one of the flags used by the United States Weather Bureau since 1891 to indicate the character of the weather expected to occur at the locality within thirty-six hours.



U. S. Weather Bureau Weather-flags.

Cross-hatching represents the color blue. The flags indicate: 1, alone, fair weather, stationary temperature; 2, alone, rain or snow, stationary temperature; 3, alone, local rain or snow, stationary temperature; 1, with 4 above it, fair weather, warmer; 1, with 4 below it, fair weather, colder; 2, with 4 above it, rain or snow, warmer; 2, with 4 below it, rain or snow, colder; 3, with 4 above it, local rain or snow, warmer; 3, with 4 below it, local rain or snow, colder; 5, cold wave.

weather-forecast (weᴛʜ'ėr-fōr″kȧst), *n.* A prediction of anticipated weather; specifically, the official published daily weather predictions (formerly known as weather indications or weather probabilities) for the next 24, 36, or 48 hours, based on the comparative study of daily weather-charts. Not to be confounded with *seasonal forecasts.*

weather-gaw (weᴛʜ'ėr-gâ), *n.* Same as *water-gall*, 2.

weather-guard (weᴛʜ'ėr-gärd), *n.* A protection or shelter against (bad) weather or storms.

weather-guard (weᴛʜ'ėr-gärd), *v. t.* To guard against (bad) weather or storms.

> The pioneers attend to this work, trenching the ground, *weather-guarding* the shelters.
> *Buck*, Med. Handbook, I. 477.

weathering, *n.*—**Belt of weathering**, the outer portion of the earth, which stands between the surface and the ground water, and which is therefore subject to active percolation. See *belt of* ★*solution.* *Van Hise*, in U. S. Geol. Surv., Monographs XLVII. i. 43.

weather-lights (weᴛʜ'ėr-līts), *n. pl.* The auroral light, so called because supposed by some to be indicative of approaching dry weather, or the result of preceding clear, cool weather. The term is also applied to the very distant flashes of light known as 'heat-lightning' or 'sheet-lightning,' which often follow a hot summer day and are supposed to be due to the heat, although they are generally due to the existence of thunder-storms in the distance.

weather-lore (weᴛʜ'ėr-lōr), *n.* The accumulated proverbs and superstitions relative to the weather, especially in its relation to man, animals, the stars, the moon, and plants.

weather-period (weᴛʜ'ėr-pē″ri-ọd), *n.* **1.** A cycle of time within which one or more types of weather may recur regularly.—**2.** An indefinite period of time within which certain weather changes repeat themselves in a given order of recurrence but without restriction as to the variable duration of the period.

weather-register (weᴛʜ'ėr-rej″is-tėr), *n.* An hourly or daily meteorological record of weather conditions at any station; a register kept by observers, as distinguished from an automatic record of conditions.

weather-rope (weᴛʜ'ėr-rōp), *n.* A tarred rope; a rope that will shed water owing to a coating of tar on its surface.

weather-sharp (weᴛʜ'ėr-shärp), *n.* One who understands the weather; a good weather forecaster; an official meteorologist. [Colloq.]

weather-shooting (weᴛʜ'ėr-shö″ting), *n.* The attempt to produce rain by the detonation of explosives or the sending up of smoke-rings or vortex-rings from specially constructed cannon. [Colloq.]

weather-table (weᴛʜ'ėr-tā″bl), *n.* Same as *water-table*, 1.

> A *weather-table* on the north wall [of a crypt at Iona] indicated that the side aisles had at one time extended westward to the transept.
> *The Antiquary*, Jan., 1906, p. 7.

weather-type (weᴛʜ'ėr-tīp), *n.* A distinctive kind of weather experienced at any station when the centers of high and low pressure have certain specific locations relative to the station. Very many such types have been described. Abercromby characterizes British types by the prevailing winds, namely: (1) the southerly wind-type, in which an anticyclone lies to the east or southeast of Great Britain; (2) the westerly wind-type, in which the tropical belt of anticyclone lies to the south of Great Britain; (3) the northerly wind-type, in which the anti-cyclone or the eastern part of the tropical belt of high pressure lies to the west and northwest of Great Britain; (4) the easterly wind-type, in which the high pressure of Asia and southern Europe appears in the northeast of Europe, rarely extending beyond the coast-line, while the Atlantic high pressure is feeble or absent.

weather-whistle (weᴛʜ'ėr-hwis″l), *n.* A signal given by means of a whistle, usually the steam-whistle of a factory, to announce to the public the forecast of the local weather and temperature for the next twenty-four hours as telegraphed from the Weather Bureau at Washington. The signal consists of a succession of long blasts and short blasts; for example, one long blast, fair weather; two long, rain or snow; three long, local rain or snow; four long, heavy snow; one short, lower temperature; two short, higher temperature; three short, a cold wave.

weav, *v.* and *n.* A simplified spelling of *weave*¹.

weavable (wē'vạ-bl), *a.* [*weave*¹ + *-able.*] Capable of being woven.

weave¹, *n.*—**Batavia weave**, a kind of twilled armure weave made on four harnesses.—**Cross-warp weave**, a weave in which the warp-threads cross one another in regular order, as in gauze- or leno-weaving.—**Plain weave**, the simplest form of weaving; the alternate interlacing of the warp-threads with the weft-threads. Sometimes called *cotton-weave.*

weaver, *n.*—**Cobweb weaver**, any spider of the family *Theridiidæ*, many of which inhabit houses. *Comstock*, Manual of Insects, p. 34.—**Social weaver**, *Philhetærus socius*, a weaver-bird of Central Africa which nests in companies of a hundred or more, building a structure as large as a hay-stack.

web, *n.*—**Half-tone web**, a glass plate containing two sets of opaque lines crossed at right angles, forming a dark ground pierced with small, transparent squares, used for the purpose of getting lines and dots in the negative.

webbing, *n.* **4.** *pl.* Reins. [Slang.]

> You did an infernal fool trick, but you 've saved me Tommy Eye, the best teamster on the Umcolcus waters. As he lies there now he ain't worth half a cent a pound to feed to cats; when he 's on a load with the *webbin's* in his hands I would n't take ten thousand dollars for him.
> *Holman Day*, King Spruce, iii.

webbing-moth (web'ing-môth), *n.* Any one of the true clothes-moths.

Weber-Fechner law. See ★*law*¹.

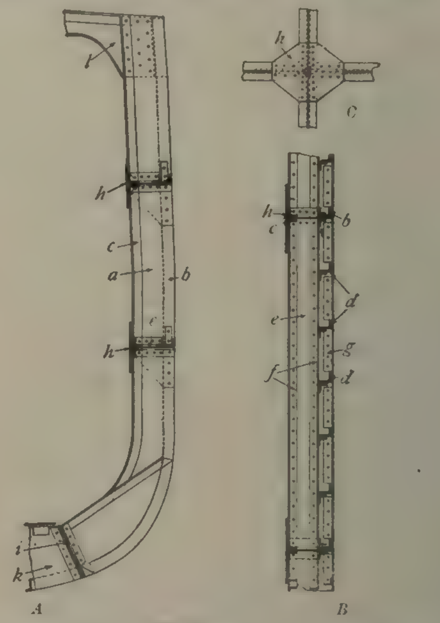
Weber formation. See ★*formation.*

web-foot, *n.* **2.** A native, or citizen of the State of Oregon: so called on account of the moist climate. *N. and Q.*, 9th ser., VII. 135. [Slang.]

web-footed, *a.* **2.** Said of a horse which goes best on a muddy or very wet track. [Racing slang.]

> Ravena and Bill Phillips, which finished second and third to Reddick, are by Clifford and Ornament respectively, both racers that were able to run stoutly on any kind of a track. The fifth event finds Saladin the winner, and he is by Albert, who, it has been said, never bred anything but *web-footed* colts and fillies.
> *N. Y. Evening Sun*, Aug. 17, 1905.

web-frame (web'frām), *n.* In *iron ship-building*, an extra strong frame composed of a frame-bar and a web-plate stiffened at the back edge by angle-bars. Such web-frames are fitted in place of every fourth, fifth, or sixth ordinary frame, where there are no hold-beams, or in spaces such as engine-rooms where there is great depth of side unsupported between the bottom and the lowest deck. See cut. On a merchant vessel the arrangement of the frames in the manner shown is called the *web-frame system.* On war-ships frames of the same character are frequently called *belt-frames*, and in such cases all the frames in a given region are usually of a web construction.



Web-frame.

A, elevation of web-frame and section of side-stringers; *B*, plan of side-stringer and section of frames; *C*, side elevation of junction of web-frame and stringer; *a*, web-plate; *b*, frame-bar; *c*, double reverse bars; *d*, ordinary frames; *e*, stringer-plate; *f*, stringer-bars; *g*, intercostal clip; *h*, diamond-plate; *i*, margin-plate; *k*, floor-plate; *l*, deck-beam.

web-member (web'mem″bėr), *n.* An element in a truss or braced girder, either in tension or compression, by which the stresses are conveyed from top chord to bottom chord, or in the reverse direction, and which acts as the solid web-plate does in the solid I-beam or the plate-girder.

webnerite (web'nėr-īt), *n.* [Named for A. *Webner*, a mining engineer.] Same as ★*andorite.*

web-plate (web'plāt), *n.* In a beam made to resist transverse or bending stress, the plate in the plane of the action of the load which joins the upper and lower flanges of the beam, resists the tendency to buckle, and withstands the shear. In very deep plate-girders, the web or vertical plate requires to be reinforced to prevent it from deforming under load: this is done by angle-irons or by extra plates.

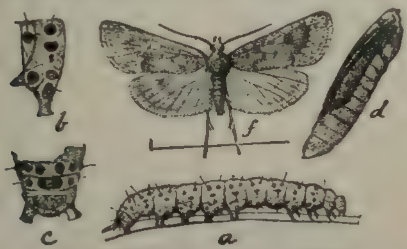
webskyite (veb'ski-īt), *n.* [Named for the German mineralogist, Martin *Websky* (1824–86).] An alteration-product of serpentine which occurs in pitch-black amorphous forms at Krems, in Bohemia.

websterite² (web'stėr-īt), *n.* [*Webster* county, N. C., + *-ite*¹.] In *petrog.*, a phaneric, granular igneous rock composed of orthorhombic and monoclinic pyroxenes; a variety of pyroxenite. *G. H. Williams*, 1890.

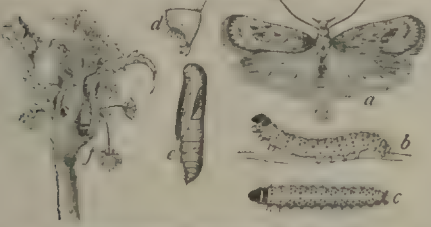
web-system (web'sis″tem), *n.* A group of web-members in a truss or girder, replacing the solid plate of a plate-girder, or the lattice-braces in a lattice-girder. See ★*web-member*.

web-work (web′wėrk), *n.* The structural part or web of a textile fabric.

web-worm, *n.*—**Alfalfa web-worm,** the larva of a pyralid moth, *Loxostege commixtalis*, common to Europe and North America. It feeds on alfalfa and other plants in the northwestern United States.—**Cabbage web-worm,** the larva of a pyralid moth, *Hellula undalis*, probably imported accidentally from Europe into the southern United States and California where it injures cabbage, turnips, and beets. *Yearbook U. S. Dept. Agr.*, 1900, p. 727.—**Corn-root web-worm.** See ★*corn*1.—**Garden web-worm,** the larva of a pyralid moth *Loxostege similalis* (formerly *Eurycreon rantalis*), which damages garden and field crops and which spins more or less silk.—**Parsnip web-worm,** the larva of an œcophorid moth, *Depressaria heracliana*, common to Europe and the United States. It feeds on the flower-heads and leaves of parsnip, protecting itself by a web.—**Pine web-worm.** Same as ★*pine-pest.*—**Privet web-worm,** the larva of a pyralid moth, *Diaphania quadristigmalis*, which occurs in the United States, the West Indies, and South America. The larva feeds on the terminal shoots of privet, hiding in a silken web.—**Root web-worm,** the larva of any one of several moths of the family *Crambidæ*: as, the *corn-root web-worm* (which see, under ★*corn*1).—**Sooty corn-root web-worm.** Same as ★*stalk-worm.*—**Spruce web-worm.** Same as *spruce bud-worm* (which see, under *spruce*3).



Garden Web-worm (*Loxostege similalis*).
a, larva; *b*, *c*, larval segments; *d*, pupa; *f*, moth, slightly enlarged.
(Riley, U. S. D. A.)



Parsnip Web-worm (*Depressaria heracliana*).
a, adult; *b*, larva from side; *c*, larva from above; *d*, anal segment of pupa; *e*, pupa; *f*, work of larva.
(From "Insect Life," U. S. D. A.)

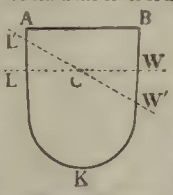
wedding, *n.* 2†. Anniversary of a wedding. [Rare.]

> So home and intended to be merry, it being my sixth *wedding*. *Pepys*, Diary, Oct. 10, 1661.

wedding-bells (wed-ing-belz′), *n. pl.* Church bells or chimes rung in celebration of a wedding.

wedding-flight (wed′ing-flīt), *n.* Same as *nuptial* ★*flight*.

wedge1, *n.* 5. In *geom.*, a prismatoid whose lower base is a rectangle, and upper base a line (sect) parallel to a basal edge.—6. In *ancient oriental archæol.*, an arrow-headed character, the shape of which was produced by pressing one corner of a solid square wand or the like into soft clay.—7. A playing-card so trimmed that one end is narrower than the other, so that when a certain part of the pack is turned round it can be withdrawn again at will, no matter how much the pack may be shuffled in the meantime.—**Compensating compound wedge,** a device of Spitta for placing an absorbent medium in the path of light-rays in a photometer. It consists of two wedges, similar in all respects, which by sliding, the one over the other, maintain a uniform thickness of the absorbing medium throughout the width of the slit. *W. M. Stine*, Photometrical Measurements, p. 90.—**Flying wedge,** in *foot-ball*, a group of men who get into rapid motion before reaching their opponents and thus strike them under headway.—**Miners' wedge,** a metal wedge used by miners for splitting off masses of coal.—**Optical wedge,** in *photog.*, a sheet of glass coated with a neutral-tinted film, graduated from transparency at one end to opacity at the other, and inserted in front of one of the lenses of a projection lantern.—**Ritchie wedge,** in *photom.*, a device for comparing the brightness of light-sources, described by Ritchie (1825). It consists of an opaque wedge with matte faces placed between the lights to be compared, with its edge toward the observer. When the illumination upon the two faces is equal, the brightness of the two sources is in the ratio of the squares of their distances from the wedge.—**Wedges of emersion and of immersion,** those portions of a floating body, specifically of a ship, which emerge from beneath the level of the liquid on the one hand, or become immersed, on the other, when the body is tipped or given a list without changing its displacement. Let A K B be the cross-section of a floating vessel, W L its water-line when upright, and W′ L′ its water-line when inclined: then W C W′ is a cross-section of the wedge of emersion and L C L′ of the wedge of immersion.



Wedge of Emersion and Immersion.

wedge1, *v. t.* 7. In *forestry*, to force by wedges (a tree that is being felled) to topple over.

wedge-gear (wej′gēr), *n.* A wedging device; an apparatus for moving a body or part by a wedging motion.

wedgewood (wej′wůd), *n.* [*wedge*1 + *wood*.] Wood made, or fit to be made, into wedges.—**Tough** or **stupid,** etc., **as wedgewood,** very tough, or stupid, etc. *N. and Q.*, 9th ser., X. 46. [Prov. Eng.]

weed1, *n.* 4. The vegetative parts of the cotton-plant as opposed to the flowers and fruit.

> Late cotton is thought [to be] more apt to run to *weed*. *U. S. Dept. Agr.*, Exper. Station, Bulletin 33, 1896, p. 250.

Mad-dog weed. (*a*) The water-plantain, *Alisma Plantago-aquatica.* (*b*) The mad-dog skull-cap or madweed, *Scutellaria lateriflora.*

weed1, *v. t.*—**To weed the rigging,** *naut.*, to clear the rigging by trimming loose ends of rope-yarns, rattling stuff, etc.

weeder, *n.*—**Riding weeder,** a weeder having a steel frame supporting three parallel horizontal steel angle-bars placed one behind the other, to which are attached sixty or more vertical steel teeth or weeding-points. The weight of the machine and the driver, who sits at the back of the machine, is supported in part by a pair of wheels and in part by the teeth, the weight upon the teeth, and the consequent depth to which they enter the ground, being under the control of the driver. The teeth are placed on the bars in diagonal lines to insure the complete breaking up of the surface of the soil and the destruction of the weeds.—**Walking weeder,** a smaller weeder of the same type, operated, by means of handles, by a man walking behind it.

weeding-hoe (wē′ding-hō), *n.* A combined rake and hoe.

weed-tree (wēd′trē), *n.* In *forestry*, a tree of a species which has little or no value.

week1, *n.*—**Baff week.** See ★*baff*3.—**Convocation week.** See ★*convocation.*—**Feast of Weeks.** See *Jewish* ★*festivals.* **Low week,** the week after Easter week, so called from its first day, Low Sunday.

week-end (wēk′end), *n.* The end of the week; by extension, the period from Friday night to Monday morning. Also used attributively: as, the *week-end* holidays. [Eng.]

> This brief holiday has got into serious history. No less an authority than Dr. S. R. Gardiner notes in his 'Oliver Cromwell' that
>
> "Oliver—if he invented nothing else—may be regarded as the inventor of that modified form of enjoyment to which hard-worked citizens have in our day given the name of the '*week-end*.'"
>
> He escaped from London to Hampton Court from Saturday to Monday. *Athenæum*, Aug. 10, 1901, p. 193.
>
> If the present weather continues, London certainly will empty for *week-ends* more than ever.
> *N. Y. Herald* (Paris ed.), June 2, 1903.

week-end (wēk-end′), *v. i.* To employ the week-end as a holiday season. [Eng.]

week-tenant (wēk′ten″ant), *n.* A tenant who rents by the week.

weep1, *v. i.* 6. To gather moisture in drops from the atmosphere, as a water-vessel cooled with ice, or a cool metal pipe in a room where steam is present or the atmosphere is humid; also leak slowly from a joint in drops.

weeper, *n.* 5. *pl.* Long side-whiskers.

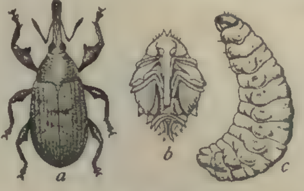
> The 'Piazza d'Erbe,' in fact, reminds us irresistibly of our own Mr. Frith; and the impression is strengthened by the presence in the foreground of a mid-Victorian Englishman with "Dundreary *weepers*."
> *Athenæum*, June 13, 1903, p. 760.

weequash (wē′kwosh), *n.* [Micmac (?) *wigwas* (also similarly in Passamaquoddy Cree, Ojibwa?), birch bark (canoe).] The act of spearing eels by night, from a canoe, with the aid of a torch or lantern. [New England.] *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 267.

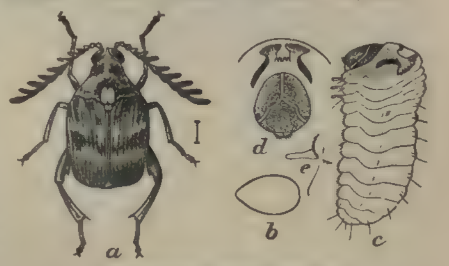
weequashing (wē′kwosh-ing), *n.* Also *wigwassing.* Same as ★*weequash.* Compare ★*neeskotting.*

weetweet2 (wēt′wēt), *n.* [Native name in Australia.] A throwing implement used by the aborigines of Victoria, Australia. It consists of a small piece of hard wood about an inch in diameter shaped like a double cone fastened to a slender, flexible rod about two feet long, and usually made in one piece. It is used in a game, the object being to throw it to the greatest possible distance. The total weight is less than two ounces. *Smyth*, Aborigines of Victoria, p. 352.

weevil, *n.*—**Black weevil.** Same as *rice-weevil.*—**Bronze apple-tree weevil,** a curculionid beetle, *Magdalis ænescens*, which in the western United States attacks the branches of the apple, particularly on spots which have previously been damaged by canker or sun-scald.—**Coffee-bean weevil,** a cosmopolitan anthribid beetle, *Aræcerus fasciculatus*, which damages many stored vegetable products, as coffee, cacao, dried apples, mace, and nutmegs. It also breeds in dry cotton-bolls and in the seeds of senna and wild indigo.—**Cotton-boll weevil,** a curculionid beetle which attacks the flowers and bolls of cotton in tropical America and which, about 1893, entered the State of Texas at Brownsville. It spread slowly through the State, crossed into Louisiana in 1903 and 1904, and threatens great damage to the cotton-growing industry of the United States. It caused an average annual loss to Texas in the years 1900 to 1905 of over $15,000,000.—**Cow-pea weevil,** a cosmopolitan bruchid, *Bruchus chinensis*, probably originating in eastern Asia, but now of very general distribution. It breeds in peas and beans of many varieties.—**Pales weevil,** a large, dark chestnut or black curculionid beetle, *Hylobius pales*, of wide distribution in the United States. Its larvæ burrow beneath the bark of the white pine, loosening it from the wood.—**Paraplectic weevil,** a European curculionid beetle, *Lixus paraplecticus*, whose larva bores in the stems of an umbelliferous plant the eating of which is supposed to cause blind staggers in horses.—**Root-weevil.** See ★*root-weevil.*—**Strawberry-weevil.** (*c*) Same as ★*strawberry-beetle*, 1.—**Sweet potato weevil.** Same as *sweet potato* ★*borer.*



Cotton-boll Weevil (*Anthonomus grandis*).
a, adult; *b*, pupa; *c*, full-grown larva: all enlarged.
(Howard, U. S. D. A.)



Cow-pea Weevil (*Bruchus chinensis*).
a, male weevil; *b*, egg; *c*, postembryonic larva; *d*, head of same; *e*, thoracic leg of same. *a*, much enlarged, *b*–*e*, more enlarged.
(Chittenden, U. S. D. A.)

wefted (wef′ted), *a.* [*weft*1, *n.*, + *-ed.*] Having the form of a weft or thin felt-like layer: said of the mycelium of fungi.

> More or less complex *wefted* sheets or tissue-like masses of such (mycelium). *Encyc. Brit.*, XXVIII. 554.

weft-fork, *n.*—**Center weft-fork,** a device fixed in the center of the reed-space of a loom for stopping the machine in case there is an omission of the weft at any throw of the shuttle. *T. W. Fox*, Mechanism of Weaving, p. 426.

Wehnelt break. An electrolytic interrupter for induction-coils. See ★*interrupter* (*a*).

Weierstrassian symbol. See ★*symbol*1.

Weigela (vī′ge-lạ̈), *n.* Same as *Weigelia.*

weigh1, *n.* 2. In *cotton-manuf.*, any given quantity of yarn delivered to an operative, for example, a winder, upon which wages are based. *R. Marsden*, Cotton Weaving, p. 412.

weigh-basket (wā′bȧs″ket), *n.* See ★*weigh-box.*

weigh-box (wā′boks), *n.* A chute used in delivering coal at a railroad coaling-station. It receives and weighs just enough coal to fill the tender of a locomotive or, when used in loading coal-cars, it measures a fixed weight of coal each time it is filled and discharged. It may be self-discharging and operated by hand or by power. A similar chute made wide and with open top for use in weighing and delivering coal from mine to car is called a *weigh-basket.* See ★*coaling-station*, 2.

weighing-globe (wā′ing-glōb), *n.* Same as ★*density-globe.* *M. W. Travers*, Exper. Study of Gases, p. 126.

weighing-head (wā′ing-hed), *n.* The element in a testing-machine connected to that part of the apparatus by which the stress passing through the test piece is weighed or measured by observation. See cut under ★*testing-machine.*

weighmaster (wā′mȧs″tėr), *n.* 1. The clerk or employee in any establishment who is in charge of the weighing-scales.—2. In Europe, a weigher of material, licensed by governmental authority to perform this duty publicly or in a market.

weighment (wā'ment), *n.* [*weigh*^{1}, *v.*, + *-ment.*] The performance of the act of weighing. [Rare.]

> Leaf *weighment* [in tea plucking] is one of the most important features of the day's work.
> *C. Bald*, Indian Tea, p. 165.

weight^1, *n.* **10.** In *math.*: (*a*) The number of roots of *x* appertaining to any given function or functions of *x*, which must be employed to express a quantity composed of the product of the coefficients. (*b*) With respect to any selected variable in a system of homogeneous functions, the sum of the weights in respect to such variable of the several coefficients of which the quantity is composed (the weight of each several coefficient meaning the index of the power of the selected variable in that term of the given function or functions which is affected with such coefficient). *Sylvester*, 1853.—**11.** In *archery*, the strength of a bow measured in pounds by the pull or weight necessary to fully draw the bow. —**Adhesion weight.** See ★*adhesion.*—**Combination by weight.** See ★*combination.* **Combining weights.** See ★*combine.*—**Curve of weight.** See ★*curves of ship calculations.*—**Galton's weights**, in *psychophys.*, a set of brass weights, made in cartridge form, and arranged for the easy verification of Weber's Law. *Francis Galton*, Human Faculty, p. 370.—**Molecular weight**, the weight of a molecule, that of hydrogen being taken as the standard.—**Near-weight detector**, an appliance used in connection with weighing-machines to indicate, as the material to be weighed is fed to the machine, that the desired quantity in weight is nearly supplied. It serves as a warning to the weigher against overweighing.—**Weight sensation.** See ★*sensation.*

weigh-tank (wā'tangk), *n.* A vessel so arranged that the tank and contents can be weighed at any time to determine the quantity of liquid withdrawn from it in a certain time or for a certain process or function. Any tank on a scales can be used for this purpose. *Jour. Brit. Inst. of Elect. Engin.*, 1904, p. 966.

weighting, *n.* **2.** The attachment to textile fabrics of substances which produce a spurious appearance of thickness and value: an adulteration frequently practised, and more common and carried much further on silk goods than on any others.

weight-money (wāt'mun"i), *n.* An early Chinese bronze coinage of the seventh to the third centuries B.C.

Weingarten triple. See ★*triple.*

weir, *n.*—**Bear-trap weir.** Same as *bear-trap* ★*dam.* —**Diversion weir**, a low dam or weir erected for the purpose of diverting water from a river or stream into the head of an irrigating canal or ditch. *H. M. Wilson*, Irrigation Engineering, p. 171.—**Drop-gate weir**, a low dam or weir the crest of which can be lowered when necessary to allow the water to pass unimpeded over the top. *H. M. Wilson*, Irrigation Engineering, p. 207.—**Flashboard weir**, the sill or base upon which flashing-boards are placed.—**Needle weir**, a form of movable weir or dam in which the portion of the waterway or channel to be regulated is closed by a series of disconnected, slender timbers, called *needles*, square or rectangular in cross-section and placed side by side in an inclined or vertical position, resting against a permanent sill on the bottom of the waterway and against a removable horizontal support near their upper ends. Various forms are used in the design of the upper movable supports for the needles and in the manner of manipulating them in the operation of opening and closing the dam, which when opened leaves an unobstructed waterway for the passage of flood-water or for navigation.—**Rated weir**, a measuring-weir, or overfall-dam, in which the quantity of water flowing over the dam per second has been determined and tabulated in terms of the depth of water flowing over the crest of the weir or dam. *Yearbook U. S. Dept. Agr.*, 1901, p. 420.—**Roller-way weir**, a dam with a movable crest, or portions which can be lowered on rollers or a similar sliding device, for permitting the free escape of water carrying ice, logs, or other debris. *H. M. Wilson*, Irrigation Engineering, pp. 192, 204.—**Shutter-weir**, a form of movable dam consisting of a series of individual narrow, rectangular wickets or shutters placed continuously side by side and together forming the entire barrier of the dam or weir. The individual character of each wicket or shutter permits the entire dam to be raised or lowered by operating one shutter at a time, and also permits the regulation of the flow of water, and hence the height of the water surface in the level above the dam to be regulated by opening or closing any desired number of shutters. *Nature*, Aug. 20, 1903, p. 363. —**Weir measurement**, the measurement of a flow of water by causing it to pass over a weir and observing accurately the width and the head, that is, the perpendicular distance between the edge of the weir and the level of the water at such a distance from the weir that its velocity is insensible. The effective weir is sometimes a rectangular or triangular notch in a thin board, and sometimes the smooth surface of a dam which has a broad crest of such slope that the flow of water while crossing it is uniform and rectilinear.

weir-box (wēr'boks), *n.* A vessel, usually rectangular, forming an enlargement in an open channel or flume, within which the current-flow may be reduced in velocity and the eddy action checked: designed to enable the water to approach a weir, at the down-stream end of the box, with the steady solid flow which is necessary if accuracy is to be secured in any measurements of flow depending on weir formulæ.

weir-crest (wēr'krest), *n.* The highest point in the current of water as it flows over a weir, as measured from the level of the bottom of the weir-notch or of the surface of the dam. The height of the crest is the height to be used in the formula to determine the volume passing the notch in a unit of time.

weir-notch (wēr'noch), *n.* See ★*weir measurement.*

weiselbergite (vī'zel-bėrg-īt), *n.* [*Weiselberg*, near St. Wendel, Germany, + *-ite*^{2}.] In *petrog.*, a porphyritic rock of pre-Tertiary age, which corresponds to a glassy and microlitic augite-andesite in composition and texture. *Rosenbusch*, 1887.

Weismannian (vīs-män'i-an), *a.* and *n.* **I.** *a.* Pertaining to or characteristic of the opinions of August Weismann or of his disciples. See ★*Weismannism.*

> To the method, observed by Boveri in *Ascaris*, in which both the divisions of the chromosomes are longitudinal and in which, accordingly, there is no reduction division in the *Weismannian* sense, the term eumitotic is applied, since it is the method characteristic of ordinary somatic mitoses.
> *Science*, June 5, 1903, p. 906.

II. *n.* One who adopts the views of August Weismann, especially with regard to heredity.

> While the line of argument will probably not be convincing to even the milder *Weismannians*, the wide range of illustrations brought together by the author will afford interesting reading to every zoölogist.
> *Amer. Nat.*, May, 1903, p. 349.

Weismannism (vīs'män-izm), *n.* **1.** The opinions and teachings of August Weismann, a noted German zoölogist and writer on speculative biology. In a memoir on the origin of the sexual cells of hydroids (1883), he showed that the sexual cells which undergo their development in the gonophores of certain hydroids are present, and recognizable, long before the gonophores, the blastostyles which carry them, or the hydranths which carry the blastostyles, come into being; and that the germ-cells reach their destination by long and complicated migrations along definite lines or germ-paths. He was afterward led, by reflection upon these facts and others, to the system of speculations about the nature of inheritance which is known by his name. These consist of the doctrine of germ-plasm together with the logical consequences of its acceptance. Germ-plasm is held to be the substance of inheritance, endowed with a complicated architecture, and never formed anew, being handed down from generation to generation in unbroken continuity. Among the logical consequences, real or assumed, of belief in this theory are: belief that germ-plasm, germ-cells, and unicellular organisms are potentially immortal, or independent of or exempt from natural death; that the development of multicellular organisms always is, has been, and must be, evolution or unfolding of the preëxistent; that cell-division is differential, consisting of the division of a cell into two or more with unlike values in inheritance and with unlike predetermined fates; that inheritance is due to the continuity of germ-plasm; that the somatic cells, or those which enter into the composition of the body, are out of the line of descent to future generations and subject to natural death, and that modifications produced in the soma ("acquired characters") are not and cannot be inherited by descendants, because the somatic cells have no descendants; that certain somatic cells serve as the bearers of germ-plasm along definite cell-paths to the regions of the body where new germ-cells are to be formed; that new hereditary modifications arise only in the germ-plasm through new combinations in sexual reproduction or amphigony; and that among these those that are fittest are preserved according to the principle of natural selection, which is the only and all-sufficient ground of the origin of species.
2. In popular biological literature, the doctrine or opinion that acquired characters are not, and can not be, inherited. See *doctrine of* ★*germ-plasm, substance* of ★*heredity, acquired* ★*character.*

Weismann's fibers. See ★*fiber*^{1}.

weiss-beer (vīs'bēr), *n.* See ★*beer*^{1}.

weiss-strahl (vīs'sträl), *n.* A pig-iron containing up to $4\frac{1}{2}$ per cent. of manganese. It is white in color and has a radiated fibrous or finely columnar fracture. It is used in certain processes for the manufacture of steel.

weka (wē'kä), *n.* [Maori.] One of several species of large, flightless rails of the genus *Ocydromus*, found in New Zealand: commonly known as *wood-hen.*

wel, *v. i.*, *n.*, *adv.*, and *a.* A simplified spelling of *well.*

welch^2, *v.* See *welsh*^{2}, *v.*

welcher, *n.* Same as *welsher.*

welcum, *a.*, *v. t.*, and *n.* An amended spelling of *welcome.*

welding (wel'ding), *n.* [*weld*^{2} + *-ing*^{1}.] The process by which substances, such as metal, are united or consolidated by hammering or compression with or without previous softening by heat.—**Electric welding**, the process of joining two surfaces of a metal by pressure when they have been made plastic by electric heat. The surfaces being brought near to each other, an electric current is passed between them. The resistance causes the formation of an electric arc at the point of approximate contact, and the intensity of the heat is so exactly controllable that most difficult joints are made with ease and certainty. Usually the two ends to be welded are held in specially constructed jaws which are electric conductors, so that by moving the ends together they are pressed properly together and the weld is completed.—**V-welding**, a method of welding iron in which the ends to be joined form an obtuse-angled V and a third piece of square section is inserted with its diagonals horizontal and vertical, fitting the two V ends. The whole is then heated and forged. It forms a butt-weld in effect, without overlapping the ends, and yet the surfaces of contact are larger, as in scarf-welding, and the mechanical pressure is effectively applied.

welding-hammer (wel'ding-ham"ėr), *n.* A hammer used by blacksmiths for striking the hard, quick blows necessary in welding.

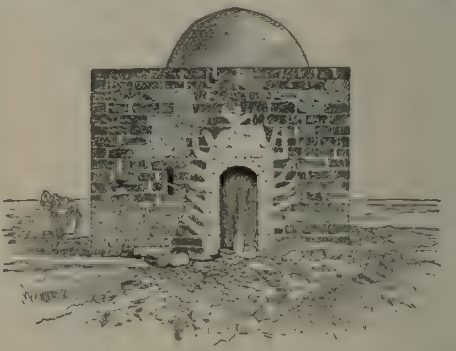
welding-machine, *n.*—**Electric welding-machine**, in *chain-making*, a machine for welding together the links of a chain by means of an electric current. The iron-wire links, bent into the required form in a bending-and-forming machine, are assembled in the same machine into an unfinished chain and fed to the welding-machine. Each link in turn is grasped by automatic clamps which press the open ends of the link together while a current is sent through the link. The gap in the link gives sufficient resistance to raise the metal at that point to welding heat when an automatic hammer strikes the link against an anvil completing the weld. The clamps release the welded link and take the next, the process being continuous. Similar machines are used to weld rods, bars, and other iron shapes.

weld-metal (weld'met"al), *n.* A name for metal of the class to which wrought-iron belongs, which has been built up from smaller masses to larger by the process of welding and pressure, instead of by a fusion process, the latter producing steels. The name has not been generally accepted in spite of its convenience. See *weld-iron* and *weld-steel.*

> Slag-bearing or "*Weld-metal*" Series.
> *Encyc. Brit.*, XXIX. 571.

Weldon mud, process. See ★*mud*, ★*process.*

weli (wel'ē), *n.* [Also *wely*, *welly*, Turk. *welī* (pron. vel'ī), Hind. *walī* (pron. väl'ī), Pers. *walī* < Ar. *walī*, a saint, patron, master.] **1.** In Mohammedan countries, a saint; a holy man. —**2.** Among European travelers in Mohammedan countries, a tomb or mausoleum (actually or nominally of a saint), visited as a shrine. *H. C. Butler*, Architecture and Other Arts, p. 247.



Weli.

well^1, *n.*—**Cold well**, a sump or collecting-basin in which is collected the water which has been cooled by passing over or through a cooling-tower. See ★*cooling-tower.*

> A 20-in. cast-iron main connects the four branches of the towers with the circulating pumps, each branch being controlled by a gate-valve. Underneath each tower is a settling well connecting with a central *cold-well* from which the condenser water is drawn.
> *Elect. World and Engin.*, Feb. 27, 1904, p. 396.

Ground-water well, a shallow well which derives water from the ground immediately surrounding it and is directly dependent upon the earth's saturation: called also a *surface well* or *seep-well.* *17th An. Rep. U. S. Geol. Surv.*, ii. 765.—**Seep-well.** Same as *ground-water* ★*well.*—**Surface well.** Same as *ground-water* ★*well.*

well^2, *a.*—**Well-the-braces**, *naut.*, an exclamation from the officer who is trimming the yards, signifying that the braces are not to be hauled on further, and that they are to be made fast or belayed.

well-come (wel-kum'), *a.* In *stock-raising*, noting an animal that has come from a good stock; of good pedigree.

> A bull may be a good individual, but is he, to use the Scotchman's phrase, "*well come*"? Were his sire, his grandsire, and his great-grandsire, his dam, his granddam, and his great-granddam good ones?
> *Rep. Kansas State Board Agr.*, 1901–1902, p. 60.

well-decked (wel′dekt), *a.* [*well*^{1}, *n.*, + *decked.*] In *iron ship-building*, noting a type of freight-steamer in which the side is carried up amidships above the upper deck to form a bridge-house closed by a bulkhead at each end. There is a forecastle deck at about the level of the bridge-house, and the upper deck between them is inclosed at the sides by high bulwarks, thus forming a sort of pit or well. To let the sea-water run out of the well, large freeing ports are cut in the bulwarks.

In the early 'nineties *well-decked* vessels formed a large proportion of the total number; but ten years later comparatively few of this type were being built, and these were principally intended for the coal trade, or were comparatively small vessels for coasting purposes.
Encyc. Brit., XXXII. 550.

well-in (wel-in′), *phrasal a.* Well-to-do; well off; wealthy. *E. E. Morris*, Austral English. [Australia.]

He 's a *well-in* squatter that took up runs or bought them cheap before free-selection, and land-boards, and rabbits, and all the other bothers that turn a chap's hair grey before his time.
Rolf Boldrewood, A Sydney-side Saxon, p. 1. Quoted
[in E. E. Morris, Austral English.

well-ordered, *a.* **2.** In *math.*, in the theory of assemblages, said of an aggregate or set when and only when its elements have been so disposed in fact or in thought, that: (a) of any two elements a and b, one, as a, precedes (that is, is of lower rank) and the other, as b, comes after (that is, is of higher rank); (b) of any triplet of elements a, b, c, if a is of lower rank than b, and b is lower than c, then a is lower than c; (c) the set has an element of lowest rank, a first term, and the same is true of every part of the set, that is, of every set whose elements are elements of the given set or series; (d) every element, unless it be the last, has an immediate successor; (e) the series satisfies Dedekind's postulate.

well-saffroned (wel-saf′rond), *a.* Well flavored or tinctured with saffron. [Rare.]

Thus they admonish: while thyself, I note,
Eatest thy ration with an appetite,
Nor fallest foul of whoso licks his lips
And sighs—'*Well-saffroned* was that barley-soup!'
Browning, Two Camels, l. 11.

well-set, *a.* **3.** In *cricket*, able to play the bowling with ease; unlikely to get out: said of a batsman.

wellsite (welz′īt), *n.* [Named for Professor H. L. *Wells* of New Haven, Conn.] A zeolitic mineral which belongs to the phillipsite group and occurs in complex twinned crystals analogous to those of phillipsite and harmotome. It contains less water than other members of the group: found in Clay county, North Carolina.

well-up (wel′up), *a.* In *cricket*, pitched nearer to the batsman than is proper; beyond a length: said of the ball. *Hutchinson*, Cricket, p. 65.

well-wheel (wel′hwēl), *n.* A large pulley-wheel supported by a swivel-hook, used to support the rope of a well.

Welsbach burner, lamp. See ★*burner*.

Welsh cotton. See *Kendal* ★*cotton*.—**Welsh porcelain,** Old Swansea and Nantgarw porcelain (the names of the towns where the leading potteries were located). The manufacture extended from 1768 to 1822. Old Swansea is sometimes called "duck-egg" porcelain. The paste has a soft translucent body similar to Sèvres.—**Welsh process.** Same as *Swansea* ★*process* of copper-smelting.

welter^2, *n.* In *glove-manuf.*, one who puts the welting in the seams and sews them up.

From the cutters' room the leather, which has assumed the shape of the glove, is sent to the "silkers," who embroider the back, and then to the "makers." Some make the gloves, that is they sew the fingers and put the thumbs in; others, called "*welters*," are engaged in welting or hemming the glove round the edge of the wrist; still others, called "pointers," work the ornamental lines on the back.
Sci. Amer. Sup., Jan. 24, 1903, p. 22629.

welter-weight, *n.* **2.** In *wrestling* or *boxing*, a weight coming between light- and middle-weight, usually 145 pounds or under.

welth, *n.* A simplified spelling of *wealth*.

welthy, *a.* A simplified spelling of *wealthy*.

welt-schmerz (velt′shmãrts), *n.* [G. *welt*, world, + *schmerz*, pain. See *smart*^{1}, *n.*] Literally, world-pain, or world-woe; weariness of life in general; in particular, a sentimental melancholy or pessimism; Wertherism.

Wemmelian (we-mē′li-an), *a.* and *n.* [*Wemmel*, in Belgium, + *-i-an.*] In *geol.*, a division of the Eocene Tertiary in Belgium, being the equivalent of the Bartonian or Barton clays of England which constitute the lower member of the Upper Eocene. They are the highest Eocene strata in the Belgian area.

wen^2 (wān), *n.* [AS. *wēn*, hope (see *ween*, *v.*), used as a name for its initial consonant.] A runic symbol (ƿ) used in Anglo-Saxon up to about 1300 A.D. to represent the w-sound.

wen^3 (wen), *n.* [Korean.] A current silver coin of Korea, equivalent to 40 United States cents.

wendigo, *n.* See ★*windigo*.

Wengen beds. See ★*bed*^{1}.

wen-mun (wen′mön), *n.* [Korean.] See the quotation.

The Corean language belongs to the Uralo-Altaic family, and is closely related to the Southern Tunguse dialects. Its mode of writing, called *wen-mun*, differs from the Chinese, and appears either to have been invented or derived from the Sanskrit by the Buddhist monks (M. Courant).
Deniker, Races of Man, p. 387.

wepon, *n.* A simplified spelling of *weapon*.

wer^4. A simplified spelling of *were*^{3}.

were-jaguar (wēr′jag″wär), *n.* [*were*(*wolf*) + *jaguar*.] A human being imagined to be transformed into a jaguar: corresponding to the werewolf or werwolf of Europe. *Keane*, Man Past and Present, p. 380.

Werfen beds. See ★*bed*^{1}.

Wernerianism (ver-nē′ri-an-izm), *n.* [*Wernerian* + *-ism*.] In *geol.*, the doctrines of Abraham Gottlob Werner. See *Wernerian*. He advocated the theory of the deposition of the metamorphic schists and gneisses as well as basalt and some other eruptive rocks from solution in the overlying ocean, and of the precipitation of mineral veins in crevices in the sea-bottom. While extensively believed at the time his views were finally in greatest part abandoned. It is called also ★*Neptunism* (which see).

werthemanite (ver′te-män-īt), *n.* [Named after its discoverer, A. *Wertheman*.] An earthy white hydrous aluminium sulphate ($Al_2O_3.SO_3.3H_2O$) from Peru. It is related to aluminite but contains less water.

Wesenberg zone. See ★*zone*.

westanite (wes′ta-nīt), *n.* [*Westanå* + *-ite*^{2}.] A hydrated aluminium silicate occurring in radiated crystalline masses of a brick-red color at Westanå, Sweden. It may be an alteration product of fibrolite or andalusite.

west-bound (west′bound), *a.* Moving or about to move toward the west; bound or destined for some place in the west: as, *west-bound* freight.

West-Ender (west-end′ėr), *n.* One who lives in the West End of London.

westernize (wes′tėrn-īz), *v. t.*; pret. and pp. *westernized*, ppr. *westernizing*. To render western (as opposed to Oriental) in character; infuse western ideas or ways into.

Not every land in the East has the elasticity of Japan to *Westernize* itself in one night.
Speaker, July 23, 1898, p. 124.

West-Indian (west-in′di-an), *a.* and *n.* **I.** *a.* Of or pertaining to the West Indies: used formerly, in a large sense, as equivalent to 'American.'—**West-Indian balsam, boxwood, lancelet.** See ★*balsam*, etc.

II. *n.* A native or inhabitant of the West Indies.

westland (west′land), *a.* Coming from the west; westerly. [Rare.]

Bide a bit, bide a bit; I'm thinking—and thanks to this bonny *westland* wind, I believe I've still a chance of it.
R. L. Stevenson, Catriona, xii.

Westm. An abbreviation of *Westminster*.

Weston cell. Same as ★*cadmium cell*.—**Weston clutch.** See ★*clutch*^{1}.

Westralian (wes-trā′lian), *a.* and *n.* [*Wes*(*tern*) + (*Aus*)*tralian*.] **I.** *a.* Of or pertaining to Western Australia.

II. *n.* **1.** An inhabitant of Western Australia.—**2.** A mining share in Western Australia: usually in the plural.

westrumite (wes′trum-īt), *n.* The trade-name for a cheap mineral-oil mixture sprinkled in a diluted state over the surface of a road to prevent or lay dust. Resistance to the action of rain and sun is claimed for this material.

A number of solutions are now on the market for the more or less temporary treatment of roads. Perhaps the best known is *Westrumite*, containing chiefly petroleum and ammonia, the product being completely miscible with water. It has been used extensively as a temporary measure. Experiments by the Scottish Automobile Club show that the effect remains for a considerable time.
Nature, Sept. 14, 1905, p. 485.

wet^1, *a.*—**Wet extraction,** in *metal.*, the extraction of a metal from its ores, or from the rock, by conversion into a soluble compound, which is leached out with water and decomposed, usually by means of another and cheaper metal. Copper, silver, and gold are largely extracted in this way.—**Wet method,** in *chem.*, same as *wet way* (which see, under *wet*^{1}).

weta (wā′tä), *n.* [Maori.] See ★*sawyer*, 6, and ★*weta-punga*.

weta-punga (wā″tä-pön′gä), *n.* [Maori.] The New Zealand name of a large locustid, *Deinacrida heteracantha*, formerly very abundant in New Zealand forests, climbing trees with agility, although bulky and wingless. *Cambridge Nat. Hist.*, V. 326.

wet-fly (wet′flī), *n.* In *angling*, an artificial fly which is allowed to sink: in distinction from a *dry-fly*, or floating fly.

The author's sympathies are rather with the *wet-fly* than with the dry-fly fisherman, and he is so far right that there is time and place for both.
Athenæum, May 7, 1904, p. 588.

wether^2, *n.*, *a.*, and *v.* A simplified spelling of *weather*.

wet-holystone (wet′hō″li-stōn), *v. t.* To holystone a deck or grating which is kept wet with water.

wet-machine (wet′ma-shēn″), *n.* In *paper-manuf.*, a machine used to gather the pulp from the water and form it into sheets and bundles.

wet-pan (wet′pan), *n.* In *ceram.*, a vat with horizontal grinding-stones in which clay is ground under water.

wet-short (wet′shôrt), *a.* Noting a lack of plasticity when wet: said of certain sands, on the analogy with "red-short" and "cold-short" as applied to wrought iron or steel. See ★*short*, *a.*, 13.

That is, while there is some small measure of cohesion, the sand, especially when wet, is excessively brittle. It is "*wet short*."
R. D. Salisbury, in Geol. Surv. of New Jersey, 1894,
[p. 102.

wettable (wet′a-bl), *a.* [*wet*, *v.*, + *-able*.] That can be made wet; that will absorb water or retain a thin stratum of water on the surface: said particularly of some leaves, in contrast with others which from being polished, velvety, or the like, do not retain water. See ★*drip-tip*.

wetting-trough (wet′ing-trôf), *n.* The open tank of water by which paper is wet or dampened for presswork.

Wetzel evaporator, an arrangement for expediting the evaporation of a liquid. It consists of a framework of pipes, through which steam passes, caused to revolve above and partly within a trough containing the liquid to be evaporated, each pipe dipping in turn into the liquid and coming out covered with a film of it, which evaporates rapidly in the remaining part of the revolution, in which the pipe is exposed to the air. Also called *Wetzel pan*.

W. G. **2.** [*l. c.*] In *ceram.*, the abbreviation of *white* ★*granite* (which see).

W. Ger. An abbreviation of *West Germanic*.

W. G. G. An abbreviation (a) of *Worthy Grand Guardians*; (b) of *Worthy Grand Guide*.

W. G. H. An abbreviation of *Worthy Grand Herald*.

W. G. M. An abbreviation of *Worthy Grand Marshal*.

W. G. S. An abbreviation of *Worthy Grand Sentinel*.

wh. An abbreviation of *wholesale*.

whack, *v. t.*—**To whack** (something) **up,** to force to greater speed; drive or send faster. [Slang.]

Moorshed suggested "*whacking her* [torpedo-boat] *up*" to eighteen knots, to see if she would stand it. . . . *Whack her up*, Mr. Hinckcliffe.
R. Kipling, Their Lawful Occasions, in Traffics and
[Discoveries, pp. 119, 123.

whack, *n.* **5.** Fettle; condition. [Rare.]

The Tycoon [Lincoln] is in fine *whack*. I have rarely seen him more serene and busy.
John Hay, Letter printed in The Century Mag., Feb.,
[1909.

whaddie, *n.* See *waddy*.

whale^1, *n.*—**Little piked whale,** the small finback, *Balænoptera acuto-rostrata*, which reaches a length of from 20 to 30 feet and is readily distinguished by the band of white across the flippers.—**Pollack-whale.** See ★*pollack-whale*.—**Pygmy right whale,** *Neobalæna marginata*, the smallest of the whalebone whales, under 20 feet in length, but related to the great arctic bowhead. It is found in the vicinity of New Zealand.—**Social whale,** the black-fish, *Globiocephalus melas*, that goes in large schools.

whale^3 (hwāl), *v. i.* To move with effort. [Slang.]

"Her!" snorted the little man, in indignant astonishment. "You don't think I've *whaled* up here . . . to talk about women, do you?"
Holman Day, King Spruce, xxiv.

whaleback, *n.* **2.** A vessel of which the upper deck is rounded: generally without upper works. It has a spoon-bow, with the whole of the main deck arched and meeting the side in a continuous curve. There are a number of very large hatches in the crown of the deck. The propelling machinery is in the extreme after end of the vessel. Such vessels were first used on the Great Lakes.—**3.** In *phys. geog.*, a drift-hill of rounded profile thought to resemble the back of a whale rising above the sea.

whaleback, whalebacked (hwāl'bak, -bakt), *a.* Having an arched or curved deck continuous with the side: said of a particular type of steamer. See ★*whaleback*, *n.*, 2.

whalebone-tree (hwāl'bōn-trē), *n.* One of the mint-trees, *Prostanthera lasianthos.* See *Prostanthera.* [Australia.]

whale-chart (hwāl'chärt), *n.* A chart showing the localities reported to be favorable for whale-fishing.

whale-deep (hwāl'dēp), *n.* A deep depression or hole in the sea-floor. Also *whale-hole.*

> The whole length of the roding ran out, and still the anchor found nothing, and Harvey grew mortally afraid, for that his last touch with earth was lost. "*Whale-hole,*" said Manuel, hauling in. . . . [It was] the edge of the barren *Whale-deep*, the blank hole of the Grand Bank.
>
> *R. Kipling*, Captains Courageous, v.

whale-feed (hwāl'fēd), *n.* A New Zealand term for a small shrimp found in immense swarms.

whale-foots (hwāl'fu̇ts), *n. pl.* The deposit found at the bottom of casks of whale-oil. It is a low-grade grease, used in making coarse soap and in tanning.

whale-hole (hwāl'hōl), *n.* See ★*whale-deep.*

Whale-oil soap. See ★*soap.*

whaler^{1}, *n.* **2.** The name given in Sydney to the shark, *Carcharias brachyurus*, Günth. *E. E. Morris*, Austral English.—**3.** A sundowner; one who cruises about. *E. E. Morris*, Austral English. [Australian slang.]

> The nomad, the "*whaler*," it is who will find the new order hostile to his vested interest of doing nothing.
>
> *Sydney Morning Herald*, Aug. 12, 1893. Quoted in [E. E. Morris, Austral English.

Whalers' language, a jargon heard in the north of the Pacific Ocean: a mixture of Hawaiian, Chinese, English, Chukchi, Japanese, etc. *Deniker*, Races of Man, p. 133.

whalm†, *n.* Same as *walm*, *n.*

whangdoodle (hwang-dö'dl), *n.* [A made word of a humorous nature.] **1.** An imaginary animal whose nature and features are purposely left undefined. Compare *gyascutus* and ★*snark.*—**2.** In *poker*, a round of jack-pots, usually played after a certain hand is shown, such as four of a kind.

whanger (hwang'ėr), *n.* A curer of fish. [Newfoundland.]

whare (hwä're), *n.* [Also *ware*, *warree*, etc. Maori for *house.*] A house. [Australia.]

> The Europeans who were near us in a raupo *whare* (rush house).
>
> *H. Williams' Journal*, Carleton's Life, p. 151. Quoted [in E. E. Morris, Austral English.

> Sitting in the sun at the mouth of his *warree*, smoking his pipe.
>
> *G. C. Mundy*, Our Antipodes, x. Quoted in E. E. Morris, [Austral English.

wharf, *n.*—**Sheer wharf**, a navy-yard wharf on which sheers are erected.

whartonite (hwâr'ton-īt), *n.* [Named after Joseph *Wharton* of Philadelphia.] A nickeliferous variety of pyrite from the Sudbury district, Ontario.

wharve (hwärv), *n.* [Also, improperly, *warve*; a variant of *wherve.*] Same as *wherve*, 1.

what^{1}, *pron.*—**To give one what for**, to give one something to cry, suffer, be miserable *for:* usually said of one who deserves punishment or retribution. [Slang.]

> Poor Little Billee came off very badly. The German Pole fenced wildly, but well. . . Then Taffy took up the foil, and redeemed the honor of Great Britain as became a British hussar, . . . and Svengali *got "what for."*
>
> *Du Maurier*, Trilby, i.

whata (hwā'tä), *n.* [Maori.] An elevated platform or storehouse for keeping food.

whau (hwou), *n.* [Maori *whau*, = Samoan, Tahitian, Marquesan, *fau*, *Hibiscus tiliaceus*, Hawaiian *hau*, Tongan *fau*, etc., name of several trees.] In New Zealand, *Entelea arborescens*, a shrub or small tree belonging to the linden family, having cymes of white, 4-petaled flowers and fruit in the form of a spinous capsule. Its wood, like that of the fau, *Pariti tilaceum*, in Samoa, is very light and is used by the natives for making floats for their fishing-nets. Also called *corkwood.* See *New Zealand* ★*cork-tree.*

whauwhi (hwou'hwē), *n.* [Maori.] In New Zealand, the lacebark and ribbonwood trees, the fibrous bast of which was formerly used for making tapa cloth. See ★*houhere*, *lacebark*, 3, and *ribbonwood.*

wheat, *n.* Present authority tends to include in one botanical species (*Triticum æstivum*; *T. sativum* of some authors) all the forms of cultivated wheat except the one-rowed wheat (see *einkorn* ★*wheat*) and the Polish wheat (see below). For the original application of *T. æstivum* see *summer* ★*wheat.* Two less important subtypes of *T. æstivum* are spelt (which see) and ★emmer. The remaining varieties (sometimes combined in a subspecies *tenax*) are divided into four groups, for which see *club*, *durum*, *poulard*, and *vulgare* ★*wheat.* According to the cerealist of the United States Department of Agriculture the United States may be divided into eight wheat-growing districts: (1) the soft wheat district, mainly the Middle and New England States; (2) the semi-hard winter wheat district, Ohio to Illinois, Michigan, and a small part of Wisconsin; (3) the southern wheat district, approximately the Southern States; (4) the hard spring wheat district, the northern States of the plains; (5) the hard winter wheat district, the middle States of the plains; (6) the durum wheat district, the southern States of the plains; (7) the irrigated wheat district, approximately the Rocky Mountain and Basin States; (8) the white wheat district, the Pacific coast States.—**Ægilops wheat**, a wheat-like cereal developed by E. Fabre through cultivation and selection of a hybrid between common wheat and the Old-World grass *Ægilops ovata.* It propagated true to type by seed and was given the name *Ægilops speltæformis.*—**Arnautka wheat**, a valued Russian durum variety, giving best results over a limited area about the Sea of Azov. It is among those introduced into the United States.—**Bald wheat**, beardless wheat.—**Barley wheat**, durum wheat: so called from its strong resemblance in the field to barley.—**Beloturka wheat**, a south-Russian durum variety, very similar to Kubanka and among those introduced into the United States. The name means 'white Turkish.'—**Blue-stem wheat**, an American variety with several subvarieties, classified as hard spring, differing from the Fife in having the glumes covered with fine velvety hair. The velvet blue-stem is grown in North Dakota and the Palouse blue-stem in southeastern Washington and adjacent regions.—**Bread wheat**, any wheat commonly used for bread-making, hence specifically same as *vulgare* ★*wheat.*—**Breast of wheat**, a spikelet or mesh.

> In some sections of the country, a spikelet is better understood if it is spoken of as a *breast of wheat.*
>
> *Todd*, Amer. Wheat Culturist, p. 24.

Club-eared wheat, any wheat with a compact head. Opposed to *sprat* ★*wheat.*—**Club wheat**, a group of wheats (sometimes distinguished as *Triticum compactum*) characterized by a short, dense head and short, stiff straw: also called *square-head wheat* from the shape of the ear. It forms a large part of the white wheat of the Pacific coast. From the fact that its ears do not shatter it is adapted to the methods of harvesting there employed. The grain is much like that of the softer vulgare sorts. It is also cultivated in Chile, Turkestan, and Abyssinia.—**Cone wheat**, a form of poulard wheat with conical ears. See *English* ★*wheat.*—**Crimean wheat.** See *Turkey* ★*wheat.*—**Duck's-bill wheat**, the poulard wheat as grown in England, or some one of its varieties.—**Durum wheat**, a strongly marked group of varieties now referred to *Triticum æstivum*, but formerly regarded as a species, *T. durum.* These are tall barley-like wheats, the stem commonly filled or lined with pith, the leaves broad, of a peculiar whitish green color, and with a very harsh cuticle. The grain is glassy and very hard and needs to be softened by steam before milling. On account of their high gluten content these wheats are adapted to the manufacture of macaroni and they afford the bulk of the product so used. The flour as prepared for use in macaroni is called *semolina.* Durum wheat also makes a richer and better-keeping bread than the ordinary and affords an excellent quality of 'grits.' Culturally, durum wheats are best adapted to hot semiarid regions and hitherto they have been grown most extensively in east and south Russia, also largely in Turkestan and North Africa, and to a less extent in the dry parts of South America, etc. In the United States these wheats, though earlier grown in small quantities experimentally or for feed (see *wild goose* ★*wheat*, *Nicaragua* ★*wheat*), had no market standing prior to 1901, when the results of government introduction and successful experimentation began to appear: in 1903 the product reached 6,000,000 bushels. They succeed in the Great Plains region, even as far north as Canada. For important Russian varieties introduced into the United States see *Gharnovka*, *Arnautka*, *Kubanka*, *Beloturka*, *Pererodka* ★*wheat.* Among Algerian varieties introduced experimentally are Pelissier and Marouani. For other general names see *hard* ★*wheat*, *macaroni* ★*wheat*, *rice* ★*wheat.*—**Dwarf wheat**, the club or hedgehog wheat. *Standard Dict.*—**Egg-shell wheat**, an old English variety of white winter wheat.—**Egyptian wheat**, wheat grown in Egypt, chiefly varieties of the poulard type; specifically, one of these varieties with branching spikes sometimes called *Triticum compositum.* This wheat has been cultivated in Egypt, the Orient, and southern Europe, but on account of its inferior grain is not highly rated. A former English name is *Smyrna wheat.* Also *mummy-wheat* (which see).—**Einkorn wheat** [G. *einkorn*, one-grain], the one-grained wheat, *Triticum monococcum*, a species bearing usually only one grain to the spikelet and having a very flat head. This species, known from antiquity, apparently originated in southeastern Europe and is thought to have been the source of emmer. It is grown in Europe in poor rough places for mush and cracked wheat and for fodder, but is known only experimentally in America. It resists leaf-rust completely.—**English wheat**, the poulard wheat in the forms grown in England.—**Fall wheat**, any autumn-sown wheat: same as *winter* ★*wheat.*—**Fife wheat**, a variety of beardless, red, hard-grained spring wheat (*vulgare* type) including several subvarieties, as red Fife (the most important), white Fife, Scotch Fife, Wellman's Fife. The stock was derived by David Fife of Ontario from imported seed believed to have been ultimately of a Russian winter variety. It yields fairly and produces a flour of excellent quality. These wheats are important northward, red Fife being the standard Canadian wheat.—**Flint wheat**, same as *hard* ★*wheat* (*b*), at least as to the harder-grained subvarieties: occurring in American variety names, as *Genessee flint*, *old white flint.*—**Fulcaster wheat**, a bearded, semi-hard, red wheat derived as a hybrid from the Fultz and another variety. It is widely grown, especially in the region from Pennsylvania to Oklahoma. **Fultz wheat**, a semi-hard, red-grained, beardless variety of the *vulgare* type, originated by Abraham Fultz in Mifflin county, Pennsylvania, in 1862, said to be probably the most widely grown variety of the United States.—**Gehun wheat**, a Himalayan variety introduced into Canada and found to be very early, high altitude having produced a quality desirable in high latitude. It has been the subject of much experiment and, crossed with Onega, has yielded early Riga, eight or nine days earlier than red Fife and of a high gluten content, but not very productive.—**Gharnovka wheat**, a Russian durum variety of high standing, the principal one grown in the vicinity of the Sea of Azov. It is one of those introduced into the United States.—**Goose wheat.** (*a*) Same as *wild goose* ★*wheat.* (*b*) An inferior wheat mainly fed to chickens: a bearded variety hardy and early. *N. E. D.*—**Grass wheat.** See *Odessa* ★*wheat.*—**Hard wheat.** (*a*) Same as *durum wheat.* (*b*) In the United States, commonly any hard-grained variety of the common wheat. Also *flint wheat.*—**Hedgehog wheat.** Same as *club* ★*wheat.* *Stand. Dict.*—**Huron wheat.** See *Ladoga* ★*wheat.*—**Indian wheat.** (*c*) A grass, *Panicum ciliatissimum*, with the habit of Bermuda grass. It is a native of western Texas and is of some agricultural value for the dry regions of the southwestern United States. Locally called *carpet-grass.*—**Kubanka wheat**, a Russian durum variety highly valued in the Volga region, and at its best on the Siberian border. It is very resistant to drought and the grain is of excellent quality. In the Great Plains region, where it has been introduced, it gives large yields and ripens sufficiently early even in the Dakotas, proving also resistant to all diseases. The name is from the territorial division Kuban.—**Ladoga wheat**, a variety of *vulgare* wheat introduced into Canada from the region of Lake Ladoga, found useful for crossing with red Fife to combine its early ripening, important in the northern country, with the excellent quality and productiveness of the latter. Two promising varieties thus obtained are the Preston, a bearded, and the Stanley, a beardless wheat, both four to six days earlier than the red Fife, but the former not quite so productive, the latter of slightly lower quality. Crossed with white Fife it has yielded the Huron, an early bearded variety slightly more productive than red Fife, and the Percy, also early, equal to red Fife in quality but less productive.—**Lammas wheat**, winter wheat: so called in England as harvested near Lammas Day (later than summer wheat). With a qualifying word, one of several varieties, as *white Lammas*, *red Lammas.*—**Macaroni wheat**, any wheat adapted to the manufacture of macaroni; hence, specifically, the durum wheats (see above), as the type chiefly so used. The Polish wheat is, however, also a macaroni wheat, and varieties of the poulard type (see *poulard* ★*wheat*) are sparingly so used. In the United States, prior to the introduction of the durum varieties, an inferior macaroni was made from hard varieties of *vulgare* wheat, produced chiefly in Kansas. **Many-eared wheat.** Same as *Egyptian* ★*wheat.*—**May wheat**, any of a group of *vulgare* spring wheats (red May, early May, late May, etc.) found to be successful in the coastal region of the southern United States.—**Mediterranean wheat.** (*a*) In general, any wheat grown in the Mediterranean region, thus including the Algerian durum wheats. (*b*) Specifically, a red bearded *vulgare* variety, a standard in Texas, introduced from the islands of the Mediterranean.—**Nicaragua wheat**, specifically, a durum wheat, probably from Nicaragua, where these wheats are almost exclusively grown, introduced into Texas before the present market for these wheats had been created.—**Odessa wheat**, a south Russian hardy red variety (*vulgare*) which can be planted either in the fall or the spring. It was the first to meet the peculiar wants of the middle section of the Great Plains of the United States. Also called *grass wheat.*—**Onega wheat**, a *vulgare* variety introduced into Canada from the region of Archangel and used in crosses for earliness. See *Gehun* ★*wheat.*—**Pendulum wheat.** See *poulard* ★*wheat.*—**Percy wheat.** See *Ladoga* ★*wheat.*—**Pererodka wheat**, a strain of Kubanka wheat with darker-colored grains. Though placed below the latter in Russia, in this country it has in some respects excelled it.—**Pink bacteriosis of wheat.** See ★*bacteriosis.*—**Polish wheat.** (*a*) Any of the varieties of *Triticum polonicum*, a species marked by very large, loosely formed heads; narrow, papery, and slightly spreading chaff; and normally very large, especially long, yellowish white, and very hard grains. Polish wheat is adapted to dry regions and is grown somewhat in the Mediterranean region, southern Russia, and Turkestan. Its grain is of macaroni quality. (*b*) A red winter wheat of the *vulgare* type grown in Poland and southwest Russia.—**Poulard wheat**, any wheat of the strongly marked subtype of *Triticum æstivum* sometimes distinguished as a species, *T. turgidum*, turgid wheat. These wheats are tall, stout-stemmed varieties with an ear that nods from its weight when filled out (hence called *pendulum wheat*), the ear being bearded, but shedding its awns at maturity. They are productive both in grain and straw, but both of these are coarse, the straw being suited to thatching. The grain is allied to that of the durum wheats and is used sparingly for macaroni. They are cultivated in the United States only experimentally, in England in small amount in places unfavorable to better varieties (see *English* ★*wheat*), and to a greater extent in the Mediterranean countries. For an important variety see *Egyptian* ★*wheat.* Here belong the cone and rivet wheats of England. The French name 'poulard' sometimes appears in English as 'pollard,' as in the variety name 'gray pollard' (see *pollard*, 5).—**Preston wheat.** See *Ladoga* ★*wheat.*—**Rice wheat.** (*a*) An American name for the durum wheats, referring to the texture of the grains. (*b*) A hard-grained, beardless, winter *vulgare* variety of the United States.—**Smyrna wheat.** See *Egyptian* ★*wheat.*—**Soft wheat**, any wheat with relatively soft grains, the term thus including many *vulgare*, but no *durum*, varieties.—**Sprat wheat,** any variety of common wheat with the ears long and straggling: opposed to *club-eared wheat.* [England.] *J. Wrightson*, Farm Crops, p. 110.—**Spring wheat.** See *summer ★wheat.*—**Square-head wheat.** Same as *club-★wheat.*—**Square wheat.** (*a*) Same as *square-head ★wheat.* (*b*) The poulard wheat in some of its forms.—**Stanley wheat.** See *Ladoga ★wheat.*—**Summer wheat,** a group of varieties of the common wheat formerly regarded as a species and distinguished not only by its late planting and early harvesting quality but also by its narrower ears, bearded glumes, and longer-bearded paleæ, its smaller grains, and shorter and more slender straw. It was locally grown in England, where it was planted in April or even in May, but was regarded as mainly a wheat of warmer countries. Opposed to *winter wheat* (see below) and also called *spring wheat*, but distinguished from varieties of winter wheat sown in early spring. It was to wheats of this type that the name *Triticum æstivum* was originally given, but the view now prevails that there is no fixed botanical distinction between summer and winter wheat, a variety of either being readily cultivated into one of the other; and the term 'spring wheat' (now chiefly used) refers only to fitness for spring planting.—**Taganrog wheat,** any variety of Russian durum wheat after export: so designated commercially from the name of the chief port of shipment.—**Talavera wheat,** a *vulgare* wheat which was introduced from Spain into England about 1817, became a favorite, especially in the form of Bellevue Talavera, and is still used. It is a good yielder with large grains, the ears long and slender, the leaves broad, and the straw white. This variety affords a part of the Italian bonnet-making straw.—**Turkey** or **Turkish wheat.** (*b*) A hard red winter wheat of the *vulgare* type, the favorite variety in the Missouri valley, etc., originally from southern Russia. Also called *Crimean wheat.*—**Vulgare wheat,** the name of that group of varieties of wheat (sometimes classed as *Triticum sativum vulgare*) which includes the ordinary bread-making wheats; common wheat. The subvarieties are either summer or winter, bearded or beardless, red, amber, or white, and soft or hard (but see *durum ★wheat*). Except a small amount of poulard, these are the only wheats grown in England and until recently practically no others have been grown in the United States.—**Wheat false caterpillar.** See *★caterpillar.*—**Wheat plant-louse.** See *★plant-louse.*—**Wheat stalk-borer** See *★stalk-borer.*—**Wild goose wheat,** a durum wheat considerably grown in Canada and less in the Dakotas, said to have sprung from grains found in the crop of a wild goose, but doubtless ultimately derived from south Russian seed. This wheat began to be shipped abroad from Canada prior to the commercial success of durum wheat in the United States. Used also of durum wheats as a type name.—**Winter wheat,** wheat of any variety sown in autumn for the crop of the next season. Formerly regarded as a species and named by Linnæus *Triticum hybernum.* See *summer ★wheat* and *Lammas ★wheat.*

wheat-beetle (hwēt′bē″tl), *n.* Same as *★grain-beetle.*

wheat-blight (hwēt′blit), *n.* See *★blight.*

wheat-grass, *n.* Several species of wheat-grass, *Agropyron*, are of settled agricultural value. The common couch-grass, *Agropyron repens*, is a good hay-grass, despite its tenacity as a weed.—**Bearded** or **awned wheat-grass,** *Agropyron caninum*, a fibrous-rooted species without creeping rootstocks. It occurs on the northern border of the United States and in Canada as far west as North Dakota, and is likely to possess agricultural value. Also called *dog-grass* and *dog's-tooth grass.*—**Bunch wheat-grass,** *Agropyron spicatum*, a densely tufted species, one of the most valuable bunch-grasses of Washington and Oregon.—**Japanese wheat-grass,** a perennial grass from Japan, *Brachypodium Japonicum*, resembling the bearded wheat-grass, but of rather stronger growth. It has passed successful tests in California, and, in the Southern States, is regarded as valuable for winter grazing, since it makes its best growth in the cooler months.—**Slender wheat-grass,** *Agropyron tenerum*, of the northern prairie region. It is well established as a cultivated hay-grass.—**Western wheat-grass.** (*a*) *Agropyron occidentale*, distinguished by its bluish tinge throughout and known as (*Colorado*) *bluestem* and *gumbo grass.* It grows naturally on dry bench lands, etc., and in Montana and neighboring States is regarded as one of the most important native forage plants. (*b*) *A. pseudorepens*, the false couch-grass of the Great Plains, is a softer plant than the last and is hence better suited to cultivation for hay.

wheat-pit (hwēt′pit), *n.* In a produce exchange, that part of the exchange where wheat is bought and sold.

> Every bonanza farmer's office is connected by wire with the markets at Minneapolis, Chicago, and Buffalo. Quotations arrive hourly in the selling season, and the superintendent keeps in close touch with his agents in the *wheat-pits* of these and other cities.
> *Encyc. Brit.*, XXV. 217.

wheat-scab (hwēt′skab), *n.* See *★scab.*

Wheatstone balance. Same as *Wheatstone bridge.*

Wheatstone-Siemens exploder, a portable magneto-electric machine for firing blasting charges of explosives.

wheel¹, *n.* 10. A movement in drill in which a line changes front without destroying the alinement.—**Allen wheel,** a form of car-wheel for sleeping or passenger-car service, in which the rim and tire are kept at a fixed distance from the hub by a filling of compressed pasteboard or strawboard or paper pulp, held in place by steel plates bolted together. They are said to run more noiselessly and with easier absorption of shock from the rail than all-metal wheels. Called also *paper car-wheels.* **Big wheel.** (*b*) See *★logging-wheel.* **Coupled wheels,** wheels which are joined by side-rods or coupling-rods. This is done on locomotives to increase and equalize the tractive force. All the coupled wheels are driving-wheels and, as they carry most of the weight of the locomotive, the adhesion is greater, as is also the tractive force, than if only one pair of wheels were connected to the piston and cylinder.—**Ferris wheel,** a device intended to amuse the people at an exhibition, fair, or summer resort. It consists of a large double wheel carrying, between its two rims, cars which are suspended from shafts through their tops, the cars thus remaining right side up as the wheel turns. The axle of the wheel is mounted in bearings which rest on columns of a little greater height than the radius of the wheel. Passengers are carried in the cars suspended in the wheel, which is slowly revolved by a suitable motor. The original Ferris wheel, exhibited at the Columbian Exposition at Chicago in 1893, was 250 feet in diameter, and 40 passengers could be carried in each of the 36 cars. It was invented by G. W. G. Ferris.—**Free wheel.** (*a*) A bicycle which has a device for freeing the driving-wheel from the driving-mechanism, as in coasting. (*b*) The driving-wheel of a bicycle which has a releasing-device for freeing the pedals for coasting.—**Gassiot's wheel,** an apparatus for demonstrating the luminous effects of Geissler tubes. The tubes are rotated while under the influence of the electric discharge, being fastened to a frame for that purpose. Very beautiful effects are produced, similar to those seen with fireworks.—**Impact wheel,** an impulse-wheel; a water-wheel in which the energy is partly or wholly obtained from the impact of the water on the blades. The reaction of the water, derived from changing its direction of flow, is also used by such a wheel in most cases.—**Lee wheel,** the leeward side of the steering-wheel; the side of the wheel where the assistant wheelsman stands.—**Little tin god on wheels.** See *★god¹.*—**Open-plate wheel,** in *car-building*, a light cast-iron street-car wheel having radial openings in the plate or web.—**Pelton wheel,** a form of water-wheel which has, on the periphery of the rotating wheel, buckets on which impinge one or more tangential jets of water. The buckets are so shaped as to divide the stream of water into two parts and reverse the direction of the water, so as to take advantage of the reaction. The wheel is named after its inventor. It has been used also for steam-turbines.—**Phonic wheel,** a rotating device, used in certain systems of synchronous telegraphy, the motion of which is controlled by electric impulses sent over the line.

> The *phonic wheel*, invented independently by La Cour and Lord Rayleigh . . ., consists of a wheel carrying several soft iron armatures fixed at equal distances round its circumference.
> *Encyc. Brit.*, XXV. 50.

Radial wheel, a wheel having straight radial spokes or spokes which point directly to the center, as distinguished from a wheel having tangential spokes.—**Square wheel,** in *railroading*, a car- or engine-wheel in which the cylindrical circumference of the tread has been worn flat in spots by sliding or skidding on the rail with the brake set hard enough to keep the wheel from turning. Soft spots in the tread make a wheel prematurely flat or square. Square wheels are very hard on both rail and car, since the wheel rolls like a polygon on a plane and strikes a hard blow on the rail when the front end of the flat spot comes down in rolling. Also called *flat wheel.*—**Tangent wheel,** a gear-wheel driven by a worm or screw tangent to its circumference.

wheel-back (hwēl′bak), *n.* A back resembling a wheel.—**Wheel-back chair,** in old English furniture, a chair in which the back resembles a wheel, although not necessarily round. The central portion or hub may be decorated with carving or inlay.

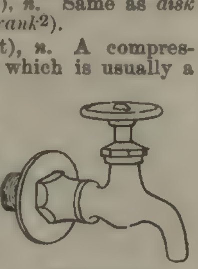
wheelbarrow-race (hwēl′bar-ō-rās″), *n.* A foot-race in which the contestants wheel barrows, either with or without occupants; also, a form of gymnastic exercise in which one player takes the other by the feet and half carries him along while the one so held runs on his hands.

wheel-base, *n.*—**Flexible wheel-base,** that of a railway-car or other vehicle in which the plane of rotation of the leading or the hauling pair of wheels is changeable so as to give a steering effect or prevent binding on curves. In an *inflexible wheel-base* (as in consolidation locomotives) this is not possible.

wheel-cake (hwēl′kāk), *n.* Same as *mill-cake*, 1.

wheel-crank (hwēl′krank), *n.* Same as *disk crank* (which see, under *crank*²).

wheel-faucet (hwēl′fâ″set), *n.* A compression-faucet, the head of which is usually a small horizontal wheel, the rotation of which pushes the screw of compression down or raises it.



Wheel-faucet.

wheel-house, *n.* 2. In *mech.*, a building in which a water-wheel is housed.—3. A structure to contain and safeguard the wheels of the valves of a water-works system.—4. The curved inclosure for the paddle- or side-wheels of a steamboat.—5. The free space under the forward part of the body in some carriages, which enables the front axle to make a more extensive arc in turning, and permits the wheels to 'cut under.'

wheeling, *n.* 3. In *mil.*, the act of executing a wheel.

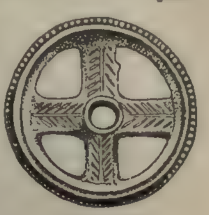
wheel-load (hwēl′lōd), *n.* The load carried by a wheel; the concentrated load impressed on a bridge or other structure by the wheel of a vehicle. *The Engineer*, April 25, 1902, p. 403.

wheel-map (hwēl′map), *n.* See the extracts.

> The mediæval *wheel-maps*, in which Jerusalem was accepted as the centre of the world, whence the main geographical lines radiated like the spokes of a wheel.
> *Geog. Jour.* (R. G. S.), XIII. 226.

> The wretched subterfuge of Cosmas (c. A.D. 550) to explain the phenomena of the apparent movements of the sun by means of an earth modelled on the plan of the Jewish Tabernacle, gave place ultimately to the *wheel-maps*—the T in an O—which reverted to the primitive ignorance of the times of Homer and Hecatæus.
> *Encyc. Brit.*, XXVIII. 618.

wheel-money (hwēl′mun″i), *n.* In *archæol.*, the name given to certain wheel-like objects of metal found in France and Great Britain. They are of gold, silver, or bronze, and, while by some regarded as primitive money, are usually looked upon as having some connection with sun-worship.



Wheel-money.

wheel-motion (hwēl′mō″shọn), *n.* A simple mechanism attached to a hank-winding machine for the convenient removal of the hank from the reel.

wheel-press (hwēl′pres), *n.* See *★forcing-press.*

wheel-shutter (hwēl′shut″ėr), *n.* In an arith-machine, a sliding plate used in certain operations to conceal any of the numeral wheels. *H. Goldman*, The Arithmachinist, p. 104.

wheelsman, *n.*—**Lee wheelsman,** *naut.*, the assistant who stands at the lee of the wheel.

wheel-stuffed (hwēl′stuft), *a.* In *leather-manuf.*, stuffed or greased by means of a drum or wheel: said of skins. *Modern Amer. Tanning*, p. 224.

wheel-stuffing (hwēl′stuf″ing), *n.* A process of greasing skins by placing them in a wheel where grease and heat are applied. *Modern Amer. Tanning*, p. 109.

wheelwrighting (hwēl′rī-ting), *n.* The business of a wheelwright.

wheez, *v.* and *n.* A simplified spelling of *wheeze.*

wheeziness (hwē′zi-nes), *n.* Excessive breathiness in a sound. See *★breathiness.*

whelk, *n.* **Native whelk,** an Australian marine mollusk, *Trochocochlea constricta.* *E. E. Morris.*

whense, *adv.* and *conj.* An amended spelling of *whence.*

wherry¹ (hwer′i), *v. t.*; pret. and pp. *wherried*, ppr. *wherrying.* [*wherry*¹, *n.*] To transport in, or as in, a wherry. [Rare.]

> Buoyant shells,
> On stormless voyages, in fleets or single,
> *Wherried* their tiny mariners; aloof,
> On wing-like fins, in bow-and-arrow figures,
> The flying fishes darted to and fro.
> *Montgomery*, Pelican Island, i.

Whetstone crystals. See *★crystal.*

Whey alcohol. See *★alcohol.*—**Whey butter.** See *★butter¹.*—**Whey champagne.** See *★champagne.*

whicker (hwik′ėr), *v.* [Also dial. *wicker*; imitative.] 1. To neigh; whinny; bleat.

> Setting it [a pony] free with a vicious cut of his whip that made it *whicker.*
> *R. Kipling*, Wee Willie Winkie, in Indian Tales, p. 84.

2. To giggle; snigger. *Eng. Dial. Dict.*

Whieldon ware. See *★ware*².

Whiffletree neck-yoke. See *★neck-yoke.*

whim¹, *n.* 6†. A pun.

> Shall Squire Oldrent's daughters
> Weare old rents in their garments? (there 's a *whim* too).
> *R. Brome*, Jovial Crew, i.

whimbrel, *n.* 2. The Australian curlew, *Numenius uropygialis.*

whimper, *v. i.* 3. To produce a sound resembling a whimper. [An affected use.]

> "What 's that that *whimpers* over'ead?" said Files-on-Parade.
> "It 's Danny's soul that 's passin' now," the Colour-Sergeant said.
> *R. Kipling*, Danny Deever, st. 4.

> For he could see the Captains Three had signalled to the Fleet.
> But three and two, in white and blue, the *whimpering* flags began.
> *R. Kipling*, The Three Captains.

whimsy-whamsy (hwim′zi-hwam″zi), *n.* A fantastic or whimsical notion; a whim. [Prov., Eng. (Lancashire).]

> The real reason . . . why the Dean has n't risen higher is because he always has some *whimsy-whamsy* in his head.
> *Anthony Hope*, Quisanté, v.

whip, *v.* **I.** *intrans.*—**To whip back,** in *cricket,* to break back quickly. See *to* ★*break back.* *Hutchinson,* Cricket, p. 326. **To whip in,** to keep the hounds from scattering; to whip them in to the line of chase.

> "You must have begun somewhere, I suppose?"
> "Yes ma'am, I begun, but then I'd *whipped-in* for five years before I hunted Squire Rayton's harriers."
> *Eyre Hussey,* Miss Badsworth, M. F. H., xv.

II. *trans.*—**To whip up,** in *golf,* to strike a ball well underneath with a lofted club and with a snappy turn of the wrists, causing it to go high in the air with little run. *W. Park, Jr.,* Game of Golf, p. 114.

whip, *n.* **3.** (*c*) See the extract. [Eng.]

> Other Treasury officials with political duties are the Financial Secretary, the Patronage Secretary, called the senior "*whip,*" and three Junior Lords of the Treasury, called assistant "*whips.*" *Encyc. Brit.,* XXXIII. 547.

12. In *pianoforte-making,* the crosspiece at the top of an action-extension which bears and operates both the hammer and the damper-action. Also called *jack-whip.* See the cut under *pianoforte.*—**13.** A light line used in marine life-saving apparatus, run as an endless circuit from the shore around a sheave on the vessel and back to the shore. The breeches-buoy is operated by such a whip.—**14.** One who operates a whip-hoisting or whip-conveying line. **Double whip,** two single blocks with a rope rove through them, the standing part being made fast to a becket in one of the blocks. **Single whip,** a rope rove through a single block. **Whip and runner,** a whip whose block is made fast to a pendant, which latter is rove through a block.—**Whip upon whip,** *naut.,* one whip applied to the fall of another whip.

whip-bird (hwip'bėrd), *n.* An Australian bird, *Psophodes crepitans,* of somewhat uncertain affinities: more commonly called *coach-whip bird.* The name alludes to the peculiar note.

whipcol (hwip'kol), *n.* Rum with eggs and cream whipped in it. See the extract.

> "*Whipcol.*"—Among well-to-do families in Shetland the crowning glory of the "Yule breakfast" has been from time immemorial a brimming bowl of *whipcol,* a delectable compound of old rum, fresh eggs, sugar, and cream. *N. and Q.,* 8th ser., II. 347.

whip-cord, *n.* **4.** A weave showing a corded effect or pattern running lengthwise of the fabric.

whip-ended (hwip'en″ded), *a.* In *archery,* tapering sharply at the ends; having the ends of very small diameter: said of a bow. A backed bow can safely be made in this fashion, though a self-bow of like construction would be liable to break.

whip-flange (hwip'flanj), *n.* In *pianoforte-making,* the projection from the action-rail to which a whip is pivoted.

whipped (whipt), *a.* Applied to a mottled or agitated blue color used on Chinese porcelain. See ★*bleu fouetté.*

whipper, *n.* **6.** See the extract.

> After being thus dried, it may be either stored or passed at once to the *whipper,* a machine that knocks the dust and sand out and leaves the cotton whiter and more open.
> *U. S. Dept. Agr.,* The Cotton Plant, Bulletin, 1896, p. 230.

whipping, *n.* **7.** In *golf,* the thin twine with which the head and shaft of a club are bound together.

whipping-action (hwip'ing-ak″shọn), *n.* In *mech.,* a reciprocating, angular motion; an action or motion which tends to produce flexure: as, the *whipping-action* of a connecting-rod.

whippoorwill-pea (hwip'pọ̈r-wil-pē″), *n.* See ★*pea*^{1}.

whipsaw, *v. t.* **3.** Hence, to beat, defeat, or cause to fail in two opposite ways at the same time. See the extract. [Slang.]

> He [a broker] has only been a member a short time. It was reported on the floor that he had lately been "*whip-sawed*" in the market, having been caught short of Reading, long of sugar and long of wheat.
> *N. Y. Evening Mail,* Jan. 24, 1906.

whip-scorpion, *n.*—**Giant whip-scorpion,** an arachnid of the order *Pedipalpi* and family *Thelyphonidæ, Thelyphonus giganteus,* found commonly in the southern United States, where it is known as the vinegerone, the vinaigrier, the mule-killer, and the whip-tail scorpion. Although greatly feared, it is harmless.—**Tailed whip-scorpion,** any member of the family *Thelyphonidæ.* See *whip-scorpion.*—**Tailless whip-scorpion,** any member of the family *Phrynidæ.* See *Phrynidæ.*

whip-snake, *n.* **2.** An Australian poisonous snake, *Hoplocephalus flagellum,* about a foot long. *E. E. Morris.*

whipsnake-eel (hwip'snāk-ēl″), *n.* Any eel of the genus *Ophichthus;* in particular, *O. gomesii,* found about the coral reefs of the Gulf of Mexico.

whip-stick (hwip'stik), *n.* Same as *mallee.*

whip-stitch, *n.*—**In a whip-stitch,** in a moment; in a jiffy. [Colloq.]

whiptail (hwip'tāl), *n.* **1.** One of the skua gulls, *Stercorarius longicaudus,* so called from the two long, slender tail-feathers.—**2.** A fish. See *Tasmanian* ★*whiptail.*—**Tasmanian whiptail,** a fish belonging to the *Macruridæ,* a family of deep-sea fishes allied to the cods, having a long tail tapering to a point.

whip-thread (hwip'thred), *n.* One of the warp-threads, in gauze-weaving, that whip, or twist, about the ground or standard warp-threads. Also called *douping-warp.*

whirl, *n.* **7.** In *angling,* a spoon-bait.

> When fishing from a sail-boat the angler uses two lines with spoon-baits or '*whirls,*' by means of which large catches are made.
> *Jordan and Evermann,* Amer. Food and Game Fishes, p. 336.

Magnetic whirl, a vortical motion of the ether surrounding a circuit in which the electric current is increasing or decreasing in intensity.

whirl-about, *n.* **3.** An American hesperiid butterfly, *Thymelicus brettus,* occurring along the coast from Connecticut to Mexico. *Comstock,* How to Know the Butterflies, p. 279.

whirler, *n.* **3.** In *ceram.,* a primitive horizontal wheel turned by one hand while the other hand of the potter fashions the clay; also a revolving wheel used by decorators in painting bands of slip, color, or gold on the ware; a decorating-wheel. See *tournette.*—**4.** A revolving derrick used in loading iron ore on cars, or transferring it from cars to a vessel.

> One of the older methods, which has not yet been abandoned, consists of the utilization of "*whirlers,*" or revolving derricks, which in their appearance and plan of working are not so very different from the steam-shovels to be found in the mining regions.
> *W. Fawcett,* in The Century, April, 1901, p. 862.

5. An instrument designed to furnish a navigator with an artificial horizon when at sea. It is also known as *Troughton's top,* after its inventor, and *spinner.*

whisk-broom (hwisk'bröm), *n.* Same as *whisk*^{1}, *n.,* 1.

whisky^2, *n.*—**Dry whisky.** See ★*mescal-buttons.*—**Malt whisky,** whisky made from malted barley. Its smoky flavor is due to the fact that the malt is dried over a peat fire. The pure Highland malt whisky of Scotland is made in this way. *Encyc. Brit.,* XXIV. 542.—**Whisky skin.** See *skin, n.,* 8.

whisky-poker (hwis'ki-pō″kėr), *n.* A variation of poker in which an extra hand, or 'widow,' is dealt face down and each player in turn can exchange his hand for it. If he exchanges, his five cards are laid face up, and any following player can exchange one of them for one of his own, or he can take them all. When any player is satisfied, either before or after exchanges have taken place, he 'knocks,' and when it comes round to him again the hands are all shown and the best poker combination wins.

whisky-still (hwis'ki-stil), *n.* See ★*still*^{2}.

whispering-dome (hwis'pėr-ing-dōm), *n.* See ★*dome*^{1}.

whispery (hwis'pėr-i), *a.* Full of whispers; whispering. [Rare.]

> The reeling sea
> Now thumps like solid rock beneath the stern,
> Now leaps with clumsy wrath, strikes short, and, falling
> Crumbled to *whispery* foam, slips rustling down
> The broad backs of the waves.
> *Lowell,* Columbus, l. 5.

whist^2, *n.*—**Bridge whist.** See ★*bridge*^{2}.—**Cayenne whist,** a variety of whist in which the suits have different values and the trump is named by the dealer's side, instead of being turned up. It may also be played without a trump, either to win tricks or to lose them all: in the latter case it is called *nullo.*—**Compass whist,** in *duplicate whist* or *bridge,* an arrangement of the players by which they always occupy the same points of the compass with which they started.—**Domino whist,** a game of cards. See ★*five-or-nine.*—**Drive whist.** Same as *progressive whist.* See *progressive* ★*games.*—**Humbug whist,** a variation of double dummy in which the two players sit opposite each other. Four hands are dealt, and if either player is not content with his own hand he can exchange it for the one on his right, the trump remaining the same as first turned up. Only the thirteen cards in each hand are played, the scoring for tricks and honors being the same as at whist.—**Kalamazoo whist,** another name for duplicate whist: so called because the first duplicate-whist trays were made in Kalamazoo, Michigan.—**Scotch whist.** See *catch the ten,* under *catch*^{1}.—**Solo whist,** a card game for four players, each having 13 cards dealt to him, 3 at a time for four rounds and then 1 at a time, the last being turned up for a trump. The cards rank as in whist, and the object is to make tricks. There are six varieties of the game, the players announcing in turn which of these, if any, they are willing to undertake. The one offering the best game is the caller. The games are: *proposal* and *acceptance,* to make six tricks with the assistance of a partner; *solo,* to make five tricks alone; *misère,* to take no trick, there being no trump suit; *abondance,* to name a trump suit, and take nine tricks alone; *open misère,* to lay the hand face up on the table after the first trick, and lose every trick; *open abondance,* to name a trump suit and take all the tricks with the caller's hand exposed face upward on the table. When a proposal is bid, any player in turn may accept, and if no higher bid is made, the players are partners, just as they sit. A solo outbids a proposal, even if it has been accepted; misère outbids solo; and so on. The eldest hand always leads for the first trick, except in open abondance. Each deal is a complete game in itself. Payments are made in red and white counters, worth 5 and 1 respectively. Proposals and solos win or lose 1 red, misères 2, abondance 3, open misères 4, open abondance 6. The single player wins from or loses to each adversary. In addition to the red counters, white ones are paid for under or over tricks.—**Straight whist,** the opposite of duplicate whist; whist played in games or rubbers.—**Swedish whist,** a game very much resembling bridge, and by some supposed to have suggested it.

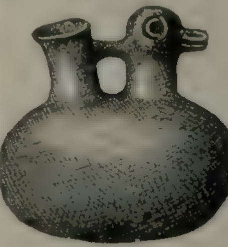
whister^2 (hwis'tėr), *n.* One who plays whist. [Colloq.]

whistle, *n.*—**Slick as a whistle,** very neatly, cleverly, or adroitly. [U. S. slang.]

whistler, *n.* **5.** A name used in England for a gadoid fish, *Motella tricirrhita.*

whistling-board (hwis'ling-bōrd), *n.* In *railroading,* a post or target displayed beside a line as a signal to the engineer to blow his whistle at that point; a whistling-post.

whistling-jar (hwis'ling-jär), *n.* A peculiar kind of jar made by the ancient Peruvians, particularly in the region of Chimu, provided with double or connecting spouts through which the air rushes when the contents of the jar are poured out. By appropriate constrictions in the spouts the inrushing air is made to produce a whistling sound. Sometimes these jars have the forms of animals and the sound is intended to imitate the voice of the animal.



Whistling-jar.

> Copies of old Peruvian vases have also been attempted, which included some of the double "*whistling-jars*" so well known to collectors of Incarial vessels.
> *E. A. Barber,* Pottery and Porcelain of the U. S., p. 90.

whistling-moth (hwis'ling-môth), *n.* Any one of several agaristid moths of the genus *Hecatesia,* inhabiting Australia. They fly at dusk and make sharp continued calls like those of cicadas. The noise, according to Sir George Hampson, is probably made by rubbing the tarsal spines against a ridged area in the front of the fore wings. *W. W. Froggatt,* Australian Insects.

> The "*whistling* (stridulating) *moths*" of the genus Hecatesia, which emit sounds like the call of a Cicada (pp. 234, 235), of which latter group there are also many large and remarkable Australian species.
> *Nature,* Sept. 19, 1907, p. 516.

whistling-post (hwis'ling-pōst), *n.* See ★*whistling-board.*

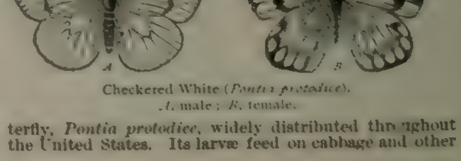
whit-bed (hwit'bed), *n.* Same as *whit-bee.* See *Portland stone,* under *stone.*

white^1. **I.** *a.*—**White C.** See ★*C.*—**White J.** See ★*J.*—**White line.** (*b*) In *wood-engraving,* a line cut directly into the surface of the block, and not left upon the surface, as was done by the early German schools. Thomas Bewick (1753–1828) introduced the method of working out the design by cutting away the lights and leaving the darks, depending thus upon a white line instead of a black line.

> By the new method the block was treated as a black surface, and the color was lessened by increasing the number of *white lines.*
> *G. E. Woodberry,* Hist. of Wood-engraving, p. 152.

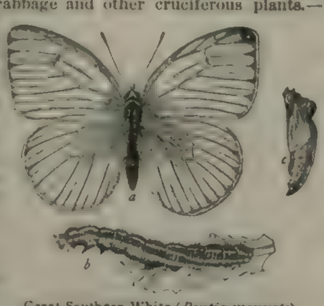
White mold. See ★*leaf-mold,* 2, and ★*mold*^{2}.—**White nebula, plague.** See ★*nebula,* ★*plague.*—**White River series.** See ★*series.*—**White rot, ware.** See ★*rot,* ★*ware*^{2}.

II. *n.* **5.** Any one of several white pierid butterflies, as the great southern white, *Pontia monuste,* the checkered white, *P. protodice,* the gray-veined white, *Pieris napi,* or the cabbage-butterfly, *P. rapæ.* *Comstock,* How to Know the Butterflies, p. 71.—**6.** In *milling,* the trade-name of flour made from the whitest and finest part of the wheat and free from all the outer coats.—**7.** Same as *bloom*^{1}, 6 (*d*). [Rare.] *Flemming,* Practical Tanning, p. 163.—**Barytic white,** a white pigment consisting of barium sulphate. Same as *constant white* (which see, under *white*^{1}).—**Charlton white,** a house-painters' pigment, consisting of barium and strontium sulphates with zinc sulphid.—**Checkered white,** an American pierid butterfly, *Pontia protodice,* widely distributed throughout the United States. Its larvæ feed on cabbage and other



Checkered White (*Pontia protodice*).
A, male; *B,* female.

cruciferous plants.—**Chinese white.** (*b*) A trade-name for a pigment used as a substitute for white lead: it is sometimes zinc oxid, sometimes barium sulphate.—**Duresco white,** the trade-name of a pigment consisting of barium and strontium sulphates with zinc sulphid. **Garden white,** any one of the several species of white pierid butterflies common in gardens in Europe and North America: as, the imported cabbage-butterfly, *Pontia rapæ.*—**Gray-veined white,** a variable pierid butterfly, *Pieris napi,* common to Europe and North America, which exhibits an extraordinary polymorphism, eleven named varieties occurring in the United States. Its larvæ feed on cabbage and other cruciferous plants.—**Great southern white,** a large American pierid butterfly, *Pontia monuste,* occurring commonly in the southern United States, the West Indies, and South America. Its larvæ feed on cabbage, lettuce, and turnip. **Griffiths' patent zinc white,** a pigment made by precipitating a solution of zinc sulphate or chlorid with a soluble sulphid, calcining the precipitate, and quenching it, while hot, in cold water.—**Hamburg white,** the trade-name of a pigment, a mixture of white lead and barium sulphate. **In the white,** not yet dyed: said of textile fabrics, as wool, mohair, or cotton. **Marbled white.** See ★*half-mourner.* **Orr's zinc white,** a house-painters' pigment which consists of a mixture of zinc sulphid and barium sulphate, made by the interaction of solutions of zinc sulphate and barium sulphid. It is not blackened by an atmosphere which contains sulphureted hydrogen.—**Satin white.** Same as *blanc fixe* (which see, under *blanc*).



Great Southern White (*Pontia monuste*). *a*, adult; *b*, larva; *c*, pupa.

whitebait, *n.* **3.** A name used in New Zealand for the young fry of *Galaxias attenuatus,* a fish of the family *Galaxidæ;* also the young of the New Zealand smelt, *Retropinna Richardsonii.* *E. E. Morris,* Austral English.

white-beard, *n.* **2.** In Australia, any one of several species of shrubby plants of the genus *Styphelia,* especially *S. ericoides,* so called from the dense beard of white hairs which lines the corolla lobes.

whitebill, *n.* **2.** A clupeoid fish, *Sardinella humerales,* of the West Indian fauna.

white-blast (hwīt'blȧst), *n.* A disease of cultivated onions, in America, caused by the insect *Thrips striatus.*

white-border (hwīt'bôr″dėr), *n.* The antiopa butterfly.

whitecap, *n.* **6.** The inner chaff of wheat: chiefly in the plural. *Todd,* Amer. Wheat Culturist, p. 24.

white-cat (hwīt'kat), *n.* **1.** A name applied to the fork-tailed catfish of the Potomac river, *Amiurus catus,* found from Maryland to Texas.—**2.** Same as *channel-cat* (*a*).

white-eye, *n.* **4.** Same as *wall-eyed pike* (which see, under *pike*^{2}).

whiteface (hwīt'fās), *n.* A small Australian passerine bird, *Xerophila leucopsis.* *E. E. Morris.*

Whitefielder (hwit'fēl-dėr), *n.* A follower of Whitefield, the evangelist, who, in the great controversy with Wesley, in the middle of the eighteenth century, held the Calvinistic view as opposed to the Arminian; a Whitefieldian.

Whitefieldite (hwit'fēl-dīt), *n.* Same as ★*Whitefielder.*

whitefish, *n.*—**Bissell's whitefish,** *Argyrosomus bisselli,* found in small lakes in Michigan.—**Bloater whitefish,** a small whitefish, *Argyrosomus prognathus.*—**Broad whitefish,** the common name of a species of whitefish, *Coregonus kennicotti,* of the family *Salmonidæ,* found in the streams of British Columbia and Alaska. The largest species of the genus attains a weight of 30 pounds. **Coulter's whitefish,** *Coregonus coulterii,* found in the head waters of the Columbia river in British Columbia.—**Humpback whitefish,** *Coregonus nelsoni,* of northern North America.—**Kennicott's whitefish,** *Coregonus kennicotti,* from British America and Alaska.—**Lauretta whitefish,** a fish, *Argyrosomus laurettæ,* found in the Yukon river.—**Least whitefish,** a fish, *Argyrosomus pusillus,* widely distributed in the fresh waters of Alaska.—**Richardson's whitefish,** *Coregonus richardsoni,* found in British Columbia.—**Silver whitefish,** *Argyrosomus prognathus,* a whitefish found in the Great Lakes.

whitehead, *n.* **5.** A small and rare oscinine bird, *Clitonyx albicilla,* peculiar to the North Island, New Zealand, and threatened with extinction.

> Now, singularly enough, the *whitehead* (Clitonyx albicapilla(sic!) was forty years ago the commonest bird in the North Island, and at that time a strict inhabitant of low scrubby vegetation, where its habits were gregarious. For many years it seemed to have become extinct, Mr. Reischek, during several years' hunting in the Auckland woods never having met with a single example. During the last few years it has reappeared, but in an entirely new character, as the frequenter of the highest tree-tops, and it appears to be sensibly increasing.
> *Pop. Sci. Mo.,* Jan., 1903, p. 224.

white-letter (hwīt'let-ėr), *n.* See the extract.

> The roman type was then called *white-letter* as a ready name of distinction [from 'black-letter'], for roman showed more white than black upon the printed page.
> *De Vinne,* Plain Printing Types, p. 292.

Whitening of pig-iron. See ★*pig-iron.*

white-pointer (hwīt'poin″tėr), *n.* A New South Wales name for the *white shark.* See *shark*^{1}. *E. E. Morris,* Austral English.

white-top, *n.* **2.** Same as ★*blackbutt.*—**3.** The common wild oat-grass, *Danthonia spicata,* of the eastern United States.—**4.** *Tridens strictus,* an approved hay-grass of central Texas.

whitewash, *n.* **4.** A wash or loose superficial deposit of white boulders and pebbles of quartz and sericite-schist which appears on the hillsides above the gold-bearing creeks of the Klondike and is itself auriferous. See the extract. [Local.]

> The early miners of course confined their attention to the valleys, and the discovery of these rich deposits upon the hillsides excited great surprise; they now rival the valley gravel in importance. The deposit is locally known as '*white-wash*' or the 'White Channel.' The origin of the White Channel is shrouded in mystery; it was at first supposed to be a glacial deposit.
> *H. A. Miers,* in Pop. Sci. Mo., July, 1902, p. 234.

whitewashing-machine (hwīt'wosh-ing-ma-shēn″), *n.* A painting-machine adapted to the use of prepared liquid whitewash. See ★*painting-machine.*

whither^2 (hwiᴛʜ'ėr), *v. i.* [Also dial. *whidder, whuther, whudder, wither, wuther, wudder;* origin obscure, perhaps orig. imitative. Compare *wuther.*] To make a rushing noise; make a tumult in the atmosphere; roar, rustle, or whistle, as the wind; bellow, as a bull. [A wide-spread prov. word.]

whiting^2, *n.* **5.** A name given to a large number of unrelated silvery and white fishes, for example to different sciænoid, clupeoid, and gadoid fishes.—**California whiting,** *Menticirrhus undulatus,* of the coast of California.—**Northern whiting,** *Menticirrhus saxatilis,* of the Atlantic coast of the United States.—**Sand whiting,** *Menticirrhus americanus,* of the south Atlantic and Gulf coasts of the United States. **Whiting of Lake Winnipiseogee,** a whitefish, *Coregonus labradoricus,* found from the Winnipeg and Great Lake regions to the lakes of the Adirondacks and White Mountains, and northeastward.

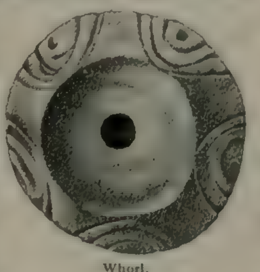
whitney, witney (wit'ni), *n.* A kind of cloth having a raised nap in ridges (*E. D. D.*): a heavy, rather coarse, woolen fabric much used in the eighteenth century for coats, breeches, petticoats, and cloaks. Blankets are now made of it. [Prov., Eng. (Yorkshire).]

> *Whitney.* A heavy and rather coarse cloth in universal use in the eighteenth century. . . . Its color was usually scarlet. . . . It was also spelled *Witney.*
> *A. M. Earle,* Costume of Colonial Times, p. 256.

whittlings (hwit'lingz), *n. pl.* Chips or bits produced in whittling.

W. H. M. A. An abbreviation of *Women's Home Missionary Association.*

whorl, *n.* **5.** In *archæol.,* one of certain round objects, sometimes slightly cup-shaped, which are frequently found in excavations. They usually carry marks or inscriptions, and are probably votive offerings. Dr. Schliemann found many thousand terra-cotta whorls in the third, fourth, fifth, and sixth cities at Hissarlik. They have been found in Italy, Crete, and elsewhere.



Whorl.

whort, *n.*—**Indian whort,** the bearberry, *Arctostaphylos Uva-ursi.* Also called *upland* or *wild cranberry.*

whudder (hwud'ėr), *v. i.* See ★*whither*^{2}, *v.*

whyo (hwī'ō), *n.* A footpad. [Western U. S. slang.]

W. I. An abbreviation of *West Indies.*

Wianamatta shales. See ★*shale*^{2}.

Wichita group. See ★*group*^{1}.

wick^1, *n.* **2.** In *hort.,* a pea-vine, of a set being bred for earliness, which continues to grow above instead of promptly maturing the lower pods.

> The objectionable form is a vine twenty-four to sixty inches in height, which even when the lowest pod is fully ripe is still growing, having its apex covered with blossoms and buds. Such plants as these last are called by seedmen '*wicks*' or 'offs,' and a stock of 'Extra Early' peas is valued in inverse proportion to the number of such plants it produces. *Science,* May 6, 1904, p. 738.

wickelkamacite, *n.* See ★*meteorite.*

wicker^3, *v.* See ★*whicker.*

wicket, *n.* **8.** A game, formerly played in parts of the United States, resembling primitive cricket.—**Bird-lime wicket,** in *cricket,* a wicket which in consequence of the action of rain followed by wind or sunshine becomes dry on the surface only, causing the ball when bowled to break readily. *Hutchinson,* Cricket, p. 88.—**Biting wicket,** in *cricket,* a wicket upon which the spin or twist imparted to the ball by the bowler will readily bite or take effect. *Hutchinson,* Cricket, p. 103.—**Hard wicket,** in *cricket,* a wicket or playing-ground which is hard and dry. *Hutchinson,* Cricket, p. 69. **Pace of the wicket.** See ★*pace*^{1}.—**Single wicket,** that form of cricket in which only one batsman at a time is having his innings.—**Sticky wicket,** in *cricket,* a wicket affected by rain which causes the ball to stick and lose its speed at the pitch.—**To catch a wicket,** in *cricket,* to catch a batsman out.

wicking^2 (wik'ing), *n.* [*wick*^{5} + *-ing*^{1}.] In *lawn-bowls,* the act of caroming from one ball lying near the jack, with the effect that one's own balls lie nearer the jack than those of one's opponents: more fully termed *in-and-out wicking.*

wickiup, *n.* **2.** Hence any small hut or shanty. [Western U. S.]

> This Wilkins lives in a *wickeyup* out on the aige of the town. *A. H. Lewis,* Wolfville Days, iii.

> See those spars up-ended over there? I mean that *wickyup* thing. Hop-poles, then, you rural blightee. Keep on fetching me hop-poles.
> *R. Kipling,* Steam Tactics, in Traffics and Discoveries, [p. 181.

Widal reaction. See ★*agglutination test.*

Wide ball, cards. See ★*ball*^{1}, ★*card*^{1}.

wide-awake, *n.* **2.** The sooty tern, *Sterna fuliginosa,* a tropical and subtropical species, named from its cry.

> The most numerous terns are the 'black-backed' and 'gray-backed' *wideawakes,* of which there must be millions, nesting among the bushes and tufts of grass, particularly on the southern end of the island.
> *C. C. Nutting,* in Pop. Sci. Mo., Aug., 1903, p. 327.

wide-gage (wīd'gāj), *a.* Same as *broad-gage.*

wide-lead (wīd'led), *v. t.* In *printing,* to lead (lines of type) widely.

> If the text is *wide-leaded,* about half a page of blank space may be given to the chapter heading; if thin-leaded, one third; if solid and without a head-band, one fourth or one fifth of the page.
> *De Vinne,* Mod. Book Composition, p. 131.

wide-minded (wīd'mīn-ded), *a.* Broad-minded; liberal; capable of more than one view of a subject.

widemindedness (wīd'mīn-ded-nes), *n.* Broadmindedness; liberality; a capacity of looking at a subject from many points of view.

> Free libraries controlled by trained librarians [develop] a certain *widemindedness*—forming a basis for true cultivation. *N. and Q.,* 10th ser., III. 320.

wide-space (wīd'spās), *v. t.* In *printing,* to arrange the type or words with thicker or wider spaces than usual.

> *Wide-space* fat type; thin-space condensed type.
> *De Vinne,* Mod. Book Composition, p. 88.

widow^1, *n.*—**College widow.** See ★*college.*—**Widow's peak,** a lock of hair growing down in the middle of a woman's forehead. [Colloq.]

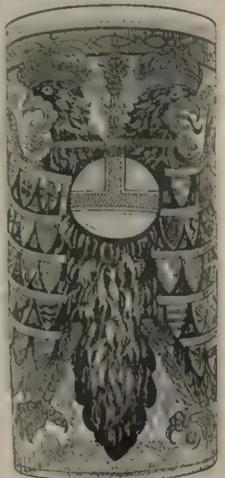
> She who waited by the brushwood-pile was no longer a little girl, but a woman with black hair that grew into a "*widow's peak,*" combed back from her forehead.
> *R. Kipling,* The Brushwood Boy, in The Day's Work, [p. 410.

widow-fish (wid'ō-fish), *n.* A scorpænoid fish, *Sebastodes ovalis,* found on the coast of California.

widow-maker, *n.* **2.** Specifically: (*a*) In *lumbering,* a broken limb hanging loose in the top of a tree, which in its fall may injure a man below. (*b*) A breaking cable.

width, *n.*—**Intercondylic width,** the distance between the outer surfaces of the condyles of the lower jaw. *A. Thompson,* Jour. Anthrop. Inst., XXXIII. 148.—**Intertemporal width,** in *anthrop.* and *zoöl.,* the least width between the two temporal fossæ, taken behind the postorbital processes: used in measuring skulls of mammals.

wiederkomm (vē'der-kọm), *n.* [G. *wiederkomm,* < *wiederkommen,* come again, < *wieder,* again, + *kommen*, come.] A cylindrical drinking-glass, usually of large size, decorated with paintings in enamel colors, made in Germany in the 16th, 17th, and 18th centuries. See ★*willkomm*.



Wiederkomm, 17th century.

wierd, *a*. An amended, and former, spelling of *weird*.

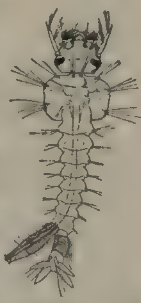
wife, *n*.—**Spiritual wife**, in the Mormon church, the wife who is 'sealed' to her husband 'for eternity.' See ★*sealing*^{2}, 2.

wife-tribe (wīf'trīb), *n*. In primitive society where laws of exogamy exist, that tribe from which a member of a certain tribe must choose his wife. *Ratzel* (trans.), Hist. of Mankind, I. 117.

wig^4 (wig), *v. i.* [Origin obscure.] To post a scout on the route of flight in a pigeon race, with a hen pigeon to attract the opponent's bird and retard his progress. *Barrère and Leland.* [Slang.]

wiggler, *n*. **2.** The larva of a mosquito. Same as *wriggler*, 1, and *wiggletail*.

> The larvæ of Culex, commonly known as *wigglers*, are familiar to almost everyone, and are the common *wigglers* found in horse troughs and rain-water barrels, which wriggle around in the water, returning at frequent intervals to the surface to breathe, and when at the surface hanging with simply the tip of the tail extruding, the rest of the body being held below the surface at a great angle.
> *L. O. Howard*, in Yearbook U. S. [Dept. Agr., 1901, p. 181.



Wiggler (full-grown larva of *Culex*), enlarged. (Howard, U. S. D. A.)

Wiggletail Democrat, a Democrat bred in a stagnant party as the wiggletail or wiggler is bred in stagnant pools; one who is a Democrat by inheritance or habit and not by reflection. *Thomas E. Watson.* [U. S. political slang.]

wigwassing, *n*. See ★*weequashing*.

Wikstrœmia (wik-strē'mi-ạ̈), *n*. [NL., named in honor of Johann Emanuel *Wikström* (1789–1856), a Swedish botanist.] A name given by Endlicher in 1833 to *Capura*, a genus of plants of the family *Daphnaceæ*.

wil, *v*., *n*., and *a*. A simplified spelling of *will*.

wild^1, *a*. **14.** Being in a state of ebullition. Thus steel, solidifying in a mold, which is evolving gases, is said to be *wild*.

> No. 2 sample is an extra soft open-hearth steel, containing 0.14 per cent. of carbon and only 0.19 per cent. of manganese. This steel must have been very "*wild*" and oxygenated. *Nature*, April 14, 1904, p. 553.

Cape wild dog, *Lycaon pictus*, better known as the Cape hunting dog.

> Elephants, hyænas, hippopotami, and that most typical African animal, the *Cape wild-dog!*
> *Nature*, Oct. 23, 1902, p. 633.

Wild date. See ★*date*^{3}

wildboret, *n*. Apparently a heavy repped woolen goods, which was much used for women's winter gowns in Colonial days.

> *Wildbore.* We read of "Marone Ribb'd *Wildbores*" in the Salem Gazette of 1784, and the name appears frequently elsewhere, until this century *Wildbore* was apparently a heavy repped woollen goods, and was much used for women's winter gowns.
> *A. M. Earle*, Costume of Colonial Times, p. 257.

wildcat, *n*. **3.** *Naut.*, a deeply grooved iron wheel on a windlass or capstan. On the side faces of the groove are radial projecting ribs in pairs called whelps, so spaced that they catch the alternate links of the chain cable.—**4.** A formational name applied in Kentucky to a conglomerate of Carboniferous age (Wildcat Mountain Conglomerate), and in California to a series of sediments of Pliocene age.

> As already pointed out these flood plains are not delta deposits, but are the result of corrasion of the rocks of the *wild-cat* formation.
> *U. S. Dept. Agr.*, Bureau of Plant Industry, 1902, Bul- [letin 12, p. 55.

5. Same as ★*niggerhead*, 4.—**6.** An oil-well, mine, or the like discovered in ★**wildcatting** (which see).

> New territory has been opened up by unexpected *wildcats* [oil-wells]. The shut-down had done less than was expected to decrease stocks.
> *McClure's Mag.*, Feb., 1903, p. 399.

wildcatter (wīld'kat"ėr), *n*. One who prospects for oil or ores, or takes other ventures; one who opens new oil-wells, mines, or similar venturesome enterprises.

> It is a fact that large oil producers do not prospect; they leave that dangerous business to the professional "*wildcatter*," and when he has located a new, rich territory, they buy him out.
> *Sci. Amer.*, June 18, 1904, p. 474.

wildcatting (wīld'kat-ing), *n*. The act of prospecting, as for ores or minerals. See the extract under ★*wildcatter*.

> *Wildcatting* has been going on at a number of other points in the state and some encouragement has been met, especially in Randolph and Macoupin counties. It seems not unlikely that as experienced drillers prospect other parts of the state, especially in the southern portion, additional oil fields will be found.
> *Contrib. to Econ. Geol.*, U. S. Geol. Surv., 1907, p. 829.

Wildermuth ear. See ★*ear*^{1}.

wild-fowling (wīld'foul-ing), *n*. The hunting of wild-fowl.

> Their principal means of subsistence is *wild-fowling*, a dangerous occupation, frequently costing human lives.
> *Geog. Jour.* (R. G. S.), XIII. 259.

wilful-missing (wil'fụl-mis"ing), *a*. Missing voluntarily; missing, but not killed, wounded, or captured. [Colloq.]

> There is a world outside the one you know,
> To which for curiousness 'Ell can't compare—
> It is the place where "*wilful-missings*" go,
> As we can testify, for we are there.
>
> You may 'ave read a bullet laid us low,
> That we was gathered in "with reverent care
> And buried proper." But it was not so,
> As we can testify, for we are there.
> *R. Kipling*, Wilful-Missing, st. 1.

wilga (wil'gạ̈), *n*. [Austral Eng., from the aboriginal name.] An Australian tree of the rue family, *Geijera parviflora*, yielding a hard wood having an agreeable odor.

wilk-bob (wilk'bob), *n*. Same as *road-goose* (which see, under ★*goose*).

will^1, *n*.—**Divided will.** See *divided* ★*self*.—**Mancipatory will.** Same as *mancipatory testament* (which see, under *testament*).—**Sealed will** or **mystic will**, a form of will or testament common under the Louisiana code as under its original, the Code Napoleon. It is signed by the testator, and placed in a sealed wrapper and superscribed by the testator and by a notary and witnesses to whom he has declared that it is his will.—**To break a will.** See ★*break*.

Will^4 (wil), *n*. An abbreviation of the personal name *William*.—**Black Will**, a common name of *Centropristes striatus*, a serranoid fish of the Atlantic coast of the United States.

Willard's brome-grass. See ★*brome-grass*.

willcoxite (wil'kok-sīt), *n*. [Named after Col. Joseph *Willcox*.] A hydrous silicate of aluminium, magnesium, sodium, and potassium, which occurs in whitish pearly scales as a coating about corundum and is derived from its alteration: found in North Carolina.

Willesden canvas. See ★*canvas*.

willey (wil'i), *v. t.* Same as *willow*^{1}, *v. t.* *C. Vickerman*, Woollen Spinning, p. 117.

williamsite (wil'yạm-sīt), *n*. [Named after L. W. *Williams*, from whom it was received.] An apple-green or oil-green variety of serpentine which has lamellar to massive granular structure, from Pennsylvania.

willier (wil'i-ėr), *n*. [*willy* + *-er*^{1}.] One who operates a willow or willy for cleaning cotton, wool, etc.

Willing game. See ★*game*^{1}.

Willis's cords. See ★*cord*^{1}.

willi-willi (wil'i-wil"i), *n*. See ★*willy-willy*.

willkomm (vil'kọm), *n*. [G. *willkomm-becher*, 'welcome-cup.'] Same as ★*wiederkomm*.

willow^1, *n*. **3.** Same as ★*blackbutt*.—**Native willow.** (*a*) In Australia, any one of several species of trees suggesting the willow, especially the boobyalla, *Acacia longifolia*, and *Pittosporum phyllirœoides*. See ★*boobyalla* and ★*butter-bush*. (*b*) Same as ★*coobah*.—**Roman willow**, the lilac, *Syringa vulgaris*.—**Willow dagger-moth.** See ★*willow-moth*, 2.—**Willow fig.** See ★*fig*^{2}.—**Willow leaf-beetle.** See ★*leaf-beetle*.—**Willow slug-caterpillar.** See ★*slug-caterpillar*.

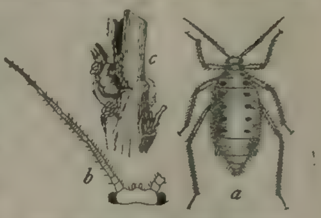
willow-borer (wil'ọ̄-bōr"ėr), *n*. (*a*) A cerambycid beetle, *Xylotrechus annosus*. (*b*) Any one of several buprestid beetles, such as *Buprestis fasciata* and *Agrilus politus*.

willow-cat (wil'ọ̄-kat), *n*. A name applied to the large catfish of the lower Mississippi, *Ictalurus anguilla*.

willow-catfish (wil'ọ̄-kat"fish), *n*. Same as ★*willow-cat*.

willow-chafer (wil'ọ̄-chā"fėr), *n*. Same as *goldsmith-beetle*, 1.

Willow Creek beds. See ★*bed*^{1}.

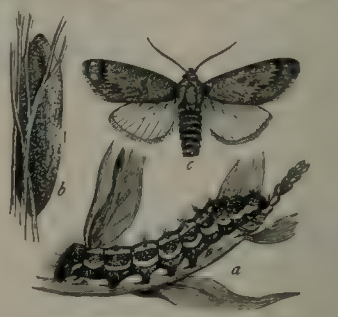


Flocculent plant-louse (*Melanoxanthus flocculosus*) found on willow.

a, oviparous female, enlarged; *b*, head and antenna of same, greatly enlarged; *c*, eggs on willow bark. (After Weed, U. S. D. A.)

willow-louse (wil'ọ̄-lous), *n*. Any one of several species of plant-lice found on the willow, such as *Rhopalosiphum salicis*, *Chaitophorus nigræ*, *C. smithiæ*, *Lachnus salicicola*, and *L. dentatus*.

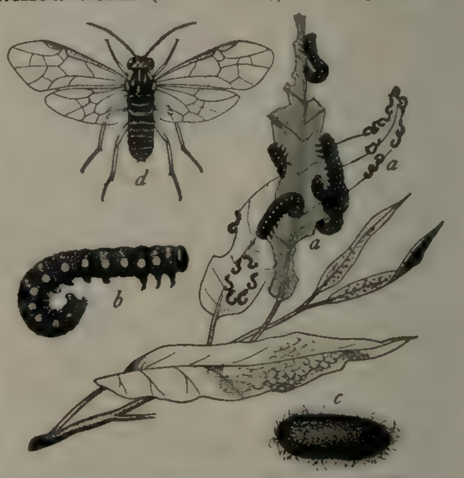
willow-moth, *n*. **2.** Any one of more than 60 species of American moths whose larvæ live on willows; notably the willow tussock-moth, *Hemerocampa definita*, the adult of the pink-striped willow span-worm, *Deilinea variolaria*, and either of the willow dagger-moths, *Apatela oblinita* and *A. Americana*.



Willow Dagger-moth (*Apatela oblinita*).

a, larva; *b*, cocoon; *c*, moth. (After Riley, U. S. D. A.)

willow-worm (wil'ō-wėrm), *n*. Any one of more than 150 species of lepidopterous or tenthredinid larvæ which feed on the willow.



Yellow-spotted Willow-worm (*Pteronus ventralis*).

a, *a*, young larvæ; *b*, full-grown larva; *c*, cocoon; *d*, adult: all slightly enlarged. (Howard, U. S. D. A.)

willyamite (wil'yạ-mīt), *n*. [*Willyama* (see def.) + *-ite*^{2}.] A sulphantimonide of cobalt and nickel which occurs in masses with cubic cleavage and of a tin-white to steel-gray color: found at the Broken Hill mines, Willyama township, New South Wales.

willy-willy (wil'i-wil"i), *n*.; pl. *willy-willies* (-iz). [Native Australian *willi-willi*.] **1.** A small whirl of wind carrying up black clouds of dust and often leaves and grass. [Interior of Australia.]—**2.** A violent storm of wind and rain on the northwest coast of Australia.

> His [Henry Taunton's] reminiscences are spread over the seventies and eighties, his last pearling season being that of 1886–7, which terminated by the disastrous loss of his vessel, torn from its anchorage in Lagrange Bay by one of those sudden hurricanes known by the native name of "*Willi-Willi.*" *Athenæum*, Jan. 2, 1904, p. 11.

> In discussing cyclones and storms, mention is made of the "*Willy Willies*" which afflict the north-west parts of West Australia. These are severe cyclones which apparently originate in the Cambridge Gulf and travel south-

west and south along the line of the coast, or they cross the continent towards the Australian Bight. These storms cause great havoc, and are marked by torrential rains. *Nature*, Oct. 22, 1908, p. 653.

wilsonite (wil′sọn-īt), *n.* [Named after Dr. James *Wilson*, who found it.] An altered scapolite, near pinite in composition, from Bathurst, Canada.

wilt¹ (wilt), *n.* [*wilt*, *v.*] A disease of plants which causes them to wilt: used only with a qualifying word indicative of the plant affected. —**Aster wilt**, a fungous disease of cultivated asters caused by a species of *Fusarium*.—**Carnation wilt**, a disease very similar to aster wilt, which affects cultivated carnations.—**Corn wilt**, a bacterial disease of corn caused by *Pseudomonas Stewarti*.—**Cotton wilt.** See *wilt* ★*disease*.—**Cucumber wilt**, a fungous disease of cucumbers caused by *Neocosmospora vasinfecta*.—**Flax wilt**, a serious disease of flax, especially in the Dakotas, attributed to *Fusarium Lini*.—**Potato wilt**, a fungous disease which affects potatoes, doubtfully attributed to *Oöspora rosea*.—**Tomato wilt.** Same as *sleepy* ★*disease*.

wilt-disease (wilt′di-zēz″), *n.* See ★*disease* and ★*wilt*.

Wilts. An abbreviation of *Wiltshire*.

wimble-bit (wim′bl-bit), *n.* See ★*bit*¹.

wimble-drill (wim′bl-dril), *n.* See ★*drill*¹.

wimen, *n.* An amended spelling of *women*.

wimi (wē′mē), *n. sing.* and *pl.* [Hopi.] Sacred objects, supposed to possess magical powers, belonging to the various clans and religious societies among the Hopi. These objects are used in the construction of the ponya, or altar, and include tiponis, effigies of the gods, and other objects.

The Antelope chief bewailed that his altar was so poor in *wimi* (fetishes), and showed me, in addition to what have been mentioned, a trochid shell and a few rounded stones. *J. W. Fewkes*, in An. Rep. Bur. Amer. Ethnol., [1894-95, p. 279.

win¹, *v.*—**To win out.** (*a*) In *faro*, said of a card when it wins four times on one deal. (*b*) To win; succeed. [Colloq.]

win¹, *n.* 2. A victory; a success; an act of winning. [Colloq.]

Mr. . . . has bred his good bitch Frances, who only lacks one *win* of being a champion, to Debonair-Adirondack Kennels' Debonair Carol, 52677. *Field and Fancy*, April 6, 1901.

wind¹, *v.* **I.** *intrans.*—**To wind away**, *naut.*, to blow the boatswain's call; whistle a call; sound the boatswain's whistle.

II. *trans.*—**To wind a ship**, to change its position by bringing its stern where its head was; swing a vessel around at its anchor so as to clear a turn in the hawse.

wind¹, *n.*—**Out of wind.** (*b*) In *carpentry*, free from perceptible or injurious warping or twisting, as timber; also, brought to a straight and regular form by cutting or planing.

wind², *n.* **Backing wind.** See *hauling* ★*wind*.—**Baric law of the wind**, the relation between the direction of the wind and the trend of the isobars; the law according to which the winds blow spirally inward, circulating in the direction contrary to the sun or contrary to the motion of the hands of a watch.—**Beating wind**, a head wind which forces a vessel to tack.—**Coast wind**, a wind that blows along or over the coast of a continent. Such winds are sometimes dry winds descending from interior mountains, as the harmattan of West Africa or the northers of the Texas coast. At other times they are simply the steady winds of that region of the globe, but converted into eddies and gusts by the transition from land to water, as on the west coast of Mexico.—**Diurnal inversion of the wind**, the Espy-Koeppen rule in accordance with which the wind, at some little distance above the earth's surface, is strongest during the night and feeblest at midday, whereas the reverse is true at the immediate surface of the earth, with corresponding diurnal changes in direction, as announced by Espy in 1840 and Koeppen in 1886.—**Dove's law of the rotation of the winds**, the rule that in the north temperate zone the changes in the direction of the wind at any locality go through a period lasting only a few days, and most frequently in this order: east, south, west, north, or in the direction of the apparent daily course of the sun. In the southern hemisphere the order is reversed. This law was known to Aristotle for the Mediterranean region, but Dove in 1827 gave it a wider extension. His theoretic explanation by the introduction of belts of southerly and northerly winds is now replaced by the laws of cyclones and their movements of translation.—**Eye of the wind.** See ★*eye*¹.—**Hauling wind**, a wind that changes around the compass in the direction of the movement of clock-hands or with the sun—the reverse of a *backing wind*, which shifts contrary to the revolution of clock-hands, or against the sun.—**Head wind**, a wind directly in the course of the vessel; a wind coming from the quarter toward which the ship is bound.—**Hot wind**, specifically, in Australia, a wind blowing from the north, lasting for two or three days, and marked by a few hours of extreme heat.—**Hurricane winds.** In the northern hemisphere these winds revolve contrary to the movements of the hands of a watch, and in the southern hemisphere with the hands of a watch, or, as a sailor expresses it, 'against the sun' and 'with the sun,' respectively.—**In the wind.** (*b*) Said of the sails of a vessel when they are all shivering, owing to the ship's having been brought close to the wind.—**Large wind**, *naut.*, a wind blowing at such an angle with the keel that it is practically a free or quartering wind, or one which blows over the quarter of the vessel.—**Moderate wind.** Same as *moderate breeze*. See *wind-scale* (under *scale*³).—**Planetary winds.** See ★*planetary circulation*.—**Spiral** or **spiraling winds**, winds that blow in a general reëntrant spiral system of curves around the globe and around local areas of high and low pressure; the complex system of cyclonic and anticyclonic winds.

The relation of weather changes to the *spiraling winds* of the prevailing westerlies may be simply illustrated by drawing (on an appropriate scale) the winds and clouds of a cyclonic and an anticyclonic area, . . . on tracing paper and moving the paper slowly to the right, across a map of the United States. *W. M. Davis*, Elem. Phys. Geog.

To hold a good wind (*naut.*), to possess weatherly qualities; to preserve the breeze.—**To hold the wind** (*naut.*), to keep the sails full.—**To hug the wind.** See ★*hug*.—**Wind erosion.** See ★*erosion*.—**Wind-mantle.** See ★*shelter-belt*.—**Woven wind**, a fanciful name applied to various delicate gauzy textiles, such as Coan linen, Dacca muslin, etc.

The construction of the roller gin has undoubtedly been greatly improved in recent times, especially as regards the ease with which it is worked and the quantity of cotton it cleans, but it is doubtful if the quality of the product is any better than it was in those ancient days when the Hindoos extracted with it the delicate fibers with which they made the wonderful tissues called the "*woven wind*." *U. S. Dept. Agr.*, The Cotton Plant, Bulletin, 1896, p. 355.

windage, *n.* 3. The disturbance of the atmosphere by the movement of any object through it, as by that of a revolving fly-wheel or armature.

In reply to a query as to whether the *windage* is excessive, he said that it is more than in the case of the slow-speed generator, yet as a whole it has not a disagreeable effect since noise in the engine room is a comparative quantity. *Elect. World and Engin.*, July 4, 1903, p. 15.

4. The space intervening between the moving part of any mechanism and the inclosure within which it moves, as the air-gap of a dynamo.—5. The air-friction of the moving parts of a machine as distinguished from the friction of the bearing surfaces.

Mr. W. Odell described some experiments he had carried out to determine the power wasted by the *windage* of fly-wheel and dynamo armatures and he stated that a 9-foot disc running at 500 revolutions a minute would absorb about 10 H. P. *Nature*, Oct. 29, 1903, p. 635.

wind-bag, *n.* 2. In *ornith.*, a pouch connected with the gullet and capable of being distended with air when a bird is 'showing off.' Such wind-bags are present in the frigate-bird, the great bustard, and others.

These *wind bags*, which, almost without exception, may be inflated and deflated at the will of the animal, differ much in the nature of their origin. *W. P. Pycraft*, in Knowledge, Jan., 1903, p. 1.

wind-borne (wind′bôrn), *a.* Carried by the wind, as sand.

wind-break, *n.* 2. The breaking of trees by wind.

wind-cripple (wind′krip″l), *n.* A tree stunted or otherwise injured by the wind.

Wind-cripples have dead or dying tops, often with entire loss of the conical shape; the growth of their branches is limited to a critical line. This leads to a densely branched and often one-sided habit. *Science*, Feb. 28, 1908, p. 339.

wind-cutter, *n.* 2. A construction or configuration for the front end of a high-speed vehicle, such as a railway-car or motor-vehicle, by which the resistance to motion by displacement of the air is lessened. Such wind-cutters are sections of conoids or inclined or warped surfaces presenting a sharp edge of entry into the air, or receiving the wind pressure on areas oblique to the direction of motion. Dirigible aërodromes have wind-cutting ends. *The Engineer* (London), 1901, p. 432.

wind-drift (wind′drift), *n.* The general movement or resultant of the wind, disregarding minor deflections; the general movement of clouds or storms or flotsam carried along by the wind.

The sand so produced is rounded by *wind-drift* in an unmistakable manner, the grains being entirely different from those of sea-sand. *Geog. Jour.* (R. G. S.), XI. 662.

winder¹, *n.* 6. A mechanism for drawing or bending a crossbow.

winder-hole (wīn′dėr-hōl), *n.* The hole in the dial or case of a clock, or of any spring-driven apparatus, into which the key is inserted for the purpose of winding the spring.

wind-firm (wind′fėrm), *a.* Able to withstand heavy wind.

wind-gall, *n.* 2. A defect in a timber or log, due to an old wound caused by the breaking of a limb, commonly by a wind.

wind-guard (wind′gärd), *n.* A screen or some device placed between an object and the wind, for protection.

A *wind-guard* is also provided in the form of a fan revolving very rapidly in front of the balloon, and thus deflecting and dispersing the current of wind and preventing any impact blow on the nose of the silk bag. *Daily Telegraph*, Oct. 5, 1905.

wind-harp (wind′härp), *n.* Same as *Æolian harp* (which see, under *Æolian*).

wind-hungry (wind′hung″gri), *a.* Said of sails that have no wind in them; not rounded by the wind, as sails.

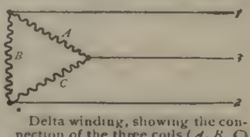
Windic (win′dik), *a.* and *n.* **I.** *a.* Of the Winds or Wends: used as a large group-name.

II. *n.* A group-name used to include the Lettic and Slavic branches. Compare *Wendic*.

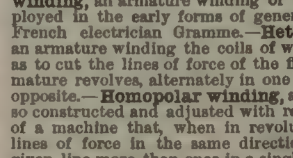
windigo (win′di-gō), *n.* [Also *wyndego*, *wendigo*; Canadian F. *windigo*, *wendigo*, < Ojibwa and Cree *windigo*.] A cannibal giant in Indian mythology.

Wendigo (*windigo*). A monster, a cannibal-giant of Indian story, an Indian turned cannibal. A word still in use in northern and northwestern Canada, and the literature of that region. *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 266.

winding¹, *n.* 3. Any portion of an electric circuit which is coiled. The term is applied to the armature and field-coils of generators and motors, to the turns of wire on electromagnets, to the coils of galvanometers and other current-measuring instruments, to the primary and secondary turns of transformers, to resistance and inductance-coils, and, in general, to any convolution or set of convolutions which forms a portion of the conducting circuit of an electrical machine or device.—**Armature winding**, the coil or set of coils of wire, or, in general, the set of conductors, on the armature of a generator or motor, constituting the circuit in which currents are generated when cut by the lines of force of the magnetic field of the machine, or which, in the case of a motor, move across the lines of the field.—**Bar-winding**, an armature winding for generators of low voltage and large current output, in which a small number of conductors of large cross-section are used.—**Bifilar winding**, a form of non-inductive winding in which two wires are wound side by side and connected differentially in series. See *differential winding*, under *differential*.—**Bipolar winding**, any armature or field winding designed for use in a generator or motor having but one pair of magnet poles.—**Chain-winding**, a form of winding, for the stationary armatures of alternating-current machines, in which separate overlapping coils are inserted in slots of the armature core and the coils belonging to each phase are connected in series.—**Closed-coil winding**, an armature winding for direct-current generators and motors in which all the coils are in series, the successive bars of the commutator serving as connectors: distinguished from an *open-coil winding*, in which only one coil at a time is in circuit.—**Cumulative winding**, a winding consisting of two sections, which are excited by two different currents, as a shunt- and a series-current, in such a manner that their magnetic effects are in the same direction.—**Delta winding**, a three-phase winding in which the phase-coils are connected in series with one another so as to form a closed circuit and the terminals of the outside circuit are connected to the three junctions between the coils.—**Discoidal winding**, an armature of ring type in which the thickness of the core, measured parallel to the axis, is small as compared with its diameter.—**Disk-winding**, an armature winding with radial conductors all in the same plane and connected by peripheral wires about the thin disk-like support.—**Double-layer winding**, a slot-winding for armatures in which each slot contains two conductors placed one above the other.—**Drum-winding**, the armature winding of electric machines in which the conductors are arranged on the surface of a laminated iron cylinder or drum: contrasted with a *ring-winding*, in which one side only of each armature turn is on the surface, the other side passing through the interior of a ring-shaped iron core.—**Field-winding**, the coil, or set of coils, constituting the field-circuit of a generator or motor and serving to conduct the currents that produce the magnetic field of the machine. The machine is said to be 'series-wound' or 'shunt-wound,' according to the manner in which the field-winding is connected to the armature circuit.—**Flat-ring winding**, a discoidal winding.—**Gramme winding**, an armature winding of the ring type as employed in the early forms of generator devised by the French electrician Gramme.—**Heteropolar winding**, an armature winding the coils of which are so arranged as to cut the lines of force of the field, in which the armature revolves, alternately in one direction and in the opposite.—**Homopolar winding**, an armature winding so constructed and adjusted with reference to the field of a machine that, when in revolution, it always cuts lines of force in the same direction and never cuts a given line more than once in a single revolution.—**Lap-winding**, a form of winding for the armatures of motors and generators in which successive coils overlap, as is shown in the diagram.—**Mesh-winding**, a form of armature winding for polyphase armatures.—**Multiple winding**, in *elect.*, a winding of field-coils, armatures, or other coils in which two or more wires are wound side by side with the ends connected so as to form a multiple circuit. Such windings afford the same number of turns as a series-winding having the same length of wire, but they are of lower resistance.—**Multipolar winding**, any armature or field winding of a multipolar generator or motor.—**Non-inductive winding**, a winding, as of the coils in a resistance-box, in which the current flows in one direction through half of the total number of turns and in the

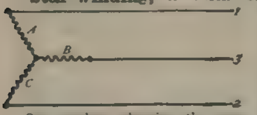


Delta winding, showing the connection of the three coils (*A*, *B*, *C*) with the three mains (1, 2, 3).

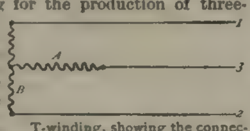


Lap-winding on four-pole dynamo.

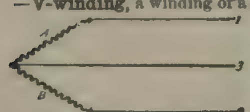
other direction through the remainder, so that the inductive effect on neighboring circuits is neutralized. A non-inductive winding is frequently made by doubling upon itself the wire to be wound and then winding the halves simultaneously side by side. The current entering the coil flows around the spool in one direction until the middle of the wire is reached, when it turns and flows back through the remaining half, almost along its former path.—**Open-coil winding**, an armature winding so connected that, at any moment, only those coils the terminals of which are under the brushes are in circuit.—**Parallel winding**, in *elect.*, a coil consisting of two or more windings in multiple circuit.—**Phase winding**, one of the several separate coils on the armature of a polyphase generator.—**Polyphase winding**, a set of similar coils symmetrically placed on the armature of an alternating-current generator and so connected as to furnish polyphase current in the outside circuit of the machine; the winding of any machine or device on a polyphase circuit.—**Primary winding.** See ★*primary.*—**Quarter-phase winding**, an armature winding with two sets of coils so arranged as to follow each other through the field and to produce two separate alternating currents with a difference of phase of 90°.—**Re-entrant winding**, an armature winding which, as in some types of spirally wound ring-armatures, is closed upon itself.—**Ring-winding**, an armature winding of the type devised by Pacinotti and first introduced in practical form by Gramme. In ring-windings the armature core is in the form of a more or less flattened hollow ring about which the coils are wound, each turn passing from the commutator end outside of the core and returning through the inside on the same side of the axis and close to the iron of the core.—**Rotor winding**, the set of conductors constituting the revolving circuit of a generator or motor. In machines with stationary field-coils the rotor winding is on the armature; in machines with a stationary armature the rotor winding is the field-winding.—**Secondary winding**, the coil, or set of coils, constituting the circuit in which, in a transformer, currents are induced.—**Series-winding.** (*b*) A winding placed in series with the other parts of the main circuit of any electrical machine or device, as a dynamo, motor, or arc-lamp, and traversed by the entire current flowing in that circuit.—**Shunt-winding.** (*b*) A winding placed in parallel with a portion of the main circuit of any electrical machine or device, as a dynamo, motor, or arc-lamp, and traversed by a portion of the current flowing in the main circuit.—**Shuttle-winding**, an armature coil wound longitudinally about a deeply grooved shuttle-shaped bobbin of iron.—**Siemens winding**, a simple form of drum-winding for armatures as used by Siemens in his early form of direct-current generator.—**Single-layer winding**, a slot-winding for armatures in which each slot contains but one conductor.—**Single-phase winding**, the armature winding of an alternater designed for the production of single-phase currents, or of a motor on a single-phase circuit.—**Slot-winding**, an armature winding the turns of which are embedded in deep grooves or slots in the core, or a field-winding of a generator or motor similarly embedded in the iron of the poles.—**Spiral winding**, a winding of a ring-armature in which the coils form a continuous spiral around the ring-shaped core.—**Squirrel-cage winding**, a form of rotor or armature winding in which copper bars are mounted in equidistant longitudinal slots in a cylindrical frame and are all joined together at either end to copper rings.—**Star-winding**, a form of polyphase winding in which the middle points of the phase-coils are connected together and grounded, as in the quarter-phase star-connected system; or in which the three phase-coils of a three-phase machine are connected together as shown in the cut, and the mains are connected to the free ends of the coils.—**Stator winding**, the set of conductors on the stationary part of a generator or motor; the field-winding in machines with a revolving armature and the armature winding in machines in which the field is on the rotor.—**Sunk winding**, in *elect.*, a winding embedded within the iron of the field or armature of a generator or motor, or sunk in a groove or slot. See *slot-*★*winding.*—**Teaser winding**, an extra magnetizing coil applied to the field of a generator or motor: said of the shunt-coils of compound-wound machines, or of separately excited coils used in addition to the regular field-coils for purposes of starting or regulation.—**Three-phase winding**, in alternating-current generators, the set of armature-coils necessary to the production, in the outside circuit, of a three-phase current; the winding of any apparatus used on a three-phase system.—**T-winding**, a winding for the production of three-phase currents in which only two coils are used. One terminal of one of the coils is connected to the middle point of the other coil and the three free ends of the coils are connected to the three mains of the outside circuit.—**Two-phase winding**, in alternating-current generators, the armature coils necessary to the production of a two-phase current; the winding of any apparatus used on a two-phase circuit.—**V-winding**, a winding of a generator, motor, or transformer, consisting of two coils connected in series, for use on a three-phase circuit. Two of the three mains of the outside circuit are connected to the coils at their junction.—**Wave-winding**, a modification of a lap-winding for armatures in which the end connectors of each loop pass around the shaft in opposite directions.—**Y-winding**, a form of star-winding for three-phase machines and transformers.



Star-winding, showing the connections of three phase-coils (*A*, *B*, *C*) to the mains (1, 2, 3).



T-winding, showing the connection of the two coils (*A*, *B*) with the three mains (1, 2, 3).



V-winding, showing the connection of the two coils (*A*, *B*) with the three mains (1, 2, 3).

winding-band (wīn′ding-band), *n.* A band on a spinning-mule for governing the rotation of the spindle in winding the yarn on the cop. *Nasmith*, Cotton Spinning, p. 295.

winding-drum (wīn′ding-drum), *n.* A small cylinder on a spinning-mule upon which is wound the winding-band. See ★*winding-band.* *Nasmith*, Cotton Spinning, p. 287.

winding-faller (wīn′ding-fâ″lėr), *n.* A wire that runs lengthwise of the spindle-carriage on a spinning-mule. It is designed to press down the yarn on the spindle to the required point for the commencement of winding, and to guide it in properly forming the cop. *Nasmith*, Cotton Spinning, p. 267.

winding-machine (wīn′ding-ma̤-shēn″), *n.* In *textile-manuf.*, a machine for winding thread or yarn on a reel, bobbin, spool, etc.—**Doubling winding-machine**, a machine for winding two or more single threads together upon a bobbin, preparatory to the process of twisting, as in the manufacture of cotton thread. *Nasmith*, Cotton-Spinning, p. 364.

winding-shaft (wīn′ding-shȧft), *n.* The shaft in a hopper, or dumping-bottom car, around which are wound the chains by which the bottom is held up.

wind-jammer (wind′jam-ėr), *n.* A common term for a merchant sailing vessel. [Colloq.]

> I went for a voyage in a sailing-ship once for my health. What is it you call them? *Wind-jammers?*
> *Dolf Wyllarde*, Captain Amyas, vi.

> Well, I hope her crew have got to dry land somewhere, or been picked up, poor beggars. Nasty things, those old *wind-jammers*, Mr. Strake. Give me steam.
> *Cutcliffe Hyne*, A Master of Fortune, vii.

windlass^2, *n.* 3. A hand or power machine for drawing a package of staves together to form a barrel.—**Spanish windlass.** (*b*) A device for moving heavy objects in logging. It consists of a rope or chain, within a turn of which a lever is inserted and power gained by twisting.

windlass-house (wind′la̤s-hous), *n.* In a vessel, a compartment or house above the deck, in which a steam windlass is placed.

windlass-machine (wind′la̤s-ma̤-shēn″), *n.* A piece of gymnasium apparatus similar to a steering-machine in a boat, with sticks to be grasped by the hands and so weighted or moved against springs as to provide the necessary resistance.

wind-mantle (wind′man″tl), *n.* Same as ★*shelter-belt.*

wind-meter (wind′me″tėr), *n.* Any apparatus for accurately measuring the force, pressure, or velocity of the wind; an anemometer.

wind-motor (wind′mō″to̤r), *n.* A windmill; any motor using the force of the wind directly.

window, *n.*—**Clearstory window.** See ★*clearstory.*—**Double window**, a pair of window-sashes with air-space between, usually adjustable so that the outer sash or casement is put up only in winter.—**Hering window**, in *physiol.* and *psychol.*, a device for the demonstration of color-contrast. By means of two vertical slits in the wall of a dark room (the one admitting white, the other colored light), two contiguous shadows of a black rod are thrown upon a white screen; the one shadow appears in the stimulus color, the other in the complementary color. The Hering window has four colored glasses, to serve as stimulus colors, and an arrangement whereby the width of the vertical slits may be varied and controlled.—**Lenard window**, a diaphragm of aluminium inserted in the wall of a vacuum-tube to permit of the exit of cathode-rays generated within the tube.

window-box (win′dō-boks), *n.* In *carpentry*, the vertical hollow upright of the window-frame prepared to hold the weights for a sliding sash.

window-dresser (win′dō-dres″ėr), *n.* In a retail store, a person employed to dress a show-window or to arrange in the window an attractive display of samples of the goods for sale in the store.

window-fly (win′dō-flī), *n.* Any of the small active black flies of the dipterous family *Scenopinidæ*, found commonly on windows in houses. See *Scenopinus* and *Scenopinidæ.*

window-peeper (win′dō-pē″pėr), *n.* Formerly, in certain parts of England, an inspector of houses in connection with the requirements of the window-tax.

> I have heard that in Sussex a "*window-peeper*"—i. e. an inspector of houses in connexion with the window tax—was used as a term of reproach long after the office had been done away with.
> *C. F. Y.*, in N. and Q., 9th ser., XI. 50.

window-wing (win′dō-wing), *n.* Any moth of the family *Thyrididæ*, many of which have translucent spots on their wings.

wind-pressure, *n.*—**Coefficient of wind-pressure.** See ★*coefficient.*

wind-puff (wind′puf), *n.* See the extract.

> After caponizing the bird should be given plenty of soft feed and should have plenty of water to drink. . . . It is well, however, to look him over two or three days after the operation has been performed, for sometimes air gets under the skin, causing a slight swelling or "*wind puff.*"
> *U. S. Dept. Agr.*, Bur. Animal Industry, Rep., 1905, p. [254.

wind-puffed (wind′puft), *a.* Affected with wind-puff, as a capon. See ★*wind-puff.*

> For a week or ten days the newly-made capons should be carefully observed to see whether they become "*wind-puffed.*" This is a condition caused by air gathering under and puffing out the skin near the wound.
> *U. S. Dept. Agr.*, Bur. Animal Industry, Rep., 1905, p. [273.

wind-ripple (wind′rip″l), *n.* A ripple-mark produced in sand by the wind, as contrasted with those produced by water.

> The uniformity of the *wind-ripple* pattern is at all times remarkable. *Geog. Jour.* (R. G. S.), IX. 279.

Wind River group. See ★*group*^{1}.

wind-rose, *n.*—**Baric** or **barometric wind-rose**, a diagram of radii showing, for any locality, the average pressure of the air or height of the barometer during the prevalence of wind from each point of the compass.—**Humidity wind-rose**, a wind-rose whose radii are proportional to the average relative humidity or, in some cases, the average absolute humidity or average dew-point of the respective winds.—**Hyetal** or **rain wind-rose**, a wind-rose whose radii are proportional to the quantity of rain that falls during the prevalence of each wind; one whose radii are proportional to the probability of the occurrence of rain within 24 hours.—**Temperature wind-rose**, a diagram of radii proportional to the temperatures of the respective winds.

windrow, *v. t.* Specifically—2. To cut (sugar-cane) before it is quite ripe and lay (it) in rows in the furrows. This is done to prevent the sap from running back into the roots or being otherwise spoiled by the action of frost. *U. S. Monthly Weather Rev.*, April, 1903, p. 192.

windrower (wind′rō″ėr), *n.* An attachment to a mower, consisting of a series of steel bands which trail on the ground behind the cutter-bar. It collects the grass as fast as cut, guides it to one side, and delivers it behind the mower in a continuous windrow.

wind-scale (wind′skāl), *n.* See *scale*^{3}, *n.*, and *Beaufort* ★*scale.*

wind-scoop (wind′sköp), *n.* 1. Same as *wind-sail.*—2. Any service used on a moving vessel or car to cause the motion of the latter to force air into the car for ventilation or to exhaust vitiated air by maintaining a lowered pressure at the orifice.

wind-shield (wind′shēld), *n.* A shield or protection against the force of the wind.

> The spectacle of a motor being driven at a rate which the cyclist can follow with the protection of a *wind-shield.* *Encyc. Brit.*, XXVII. 327.

wind-signal (wind′sig″na̤l), *n.* Any device for announcing publicly the expected character and direction of an approaching wind. In the United States, the storm-signal is a red flag with a square black center; the information signal, a pennant without flag; the hurricane signal, two red flags with black centers; the hot wind signal, a red pennant; and the inland storm signal, a red flag with a black center. See ★*weather-flag* and *hurricane* ★*warning.*

wind-slash (wind′slash), *n.* See *windfall*, 1 and 3.

Windsor fern. Same as *creeping-*★*fern.*

wind-stacker (wind′sta̤k″ėr), *n.* A pneumatic or blower elevator. It consists essentially of a power-driven blower for supplying an air-blast and a long adjustable sheet-metal pipe held in a nearly upright position by guy-ropes. It is used in connection with corn-huskers and -shredders to gather up the shredded husks and cut stalks, blow them through the pipe, and deliver them in a heap or stack upon the ground at a safe distance from the engine and machinery. By moving the pipe the heap of material falling from it can be given any shape required. The usual shape of the stack is a crescent with the points of the crescent facing south-east to form a shelter for cattle against cold northwest winds.

wind-star (wind′stär), *n.* A figure upon a chart having the form of an irregular star and showing the relative frequency and force of winds from different points of the compass at the point indicated.

> Maury constructed wind and current charts for all oceans, copies of which were supplied gratuitously for the use of navigators in this country, and FitzRoy and his small staff at once set to work on them, and converted the pilot charts (which showed the wind directions numerically under each principal point of the compass) into graphical "*wind-stars.*" *Nature*, June 9, 1904, p. 130.

windy-weep (win′di-wēp), *n.* The cool, gentle, evening breeze which descends upon a broad, quiet river, with a sighing or weeping sound, from a forest in a tributary ravine. [Colloq., U. S.]

wine, *n.*—**Aromatic wine**, a tonic wine used in tropical medicine made by percolating lavender, origanum, peppermint, rosemary, sage, and wormwood with strong white wine.—**Fig wine**, an alcoholic beverage made in Portugal by fermentation of the juice of ripe figs in the fresh state. A fig brandy is made from the wine by distillation.—**Way of the wine.** See ★*way*.

wineberry, *n.* **6.** In Australia, a small tree of the saxifrage family, *Polyosma Cunninghamii*, bearing small, ovoid, one-seeded fruits.

wine-card (wīn′kärd), *n.* A list of the wines, etc., that may be obtained in a hotel or restaurant.

Wine-cask borer. See ★*borer*.

wine-glass, *n.*—**Wine-glass cooler**, a cylindrical glass vessel of finger-bowl form, with a lip or notch at each side, for cooling wine-glasses, which were placed in it in an inverted position, the stems resting in the hollows of the lips.

wine-shop (wīn′shop), *n.* On the continent of Europe, a small shop where wine is retailed; in France, a cabaret.

> Monsieur Sigard and his new-found acquaintance, seated at a little table in front of a near-by *wine-shop*, were preparing the smoky-green mixture of absinthe and water which Paris slang has dubbed a parrakeet.
>
> *G. W. Carryl*, Zut and Other Parisians, p. 255.

winful (win′fu̇l), *a.* Winning; winsome. [Rare.]

> He is harmless, ye are sinful;
> Ye are troubled, he, at ease:
> From his slumber, virtue *winful*
> Floweth outward with increase.
> Dare not bless him! but be blessëd by his peace, and go in peace.
>
> *Mrs. Browning*, A Child Asleep, st. xii.

wing, *n.* **9.** (*q*) A cutter attached to the side of a colter making it a skim-colter. See *skim-colter*. (*r*) The characteristic part of a wing shovel (see under ★*shovel*^{1}) or of a wing sweep (see under ★*sweep*). (*s*) In *chess*, the extreme right or left of the board: as, the king's *wing* or the queen's *wing*. *Morphy*, Games of Chess, p. 385. (*t*) That part of the line of forwards, in games such as foot-ball, hockey, etc., which stretches from the center to the end; also, the position of certain players in push-ball and similar games.—**Royal wing**, in *chess*, an obsolete term for ★*king's side*. *Morphy*, Games of Chess, p. 348.

wing, *v. t.* **10.** *Naut.*, to move (an object having weight) from the middle of a vessel toward the sides.

wing-bar (wing′bär), *n.* **2.** A bar or spit formed partly across a bay.

> Dungeness foreland, then, appears to represent a transition from a bay-bar to a cuspate foreland. The *wing-bar* attempted at first to close Appledore bay, and then, on account of eddies, changed its nearly straight form into a cuspate point, which advanced gradually from south-west to north-east. *Geog. Jour.* (R. G. S.), IX. 545.

wing-bore (wing′bōr), *n.* A bore or hole made in the side or flank of an adit or gangway in a mine. *Coal and Metal Miners' Pocketbook.*

wing-dam (wing′dam), *n.* See ★*pier-dam*.

wing-deck (wing′dek), *n.* In *ship-building*, the projecting platform outside the hull forward and abaft the paddle-boxes of a paddle-steamer, with its framing and fender. Also called *paddle-wing*.

Winged disk. See ★*disk*.

wing-finger (wing′fing″gėr), *n.* One of the digits supporting a membrane which forms a wing, as in bats and the extinct pterodactyls. In bats there are four wing-fingers, corresponding to the four fingers (omitting the thumb) of the human hand; in pterodactyls there is but one finger, the enormously lengthened fifth digit, or little finger.

wing-jam (wing′jam), *n.* See ★*jam*^{1}.

wing-mark (wing′märk), *n.* A conspicuous band of color on the wing of an animal; specifically applied to the speculum of ducks.

wing-nut (wing′nut), *n.* A bolt- or screw-nut with wing-like projections; a thumb-nut; a finger-nut.

wing-patch (wing′pach), *n.* A well-marked patch of color on the wing of a bird, which may or may not correspond to the speculum; also a marking on the edge of the secondaries in ducks.

wing-sail (wing′sāl), *n.* The foresail or the mainsail of a schooner: so called because when the schooner is running before the wind these sails are often boomed out on opposite sides of the vessel, which is then said to be sailing *wing-and-wing*.

wing-space (wing′spās), *n.* *Naut.*, the space in the interior of a vessel near the side below the lower deck. Also called *wing*. See also *wing* ★*compartment* and *wing*, 9 (*d*).

> Above the turn of the bilge, the inner skin (*w*, *w* in the sections) is usually worked vertically up to the height of the main-deck, thus enclosing "*wing-spaces*" in the region of the water-line, or, as it is termed, "between wind and water." *White*, Manual of Naval Arch., p. 31.

wing-stay (wing′stā), *n.* **1.** A lateral stay or brace.—**2.** A radial stay used in steam-boilers to prevent deformation of flat surfaces such as heads under pressure by securing the head to the shell by flat steel plates riveted to both. More usually called *gusset-stay*.

wing-valve (wing′valv), *n.* A lifting- or check-valve which has its lift guided by three or four feathers or ribs called 'wings,' which are elements of a cylindrical surface below the valve-face and which fit a hollow cylindrical contact-area below the valve. *Lockwood*, Dict. Mech. Engin. Terms.

winhuka (win-hö′kä), *n.* Same as ★*rhinhuka*.

> Many species in this family [*Belostomatidæ*] occur in tropical America and frequently prove troublesome, among them a species related to the "wheel-bug," which occurs in Chili and is called the "*winhuka*" or "rhinhuka." It is said to be greatly feared, and, if numerous, to drive people for a time from their dwellings.
>
> *Buck*, Med. Handbook, V. 162.

winkle-pin (wing′kl-pin), *n.* An implement for eating periwinkles. See the extract.

> The snails promised on the oars duly appeared at déjeuner, served with two-pronged forks like giant *winkle-pins*, and disappeared at a pace that could scarcely be called snail's.
>
> *Zangwill*, in The Reader, May, 1904, p. 623.

winklerite (wingk′lėr-īt), *n.* [Named after Dr. C. *Winkler*.] A hydrated oxid of cobalt and nickel from Spain, which occurs in impure black amorphous forms.

Winkler's azotometer. See ★*azotometer*.

winning, *n.* **4.** In *metal.*, same as *beneficiation*.

> The electrolytic "*winning*" of copper is much more difficult than its refining, which latter now depends to a large extent on engineering and not so much on the operator's scientific knowledge of electrochemistry.
>
> *Electrochem. Industry*, April, 1904, p. 155.

winnonish (win-o̤-nish′), *n.* See ★*wananish*, ★*ouananiche*.

winter^1. **I.** *n.*—**Dogwood winter.** See the extract.

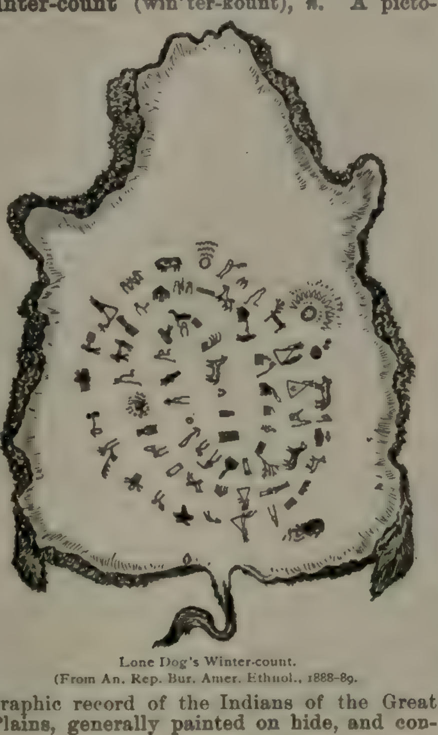
> *Dogwood winter.*—A man from North Carolina, who was visiting in Philadelphia, in the course of conversation used the expression *dogwood winter*. "What do you mean by *dogwood winter?*" asked his host. "Don't you really know what *dogwood winter* is?" demanded the man from Hickory, N. C. "There is always a spell of it in May, when the dogwood tree is in bloom. For several days there is cold, disagreeable, cloudy weather and often a touch of frost. Down our way it never fails, and we call it *dogwood winter*. I thought the phrase was general."
>
> Quoted in *Jour. Amer. Folk-lore*, July–Sept., 1907, p. 235.

Radiation winter, the cold portions of the winter season when radiation weather has most influence.—**Squaw winter**, the little winter, a short period of cold and light snow that often precedes the Indian summer of Canada and New England.

> *Squaw winter* is giving us a good long visit.
>
> *Seneca County Courier*, Nov. 21, 1901.
>
> We have had *squaw winter*; now we look for Indian summer. *Ithaca Journal*, Nov. 16, 1903.
>
> [Both the above quoted in *Dial. Notes*, II. vi.]

II. *a.*—**Winter brake.** See ★*brake*^{5}.—**Winter country**, in New Zealand (South Island), land so far unaffected by snow that stock is wintered on it. *E. E. Morris*, Austral English.—**Winter fallow.** (*b*) See ★*fallow*^{2}. **Winter garden.** See ★*garden*.

winter-count (win′tėr-kount), *n.* A pictographic record of the Indians of the Great Plains, generally painted on hide, and consisting of a series of figures each being the symbol of the principal event of a year. Thus their winter-counts are mnemonic devices for retaining the tribal history.



Lone Dog's Winter-count.
(From An. Rep. Bur. Amer. Ethnol., 1888–89.)

> The paintings were executed by an aged shaman as a sort of personal record akin to the calendars, or *winter-counts*, which play so large, yet so obscure, a rôle in Indian life. *Smithsonian Rep.*, 1900, p. 67.

winter-gnat (win′tėr-nat), *n.* Any species of the tipulid genus *Trichocera*. They inhabit high latitudes and appear fond of a low temperature. *Cambridge Nat. Hist.*, VI. 473.

winter-mother (win′tėr-muᴛʜ″ėr), *n.* A wingless parthenogenetic hibernating female of *Chermes* and allied aphidids. *Cambridge Nat. Hist.*, VI. 586.

Winton. In *eccles.*, an abbreviation of the Latin *Wintoniensis*, Winchester.

wiper, *n.* **5.** Same as *wiper-wheel*. See the extract and also ★*wipe-spark*.

> With the single wire or sparking coil with current from a live battery or permanent field generator, or other generator giving a nearly constant current that is broken by a wipe or contact breaking device within the cylinder, there are also troubles, resulting in mis-fires. The *wiper* or hammer must be actuated by snap devices on the outside of the cylinder and may be well regulated as to time and varied in its movement to delay ignition for motor speed change. *Hiscox*, Horseless Vehicles, p. 118.

6. A ring in a shaft-bearing, resting by its inner surface on the top of the shaft and hanging with its bottom elements in a bath of oil. As the shaft revolves the ring turns slowly with it, and brings up the oily parts of its surface which are wiped off by the grooves in which the ring is steadied.

wipe-spark (wīp′spärk), *n.* See ★*spark*^{1}.

wiping-spark (wī′ping-spärk), *n.* See ★*spark*^{1}.

wirble (wėr′bl), *v. i.* [ME. **werblen*, turn, whirl?] To whirl; eddy.

> Through each pause
> Of its fitful recital, in raw gusty flaws,
> The rain shook the canvas, unheeded; aloof,
> And unheeded, the night-wind around the tent-roof
> At intervals *wirbled*.
>
> *Owen Meredith*, Lucile, vi. 17.

wire^1, *n.* **10.** In *paper-making*, a general term for the woven brass wire-cloth used in a Fourdrinier or paper-making machine.—**Aluminium wire**, wire made of aluminium. It is nearly twice as strong as steel telegraph wire per unit of weight, but is only a little more than one half as strong per unit of volume.—**Bone-wire**, a substitute for whalebone, for stiffening dress-waists, etc.—**Bookbinders' wire**, a wire, covered with tin, used instead of thread stitching for holding together the sheets of pamphlets and magazines.—**Brass wire**, wire made from brass: used for springs, etc., where steel would rust.—**Helmholtz side-wire**, a wire which acts as a shunt to the primary coil of the Du Bois-Reymond inductorium, and thus reduces the disparity between the make-and-break currents. *A. D. Waller*, Human Physiol., p. 316.—**Leading-in wires.** (*b*) In *elect.*, wires connecting the terminals of an apparatus with the line wires or main circuit.

> That portion of the *leading in wires* embedded in the glass is of platinum.
>
> *Elect. World and Engin.*, May 21, 1904, p. 1012.

Machinery wire, a good quality of steel wire, untempered so that it may easily be bent.—**Metal-coated wire**, wire-cloth woven from steel wire that has been previously coated with zinc.—**Neutral wire**, in *elect.*, the intermediate conductor, usually maintained at zero potential, of a three-wire circuit.—**Plow-ground wire.** See ★*plow-ground*.—**Reticule wire.** See ★*reticule*.—**Steel wire**, wire made by rolling steel billets into rods, and drawing the rods through draw-plates into wire. It is of all grades of temper and composition to fit it for use in springs, drills, needles, electric lines, and the like.—**Stone wire.** (*a*) A wire of such cross section that the coil of the standard length weighed one English stone or 14 pounds. (*b*) By derivation from this, an annealed wire of size and weight suitable for weaving into nettings, wire-cloth, and the like.—**Three-wire system**, in *elect.*, a method of low tension distribution by three conductors energized so that the voltage between the two outside conductors is twice the voltage between the middle or neutral conductor and either of the outside ones. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 808.—**Wire-bar pitch**, the state of tough-pitch copper in which the removal of oxygen has been carried farther than it has in the ingot-pitch copper. See ★*ingot-pitch*.

> Finally, micrograph Fig. 31 represents a sample of copper . . . which has been brought to plate-pitch, *i. e.*, the poling has been carried further than is the case with the highest degree of *wire-bar pitch*.
>
> *Electrochem. Industry*, March, 1904, p. 94.

II. *a.*—**Wire bunch-grass.** See ★*bunch-grass*.—**Wire lath**, a wire netting used instead of wooden lath in the application of plaster to a wall. Sheet-metal cut in various ways is also used.—**Wire nail.** See ★*nail*.

wire-binder (wīr′bīn″dėr), *n.* An attachment to a harvesting-machine by which the sheaves are bound with wire.

wire-carrier (wīr′kar″i-ėr), *n.* A carrier consisting of a single or multiple block, used to support the wire which connects a signal-cabin of a railroad with the signal-arm on the signal-post. Where the line is curved the blocks are swiveled to allow the wires to move freely on the curve. Where a chain is used in place of a wire the carrier is called a *chain-wheel.*

wire-gage (wīr′gāj), *n.* See ★*gage*^{2}.— **American, Birmingham, British,** and **Stubb's wire-gage.** See ★A. W. G.

wire-glass (wīr′glás), *n.* Window-glass in which woven-wire netting is embedded. The netting serves to hold the glass together when cracked by heat or broken in any manner. Wire-glass is used in roofs, sky-lights, elevators, and wherever a thick semi-transparent glass is exposed to injury from fire, hail, etc. It is semi-fireproof. *Amer. Architect.*, Sept. 27, 1902, p. 99.

wire-grama (wīr′grä″mä), *n.* See ★*grama.*

wire-grass, *n.* 4. See *vine-*★*mesquite.*—5. The nimble-Will, *Muhlenbergia diffusa.*

wire-haired (wīr′hãrd), *a.* Having coarse, stiff hair: as, a *wire-haired* fox-terrier.

wire-joint (wīr′joint), *n.* 1. A joint by which two wires are united.— 2. A joint in a pipe-line in which a soft wire, laid in a groove or between flat surfaces, is used for packing. The soft metal compresses and compensates for irregularities.

wireless (wīr′les), *a.* and *n.* I. *a.* Being or done without a wire; not requiring a wire for its operation: as, *wireless* telegraphy.—**Wireless telegraphy, telephony.** See ★*telegraphy,* ★*telephony.*

II. *n.* Wireless telegraphy: as, a message by *wireless.* [Colloq.]

> First in this great field of making the "*wireless*" a handmaid of commerce is the . . . system, which has won the approval also of the United States government.
> *N. Y. Com. Advertiser*, Jan. 31, 1903.

wire-milker (wīr′mil″kėr), *n.* One who taps a telegraph-wire in order to intercept messages or to send his own; a wire-tapper [Colloq.]

> The *Wire-Milkers* [chapter heading].
> *Cutcliffe Hyne,* A Master of Fortune, vi.

wire-money (wīr′mun″i), *n.* The Maundy money of 1792, so called from the form of the numerals of value. *W. C. Hazlitt.*

wire-pointer (wīr′poin″tėr), *n.* A machine or apparatus for sharpening the end of wire in a coil so that it may be entered and pass through the steel dies used in the drawing process and start the proposed reduction.

wire-press (wīr′pres), *n.* A machine for putting the wire in the edges of tin pans, pails, or other tinware.

wire-rod (wīr′rod), *n.* A metal rod rolled to the correct size for drawing into wire.

wire-saw (wīr′sâ), *n.* A cutting-tool for stone or rock, made of an endless band of three or more hard wires made into a strand passing over pulleys which are driven like those of a band-saw. The stone is fed to the moving band, while a feed of sand and water is led into the groove as the band cuts into it.

> The *wire-saw* may be regarded as a kind of band saw. It is an endless strand composed of three steel wires, which is kept moving upon the rock while sand and water are fed to it. *Encyc. Brit.*, XXX. 764.

wire-stitch (wīr-stich), *v. t.* To fasten (loose leaves or the folded sections of a proposed book) by means of a wire staple forced through the paper by a machine.

> There has been introduced recently a noteworthy combination folding and *wire-stitching* machine, which by a continuous and automatic operation takes the sheets from the feeders, and folds, gathers, collates, covers, and wire-stitches copies of magazines and pamphlets, delivering them ready for distribution.
> *Census Bulletin* 216, June 28, 1902, p. 65.

wire-stitcher (wīr′stich″ėr), *n.* A machine used by bookbinders for stitching pamphlets with wire staples.

wire-tapper (wīr′tap″ėr), *n.* One who 'taps' a telegraph-wire, that is, reads by illicit means the messages passing over it; also, one who, for fraudulent purposes, professes to have secured private information in this way.

> On the day he bet his money, the *wiretappers* made it appear to . ., he says, that such sportsmen as . . . and . were betting thousands on Old Stone, through them, and advised him to "get in on the good thing," too.
> *N. Y. Tribune*, Feb. 1, 1906.

wire-tapping (wīr′tap″ing), *n.* The act, or the fraudulent scheme, of a wire-tapper. See ★*wire-tapper.*

wireworm, *n.*—**Corn-wireworm.** See ★*corn*^{1}.

wiring-die (wīr′ing-dī), *n.* An attachment to a sheet-metal press for placing reinforcing wire in the edges of pressed ware.

wirrah (wir′ạ̈), *n.* [Aboriginal Australian.] A fish, *Acanthistius serratus*, of New South Wales.

wirricow, *n.* Same as *worricow.*

Wis. An abbreviation of *Wisconsin.*

Wisd. An abbreviation of *Wisdom* (*Book of*).

wise, *a.* 7. Quite aware; knowing; cognizant of. [Slang.]

> I 'm *wise* his diamond ring 's a cut-glass snide.
> *Wallace Irwin,* Love Sonnets of a Hoodlum, vi.

Wise men of the East. See *Magus,* 2.

wisen (wī′zn), *v. i.* [*wise, a.*] To grow wise; know better. [Prov.]

> [He 's not] got climatized to the place, but . . . he'll *wisen* i' time. Quoted in *N. and Q.*, 9th ser., XII. 145.

wiserite (wiz′ėr-īt), *n.* See *wiserine.*

wiskinski, wiskinsky (wis-kin′ski), *n.* [Said to be of Algonkian origin.] An officer in the Tammany Society, nominally a door-keeper.

wistarin (wis′tạ-rin), *n.* [*Wistaria* + *-in*^{2}.] A colorless, crystalline, bitter, astringent glucoside contained in the bark of *Wistaria chinensis.*

wistiti (wis′tē-tē), *n.* [Also *ouistiti.*] A common name for the little South American monkeys known as marmosets, belonging to the genus *Midas* and related genera. See *Hapale* and *tamarin,* with cuts.

witch^{1}, *n.* 8. A modified and simplified form of a Jacquard attachment to a loom, for a more limited range of work; a *dobby* or *index-machine.*—**Black witch.** (*b*) See ★*witch-moth.*

witch-elm, *n.* 2. The winged elm or wahoo. —3. Occasionally, and improperly, applied to the witch-hazel.

witchetty (wich′e-ti), *n.* The name given in Australia to certain longicorn larvæ dug out of the roots of shrubs, or out of fallen trees, and roasted and eaten by the natives. *E. E. Morris,* Austral English.

witch-gowan (wich′gou″ạn), *n.* Same as *milk-*★*gowan.*

witch-hammer (wich′ham″ėr), *n.* A popular name for an inquisitorial code regarding witches, composed by the inquisitorial commissioner Sprenger.

Witch-hazel dagger. See ★*dagger*^{1}.

witch-hobble (wich′hob″l), *n.* [*witch* + *hobble.*] The hobble-bush, *Viburnum alnifolium* (so in the quotation); also the cranberry tree, *V. opulus.* The name 'hobble' refers to the obstruction offered by the prostrate branches of the former, which is also called *tangle-foot, tangle-legs,* and *trip-toe.*

> As they passed from the zone of striped maple, roundwood, *witch-hobble,* and mountain holly that Mother Nature had drawn across her naked breast . . . , his heart lifted. *Holman Day,* King Spruce, xix.

witch-hood (wich′hůd), *n.* The character of a witch; in the extract, witches collectively. [Rare.]

> And far and wide the heather press
> With *witchhood's* swarms of wantonness!
> *B. Taylor,* tr. of Goethe, Faust, I. xxi.

witch-loom (wich′lōm), *n.* A loom equipped with a witch or dobby attachment for weaving fancy patterns.

witch-moth (wich′môth), *n.* Any one of several large noctuid moths, notably the black witch-moth or black witch, *Erebus odora,* of North and South America and the West Indies.

withe, *n.* 5. In the West Indies, a liana; the stem of any vine used as a rope, and hence the vine itself.

withering (wiᴛʜ′ėr-ing), *v. n.* The act or process denoted by the verb *wither*^{2}; specifically, in the manufacture of black tea, the operation of wilting the fresh leaf by exposing it, thinly spread, for some time to the air. Withering expels half the water from the leaf and fits it to endure ★rolling (which see) without breaking, also developing oxidation. See *black* ★*tea.*

withering-loft (wiᴛʜ′ėr-ing-lôft″), *n.* In a tea-factory, an upper room devoted to the withering process. See ★*withering.* *U. S. Dept. Agr.*, Report 61, p. 16.

withering-persistent (wiᴛʜ″ėr-ing-pėr-sis′tẹnt), *a.* In *bot.*, same as *marcescent* (*a*).

withers, *n. pl.*—**Casting of the withers.** See ★*cast*^{1}, *v. t.*

witlet (wit′let), *n.* A person of little wit; a would-be witty person.

> The student himself is liable to be regarded as a relic of mediæval times, and his unconcern respecting ordinary matters is serviceable to the dramatist and newspaper *witlet* in their times of need.
> *J. J. Stevenson,* in Smithsonian Rep., 1897, p. 325.

witness, *n.* 7. In *geol.*, an eroded fragment of former more extensive strata, remaining in testimony of that which has departed. [Rare.]

> Deflation, or the action of sand-laden wind, is illustrated in many curious features, notably in certain scarped outliers of horizontal beds of sandstone which appear like pyramids in the plain. Some of these known as *zeugen* or "*witnesses*" are figured. *Nature,* Oct. 16, 1902, p. 612.

Crown witness. See ★*crown.*—**Diligence against witnesses.** See ★*diligence.*—**Going witness,** in *law,* one who is about to depart from the jurisdiction of the court so that his presence, when required, may not be compellable by subpœna. In a civil case the evidence of such a witness may be taken by deposition before trial. In a criminal case he may be detained by order of the court.—**Kerry witness,** an unreliable witness. **Prosecuting witness,** the party who, in an action to recover a penalty or in the prosecution of a criminal offense in which the government is plaintiff, is entitled to the penalty, or who is immediately aggrieved by the commission of the crime.

witney, *n.* See ★*whitney.*

wiwi (wē′wē), *n.* [F. *oui, oui,* **yes, yes.**] A Frenchman. *E. E. Morris.* [Australian slang.]

wizard (wiz′ạ̈rd), *v. t.* To effect by wizardry or enchantment. [Rare.]

> Over the eastern hills came the bright vernal sun. . . . Distance lends enchantment to the sound as well as to the view, and the clang and clash of innumerable belfries came modulated through the intervening air, wherefrom the last lingering trails of mist were gradually *wizarded* away. *A. Austin,* Lamia's Winter-quarters, p. 61.

W. L. An abbreviation of *wave-length.*

W. lon., W. long. [*l. c.* or *caps.*] An abbreviation of *west longitude.*

W. M. An abbreviation of *Worshipful Master.*

W. N. A. An abbreviation for *winter* (*free-board line for voyages in the*) *North Atlantic.* See ★*free-board*^{2}.

W. O. An abbreviation of *War Office.*

Woad vat. See ★*vat.*

wobbegong (wob′e-gong), *n.* [Aboriginal.] A New South Wales aboriginal name for a species of shark, *Orectolobus barbatus,* of the family *Hemiscylliidæ:* also known as the *carpet-shark,* from the beautifully mottled skin. *E. E. Morris,* Austral English.

wocheinite (vōċh′īn-īt), *n.* [*Wochein* (see def.) + *-ite*^{2}.] A variety of bauxite, often having a red color from ferric oxid: found near Lake Wochein in Carniola.

wodanium (wō-dā′ni-um), *n.* [NL., < *Woden,* OHG. *Wotan,* a Teutonic deity. See *Woden, Odin.*] A supposed new chemical element announced in 1818 by Lampadius as present in a cobalt ore, afterward proved to consist of already known elements (nickel, arsenic, etc.).

woehlerite (vė′lėr-īt), *n.* [Named after Prof. F. *Woehler* (1800–83).] A rare silicate which contains zirconium, niobium, calcium, and sodium, occurring in light yellow to grayish or brownish monoclinic crystals of prismatic and tabular habit: found in various localities in Norway.

wokowi (wō-kō′wẹ̄), *n.* [Comanche Indian name.] In Oklahoma, the name of the narcotic cactus *Lophophora Williamsii.* See ★*mescal-buttons.*

wolf, *n.*—**Maned wolf,** *Canis jubatus,* a long-legged, conspicuously colored species, about the size of the common wolf, found in parts of southern Brazil and northern Argentina.

> Attention is called to the fact that the attitude generally given to the South American *maned wolf* in museums and figures is incorrect, the creature carrying its head very low. *Nature,* Oct. 30, 1902, p. 661.

Marsupial wolf, the thylacine or zebra-wolf of Tasmania, *Thylacinus cynocephalus.* See cut under *thylacine.*

wolfachite (vol′fäċh-īt), *n.* [G. *Wolfach* (see def.) + *-ite*^{2}.] A sulpharsenide and antimonide of nickel, Ni(As,Sb)S, which occurs in orthorhombic crystals and in columnar radiated aggregates of a silver-white or tin-white color: found at Wolfach, Baden.

Wolffian ridge. See ★*ridge.*

wolf-hole (wůlf′hōl), *n.* A wolf's den; figuratively, a pit dug as a part of a line of defenses upon a military position. See the extract.

> In the immediate foreground of the picture is shown a series of "*wolf-holes,*" concealed with diabolical skill among a forest of sharpened sticks. These holes are laid out on a diamond pattern and each is between three and four feet deep. In many cases a sharp stake is driven firmly in the ground at the bottom. Usually they have a wire entanglement running parallel with them. In some cases they were built without the usual forest of stakes being driven around them at the surface of the ground; in which case the openings were concealed by grass and brushwood, and the attacking force knew nothing of their existence until the men crashed through to be impaled on the stakes below.
> *Sci. Amer.*, June 17, 1905, p. 482.

wolf-hound (wůlf'hound), *n.* A dog used in hunting wolves.—**Russian wolf-hound,** a large dog, much resembling the deerhound in general build, but having much softer hair. Its usual color is black and white.

Wolfram aluminium. See ★*aluminium.*

wolframine (wůlf'ra̤-min), *n.* [*wolfram* + *-ine*^{2}.] Same as *tungstite.*

wolframite (wůlf'ra̤-mīt), *n.*. [*wolfram* + *-ite*^{2}.] See *wolfram.*

Wolf-Rayet star. See ★*star*^{1}.

wolf's-peach (wůlfs'pēch), *n.* An old and fanciful name for the tomato, being a rendering of the Latin generic name of the tomato, *Lycopersicum*: it was once supposed that the fruit was poisonous or at least not good to eat.

wollomai (wol'ō̤-mī), *n.* [Aboriginal Australian.] The ★schnapper (which see). [Australia.]

wolver (wůl'vėr), *n.* Same as *wolfer.*

> Two weeks afterward as the *wolver* rode down an adjoining cañon, he saw a Wolf come out of a hole.
> *E. Thompson Seton*, Billy: the Big Wolf, i.

wolverene, *n.* **2.** An inhabitant of the State of Michigan. [Colloq., U. S.]

wolving (wůl'ving), *n.* Same as *wolfing.*

> Away back in the spring of '92 a Wolf was "*wolving*" on the east side of Sentinel Mountain.
> *E. Thompson Seton*, Billy: the Big Wolf, i.

woman, *n.* **4.** Formerly, the side of a British penny on which was the figure of Britannia, the other having the king's head: as "man or *woman?*"—that is, heads or tails?—**The new woman,** woman, as more or less freed from the control of traditional views of what is proper or becoming in female conduct, occupation, education, etc. [Slang.]—**The strange woman,** in biblical usage, a harlot.—**Veiled woman.** See ★*veil, v. t.*

womar, *n.* Same as ★*wommera.*

wommera (wom'e̤-rä̤), *n.* [Also *womerah*, *womara*, *woomera*, *wummerah*, *wammerah*, *wommela*, etc.: aboriginal Australian.] The spear-thrower, or throwing-stick, of the aborigines of Australia.

> The region in which spear slings are most frequent, even at the present day, is Australia. The principal weapon of the Australians is the spear, 3 to 4 meters in length, and all Australian spears except those used in catching fish are thrown by means of a sling, called "*wommera*," which is used both in war and in the chase. It was at one time distributed throughout Australia, but, being supplanted more and more by firearms, slings are now limited to West Australia from the north and the territory beyond New South Wales and Victoria.
> *Smithsonian Rep.*, 1904, p. 622.

wonder, *n.*—**Back-rolling wonder,** *Eupelmus mirabilis*, a chalcidoid parasite, of the family *Encyrtidæ*, which lays its eggs in the eggs of the angular-winged katydid, *Microcentrum retinerve*, and which has the habit of turning its abdomen up over the thorax.

wondercraft (wun'dėr-kráft), *n.* Thaumaturgy; the pretended art or power of working wonders. [Rare.]

> When thaumaturgy becomes a source of gain, and greed is wed to *wondercraft*, there springs from the union a progeny of devils that wreak on the teachers of truth the tortures of rack and fagot.
> *An. Rep. Bur. Amer. Ethnol.*, 1898–99, p. clxxxiii.

wondermonger (wun'dėr-mung"gėr), *n.* One who deals in marvels and prodigies; a thaumaturgist. [Rare.]

> By reason of a persistent refusal to recognize much, if any, difference between the scientist and the charlatan, between the expert and the quack; and, in fact, by a disposition—marked in some quarters—to give undue prominence to bogus weather prophets and *wondermongers*, at the expense of the equipped and reputable students of the subject. *Pop. Sci. Mo.*, Feb., 1901, p. 382.

wonga (wông'gä̤), *n.* [Aboriginal name.] In Australia, the lesser cattail, *Typha angustifolia.* See *Typha* and ★*raupo.*

wong-shi (wong-shē'), *n.* [Chinese *wang shi* or *wang sh'*, plants which grow in tufted heads with slender peduncles; *wang*, the footstalk of a flower, a plant that dyes yellow; *shi* or *sh'*, name of a plant.] A yellow dyestuff, the pods of *Gardenia florida*, brought from China. It contains crocin, apparently identical with that from saffron, and dyes silk or wool without a mordant, and cotton mordanted with tin salts.

wood^1, *n.* **11.** In *hort.*, any twig or tissue of a plant, whether hard or soft, that is considered in the making of cuttings or sometimes, in the case of garden plants, in the operation of pruning. See *hard* ★*wood*, *soft wood.*—**Armored wood,** wood which is covered with metal to protect it from injury by fire; also wood which has been strengthened by the addition of pressed or rolled steel. **Fernambuco wood.** Same as *Pernambuco wood* (which see, under *wood*^{1}). See *Brazil*, 2.—**Hard wood.** (*b*) In *hort.*, the wood or tissue that has hardened or ripened so far that it is no longer soft and herbaceous. Such twigs or shoots are often used for cuttings. The term is used in distinction from soft wood or green wood, cuttings from which are often likely to flag and decay, although some plants, as coleus, are always grown from soft-wood cuttings. (*c*) The name used in the lumber trade for the timber of deciduous-leaved trees as distinguished from evergreen or coniferous trees, though some, poplar, for instance, are as soft as white pine, while yew and some varieties of yellow pine rank high in hardness, when compared with hard woods. In Tasmania the name is usually confined to the timber of the eucalypts, while in Queensland it is especially applied to a myrtaceous tree, *Backhousia Bancroftii.*—**Haskinized wood,** wood which has been subjected to the process of ★haskinization (which see).—**Jamaica wood,** *Baryxylum Linnæi* (*Peltophorum Linnæi* of Bentham). See *West Indian redwood*, under ★*redwood.*—**Lima wood,** a dyewood obtained in Peru and Ecuador from *Cæsalpinia pectinata.* It reaches commerce from the port of Lima, whence the name. See *braziletto.*—**Madagascar wood,** a kind of sandalwood, resembling caliatour-wood, from the island of Madagascar, used as a dyestuff.—**Nic. wood,** a trade-name, an abbreviation of *Nicaragua wood.*—**Open woods,** those woods used by dyers which are soft and present little compactness of texture, so that their coloring matter is readily given up to solution in water.—**Panama wood,** a commercial name for quillai-bark, (which see, under *quillai*).—**St. Mary's wood.** See ★*bitanhol.*—**Terra-firma wood,** a dyestuff, of the same class with Brazil wood, Nicaragua wood, etc., consisting of the wood of a species of *Cæsalpinia.*—**Wood powder.** See ★*powder.*—**Wood pulp.** See *wood-pulp.*—**Wood turpentine.** See ★*spiritine.*

wood^1, *v. i.*—**To wood up.** (*a*) To supply (a boat) with wood for fuel. [U. S.]

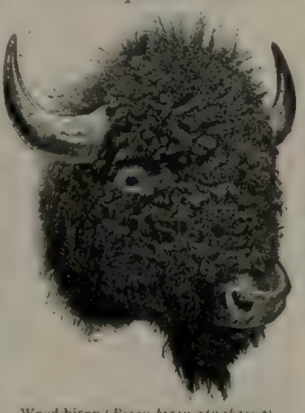
> So I 'm going down stream *to wood up*, and then we 'll come back and make them pay.
> *Cutcliffe Hyne*, A Master of Fortune, iii.

(*b*) To make a noise by scuffling with the feet or by handclapping, as students in approval or disapproval of a professor. [U. S. slang.]

wood-alcohol, *n.* Seriously injurious and even fatal effects have been observed as the result of swallowing wood-alcohol (methyl alcohol), or preparations containing it, such as essence of ginger. Injury to vision has repeatedly attracted attention.

Wood-apple gum. See ★*gum*^{2}.

wood-bison (wůd'bī"so̤n), *n.* An American bison, separated as a subspecies under the name *Bison bison athabascæ.* It formerly inhabited the mountainous and wooded parts of the northwestern United States and British territory from there to Lake Athabasca. A few still remain near this last locality. More commonly called *wood-buffalo.*



Wood-bison (*Bison bison athabascæ*)

wood-borer, *n.*—**Metallic wood-borers,** the beetles of the family *Buprestidæ.*

wood-buffalo (wůd'buf"a̤-lō), *n.* Same as ★*wood bison.*

wood-carving, *n.*—**Wood-carving machine,** one of a variety of profiling-machines having revolving cutters for reproducing a pattern in a wooden surface, much used in the manufacture of piano-legs, carved furniture, etc.

wood-cloth (wůd'klôth), *n.* A textile fabric manufactured by a process invented by Mitscherlich, in which long strips of soft wood, free from knots, cut parallel to the grain, are boiled with a solution of sulphurous acid or an acid sulphite, washed with water, pressed, repeatedly passed between rolls to separate but not break the fibers, dried, and combed like flax, being afterward spun and woven like any other textile material.

woodcock, *n.*—**Scotch woodcock,** eggs and bacon with caviare or anchovy paste on toast.

wood-crowfoot (wůd'krō"fůt), *n.* See ★*crowfoot.*

wood-drill (wůd'dril), *n.* **1.** A kind of auger for large holes in which the point has a tapering screw designed to draw the cutting edges forward.—**2.** A form of drill resembling an auger, used in mining in soft material, which has a central tit to draw the cutter proper after it.

wood-duck, *n.* **3.** The maned goose, *Bernicla jubata*, found in southern Australia.

Wood-engraver bark-beetle, a North American scolytid beetle, *Tomicus cælatus* Eichoff, damaging white pine, mining beneath the bark and loosening it from the wood, making regular and artistic furrows which suggested the name to Thomas Say, the pioneer entomologist. Same as *wood-engraver*, 2.

wood-gas, *n.* A double process of destructive distillation is necessary, the first producing a mixture of liquid, oily, or tarry substances, which in the second retort, at a higher temperature, evolves gases, chiefly marsh-gas and its homologues, ethylene and other unsaturated hydrocarbons, hydrogen and carbon monoxid, with carbon dioxid in large quantity, this last to be afterward removed by passage over slaked lime. Wood-gas is practically free from sulphur compounds.

wood-grass, *n.* **2.** Same as *bushy* ★*blue-stem.*—**3.** Same as *knot-root* ★*grass.*

wood-gum (wůd'gum), *n.* Same as ★*xylan.*

wood-hare (wůd'hãr), *n.* A term sometimes applied to the gray rabbit or cottontail, *Lepus sylvaticus*: mainly a book-name.

Woodhouse beds. A group of strata in Charnwood Forest, Leicestershire, England, believed by some to be pre-Cambrian, by others Cambrian. *Geikie*, Text-book of Geol., p. 897.

wood-ipecac (wůd'ip"ē̤-kak), *n.* See ★*ipecac.*

woodite (wůd'īt), *n.* A trade-name for an elastic packing material of fibrous character and consisting in part of india-rubber, intended, among other applications, for lining the hulls of ships of war in order to secure temporary plugging of holes made by shot. *N. and Q.*, 8th ser., II. 213.

woodland, *n.* **2.** In *forestry.* See ★*forest*, 1.—**3.** In *phytogeog.*, a vegetation composed of woody plants, regarded by Schimper as one of three grand types of climatic formation (compare ★*grass-land*, 2, and ★*desert*^{1} (*b*)). This author subdivides *woodland* (*gehölz*) into *forest* (*wald*), in which the tree growth is closed up; *bushwood* (*buschwald*), in which the trees are so separated by shrubby growth that their crowns do not touch; and *shrubwood* *gesträuch*), in which shrubs are the chief feature. Tropical woodland is divided by the same author into rain forest, monsoon forest, savanna forest, and thorn forest, these resulting from as many combinations of climatic conditions. See ★*forest*, 4.

wood-lot (wůd'lot), *n.* A lot covered with forest. See ★*forest*, 1. [U. S.]

> I've . . . scrimped here and pinched there. What do you s'pose I sold the *woodlot* for?
> *J. C. Lincoln*, Partners of the Tide, v.

wood-meal (wůd'mēl), *n.* Wood ground to a meal-like powder: used in paper-making, in the manufacture of explosives, and as a constituent of some plastic materials. See ★*meal*, 2.

wood-mosquito (wůd'mus-kē"tō), *n.* See ★*mosquito.*

wood-mulls (wůd'mulz), *n. pl.* Heavy hose worn by fishermen. [Eng.]

wood-nettle (wůd'net"l), *n.* See ★*nettle*^{1}.

wood-nodule (wůd'no̤d"ūl), *n.* Same as ★*sphæroblast.*

wood-nymph, *n.*—**Southern wood-nymph,** an American agapetid butterfly, *Cercyonis pegala*, common in Florida and the other Gulf States. Its larvæ feed on grasses.

wood-oil, *n.*—**China wood-oil,** a drying oil from the kernels of *Aleurites cordata* or *Elæococca vernicia*, used in making varnish.

wood-paper, *n.* **2.** Very thin veneers of wood backed or reinforced by thin paper: used as a wall-paper.

woodpecker, *n.* **2.** In *lumbering*, a poor chopper. [Slang.]

wood-pitch (wůd'pich), *n.* The residue left in the still after distillation of wood-tar. It is run out from the still while hot and becomes solid on cooling. It is used, often re-melted with rosin-pitch or with coal-tar, to protect the surface of timber; also used by shoemakers.

wood-pulp, *n.* *Chemical pulp* is produced by the chemical treatment of wood in the form of chips. It is almost wholly included under the heads of *sulphite pulp*, made with the aid of a solution of calcium acid-sulphite, and *soda pulp*, made with a solution of caustic soda. *Mechanical pulp* is produced by grinding wood to a sort of powder against a rapidly revolving surface of sandstone under a stream of water. Pulp so prepared has very little felting power, and is generally used with some addition of material of longer fiber. It is employed very largely in making lower-class, weak paper, such as that on which many newspapers are printed.—**Wood-pulp silk.** See ★*silk.*

wood-quartet (wůd'kwâr-tet"), *n.* An instrumental quartet of wood instruments, usually a flute, an oboe, a clarinet, and a bassoon.

wood-satyr (wůd'sat"ėr), *n.* A popular name of certain agapetid butterflies.—**Little wood-satyr,** an American agapetid butterfly, *Cissia eurytus*, having a wide southern and northern range in the United States. Its larvæ feed on grass.

wood-spirits (wůd'spir"its), *n.* Same as ★*spiritine.* Not to be confounded with 'wood-spirit' or methyl alcohol.

Woodstock group. See ★*group*^{1}.

wood-sugar (wůd'shůg"ä̤r), *n.* Same as ★*xylose.*

wood-trimmer (wůd′trim″ėr), *n.* In *wood-working*, a hand- or power-machine for cutting blocks or pieces of wood into a great variety of shapes. It is essentially a mitering cutter employing two cutting knives placed at a right angle and giving a shaving cut. See *mitering-machine*.

wood-turpentine (wůd′tėr″pen-tīn), *n.* Spirits of turpentine made by distilling with water the refuse wood of the long-leaf pine. See ★*spiritine*.

wood-yard (wůd′yärd), *n.* A yard or space where wood is stored and cut.

wool, *n.* 1. A wool fleece is divisible into sorts, according to fineness or length of staple. Clothing or short-staple wool may be divided into 9 (or more) sorts: *picklock*, *prime*, *choice*, *super*, *head*, *downrights*, *seconds*, *abb*, and *breech*; worsted or combing wool may be divided into 7 (or more) sorts: *blue*, *fine*, *neat*, *brown drawing*, *breech* or *britch*, *cow-tail*, and *brokes*. These sorts are sometimes designated as first, second, third, etc.—**Carbon wool.** See ★*carbon*.—**Clayton wool-brown**, an acid coal-tar color which dyes wool brown in an acid bath.—**Cross-bred wool**, the wool of a sheep that is the progeny of two varieties (usually understood to be an English and a merino blooded sheep).—**Forest wool**, the filamentous part of pine-tree leaflets, used for stuffing mattresses and for hygienic and other fabrics: for the latter use it is generally mixed with cotton.

> Near Breslau, in Silesia, there have been erected factories that convert the pine leaves into what is called "*forest wool*," for wadding. Other factories have been erected in other parts of Europe for a similar use of these leaflets, as in Sweden, Holland, and France. The products made from these pine-tree leaflets have been exhibited at a number of expositions, where they attracted more or less attention as furnishing suitable material for stuffing mattresses and articles of furniture in place of horse hair, for manufacture into hygienic fabrics for medical use, and for articles of dress, such as inner vests, drawers, shirts, chest preservers, etc. In the preparation of the textile material an ethereal oil is produced, which is employed as a curative agent and oftentimes as a useful solvent. *Sci. Amer. Sup.*, Nov. 15, 1902, p. 22464.

Full-blood wool, any wool bred to a fixed type.—**Glass wool.** (*b*) A variety of spun glass resembling asbestos or mineral wool, used for making fire-proof cloth and for electrical purposes.—**Half-blood wool**, a trade term for wool from sheep with one half merino blood and one half cross-bred or English blood.—**Kapok wool.** See *kapok*.—**Luster wool**, long-staple wool exhibiting a silky luster: it is the wool of such breeds of sheep as the Leicester and Lincoln converted by spinning into worsted yarn.—**Mestizo wool**, South American wool, particularly that of Argentina, from the cross between the imported merino and the native criollo sheep.—**Quarter-blood wool**, a trade term for wool from sheep with one quarter merino blood and three quarters cross-bred or English blood.—**Silk wool.** See ★*silk*.—**Skirted wool.** See *skirted*. **Tanners' wool.** See ★*tanner*^{1}.—**Three-eighths-blood wool**, wool from sheep with three eighths merino blood and five eighths cross-bred or English blood.—**Vegetable wool.** (*a*) Flax or other vegetable fibers which have been prepared by a chemical or mechanical process, or both, so as to look like wool: used for mixing with the latter.

> At the time of the New Jersey experiments it was thought that the question of economically cleaning the fiber [jute] had been settled by the invention of a "combined chemical and mechanical process." It was stated that the practical advantage of this refining process consisted in obtaining a *vegetable wool* so nearly akin to coarse animal wool "as to render their union in coarse fabrics advantageous, and for additional possible uses by itself a valuable substitute."
>
> *U. S. Dept. Agr.*, Rep. No. 6, p. 29.

(*b*) See the extract.

> Cotton, which comes next to sugar cane among the agricultural products of the coast, is principally grown in the departments of Piura, Ica, and Lima. Piura produces the remarkable cotton called *vegetable wool*, known in Europe as "full rough" and "moderate rough." This cotton is unique in its class and is used for mixing with wool in the manufacture of woolen goods. So excellent is this cotton that even an expert may mistake it for wool. *National Geog. Mag.*, Aug., 1904, p. 315.

Wool yellow. See *patent* ★*fustin*.

wool-eating (wůl′ē″ting), *n.* A disease of sheep. See ★*lick*, 7.

wooled (wůld), *a.* [*wool* + *-ed*^{2}.] Having wool: as, a fine *wooled* or medium *wooled* sheep.

> Marked achievements have been attained in producing new breeds of sheep; for instance, among the fine and medium *wooled* breeds from Europe are the Rambouillets, the Horned Dorsets, etc.
>
> *Yearbook U. S. Dept. Agr.*, 1901, p. 219.

woolen-mill (wůl′en-mil), *n.* An establishment in which all or some of the principal processes of wool-manufacture, as carding, spinning, and weaving, are performed, separately or together; a wool-mill.

wool-extract, *n.* Fabrics of mixed wool and cotton are steeped in dilute sulphuric or hydrochloric acid, dried, and heated to about 110° C., which 'carbonizes' the cotton and makes it easily reducible to powder: this powder is separated by dusting and screening.

wool-grease (wůl′grēs), *n.* The material, of greasy consistence, obtained from raw sheep's wool by extraction with special solvents, such as petroleum ether, or recovered from water in which the wool has been scoured. It consists largely of cholesterol and isocholesterol and thin esters, along with potash salts and certain special fatty and waxy organic substances. Lanolin for medical use and potassium carbonate are made from it. Also known as *suint*. *Jour. Soc. Chem. Industry*, X. 709.

Woolhope limestone. See ★*limestone*.

woolly-breeches (wůl′i-brich″ez), *n.* See *yellow* ★*forget-me-not*.

woolly-foot (wůl′i-fůt), *n.* A grama-grass, *Bouteloua eriopoda*, found in dry gravelly soil from Texas to Arizona and in Mexico, distinguished from others of its genus by having the stems woolly toward the base. It withstands severe drought and is locally very valuable for grazing. More fully, *woolly-foot grama*.

woolly-head, *n.* 2. A small white alto-cumulus or cirro-cumulus cloud, of a round shape and compact texture: distinct from the clouds of the mackerel sky, which are thinner and of a paler tint, shading off to white on one side, but fading into the delicate blue of the sky on the other.

wool-man (wůl′man), *n.* [Native Australian corruption of E. *old man*.] Old man: applied to a kangaroo. [Australian.]

> The male kangaroos were called by my natives old men, '*wool-man*,' and the females, young ladies, 'young liddy.'
>
> *R. Dawson*, The Present State of Australia, p. 139.
> [Quoted in E. E. Morris, Austral English.

wool-press (wůl′pres), *n.* Same as *wool-packer*, 2.

wool-printing (wůl′prin″ting), *n.* The printing of wool fabrics: analogous to calico-printing. *Georgievics* (trans.), Chem. Technol. Textile Fibres, p. 278.

wool-puller (wůl′půl″ėr), *n.* A workman who removes the wool from sheepskins. *Flemming*, Practical Tanning, p. 1.

wool-pulling (wůl′půl″ing), *n.* The process of removing the wool from sheepskins. *Flemming*, Practical Tanning, p. 2.

wool-scarlet (wůl′skär″let), *n.*—**Wool-scarlet R**, an artificial dyestuff belonging to the class of the oxy-azo dyes, soluble in water.

wool-scouring (wůl′skour″ing), *n.* The process by which raw sheep's wool is cleansed to prepare it for textile use. For a long time stale urine, containing ammonium carbonate derived from the hydrolitic decomposition of urea, was the chief agent in use, but at present soft water with cautious addition of ammonia, sodium carbonate or specially selected soap, is chiefly resorted to, or washing with petroleum naphtha followed by water alone. Wool itself is so easily attacked by alkalis that great care has to be exercised in using them.

wool-seal (wůl′sēl), *n.* 1. A very young harp-seal, *Phoca grœnlandica*, in its coat of long, white, woolly hair. Better known as *white-coat*.—2. See the extract.

> Many furriers—in America, at least—fail to recognize the fast furs as from a species of hair seals, considering them as the skins of a distant and separate species, to which they give the name "*wool-seal*."
>
> *Sci. Amer. Sup.*, Feb. 11, 1905, p. 24335.

wool-shed (wůl′shed), *n.* In Australia, a shed or building in which sheep are sheared and the wool sorted, packed, or stored ready for market. *E. E. Morris.*

> The *wool-shed* is a large building open on every side, with a high-pitched roof,—all made of wood and very rough. The sheep are driven in either at one end or both, or at three sides, according to the size of the station and the number of sheep to be shorn. They are then assorted into pens, from which the shearers take them on to the board;—two, three, or four shearers selecting their sheep from each pen. The floor, on which the shearers absolutely work, is called 'the board.'
>
> *A. Trollope*, Australia and New Zealand, I. 126.

woolskin (wůl′skin), *n.* A sheepskin with the wool on. *Flemming*, Practical Tanning, p. 64.

wool-table (wůl′tā″bl), *n.* Same as *wool-packer*, 2.

Woolwich and Reading beds. See ★*bed*^{1}.

wool-yoke (wůl′yōk), *n.* See ★*wool-grease*.

woomera, *n.* See ★*wommera*.

woozy (wö′zi), *a.* Grotesque; ridiculously odd or extraordinary. [Colloq.]

> Mr. Trelawney, . . . rich and learned in Egyptology, had the feline and mulierine mummies in a strange cabinet of weird and *woozy* curios, and he kept the jewel in a burglar-proof safe in the same room.
>
> *The Reader*, May, 1904, p. 658.

word^{1}, *n.*—**Motor word**, in *psychol.* and *phonetics*, the word as spoken; the word as presented in kinesthetic terms: opposed to *auditory*, *visual*, *written word*. *Scripture*, Exper. Phonetics, p. 83.

word-deaf (wėrd′def), *a.* Unable to understand spoken words, although the sound is heard. *Scripture*, Exper. Phonetics, p. 85.

word-dumbness (wėrd′dum″nes), *n.* Same as *ataxic aphasia* (which see, under *aphasia*). *Scripture*, Exper. Phonetics, p. 84.

word-idea (wėrd′i-dē-ạ̈), *n.* The idea or meaning conveyed by a written or spoken word.

> A *word-idea* should be learned as part of various courses of thought, in order to form the necessary language associations, in addition to being learned separately in the earlier lessons. *Scripture*, Exper. Phonetics, p. 150.

word-movement (wėrd′möv″ment), *n.* The muscular movement which constitutes articulation of a word. [Rare.]

> The centers for memories of *word-movements* are mainly in the anterior portion of the speech region.
>
> *Scripture*, Exper. Phonetics, p. 83.

word-seller (wėrd′sel-ėr), *n.* A rhetorician. [Rare.]

> So these *Word-sellers* haue no power to cure
> The passions which corrupted liues endure.
>
> *Lord Brooke*, Humane Learning, st. xxx.

word-sign (wėrd′sīn), *n.* A character used as the sign of a whole word: as, in phonography, a sign for *sh* may be used for *shall*, *ng* for *thing*, *ch* for *which*, etc. *Jour. Anthrop. Inst.*, XXX. p. 156.

> The *word-sign* value of a sign is, in the first place, the name of the object it represents, or of some material, or quality, or action, or idea suggested by it.
>
> *Encyc. Brit.*, XXVII. 730.

word-unit (wėrd′ū″nit), *n.* In *phonet.*, the spoken word considered not as made up of independent sounds, each expressed by a letter of the alphabet, but as a continuous series of an infinite number of sounds; and considered also as the expression, not of a series of volitions (for prefix, suffix, etc.), but of a single unified volition. *Scripture*, Exper. Phonetics, p. 453.

work, *v.* I. *intrans.* 9. *Naut.*, to move slightly, as a structural part of a vessel, with reference to adjacent parts; change form slightly, as a vessel: due to the strains brought upon a vessel that is rolling or pitching at sea.

> In many cases wood ships alter form transversely, "*working*" at the junctions of the decks and sides, or at the bilges, when rolling in a seaway.
>
> *White*, Manual of Naval Arch., p. 296.

10. In *machin.*, to have an undesired motion due to defective fitting of the bearing, guiding, or supporting areas of contact, or from wear.

II. *trans.* 18. In *hort.*, to graft or to bud.—**To work and turn.** See ★*turn*.—**To work out one's taxes**, to pay one's taxes by working on the highways or other public works. *Dialect Notes*, III. iii. [U. S.]

work, *n.* 15. A movement of strata of the earth upon one another which causes creeping, squeezing, or faulting of the veins or lodes in a mine.—**Detached work**, a redoubt or other defensive work not in close defensive relation with the main line of defense.—**Free work**, in *thermodynamics*, the work obtainable from any isothermal modification of the state of a substance or system. See *free* ★*energy*.—**Gaged work**, in *bricklaying*, fine work upon arches, etc., and in which gaged bricks are used. See *brick*^{2}.—**Incised work**, lettering, decorative sculpture, and the like, done by incision in a surface, either pierced through, as in a plate of metal, or merely sunk, as in a slab of stone with an inscription. The former is more properly called *pierced work*. Incised work may be filled up with another material, producing inlay (which see).—**Long and short work**, in *building*, the fitting of stones in successive courses, as at the corner of a building or a window jamb, so that the stones enter the wall in alternately longer and shorter blocks. The system is used in order to tie the body of the wall, when of an inferior material, more firmly to the square blocks of the angle or the jamb, and it enters into the decorative effect of some styles of architecture, such as that of the French Renaissance.—**Mont Melick work**, embroidery which is composed of many of the stitches used in lace and embroidery. It is of Irish origin and very old: recently revived.—**Principle of maximum work**, in *phys. chem.*, a theorem of Berthelot, which asserts that every chemical action which takes place without the addition of energy from without, tends to form that substance or those substances whose formation occasions the greatest development of heat. There are so many exceptions to the proposition that it is obviously not a law of nature.—**Sorrento work**, ornament cut out of flat boarding, as with a jig-saw or ribbon-saw; flat scrollwork, the back and face being parallel.

work-adder (wėrk′ad″ėr), *n.* In *physiol.* and *exper. psychol.*, an attachment to the ergograph, constructed on the principle of the cyclometer, which sums up the work done by the finger in successive contractions and thus indicates the total amount of work performed in a particular test or series of tests. See ★*ergograph*.

worked (wėrkt), *a.* In *hort.*, said of plants that have been grafted or budded.

worker, *n.*—**Fertile worker,** a worker honey-bee which lays eggs.

working, *n.* 6. In *forestry*, the harvesting of the final yield under a working plan. Working is *annual* when cuttings are made each year, *periodic* when they are made after uniform periods of two or more years; and *intermittent* when they are made at irregular intervals. *Sustained*, annual, periodic, or intermittent workings are those under which the amount of wood cut is so regulated that the productive capacity of the forest does not decrease, but produces a *sustained yield*, which likewise may be annual, periodic, or intermittent.

7. *Naut.*, the condition of moving slightly or changing form under the strain of rolling: said of a vessel or any of its structural parts. See ★*work*, *v. i.*, 9.—**Working home,** in *mining*, a system of working a vein or seam by which the work of extraction is begun at the point on the property farthest from the shaft or main gangway, and the progress is from the boundary toward the point of discharge. *Coal and Metal Miners' Pocket-book.*

working-area (wėr′king-ā″rẹ-ạ), *n.* In *forestry*, the total forest-area managed under a working-plan. Also called *working-circle.*

working-circle (wėr′king-sėr″kl), *n.* See ★*working-area.*

working-jib (wėr′king-jib), *n.* *Naut.*, the regular jib; the jib that is in general use, and not the jib of light-weight canvas sometimes bent in light weather.

working-mold (wėr′king-mōld), *n.* In *ceram.*, a plaster cast taken from a case-mold and used in molding the ware; an exact reproduction of the block-mold. See ★*block-mold* and ★*case-mold.*

working-pit (wėr′king-pit), *n.* That shaft of a mine out of which the ore is taken and which is used as a passage by the miners, as distinguished from a shaft used only for pumping or ventilation.

Working-plan renewal, in *forestry*, the preparation of a new working-plan for a given tract, when the present working-plan has been carried out, or changed conditions require its revision.

workplace (wėrk′plās), *n.* A place where work is done; a place or structure in which people work.

The size of the *workplace* should, of course, correspond to the number of employees, and to the needs of each establishment. The minimum of four hundred cubic feet of space for each worker, which is established by legislation in many places, is entirely inadequate.
Buck, Med. Handbook, VI. 327.

workt, *p. a.* A simplified spelling of *worked.*

world, *n.*—**Astral world.** See ★*astral.*—**In the world.** See *world*, 17.—**Roof of the world.** See ★*roof*^{1}.—**The world of appreciation.** See ★*appreciation.*

world-map (wėrld′map), *n.* A map of the entire earth.

A complete mappemonde, to remedy the deficiencies noticed above in the *world-map.*
Geog. Jour. (R. G. S.), XV. 379.

world-myth (wėrld′mith), *n.* A myth which assumes to explain the origin or constitution of the world. *Ratzel* (trans.), Hist. of Mankind, I. 58.

world-power (wėrld′pou″ėr), *n.* A state, a church, or other organization which exercises power in every part of the world or among all mankind.

In that development of doctrine which had organised the Church, as the representative of absolute truth, into a *world-power* coextensive with the State and resting ultimately on force. *Kidd*, Western Civilization, p. 307.

world-process (wėrld′pros″es), *n.* A development or evolution coextensive with the duration of the world, but especially of mankind, and including all the events of universal history. *Kidd*, Western Civilization, p. 174.

world-soul (wėrld′sōl), *n.* The (supposed) soul of the world.

The soul of the Upanishads had already become the one primeval *world-soul* from which all other souls emanated, when Buddhism arose; and the remarkable feature about this approximation to a great central truth was that it owed its existence, not to Brahmin philosophy, but to the conception of lay speculation.
Nature, Dec. 10, 1903, p. 121.

world-stuff (wėrld-stuf), *n.* The (ultimate) material of which the universe is composed.

world-weariness (wėrld′wē″ri-nes), *n.* The condition of being world-wearied; weariness with the world; general dissatisfaction with life.

worm, *n.* 6. (*e*) A conical winding-drum having a spiral groove in which the winding rope or chain lies as it is wound upon the drum, the object being to wind the rope at first over the smaller diameter of the cone, and to increase the leverage as the winding proceeds. A common example is the brake-chain worm of a railroad car at the lower end of a brake-shaft. (*f*) The driving element in screw-gearing or worm-gearing; the helix whose section is that of a wheel-tooth described upon a cylinder as a base which bears upon the tooth of the worm-wheel to cause the latter to revolve.

To particularize further, the motor runs at a speed of 1,500 r. p. m. and its extended shaft has a $\frac{7}{8}$-inch *worm* with 20 threads per inch, which engages with a worm wheel that is 7 inches in diameter, and similarly has 20 threads per inch in 500 teeth. *Elect. Rev.*, Sept. 17, 1904, p. 458.

Medina worm. Same as *guinea-worm.*—**Miners' worm,** *Ancylostoma duodenale.*—**Woolly worm,** any one of a number of saw-fly larvæ which secrete a close waxy fibrous covering resembling wool.

worm-abscess (wėrm′ab″ses), *n.* An abscess resulting from the presence of worms or larvæ of insects in the tissues.

worm-box (wėrm′boks), *n.* A metal covering with bearings for a worm and worm-wheel.

worm-eel (wėrm′ēl), *n.* A name applied to a small eel of the family *Myridæ.*

worm-gear, *n.*—**Ball worm-gear,** a form of gear using a screw-gear driven by a worm, in which the contact of the worm with the wheel is by means of steel balls in the periphery of the latter instead of teeth, to reduce the sliding friction. The balls are sunk in the wheel up to their equatorial line, and a guard or container prevents them from getting out beyond the area of contact with the worm.

worming (wėrm′ing), *v. n.* Specifically, the operation (performed by hand) of ridding the growing tobacco-plant of worms, chiefly the tobacco-worm (which see).

Worming has been done so persistently in many places in the Connecticut valley that this pest is well-nigh exterminated. *Killebrew and Myrick*, Tobacco Leaf, p. 251.

worm-tube (wėrm′tūb), *n.* The shell-like tube formed by many marine worms, especially by those of the genus *Serpula.*

From a conical base, which has a flat spreading margin and is attached to a mass of *worm-tubes*, the short main stem arises.
Annals and Mag. Nat. Hist., May, 1904, p. 381.

wormwood, *n.*—**Silvery wormwood.** See *wormwood-*★*sage.*

wormwood-sage (wėrm′wụd-sāj), *n.* See ★*sage*^{2} and *pasture* ★*sage-brush.*

wound^1, *n.*—**Exit wound,** in *medical jurisprudence*, the wound caused when a weapon or missile comes out, after it has passed completely through the body or a part of it.

wound-duramen (wönd′dū-rā″men), *n.* The duramen-like tissue formed in the process of healing of wounds in woody plants.

For these reasons it is quite correct to designate these preliminary steps towards wound-closure as a pathogenic formation of duramen, and the tissue derived from the process as *wound-duramen.*
Tubeuf, Diseases of Plants, p. 76.

wound-fungus (wönd′fung″gus), *n.* A fungus which gains entrance to a plant by means of a wound.

wound-gum (wönd′gum), *n.* A dark-colored gummy substance which forms in the dead tissue of wounds of woody plants.

wound-parasite (wönd′par″ạ-sīt), *n.* A parasite which gains entrance to a plant through a wound. See *wound* ★*parasite.*

Fomes Ribis enters the trunk of the tree apparently in the same manner as do most of the so-called "*wound parasites.*" *Science*, Oct. 11, 1907, p. 480.

Woven wind. See ★*wind*^{2}.

W. P. An abbreviation of *Worthy Patriarch.*

W. R. An abbreviation (*a*) of *West Riding*; (*b*) of *William Rex* (King William).

wraithe (rāᴛʜ), *n.* [Cf. *writhe*, *v.*] A coarse comb used on a form of warp-dressing or -beaming machine to keep the warp-threads apart. *R. Marsden*, Cotton Weaving, p. 292.

wrangler, *n.* 4. Same as *horse-wrangler.* [Western U. S.]

wrap^1, *n.* 2. In *cotton-manuf.*, one complete circuit of the measuring mechanism of a warp-beaming machine. The length of the wrap varies according to the details of the mechanism—3,564 yards, more or less. *R. Marsden*, Cotton Weaving, p. 281.

wrapper, *n.*—**Cigar wrapper,** tobacco-leaf employed for the outside finish of cigars: the most difficult to produce of all the grades. A light, thin, elastic, fine-veined and well-colored leaf is sought. See *broad-leaf* ★*tobacco*, *Havana* ★*tobacco*, *Sumatra* ★*tobacco.*—**Mahogany wrapper.** See *plug* ★*wrapper.*—**Plug wrapper,** tobacco-leaf fitted by fine, elastic texture, attractive color, etc., for covering plug tobacco. The lemon yellow is rated highest, this grading into mahogany and red. See *yellow* ★*tobacco*, *mahogany* ★*tobacco.* The dark export tobacco furnishes red and brown plug wrappers.—**Swiss wrapper,** a type of American export tobacco taken in small amount by Switzerland for cigar wrappers. It is a large, silky, fine-veined leaf of a dark brown or chestnut color.

wrapper-chain (rap′ėr-chān), *n.* See ★*binding-chain.*

wrapt, *p. a.* A simplified spelling of *wrapped.*

wrasse, *n.* (*b*) In New Zealand, *Pseudolabrus bothryocosmus.* Called also *poddly*, *spotty*, and *kelp-fish.* *E. E. Morris*, Austral English.

Wreath cent. See ★*cent.*

wrecker, *n.* 3. One whose business it is to tear down buildings preparatory to the erection of new ones on their sites.

The buildings now on the property will be turned over to *wreckers* on May 1. *N. Y. Evening Post*, Feb. 10, 1906.

wreck-fish, *n.* 2. An Australian species, *Polyprion oxygeneios*, of the family *Serranidæ.* *E. E. Morris*, Austral English.

wrecking (rek′ing), *p. a.* and *n.* [*wreck*^{1}, *v.*] Relating to the work of removing wreckage, as on a railway, of saving wrecked vessels or their cargoes, or of tearing down old buildings; also, such work itself.

wrecking-block (rek′ing-blok), *n.* A wire-rope block having three or more sheaves used in the derrick of a wrecking-car.

wrecking-company (rek′ing-kum″pạ-ni), *n.* A business concern engaged in saving wrecked vessels or their cargoes, or in tearing down old buildings.

wrecking-crane (rek′ing-krān), *n.* A crane adapted for use upon a wrecking-car.

wrecking-crew (rek′ing-krö), *n.* The men engaged in operating a wrecking-car or a vessel employed in wrecking-work.

wrecking-train (rek′ing-trān), *n.* A railroad train fitted up with appliances for clearing away wreckage on the track and repairing damages so far as may be to cars, track, and engine. See *wrecking-car.*

wreckt, *p. a.* A simplified spelling of *wrecked.*

wrench, *n.*—**Thomas wrench,** an instrument used for the forcible correction of a club-foot.—**Union wrench.** (*a*) A steel-bar wrench or spanner for work upon the nuts of unions for pipe or hose. (*b*) A hose-coupling wrench or spanner. The hose-coupling union may have pins or tits on its exterior face, fitting a hole in the end of the curved bar or spanner; or the unions may have radial holes into which a tit on the end of the spanner may enter.

wrench-board (rench′bōrd), *n.* A board or flat wooden surface upon which may be conveniently mounted, for display and access, the special wrenches supplied with an engine or machine. Fixed wrenches are much less injurious to bolts and nuts than the adjustable screw-, key-, or monkey-wrenches.

wrest, *n.* 5. The mold-board of a plow: originally its front portion. See *turn-wrest plow* (under *plow*).

The mould-board . . . is also called the turn-furrow or *wrest.* This term originally applied only to a portion of the mould-board, and was probably the *wrest* of the ancient plow which turned aside the earth.
J. Scott, Field Implements and Machines, p. 6.

wrestling-machine (res′ling-mạ-shēn″), *n.* A piece of gymnasium apparatus consisting of a long bar to be grasped at either end, resistance being given by friction and a spring which may be regulated.

wring-bolt (ring′bōlt), *n.* In *wood ship-building*, a large ring-bolt or eye-bolt used in conjunction with a wring-staff to force the outside planking into position in building a vessel. Also called *wrain-bolt.*

wrinkle-layer (ring′kl-lā″ėr), *n.* In the shells of the goniatite cephalopods, a shell layer beneath the epidermal or outer layer, which is characterized by very fine irregular transverse wrinkles.

wrist-guard (rist′gärd), *n.* In *archery*, a piece of bone, stone, stiff leather, or other material worn on the left wrist as a protection against the released bow-string.

wrist-machine (rist′mạ-shēn″), *n.* A piece of gymnasium apparatus consisting of a rounded bar attached to pulley-weights. The bar is grasped in the hands and the weights are pulled up by turning it.

wrist-reflex (rist′rē″fleks), *n.* Involuntary flexion or extension of the wrist caused by tapping the tendons of the flexor or extensor muscles respectively.

wrist-shot (rist′shot), *n.* See ★*shot*^{1}.

writ^1, *n.*—**Register of writs.** See ★*register*^{1}.—**Writ of association, covenant, debt, entry, seizin.** See ★*association*, etc.

writing, *n.*—**Automatic writing.** See ★*automatic.*—**Point writing.** See ★*point-writing.*—**Tangible**

writing, any writing in which the letters or other written characters are raised above the surface of the paper and sufficiently high to be read by the blind through the sense of touch. The term includes all kinds of handwriting employing letters and numerals, or any system of dots expressing letters, numerals, punctuation marks, or musical notation. See ★*point-writing.*

writing-fluid (rī′ting-flö″id), *n.* A trade term, usually applied to common ink made with nutgalls and a ferrous instead of a ferric salt of iron, the result being a solution nearly free from suspended solid particles, which flows freely from the pen, but produces writing which is pale at first and only gradually acquires its full depth of blackness by exposure to the air as oxygen is absorbed and ferric tannate formed.

W. R. jug. See ★*jug*^{1}.

Wronskian (rons′ki-an), *a.* A determinant the elements of whose first row, a_{1i}, are functions of x, whose successive derivatives are the elements of the succeeding rows: a_{ki} being thus the $(k-1)$th derivative of a_{1i}. Named for Hoëné Wronski, a Pole.

Wrotham ware. See ★*ware*^{2}.

wrought-iron, *n.*— **Direct production of wrought-iron.** See *Blair's* ★*process.*

W. S. An abbreviation (*b*) of *West Saxon.*

wuddie (wud′i), *n.* A gibbet. [Scotch.]

> 'Play on Captain Green's *wuddie,*' said the caddy on Leith Links; and his employer struck his ball in the direction of the Captain s gibbet on the sands.
> *A. Lang*, Historical Mysteries, ix.

Wülfing cloth. See ★*cloth.*

wummerah, *n.* See ★*wommera.*

wunder, wunderful, wundrous. Amended spellings of *wonder, wonderful, wondrous.*

Wundt-Lamansky law. See ★*law*^{1}.

Wundt's chronograph. See ★*chronograph.*

wurley (wėr′li), *n.* [Also *wurlie:* aboriginal Australian.] A hut or camp of the aborigines of Australia.

> He took
> His axe, and shaped with boughs and wattle-forks
> A *wurley*, fashioned like a bushman's roof.
> *H. C. Kendall*, Poems, p. 42. Quoted in E. E. Morris, [Austral English.

wurlie, *n.* See ★*wurley.*

wurm, *n.* and *v.* An amended spelling of *worm.*

wurry, *v.* and *n.* An amended spelling of *worry.*

wurse, wurst. Amended spellings of *worse, worst.*

wurship, *n.* and *v.* An amended spelling of *worship.*

wurshipt, *p. a.* An amended spelling of *worshiped.*

wurth, *v. i.*, *a.*, and *n.* An amended spelling of *worth.*

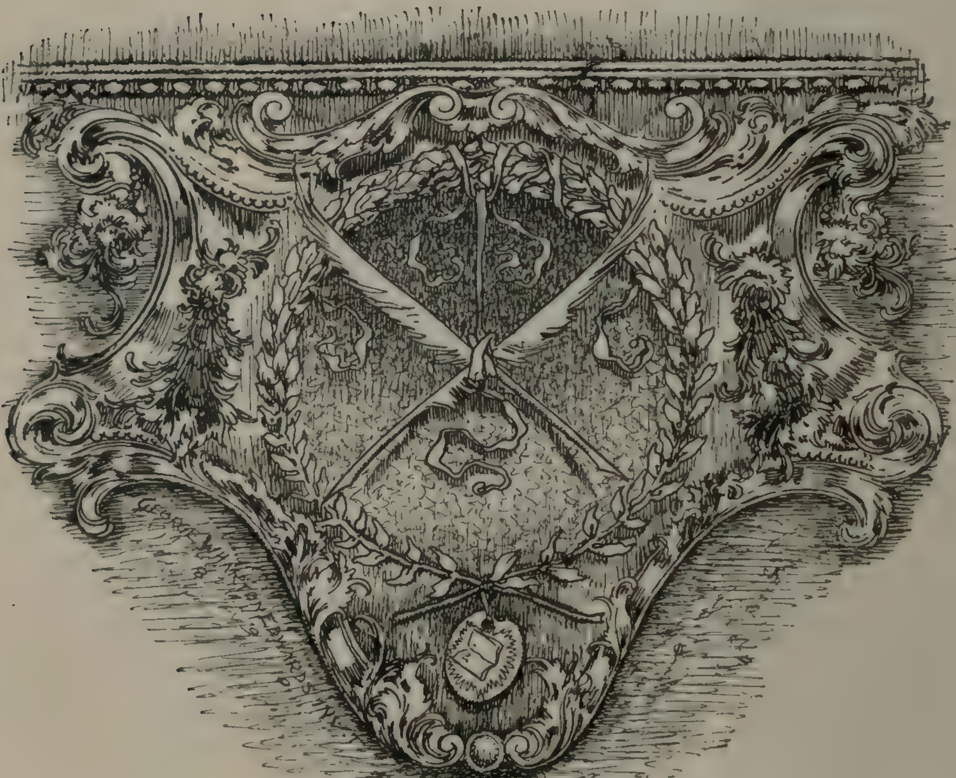
wurthless, *a.* An amended spelling of *worthless.*

wurthy, *a.*, *n.*, and *v. t.* An amended spelling of *worthy.*

W. Va. An abbreviation of *West Virginia.*

Wyo. An abbreviation of *Wyoming.*

wyomingite (wī-ō′ming-īt), *n.* [*Wyoming* + *-ite*^{2}.] In *petrog.*, an aphanitic lava with phenocrysts of phlogopite in a ground-mass of leucite and subordinate diopside. *Cross*, 1897.



X 4. (*c*) The chemical symbol of *xenon.* (*d*) In *elect.*, the symbol for *reactance* in alternating-current circuits. (*e*) In *wireless telegraphy*, a local disturbance causing a false signal; a stray.

xanol (zan′ol), *n.* [Appar. < Gr. *ξαν*(*θός*), yellow, + *-ol.*] The trade-name of sodium caffein salicylate. It is a colorless, pulverulent compound, used in medicine as a diuretic.

xanthaline (zan′tha-lin), *n.* [Gr. *ξανθός*, yellow, + *-al*³ + *-ine*².] A pulverulent alkaloid, $C_{37}H_{36}O_9N_2$, contained in crude opium. It melts at 206° C.

xanthamide (zan′thạ-mid), *n.* [Gr. *ξανθός*, yellow, + E. *amide.*] A colorless compound, $H_2NCS.OC_2H_5$, prepared by the action of alcoholic ammonia on ethyl xanthate. It crystallizes in monoclinic pyramids and melts at 38° C. Also called *xanthogenamide.* It is not the amide of xanthic acid.

xanthane (zan′thān), *n.* [Gr. *ξανθός*, yellow, + *-ane.*] The radical, $C_2N_2S_3$, of persulphocyanic acid.—**Xanthane hydrid.** Same as *isopersulphocyanic acid* (which see, under ★*persulphocyanic acid*).

xanthelasmoidea (zan″thẹ̄-las-moi′dẹ̄-ä̤), *n.* [NL., < *xanthelasma* + Gr. *εἶδος*, form.] An affection of the skin occurring in the form of reddish or yellowish wheals, which leave more or less permanent yellowish or brownish patches on the skin: called also *urticaria pigmentosa.*

> If further investigation should prove that in *xanthelasmoidea* the coagulability is high it will thus be more decisively separated from the urticarias and the name "urticaria pigmentosa" will be abandoned.
>
> *Lancet*, May 30, 1903, p. 1521.

xanthene (zan′thēn), *n.* [Gr. *ξανθός*, yellow, + *-ene.*] Orthomethylenediphenylene oxid; a colorless compound,  $CH_2\left\langle\begin{matrix}C_6H_4\\C_6H_4\end{matrix}\right\rangle O$, prepared by the action of aluminium chlorid on phenol. It crystallizes in plates, melts at 100.5° C., and boils at 315° C.

Xanthichthys (zan-thik′this), *n.* [NL., < Gr. *ξανθός*, yellow, + *ἰχθύς*, a fish.] A genus of fishes of the family *Balistidæ*. They are found chiedy in American waters, but some of them are widely distributed.

xanthidium (zan-thid′i-um), *n.*; pl. *xanthidia* (-ä̤). [NL., < Gr. *ξανθός*, yellow, + dim. *-ιδιον.*] A name applied to the fossil spore-cases of desmidean *Algæ* and also to the statoblasts of *Polyzoa*: found in rocks of various ages.

xanthin, *n.* A simplified spelling of *xanthine.*—**Xanthin bases.** See ★*alloxuric.*

xanthinine (zan′thi-nin), *n.* [*xanthin* + *-ine*².] A colorless, pulverulent compound, $C_4H_3O_2N_3$, prepared by heating ammonium thionurate.

xanthinoxydase (zan-thi-nok′si-dās), *n.* [*xanthin* + *oxydase.*] An autolytic oxidizing ferment which causes the transformation of hypoxanthin into xanthin.

Xanthoceras (zan-thos′ẹ-ras), *n.* [NL. (Bunge, 1834), < Gr. *ξανθός*, yellow, + *κέρας*, horn; in allusion to the color and form of the five glands alternating with the petals.] A genus of North China plants, of the family *Sapindaceæ*. The single species, *X. sorbifolia*, is a handsome and desirable large shrub or small tree, hardy as far north as Massachusetts, with pinnately compound leaves and white flowers in numerous racemes. The fruit is large, green, and spineless, resembling that of the buckeye, containing dark brown glossy globular seeds.

xanthochroism (zan-thok′rọ̄-izm), *n.* [*xanthochro*(*ous*) + *-ism.*] In *ornith.*, the fact or condition of having abnormally yellow feathers. It occurs most frequently in cases where feathers are normally green, red, or orange, and is often seen in parrots and tanagers.

> The direct cause of Albinism is easily found, . . . but that of Erythrism and "*Xanthochroism*" cannot be positively assigned.
>
> *Newton*, Dict. of Birds, p. 1007.

xanthochroöid (zan-thok′rọ̄-oid), *a.* [*xanthochro*(*ic*) + *-oid.*] Same as *xanthochroic.*

xanthocyanopia (zan″thọ̄-sī-ạ-nō′pi-ä̤), *n.* [NL., < Gr. *ξανθός*, yellow, + *κύανος*, blue, + *ὤψ* (*ὠπ-*), eye.] A form of color-blindness in which there is perception only of yellow and blue; red-green blindness or xanthocyanopsy.

xanthogallol (zan-thọ̄-gal′ol), *n.* [Gr. *ξανθός*, yellow, + *gallol.*] A yellow compound,  $C_6H_2Br_4O\left\langle\begin{matrix}OC_6HBr_5O\\OC_6HBr_5O\end{matrix}\right\rangle O$(?), prepared by the action of bromine on pyrogallol. It crystallizes in laminæ and melts at 122° C.

xanthogenamide (zan″thọ̄-jen-am′id), *n.* Same as ★*xanthamide.*

xanthogenate (zan′thọ̄-je-nāt), *n.* [*xanthogen*(*ic*) + *-ate*¹.] Same as *xanthate.*

xanthogenic (zan-thọ̄-jen′ik), *a.* [Gr. *ξανθός*, yellow, + *-γενης*, -producing, + *-ic.*] Producing a yellow color; xanthic.

xanthometer (zan-thom′e-tėr), *n.* [Gr. *ξανθός*, yellow, + *μέτρον*, measure.] A graduated scale of colors from blue to yellow, white, or green, for determining the color of ocean or lake water. Well-known examples are Forel's scale from blue to olive, for use in the lake of Geneva; O. Krümmel's modification, to which the name 'xanthometer' was first given, for use on the plankton expedition of 1890; and the scale of W. Ule of Halle, who extended the scale to 21 numbers.

xanthone (zan′thōn), *n.* [Gr. *ξανθός*, yellow, + *-one.*] Dihydroxybenzophenone anhydrid; a colorless compound,  $C_6H_4\left\langle\begin{matrix}\overset{1}{O}\\\underset{2}{CO}\end{matrix}\right\rangle C_6H_4$, prepared by the oxidation of methylenediphenylene oxid. It crystallizes in long needles, melts at 173–174° C., boils at 349–350° C., is volatile with steam, and is the parent substance of a considerable number of natural coloring matters.

xanthopsia (zan-thop′si-ä̤), *n.* [NL., < Gr. *ξανθός*, yellow, + *ὄψις*, view, appearance.] A pathological condition in which objects appear yellow.

xanthopurpurin (zan-thọ̄-pėr′pū-rin), *n.* [Gr. *ξανθός*, yellow, + E. *purpurin.*] Metadihydroxyanthraquinone; a yellow compound,  $C_6H_4\left\langle\begin{matrix}\overset{1}{CO}\\\underset{2}{CO}\end{matrix}\right\rangle C_6H_2(\overset{2\;4}{OH})_2$, contained in crude natural purpurin and prepared from this substance by reduction. It crystallizes in lustrous needles, melts at 262–263° C., and may be sublimed. Also called purpuroxanthin.

xanthorrhœa² (zan-thọ̄-rē′ä̤), *n.* [NL., < Gr. *ξανθός*, yellow, + *ῥοία*, flow.] The technical term applied to certain resins otherwise known as *akaroid resin*, *Botany Bay resin*, *nut resin*, or *grass-tree gum.*

xanthorthite (zan′thôr-thīt), *n.* [Gr. *ξανθός*, yellow, + *ὀρθός*, straight, + *-ite*².] An altered and hydrated variety of allanite of a yellowish color.

xanthose (zan′thōs), *n.* [Gr. *ξανθός*, yellow, + *-ose.*] An orange pigment found in certain crabs.

xanthosiderite (zan-thọ̄-sid′ẹ-rīt), *n.* [Gr. *ξανθός*, yellow, + *σιδηρίτης*, of iron.] 1. A hydrated ferric oxid, $Fe_2O_3.2H_2O$, which occurs in fine needles or fibers, also as an ocher, of a golden-yellow to brown or red color.—2. Same as *copiapite.*

xanthoxylin (zan-thok′si-lin), *n.* [*Xanthoxyl*(*um*) + *-in*².] A colorless, crystalline compound, $C_{10}H_{12}O_4$, contained in Japanese pepper, *Xanthoxylum piperitum.* It melts at 80° C. and boils without decomposition.

xanthydrol (zan-thī′drol), *n.* [Gr. *ξανθός*, yellow, + E. *hydr*(*ogen*) + *-ol.*] A colorless compound,  $O\left\langle\begin{matrix}C_6H_4\\C_6H_4\end{matrix}\right\rangle CHOH$, prepared by the reduction of xanthone. It crystallizes in microscopic needles and decomposes when heated.

xanthylic (zan-thil′ik), *a.* [*xanth*(*in*) + *-yl* + *-ic.*] Noting an acid, a hypothetical nucleinic acid which on decomposition yields only one xanthin base, namely, xanthin.

Xaverian (zạ-vēr′i-ạn), *a.* and *n.* **I.** *a.* Of or pertaining to St. Francis Xavier.

II. *n.* A member of a teaching brotherhood in the Roman Catholic Church, called the Xaverian Brothers.

xcp. An abbreviation of *ex coupon*, without coupon.

xdiv. A way of writing *ex div.* (which see).

Xe. A chemical symbol of xenon: less commonly used than X.

Xenarchi (zẹ-när′kī), *n. pl.* [NL., < Gr. *ξένος*, strange, + *ἀρχός*, rectum (anus).] A suborder of fishes containing only a single family and species, found throughout the Mississippi valley and coastwise from New York to Texas.

xenia² (zē′ni-ä̤), *n.* [NL., < Gr. *ξενία*, hospitality, also alien condition: see *xenial.*] In *bot.*, the immediate influence of pollen; the influence or effect on the very fruit which is pollinated rather than on the fruits of the plants which spring from the crossed seeds. *W. O. Focke.*

xenian (zē′ni-ạn), *a.* Same as *xenial.*

Xenistius (zẹ-nis′ti-us), *n.* [NL., < Gr. *ξένος*, strange, + *ἱστίον*, sail (alluding to the dorsal fin).] A genus of fishes of the family *Neomænidæ* found on the Pacific coast of America from San Diego to La Paz.

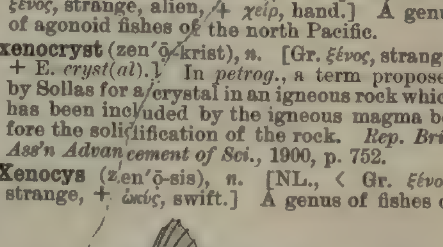
xenobiosis (zen″ọ-bī-ō′sis), *n.* [NL., < Gr. *ξένος*, strange, alien, + *βίωσις*, way of living.] The form of social symbiosis among ants which exists when two colonies of different species live together on friendly terms without bringing up their brood in common. *Wheeler*, 1901.

> As there are no observations on the behavior of the recently fecundated queens, it is impossible to decide whether the form of symbiosis exhibited by these ants arose from dulosis or from temporary parasitism or merely from a condition of *xenobiosis* like that of the North American Leptothorax emersoni or the European Formicoxenus nitidulus.
>
> *W. M. Wheeler*, in Pop. Sci. Mo., Dec., 1907, p. 557.

Xenochirus (zen-ọ-kī′rus), *n.* [NL., < Gr. *ξένος*, strange, alien, + *χείρ*, hand.] A genus of agonoid fishes of the north Pacific.

xenocryst (zen′ọ-krist), *n.* [Gr. *ξένος*, strange, + E. *cryst*(*al*).] In *petrog.*, a term proposed by Sollas for a crystal in an igneous rock which has been included by the igneous magma before the solidification of the rock. *Rep. Brit. Ass'n Advancement of Sci.*, 1900, p. 752.

Xenocys (zen′ọ-sis), *n.* [NL., < Gr. *ξένος*, strange, + *ὠκύς*, swift.] A genus of fishes of the family *Neomænidæ* inhabiting rocky shores of the eastern Pacific.



Xenocys jessiæ.
(From Bulletin 47, U. S. Nat. Museum.)

xenogenite (zẹ-noj'e-nīt), *n.* [Gr. *ξένος*, strange, + *-γενής*, -producing, + *-ite*².] Mineral deposits introduced into cavities in an older rock from an outside source. The contrasted terms are *idiogenite* and *hysterogenite*. *F. Pošepný*, in Trans. Amer. Inst. Min. Eng., XXIII. 207.

xenogenous (zẹ-noj'e-nus), *a.* [Gr. *ξένος*, strange, + *-γενής*, -producing, + *-ous*.] In *pathol.*, originating from causes outside of the body.

xenolith (zen'ọ̄-lith), *n.* [Gr. *ξένος*, strange, + *λίθος*, stone.] In *petrog.*, a term proposed by Sollas (1894) for a rock inclosed in an intrusive rock, and not derived from the igneous magma.

> The blocks (*xenoliths*) are completely immersed in the magma, partly through the confluence of apophyses which have been injected on joints and other planes of weakness in the country-rock; more often the blocks represent the effect of shattering, due to the obviously unequal heating of the solid rock at magmatic contacts.
> *Amer. Jour. Sci.*, July, 1908, p. 19.

xenomania (zen-ọ̄-mā'ni-ạ̈), *n.* [NL., < Gr. *ξένος*, a stranger, + *-mania*.] A mania for foreign persons or things.

> Even in his own day it was doubted whether he had not overweighted himself with his choice of historical subjects, though the epithet of "well-languaged," given to him at the time, evinces a real comprehension of one of his best claims to attention. No writer of the period has such a command of pure English, unadulterated by *xenomania* and unweakened by purism, as Daniel.
> *G. Saintsbury*, Hist. Elizabethan Lit., p. 136.

Xenomystax (zen-ọ̄-mis'taks), *n.* [NL., < Gr. *ξένος*, strange, + *μύσταξ*, the upper lip (maxilla).] A genus of eels of the family *Murænesocidæ* taken off the coast of Ecuador in over 400 fathoms.

xenon (zen'on), *n.* [NL. *xenon*, < Gr. *ξένον*, neuter of *ξένος*, strange, a stranger.] In *chem.*, the heaviest of the five recently discovered elementary substances present in gaseous form in the atmosphere. It was first obtained by Sir William Ramsay, assisted by M. W. Travers, in 1898, as a result of the careful fractional distillation of liquid air. It is a colorless gas, of density about 65.35 (oxygen = 16), condensable to a colorless liquid of density 3.52 at its boiling-point (water = 1), which boils under normal pressure at —109.1° C. Xenon is incapable, as far as known, of chemically combining with anything else. It gives in a suitably exhausted tube by electrical discharge a characteristic spectrum, which is modified on introduction of a Leyden jar and spark-gap. Ramsay found in atmospheric air about 1 volume in 170,000,000 of air.

xenoparasite (zen-ọ̄-par'ạ-sīt), *n.* [Gr. *ξένος*, a guest, + *παράσιτος*, a parasite.] A parasitic fungus which is able to infect a certain host-plant only when that host is wounded or otherwise injured. Compare ⋆*œcoparasite*.

> In a recent paper, E. S. Salmon described methods of culture in which he wounded, or otherwise injured, a host plant hitherto immune to the fungus, and thus rendered it liable to infection. For such a case he proposes the terms *xenoparasite* and xenoparasitism. In the case of the specialised fungus on its proper host under normal conditions, he uses the terms œcoparasite and œcoparasitism. He found that though he could, by wounding or weakening the host plant, induce a "strange" form to grow on it, yet, in the following generation, the spores so produced refused to germinate on the same host if it were in a healthy condition, while they germinated readily on the host on which the form normally grew.
> *Jour. Roy. Micros. Soc.*, April, 1905, p. 219.

xenoparasitism (zen-ọ̄-par'ạ-sī-tizm), *n.* [*xenoparasite* + *-ism*.] The particular form of parasitism shown by a xenoparasite. See the extract under ⋆*xenoparasite*.

xenophya (ze-nō'fi-ạ̈), *n. pl.* [Gr. *ξένος*, strange, + *φύεσθαι*, grow.] Foreign particles sometimes found combined with spicules and other elements in the skeleton of sponges. Compare ⋆*autophya*. *Haeckel.*

xenylenic (zen-i-len'ik), *a.* In *organic chem.*, pertaining or relating to derivatives of diphenyl.

xenylic (zẹ-nil'ik), *a.* Same as ⋆*xenylenic*.

Xererpes (zẹ-rėr'pēz), *n.* [NL., < Gr. *ξηρός*, dry, + *ἕρπης*, creeper.] A genus of the family *Blenniidæ*, small fishes of the Pacific coast of the United States.

xeribole (zē'ri-bōl), *n.* [Gr. *ξηρός*, dry, + *-βολος*, thrown, < *βάλλειν*, throw.] In *phytogeog.*, a bolochore in which the propulsion takes place as a result of drying. *F. E. Clements.*

xerodermatic (zē″rō-dėr-mat'ik), *a.* [*xeroderma (-mat-)* + *-ic*.] Relating to, or of the nature of, xeroderma. *Buck*, Med. Handbook, IV. 837.

xeroform (zē'rọ-fôrm), *n.* [Gr. *ξηρός*, dry, + E. *form(aldehyde)*.] A yellowish green, almost odorless and tasteless powder which consists of tribromphenol-bismuth, containing 50 per cent. of tribromphenol: a surgical and intestinal antiseptic.

xeronic (zẹ-ron'ik), *a.* [Gr. *ξηρός*, dry, + *-on* + *-ic*.] Noting a hypothetical acid,

$$\begin{matrix}C_2H_5CCOOH\\ \|\\ C_2H_5CCOOH\end{matrix}$$

, known only in the form of its salts or anhydrid.

xerophil, *n.* **II.** *a.* Same as ⋆*xerophile*.

xerophile (zē'rọ-fil), *a.* [Gr. *ξηρός*, dry, + *φιλεῖν*, love.] Same as *xerophilous*. *Kearney.*

xerophilous, *a.* **2.** In recent usage correlated with ⋆*xerophyte* and equivalent to ⋆*xerophytic*, properly in sense 1: first used by Thurmann (1849), who regarded xerophilous plants as correlated with dysgeogenous soils. See quotation under ⋆*silicicolous*.

> A hygrophilous vegetation corresponds to physiological moistness and a *xerophilous* vegetation to physiological dryness. *A. F. W. Schimper* (trans.), Plant-Geog., p. 2.

xerophily (zẹ-rof'i-li), *n.* [*xerophil(ous)* + *-y*³.] In *phytogeog.*, the character of being xerophilous or the occurrence of such character.

> In connection with the experimental investigation of the causes of *xerophily* in bog plants, new evidence as to the factors involved in the development of palisade cells and resinous deposits has been obtained.
> *Science*, June 3, 1904, p. 866.

xerophyte (zē'rọ-fīt), *n.* [NL. *xerophytum*, < Gr. *ξηρός*, dry, + *φυτόν*, plant.] In *phytogeog.*, a plant adapted to live under conditions of small available moisture. The name was first applied to plants inhabiting arid lands; but it now includes also the vegetation of salt marshes (see *halophyte*), of arid bogs and moors, and of cold regions, since in these situations, though the physical water (that is, the actual moisture) is copious, the physiological water (that which the plant is capable of appropriating) is scanty. The latter classes of plants possess adaptive modifications similar to those of dry-ground plants. Xerophytic adaptations are divided by F. E. Clements into those having to do with the increase in size and effectiveness of the root-system, by which absorption is increased; those developed in root, stem, and leaf for the storage of water; those in which the surface of the plant is reduced; and those arising in or near the epiderm, in consequence of which transpiration is decreased. Compare ⋆*hydrophyte* and ⋆*mesophyte*. See also ⋆*xerophilous*.

> In addition to the generally accepted classes of "hygrophytes" and "*xerophytes*," Schimper recognises a third or intermediate type, which he calls "tropophytes."
> *Nature*, Oct. 13, 1904, p. 573.

xerophytic (zē-rọ-fit'ik), *a.* [*xerophyte* + *-ic*.] Having the character or some feature of a xerophyte; xerophilous; composed of xerophytes; conditioned favorably as to the production of xerophytes. *Athenæum*, Jan. 27, 1906, p. 110.

xerophytism (zẹ-rof'i-tizm), *n.* [*xerophyt(e)* + *-ism*.] In *plant ecology*, adaptation to arid conditions; xerophily.

xerostatic (zē-rọ-stat'ik), *a.* [Gr. *ξηρός*, dry, + *στατικός*, causing to stand, stopping.] In *phytogeog.*, taking place under substantially uniform conditions of dryness: said of a succession in vegetation. *F. E. Clements.*

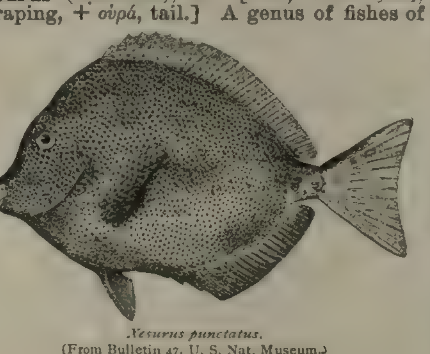
xerostoma (zẹ-ros'tọ-mạ̈), *n.* An improper form for *xerostomia*.

xerothermic (zē-rọ-thėr'mik), *a.* [Gr. *ξηρός*, dry, + *θερμός*, hot, + *-ic*.] Dry and hot; arid and warm: describing a climatic condition similar to that of the steppes of southern Russia.

> Jerosch holds that an interglacial *xerothermic* or steppe period has been proved by the facts of plant geography, paleontology, and geology; there is more doubt as to a similar postglacial period. *Bot. Gazette*, April, 1904, p. 312.

xerotropic (zē-rọ-trop'ik), *a.* [Gr. *ξηρός*, dry, + *-τροπος*, < *τρέπειν*, turn, + *-ic*.] In *phytogeog.*, due to a sharp change in conditions from moist to dry: said of a succession in vegetation. *F. E. Clements.*

Xesurus (zẹ-sū'rus), *n.* [NL., < Gr. *ξέσις*, scraping, + *οὐρά*, tail.] A genus of fishes of the family *Teuthididæ* of the tropical Pacific coast of America.



Xesurus punctatus.
(From Bulletin 47, U. S. Nat. Museum.)

xi (zī), *n.* The Greek letter Ξ, ξ, corresponding to the English *x*.

Xincan (hēn'kän), *n.* [*Xinc(a)* + *-an*.] A linguistic stock of southern Guatemala, now represented by a single language with a few dialects, spoken by the Xincas.

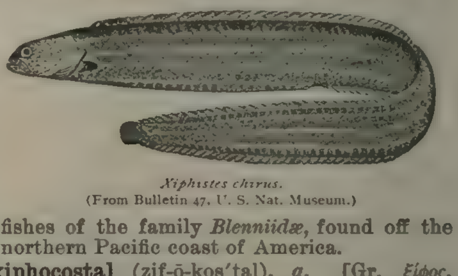
Xiphagrostis (zif-ạ-gros'tis), *n.* [NL. (Coville, 1905), < Gr. *ξίφος*, sword, + *ἄγρωστις*, grass, in allusion to the cutting leaf-margins of *X. floridula*.] A genus of about six species of tall perennial grasses with terminal fan-shaped panicles. The spikelets are one-flowered, in pairs at the joints of the rachis, one nearly sessile, the other pedicellate. The beautiful feathery appearance of the panicle is occasioned by a cluster of silky hairs which arises from the base of the spikelets. The species are natives of southern and eastern Asia, and one, *X. Japonica*, is frequent in cultivation.

xiphicerid (zī-fis'ẹ-rid), *n.* and *a.* **I.** *n.* A member of the orthopterous family *Xiphiceridæ*.

II. *a.* Having the characteristics of or belonging to the *Xiphiceridæ*.

Xiphidiinæ (zī-fid-i-ī'nē), *n. pl.* [NL., < *Xiphidion*, the type genus, + *-inæ*.] A subfamily of fishes under the family *Blenniidæ*.

Xiphistes (zī-fis'tēz), *n.* [NL., < Gr. *ξιφιστής*, a sword-belt, < *ξίφος*, a sword.] A genus of fishes of the family *Blenniidæ*, found off the northern Pacific coast of America.



Xiphistes chirus.
(From Bulletin 47, U. S. Nat. Museum.)

xiphocostal (zif-ọ̄-kos'tạl), *a.* [Gr. *ξίφος*, sword, + L. *costa*, rib, + *-al*¹.] Relating to the ensiform cartilage and the ribs.

xiphodynia (zif-ọ̄-din'i-ạ̈), *n.* [NL., < Gr. *ξίφος*, a sword, + *ὀδύνη*, pain.] Pain in the region of the ensiform appendage of the sternum.

xiphoidal (zī-foi'dạl), *a.* [*xiphoid* + *-al*¹.] Relating to or connected with the posterior or xiphoid portion of the breastbone.

> This gives rise to a pair of flaring external *xiphoidal* processes. *Amer. Nat.*, Jan., 1904, p. 20.

xiphonite (zif'ọ̄-nīt), *n.* [Gr. *Ξιφωνία*, Xiphonia, a city in Sicily, + *-ite*².] A variety of amphibole occurring in minute crystals of light yellow color and feeble pleochroism. It is found in cavities of a volcanic rock near Xiphonia, an ancient city of Sicily.

xiphopagic (zif-ọ̄-paj'ik), *a.* [NL. *xiphopag(us)* + *-ic*.] Same as ⋆*xiphopagous*. *Buck*, Med. Handbook, VII. 685.

xiphopagous (zī-fop'ạ-gus), *a.* [NL. *xiphopag(us)* + *-ous*.] Relating to that form of double monster known as a 'xiphopagus' in which the two bodies are united in the region of the xiphoid cartilage.

xiphosternal (zif-ọ̄-stėr'nạl), *a.* Same as *xiphisternal*.

X-luminescence (eks'lū-mi-nes″ẹns), *n.* The emission of light by certain substances as the result of exposure to X-rays. See ⋆*luminescence*.

xonotlite (zọ-not'līt), *n.* Same as *xonaltite*.

X-radiation (eks'rā-di-ā″shọn), *n.* See ⋆*radiation*.

X-radiator (eks'rā″di-ā-tọr), *n.* See ⋆*radiator*.

X-ray, *n.* See ⋆*ray*¹.—**X-ray dermatitis.** Same as *Röntgen-light* ⋆*dermatitis*.

X-ray (eks-rā'), *v. t.* To take a radiograph of; apply X-rays to the study of (an object, such as a portion of the human body).

> The distance between antikathode platinum plate and the surface of the part that is being *x-rayed* should be from 12 to 15 inches.
> *Amer. X-Ray Jour.*, Feb., 1903, p. 43.

Xt. A contraction of *Christ*.

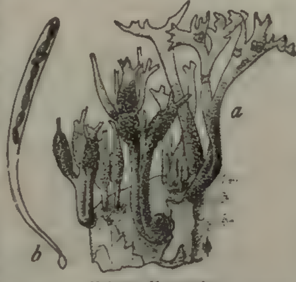
Xtian. A contraction of *Christian*. See *X*, 3.

xurel (hö-rāl'), *n.* [Sp. *jurel*, *xurel*.] Either of two carangoid fishes, *Trachurus picturatus* of the east Pacific and east Atlantic, and *Caranx latus* of the warm and tropical American Atlantic and Pacific.—**Xurel de castilla**, a Mexican name for *Chloroscombrus orqueta*, a carangoid fish found from Lower California to Panama.

xylamide (zil'a̤-mid), *n.* [*xyl*(*ic*) + *amide.*] In *organic chem.*, any one of a number of compounds, $(CH_3)_2C_6H_3CONH_2$, derived from the various xylic acids.

xylan (zī'la̤n), *n.* [Gr. *ξύλον*, wood, + *-an.*] A gelatinous, levorotatory compound, $C_5H_8O_4$(?), contained in all kinds of wood. With sulphuric acid it yields the sugar xylose; boiling mineral acids convert it chiefly into furfuraldehyde. It is also called *wood-gum.*

Xylaria (zī-lā'ri-ä̤), *n.* [NL. (Schrank, 1789), < Gr. *ξύλον*, wood.] A large genus of pyrenomycetous fungi having erect, black stipitate, cylindrical or clavate, simple or branched, corky stromata covered with a layer of perithecia. The spores are unicellular and dark-colored. Over 200 species have been described. Many occur in the tropics and some are cosmopolitan, growing on decaying wood. *X. Hypoxylon* is common and widely distributed, being rather variable in form of branching.



Xylaria Hypoxylon.
a, several stromata, showing various forms, reduced; *b*, ascus with spores.

Xylariaceæ (zī-lā-ri-ā'sē̤-ē), *n. pl.* [NL., < *Xylaria* + *-aceæ.*] A family of pyrenomycetous fungi, named from the genus *Xylaria*, characterized by the rather large variously shaped black stromata and mostly unicellular dark brown ascospores.

xylenol (zī'le-nol), *n.* [Gr. *ξύλον*, wood, + (*ph*)*enol* (?).] In *organic chem.*, any one of six colorless, crystalline compounds, $(CH_3)_2C_6H_3OH$, closely resembling phenol in general properties.

xyletic (zī-let'ik), *a.* [*xyl*(*ic*) + *-et-* + *-ic.*] Derived from or pertaining to xylenol or, specifically, to xyletic or hydroxydimethylbenzoic acid.—**Xyletic acid**, the general term applied, in organic chemistry, to the isomeric acids of the formula $(CH_3)_2C_6H_2(OH)COOH$, or hydroxydimethylbenzoic acids.

xylic (zī'lik), *a.* [*xyl*(*ene*) + *-ic.*] Pertaining to xylene or, specifically, to xylic or dimethylbenzoic acid.—**Xylic acid**, in *organic chem.*, the general term applied to the isomeric acids of the formula $(CH_3)_2CH_3COOH$, the dimethylbenzoic acids.

xylidic (zī-lid'ik), *a.* [*xyl*(*ic*) + *-id* + *-ic.*] Noting an acid.—**Xylidic acid**, either of two compounds, $CH_3C_6H_3(COOH)_2$, distinguished as *α*- and *β*-. They are formed by the oxidation of the corresponding dimethylbenzoic acids. The first, methylterephthalic acid, forms granular crystals, and melts at 280–283° C. The second, methylisophthalic acid, crystallizes in microscopic needles, and melts at 320–330° C.

xylidine, *n.* **2.** In *chem.*, an amine derivative from the hydrocarbon xylene, itself obtained from coal-tar. The general formula for xylidine is $C_6H_3(CH_3)_2NH_2$, but there are six isomeric forms, of which two form the greater part of the oily liquid industrially known under this name and used in the manufacture of artificial dyestuffs.—**Xylidine red**, an artificial dyestuff, the sodium salt of metaxylol-azo-*β*-naphtholsulphonate, used as a substitute for cochineal in dyeing wool and silk. Also known as *xylidine ponceau* and *ponceau 2 R.*

xylindein (zī-lind'ē̤-in), *n.* A blue compound contained in green, decayed wood which has been infected with *Peziza æruginosa.* It crystallizes in quadratic plates which have a strong coppery luster.

xylinid (zil'i-nid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Xylinidæ.*

II. *a.* Having the characteristics of or belonging to the family *Xylinidæ.*

xylite (zī'līt), *n.* [Gr. *ξύλον*, wood, + *-ite*².] 1. A colorless carbohydrate, $C_5H_{12}O_5$, prepared by the reduction of xylose.—2. A colorless liquid obtained from crude wood-spirit. It boils at 61.5° C.

Xylocopidæ (zī-lō̤-kop'i-dē), *n. pl.* [NL., < *Xylocopa* + *-idæ.*] A family of bees of which *Xylocopa* is the type genus; the carpenter-bees.

xyloglodine (zī-log'lō̤-din), *n.* [Gr. *ξύλον*, wood, + E. *gl*(*ycerin*) + *-od-* + *-ine*².] The trade-name of an explosive produced by the nitration of glycerin with starch, with cellulose, with mannite, or with benzene or other analogous substances.

xyloglyphy (zī-log'li-fi), *n.* [Gr. *ξύλον*, wood, + *γλύφειν*, carve.] The art of wood-carving. [Rare.]

xylografy, *n.* An amended spelling of *xylography.*

xyloline (zī'lō-lin), *n.* [Gr. *ξύλον*, wood, + *-ol* + *-ine*².] The trade-name of yarn or thread made by spirally twisting, with the aid of special machinery, narrow strips of paper-pulp taken from the paper-making machine. The yarn produced is said to be strong and cheap. See the analogous material **silvaline.*

xylolite (zī'lō̤-līt), *n.* [Gr. *ξύλον*, wood, + *-ol* + *-ite*².] The trade-name of a plastic material, a mixture of sawdust, calcined magnesite, and magnesium chlorid, intended for use in covering floors, partition walls, ships' decks, etc.

xylometer (zī-lom'e-tėr), *n.* [Gr. *ξύλον*, wood, + *μέτρον*, measure.] An instrument for ascertaining the specific gravity of wood.

xylonic (zī-lon'ik), *a.* [*xyl*(*ose*) + *-on-* + *-ic.*] Pertaining to xylose.—**Xylonic acid**, a colorless, dextrorotatory compound, $C_5H_{10}O_6$, prepared by the action of bromine and water on xylose.

xylophagid (zī-lof'a̤-jid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Xylophagidæ.*

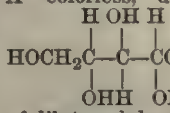
II. *a.* Having the characteristics of or belonging to the family *Xylophagidæ.*

xylophilous, *a.* **2.** In *phytogeog.*, growing on wood in any state: applied to a class of fungi. *Pound and Clements.*

xyloretinite (zī-lō̤-ret'i-nīt), *n.* Same as *xyloretine.*

xylorganum (zī-lôr'ga̤-num), *n.* [Gr. *ξύλον*, wood, + *ὄργανον*, organ.] Same as *xylophone.*

xylose (zī'lōs), *n.* [Gr. *ξύλον*, wood, + *-ose.*] A colorless, dextrorotatory carbohydrate,



$$HOCH_2\underset{OH}{\overset{H}{C}}-\underset{H}{\overset{OH}{C}}-\underset{OH}{\overset{H}{C}}CHO$$

prepared by the action of dilute sulphuric acid on wood-gum or corn-cobs. It reduces alkaline copper solutions, crystallizes in needles or orthorhombic prisms, and melts at 144–145° C. Also called *wood-sugar.*

xylylene (zī'li-lēn), *n.* [Gr. *ξύλον*, wood, + *-yl* + *-ene.*] In *organic chem.*, any one of the three isomeric bivalent radicals, $(CH_3)_2C_6H_2$ < $[CH_3;CH_3 = 1,2;\ 1,3;\ \text{or}\ 1,4.]$ The term is homologous with phenylene and the derivatives of both radicals resemble each other in general properties.

Xynœciæ (zī-nē'si-ē), *n. pl.* See **synœcia*¹.

Xyrauchen (zī-râ'ken), *n.* [NL., < Gr. *ξυρόν*, a razor, + *αὐχήν*, neck.] A genus of suckers (*Catostomidæ*) found in the Colorado River basin.

Xyrichthyinæ (zī-rik-thi-ī'nē), *n. pl.* [NL., < *Xyrichthys* + *-inæ.*] A rather large subfamily of labroid fishes, which have the lateral line interrupted posteriorly.

Xyridales (zī-ri-dā'lēz), *n. pl.* [NL. (Britton, 1898), < *Xyris* + *-ales.*] A large order of monocotyledonous plants, distinguished chiefly by the mealy endosperm, from which it has been called *Farinosæ.* In modern systems it is placed between the *Arales* and the *Liliales*, and embraces 11 families, of which the most important are the *Xyridaceæ*, *Bromeliaceæ*, *Commelinaceæ*, and *Pontederiaceæ.*

Xyrula (zir'ö̤-lä̤), *n.* [NL., < Gr. *ξυρόν*, razor (see *Xyrichthys*), + L. dim. *-ula.*] A genus of labroid fishes, including a single species found in rather deep water off Florida.

Xystæma (zis-tē'mä̤), *n.* [NL., < Gr. *ξυστόν*, the shaft of a spear, + *αἷμα*, blood (alluding to the interhæmal).] A genus of fishes belonging to the family *Gerridæ*, found on both coasts of tropical America.

Xystes (zis'tēz), *n.* [NL., < Gr. *ξύστης*, one that scrapes, < *ξύειν*, scrape.] A genus of fishes of the family *Agonidæ*, found on the north Pacific coast of the United States.

Xystreurys (zis-trö'ris), *n.* [NL., < Gr. *ξύστρα*, a scraper, + *εὐρύς*, broad. The name alludes to the broad gill-rakers.] A genus of flounders found on the southern Californian coast.

Xystroperca (zis-trō̤-pėr'kä̤), *n.* [NL., < Gr. *ξύστρα*, a scraper, + *πέρκη*, a perch.] A subgenus of serranoid fishes inhabiting the Gulf of California.

Y 2. (*e*) In *elect.*, the symbol for *admittance*, in alternating-current circuits. See ★*admittance*, 6.—**3.** (*b*) [*l. c.*] An abbreviation of *yard.*—**4.** [*l. c.* or *cap.*] A corruption of the Anglo-Saxon character Þ, equivalent to *th*, giving *ye* for *the* or *thee*; and, by contraction, *ym* for *them*; *yn* for *then*; *yr* for *their*; *ys* for *this*; *yt* for *that*. See def. 1.

Y^{2}, *n.*—**Golden Y,** a British collectors' name for a noctuid moth, *Plusia iota*. Also called the *plain golden Y*. *Plusia pulchrina* is called the *beautiful golden Y*.

Ya. In *chem.*, the designation first given by Marignac in 1880 to the metal now known as *gadolinium*, its oxid having been obtained, along with that of yttrium and other elements of the same group, from the samarskite of North Carolina.

yabber (yab'ėr), *v. i.* [Prob. a variant (as if D. or G.) of *jabber*. Some make it aboriginal.] To talk unintelligibly; jabber: said of the Australian aborigines. *E. E. Morris*, Austral English.

yabber (yab'ėr), *n.* [*yabber*, *v.*] The language or talk of the Australian aborigines. *E. E. Morris*, Austral English. [Australia.]

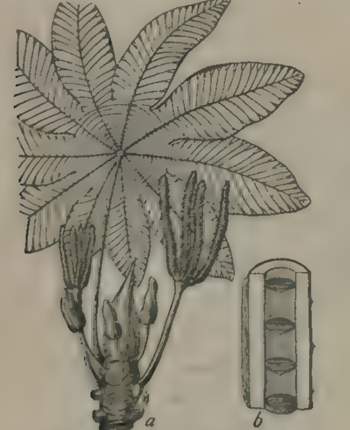
yabby (yab'i), *n.* [Also *yabbie*, < Australian aboriginal *yappy*, var. *yappitch*, *yabbechi*, *yaabity*.] In Australia, a crawfish, *Astacopsis bicarinatus*. *E. E. Morris*, Austral English.

yacht, *n.*—**Auxiliary yacht,** a pleasure vessel having both sail- and steam-power.—**Fin-keel yacht,** a pleasure vessel provided with a fin-keel.—**Royal yacht,** a yacht forming part of a navy and assigned for the special use of royalty.

yackman (yak'man), *n.* [D. *jagdman*, hunter.] A foraging ant; a wandering ant. [British Guiana.]

yad (yäd), *n.* [Heb. *yād*, hand.] A small tapering hand with outstretched index-finger, made of precious metal or ivory, beautifully carved. It is used to indicate the words to the reader while he is reading the Scriptures in the synagogue from the scroll called *Sepher Torah*.

yagrumo (yä-grö'mō), *n.* [An altered form of *guarumo*, the Cecropia tree.] In Porto Rico, a name applied to several trees having a slender trunk and a crown of large palmate leaves. *Yagrumo hembra* (female yagrumo) is a name applied to the hollow-stemmed *Cecropia peltata*, and *yagrumo macho* (male yagrumo) to the solid-stemmed *Didymopanax Morototoni*. See ★*grayumo*.



Yagrumo hembra (*Cecropia peltata*).
a, inflorescence and leaf; *b*, vertical section of the hollow-chambered stem.

yahourth (yä-hörth), *n.* [Also *yohourth*, *yoghourt*.] A soured and curdled milk used by the peasants of Bulgaria. It is prepared by the addition to boiled milk (or milk heated to about 180° F. and partly evaporated) of a leaven called 'maya,' which contains a powerful lactic ferment.

> A similar product which has received considerable attention of late is known as *yohourth*. While the kefir comes from the Caucasus region, the latter product is taken from Bulgaria or the neighboring regions, where its use is general and its dietetic qualities recognized. While it has the same general properties, it differs from kefir in its consistence and taste, seeing that it is a semi-solid, like soft cheese.
>
> *Sci. Amer. Sup.*, Nov. 23, 1907, p. 334.

Yakoma rubber. See ★*rubber*^{1}.

Yalensian (yā-len'ṣi-an), *a.* and *n.* [NL. *Yalensi*(*s*) + *-an*.] Of or pertaining to Yale University; a student or graduate of that University.

> A score of co-operative *Yalensians*, many of them specialists, have been engaged in the improvement of the three great dictionaries.
>
> *D. C. Gilman*, in Science, Nov. 1, 1901, p. 675.

yam, *n.*—**Australian yam,** either of two endemic species of *Dioscorea*, *D. hastifolia* of Western Australia and *D. transversa* of New South Wales and Queensland. The latter is usually known as the long yam. A third species, *D. sativa*, though common, is not endemic in Australia. Yams are largely eaten by the Australian aborigines, and the plants are the only ones which they cultivate.—**Dye yam,** a climbing plant, *Dioscorea rhipogonoides*, native of southern China, Indo-China, and Formosa. Its tuberous roots are used for dyeing coarse native cotton cloth and fishing-nets a dark-brown or tan color. Called by the Chinese *shu-lang*.—**Long yam.** See *Australian* ★*yam*, above.—**Native yam,** in Australia, any one of several species of *Ipomœa*, the tubers of which are sometimes eaten by the aborigines.—**Round yam.** See ★*burdekin-vine*.—**Wild yam.** (*c*) In Australia, a leafless, parasitic orchid, *Gastrodia sesamoides*, called native potato in Tasmania. The rhizomes of this plant, which are of the size and nearly the form of potatoes, were roasted and eaten by the Tasmanian natives.

yamen (yä'mun), *n.* A common, but misleading, spelling of *yamun*. See ★*yamun*.

yam-stick (yam'stik), *n.* A stick used by many primitive peoples, such as the natives of Australia, for digging roots. Also called *digging-stick*.

> The natives dig these roots with the *yam-stick*, an indispensable implement with them, made of hard wood, about three feet in length, thick at one end and edged; it is likewise used amongst the aboriginal tribes of South Australia, like the waddy, as a weapon of offence.
>
> *A. Tolmer*, Reminiscences, II. 102. Quoted in E. E. [Morris, Austral English.

yamun, *n.* Various transliterations of the Chinese word are in use: (1) *yamun*, which is to be preferred; (2) *yamăn*, used by Dr. S. Wells Williams in his "Dictionary of the Chinese Language"; (3) *yamên*, originally introduced by Sir Thomas F. Wade, former British Minister in Peking, and now used in the diplomatic, consular, and customs' services of China: it is more particularly characteristic of the Pekingese "dialect"; (4) *yamen*, which is the same as the preceding with the circumflex omitted, owing to the poverty of the type-fonts used in type-setting machines; (5) *yamön*, the form preferred by Prof. F. Hirth of Columbia University, New York. In every case the pronunciation is the same.

Yankee^{2}, *n.* **5.** A name for various special tools in various industries, usually given because of their American origin or because they have proved handy and ingenious; specifically, a molders' lifting-tool with the shank curved to admit it to places difficult of access.

yaourt^{2}, *n.* Same as *yurt*.

Yapman (yäp'man), *n.* A native of Yap, one of the Caroline Islands.

> The king of Korror allowed a hundred *Yapmen*, who were replaced from time to time, so that the number was always kept up to about a hundred, to live in his territory, to quarry these great discs of stone and send them over to their own island.
>
> *Geog. Jour.* (R. G. S.), XIII. 132.

yappy (yap'i), *a.* [*yap*^{1}, *v.*] Inclined to yap or yelp.

yara (yä'rä), *n.* [*Yara* river (?), eastern Cuba.] A variety of tobacco grown in eastern Cuba, mostly for home consumption, having a very different flavor from the Havana, and thought by some to be the product of *Nicotiana repanda*.

yarborough (yär'bur-ọ), *n.* In *whist* or *bridge*, a hand which contains no card above a nine: so called because a former Earl of Yarborough made a practice of betting 1,000 to 1 against any player's holding such a hand. The true odds against it are 1,827 to 1.

yard^{1}, *n.*—**Lower yards,** the fore-, main-, and cross-jack yards. See *yard*^{1}, 5.

yard^{2}, *n.*—**Bureau of Yards and Docks.** See ★*bureau*.—**Car-sorting yard.** See ★*drill-yard*.

yardage, *n.* **4.** Measurement or amount in yards.

> So that in actual cubic *yardage* we are exceeding the achievement of our predecessors, and the prophecy, which a year ago seemed over-sanguine, that the canal would be ready for commemorative expositions at Los Angeles and New Orleans in 1915, bids fair to be fulfilled.
>
> *Jour. Franklin Inst.*, Jan., 1908, p. 27.

5. ★Yard-price.

yard-craft (yärd'kråft), *n.* The tugs, lighters, and other small vessels used in a navy-yard or dockyard: used collectively.

> Merchants and shipowners make considerable use of this measurement, although it has no legal authority; it is also used in the Admiralty service in connection with store ships and *yard-craft*.
>
> *White*, Manual of Naval Arch., p. 72.

yard-locomotive (yärd'lō-kọ-mō″tiv), *n.* A locomotive specially designed to operate in the station- or terminal-yards of a railway for making up and distributing trains. Such locomotives must be capable of taking easily the sharp curves of switches and turnouts, and are often made without front trucks. They are heavy haulers, but are not adapted for high speeds on the line.

yard-price (yärd'prīs), *n.* **1.** The price of goods delivered in the yard or warehouse, as distinguished from the prime cost, or the price free on board the transportation vehicle.—**2.** The price per yard of headings driven in a mine or drift, in addition to the price per ton extracted to cover the value of the gangways to the mine-owners.—**3.** The price per yard of any work measured by this unit, as in road-making, excavation, and the like. Also called *yardage* in England.

yareta (yä-rā'tä), *n.* [Quichua name.] A curious umbelliferous plant, *Azorella glebaria*, of the high table-land of Peru and Bolivia, where, together with *taquia*, or llama dung, it is the chief source of fuel. It grows in hard compact masses like rounded hillocks or hemispherical boulders two or three feet high, and abounds in a balsamic resin. Quantities of it are gathered by the Indians and transported on the backs of llamas to Arequipa and other cities and to smelting-works of the mines of this treeless region, at many of which no other fuel is obtainable. At the Falkland Islands, where it also occurs, it is called *bog-balsam*. See *balsam-bog*.

Yarmouth capon. Red herring. *Halliwell.* [Prov., Eng.]

yarn^{1}, *n.*—**Clouded yarn.** (*a*) An unevenly colored yarn. (*b*) Yarn made from imperfectly carded stock.—**Condenser yarns.** See ★*condenser*.—**Paper yarn,** yarn made from cellulose fiber converted into flat strips and spun or twisted. It lends itself to a wide range of application, as for wall-hangings, druggets, etc., and will withstand washing and even bleaching. Allied to wood, silvalin, xylolin, and other so-called 'paper yarns.' *Daily Con. and Trade Rep.*, July 26, 1907, p. 1.—**Vigogne** (vicuña) **yarn,** yarn spun from cotton-waste.

yarra-herring (yar″ạ̈-her'ing), *n.* See *yarra* ★*herring*.

yarran (yar'ạ̈n), *n.* [Austral Eng.; from the aboriginal name.] Any one of several species of *Acacia*, as the Victorian myall, *Acacia homalophylla*, the weeping myall or boree, *A. pendula*, and *A. linifolia*. See *myall* and ★*boree*^{2}.

Yarrella (ya-rel'ạ̈), *n.* [NL., named after W. *Yarrell*, a British naturalist.] A genus of fishes of the family *Chauliodontidæ*, of the deep Atlantic.

Yaryan evaporator, *n.* See *Yaryan* ★*apparatus*.

yati (yut′ẹ̄), *n.* [Skt. *yáti*, lit. striver, < √ *yat*, strive after, dispose.] In Hindu mysticism, one who has renounced the world.

yautia (you-tẹ̄′ạ̈), *n.* [Arawak *yahutia.*] On the island of Porto Rico, the name applied to several species of *Xanthosoma*, plants belonging to the arum family, with large sagittate leaves and starchy roots, which are used for food after the manner of the leaves and roots of the taro of Polynesia (*Caladium Colocasia*). The principal cultivated species are *Xanthosoma sagittæfolium*, *X. atrovirens*, and *X. violaceum*. In addition to the indigenous species of *Xanthosoma*, the name is also applied to the introduced *Caladium Colocasia*, called 'Yautia malanga,' easily distinguished by its peltate leaves, the leaves of all the species of *Xanthosoma* having an open basal sinus; and also to *Alocasia macrorhiza*, called 'Yautia Panamá,' the *ape* of Polynesia. See ★*piga* and illustration under ★*ape*, 2.

yawl^2, *n.*—**Roslyn yawl**, a special type of large sharpy which carries jibs and a jigger-mast, and is supposed to have had its origin at Roslyn, Long Island, New York.

yaw-sighted (yâ′sī-ted), *a.* Cross-eyed. [Sailors' slang.]

Y-connection (wī′kọ-nek″shọn), *n.* See ★*polyphase.*

year, *n.*—**Calendar year.** See ★*calendar.*—**Chinese year,** a year of 12 lunar months of 29 and 30 days, with an intercalary month nearly every third year or 7 in the course of 19 years (the 3d, 6th, 9th, 11th, 14th, 17th, and 19th), thus bringing the lunar reckoning into agreement with the solar every nineteenth year. The year begins with the first new moon after the nineteenth of January. See *Metonic cycle*, under *cycle*^{1}. The Chinese system of reckoning by lunar months was introduced into Japan in 645 A.D., but was superseded by the Gregorian calendar in 1872.—**Christian year, church year.** Same as *ecclesiastical year* (which see, under *year*).—**Collected years** or **collect years**†, years taken in round periods, as 20, 40, or 60 years, for which the amount of a planet's motion is stated. *Skeat*, in Chaucer, Astrolabe (1872), glossary.—**Equinoctial year.** Same as *tropical year* (see *year*, 1); the mean period between two successive passages of the sun through the same equinox, which determines the seasons. It is 365 days, 5 hours, 48 minutes, 45.5 seconds.—**Farmers' year,** the year as related to agriculture: identical with the tropical year in length, but beginning with seed-time or harvest, which vary with the climate. Astronomically its commencement depends on the date when the sun attains a certain declination, rising at a fixed point on the horizon.

> Should this be confirmed we see that the *farmers' years* were the first to be established, and it is interesting to note that the agricultural rent year in many parts of Ireland still runs from May to November. . . . I have pointed out that both the May and August years began when the sun had the same declination (16° N.) or thereabouts.
>
> *Sir Norman Lockyer*, in Nature, Jan. 16, 1902, p. 250.

Light-year. See ★*light-year.*—**Presidential year,** in the United States, the year in which a president is elected.—**Year and day,** in *law*, a distinct period of time recognized for various purposes. It frequently had reference to a fixed period other than the exact number of days indicated by the literal meaning of the expression; for instance, in the law of the Gothic nations it meant a year and six weeks, and in Scotch law, in computing a term, it meant the return of the day of the next year bearing the same denomination.

> And if an appeal of murder be not brought within a *year and a day*, it shall be lost forever. And a copyhold not claimed within a *year and a day* after the death of the ancestor shall be lost forever by the custom of many manors, and such custom shall be good.
>
> *Plowden*, Reports, 372.

year-count (yēr′kount), *n.* Same as ★*winter-count.*

> There is absolutely no similarity between the "Tibetan calendar and the primitive form of the American," which "was not intended as a *year-count*, but as a ritual and formulary," and whose signs "had nothing to do with the signs of the zodiac, as had all those of the Tibetan and Tartar calendars."
>
> *Brinton*, quoted in Keane, Ethnology, p. 218.

year-day, *n.* **2.** A certain day of the year, defined by the position of the sun, the moon, or a star, for instance, by the setting of the sun behind a distant peak: used by primitive tribes in roughly adjusting the lunar and solar calendars, or for determining the time of ceremonials.

> A simple observation on the setting sun behind a distant sierra, which would in itself permit a count of *year-days*, if not the recognition of the bissextile.
>
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. xliii.

yeast, *n.*—**Surface yeast.** This is the more active form of yeast and is employed in brewing. It is carried to the surface of the fermenting liquid by minute bubbles of carbon dioxid, and accumulates as a ropy foam. See *yeast*, 1.—**Wild yeast,** any yeast which differs from the ordinary cultivated yeasts used in brewing.—**Yeast serum.** See ★*serum.*

yeast-budding (yēst′bud″ing), *n.* A form of reproduction occurring in some of the lower fungi, especially the *Saccharomycetes.* The spores germinate and produce other spores directly without the formation of a mycelium. See *yeast*, 1.

yeast-cake (yēst′kāk), *n.* A small condensed portion of yeast, dried into a cake or wrapped in tinfoil, used in raising bread.

yeast-powder, *n.* While this term is, in the United States, generally understood to mean one of the baking-powder mixtures used as substitutes for yeast, it has been sometimes applied to yeast itself obtained as a result of alcoholic fermentation, freed from water by pressure, washed with acetone and then with ether, and dried in pulverulent form by spreading it out on absorbent paper at ordinary temperature.

Yeda-urushi lacquer. See ★*lacquer.*

yeelaman (yē′lạ̈-man), *n.* [Australian.] Same as ★*hielaman.*

yegg (yeg), *n.* [Origin obscure: said to be from the name (John *Yegg*) of a tramp and safe-breaker; poss., through the form **yegger*, < G. *jäger*, hunter.] Same as ★*yeggman.*

> The prompt breaking up of the organized gangs of professional beggars and *yeggs.*
>
> *N. Y. Evening Post*, June 23, 1903. Quoted in Dialect [Notes, II. vi.

yeggman (yeg′man), *n.*; pl. *yeggmen* (-men). [*yegg* + *man.*] A tramp burglar and safe-breaker.

> Detective Sergeants . . . captured on the Bowery three men who, they say, are among the most successful "*yeggmen*," or safe-crackers, in the business. . . . A "*yeggman*" is the hardest sort of a rogue to catch, for he is usually shrewd enough to avoid traveling with his fellows or appearing in public places.
>
> *N. Y. Times*, Jan. 2, 1905.

> Six *yeggmen*, masked with handkerchiefs, blew open the safe in the Suffield Savings Bank early this morning.
>
> *N. Y. Tribune*, Dec. 18, 1905.

yel, *v.*, *n.*, and *a.* A simplified spelling of *yell.*

yelk, *n.* **2.** A manufacturers' term in Lancashire, England, for one of the hard, stony lumps found in slaked lime from a Buxton limestone.

yellow. **I.** *a.* **2.** As originally applied to journalism, indecently sensational; in general, sensational; morbid; decadent. See *yellow* ★*journal.*

> We must suppose that New York newspapers are by no means all "*yellow*," for the sensational "thousand words" [intended to further an evil design] is never printed. *Athenæum*, May 6, 1905, p. 555.

> The *Yellow* Book, a publication which . . . finally gave the adjective "*yellow*" a new and interesting application that has been found so expressive and so useful as to have fixed itself in the English language.
>
> *Bookman*, Feb., 1906, p. 552.

Yellow cell. See ★*Chlorella.*—**Yellow disease of the hyacinth.** Same as ★*bacteriosis of the hyacinth.*—**Yellow-fever fly.** See ★*fly*^{2}.—**Yellow grass-tree gum,** an Australian name for acaroid resin, from *Xanthorrhœa hastilis.*—**Yellow journal.** See ★*journal.*—**Yellow peril.** See ★*peril.*

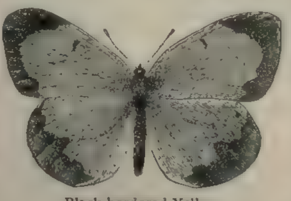
> *The Nation*, of New York, for August 3rd, has an interesting note on J.-J. Rousseau and the "*Yellow Peril*," by M. Salomon Reinach. He points out that "nobody seems as yet to have remarked that the first to prophesy the "*yellow peril*," and even the present war, was Jean-Jacques Rousseau in his little-read 'Contrat Social' (chap. viii.): 'L'Empire de Russie voudra subjuguer l'Europe, et sera subjugué lui-même. Les Tartares, ses sujets ou ses voisins, deviendront ses maîtres et les nôtres; cette révolution me paraît infaillible.' Voltaire laughed at that passage, and upbraided Rousseau for writing like the author of a popular almanac."
>
> *Athenæum*, Aug. 19, 1905, p. 245.

Yellow precipitate. See ★*precipitate.*—**Yellow press.** See *yellow* ★*journal.*—**Yellow sect.** See the extract.

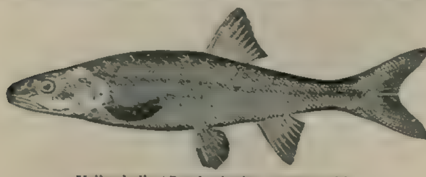
> In religion they [Milians] adhere to the "*Yellow Sect*," or reformed church of Tibet.
>
> *Geog. Jour.* (R. G. S.), XV. 622.

Yellow silver. See ★*silver.*—**Yellow spirit.** See ★*spirit.*—**Yellow ware.** See ★*ware*^{2}.

II. *n.* **1.** (*b*) An acid coal-tar color of the monoazo type prepared by combining diazotized meta-sulphanilic acid with diphenyl amine. It dyes wool orange-yellow in an acid bath.—**Acme yellow,** an acid dyestuff. Same as *tropæolin.*—**Acridine yellow,** a basic color related to acridine. It is of no value for wool-dyeing, but dyes silk and tannin-mordanted cotton a yellow with a greenish cast.—**Alizarin yellow,** the name applied to a number of yellow mordant dyestuffs, none of which are true alizarin colors. With the exception of alizarin yellow paste they are related to salicylic acid or to pyrogallic acid. Alizarin yellow paste is a natural product, made by extracting divi-divi or myrobalans with hot water and decomposing the extracted elagic acid with an acid or alkali.—**Alizarin yellow R,** a mordant acid coal-tar color of the monoazo type prepared by combining diazotized para-nitraniline with salicylic acid. It dyes unmordanted wool in an acid bath, but should be after-chromed for the best results. It may also be dyed upon chromium mordanted wool.—**Alkali yellow,** a direct cotton-color prepared from primulin.—**Aniline yellow,** an artificial coloring matter of the monoazo type. Chemically it is amido-azo-benzene. No longer used as a dyestuff.—**Anthracene yellow,** a mordant dyestuff. It is not derived from anthracene as its name indicates, but is a di-brom-di-hydroxy, beta-methyl-coumarin. It is sold in paste form and dyes wool, mordanted with chromium, a greenish yellow.—**Anthracene yellow B. N.** Same as *milling* ★*yellow.*—**Anthracene yellow C,** a mordant acid dyestuff of the disazo salicylic acid type.—**Arnica yellow,** a direct cotton-color, derived from stilbene. It dyes cotton a golden yellow from a salt bath.—**Azo yellow,** an acid-color of the monoazo type, prepared by the action of nitric acid upon diphenylamine yellow. It dyes wool yellow from an acid bath.—**Azulin yellow,** an acid coal-tar color: now obsolete.—**Black-bordered yellow,** an American pierid butterfly, *Eurema nicippe*, with bright orange wings bordered with blackish brown. It extends from New England to Florida and to Lower California. Its larvæ feed on the plants of the genus *Cassia.*—**Brilliant yellow,** the name applied to two coal-tar colors, one an acid-color of the nitro type prepared by the action of nitric acid on α-naphthol-disulphonic acid; the other a direct cotton-color of the disazo type derived from di-amino-stilbene-disulphonic acid. They both dye a bright yellow.—**Brilliant yellow S,** an acid coal-tar color of the monoazo type, prepared by sulphonating orange IV.—**Campobello yellow,** chryseinic acid. See ★*chryseinic.*—**Carbazol yellow,** a direct cotton coal-tar color of the disazo type derived from carbazol. It dyes unmordanted cotton yellow in an alkaline salt bath.—**Chloramine yellow,** a direct cotton coal-tar color of unpublished composition. It dyes unmordanted cotton green in a neutral salt bath. It is very fast to light for a color of this class.—**Chrome fast yellow.** Same as *milling* ★*yellow.*—**Chrome fast yellow G,** a mordant coal-tar color of the monoazo type related to salicylic acid. It dyes chromium-mordanted wool yellow and is used in calico-printing.—**Clayton yellow.** Same as *thiazol* ★*yellow.*—**Cologne yellow,** a pigment consisting of lead chromate mixed with lead sulphate and calcium sulphate.—**Columbia yellow.** Same as *chloramine* ★*yellow.*—**Cresotin yellow G** and **R,** two direct cotton coal-tar colors of the disazo type. The former is derived from benzidine, and the latter from toluidine. It dyes unmordanted cotton yellow in a soap bath.—**Crumpsall yellow,** a mordant acid coal-tar color of the monoazo salicylic-acid type. It dyes wool yellow in an acid bath. Its fastness is increased by after-chroming.—**Diamine yellow,** a direct cotton coal-tar color of the disazo type derived from benzidine. It dyes unmordanted cotton a bright yellow in a soap bath containing sodium phosphate.—**Diamond yellow,** a mordant coal-tar color of the monoazo type derived from amido-benzonic acid. It dyes chromium-mordanted wool yellow.—**Direct yellow G, 2G, 4G,** and **R,** direct cotton coal-tar colors of similar but uncertain composition: derived from para-nitro-toluene sulphonic acid. They all dye unmordanted cotton yellow in a salt bath and possess very good fastness.—**Dutch yellow,** a yellow pigment, the color lake formed by combining the coloring principle of Persian berries with aluminium and calcium oxids or hydroxids.—**English yellow.** (*a*) The name applied to the silver alloyed variety of gold much used in England 50 to 60 years ago, strikingly resembling in color the electrum of the ancients. (*b*) Same as ★*yellow*, 1 (*b*).—**French yellow,** chryseinic acid. See ★*chryseinic.*—**Gambine yellow,** a mordant coal-tar color. It dyes chromium-mordanted wool yellow.—**Heligoland yellow,** a direct cotton coal-tar color of the disazo type derived from di-phenyl-thio-urea. It dyes unmordanted cotton yellow in a salt bath.—**Hessian yellow,** a direct cotton coal-tar color of the disazo type derived from di-amido-stilbene. It dyes unmordanted cotton yellow in an alkaline salt bath.—**Imperial yellow.** (*b*) Same as *aurantia.*—**Indian yellow.** (*b*) Same as *azo* ★*yellow.*—**Janus yellow,** a Janus coal-tar color. It dyes tannin-mordanted cotton in a neutral bath and unmordanted cotton in an acid bath.—**Kongo yellow,** a direct cotton color of the disazo type derived from benzidine. It is sold in paste form. It dyes unmordanted cotton dull yellow in a soap bath.—**Lancaster yellow,** an acid coal-tar color. [Obsolete.]—**Leather-yellow.** See ★*phosphine*, 2.—**Mekong yellow G** and **R,** two direct cotton coal-tar colors of the tetrakisazo type, the former derived from benzidine and the latter from tolidine. They both dye unmordanted cotton yellow in a salt bath.—**Metanil yellow,** an acid coal-tar color of the monoazo type prepared by combining diazotized meta-sulphanilic acid with diphenylamine. It dyes wool orange-yellow in an acid bath.—**Mikado golden yellow.** Same as *mikado* ★*yellow.*—**Mikado yellow,** a direct cotton coal-tar color of the stilbene type, prepared by the action of caustic soda with para-nitro-toluene-sulphonic acid in the presence of an oxidizing agent. It dyes unmordanted cotton yellow in a salt bath.—**Milling yellow,** a mordant acid dyestuff of the azo-salicylic acid type. It may be dyed upon wool in an acid bath and afterward chromed, or it may be dyed directly upon chrome-mordanted wool. It gives a yellow which is fast to light and milling.—**Nankeen yellow,** a reddish yellow produced upon cotton by precipitating an iron salt with an alkali. Same as *iron buff* (which see, under *buff*^{1}).—**Naphthalene yellow.** See *Manchester yellow.*—**Naphthol yellow R. S.** Same as *brilliant* ★*yellow.*—**Naphthylamine yellow.** Same as *Manchester yellow* (which see, under *yellow*).—**New yellow.** (*a*) Same as *acid-yellow.* (*b*) Same as *diphenylamine-orange* (which see, under *orange*^{1}).—**Persian yellow,** a mordant coal-tar color of the monoazo type prepared by the nitration of the compound formed when diazotized toluidine is combined with salicylic acid. It dyes chromium-mordanted wool yellow and is used in calico-printing.—**Philadelphia yellow.** See ★*phosphine*, 2.—**Sulphanil yellow,** an artificial dyestuff, one of the class of benzidine dyes.—**Thiazol yellow,** a direct cotton coal-tar color of the thiazol type. It dyes unmordanted cotton a bright greenish yellow in a salt bath. It is not fast, but is used with other dyestuffs on account of the purity of the yellow it produces.—**Uranium yellow,** a color obtained from the metallic element uranium and used in coloring and decorating glass and porcelain.—**Victoria yellow.** Same as ★*yellow*, 1 (*b*).—**Wool yellow.** See *patent* ★*fustin.*



Black-bordered Yellow
(*Eurema nicippe*).



Yellowbelly (*Ptychocheilus oregonensis*).
(From Bulletin 47, U. S. Nat. Museum.)

yellowbelly, *n.* 2. *Ptychocheilus oregonensis*, a cyprinoid fish found in fresh waters of the Pacific coast of America tributary to the Columbia and Fraser rivers. It is long and slender, pike-like in form, although with toothless mouth. A second species, *P. grandis*, inhabits the waters of California. Also known as *squaw-fish*. 3. In New South Wales, a fresh-water fish, *Ctenolates auratus*: called also *golden perch*.—4. In Dunedin especially, and New Zealand generally, a large flounder, also called ★*lemon-sole* or *turbot*. *E. E. Morris*, Austral English.—5. A frog. [Dial. and nursery language.]

> "*Yellow belly, yellow belly*, come and have a swim."
> "Yes, my master, when the tide comes in."
> *Nursery song.*

6. A person born in the fens of Lincolnshire, in jesting reference to the frogs in the fens. *Halliwell.*

yellowbottle (yel′ō-bot″l), *n.* Same as ★*korumburra.*

yellowhead (yel′ō-hed), *n.* The yellow-headed blackbird, *Xanthocephalus xanthocephalus*, of the western United States; also a small perching bird, *Clitonyx ochrocephala*, of New Zealand.

> In complaints made against the redwing the *yellowhead* is frequently included as equally guilty. During the breeding season it is a hearty insect eater, and a number of the stomachs examined contained the remains of the well-known "army worm" (Leucania unipuncta), which was also found in stomachs of the redwing.
> *Yearbook U. S. Dept. Agr.*, 1897, p. 351.

yellowing, *n.* 2. A pathological condition of plants in which the leaves become yellow. It may be due to various causes, such as an excess of carbon dioxid in the air, an excess of water about the roots of the plant, or the presence of poisonous or acid gases in the soil or air.

yellow-jacket, *n.* 2. In Australia, any one of several species of trees having a smooth, yellow bark, especially the yellow box, *Eucalyptus melliodora*, and the river gum, *Eucalyptus rostrata*. *E. E. Morris*, Austral English.

Yellow-knives (yel′ō-nīvz), *n. pl.* The Athapascan tribe located northeast of the Great Slave Lake. Also called *Copper Indians.*

yellows (yel′ōz), *n.* See ★*yellowing*, 2.—**Beet yellows**, a disease of the beet attributed to bacteria. The leaves become covered with green and white spots, and finally turn yellow, while the root becomes stunted.

yellowtail, *n.* 2. (*j*) A fish, *Ocyurus chrysurus*, belonging to the family *Lutianidæ*, and found from Florida to Brazil. (*k*) In Victoria and New South Wales, *Trachurus declivis*, a species slightly different from the horse-mackerel of Europe.

yellow-top, *n.* 2. A reed-grass, *Calamagrostis hyperborea Americana*, common in low meadows and on shady river-banks throughout the northwestern United States. It affords a large yield of hay, excellent if cut in season.—3. Same as *early* ★*goldenrod.*

yellow-wood, *n.* 4. See ★*polecat-tree.*

yellow-worm (yel′ō-wėrm), *n.* A redia of a liver-fluke: more fully named *King's yellow-worm.*

yelm, *v.* 2. To lay straw in order for any purpose. [Prov.]

> Whereby all *yelming* or handling of the straw, except by the feeder, is avoided, with great saving of expense.
> *W. Fream*, Complete Grazier, p. 771.

yelting, *n.* 2. A fish, *Lutianus aya*, the red snapper of the southern Atlantic coast of the United States and the West Indies.

Yemenite (yem′e-nīt), *a.* and *n.* Of or pertaining to, or native to, Yemen, a region (now a vilayet) in southern Arabia; an inhabitant of Yemen.

> The present Sultan, a descendant of those *Yemenite* Imams who consolidated Arab power in Zanzibar and on the East African coast. *Encyc. Brit.*, XXXI. 529.

yen⁴ (yen), *n.* [Amerindian.] A name given by the Indians about the Klamath Lakes of Oregon to the short-nosed sucker, *Chasmistes brevirostris.*

Yeo. An abbreviation of *Yeomanry.*

yeoman, *n.*—**Signal yeoman**, a petty naval officer who has charge of the signal-chest. Also referred to as *yeoman of the signals.* [Eng.]

> The *Yeoman of Signals* came to the captain's cabin at the regulation pace.
> *R. Kipling*, Fleet in Being, Note iv.

yep (yėp), *adv.* A corruption of *yes.* Compare ★*nope.* [Slang.]

> "Like Lorry Tuck?" Harvey put in.
> "*Yep*; or the two De Vitré boys."
> *R. Kipling*, Captains Courageous, x.

yerbal (yār-bäl′), *n.*; pl. *yerbales* (-bä′lāz). [S. Amer. Sp., ‹ *yerba*, yerba.] A district or tract of country where yerba-mate, or Paraguay tea, abounds; a grove or plantation of yerba-mate. See *mate*⁴.

> A Belgian syndicate, working *yerbales*, cattle ranches, &c., £60,000. *Encyc. Brit.*, XXXI. 462.

yern⁴, *v.* A simplified spelling of *yearn*¹.

yeshibah (ye-shē′bä), *n.*; pl. *yeshiboth* (-bōt). [Yiddish *yesheve*, ‹ Heb. *yashab*, dwell, remain, sit.] A rabbinical college, presided over by eminent Talmudical scholars. The most renowned yeshibah is at Volojin, in the province of Vilna, Russia. Modern rabbinical colleges, where, besides Talmudical lore, academic instruction is given, are called *seminaries.*

yeshiboth, *n.* Plural of ★*yeshibah.*

Yesod, *n.* [Heb., foundation.] The ninth Sephira, attribute, or intelligence forming the Adam Kadmon. See ★*Sephiroth.*

yeux-de-perdrix (yė-dẹ-per-drē′), *n.* Plural of *œil-de-perdrix.*

Yezdigerdian (yez-di-jėr′di-an), *a.* [*Yezdigerd* + *-i-an.*] Of or pertaining to Yezdigerd III., the last Sassanid king of Persia, who reigned A.D. 632–641; specifically, noting an era dating from June 16, 632, the date of his accession to the throne.

yield, *n.* 2. Specifically, in *forestry*, the amount of wood at present upon, or which after a given period will be upon, a given area. See phrases below.—**Accident yield**, in *forestry*, trees which are cut on account of accident, such as damage by wind, snow, insects, or fire.—**Final yield**, in *forestry*, all material from reproduction cuttings or clean cuttings. It is usually the chief crop, and marks the end of the rotation. See *intermediate* ★*yield.*—**Future yield**, in *forestry*, the amount of wood which given trees upon a given area will contain after a given period.—**Intermediate yield**, in *forestry*, all material from thinnings or from any cutting not intended to invite or assist reproduction. See *final* ★*yield.*—**Present yield**, in *forestry*, the amount of wood at present contained in given trees upon a given area.—**Sustained yield.** See ★*working*, 6.

yielder, *n.* 3. That which yields or supplies; specifically, a variety of some cropping plant: with a qualifying term, as *good* or *poor.*

> The varieties of durums so far grown in the United States have proved better *yielders* under semiarid conditions than the vulgare wheats.
> *U. S. Dept. Agr.*, Bur. Plant Industry, 1902, Bulletin 7, [p. 13.

yield-point (yēld′point), *n.* 1. In testing the strength of iron, steel, and other ductile materials, the minimum load which produces permanent deformation. Also spoken of, less correctly, as the *elastic limit.*

> (*c*) Four features of the results of the tensile stress tests of outstanding interest merit a special comment.
> (1) In view of the doubt which exists at the present time as to whether copper and its alloys possess true *yield-points*, it is important to record that [with] from 0·1 per cent. to 9 per cent. of aluminium the alloys possess clearly marked *yield-points.* *Nature*, Feb. 28, 1907, p. 426.

2. The point on a stress-strain curve at which the strain begins to increase very greatly for a slight increase of stress.—3. See under ★*point.*

Y. M. C. A. An abbreviation of *Young Men's Christian Association.*

yod (yōd), *n.* [Heb., *hand.*] The tenth letter (י) of the Hebrew alphabet, corresponding to the English *i* (with the sound of *y*). Its numerical value is X.

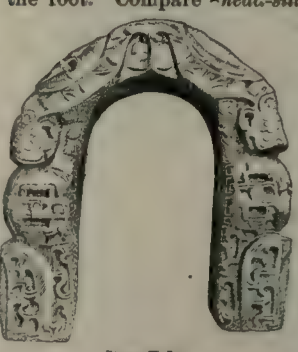
yohimbenine (yọ-him′bẹ-nin), *n.* [*yohimbé* + *-en* + *-ine*².] A colorless alkaloid, $C_{35}H_{45}O_6N_3$, found, together with yohimbine, in the bark and leaves of the yohimbé or yumbehoa-tree, belonging to the *Rubiaceæ.*

yohimbine (yō′him-bin), *n.* [*yohimbé* + *-ine*².] A colorless dextrorotatory alkaloid, $C_{23}H_{32}O_4N_2$, found, together with yohimbenine, in the bark and leaves of the yohimbé or yumbehoa-tree, belonging to the *Rubiaceæ.* It crystallizes in needles and melts at 234° C.

yoke¹, *n.* 2. (*m*) In *carp.*, the cross-piece at the head of a wooden window-frame, which forms the head of a window as the sill forms the foot. Compare ★*head-sill.*—**Stone yoke**, an ancient Mexican stone carving in the form of a yoke or collar, probably used for ceremonial purposes, perhaps for holding down the necks of individuals to be sacrificed: often elaborately carved.

> The *stone yoke*, or ceremonial collar, obtained from Mexico.
> *Smithsonian* [*Rep.*, 1899, p. 41.

To cause to pass under the yoke. See *yoke*¹, *n.*, 3.—**Yoke method**, in *elect.*, a method of measuring the magnetic quality of iron or steel in which the magnetic circuit through the specimen to be tested is completed through a massive yoke of soft iron.



Stone Yoke.
(From An. Rep. Bur. Amer. Ethnol., 1903–04.)

yoke-piece (yōk′pēs), *n.* 1. Any V-shaped piece used in mechanical constructions to enable a load or effort to be transmitted symmetrically to two other points of attachment, or which bridges or spans another element without touching it, for this same general purpose.—2. A piece which acts to bring two parallel forces or efforts to act at one point when resistance is applied, as the yoke enables two oxen to draw one cart or plow.

> The magnetizing coil, which surrounds the sheets or bars to be tested, possesses a correction winding and the heavy *yoke-piece* of cast steel of high permeability forms the arm of a balance. The magnetic attraction is compensated by a running weight, the displacement of which gives the measure of the induction obtained.
> *Elect. Rev.*, Sept. 17, 1904, p. 462.

yoking, *n.* 3. *pl.* In mining surveys, the stakes or monuments on the surface of the ground which when connected together by lines give the boundaries of the claim.

yolala (yö-lä′lä), *n.* [Malagasy.] A migratory locust of Madagascar, a variety of *Pachytylus migratorioides.* *Cambridge Nat. Hist.*, V. 298.

Yoldia clay. See ★*clay.*

yoldiform (yōl′di-fôrm), *a.* [*Yoldia* + L. *forma*, form.] Having the form of the molluscan shell of the genus *Yoldia.*

yolk-furrow (yōk′fur″ō), *n.* See ★*furrow.*

yolk-germ (yōk′jėrm), *n.* The germ from which the yolk of the egg develops.

yolk-mass (yōk′mȧs), *n.* The yolk of the egg considered as a unit.

yolk-nucleus (yōk′nū″klẹ-us), *n.*; pl. *yolk-nuclei* (-ī). In *cytol.*, one of the bodies of unknown significance and of variable structure which appear in the cytoplasm of the ovarian egg, or oöcyte; the "Dotterkern" of Carus (1850).

yolk-platelet (yōk′plāt″let), *n.* One of certain small crystalline structures found in the eggs of certain fishes and amphibia, consisting of albuminous material in combination with lecithins and mineral salts.

yolk-plug (yōk′plug), *n.* A mass of large entoderm cells which fills the blastopore of the amphibian embryo.

yolk-pyramid (yōk′pir″ạ-mid), *n.* One of the cuneate or pyramidal yolk segments of the developing eggs of certain crustaceans, such as the crawfish.

yolk-sphere (yōk′sfēr), *n.* The yolk-mass of a spherical egg.

yolk-stalk (yōk′stâk), *n.* The stalk-like tubular connection between the intestine of the vertebrate embryo and the yolk-sac.

> In the first stage, the proton is a modified strip of the ventral epithelium of the foregut bordering the *yolk-stalk.* *Trans. Amer. Micros. Soc.*, Nov., 1900, p. 57.

yoman, *n.* A simplified spelling of *yeoman.*

Yom-kipper (yom-kip′ėr), *n.* [Yiddish; Heb. *Yom Kippur.*] The Day of Atonement. See *Jewish* ★*fasts.*

yom-tob (yom-tōb′), *n.* [Yiddish *Yomtef*, ‹ Heb. *yom*, day, + *tob*, good.] A holy day; a festival. See *Jewish* ★*festivals.*

yoni (yō′ni), *n.* [Skt. *yoni*, lap, vulva, womb, origin, source, etc., ‹ √ *yu*, hold, fasten, yoke, etc.] The female organ of generation or a symbol thereof. Compare *lingam.*

york (yôrk), *v. t.* [See ★*yorker.*] In *cricket*, to bowl a batsman out with a ball which pitches in his block-hole, or within a few inches of it. *Cricket*, in The Badminton Library, p. 133.

yorker (yôr′kėr), *n.* [*York*(*shire*) + *-er*¹.] A ball which pitches in the block-hole, or within a few inches of it. *Hutchinson*, Cricket, p. 32.

> For one thing, the very name "anthropology" is apt to suggest different things to different minds. (And yet, as was said of the *yorker*, "What else would you call it?")
> *Athenæum*, March 25, 1905, p. 370.

Yorks. An abbreviation of *Yorkshire*.

York shilling. See ★*shilling*.

Yorkshire grease. See ★*grease*.

Yorktown beds. See ★*bed*¹.

yoro (yō′rō), *n.* See ★*buri*.

Yoruban (yō′rö-ban), *a.* and *n.* **I.** *a.* Of or pertaining to Yoruba.

II. *n.* A native of Yoruba.

Yosemitic (yō-se-mit′ik), *a.* [*Yosemit*(*e*) + *-ic.*] Of or pertaining to, or characteristic of, the Yosemite valley. [Rare.]

> Among all the countless waterfalls I have met in the course of ten years' exploration in the Sierra, whether among the icy peaks, or warm foot-hills, or in the profound *yosemitic* cañons of the middle region, not one was found without its Ouzel.
> *Muir*, The Mountains of California, p. 276.

young, *a.* 9. In *phys. geog.*, exhibiting an early stage of the geographic cycle, when sculpture or dissection is not far advanced. —**Younger hand.** See ★*hand*.—**Young river.** See ★*river*².

youngership (yung′gėr-ship), *n.* In primitive society, the position of a person who is throughout his life considered as a younger relative by the other members of the tribe, and who, as such, is obliged to remain in an inferior position. [Rare.]

> The captive is thus doomed to perpetual *youngership*, if the term may be permitted — that is, to perpetual servitude — because all other members of the tribe may consider him as last born and never to be advanced in age.
> *An. Rep. Bur. Amer. Ethnol.*, 1898–99, p. cxiii.

youthful, *a.* 5. In *phys. geog.*, exhibiting an early stage of the geographical cycle; young.

yponomeutid (i-pon-ọ-mū′tid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Yponomeutidæ*.

II. *a.* Having the characteristics of or belonging to the lepidopterous family *Yponomeutidæ*.

Ypresian (i-pres′i-ạn), *a.* and *n.* [*Ypres* (see def.) + *-ian.*] In *geol.*, noting that stage of the Lower Eocene Tertiary in Belgium which is equivalent to the London Clay of England. It takes its name from Ypres in West Flanders. Also termed *Londinian*.

Y. P. S. C. E. An abbreviation of *Young People's Society of Christian Endeavor*.

Y. s. In *med.*, an abbreviation of *yellow spot* (of the retina).

Yt. An occasional symbol for *yttrium*. The single letter *Y* is more generally so used.

ytterbia (i-tėr′bi-ạ̈), *n.* [See *ytterbium*.] In *chem.*, ytterbium oxid, commonly assumed to be Yb_2O_3, which is white, and forms colorless salts, giving no absorption-spectrum; but a characteristic spark-spectrum can be obtained.

ytterbic (i-tėr′bik), *a.* [*ytterb*(*ium*) + *-ic.*] In *chem.*, containing ytterbium as a constituent.

ytterbium, *n.* In making the 'glowers' or filaments for the Nernst incandescent electric lamps it has been found that the mixture of zirconia with the earths of the yttria group gives the most satisfactory results when the latter contain a large proportion of ytterbium as compared with yttrium.

ytter earth. The name first given by Gadolin in 1794 to a new earth discovered by him in a black mineral (gadolinite) from Ytterby in Sweden. This is now known as *yttria* or *yttrium oxid*, though the original substance has been shown to contain in admixture several other metallic oxids.

> As early as 1794 Gadolin had separated from the gadolinite of Ytterby an earth which he called *ytter earth*, and which later was recognized as formed of erbine, terbine, and of ytter properly so called.
> *C. Winkler* (trans.), in Smithsonian Rep., 1897, p. 239.

ytterite (it′ėr-īt), *a.* [*yttrium* + *-ite*².] In *chem.*, of the same class as yttria. [Rare.]

> The cerite earths forming "alums" which are insoluble in potassic sulphate and so separate out, while the *ytterite* earths [yttrium oxid, erbium oxid] remain in solution. *V. B. Lewes*, in Smithsonian Rep., 1900, p. 388.

yttrocrasite (it-rọ-krā′sīt), *n.* A complex titanate of yttrium, thorium, uranium, and other elements. It occurs in the form of rough crystals (orthorhombic?) having a black color and pitchy luster, in Burnet county, Texas.

yttroilmenite (it-rọ-il′men-īt), *n.* [*yttrium* + *ilmenite.*] A name given by Hermann in 1846 and 1847 to a variety of yttrotantalite and afterward to samarskite under the impression that he had discovered in these minerals a new metallic element, which he proposed to call *ilmenium*.

Y-tube (wī′tūb), *n.* A form of tube, usually of glass and used in physical or chemical research, in which two diverging branches unite into a common stem. The flow of fluid may be either convergent into the single tube, or divergent from the latter into the two branches.

> An inverted *Y-tube* with a stop-cock in one arm connects the normal electrode with the other vessel.
> *Jour. Phys. Chem.*, Jan., 1905, p. 72.

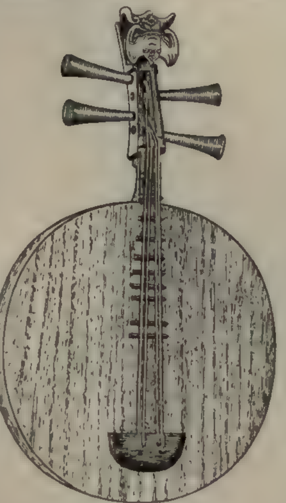
yuca, *n.* See ★*yucca*, 3.

yucca, *n.* 3. [Pron. iö′kạ̈.] The name given in western South America to *Manihot Aipi* (see *Manioc*). The latter name is not known in Peru and Chile or Bolivia, only 'yuca' being used. It is extensively consumed as a vegetable. The name is also common throughout Central America.—**Yucca cactus.** See ★*cactus*.

yucca-moth (yuk′ạ̈-môth), *n.* Same as *yucca-fertilizer*. *Cambridge Nat. Hist.*, VI. 432. —**Bogus yucca-moth,** any moth of the tineid genus, *Prodoxus*, of which the larvæ live in the flower-stems of yucca and not in the seed-pods as do the true yucca-moths of the genus *Pronuba*. *Cambridge Nat. Hist.*, VI. 432, note.

yufu (yū′fö), *n.* A fabric made from the bark of the paper-mulberry tree. *Jour. Anthrop. Inst.*, XXXI. 131.

yu-kin (yö-kin′), *n.* [Chin.] A Chinese lute or guitar with a large circular body, a short neck, and four strings. Also called *moon-guitar*.



Yu-kin.
(In Stearns Collection, University of Michigan.)

yukonose (yö′kon-ōs), *n.* [*Yukon*, Alaska, + *-ose*, suffix applied to names of subrangs.] In *petrog.*, in the quantitative system (see ★*rock*¹), a persodic domalkalic igneous rock of the quarfelic order of persalane, that is, one in which normative quartz and feldspar are in equal or nearly equal proportions, the feldspar being chiefly andesin.

yung, *a.* and *n.* A simplified spelling of *young*.

yustone (yū′stōn), *n.* [Chin. *yu*, jade, + E. *stone*.] Same as *jade*².

Yvette, crème d' (krām di-vet′). [F. *crème*, cream.] A cordial liqueur, one of those known as a crème from its consistency.

Y. W. C. A. An abbreviation of *Young Women's Christian Association*.

Y. W. C. T. U. An abbreviation of *Young Women's Christian Temperance Union*.

Z 2. (*d*) [*cap.* or *l. c.*] In *elect.*, the symbol for impedance in alternating-current circuits. See *impedance*.—3. A section of rolled steel, wrought-iron, or other metal used in structures, and particularly in the hulls of vessels, to resist flexure, and to connect other members. Its shape resembles the capital letter Z, except that the web is at right angles to the upper and lower flanges.

zacate (thä-kä′tā̤), *n.* [Mex. Sp. *zacate*, *sacate*, < Nahuatl *zacatl* (*çacatl*), grass, straw.] In Mexico, the southwestern United States, Guam, and the Philippines, a name applied to grasses, especially to those used for hay or fresh forage. Under this name the rice-grass, *Homalocenchrus hexandrus*, a grass of Mexican origin, is cultivated in the Philippines for fodder. See ★*rice-grass*.—**Zacate limon**, in Guam, the introduced lemon-grass, *Andropogon Nardus*.

zacaton (thä-kä-tōn′), *n.* [Mex. Sp. *zacatón*, aug. of *zacate*, < Nahuatl *zacatl* (*çacatl*), grass, straw.] In the southwestern United States and Mexico: (*a*) One of several grasses useful for hay, especially *Epicampes macroura* and species of *Sporobolus*; specifically, *Sporobolus Wrightii*, which in Arizona and New Mexico yields a hay valued in lieu of better for horses and mules. It grows in great clumps, producing a large amount of coarse, tough stems and leaves. (*b*) Same as *broom-root*.—**Alkali zacaton**. (*a*) The bulbous panic grass, *Panicum bulbosum*, native in cañons from Texas to Arizona and in Mexico. The stem has a bulbous base (hence called *turnip grass*), the leaves are smooth and flat, and the panicle is usually ample. It serves as a hay grass, valued on account of its ability to endure drought and an alkali soil. (*b*) Same as *fine-top* ★*salt-grass* (*a*).—**Bearded zacaton**, a tall satin-grass, *Muhlenbergia distichophylla*, with long leaves and a very long, narrow panicle, frequent in rich valleys in Arizona and New Mexico, where it is often cut, or by the Indians pulled, for hay.

Zaclemus (za-klē′mus), *n.* [NL.] A subgenus of *Paralonchurus*, sciænoid fishes of the American Pacific.

Zadokite (zā′dok-īt), *n.* and *a.* **I.** *n.* One of the sons of Zadok, who, according to Ezekiel, were the only legitimate priests.

II. *a.* Pertaining to Zadok, chief priest in the time of Solomon, or to his descendants.

zadruga (zä-drö′gä), *n.* [Serv. *zadruga*.] Among the South Slavic peoples, the association of all consanguineals into a coöperative organization, the members of which generally live in a complex of houses built within an inclosure and around the house of the stareshina or chief of the community. *Athenæum*, July 22, 1905, p. 104.

zaguan (thä-gwän′), *n.* [Sp.] A porch or a vestibule at the entrance of a house; entrance; hall.

Zalembius (za-lem′bi-us), *n.* [NL., < Gr. ζάλη, surge of the sea, + ἔμβιος, in life, < ἐν, in, + βίος, life.] A genus of surf-fishes, *Embiotocidæ*, found on the California coast.

Zalieutes (zal-i-ū′tēz), *n.* [NL., < Gr. ζάλη, surge of the sea, + ἁλιευτής, fisher.] A genus of fishes of the family *Ogcocephalidæ*, found in the eastern Pacific.

zalil (zä′lēl), *n.* [Native name in Khorasan.] A yellow-flowered larkspur, *Delphinium Zalil*, found in parts of Afghanistan and Khorasan. It is used for dyeing silk and is exported through the Panjab to India. See ★*asbarg*. (See cut, next column.)

Zalocys (zal′ǫ-sis), *n.* [NL., < Gr. ζάλη, surge of the sea, + ὠκύς, swift.] A genus of carangoid fishes found in the eastern Pacific. The only known specimen was taken at Clarion Island.

Zalopyr (zal′ǭ-pīr), *n.* [NL., < Gr. ζάλη, surge of the sea, + πῦρ, fire.] A subgenus of *Sebastodes* or rockfishes, found in the temperate and northern Pacific.

Zalypnus (za-lip′nus), *n.* [NL., < Gr. ζάλη, surge of the sea, + ὕπνος, sleep.] A genus of gobioid fishes found in the tropical Pacific on the American coast.

Zambesi black, blue, brown. See ★*black*, *n.*, etc.

zambo (säm′bō), *n.* Same as *sambo*.

Zanclean (zan′klẹ̄-a̤n), *n.* [L. *Zanclē*, < Gr. Ζάγκλη, an older name of Messana, It. *Messina*.] In *geol.*, the lowest division of the Subapennine series of Pliocene deposits in Italy: equivalent to the Messinian.

zangero, *n.* See ★*zanjero*.

Zaniolepis (zan-i-ol′e-pis), *n.* [NL., erroneously for *Xaniolepis*, < Gr. ξάνιον, a card or comb for wool, + λεπίς, a scale.] A genus of fishes of the family *Hexagrammidæ*, found in the north Pacific.

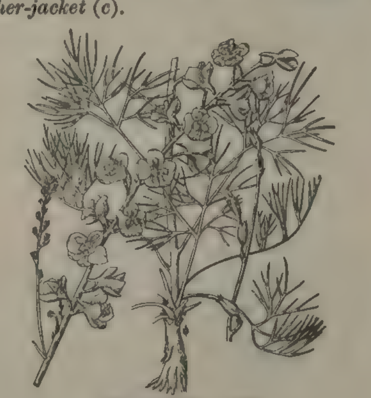
zanjero (thän-hā′rō), *n.* [Amer. Sp., < Sp. *zanja*, a ditch.] A man who patrols irrigation ditches to keep them in order or repair. See ★*ditch-rider*. Also *zangero*. *L. M. Wilcox*, Irrigation Farming, p. 163.

zanza, *n.* Same as ★*sansa*².

zapallo (thä-pä′lyō), *n.* [S. Amer. Sp.] The South American squash, *Cucurbita maxima*. The zapallo is originally from the East Indies.

zapatera (thä-pä-tā′rä), *n.* See *rule* ★*boxwood*.

zapatero (thä-pä-tā′rō), *n.* [Sp., shoemaker, < *zapato*, shoe.] A fish, *Oligoplites saurus*, found on both coasts of tropical America. See *leather-jacket* (*c*).



Zalil (*Delphinium Zalil*).

Zaphotias (za-fō′ti-as), *n.* [NL., < Gr. ζα-, very, + φῶς (φωτ-), light. The name alludes to the photophores.] A genus of fishes containing the single species *Z. pedaliota*; found in deep water of the Gulf Stream. Also written *sapote*.

zapor (zä′pôr), *n.* [Russ. *záporŭ* = Bulg. Bohem. Pol. *zapor*, a bar, barrier, < Slav. *za-per-*, *za-por-*, close, bar, < *za*, behind, + √ *per-*, OBulg. *prieti*, prop, support, Russ. *peretĭ*, press, close.] An artificial barrier in a river.

> From the earliest Russian times the natives were taught to barricade the streams by *zapors*, or barricades which were maintained for generations in the principal rivers.
> *Bulletin U. S. Fish Com.*, XXI. 244.

zapote (thä-pō′tā̤), *n.* [Mex. Sp., < Nahuatl *zapotl* (*çapotl*), pulpy sweet fruits.] The name of a number of fruits more or less spherical in form containing sweet edible pulp, and also of the trees which bear them. Also written *sapote*. See the following.—**Black zapote**, or **zapote prieto**, in southern Mexico, the insipid fruit of the introduced East Indian ebony, *Diospyros ebenaster*; in northern Mexico, the Mexican persimmon, *Brayodendron Texanum*, which see, under *persimmon*.—**Caimito zapote**, the star-apple, *Chrysophyllum cainito*.—**Chico zapote**, or **zapote chico**, the sapodilla, nispero, or naseberry, *Sapota zapotilla*.—**Egg zapote**, in southern Mexico, *Achras salicifolia*; in the Bahama Islands, *Achras serpentaria*, which see, under ★*egg-fruit*.—**Green zapote**, or **zapote verde**, *Matisia cordifolia*, a lofty tree of the bombax family growing in Colombia, having large heart-shaped leaves, clusters of rose-colored caulifloral flowers, and edible, green, fleshy 5-seeded fruit; also called *chupa-chupa*.—**Mammee zapote**, or **zapote mamey**, also called *zapote grande* and *zapote colorado*, the marmalade-tree, *Achras Sapota* (*Lacuma mammosa* Gaertn.), which see, under *marmalade-tree*.—**Melon zapote**, or **zapote melon**, the papaya, or papaw, *Carica papaya*, which see.—**Santo Domingo zapote**, in Mexico, the introduced mammee-apple, *Mammea Americana*, easily distinguished from the mammee zapote by its rough seeds: see *mammee-apple*.—**Sleepy zapote**, the fruit of *Casimiroa edulis*, a large tree of the Rutaceæ: see illustration under ★*cochilsapote*.—**Tipsy zapote**, or **zapote borracho**, *Achras salicifolia*, the fruit of which resembles a small yellow mango in form and color, and contains a sweet orange-colored pulp of a peculiar flavor, which is said to be intoxicating if eaten in quantity.—**White zapote**, or **zapote blanco**, same as *sleepy* ★*zapote*.—**Yellow zapote**, or **zapote amarillo**, same as *tipsy* ★*zapote*.

zapote-wood (thä-pō′tā̤-wůd), *n.* In southern Mexico and Yucatan, the hard durable wood of *Sapota zapotilla*, which is used in construction and in cabinet work. Also called *palo-Maria* in Yucatan.

Zaprora (za-prō′rä), *n.* [NL., < Gr. ζα-, intensive, + πρῷρα, prow.] A genus of fishes belonging to the family *Zaproridæ*.

Zaproridæ (za-prō′ri-dē), *n. pl.* [NL., < *Zaprora* + *-idæ*.] A family of fishes containing a single genus and species, *Zaprora silenus*, of which only the type is known. Taken off the coast of Vancouver Island.

Zapteryx (zap′te̤-riks), *n.* [NL., < Gr. ζα-, intensive, + πτέρυξ, fin. The ventral fins are larger than in the genus *Raja*.] A genus of guitar-fishes found in the warmer or tropical parts of the American Pacific.

zarp (zärp), *n.* ["From the initials *Z*(uid) *A*(frikaansch) *R*(epublikeinsch) *P*(olitie) = South African Republican Police." *Encyc. Dict.*] A member of the police force of the late South African Republic; a Boer policeman. [Slang.]

> It had been occupied by the Johannesburg *zarps*, who were driven north. The *zarps* had been greatly interfering with the success of Lord Roberts's proclamations for pacifying the country.
> *Pall Mall Gazette*, May 19, 1900, p. 8.

zayin (zä′yin), *n.* The seventh letter (ז) of the Hebrew alphabet, corresponding to the English *z*. Its numerical value is 7.

Z-bar (zē′bär), *n.* A rolled structural bar with a web and two flanges at right angles to it, roughly resembling the letter Z: largely used in ship-building for solid frames and stiffeners.

> *Z-bars* are now largely used for war-ships, and channel bars for merchant ships.
> *White*, Manual of Naval Arch., p. 384.

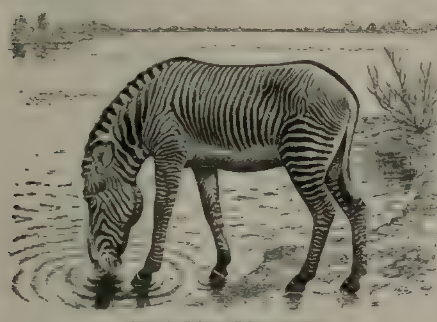
Z-beam (zē′bēm), *n.* A metal beam resembling in section the capital letter Z.

Z. B. T. An abbreviation of the Hebrew *Zion Bemishpat Tipodeh*, 'Zion shall be redeemed with judgment' (Isa. i. 27): the initials of a Jewish fraternity. The fraternity was founded in 1889, "to unite fraternally all collegiate Zionists of the United States and Canada" and to advance the cause of Zionism.

Z. C. In *astron.*, an abbreviation of *Zonæ Cordobenses*, Gould's Cordova Zones. See ★*C. Z.*

zearin (zē′a̤-rin), *n.* A colorless compound, $C_{52}H_{88}O_4$, contained in many species of lichens, particularly in *Hæmatomma coccineum*. It crystallizes in hexagonal double pyramids resembling quartz and melts at 249–251° C.

zebra, *n.* 2. A name used by fish-culturists in England for hybrids between *Salmo fario*, the European trout, and *Salmo fontinalis*, the American brook-trout.—3. An American heliconiid butterfly, *Apostraphia charithonia*, with black, yellow-banded wings. It occurs in Central America, the West Indies, and the southern United States. Its larvæ feed on the passion-flower vine.—**Grévy's zebra**, *Equus grevyi*, a species somewhat taller and more slender than



Grévy's Zebra (*Zebra grevyi*).

the true zebra, marked with many narrow black stripes, the cross stripes being much more numerous than the oblique stripes. The mane and tail are well developed. It inhabits the mountains from Somaliland to the north side of the Victoria Nyanza.

zebra-fish (zē'brạ̈-fish), *n.* A percoid fish, *Neotephrœops zebra*, found in Australian waters.

zebrinny (zē-brin'i), *n.* [*zebr*(*a*) + (*h*)*inny*.] A name given by Professor E. C. Ewart to a hybrid between a stallion and a female zebra.

zebroid (zē'broid), *a.* and *n.* [*zebra* + *-oid*.] **I.** *a.* Resembling a zebra.

II. *n.* A hybrid between a zebra and a pony.

> Whether, however, "*zebroids*," as it is proposed to call the hybrids, will maintain the immunity against tsetse attack characteristic of pure bred zebras, remains to be proved. *R. Lydekker*, Mostly Mammals, p. 43.

zebrula, *n.* An erroneous (New Latin) form of ★*zebrule*.

zebrule (zē'bröl), *n.* [*zebr*(*a*) + (*m*)*ule*.] A name given by Professor E. C. Ewart to the offspring of a mare and a zebra stallion.

> The zebra-horse hybrids were obtained by crossing mares of various sizes with a zebra stallion, a Burchell's zebra; and the new animals get the name of '*zebrules*.' *Science*, July 24, 1903, p. 128.

zebucan (sä-bö-kän'), *n.* [A native name in Guiana.] Same as *matapi*.

Zech. An abbreviation of *Zechariah*, a book of the Old Testament.

Zeelander (zē'lạ̈n-dėr), *n.* An inhabitant of Zeeland, Holland.

Zeeman effect. See ★*effect*.

zefyr, *n.* An amended spelling of *zephyr*.

zeilanite (zī'lạ̈-nīt), *n.* Same as *ceylonite*.

Zeinæ (zē-ī'nē), *n. pl.* [NL., < *Zeus* + *-inæ*.] A subfamily of fishes (John-dories) containing the pelagic genus *Zenopsis*.

zeiodelite (zī-od'ẹ̈-līt), *n.* A trade-name for a mixture of melted sulphur with rather more than its own weight of finely pulverized glass, used as a cement and as a substitute for plaster of Paris in making casts.

zelot, *n.* A simplified spelling of *zealot*.

zelous, *a.* A simplified spelling of *zealous*.

zeme, *n.* See ★*zemi*.

zemeism (zā'mẹ̄-izm), *n.* [*zemi* (*zeme*) + *-ism*.] That form of religious organization and worship which is associated with zemis. Also *zemism*.

> As in all primitive society the social organization of the Antilleans was built on a religious foundation, the people being governed by priesthoods which controlled all the public life of the people. Every cacique was a priest in virtue of his standing in the clan, which was the political unit and, as we shall later see, the religious and ceremonial unit as well. The whole social and religious organization was knit together by a form of totemism or tutelary clan ancients worship which I shall call *zemeism*. *J. W. Fewkes*, in Science, July 18, 1902.

zemi (zā'mi), *n.* [Also *zeme*; from West Indian (Taino).] A peculiar kind of image or idol, carved to represent some animal or the human form, found among the aboriginal inhabitants of the islands of the West Indies. They were usually of stone, and are still found occasionally on the islands. They are supposed to represent the ancestor or tutelary god of the clan.

> Idols, as well as the spirits they represented, were called *zemis*, and the name, meaning originally magic power, came to be applied to all supernatural beings and their symbolic representations. *J. W. Fewkes*, in An. Rep. Bur. Amer. Ethnol., 1903–04, [p. 54.

zemism (zā'mizm), *n.* Same as ★*zemeism*.

zemstvoist (zems'tvō-ist), *n.* and *a.* [*zemstvo* + *-ist*.] **I.** *n.* A deputy to a zemstvo; a member of an assemblage or congress of zemstvos.

II. *a.* Relating to a zemstvo or to the zemstvoists.

> From that sprang the imperial ukase of a year ago, nominally granting all the *zemstvoist* demands save that for a constitutional parliament, and also the industrial uprising of January last, in whose dreadful massacres the doom of autocracy was sealed. *N. Y. Tribune*, Jan. 1, 1906.

Zendicism (zen'di-sism), *n.* [*Zendic* + *-ism*.] Zendic doctrine. See ★*Zindikite*.

Zendicite, *n.* See ★*Zindikite*.

Zenion (zē'ni-ọn), *n.* [NL., dim. < Gr. *Ζήν*, variant form of Ζεύς, Zeus: see *Zeus*.] A genus of deep-sea fishes of the family *Zeidæ*. The only known specimens of its single species, *Z. hololepis*, were taken off Yucatan and Little Bahama Bank.

zenith, *n.*—**Astronomical zenith**, the point where the observer's plumb-line, produced upward, pierces the celestial sphere.—**Geocentric zenith**, the point where a line from the center of the earth through the observer, produced upward, pierces the celestial sphere. The geocentric zenith lies always nearer the equator than the astronomical zenith, the angular distance between them being called *the angle of the vertical*. This is a maximum in lat. 45°, where it becomes about 11′.—**Geometric zenith**, the point near the zenith of the plumb-line corresponding to the upper end of a line drawn from the center of the earth. The difference between the plumb-line zenith, or astronomical zenith, and the radius from the center of the earth would be zero if the earth were a homogeneous sphere without rotation on its axis; the rotation throws the plumb-line toward the equator and the irregularity of composition produces large local deflections, so that the geometric zenith differs from the astronomical.

zenithal, *a.*—**Besson's zenithal nephoscope.** See ★*nephoscope*.

zenitho-nadiral (zē″nith-ọ̄-nā'dėr-ạ̈l), *a.* Of or pertaining to the zenith and the nadir: applied to instruments for determining the meridian distances of stars from the astronomical zenith, for the purpose of finding the latitude. *Science*, Jan. 25, 1901, p. 131.

zenographical (zen-ọ̄-graf'i-kạ̈l), *a.* [*zenograph*(*y*) + *ic-al*¹.] Of or pertaining to zenography, the study of the planet Jupiter. *Smithsonian Rep.*, 1890, p. 176.

zenography (zẹ̄-nog'rạ̈-fi), *n.* [Gr. *Ζήν*, for Ζεύς, Jupiter, + *-γραφια*, < *γράφειν*, write.] The description and study of the planet Jupiter. Compare *selenography*, *areography*.

Zeoidea (zē-oi'dẹ̄-ạ̈), *n. pl.* [NL., < *Zeus* + *-oidea*.] A group of fishes containing the single family *Zeidæ* or the John-dories.

zeolitize (zē'ọ̄-līt-īz), *v. t.* To render zeolitic; transform into a zeolite.

zeophyllite (zẹ̄-of'i-līt), *n.* [Gr. *ζέειν*, boil, foam, + *φύλλον*, leaf, + *-ite*².] A zeolitic mineral having the composition $H_4Ca_4F_2Si_3O_{11}$. It occurs in hemispherical and spherical aggregates of small plates showing a perfect cleavage and pearly luster.

Zeph. An abbreviation of *Zephaniah*, a book of the Old Testament.

zepharovichite (zef'ạ̈-rọ̄-vich″īt), *n.* A hydrous aluminium phosphate, $AlPO_4 + 3H_2O$, occurring in whitish crystalline to compact masses: it is found in Bohemia.

zerenid (zẹ̄-ren'id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Zerenidæ*.

II. *a.* Having the characteristics of and belonging to the family *Zerenidæ*.

zero, *n.* 4. In *function-theory*, a value of *x* which makes the function vanish.—**Drift of zero**, in *physics*, the gradual change of the position of the reference-point or zero from which deflection of the suspended parts of an instrument, as a galvanometer or electrometer, is measured.—**False zero**, in *elect.*, a deflected position of the needle of a galvanometer which is taken as the zero in certain methods of measurement, as in the determination of resistances containing electromotive force or in the loop-test for faults in cables.—**Order of zeros.** See ★*order*.—**Physiological zero.** (*a*) The lowest temperature at which eggs or seeds develop. (*b*) In *psychophys.*, the temperature at which a thermal stimulus fails to arouse a sensation either of warmth or of cold in the cutaneous organs; the indifference-point of thermal stimulation. *E. C. Sanford*, Exper. Psychol., p. 9.—**Zero field.** See ★*field*.

zero-meridian, *n.* See ★*meridian*.

zerriba, *n.* Same as *zareba*.

Zesticelus (zes-ti-sē'lus), *n.* [NL., < Gr. *ζεστός*, boiled (soft), + *Icelus*, name of another genus.] A genus of cottoid fishes found in the deep parts of Bering Sea.

Zestidium (zes-tid'i-um), *n.* [NL., dim. of *Zestis*.] A subgenus of *Stellifer*, sciænoid fishes of the tropical Atlantic and Pacific.

Zestis (zes'tis), *n.* [NL., < Gr. *ζεστός*, boiled (soft).] A subgenus of *Stellifer*, sciænoid fishes found in tropical parts of the Atlantic and Pacific.

zetaic (zẹ̄-tā'ik), *a.* [*zeta*¹ + *-ic*.] Of the nature of an ordinary algebraic multiplication except that subjacent indices are treated as if they were exponents: thus, the *zetaic* product $(a_1 - b_1)(a_1 - c_1)$ is $a_2 - a_1b_1 - a_1c_1 + b_1c_1$.

Zethus (zē'thus), *n.* [NL., < Gr. *Ζῆθος*, a name in mythology.] Same as *Cybele*, 2.

zeuxite (zūk'sīt), *n.* [Gr. *ζεῦξις*, a yoking, joining.] A ferriferous tourmalin from Cornwall, occurring in acicular interwoven crystals.

zeybek, *n.* Same as *Xebec*.

Z. G. An abbreviation of *Zoölogical Garden* or *Gardens*.

Z-girder (zē'gėr″dėr), *n.* See ★*girder*¹.

zibeline, *n.* 2. A kind of woolen dress-goods made from long wool and finished with a furry nap.

zibethum, *n.* Same as *zibetum*.

zikr (zēkr), *n.* [Ar. *zikr*, remembering, < *zakara*, mention, take part in.] A religious ceremony, or act of devotion, of various orders of dervishes.

zimba (zim'bạ̈), *n.* Same as ★*sansa*².

zinc, *n.* 2. The zinc element of a galvanic cell, prepared of proper shape and size, and often fitted with a binding-screw, ready for use.—**Acetate of zinc**, a salt obtained by dissolving either zinc, its oxid, or its carbonate, in acetic acid. It crystallizes in nacreous efflorescent laminæ belonging to the monoclinic system. The salt dissolves very readily in water and melts at 100° C.—**Aluminium zinc.** See ★*aluminium*.—**Belgian process for the extraction of zinc.** See ★*process*.—**Griffith's patent zinc white.** See ★*white*¹.—**Perforated zinc**, in *bee-keeping*, a sheet of zinc pierced in such a way that a queen or drone cannot pass through it, while a worker is readily admitted.—**Zinc chlorid**, in *chem.*, a white solid, $ZnCl_2$, of soft consistence at ordinary temperature, melting at a little above 100° C., and volatilizing at a higher temperature, very deliquescent and easily soluble in water. It is used by tinsmiths to facilitate soldering, in the manufacture of 'indurated fiber,' in weighting cotton cloth, and in surgery as an escharotic.—**Zinc fume**, the finely divided solid matter carried off in suspension by the gases from the hearth of a reverberatory furnace in which blende (zinc sulphid) is being roasted. It contains some 10 per cent. of zinc as sulphate, which can be recovered by leaching.—**Zinc oxid.** See ★*oxid*.—**Zinc sulphate**, in *chem.*, a compound obtainable by acting on metallic zinc with dilute sulphuric acid, generally prepared on the large scale by roasting zinc-blende and leaching the roasted ore with water, in either case evaporation of the solution yielding colorless crystals of the composition $ZnSO_4.7H_2O$. The salt is used in connection with dyeing, in hardening stucco, as an addition to size, and to boiled linseed-oil (as a dryer), and in medicine as an astringent and emetic. On being strongly heated zinc sulphate gives off sulphur dioxid and oxygen, and leaves a residue of zinc oxid.

zinc, *v. t.*—**Zinced iron**, iron coated with zinc by careful cleansing of the surface in a bath of dilute acid and subsequent immersion in melted zinc. The iron is galvanically protected from rusting by the presence of the zinc. Also, and more commonly, known as *galvanized iron*.

Zincali, *n. pl.* Same as *Zingari*. See *Zingaro*.

zincaluminite (zingk'a-lū″mi-nīt), *n.* A hydrated basic sulphate of zinc and aluminium occurring in minute thin hexagonal plates, white or bluish in color. It comes from the zinc mines of Laurium, Greece.

zinc-ammonium (zingk'a-mō″ni-um), *n.* In *chem.*, a hypothetical compound radical, in which an atom of zinc is assumed to replace two atoms of hydrogen in two combining units of the radical ammonium, as in zinc-ammonium chlorid, $\left.\begin{matrix}NH_3\\NH_3\end{matrix}\right\} ZnCl_2$.

zincate (zing'kāt), *n.* [*zinc* + *-ate*¹.] In *chem.*, a compound which may be viewed as resulting from the union of zinc oxid with the oxid of a more electropositive metal, or from the replacement of hydrogen in zinc hydroxid by a very strongly electropositive metal, such as potassium or sodium.

zinc-dust (zingk'dust), *n.* Metallic zinc in the condition of a fine powder, produced by grinding in an iron mortar heated to 200–250° C., and obtained to a considerable extent by the rapid cooling of zinc vapor in the reduction of the metal from its ores. In the latter case there is mixed with the powder more or less zinc oxid. Zinc-dust is much used as a deoxidizing agent in the operations of dyeing and calico-printing, sometimes also as a protective paint for ironwork. Also called *zinc-powder*.

zinc-gray (zingk'grā), *n.* A paint which consists of zinc ground in oil: used as a preservative for ironwork. *Phillips and Bauerman*, Elements of Metallurgy, p. 560.

zincide (zing′kid), *n.* [*zinc* + *-ide.*] In *chem.*, a compound of zinc with a more electropositive element or radical, as with sodium.

zincing (zing′king), *v. n.* A name given to the Parkes process (which see, under *process*); also the operation of adding zinc to the lead bath in the Parkes process. *Phillips and Bauerman*, Elements of Metallurgy, p. 700.

zinc-iron (zingk′ī″ėrn), *n.* An alloy of iron and zinc, easily obtainable by dissolving the former metal in melted zinc at a high temperature. Such an alloy is used as the means of introducing iron into copper-zinc and copper-tin alloys.

zincite, *n.* See *zinkite.*

zincografy, *n.* An amended spelling of *zincography.*

zincosite (zing′kọ-sīt), *n.* Same as ★*almagrerite.*

zinc-powder (zingk′pou″dėr), *n.* See ★*zinc-dust.*

zinc-sponge (zingk′spunj), *n.* Metallic zinc separated from a solution of one of its salts in the condition of an imperfectly coherent, sponge-like mass. *Encyc. Brit.*, XXVIII. 110.

zincum (zing′kum), *n.* [NL. *zincum*, zinc. See *zinc.*] A Latinized form of the name of the metal zinc. Used in official medical terminology.

zindikite (zin′di-kīt), *n.* [Ar. *zindīq*, a hopeless infidel, perhaps < Pers. *zan-dīn*, a woman's religion, + *-ite.* *Hughes.*] An infidel.

> There is a sect among the Mohammedans, called the *Zindikites*, who believe neither in the providence of the sovereign Power, nor in the immortality of the soul. But the four elements they believe to be the four essences constituting the Deity; and that, all things being compounded of them, all things are portions of the Deity himself.
>
> *C. Bucke*, Beauties, Harmonies and Sublimities of Nature, p. 319.

Zinganologist (zing-gạ-nol′ō-jist), *n.* [*Zingano*, Gipsy, + *-olog*(*y*) + *-ist.* See *Gipsy.*] Same as *Gipsologist.*

zingaresca (zing-gạ-res′kạ̈), *n.* [It. See *Gipsy.*] A song in Gipsy style.

zinke, *n.* **2.** In *organ-building*, a loud reed-stop. Also *cornet.*

zinkenite, *n.* Same as *zinckenite.*

zinket (zing′ket), *n.* [*zinc* + *-et.*] A trade-name for a sheet-metal tray used in transporting eggs, the eggs being held upright in the tray by means of circular supports. The tray with one dozen eggs is packed on the farm, shipped in crates and retailed in the tray, the consumer keeping the eggs in the tray till wanted; or the eggs may be cooked by placing them in the tray in boiling water.

> These *zinkets* are tray-like constructions of metal made by mechanical methods, each one of which holds one dozen eggs, and it is designed that the eggs shall be placed in these carriers at the time of their gathering on the farm, and in them they shall remain until such time as it is proposed to prepare them for consumption.
>
> *Sci. Amer.*, Feb. 4, 1905, p. 106.

zinkosite (zing′kọ-sīt), *n.* See ★*almagrerite.*

Zionism (zī′ọn-izm), *n.* [*Zion* + *-ism.*] The latest national movement of the Jews which has for its object "the creation of a home secured by public rights, for those Jews who either cannot or will not be assimilated in the country of their adoption." (*Herzl.*) This revival of the national spirit in a political form was due to the anti-Semitic agitation in the latter part of the nineteenth century. Dr. Theodor Herzl of Vienna was the leader, and in his "Jewish State" (1896) he first set forth the plan of an exodus to Palestine and the organization of a state paying tribute to the Sultan and settled by a chartered company, republican in form and tolerant of all religious opinions. An organization has been formed having over 100,000 members; annual congresses are held, and a colonial bank and national fund have been established.

> One of the most interesting results of the anti-Semitic agitation (see Anti-Semitism) has been a strong revival of the national spirit among the Jews in a political form. To this movement the name *Zionism* has been given.
>
> *Encyc. Brit.*, XXXIII. 927, p. 106.

Zionist. **I.** *n.* **2.** Specifically, an adherent of the plan of colonizing Hebrews in Palestine set forth by Theodor Herzl in 1896. See ★*Zionism.*

> The third annual convention of the Federation of American *Zionists* . . . will be held at New York City on June 10. This body will elect delegates to the *Zionist* Congress to be held at Basle, Switzerland, in August.
>
> *Rev. of Revs.*, May, 1900, p. 553.

II. *a.* Of or pertaining to Zionism or the Zionists.

> In the first place there is the so-called *Zionist* movement, which is a kind of Jewish nationalism and is vitiated by the same errors that distinguish its anti-Semitic analogue.
>
> *Encyc. Brit.*, XXV. 482.

Zionist flag. See ★*flag*^{2}.

Zionistic (zī-ọn-is′tik), *a.* Same as ★*Zionist.*

Zircon light. See ★*light*^{1}.

zirconia, *n.* This earth is now of industrial value as the chief material used in the 'glower' of the Nernst incandescent electric lamp. The glower commonly consists of about 85 per cent. zirconia and 15 per cent. yttria or mixed earths of that class.

zirconiferous (zėr-kọ-nif′ẹ-rus), *a.* [*zircon* + *-i-* + *-ferous.*] In *petrog.*, containing zircon.

zirconifluoride, zirconofluoride (zėr″kọ-ni-, zėr″kọ-nọ-flö′ọ-rid), *n.* Same as ★*fluozirconate.*

zirconitic (zėr-kọ-nit′ik), *a.* [*zircon* + *-it-* + *-ic.*] In *petrog.*, containing zircon. *J. D. Dana*, Manual of Geol. (4th ed.), p. 83.

zircono-. In *chem.*, a prefix to the name of a compound, signifying the presence of zirconium as a constituent, as potassium zirconofluoride, K_2ZrF_6. Sometimes written *zirconio-*, *zirconi-*, and *zirco-.*

zirkelite (zėr′kel-īt), *n.* [Named after Professor Ferdinand *Zirkel* of Leipzig, + *-ite*^{2}.] **1.** In *petrog.*, a name applied by Wadsworth (1887) to diabasic glasses. Same as *sordavalite.*—**2.** A rare mineral containing zirconium, titanium, thorium, iron, and calcium. It occurs in black octahedral crystals at Jacupiranga, Brazil.

zisium (zis′i-um), *n.* A trade-name for an alloy of aluminium with small proportions of zinc, tin, and copper, and traces of antimony and bismuth: it is used in making scientific instruments.

ziskon (zis′kon), *n.* A trade-name for an alloy of aluminium and zinc, containing 25 per cent. of the latter metal: used in making scientific instruments.

zithagin (zith′ạ-jin), *n.* Same as *saponin.*

Zittmann's decoction. See ★*decoction.*

zizarme, *n.* Same as *guisarme.*

Zoarcinæ (zō-är-sī′nē), *n. pl.* [NL., < *Zoarces*, the type genus, + *-inæ.*] A subfamily of eelpouts, or ophidioid fishes.

zodiac, *n.* **4.** Of the moon or of a planet, the belt of the heavens within which the moon or a planet moves.

zodiacal, *a.*—**Zodiacal band,** a band of faint light by some observers reported to extend from the apex of the zodiacal light to a considerable distance along the zodiac.

> The *zodiacal bands*, which are said to form a prolongation of the ordinary zodiacal light, were not seen, though stellar or nebulous bands, one extending from Aquila to the Pleiades, and the second from Præsepe to Coma Berenices have been noticed and perhaps offer an explanation of the *zodiacal bands.*
>
> *W. C. Winlock*, in Smithsonian Rep., 1890, p. 144.

zoecial, *a.* Same as *zoœcial.*

zoecium, *n.* Same as *zoœcium.*

zoëhemera (zō-ē-hem′ẹ-rạ̈), *n.*; pl. *zoëhemeræ* (-rē). [Gr. ζωή, life, + ἡμέρα, a day.] In *paleont.*, a term introduced by Clarke to express the period of duration of an index species in a given faunal province. *Zoëhemera* is contrasted with *hemera* in this respect, that the latter (employed with reference to any given species, as the '*hemera* of *Manticoceras intumescens*') implies the entire lapse of time during the existence of that species irrespective of the limitation of its province: the hemera of a species is universal, though the species itself is restricted in its distribution. The '*zoëhemera* of *Manticoceras intumescens*' expresses the time unit and the geographic distribution of the species or the fauna which it exemplifies, or, in other words, the duration of the faunal province to which that species pertains.

zogan (zō′gän), *n.* [Jap.] Inlaid work of gold or silver in other metal, as practised by the Japanese.

Zoharite (zō′här-īt), *n.* Same as ★*Frankist.*

zoidiogamous, *a.* See ★*zoidogamous.*

> The higher cryptogams, on the contrary, were *zoidiogamous*, i.e., fertilization was accomplished by a self-motile male cell, the spermatozoid.
>
> *Internat. Year-Book*, 1898, p. 113.

zoidogamous (zō-i-dog′ạ-mus), *a.* [(*spermato*)-*zoid* + *-o-* + Gr. γάμος, marriage.] In *bot.*, fertilized by motile male cells, or spermatozoids: said of the higher cryptogams among plants.

> The final history of the generative cell is obscure, but it is to be inferred from the brief summary of Thomson (*loc. cit.*) that the antheridial cell of the Araucarineæ does not divide into two as in the Abietineæ and the ancient *zoidogamous* Gymnosperms.
>
> *Amer. Nat.*, June, 1907, p. 362.

zoiodin (zō-ī′ọ-din), *n.* [Gr. ζωή, life, + ἰώδης, of a violet, + *-in.*] A form of nitrogenous organic matter deposited in violet laminæ from the sulphur-waters of Aix in Savoy.

zoisitization (zoi-sīt-i-zā′shọn), *n.* [*zoisite* + *-ize* + *-ation.*] In *petrog.*, the alteration of minerals or rocks to zoisite.

Zolaist (zō′lạ̈-ist), *n.* [*Zola*(*ism*) + *-ist.*] A writer whose works are marked by Zolaism; a literary follower of Émile Zola.

> Like most of his novels, it belongs to the school of what the *Zolaist* would term "moral anatomy."
>
> *G. Monod*, in Contemporary Rev., March, 1887, p. 449.

Zolaize (zō′lạ̈-īz), *v.*; pret. and pp. *Zolaized*, ppr. *Zolaizing.* [*Zola* + *-ize.*] **I.** *intrans.* To write in the naturalistic vein of Émile Zola.

II. *trans.* To cause to resemble, or bring into accord with, Zola's literary method or style.

> I do not mean that M. R. — has *Zolaized* Mr. Hardy; that would be unjust; but I do think that, unconsciously, he has subdued his translation to the taste that cherishes M. Zola.
>
> *G. H. Ely*, in Literature, March 30, 1901, p. 234.

zoll (tsọl), *n.* [G.] The twelfth part of a German foot, varying with the length of the foot but not very different from the English inch. *C. Hering*, Conversion Tables, p. 33.

Zöllner's photometer. See ★*photometer.*

zollpfund (tsọl′pfund), *n.* [G., < *zoll*, custom, + *pfund*, pound.] The pound adopted for the customs service of the German Zollverein, equal to 500 grams, or 1.1023 pounds avoirdupois.

zolotnik (zō-lōt-nēk′), *n.* [Also *solotnick*; < Russ. *zolotnikŭ.*] A Russian unit of weight, $\frac{1}{96}$ of the funt or Russian pound, equal to 4.27 grams or nearly 66 grains. It is divided into 96 dolia.

zomotherapeutics (zō″mọ-ther-ạ-pū′tiks), *n.* Same as ★*zomotherapy.*

zomotherapy (zō-mọ-ther′ạ-pi), *n.* [Gr. ζωμός, soup, + θεραπεία, medical treatment.] Use of raw meat, or the juice expressed therefrom, in the treatment of disease. *Med. Record*, June 27, 1903, p. 1059.

zona, *n.*—**Zona dermatica,** the thicker ring of dermal tissue which surrounds the zona epithelioserosa in rachischisis.—**Zona epithelioserosa,** the ring of epithelial tissue which bounds the defect in rachischisis.

zonæsthesia (zō-nes-thē′sị-ạ̈), *n.* [NL., < Gr. ζώνη, zone, + αἴσθησις, perception.] Same as ★*girdle-sensation.*

zonal, *a.* **6.** In *phytogeog.*, in or relating to œcological zones or belts. See ★*zone*, 8.

> It would seem that there are two principal types of plant arrangement in their habitats. These are: (1) *Zonal* and (2) Azonal.
>
> *C. MacMillan*, in Bulletin Torrey Bot. Club, XXIII. 500.

Zonal candle-power. See ★*candle-power.*—**Zonal equation.** See *zone-symbol*, under ★*symbol*^{1}, 2.—**Zonal structure,** in *petrog.*, a character of a crystal produced by concentric shells or layers of the crystal, which have different composition, color, or inclusions.

Zonary plankton. See ★*plankton.*

zonation (zō-nā′shọn), *n.* [Gr. ζώνη, zone, + *-ation.*] **1.** In *phytogeog.*, the distribution of vegetation in œcological zones or belts, or the general concept of such distribution. See ★*zone*, 8. *F. E. Clements.*—**2.** In *cytol.*, a term applied to a differentiation of the cytoplasm of the plant cell into concentric layers.

> During the completion of the mitosis the ooplasm and periplasm become clearly differentiated, but as yet no plasmoderma exists. This process of differentiation has been termed *zonation*, and is here accomplished by a withdrawal of cytoplasm from the periphery of the oogonium, as in Peronospora (Wager '00, fig. 2) and Albugo candida (Stevens '01, fig. 14), not by an aggregation of separate dense regions, as in A. Bliti (Stevens '99, figs. 59–61).
>
> *Bot. Gazette*, Dec., 1902, p. 421.

zone, *n.* **5.** (*b*) A portion of the surface of a sphere cut off by one plane.—**7.** A belt on the surface of the earth or of the celestial sphere included between two parallels to the equator.—**8.** In *phytogeog.*, a vegetation ring or belt: referring more directly to the plant-content itself or to the areas marked by œcological difference. (*a*) By Humboldt, and now with general consent, but with difference in application, used of circumpolar, roughly longitudinal belts of plant forms, which follow isothermal lines more nearly than parallels, the controlling factor being temperature. These are sometimes termed *zones of latitude.* See *life* ★*zone.* (*b*) Frequently used in the sense of a belt around a more local center corresponding to a gradation of the controlling forces in radial lines, as upon a mountain peak, in a lake, or in a sphagnum bog; or, more broadly, of continental elevation belts. Here other factors than heat, as moisture and light, are often dominant. Sometimes all of these are called *mountain zones* or *zones of altitude.* See ★*region*, 8 (*a*). The symmetry, hence the zonation, is in these cases *radial*; but along a ridge or a river the same causes produce bands of vegetation (by F. E. Clements still called 'zones') in which the symmetry is then said to be *bilateral.* The same author regards the layered vegetation of a forest, etc., as zonal, the zonation in this case being *vertical* or *unilateral* (that of former types being *lateral*). (*c*) A vegetation ring of biological origin resulting from the radial growth or dissemination of an individual, the interior of the circle disappearing: for example, the fairy ring (which see, under *fairy*). *C. MacMillan* and *F. E. Clements.*

9. One of the different levels of a shaft-furnace, characterized according to the reaction which takes place in it: as, the *zone* of fusion, reduction-*zone*, etc.—**Albany zone,** a catalogue of 8,200 stars between the parallels of 1° and 5° north declination observed at the Dudley Observatory, Albany, New York. *Smithsonian Rep.*, 1890, p. 179.—**Arctic** or **arctic-alpine zone.** See *life* ★*zone*.—**Austral zones.** See *life* ★*zone*.—**Biological zones,** geographic regions or subdivisions of the surface of the earth appropriate for sustaining specific forms of animal and vegetable life. Many such subdivisions or zones have been suggested. The most important are those of C. Hart Merriam. See *life* ★*zone*.—**Blue-yellow zone,** in *psychol. optics*, an intermediate retinal area, sensitive to blue, yellow, and the various terms of the black-white series, but insensitive to red and green. The results of perimetrical and campimetrical experiments show that the outermost zone of the retina is sensitive only to black-white; the central zone to black-white, blue-yellow, red-green; and the intermediate zone only to black-white and blue-yellow. *E. B. Titchener*, Exper. Psychol., I. i. 12.—**Canadian zone.** See *life* ★*zone*.—**Charcot's zones.** Same as *hysterogenic zones* (which see, under *zone*).—**Climatic zone,** one of a number of belts or subdivisions of the surface of the earth distinguished by successive differences of climate. Supan distinguishes the following: (*a*) Marine and equatorial climate, in which the temperature variations are less than 15° C. (*b*) Transition climate, in which the variation is greater than 15° C. and less than 20° C. (*c*) Land climate, in which the variation is greater than 20° C. and less than 40° C. (*d*) Extreme continental climate in which the variations are greater than 40° C. *Koeppen's climatic zones* are arbitrary divisions based upon temperature considerations as follows: (1) A tropical zone having an average temperature of over 68° F. (2) A subtropical zone which has the same temperature during 4 to 11 months. (3) A constant temperate zone with a temperature between 50 and 68° F. (4) A hot summer temperate zone which has an average temperature that sometimes falls below 50° F. (5) A moderate summer and cold winter temperate zone with a temperature between 50 and 68° F. (6) A cold zone with a prevailing temperature below 50° F. (7) A polar zone with an average temperature always below 50° F. *Wojeikoff's climatic zones* are distinguished according to the quantity and character of the rainfall. Twelve climatic regions are shown upon his maps as follows: (1) A zone of ocean trades with very rare rainfalls. (2) A region of equatorial rains, including the zone of calms. (3) A region of rain which prevails throughout the year. (4) A subtropical zone with rainless summers. (5) A zone of the fall and winter rains of middle latitudes. (6) The zone of summer rainfall of middle latitudes. (7) The zone of equal distribution of rain throughout all seasons. (8) A polar region with light snows in winter. (9) Deserts and semi-deserts with an annual precipitation less than 250 mm. (10 in.). (10) The region of the Australian monsoons. (11) The region of the Asiatic monsoons. (12) The region of the African monsoons. Climatic zones in altitude correspond to climatic zones in latitude and are marked by the retardation of the dates of the development of vegetation; this retardation amounts to about ten days for every 300 meters of increase in altitude in the Alps, or four days for 800 meters in France.—**Contact-zone,** a term much used by mining geologists and petrographers to describe those bands of altered and more or less recrystallized rock which follow the contacts between intrusive, igneous masses and the older rocks, usually sediments, which they penetrate. From limestones, intrusive rocks produce zones of garnet, vesuvianite, epidote, diopside, and other lime-silicates or, in the absence of these, crystalline marbles. Copper ores and magnetite are frequently found in these belts. Aluminous strata, such as clays and shales, yield andalusite, biotite, and various aluminous silicates. The rocks become dense and flinty and are called hornfels. It has been a disputed point whether the intrusive rock contributed new matter to the zones or merely caused the recrystallization of that *in situ*, but the conviction is growing that the former view is correct. The zones, especially when of varying intensity of change, are often called aureoles.—**Critical zone,** a zone or belt in the rocky crust of the earth along which movement is especially prone to occur during upheaval, because of the weakness of the rocks.

> Throughout the Tertiary crust-movements in the Alps, this passage-zone had been the great crush-zone of the district. It occurred in Fassa below a massive development of calcareous rocks, and above an almost equal thickness of mixed deposits; it was, therefore, a well-marked "*critical*" *zone* within the earth's crust, interleaved between rock material presenting strongly contrasted physical characters.
>
> *Nature*, Feb. 12, 1903, p. 359.

Crop-zone, a tract bounded by the latitudinal limits within which a crop will succeed; a life zone viewed with reference to cultivated crops. See *life* ★*zone*. Also *crop-belt*.—**Deep-sea coral zone,** a depth of the sea of between fifty and a hundred fathoms.—**Efficient zone,** in *psychophys.*, the innermost of the three retinal zones; the zone which is capable of seeing the reds and greens, as well as the blacks and whites, blues and yellows (G. *farbentüchtig*).—**Epigastric zone.** See *abdominal regions*, under *abdominal*.—**Floral zone,** a geographical division of the globe in accordance with the connection between vegetation and climate. Among the special divisions of this kind is that of Drude, who divided the earth into the boreal, tropical, and austral divisions, which are again subdivided into several sections. The most elaborate subdivision is that of Smirnos into nine zones whose boundaries, expressed in degrees of north latitude, are as follows: (1) equatorial, 0–15°; (2) tropical, 15–23.5°; (3) subtropical, 23.5–34°; (4) warm temperate, 34–45°; (5) cool temperate, 45–58°; (6) subarctic, 58–66.5°; (7) arctic, 66.5–72°; (8) frigid, 72–82°; (9) polar, 82–90°. These nine sea-level boundaries correspond also to nine altitudes above sea-level proceeding by steps of 2000 feet each. Thus the equatorial zone extends upward 2000 feet; above the equatorial lies the tropical zone between the limits 2000 and 4000 feet; the subtropical includes the interval between 4000 and 6000 feet; and so on for the whole system.—**Fundamental zone.** See *fundamental* ★*plate*.—**Hudsonian zone.** See *life* ★*zone*.—**Huygens's zone.** Same as *half-period* ★*element*.—**Hypogastric zone,** the lower of the three chief abdominal regions (which see, under *abdominal*).—**Impressed zone,** in the coiled cephalopod shells, the longitudinal impression formed in the dorsum by contact with the next whorl within. This may exist only while the whorls are in contact or may arise through inheritance in the young before the whorls come in contact, or persist in senile stages when the final whorl has been detached.—**Law of zones.** See ★*law*^{1}.—**Life zone.** (*a*) One of the longitudinal belts of plant and animal life determined upon principles worked out by C. H. Merriam. These principles are: (1) that the northward distribution of animals and plants is governed by the total quantity of heat during the season of growth and reproduction; and (2) that their southward distribution is governed by the mean temperature of a brief period covering the hottest part of the year. Upon this basis Merriam has made the following transcontinental divisions for North America:

Boreal region	Arctic or arctic-alpine zone. Hudsonian zone. Canadian zone.
Austral region	Transition zone. Upper Austral zone. Lower Austral zone.

Tropical region (not subdivided latitudinally).

Upon the basis of humidity, the transition zone is subdivided into the Alleghanian area, the arid transition area, and the Pacific Coast transition area; the Upper Austral into the Carolinian and Upper Sonoran areas; and the Lower Austral into the Austroriparian (Louisianian) and the Lower Sonoran areas. See phrases under ★*area*. (*b*) A bed or series of beds in any geological formation characterized by certain fossils or groups of fossils: nearly equivalent in meaning to ★*life-horizon*.—**Marsupite zone,** in *geol.*, a zone of the Upper Cretaceous series in France, equivalent to the Margate ★chalk of England (which see).—**Mesogastric zone,** the central abdominal zone, which comprises the umbilical and two lumbar regions.—**Mineral zone,** in *mining geol.*, a zone or belt, of somewhat indefinite and ill-defined lateral extent, along which impregnation of the rocks with ores or minerals has taken place.

> The term "*mineral zone*," as used in contradistinction to a "mineral vein," refers to the fact that a mineral zone is not always clearly defined, as by walls. The mineralization may extend along one or both sides of a fissure having no defining limits, while a vein is presumed to be situated wholly within definite bounding planes and may be easily distinguished from the adjoining country rock. In a zone of mineralization the mineralization may gradually disappear as distance from a central crack or fissure increases until it ceases altogether. A mass of rock within which occur several veins or ore bodies is also often referred to as a zone.
>
> *Mining and Scientific Press*, quoted in Sci. Amer. Sup., [Aug. 22, 1903, p. 23114.

Motor zone, the region of the cerebral cortex which, when electrically stimulated, produces contraction of the various voluntary muscles. *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 247.—**Mountain-zones.** See ★*zone*, 8 (*b*).—**Neutral zone.** (*b*) A zone or belt occupied by neither of two neighboring powers, but lying between their frontiers.

> Apart from the question of the *neutral zone*, the White Volta has never been accepted by Great Britain as the German frontier north of 10° N.
>
> *Geog. Jour.* (R. G. S.), XIII. 528, note.

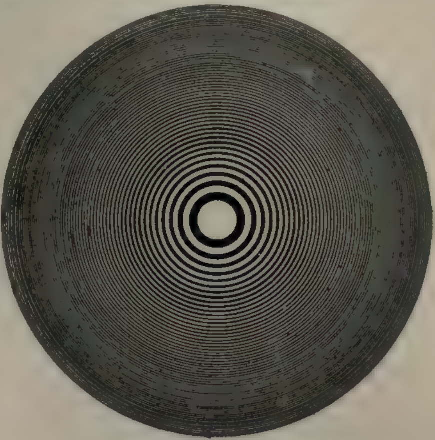
Oesel zone, in *geol.*, a division of the Upper Silurian rocks of the Baltic provinces, constituting the uppermost stage and divisible into a lower and an upper zone, the former broadly equivalent to the Wenlock and the latter to the Ludlow group of England.—**Red-green zone.** See *blue-yellow* ★*zone*.—**Spherical zone,** a portion of the surface of a sphere cut off by one plane, or included between two parallel planes.—**Thermal zone.** See ★*thermal belt*.—**Transition zone,** the territory or area in which the change takes place between the faunas or floras of two regions, the animals or plants of one being gradually replaced by those of the other. The transition zone thus contains a certain mixture of the plants and animals characteristic of the adjacent regions. Such zones are most marked on mountain ranges. See *life* ★*zone*.—**Vascular zone,** an area in the supramastoid fossa (a slight depression at the juncture of the superior and posterior walls of the external auditory canal), in which there are many foramina giving passage to blood-vessels. Also called *spongy spot*.—**Verdant zone,** a nearly horizontal belt on the sides of the Appalachian Mountains, corresponding in width to 400 feet vertical, in which vegetation is rarely affected by frost; a 'thermal belt.'

> The beautiful phenomena of the "*verdant zone*" or "thermal belt" exhibits itself upon our mountain sides commencing at about 300 feet vertical height above the valleys. *S. McDowell*, in Rep. U. S. Patent Office, 1861.

Wesenberg zone, in *geol.*, a division of the Lower Silurian in the Baltic provinces of Russia equivalent to the Bala or Caradoc of the British section. The Wesenberg zone is represented by a limestone abounding in fossils. **Zone catalogue,** a catalogue of the stars included between two parallels of declination, for example between + 30° and + 40°.—**Zone of brecciation,** a zone in the earth's crust at no great depth below the surface where openings in the form of intersecting fractures are more abundant than at other depths, and which is preeminently a zone of underground water circulation. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. iii. 130.—**Zone of cultivation,** the altitudes at which human beings live, cultivate the fields, pasture flocks, or hunt wild animals. In the Alps, according to Fritz, the altitude of permanent habitations averages about 1380 meters; that of the grain-fields 1390; that of the herdsmen's cottages 1950; that of the shepherds' huts 2190; and that of isolated trees 2250. The orographic snow-line is at 2630 meters, and the climatic snow-line at 2960 meters.—**Zone of cyclones.** See ★*cyclone*.—**Zone of flowage.** See ★*flowage*.—**Zone of maximum rainfall,** that altitude above the sea-level at which rainfall is heaviest, and above and below which it diminishes. In the northwestern Himalayas this is 1200–1400 meters above sea-level; in Java it is about 1000 meters; and in the Alps about 2000 meters. On the high plateau of Central Asia the zone of maximum snowfall in winter is at 2500–3000 meters, but the zone of rainfall in summer is higher up.—**Zone of observation,** the outer portion of the earth which comes within the range of human observation. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. i. 37.—**Zone of Rolando,** the Rolandic or 'motor' area of the cerebral cortex. *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 34.—**Zone of stars.** See ★*star*^{1}.—**Zones of altitude.** See ★*zone*, 8 (*b*).—**Zones of latitude.** See ★*zone*, 8 (*a*).—**Zone star.** See ★*star*^{1}.

zone-index (zōn′in″deks), *n.* See ★*symbol*, 2.

zone-plate (zōn′plāt), *n.* A plate bearing a series of concentric rings, alternately opaque and transparent. Such a device when placed in a beam of light brings the light to a focus by diffraction.



Zone-plate.

zone-symbol (zōn′sim″bọl), *n.* See ★*symbol*^{1}, 2.

zone-tariff (zōn′tar″if), *n.* See *zone* ★*tariff*.

zone-testing (zōn′tes″ting), *n.* A method of determining the chromatic and spherical aberrations of lenses and their astigmatism by taking photographs of the cone of light transmitted by separate zones of the lens.

zonite (zō′nīt), *n.* [Gr. ζώνη, girdle, + *-ite*^{2}.] Any one of the body rings of a myriapod. *Jour. Roy. Micros. Soc.*, April, 1903, p. 177.

zonolimnitic (zō″nọ-lim-nit′ik), *a.* [Gr. ζώνη, zone, + λίμνη, lake, + *-it-ic*.] Floating or swimming in fresh water at a definite depth below the surface. Also *zonolimnetic*. Compare ★*autolimnitic*, ★*bathylimnitic*.

zonophone (zō′nọ-fōn), *n.* [Gr. ζώνη, girdle, + φωνή, sound, voice.] A trade-name for a gramophone the records of which have been prepared by the Cheney process. See the extract.

> In a later method [Cheney's] the point of the recorder draws a groove in the surface of a viscous substance, from which an electrotype is made as a matrix. The resistance to the vibratory movement is very small and the sound is recorded with increased truthfulness. Records by this process have been called *zonophone* records.
>
> *Scripture*, Exper. Phonetics, p. 53.

zonulitis (zō-nụ̄-lī′tis), *n.* [NL., < *zonule* + *-itis*.] Inflammation of the suspensory ligament of the crystalline lens of the eye.

zoöcentric (zō-ō-sen′trik), *a.* [Gr. ζῷον, a living being, + κέντρον, center, + *-ic*.] Pertaining to the philosophy which regards the world as intelligently designed to promote the well-being of sentient creatures, that is, man and animals. *L. F. Ward*, Dynamic Sociol., II. 50.

zoöchore (zō′ọ̄-kōr), *n.* [Gr. ζῷον, animal, + χωρεῖν, spread abroad.] In *phytogeog.*, a plant disseminated through the agency of animals. *F. E. Clements.*

zoöchorous (zọ-ok′ọ̄-rus), *a.* [*zoöchore* + *-ous*.] Having the character of or pertaining to zoöchores. *F. E. Clements.*

zoöcracy (zọ-ok′ra̤-si), *n.* [Gr. ζῷον, an animal, + -κρατια, < κρατεῖν, govern.] Tribal law, the contents and execution of which are ascribed to the supernatural powers of animals. *W J McGee*, in 17th An. Rep. Bur. Amer. Ethnol., p. 294.

zoöcratic (zō-ọ̄-krat′ik), *a.* Of or pertaining to zoöcracy. *W J McGee*, in 17th An. Rep. Bur. Amer. Ethnol., p. 294.

zoöcultural (zō′ọ̄-kul-ṭūr-a̤l), *a.* [*zoöculture* + *-al*^{1}.] Pertaining to or of the nature of zoöculture. [Rare.]

When in barbarism agricultural and *zoöcultural* industries are organized, and other industries are carried

> on for exchange, then the labor of captives becomes an important factor in the industrial life of the people.
> *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1898–99, [p. cxiii.

zoöculture (zō'ọ-kul-ṭūr), *n.* [Gr. ζῷον, an animal, + L. *cultura*, culture.] The domestication of animals; the relations between man and animals which are found in various stages of culture, beginning with the hunting of animals, and developing through toleration of animals as neighbors to domestication.

> During his stay among the Hopi, Dr. Fewkes' attention was directed to the inter-relation between the tribesmen and certain feral creatures, notably eagles. The eagles are of much consequence to the folk, chiefly as a source of feathers, which are extensively used in ceremonies for symbolic representation, etc.; and it appears from the recent observations that particular clans claim and exercise a sort of collective ownership in certain families of eagles, perhaps homing in distant mountains; and that this right is commonly recognized by other clans, and even by neighboring tribes. Thus the relation affords a striking example of that condition of toleration between animals and men which normally precedes domestication, and forms the first step in *zooculture*, as has been set forth in preceding reports.
> *Smithsonian Rep.*, 1900, p. 65.

zoöcurrent (zō'ọ-kur-ẹnt), *n.* [G. **zoöcurrent* (Haeckel), < Gr. ζῷον, animal, + L. *currens*, current.] A stream of floating organisms in the water of the sea; a zoöreme, or planktonic current. See ★*zoöreme*, ★*planktonic current.*

> The pelagic animals and plants are so closely packed in these *zoöcurrents* as to resemble somewhat the human population in the busiest street of a great commercial city.
> *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 626.

zoögene (zō'ọ-jēn), *a.* [Gr. ζῳογενής, born of an animal, < ζῷον, an animal, + -γενης, -born.] In *geol.*, having an animal origin, as coralline limestone, pteropod ooze, etc. Also *zoögenous.*

zoögenesis (zō-ọ-jen'e-sis), *n.* [Gr. ζῷον, an animal, + γένεσις, genesis.] Same as *zoögeny.*

zoögenic, *a.* **2.** In *geol.*, noting rocks the constituents of which have been furnished by animals as distinguished from plants, as, for example, shell limestones, guano beds, etc. *Amer. Geol.*, April, 1904, p. 231.—**Zoögenic sociology.** See ★*sociology.*

zoögenite (zọ-oj'e-nīt), *n.* [Gr. ζῷον, animal, + -γενης, -produced, + *-ite*^{2}.] In *petrog.*, a rock formed by the accumulation of animal debris. *Senft*, 1857.

zoögenous (zọ-oj'e-nus), *a.* **1.** In *geol.*, see ★*zoögene.*—**2.** In *pathol.*, noting certain diseases which are acquired by man from the lower animals.

zoögrafting (zō'ọ-graf-ting), *n.* [Gr. ζῷον, an animal, + E. *grafting.*] In *surg.*, the grafting of tissues derived from the lower animals.

zoögrafy, *n.* An amended spelling of *zoögraphy.*

zoöl. **2.** [*l. c.* or *cap.*] An abbreviation of *zoölogical.*

Zoölogical station. See ★*station.*

zoölogize (zọ-ol'ọ-jīz), *v. i.*; pret. and pp. *zoölogized*, ppr. *zoölogizing.* [*zoölog*(*y*) + *-ize.*] To study zoölogy practically.

zoölogy, *n.*—**Experimental zoölogy,** the study of living animals by means of experiments of which the objects, among others, are to ascertain how animals behave under given conditions, the readiness with which and the extent to which they may be influenced by their surroundings, and if sex may be determined by external or other conditions and, if so, in what manner.

> The scope of *experimental zoology* is so great that it cannot be treated as a whole within a volume of ordinary size.
> *Science*, Jan. 24, 1908, p. 140.

zoömechanical (zō"ọ-mẹ-kan'i-kal), *a.* Of or pertaining to zoömechanics.

> Roux claims that *zoomechanical* methods are of primary importance, that those of the descriptive zoölogists only prepare the way for causal investigators, and are of little or no intrinsic value.
> *Nat. Sci.*, June, 1897, p. 412.

zoömechanics, *n.* **2.** The doctrine or opinion that the origin and activity of living beings will, some day, be resolved into the activity of the organic mechanism and expressed in terms of matter and motion.

> Every science is a mechanical one, but to tack on the word "mechanics" to zoology and rechristen it "*zoomechanics*" in a general philosophical sense is not to create a new science.
> *Nat. Sci.*, June, 1897, p. 412.

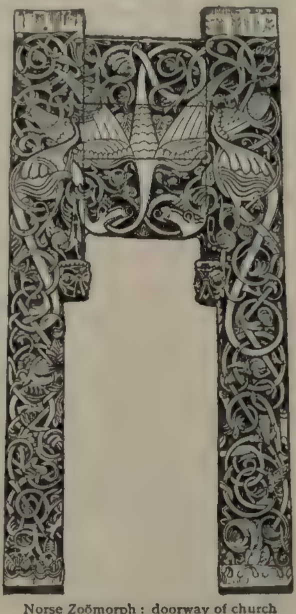
3. The opinion that the methods of the experimental laboratory are the only scientific and fruitful methods for studying zoölogy, and that knowledge gained by observing the changes that take place in the laboratory of nature is trivial and insignificant.

zoömimetic (zō-ọ-mi-met'ik), *a.* [Gr. ζῷον, an animal, + μιμητικός, mimetic.] Characterized by actions imitative of those of animals: said of an early stage of culture in which all technic activities, such as cutting, breaking, sawing, etc., are supposed to be imitative of similar activities of animals, and in which appropriate parts of animals, such as teeth, claws, horns, etc., are used as tools. Also called *hylozoic.* Compare ★*prelithic.* *W J McGee*, in An. Rep. Bur. Amer. Ethnol., 1895–96, p. 250.

zoömimic (zō-ọ-mim'ik), *a.* [Gr. ζῷον, an animal, + μιμικός, mimic.] See ★*zoömimetic.*

zoömonera (zō"ọ-mọ-nē'rä), *n. pl.* [NL., < Gr. ζῷον, an animal, + μονήρης, single.] Animal organisms without nuclei. Few zoölogists admit the existence of animals without nuclei. Since nuclei have been demonstrated in some of the so-called zoömonera, failure to find them in others is no proof of their absence.

zoömorph (zō'ọ-môrf), *n.* [Gr. ζῷον, an animal, + μορφή, form.] A manufactured object or ornamental design whose form originated in the endeavor to copy or imitate some animal. *Haddon*, Evolution in Art, p. 40.



Norse Zoömorph: doorway of church of Borgund, Norway.

zoöpaleontology (zō"ọ-pā"lẹ-on-tol'ọ-ji), *n.* [Gr. ζῷον, an animal, + E. *paleontology.*] A badly formed word introduced by Osborn to express that division of paleontology which relates solely to animal as contrasted with plant life. Same as *paleozoölogy.*

zoöpantheon (zō-ọ-pan'thẹ-on), *n.* [Gr. ζῷον, an animal, + πάνθειον, pantheon.] A pantheon which consists of animal gods, such as is characteristic of primitive religions.

zoöperal (zọ-op'ẹ-ral), *a.* [*zoöper*(*y*) + *-al*^{1}.] Of or relating to zoöpery.

zoöperist (zọ-op'ẹ-rist), *n.* [*zoöper*(*y*) + *-ist.*] One who experiments on animals; an experimental zoölogist.

zoöpery (zọ-op'ẹ-ri), *n.* [Gr. ζῷον, an animal, + πειρᾶν, try, + *-y*^{3}.] Experimentation on animals; experimental zoölogy.

zoöph. An abbreviation of *zoöphytology.*

zoöpharmacy (zō-ọ-fär'ma-si), *n.* [Gr. ζῷον, animal, + E. *pharmacy.*] That branch of pharmacy which pertains to the preparation of drugs as they are used in veterinary medicine.

zoöphile (zō'ọ-fil), *n.* [Gr. ζῷον, an animal, + φιλεῖν, love.] A zoöphilist, especially an antivivisectionist.

zoöphobia (zō-ọ-fō'bi-ä), *n.* [Gr. ζῷον, an animal, + -φοβια, < φοβεῖν, fear.] **1.** In *pathol.*, a morbid fear of animals.—**2.** In *anthrop.*, the fear of animals considered as beings endowed with supernatural powers. *Amer. Anthropologist*, Jan.–March, 1901, p. 12.

zoöphysical (zō-ọ-fis'i-kal), *a.* [*zoöphysic*(*s*) + *-al*^{1}.] Of or pertaining to zoöphysics in either sense of that word.

zoöphysics, *n.* **2.** The physics of animal bodies.

zoöphysiology (zō-ọ-fiz-i-ol'ọ-ji), *n.* [Gr. ζῷον, an animal, + E. *physiology.*] The physiology of animals: opposed to *phytophysiology*, or the physiology of plants.

zoöplankton (zō-ọ-plangk'ton), *n.* [Gr. ζῷον, animal, + NL. *plankton.*] Animals that float or swim in the water, considered collectively and contrasted with floating or swimming plants. See ★*plankton*, ★*phytoplankton.*

zoöplasm (zō'ọ-plazm), *n.* [Gr. ζῷον, an animal, + πλάσμα, anything formed.] The living substance of animals as contrasted with that of plants.

zoöplasty (zō'ọ-plas-ti), *n.* [Gr. ζῷον, an animal, + πλαστός, formed, + *-y*^{3}.] Same as ★*zoögrafting.*

zoöpraxiscope (zō-ọ-prak'si-skōp), *n.* **1.** Same as *zoöpraxinoscope.*—**2.** A phenakistoscope.

zoöpsychological (zō"ọ-sī-kọ-loj'i-kal), *a.* [*zoöpsycholog*(*y*) + *-ic-al*^{1}.] Of or pertaining to zoöpsychology.

zoöpsychologist (zō"ọ-sī-kol'ọ-jist), *n.* [*zoöpsycholog*(*y*) + *-ist.*] One who studies animal or comparative psychology; a comparative psychologist.

zoöreme (zō'ọ-rēm), *n.* [G. ★*zooreme* (?) (Haeckel), < Gr. ζῷον, animal, + It. *rema*, otherwise *reuma*, defluxion, rheum, said to be used dial. in the original Gr. sense, Gr. ῥεῦμα, a flow, a current.] A stream of floating organisms in the ocean; a zoöcurrent. See ★*zoöcurrent*, ★*planktonic current.* See the extract.

> Among the most noteworthy and important phenomena of marine biology is the great accumulation of swimming bodies which form long and narrow bands of thickened plankton. . . . For their scientific designation and their distinction from other marine currents I propose the term Zoöcurrent or *Zoöreme.*
> *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 626.

zoösematic (zō"ọ-sẹ-mat'ik), *a.* [Gr. ζῷον, an animal, + σῆμα(τ-), a sign, + *-ic.*] Symbolizing animals. *W J McGee*, in An. Rep. Bur. Amer. Ethnol., 1895–96, p. 169.

zoösporangium, *n.* **2.** Any multicellular organ among the algæ or fungi giving rise to zoöspores.

zoösporocyst (zō-ọ-spō'rọ-sist), *n.* [*zoöspore* + Gr. κύστις, bag (cyst).] Any unicellular structure among algæ or fungi which produces zoöspores. Compare ★*zoösporangium*, 2.

zoötechny, *n.* **2.** The industries which are associated with the animal kingdom. *O. T. Mason*, in Amer. Anthropologist, Jan., 1899, p. 45.

zoötypic (zō-ọ-tip'ik), *a.* [Gr. ζῷον, animal, + τύπος, type, + *-ic.*] Of the animal type. [Rare.]

> But the worm-like organisms, "being longitudinal and bilateral," writes Cope, "one extremity becomes differentiated by first contact with the environment." In other words, the animal type has shown a cephalic or head-forming evolution in consequence of the bilateralism of structure. The individual has become concentrated. Out of this worm-form type, therefore, all the higher ranges of *zootypic* evolution have sprung, and one is almost tempted to read a literal truth into David's lamentation that "I am a worm and no man."
> *L. H. Bailey*, in Smithsonian Rep., 1897, p. 454.

zopf (tsopf), *n.* [G., a cue, queue, pigtail.] The fashion of the queue, that is, old-fashioned, pedantic formalism: applied to stiff antiquated ways in official life, in musical composition, etc.

zosmerid (zos'mẹ-rid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Zosmeridæ.*

II. *a.* Having the characteristics of or belonging to the family *Zosmeridæ.*

zosteriform (zos-ter'i-fôrm), *a.* [Gr. ζωστήρ, a girdle, + L. *forma*, form.] Resembling herpes zoster. *Buck*, Med. Handbook, V. 864.

Zuñi pottery. See *Pueblo pottery*, under *American* ★*pottery* (*a*).

zurlite (zör'līt), *n.* [Named after Signore *Zurlo.*] An impure form of humboldtilite (melilite) which occurs in opaque squares or octagonal prismatic crystals in calcareous blocks in Monte Somma.

zwieback (tswē'bäch), *n.* [G., < *zwie-*, E. *twi-*, two-, twice, + *backen*, E. *bake.* The word is equivalent in meaning to *biscuit.*] Slices of bread made from a rich dough, which have been heated in an oven until they are thoroughly dried and are of a deep yellow color.

Zwinglianism (zwing'li-an-izm), *n.* The doctrines of Ulrich Zwingli (1484–1531) and his followers. See *Zwinglian.*

zwischenglas (tswish'en-glas), *n.* [G., 'between-glass.'] A drinking-glass or tumbler so constructed that the decoration, usually depicting hunting scenes, is inclosed between two layers of glass: used in Germany in the 18th century. The outside surface is cut into vertical facets to facilitate handling.

zwitter (tswit'ėr), *n.* [G., lit. a hybrid, a halfbreed, < *zwei* (*zwi-*), two.] In *petrog.*, a variety of greisen, associated with tin ores, of somewhat variable composition, chiefly quartz, mica, topaz, with more or less tin ore.

zybethum, *n.* See *zibetum*.

zygadineine (zig-a̤-din′ē-in), *n.* [*zygadin*(*one*) + *-e-ine*.] A pale yellow, basic compound formed by the action of barium hydroxid on zygadinone. It resembles veratrine in physiological effect and melts at 102° C.

zygadinic (zī-ga̤-din′ik), *a.* [*zygadin*(*one*) + *-ic*.] Noting an acid, a compound prepared by the action of barium hydroxid on zygadinone.

zygadinin (zī-gad′i-nin), *n.* [*Zygad*(*enus*) + *-in* + *-in*.] A colorless, neutral compound contained in *Zygadenus venenosus*. It crystallizes in large transparent prisms and melts at 134° C. See *Zygadenus*.

zygadinone (zī-gad′i-nōn), *n.* [*Zygad*(*enus*) + *-in* + *-one*.] A resin contained in *Zygadenus venenosus*. Its physiological action is the same as that of the crude drug.

zygion (zig′i-on), *n.*; pl. *zygia* (-ä). [NL., < Gr. ζυγόν, yoke.] In *craniom.*, the points at which the greatest bizygomatic diameter is found.

zygnemaceous (zig-nē̤-mā′shius), *a.* Belonging or pertaining to the family of algæ *Zygnemaceæ* or to the genus *Zygnema*.

zygomatico-orbital (zī-gō̤-mat″i-kō-ôr′bi-ta̤l), *a.* Relating to both zygoma and orbit.

zygomaticosphenoid (zī″gō̤-mat″i-kō-sfē′noid), *a.* Relating to both the zygoma and the sphenoid bone: noting a fissure between the two.

zygomaticum (zī-gō̤-mat′i-kum), *n.*; pl. *zygomatica* (-kä̤). [NL.] The suborbital ring, a chain of small ossicles following the lower margin of the orbital cavity in fishes.

zygomaxillare (zī″gō̤-mak-si-lā′rē̤), *n.* [NL.] In *craniom.*, the lower terminus of the zygomaxillary suture. *Von Török.*

zygoneurous (zī-gō̤-nū′rus), *a.* [*zygoneur*(*y*) + *-ous*.] Relating to or characterized by zygoneury. *Proc. Zool. Soc. London*, 1901, p. 466.

zygoneury (zī-gō̤-nū′ri), *n.* [Gr. ζυγόν, a yoke, + νεῦρον, sinew, nerve, + -y^{3}.] In some gastropods, an arrangement of the nervous system, more frequent on the right than on the left side, in which the mantle-nerve of the pleural ganglion runs directly to the ganglion of the visceral commissure of its own side (supra- or subintestinal). Compare ⋆*dialyneury*.

zygoörbitale (zī″gō̤-ôr-bi-tā′lē̤), *n.* [NL.] In *craniom.*, the upper terminus of the zygomaxillary suture. *Von Török.*

zygophyllaceous (zī″gō̤-fi-lā′shius), *a.* [NL. *Zygophyllace*(*æ*) + *-ous*.] Belonging or pertaining to the *Zygophyllaceæ*.

Zygoptera (zī-gop′te̤-rä̤), *n. pl.* [NL., < Gr. ζυγόν, yoke, + πτερόν, wing.] A suborder of the *Odonata* which includes the two families *Calepterygidæ* and *Agrionidæ*. They have the wings of the two pairs equal in size, or the hind ones a little the smaller.

zygopterid (zī-gop′te̤-rid), *n.* and *a.* **I.** *n.* A member of the *Zygopterides*.

II. *a.* Having the characteristics of or belonging to the *Zygopterides*.

zygosphenal (zī′gō̤-sfē-na̤l), *a.* [*zygosphene* + *-al*^{1}.] Pertaining to, or of the nature of, a zygosphene (which see).

zygote, *n.* **2.** In *biol.*, a fertilized ovum, or the equivalent, in plants and in unicellular organisms, of a fertilized egg; the product of the conjugation of gametes, or sexual cells.

> The term "gamete" is now generally used as the equivalent of "germ-cell," whether male or female, and the term "*zygote*" is here used for brevity to denote the organism resulting from fertilization.
> *W. Bateson*, Mendel's Prin. of Heredity, p. 18, note.

> After the fusing of the flagella with the female germs in the stomach of the Anopheles mosquitoes, the fertilized organisms attach themselves to the walls of the stomach, penetrate the inner walls, and locate themselves just under the outer muscular wall. They then rapidly increase in size until they eventually become five times as large as at first. They are now known as *zygotes*.
> *L. O. Howard*, Mosquitoes, p. 51.

zygotic (zī-got′ik), *a.* [*zygot*(*e*) + *-ic*.] Of, pertaining to, or produced by means of, fertilized eggs or zygotes.

> In gametic variation we thus meet in fact the same series of possibilities with which we have been familiar in the variation of *zygotic* organisms.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, [I. 127.

zygotoblast (zī-got′ō̤-blȧst), *n.* [Gr. ζυγωτός, yoked, + βλαστός, germ.] Same as ⋆*sporozoite*.

zygotomere (zī-got′ō̤-mēr), *n.* [Gr. ζυγωτός, yoked, + μέρος, part.] Same as *sporoblast*.

zygous (zī′gus), *a.* [Gr. ζυγόν, a yoke, + *-ous*.] Paired: used in descriptive paleontology with special reference to the lobes and saddles in the septal sutures of the ammonites, in contrast to the azygous or unpaired inflections.

zymic, *a.* **2.** Noting zymic acid, a substance which is now known to be impure lactic acid.

zymin (zī′min), *n.* [Gr. ζύμη, le̤aven, + *-in*^{2}.] An enzym, in a general sense.

zymite (zī′mīt), *n.* [Gr. ζύμη, leaven, + *-ite*^{2}.] In the Greek Church, the priest who celebrates the Eucharist with unleavened bread.

zymocyte (zī′mō-sīt), *n.* [Gr. ζύμη, leaven, + κύτος, a hollow (cell).] An organism which produces fermentation.

> Salicylic acid only holding its reputation as an enemy to the *zymocytes* of the cider barrel. *Disinfectants*, p. 14.

zymogenic, *a.* **2.** Of or pertaining to a zymogen. *Abbott*, Prin. of Bacteriology, p. 36.

zymohydrolysis (zī″mō-hī-drol′i-sis), *n.* [NL., < Gr. ζύμη, leaven, + E. *hydrolysis*.] The addition of the elements of water to the molecule of a compound (hydrolysis) by the action of an enzym (zymase).

> Scientific nomenclature — or, rather, scientific shorthand — is a little forbidding at times, and so it was that Croft Hill's bold announcement, three or four years ago, of the discovery of "reversible *zymohydrolysis*" was not starred in large type in the public prints the next morning. But this young Englishman had shown that a constructive ferment exists; or, rather, that under given conditions the destructive action of the ferment is reversible. *C. Snyder*, New Conceptions in Sci., p. 236.

zymolysis, *n.* **2.** Digestion by means of the non-organized ferments.

> It will be convenient to use the expression '*zymolysis*' to denote the changes produced by the enzymes in their action on other substances and to apply the term 'fermentation' to the action of the organized ferments.
> *Buck*, Med. Handbook, III. 840.

zymophore (zī′mō̤-fōr), *a.* Same as ⋆*toxophore*.

> The hypothesis of Morgenroth in regard to the existence of a haptophore group and the *zymophore* group in the labile ferment has been recently verified by Myers and Bashford, who have discovered zymoids analogous to the toxoids.
> *U. S. Dept. Agr.*, Bur. Animal Industry, Rep., 1900, [p. 257.

zymophoric (zī-mō̤-for′ik), *a.* [Gr. ζύμη, leaven, + -φορος, < φέρειν, bear.] Zymophorous; specifically, noting a group, analogous in its action to that of a ferment, which does not exist, however, in the free state, but as an integral part of free complements, or of receptors having the structure of agglutinins and precipitins. See ⋆*immunity*, 5, ⋆*toxophoric*.

zymophorous (zī-mof′ō̤-rus), *a.* [Gr. ζύμη, leaven, + φέρειν, bear.] Same as ⋆*zymophoric*.

zymoplastic (zī-mō̤-plas′tik), *a.* [Gr. ζύμη, leaven, + πλαστός, formed, + *-ic*.] Forming a ferment. *Buck*, Med. Handbook, IV. 475.

zymose (zī′mōs), *n.* [Gr. ζύμη, leaven, + *-ose*.] Same as *invertin*.

zymotechnologist (zī″mō̤-tek-nol′ō̤-jist), *n.* [*zymotechnolog*(*y*) + *-ist*.] One who is versed in zymotechnology or zymotechnics.

> The leading purpose of this treatise is to enlighten the so-called practical man in the methods of investigation employed by the *zymotechnologist*, so that in the future the practical man and the technologist may work together with better understanding at the many important and difficult problems which are encountered in the processes of the fermentation industries.
> *Nature*, Nov. 5, 1903, p. 4.

zymotechnology (zī″mō̤-tek-nol′ō̤-ji), *n.* Same as *zymotechnics* or *zymurgy*.

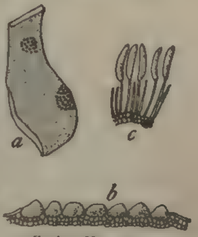
zymotoxic (zī-mō̤-tok′sik), *a.* [Gr. ζύμη, leaven, + τοξ(ικόν), poison, + *-ic*.] **1.** Noting that group of the complement to which its solvent properties are due, in accordance with the supposition that it may be of ferment nature. See ⋆*immunity*. Sometimes used synonymously with ⋆*toxophoric*.

> The intermediary body, therefore, carries two sets of combining or haptophore groups: one for the cells and the other for the complement (complementophilic group). The complement possesses in addition to such a corresponding haptophore group, another group which exhibits fermentative properties (*zymotoxic* or toxophore group), through the action of which solution of cells takes place.
> *Jour. Exper. Med.*, March 17, 1902, p. 282.

2. Relating to the action of toxins in the theory of infection.

Zyrian (zir′i-a̤n), *n.* A member of a Finnic people living in northeastern Russia, principally in the government of Vologda. Also *Ziryanian*, *Siryanian*.

Zythia (zith′i-ä̤), *n.* [NL. (Fries, 1825), < Gr. ζῦθος, ale, beer (?).] A genus of the imperfect fungi, type of the family *Zythiaceæ*, characterized by having reddish or orange-colored waxy pycnidia and hyaline unicellular spores. About 20 species have been described. *Z. Versoniana* occurs on fruit of *Punica Granatum* in Italy.



Zythia Versoniana.

a, pycnidia on skin of unripe pomegranate, reduced in size; *b*, pycnidia enlarged; *c*, sporophores with spores, highly magnified.

Zythiaceæ (zith-i-ā′sē̤-ē), *n. pl.* [NL., < *Zythia* + *-aceæ*.] A family of sphæropsidaceous fungi which have light- or bright-colored, fleshy or waxy pycnidia: named from ⋆*Zythia*, the principal genus (which see).

THE CENTURY CYCLOPEDIA OF NAMES SUPPLEMENT

The asterisk (*) is used to mark additions to articles in the Cyclopedia of Names

Aasen*, Ivar Andreas. Died Sept. 23, 1896.

Abbadie*, Antoine Thomson d'. Died at Paris, March 20, 1897.

Abbadie*, Arnaud Michel d'. Died 1893.

Abbazia (ä-bät-sē′ä). A village in Istria, Austria, situated on the Gulf of Quarnero, noted as a health-resort. It is protected on the north and west by mountains of considerable height and enjoys an equable climate (mean winter temperature, 50° F.: summer, 77° F.). The annual number of those seeking the baths is upward of 14,000. Population (1890), 1,192.

Abbe*, Cleveland. He has been professor of meteorology at George Washington University since 1886.

Abbe (äb′e), **Ernst.** Born at Eisenach, Saxe-Weimar, Jan. 23, 1840: died at Jena, Jan. 14, 1905. A German physicist, professor in the University of Jena 1870–91 and director of the astronomical observatory from 1878. He is noted for his theoretical work in optics and for the improvements which he made in optical glass and in optical instruments, especially in the microscope. The so-called Jena glass, including varieties much used for lenses, etc., was his invention. From 1866 he was connected with the firm of Karl Zeiss, the instrument-maker, of Jena.

Abbé Constantin, L' (ă-bā′coṅ-stăṅ-taṅ′). A novel by Ludovic Halévy, published in 1882.

Abbot*, Francis Ellingwood. Died 1903.

Abbott*, Austin. Died April 19, 1896.

Abbott*, Evelyn. Died 1901.

Abbott (ab′ọt), Sir **John Joseph Caldwell.** Born at St. Andrew's, Quebec, March 12, 1821: died at Montreal, Oct. 30, 1893. A Canadian statesman. He was graduated at McGill University in 1847, was called to the bar in the same year, and was appointed queen's counsel in 1862. He was dean of the faculty of law in McGill University for several years, and was knighted in 1892. He was a member of Parliament for Argenteuil 1859–74 and 1881–87, and entered the Senate for the division of Inkerman, Quebec, May, 1887. He joined the Conservatives in 1865, was a member (without portfolio) of Sir J. A. Macdonald's cabinet in 1887, and was premier of Canada 1891–92.

Abbott (ab′ọt), **Thomas Kingsmill.** Born at Dublin, March 26, 1829. An Irish clergyman and scholar, a graduate and fellow of Trinity College, Dublin, in which he occupied the chair of moral philosophy 1867–72, of biblical Greek 1875–88, and of Hebrew 1879–1900. He is the author of "Sight and Touch" (1864), a translation of Kant's "Theory of Ethics" (1873), "Elementary Theory of the Tides" (1888), etc.

Abdul Hamid II*. Sultan of Turkey. He was dethroned April 27, 1909, and was succeeded by his brother, Mehmed V.

Abdurrahman Khan*. Died Oct. 3, 1901.

Abel*, Sir **Frederick Augustus.** Died at London, Sept. 6, 1902.

Abney (ab′ni), Sir **William de Wiveleslie.** Born at Derby, England, July 24, 1844. An English physicist and captain in the Royal Engineers, known for his work in photography and spectroscopy. He was president of the Royal Astronomical Society 1893–95 and of the Physical Society 1895–97. Knighted in 1900.

Abra (ä′brä). **1.** A river of Luzon, rising in Lepanto-Bontoc province and taking a circuitous course, through Abra and Ilocos Sur provinces, to the China Sea. Length, 55 miles.— **2.** A province of northwestern Luzon in the Philippine Islands. It is bounded by Ilocos Norte (separated by a spur of the Cordillera Norte) on the north, Cagayan and Lepanto-Bontoc (separated by the Cordillera Central) on the east, Lepanto-Bontoc and Ilocos Sur on the south, and Ilocos Sur on the west. Capital, Bangued. The highest peak in the province is Burnay, near the point of separation from Ilocos Norte and Ilocos Sur. The valleys are fertilized by the Abra and its branches. Corn, rice, and tobacco are the chief products. The population consists mainly of Ilocans and Tinguianes. Area, 1,171 square miles. Population (1903), 51,860.

Abruzzi (ä-bröt′sē), **Duke of the (Prince Luigi Amadeo Giuseppe Maria Ferdinando Francesco).** Born at Madrid, Jan. 29, 1873. An Italian explorer, third son of Prince Amadeo of Aosta, at one time King of Spain. See *Amadeus.* In July, 1897, he ascended Mount St. Elias, in Alaska, and in 1899–1900 made an attempt, in the Stella Polare, to reach the north pole from Franz Joseph Land. Captain Cagni of his party, with three others, gained lat. 86° 33′ N., the highest then reached. In 1906 he made an ascent of the peaks of Mount Ruwenzori, and in 1909 conducted an expedition to the Himalayas. He has written "La Stella Polare nel mare artico 1899–1900" (1902), etc.

Absolon*, John. Died at London, June 26, 1895.

Academy, British. See *British Academy.*

Academy of Fine Arts, Pennsylvania. See *Pennsylvania Academy.*

Acapulco*. It was destroyed by earthquakes July 30, 31, 1909.

Achenbach*, Oswald. Died at Düsseldorf, Feb. 1, 1905.

Achensee (ăċh′en-zā). A small lake in the Tyrol, Austria, lying north of the valley of the lower Inn. It empties into the Isar. Length, 5½ miles.

Acheson (ach′e-sọn), **Edward Goodrich.** Born at Washington, Pa., March 9, 1856. An American electrician, the inventor of carborundum, siloxicon, the process of Egyptianizing clay, and a method of producing artificial graphite.

Acland*, Sir **Henry Wentworth.** Died Oct. 16, 1900.

Aconcagua*, Mount. Height determined in 1904, 22,812.1 feet (Schrader).

Acre (ä-krâ′). A territory of Brazil lying north of the river Aquiri and bordering on Bolivia and Peru. It is rich in india-rubber. The boundary dispute between Bolivia and Brazil with regard to this territory was adjusted by a treaty in November, 1903, and an agreement to adjudicate a similar dispute between Brazil and Peru was reached in July, 1904.

Acton, Lord. See *Dalberg-Acton.*

Acton*, Thomas C. Died May 1, 1898.

Adam*, Franz. Died Sept. 30, 1886.

Adams (ad′a̤mz), Mrs. (**Abigail Smith**). Born at Weymouth, Mass., Nov. 23, 1744: died at Quincy, Mass., Oct. 28, 1818. The wife of John Adams (second President of the United States) and the mother of John Quincy Adams (sixth President). Her marriage to John Adams took place Oct. 25, 1764. She supported her husband in his political views and work; joined him in France in 1784; and accompanied him to London, where he was United States minister 1785–88. Her letters, published in "Familiar Letters of John Adams and his Wife" (1876), are of historical value.

Adams (ad′a̤mz), **Brooks.** Born at Quincy, Mass., June 24, 1848. An American lawyer and writer, son of Charles Francis Adams (1807–86). He was secretary to his father when the latter was arbitrator at the Geneva tribunal (1871–72), and practised law until 1881. He is the author of "The Emancipation of Massachusetts" (1887), "The Law of Civilization and Decay" (1896), "America's Economic Supremacy" (1900), "The New Empire" (1902), etc.

Adams*, Charles Kendall. Died July 26, 1902.

Adams (ad′a̤mz), **Henry Carter.** Born at Davenport, Ia., 1851. An American economist, writer, and educator. He was lecturer at Cornell University and the University of Michigan 1880–87, and at Johns Hopkins 1880–82; was director of the division of transportation of the eleventh census and statistician of the Interstate Commerce Commission; and has been professor of political economy and finance in the University of Michigan since 1887. He is the author of "Outline of Lectures on Political Economy" (1881, 1886), "The State in Relation to Industrial Action" (1887), "Taxation in the United States 1789–1816" (1884), "Public Debts" (1887), "The Science of Finance" (1888), "Statistics of Railways" (1888–1904), "Economics and Jurisprudence" (1897), "Special Report on Railway Mail Pay" (1900), "Commercial Valuation of Railway Property in the United States" (1904: with B. H. Meyer), and "Digest of Hearings before the Senate Committee on Interstate Commerce" (1906: with H. T. Newcomb).

Adams (ad′a̤mz), **Herbert.** Born at West Concord, Vt., Jan. 28, 1858. An American sculptor. He was educated in Boston and was a pupil of Mercié in Paris; won honorable mention at the Paris Salon in 1888 and 1889, a medal at the Columbian Exposition, Chicago, in 1893, and a gold medal at the St. Louis Exposition in 1904; and has executed many memorial compositions and portrait statues. He has also been employed on the decoration of the great expositions.

Adams (ad′a̤mz), **Herbert Baxter.** Born at Shutesbury, Mass., April 16, 1850: died at Amherst, Mass., July 30, 1901. An American historian and educator. He was educated at Amherst College, Heidelberg University, and Johns Hopkins University; was lecturer in history at Smith College 1878–81; and was for many years associate professor and professor of history at Johns Hopkins University. He edited the reports of the American Historical Association (after 1884), the "Contributions to American Educational History" for the United States Bureau of Education (after 1887), and the "Johns Hopkins University Studies in Historical and Political Science." He published "Life and Writings of Jared Sparks" (1893), and many historical monographs.

Adams (ad′a̤mz), **Maude.** Born at Salt Lake City, Nov. 11, 1872. An American actress. For Kiskadden, her family name, she substituted her mother's maiden name, Adams. She first appeared on the stage as a child; supported John Drew, in "The Masked Ball," in 1892; and has made her principal successes in J. M. Barrie's plays, "The Little Minister," "Quality Street," "Peter Pan," and "What Every Woman Knows." She has also played in F. H. Burnett's "Pretty Sister of José," in a translation of Rostand's "L'Aiglon," "Romeo and Juliet," "Joan of Arc," etc.

Adams*, William Taylor. Died at Boston, March 27, 1897.

Adamson*, Robert. Died in 1902.

Addams (ad′a̤mz), **Jane.** Born at Cedarville, Ill., Sept. 6, 1860. An American worker for social reform. She was graduated at Rockford College in 1881, and in 1889 opened, with Ellen Gates Starr, Hull House Social Settlement in Chicago, of which she is now head resident worker. She has written "Function of the Social Settlement" (1899), "Democracy and Social Ethics" (1902), "Newer Ideals of Peace" (1907), etc.

Ade (ād), **George.** Born at Kentland, Ind., Feb. 9, 1866. An American journalist and playwright. He is the author of "Fables in Slang," "People You Knew," etc., and among his plays are "The Sultan of Sulu" (1902), "Peggy from Paris" (1903), "The County Chairman" (1903), "The Sho-Gun" (1904), "The College Widow" (1904), "The Bad Samaritan" (1905), "Just Out of College" (1905), "Marse Covington" (1906), "Mrs. Peckham's Carouse" (1906), "In Pastures New" (1906), "The Slim Princess" (1907).

Adelbert (a̤-del′bėrt) **College.** A college of the Western Reserve University (which see). It is named for the son of Amasa Stone. The latter, in 1880, offered the sum of $500,000 to the Western Reserve College provided it should be removed from Hudson, Ohio, to Cleveland and change its name to 'Adelbert College of Western Reserve University.'

Adenis-Colombeau (ăd-nē′kō-loṅ-bō′), **Jules.** Born at Paris, 1821. A French journalist and dramatist. He was on the editorial staff of the "Corsaire" 1847–49, and has written many comedies, vaudevilles, and libretti. Among his independent works are "Philanthropie et repentir" (1855), "Une crise de ménage" (1857), "Les chasseurs et la laitière," music by Gavaert (1865), "La fiancée d'Abydos," music by Barthe (1865), and "Le nouveau sorcier" (1867) and "Les trois souhaits" (1873), music by Poise. He has also written much in collaboration with Plouvier, Decourcelle, Tourte, Laurencin, Granvallet, Rostaing, Gastineau, and others.

Adeste fideles (ad-es′tē fī-dē′lēz). [L. 'Come, ye faithful.'] A hymn, originally in Latin, beginning with these words. It has been ascribed to Bonaventura (1221–74), but is more probably of the 17th or 18th century and of French or German authorship. The familiar arrangement, commencing "O come all ye faithful, joyfully triumphant," first appeared in Murray's "Hymnal" in 1852 and is an adaptation of the translation made by the Reverend Frederick Oakeley in 1841. It has also been published in many other translations. The tune is ascribed to John Reading (1677–1764), organist, and was called the "Portuguese Hymn" because it was sung at the chapel of the Portuguese Embassy in 1797 and at once became popular.

Adis, or Addis, Abeba (ä′dis ä-bā′bä). The present capital of Abyssinia, situated in the province of Shoa in lat. 9° N. It has a population of upward of 50,000. A treaty of peace with Italy was concluded here, Oct. 26, 1896.

Adler (äd′lėr), **Cyrus.** Born at Van Buren, Ark., Sept. 13, 1863. An American orientalist and archæologist, assistant secretary (in charge of the library and exchanges) of the Smithsonian Institution and curator of historic archæology in the United States National Museum from 1905.

Adler (äd′lėr), **Felix.** Born at Alzei, Germany, Aug. 13, 1851. An American reformer, lecturer, and writer. He came to the United States in 1857; was professor of Hebrew and oriental literature at Cornell University 1874–76; was the founder of the New York Society for Ethical Culture (1876), to which he gives addresses and in the work of which he is prominent; has been professor of political and social ethics at Columbia University since 1902; is a member of the editorial board of the "International Journal of Ethics"; and has been widely influential in educational and reform movements. He is the author of "Creed and Deed" (1877), "The Moral Instruction of Children" (1893), "Life and Destiny" (1903), "Marriage and Divorce" (1905), "Religion of Duty" (1905), "Essentials of Spirituality" (1905), and of many papers on related subjects. He was exchange professor at the University of Berlin 1908–09.

Adler (äd′lėr), **Friedrich.** Born at Berlin, Germany, Oct. 15, 1827: died at Berlin, Sept. 15, 1908. A German architect and archæologist. He was educated under the painters Weiss and Grieben and at the Berlin Bauakademie under the architect Strack. He has executed several important buildings, chiefly churches, but is best known as a writer on architecture, especially the medieval and Renaissance architecture of Germany. He was the chief associate of Ernst Curtius in the excavations at Olympia, the results of which were published between 1890 and 1897.

Adolphus*, William Augustus. Last duke of Nassau. Died at Hohenberg, Nov. 17, 1905.

Adye*, Sir **John Miller.** Died Aug. 26, 1900.

Ægidi*, Ludwig Karl. Died at Berlin, Nov. 19, 1901.

Afragola (ä-frä-gō′lä). A city of Italy, in the province of Naples, about ten miles northeast of the city of Naples. Population (1901), 22,419.

Afridis (ä-frē′diz). A warlike tribe of Afghans dwelling south of Peshawar.

Agardh*, Jakob Georg. Died at Lund, Sweden, 1901.

Agassiz (ag′a̤-si), **Lake.** An extensive postglacial lake which occupied the valley of the Red River in North Dakota, Minnesota, and Manitoba. The retreating ice-sheet ponded waters in front of it and in these were laid down sediments, now the fertile wheat-fields of this region.

Agassiz (ag′a̤-si), **Mount.** 1. A peak of the Uintah Mountains in Utah, 13,000 feet high. —2. A peak in Chile, in the territory of Magallanes, about lat. 50° S. It is about 10,000 feet high.

Agno (äg′nō). 1. A river of central Luzon, in the Philippine Islands. It rises in the northern mountains of Benguet province, and flows southward into Pangasinan, where it divides and turns westward, entering Lingayen Gulf by channels at Dagupan, Lingayen, San Isidro, and San Fabian. The produce of the northern part of the central valley of Luzon is carried by branches of the Agno to Lingayen Gulf. Length, about 128 miles. 2. A river of western Luzon, rising in the Zambales Mountains and flowing west to the China Sea.

Agnone (ä-nyō′nā). A city of Italy, in the province of Campobasso. Population (1901), 6,606; commune, 9,793.

Agoo (ä-gō-ō′). A municipality of La Union province, western Luzon, Philippine Islands. Civilized population (1903), 10,653.

Aguadilla (ä-gwä-dēl′yä). 2. A department in the northwestern part of Porto Rico. It is bounded by the Atlantic Ocean on the north, Arecibo and Ponce on the east, Mayaguez (separated by mountains) on the south, and the Atlantic Ocean on the west. Capital, Aguadilla. Area, 240 square miles. Population (1899), 99,645.

Aguinaldo (ä-gē-näl′dō), **Emilio.** Born about 1868. A Filipino leader of mixed European and native descent. He took a leading part in the rebellion against Spain 1896–98. In January of the latter year he left the Philippines, agreeing not to return. After the battle of Manila, May 1, 1898, he returned with the consent of the American authorities and established a native government, of which he became the head, and collected an army. On Feb. 4, 1899, he began hostilities against the American forces occupying Manila. He was captured in March, 1901.

Ai (ī). A river of southeastern Manchuria which flows into the Yalu opposite Wiju. It played an important part in the attack of the Japanese right upon the Russians in the battle of the Yalu River, May 1, 1904.

Aicard*, Jean. He was made a member of the French Academy in 1909, succeeding François Coppée.

Aidé*, Hamilton. Died Dec. 13, 1906.

Aigun*. It was opened to international trade in 1905.

Aikawa (ī-kä′wä). A city of Japan situated on the western coast of the island of Sado. Population, upward of 11,000.

Ainger (ān′jėr), **Alfred.** Born at London, Feb. 9, 1837: died at Darley Abbey, Derbyshire, Feb. 8, 1904. An English clergyman, author, and editor. He was educated at King's College, London, and at Trinity Hall, Cambridge, taking his degree in 1860. He was reader at the Temple Church 1866–92, canon of Bristol Cathedral 1887–1903, Master of the Temple 1894–1904, and chaplain in ordinary to Queen Victoria and King Edward VII. He wrote biographies of Lamb (1882) and of Crabbe (1903), and published annotated editions of Lamb's "Essays of Elia" (1883), of Lamb's "Letters" (1888), and of Hood's "Poems," with a biographical memoir (1897). He also wrote "The Gospel and Human Life: Sermons" (1904), etc.

Ainsworth*, William Francis. Died at Hammersmith, London, Nov. 27, 1896.

Aivazovski*, Ivan. Died at Feodosia in the Crimea, May 2, 1900.

Ajanta Caves. See *Ajunta.*

Akashi (ä-kä-shē′). A city of Japan situated on the shore of the Inland Sea about 12 miles west of Kobe. Population, upward of 22,000.

Alabama*. The State has 67 counties. It was the third State in the production of pig-iron in 1908.

Alaska*. The capital of the Territory is Juneau. The highest summit is Mt. McKinley (20,464 feet: *U. S. Geol. Surv.*).

Alaska-Yukon-Pacific Exposition. An exposition held at Seattle, Wash., from June to October, 1909, for the purpose of exhibiting the resources and demonstrating the progress of northwestern America and the Pacific coast generally. It was planned to occupy 250 acres of the campus of the University of Washington. The twelve main exhibit buildings were those of (1) the United States government, (2) Alaska, (3) Yukon, (4) Manufactures, Liberal Arts, and Education, (5) Agriculture, (6) Machinery, (7) Forestry, (8) Fine Arts, (9) Fisheries, (10) Mines, (11) Hawaii and the Philippines, (12) Foreign. The products of the countries bordering on the Pacific were shown in the foreign exhibits, and exhibits representative of their interest in Pacific trade development were made by the United States, Great Britain, France, Germany, Russia, the Netherlands, etc.

Albay. 2. A province in the southeastern part of Luzon in the Philippine Islands. It is bounded by Ambos Camarines on the north, the Pacific Ocean and Sorsogon on the east, Sorsogon and the Visayan Sea on the south, and the Visayan Sea on the southwest and west. Capital, Albay. Besides its area in Luzon it includes several islands, among them Catanduanes and Batan. Albay, including Catanduanes, is the largest abaca-producing province of the Philippines. A good quality of coal is mined in Batan. Gold and mercury are reported in other parts of the province. The northeastern coast is indented by Albay Gulf. Mountains extend from east to west, the eastern extremity being Mayon Volcano. The inhabitants are Bicols. Area, 1,783 square miles. Population (1903), 240,326.

Albay (äl-bī′) **Gulf.** A gulf on the eastern coast of Albay province, southeastern Luzon, in the Philippine Islands.

Albay Volcano. See *Mayon Volcano.*

Albert* (Alexandre Martin). Died in May, 1895.

Albert (äl-bãr′), **Eugène d'.** Born at Glasgow, April 10, 1864. A pianist and composer, a pupil of Liszt. He has composed a number of operas, among them "Der Rubin" (1893), "Ghismonda" (1895), "Gernot" (1897), "Die Abreise" (1898), and "Flauto Solo" (1906); two piano concertos; a symphony; two string quartets; and smaller works. As a pianist he is placed among the foremost of contemporary artists.

Albert Edward*. He ascended the throne as Edward VII. on Jan. 22, 1901.

Albert Friedrich August*. King of Saxony. Died at the Castle of Sibyllenort, Silesia, June 19, 1902.

Albert Friedrich Rudolf*. Archduke of Austria. Died at Arco, Tyrol, Feb. 18, 1895.

Alberta*. A province of Alberta was proclaimed Sept. 1, 1905. It includes the former district of Alberta, the western half of Athabasca, and a strip of Assiniboia and Saskatchewan. It is represented in the Dominion Senate by 4 members. Area, about 253,540 square miles. Population (1901), 72,841.

Albion College. A co-educational Methodist college in Albion, Michigan. It was endowed as the Wesleyan Seminary in 1839, and was opened in 1843; the present name and system were adopted in 1861. It has an endowment of $280,000 and a total yearly income of about $40,000. The students number about 500.

Albury (âl′bur-i). A town in New South Wales, Australia, situated on the border of Victoria about two hundred miles northeast of Melbourne. It is at the limit of steam navigation on the Murray River. Population, about 5,500.

Alden (âl′de̤n), **Henry Mills.** Born at Mount Tabor, Vt., Nov. 11, 1836. An American author, editor, and classical scholar. He was managing editor of "Harper's Weekly" 1863–69, and since 1869 has been editor of "Harper's Monthly." He is the author of "God in His World" (1890), "A Study of Death" (1895), and, in collaboration with A. H. Guernsey, "Harper's Pictorial History of the Great Rebellion" (1862–65), besides poems and essays.

Alden (âl′de̤n), **William Livingston.** Born at Williamstown, Mass., Oct. 9, 1837: died at Buffalo, N. Y., Jan. 14, 1908. An American author and journalist. He wrote "Canoe and Flying Proa," "Loss of the Swansea," "A Lost Soul," "Told by the Colonel," etc.

Aldrich*, Thomas Bailey. Died at Boston, March 19, 1907. His later works include "Two Bites at a Cherry" (1894), "Judith and Holofernes" (1896), "A Sea Turn" (1902), "Ponkapog Papers" (1903), "Judith of Bethulia" (1904), "Pauline Pavlovna" and "Songs and Sonnets" (1907).

Aldrich (âl′drich) **Deep.** A very deep portion of the Pacific Ocean, lying northeast of New Zealand and east of the Kermadec Islands.

Alert (a̤-lėrt′). One of the steam-vessels of the British polar expedition under Sir George Strong Nares, 1875–76: the other was the Discovery. The Alert passed through Kennedy Channel and wintered at Floeberg Beach, (82° 25′ N.), the most northerly point reached by ship up to that date.

Alexander I. (al-eg-zan′dėr). Born at Belgrade, Aug. 14, 1876: died there, June 11, 1903. King of Servia, 1889–1903, son of Milan I. and Queen Natalie. He was proclaimed king, under a regency, upon the abdication of his father, March 6, 1889. On April 13, 1893, he assumed personal control of affairs. On April 7, 1903, he suspended the constitution and annulled a series of laws passed by the Radical government, and on the night of June 10 was assassinated with Queen Draga in the palace. He was the last of the Obrenovitch dynasty and was succeeded by Peter I., the choice of the military party.

Alexander (al-eg-zan′dėr), **Edward Porter.** Born at Washington, Ga., May 26, 1835. An American soldier and engineer. He was graduated at West Point in 1857; entered the Confederate Army in 1861; served with the Army of Northern Virginia throughout the war; and became chief of ordnance. In 1864 he was promoted brigadier-general and chief of artillery in Longstreet's corps. At the battle of Gettysburg he directed the bombardment which preceded and accompanied the charge of Pickett's men.

Alexander*, Ludwig Georg Friedrich Emil. Prince of Hesse. Died Dec. 15, 1888.

Alexandra*, (Caroline Marie Charlotte Louise Julie). Wife of Edward VII., king of England.

Alexandra Feodorovna (al-eg-zan′drä fā-o̤-dō-rōv′na̤). (**Victoria Alice** (**Alix**) **Helena Louise Beatrice**). Born at Darmstadt, June 6, 1872. Empress of Russia, the fourth daughter of Ludwig IV., Grand Duke of Hesse, and Princess Alice, daughter of Queen Victoria. She married Nicholas II., Emperor of Russia, November 26, 1894.

Alexeief (ä-lek′sā-yef), **Eugenii Ivanovitch.** Born 1843. A Russian admiral, appointed imperial lieutenant with control of both diplomatic and military affairs in the Far East, July 30, 1903, shortly before the outbreak of the Russo-Japanese war. From 1883 to 1893 he was naval attaché of the Russian embassy in Paris; commanded the Russian squadron during the Chinese-Japanese war 1894–97; and took possession of Port Arthur. In 1898 he was promoted vice-admiral and made commander of Kwangtung province. He took part in the work of the allies in China 1900–01, and became chief of the Russian Pacific squadron. His conduct of affairs after his appointment to the imperial lieutenancy was unsuccessful, and after the early Japanese successes he was deprived (April, 1904) of most of his power. He retired in November and returned to Russia.

Alfonso XIII.* He was married to Princess Ena (Victoria) of Battenberg May 31, 1906.

Alfred*, Prince (Duke of Edinburgh). Second son of Queen Victoria. Died July 30, 1900.

Algeciras Conference. An international conference held at Algeciras, Spain, January 16–April 7, 1906, for the purpose of deliberating upon reforms in Morocco. It was presided over by the Duke of Almodovar, the Spanish minister of foreign affairs. It resulted in a compromise between the claims of France and Germany with regard to finance and police in Morocco. The maintenance of order in the ports of Morocco for the next five years was placed in the hands of France and Spain; and it was decided that the bank of Morocco, to be established at Tangier, should be international. Various reforms were urged upon the Sultan of Morocco, such as the removal of disabilities placed upon citizens of the United States (by the United States delegate), the abolition of slavery (Great Britain), the establishment of lighthouses (Germany), the publication of commercial statistics (Austria), and the immediate construction of railways (Spain). The United States was represented by Henry White, ambassador to Italy.

Alger (al′jėr), **Russell Alexander.** Born in Lafayette township, Medina Co., Ohio, Feb. 27, 1836: died at Washington, D. C., Jan. 24, 1907. An American politician and general. He served in the Union army during the Civil War and was brevetted major-general of volunteers in June, 1865; was governor of Michigan 1885–87; was a candidate for the presidential nomination at the Republican National Convention of 1888; was secretary of war 1897–August, 1899; and United States senator from Michigan 1902–07.

Alger*, William Rounseville. Died Feb. 7, 1905.

Alikhanof*. Assassinated July 16, 1907.

Alison*, Sir **Archibald.** Died Feb. 5, 1907.

Allain-Targé*, François Henri René. Died at the Château de Targé (Maine-et-Loire), July 16, 1902.

Allan, George. A pseudonym of Frau Kremnitz.

Allbut (âl′but), Sir **Thomas Clifford.** Born July 20, 1836. An English physician, professor of physics in Cambridge University from 1892. He has published "Science and Medieval Thought" (1901), and various works on medical subjects.

Allen*, Charles Grant Blairfindie. Died at Haslemere, Surrey, Oct. 25, 1899.

Allen*, Harrison. Died at Philadelphia, Pa., Nov. 14, 1897.

Allen (al′en), **Henry Tureman.** Born at Sharpsburg, Ky., April 13, 1859. An American soldier, appointed brigadier-general and chief of constabulary in the Philippine Islands in 1903. He was graduated at West Point in 1882; made a tour of exploration in Alaska in 1885; was instructor at West Point 1888–90; was military attaché in Russia and Germany 1890–98; served in the Santiago campaign and in the Philippines; and was governor of Leyte in 1901.

Allen (al′en), **James Lane.** Born near Lexington, Ky., 1849. An American novelist. Since 1886, when he was professor of Latin and higher English at Bethany College, West Virginia, he has given his entire attention to writing. He is the author of "Flute and Violin" (1891), "The Blue Grass Region of Kentucky" (1892), "A Kentucky Cardinal" (1894), "Aftermath" (1896), "A Summer in Arcady" (1896), "The Choir Invisible" (1897), "The Reign of Law" (1900), "The Mettle of the Pasture" (1903), "The Bride of the Mistletoe" (1909), etc.

Allison*, William B. Died at Dubuque, Iowa, Aug. 4, 1908.

Allman*, George James. Died Nov. 24, 1898.

Almanach de Gotha. See *Gotha, Almanach de.*

Alma-Tadema*, Sir **Laurence.** He was knighted in 1899.

Almirante Oquendo (äl-mi-rän′tā ō-ken′dō). A Spanish cruiser which took part in the naval battle off Santiago de Cuba, July 3, 1898. She was sister ship to the Vizcaya (which see). She was engaged by the Iowa, Indiana, and Oregon, took fire, and was run ashore and wrecked about six and a half miles west of the Morro. Her commander, Don Juan Bautista Lazaga, was drowned.

Alt (ält), **Rudolf.** Born at Vienna, Austria, Aug. 28, 1812: died there, March 12, 1905. An Austrian painter, son of Jakob Alt (1789–1872), also a painter of note. His work is confined to oil-paintings and water-colors of brilliant realism. He traveled extensively and found his subjects in every country.

Altamirano*, Ignacio Manuel. Died Feb. 14, 1893.

Altgeld (ält′gelt), **John Peter.** Born in Germany, December, 1847: died at Joliet, Ill., March 12, 1902. An American Democratic politician. He was brought to the United States by his parents when an infant; served in the Union Army; was admitted to the Missouri bar in 1869; was judge of the Superior Court, Chicago, 1886–91; and was governor of Illinois 1893–97. As governor he attracted wide attention by his pardon in June, 1893, of Neebe, Schwab, and Fielden, three anarchists who had been concerned in the Old Haymarket riot at Chicago, May 4, 1886. He was a prominent advocate of the free coinage of silver and was a supporter of W. J. Bryan for the presidency in 1896 and 1900. He published "Our Penal Machinery and its Victims" (1884), "Live Questions" (1890), etc.

Altruria (al-trö′ri-ạ̈). An imaginary commonwealth, the government and institutions of which are founded upon the principles of altruism. W. D. Howells has described such a community in his book "A Traveler from Altruria" (1894). The practical application of the principles resulted in the abolition of monopoly and competition and the establishing of social and economic equality.

Alvary*, Max. Died 1898.

Alverstone, Baron. See *Webster, Richard.*

Amacura (ä-mä-kö′rä). A small river in Venezuela which enters the delta of the Orinoco about fifteen miles west of the mouth of the Barima.

Amador de los Rios, José. See *Rios.*

Amazulu. See *Zulu.*

Ambos Camarines (äm′bōs kä-mä-rē′nās). A province in southeastern Luzon, in the Philippine Islands. It is bounded by the Pacific Ocean on the north; Catanduanes Island (separated by Maqueda Channel), Lagonoy Gulf, and Albay on the east; Albay and Tayabas (separated by mountains) on the south; and Tayabas (partly separated by the Gulf of Ragay) on the west. Capital, Nueva Caceres. The northern coast is deeply indented by San Miguel Bay, a safe harbor in all weather. The province is traversed by mountains, of which several exceed 5,000 feet in height. The volcanoes Iriga and Isarog are in the southern part. Gold, iron, and coal are found. Ambos Camarines is well watered, heavily forested with good timber, and productive of large quantities of rice, especially in Camarines Sur. The chief river, the Bicol, or Naga, is navigable by small steamers as far as Nueva Caceres, 25 miles from its mouth. The native population is chiefly Bicol. Area, 3,279 square miles. Population (1903), 239,405.

Ambrosius, Johanna. See *Voigt.*

Ambuella. Same as *Amboella.*

America. The name given by Lowell Mason to the tune of "God Save the King," after its adaptation for use in connection with the hymn "My Country, 'T is of Thee," written by Samuel F. Smith in 1832. The author of the hymn stated: "I found the tune in a German music-book, put into my hands by Lowell Mason."

America* (yacht). There have been twelve unsuccessful attempts to recover it.

American Museum of Natural History. An institution in New York City, incorporated in 1869 for the purpose of establishing and maintaining a museum and library of natural history, and of encouraging and developing the study of natural science. The collections are contained in a building which, when completed, will inclose four quadrangles and will fully occupy what is now known as Manhattan Square, an area lying west of Central Park and extending from Seventy-seventh to Eighty-first streets. The portion of the structure now (1909) completed has a frontage of 1,072 feet and is the largest municipal building in New York. The museum is supported in part by an annual appropriation from the city, and in part by the income from a permanent endowment, from membership fees, and from gifts for special purposes. The total of running expenses of maintenance for 1908 was approximately $275,000. The affairs of the museum are administered by a board of trustees, the president of which is Henry Fairfield Osborn, who serve without compensation. The exhibits include extensive collections in anthropology, paleontology, geology, mineralogy, conchology, entomology, mammalogy, ornithology, the lower animals, and forestry. The library contains about 50,000 volumes. The museum conducts scientific investigations at home and in the field, publishes memoirs, a bulletin and a journal, and is a center for the meetings of local scientific societies. It also offers free lectures to the public and to school children, and loans small collections to the public schools. More than 1,000,000 people visited the museum in 1908 and 109,225 attended the lectures.

American Protective Association. A secret society organized at Clinton, Iowa, March 13, 1887. Its chief objects were the securing of greater restrictions on immigration and on the naturalization of immigrants, the prevention of State aid to parochial schools, and the exclusion of Roman Catholics from political, and, as far as possible, from industrial affairs. Its chief activity was in the Middle West, but an international organization was effected, the membership of which, in 1896, was said to be about 2,500,000. The decline of the organization was as rapid as its rise. Abbreviated *A. P. A.*

American School of Classical Studies at Athens. A school founded at Athens, Greece, by the Archæological Institute of America, opened in 1882, and supported by individuals and the leading American colleges and universities. Its main purpose is the study of Greek archæology and the most important work it has undertaken is the exploration of ancient Corinth (begun in 1896), and the excavation of the Heraion at Argos.

American School of Classical Studies at Rome. A school founded at Rome in 1895 by the Archæological Institute of America, and supported by individuals and the leading American colleges and universities.

American Volunteers, The (official title, **The Volunteers of America**). A religious organization founded in March, 1896, by Mr. and Mrs. Ballington Booth, who separated from the Salvation Army. It was designed to be essentially American in constitution and method.

Ames*, Adelbert. He was appointed brigadier-general of volunteers in 1898.

Amherst (am′ėrst). A seaport of Nova Scotia, the capital of Cumberland County, situated on an arm of Chignecto Bay. It has manufactures and a considerable trade in lumber and ship-building. Population (1901), 4,963.

Ammen*, Daniel. Died July 11, 1898.

Amosis. See *Aahmes.*

Amundsen (ä′mönd-sen), **Roald.** Born in Borje, Norway, July 16, 1872. A Norwegian polar explorer. Between 1903 and 1907, in the Gjöa, he navigated the whole of the Northwest Passage and relocated the north magnetic pole.

Amurath V*. Sultan of Turkey May to August, 1876. Died Aug. 29, 1904.

Amytis (am′i-tis), or **Amitu** (ä′mi-tö). The Median wife of Nebuchadnezzar, King of Babylon, for whom he built the Hanging Gardens (which see).

Ancient and Honorable Artillery of Massachusetts, The. The first regularly organized military company in America, formed in 1637 and chartered in 1638. Its founders had been members of the Honourable Artillery Company of London, chartered in 1537. Formed to be a school for soldiers, it still exists under its original charter, and upon its rolls in every generation since its birth stand the names of the most distinguished men of the Colony and State.

Andersen (än′der-sen), **Karl.** Born at Copenhagen, Oct. 26, 1828: died there Sept. 1, 1883. A Danish lyric and epic poet. He lived in Iceland 1837–48, when he returned to Denmark—becoming inspector and intendant of Castle Rosenborg in Copenhagen. His works include "Strit og Fred" (1858), "Romanser og Sanger" (1880), "Genrebilleder" (1867–81), etc.

Anderson*, John. Scottish geologist. Died Aug. 16, 1900.

Andover* (Mass.). The Andover Theological Seminary has been removed to Cambridge and is affiliated with Harvard University.

Andral (äṅ-dräl′), **Gabriel.** Born at Paris, Nov. 6, 1797: died at Châteauvieux, Loir-et-Cher, Feb. 13, 1876. A French physician, professor in the University of Paris 1828–66. Among his works are "Clinique médicale" (1823–27), "Précis d'anatomie pathologique" (1829), "Cours de pathologie interne" (1836–37), etc.

Andree (än′drā), **Salomon August.** Born at Grenna, Sweden, Oct. 18, 1854. A Swedish engineer and aëronaut. In 1896 he was prepared to attempt to reach the North Pole in a balloon from Spitzbergen but was prevented by the direction of the wind. On July 11, 1897, with two friends, Strindberg and Fränkel, he made a successful start from Danes Island on the northwestern coast of Spitzbergen. Four days later a carrier-pigeon, with a message giving the position of the balloon as lat. 82° 2′ N., long. 15° 5′ E., on the 13th, was shot on the sealer Alken. Several buoys belonging to the balloon have been found, but no definite knowledge of the fate of the party has been obtained.

Andrews*, Edward Gayer. Died at Brooklyn, N. Y., Dec. 31, 1907.

Andrews (an′dröz), **Elisha Benjamin.** Born at Hinsdale, N. H., Jan. 10, 1844. An American educator and Baptist clergyman, chancellor of the University of Nebraska 1900–1908. He served as a private and officer in the Union Army in the Civil War; was graduated at Brown University in 1870; was president of Denison University (Granville, Ohio) 1875–79; was professor of homiletics in Newton Theological Institution 1879–82; was professor of history and political economy at Brown 1882–88, and of political economy and finance at Cornell 1888–89; and was president of Brown 1889–98. From 1898–1900 he was superintendent of schools in the city of Chicago. He is the author of "A History of the United States in our Own Times" (1904), etc.

Angel in the House, The. A poem by Coventry Patmore. It was published in four parts: "The Betrothal" (published anonymously in 1854), "The Espousals" (1856), "Faithful Forever," a poem of disappointed love (1860), and "The Victories of Love," a poem of bereavement (1862). It is an idyl of the home.

Angell*, James Burrill. He was minister to Turkey 1897–98. In 1909 he resigned the presidency of the University of Michigan.

Anju (än-jö′). A town in Korea, situated near the coast at the head of Korea Bay. It is on the railroad and was of importance during the Russo-Japanese war.

Annenkof*, Michael. Died in 1899.

Annunzio (än-nön′tzi-ō), **Gabriele d'.** Born at Pescara, Italy, in 1864. An Italian poet and novelist. He has written "Primo Vere" (1879), "Canto Nuovo" (1882), "Terra Vergine" (1882), "Intermezzo di rime" (1883), "Il libro delli Vergini" (1884), "L'Isottèo: La Chimera" (1885–88), "San Pantaleone" (1886), "Elegie romane" (1887–91), "Giovanni Episcopo" (1891: translated as "Episcopo and Company," 1896), "Poema paradisiaco: Odi navali" (1891–93), "Il Piacere" (1889), "L'Innocente" (1891), "Trionfo della Morte" (1894: tr. "The Triumph of Death," 1896), "Le Vergini delle Rocce" (1896), "La Citta Morta" (1898), "La Gioconda" (1899), "Il fuoco" (1899), "La Canzone di Garibaldi" (1900), "Francesca da Rimini" (1901), "Li Laudi" (1904), "La fiaccola sotto il moggio" (1905), "Più che l'amore" (1906), "L'Orazione e la Canzone in morte d' Giosuè Carducci" (1907), "La nave" (1908).

Anping (än-ping′). A seaport on the southwestern coast of the island of Formosa, about twenty miles north of Takow.

Antarctica (an-tärk′ti-kä). All that portion of the southern hemisphere which lies between the antarctic circle and the south pole; the Antarctic.

Antarctic Ocean*. The Belgica expedition took place 1897–99. Borchgrevink penetrated (1898–1901) to lat. 78° 50′ S., the farthest point then reached; Capt. R. F. Scott (1902), to 82° 17′ S.; Lieutenant Shackleton (1908–09), to 88° 23′ S. A notable scientific result of this last expedition was the location of the south magnetic pole at lat. 72° 25′ S., long. 154° E. French antarctic expeditions were led by Dr. Charcot in 1905 and 1908. Valuable work was done by the Argentine government in establishing a number of antarctic meteorological stations.

Anthony*, **Susan Brownell.** Died at Rochester, N. Y., March 13, 1906.

Antioch College*. It has been controlled by the Christian Connection.

Antique (än-tē′kä). A province, long, narrow, and mountainous, in the western part of Panay, in the Philippine Islands. Capital, San José de Buenavista. It is bounded by Capiz on the north, Capiz and Iloilo on the east, and the Visayan Sea on the south and west. Mountains separate it from the other provinces of Panay. It has many rivers. The chief products are rice and sugar-cane, and the manufactures cotton cloths and blankets. The native race is Visayan. Area, 1,134 square miles. Population (1903), 134,166.

Antoine (oṅ-twän′), **André.** Born at Limoges, 1858. A French actor, the founder (October, 1887) of the Théâtre Libre and director of the Odéon 1906–. The Théâtre Libre gave its first representation at l'Élysée des Beaux-Arts, Montmartre, Paris. Its purpose was to present to an audience consisting entirely of subscribers, plays of intrinsic merit which could not, for well-founded reasons, be given elsewhere. Its general tone was strongly naturalistic. For a short time in 1896 Antoine was director of the Odéon, and he opened the Théâtre Antoine in 1897.

Antung (än-tung′). A town of Manchuria situated on the Yalu river, near its mouth, below Wiju. It was opened to foreign trade, by agreement between China and the United States, in January, 1904, and after the Russo-Japanese war was reopened by Japan in 1906. The Japanese left approached it on the north during the battle of the Yalu river, May 1, 1904.

Anuyao (än-ö-yä′ō). A mountain in Cagayan province, Luzon, Philippine Islands. Height, 8,123 feet.

Aoki (ä-ō′ki), Viscount **Siuzo.** Born in Choshu, Japan, January, 1844. A Japanese statesman and diplomatist. He studied in Germany and was appointed secretary of the Japanese legation at Berlin in 1873 and minister in 1875, was vice-minister of foreign affairs 1886–89, and was minister of foreign affairs 1889–91 and 1898–1900. In 1906 he was appointed first Japanese ambassador to the United States, retiring in 1907. He is a member of the privy council of the empire.

A. P. A. An abbreviation of *American Protective Association* (which see).

Aparri (ä-pä′rē). A municipality and port of Cagayan province, in the northern part of Luzon, Philippine Islands, at the mouth of the Rio Grande de Cagayan. Civilized population (1903), 18,252.

Appalachian Plateau. A name defined by the United States Geographic Board (1907) as including the entire plateau forming the western member of the Appalachian system, known in the north as the Allegheny plateau and in the south as the Cumberland plateau.

Appalachian System. According to the United States Geographic Board (1907), all the eastern mountains of the United States from Alabama to northern Maine.

Appleton* (Wis.). Lawrence University is now undenominational.

Apponyi*, Count **György.** Died March 1, 1899.

Apthorp (ap′thôrp), **William Foster.** Born at Boston, Mass., Oct. 24, 1848. A writer on and critic of music. He was graduated at Harvard in 1869, studied under J. K. Paine and later under B. J. Lang. He has taught harmony, the piano, and counterpoint, and was musical critic of the Boston "Transcript" 1870–1901. He has published "Hector Berlioz" (1879), "Musicians and Music Lovers" (1894), "By the Way" (1898), and "The Opera Past and Present" (1901).

Arabi Pasha*. He was exiled to Ceylon in 1882 and was pardoned in 1901.

Arany*, **László.** Died at Budapest, Aug. 1, 1898.

Arcadelt (är′kạ-delt), **Jacob.** Born in the Netherlands about 1514: died at Paris about 1560. A Dutch composer, long active in Rome in the papal choir and afterward in Paris. His finest compositions were madrigals: he also wrote many masses and motets. Also *Archadelt, Archadet, Arcadet, Harcadelt.*

Archæological Institute of America. A society for the promotion of archæological research, founded in Boston in 1879. It has since established affiliated societies in different cities. The Institute founded the American School of Classical Studies at Athens (opened 1882), the American School of Classical Studies in Rome (1895), and the American School for Oriental Study and Research in Palestine (1900). Its official organ is the "American Journal of Archæology." It also issues reports and special publications relating to archæology.

Archer (är′chėr), **William.** Born at Perth, Scotland, Sept. 23, 1856. An English author and dramatic critic. He studied at the University of Edinburgh; was dramatic critic of the London "Figaro" 1879–81; and held a similar position on the staff of the London "World" 1884–1905, and afterward on the "Tribune." He is the author of "English Dramatists of To-day" (1882), "Henry Irving" (1883), "About the Theatre" (1886), "Masks or Faces? A Study in the Psychology of Acting" (1888), a biography of W. C. Macready (1890), "Study and Stage" (1899), "America To-day" (1900), "Real Conversations" (1904), etc. He has also translated Henrik Ibsen's prose dramas (1890–91), etc.

Arctic Explorers*. See also *Abruzzi, Amundsen, Andrée, Baldwin, Cook, Fiala, Lockwood, Wellman.*

Arctic Highlands. A region on the western coast of Greenland, north of Melville Bay and Cape York: so named by Captain Ross, its discoverer (1818). Its inhabitants, a small number of pure Eskimos, are called 'Arctic Highlanders.'

Arditi*, **Luigi.** Died May 1, 1903.

Arecibo. 2. A department in the northern part of Porto Rico. It is bounded by the Atlantic Ocean on the north; San Juan on the east; Ponce (partly separated by mountains) on the southeast; Ponce on the south and southwest; and Aguadilla on the west. Capital, Arecibo. Area, 621 square miles. Population (1899), 162,308.

Arène (ä-rān′), **Paul Auguste.** Born at Sisteron, France, June 26, 1843: died at Antibes, France, Dec. 18, 1896. A French journalist, dramatist, novelist, and Provençal poet, a member of Les Félibres. He wrote "Pierrot héritier," a one-act comedy in verse (1865), "Jean des Figues," a novel (1870), "Les comédiens errants" (1873: with Vernier), "Char" (1878: with Alphonse Daudet), "La vraie tentation de Saint Antoine" (1879), "Au bon soleil," Provençal tales (1879), "Paris ingénu" (1882), "Vingt jours en Tunisie" (1884), "La chèvre d'or" (1889), etc.

Argao (är-gä′ō). A municipality in the eastern part of Cebu province, Cebu, Philippine Islands. Civilized population (1903), 35,448.

Argentine Republic*. Its legislature contains 30 senators and 120 deputies.

Arisaka (ä-rē-sä′kä), Lieutenant-general. Born in Choshu in February, 1852. A Japanese soldier, inventor (1901) of a quick-firing mountain gun used in the Japanese army. He was created a baron in 1907.

Arizona*. It has 13 counties.

Arkansas*. The State sends 7 representatives to Congress and has 9 electoral votes.

Armour (är′mör), **Philip Danforth.** Born at Stockbridge, N. Y., May 16, 1832: died at Chicago, Ill., Jan. 6, 1901. An American capitalist. His fortune was largely made in the commission business (pork, grain, etc.) in Chicago and elsewhere. He founded in Chicago the Armour Institute of Technology (opened Sept., 1893).

Armstrong (ärm′strông), **David Maitland.** Born at Newburg, N. Y., April 15, 1836. An American artist. He studied art in Paris (where he was a pupil of Merson) and in Rome. For four years he was consul-general of the United States in Italy, and was appointed director of the department of American art at the exposition of 1878 in Paris. He has devoted himself mainly to mural painting and stained glass. He is a chevalier of the Legion of Honor.

Armstrong*, **William George.** Died Dec. 27, 1900.

Armstrong Legislative Committee. A joint committee of the New York Legislature, appointed July 20, 1905, to investigate the condition and the methods of the various life-insurance companies of the State and to recommend suitable legislation in the interests of the policy-holders. Of its eight members, three, including the chairman, W. W. Armstrong, were appointed from the Senate and five from the Assembly. Charles E. Hughes was chosen by the committee as its chief counsel. The sessions for receiving testimony opened Sept. 6, 1905, in the Aldermanic Chamber, New York, and closed Dec. 30, 1905. Many facts in regard to the mismanagement of the insurance companies of New York were brought to light, and important legislation resulted (1906) from the investigation.

Arnaboldi (är-nä-bōl′di), **Alessandro.** Born at Milan, Nov. 19, 1827. An Italian lyric poet. He studied law in Pavia, and for eighteen years held a municipal appointment in Milan, but resigned in 1873 to devote himself to literature. His first volume, "Versi," appeared in 1872. He also published "Nuovi Versi" in 1888.

Arneth*, **Alfred von.** Died at Vienna, July 30, 1897.

Arnold*, Sir **Arthur.** Died at London, May 20, 1902. He was knighted in 1895.

Arnold*, Sir **Edwin.** Died March 24, 1904.

Arnold*, **Thomas.** Born 1823: died 1900.

Arnold-Forster (är′nọld-fôr′stėr), **Hugh Oakeley.** Born 1855: died at London, Mar. 12, 1909. A British Liberal-Unionist statesman, son of William Delafield Arnold and adopted son of William Edward Forster (his uncle). He was educated at Rugby and at University College, Oxford, and was called to the bar of Lincoln's Inn in 1879. He was a member of the House of Commons for Belfast, West, 1892–1905, and for Croydon from 1906; was parliamentary secretary to the admiralty 1900–03; and was secretary of state for war 1903–Dec., 1906. He published "How to solve the Irish Land Question" (1889), "In a Conning Tower" (1891), "Our Home Army" (letters in the "Times," 1891–92), "Army Letters" (1898), "Our Great City" (1900), "War Office, Army, and Empire" (1900); "English Socialism of To-day" (1908); etc.

Arrhenius (ăr-rā′ni-ös), **Svante August.** Born at Wyk, near Upsala, Sweden, Feb. 19, 1859. A Swedish chemist, professor of physics at Stockholm from 1891, and director of physical chemistry at the Nobel Institute in Stockholm since 1905: especially noted for his researches in physical chemistry. His most important contribution to science is his theory of electrolytic dissociation. He has published a text-book of electrochemistry (1890), "Lehrbuch der cosmischen Physik" (1903), "Theorie der Chemie" (1906), "The Life of the Universe" (1909), etc.

Artesia (är-tē′ṣiạ̈). 1. A village in Los Angeles Co., California.—2. A post-town in Lowndes Co., Mississippi.—3. A town in Eddy Co., New Mexico.

Arthur (är′thụr), **Timothy Shay.** Born near Newburg, N. Y., 1809: died at Philadelphia, March 6, 1885. A writer of moral tales. He published some fifty stories, of which the best known is "Ten Nights in a Bar-room." In 1852 he founded "Arthur's Home Magazine."

Asakawa (ä-sä-kä′wä), **Kan-Ichi.** Born in Japan, Dec. 20, 1873. A Japanese scholar, appointed instructor in the history of Japanese civilization in Yale University from 1907. He was graduated at Waseda University, Tokio, and at Dartmouth College in 1899, where he was lecturer on East-Asian history 1902–06. He has published "The Early Institutional Life of Japan" (1903), "The Russo-Japanese Conflict" (1904), "Japan" (1906), etc.

Ascoli*, **Graziadio Isaia.** Born at Gorizia, July 16, 1829: died at Milan, Jan. 21, 1907.

Ashanti*. It became a British protectorate in 1896 and was annexed in 1901.

Ashikaga (ä-shi-kä′gä). A city of Japan, situated about sixty-five miles northwest of Tokio. Population, upward of 22,000.

Ashmead-Bartlett (ash′mēd-bärt′let), Sir **Ellis.** Born at Brooklyn, N. Y., 1849: died at London, Jan. 18, 1902. An English Conservative politician of American parentage. He was educated at Torquay and Christ Church, Oxford; was called to the bar of the Inner Temple in 1877; was a member of Parliament for Eye, Suffolk, 1880–85 and for Ecclesall, Sheffield, 1885–1902; and was civil lord of the admiralty 1885–92. Knighted in 1892. He was a strong imperialist and served in the South African war in 1900. He published "The Battlefields of Thessaly" (1897).

Aso (ä′sō), **Mount.** A living volcano in the island of Kiusiu, Japan.

Aspasia (as-pā′shiạ̈) the Younger. Milto, the daughter of Hermotimus, a native of Phocæa in Asia Minor. On account of her beauty a satrap of Persia carried her off and presented her to Cyrus the Younger. He changed her name to Aspasia (after the mistress of Pericles) and lived with her as her husband. After his death she fell into the hands of Artaxerxes, from whom she was claimed by Darius when he was declared heir to the Persian throne by his father. Artaxerxes gave her up (in accordance with the Persian custom), but shortly afterward made her a priestess of Artemis (Anaitis) at Ecbatana, or, according to Justin, a priestess of the sun.

Asquith (as′kwith), **Herbert Henry.** Born at Morley, Yorkshire, Sept. 12, 1852. An English statesman. He was educated at Balliol College, Oxford, and was called to the bar in 1876. Since 1886 he has been Liberal member of Parliament for East Fife. He was secretary of state for the home department 1892–95; ecclesiastical commissioner 1892–95; chancellor of the exchequer December, 1905, to 1908; and premier and first lord of the treasury 1908–.

Assiniboia*. On the establishment in 1905 of the provinces of Alberta and Saskatchewan, the larger part of Assiniboia was incorporated in these provinces.

Assuan Dam. A dam constructed across the Nile at Assuan, by Sir Benjamin Baker, for purposes of irrigation, completed in 1902. It is 1¼ miles long and its maximum height from the foundation was about 130 feet. In 1907 it was decided to increase its height six meters.

Astié*, **Jean Frédéric.** Died at Lausanne, May 20, 1894.

Astley (ast′li), Sir **John Dugdale.** Born at Rome, Feb. 19, 1828: died at London, Oct. 10,

1894. A noted English patron of sport. He entered the army, served in the Crimea 1854–55, and retired in 1859 with the rank of lieutenant-colonel. He succeeded to the baronetcy in 1873 and was Conservative member of Parliament for North Lincolnshire 1874–80. For many years he was a patron of the turf. He wrote "Fifty Years of my Life in the World of Sport at Home and Abroad" (1894).

Astor Library*. In 1895 it was combined with the Lenox Library and the (proposed) Tilden Library as the New York Public Library (which see).

Astrup (äs'tröp), **Eivind.** Born at Christiania, Norway, Sept. 17, 1871: died on the Dovrefjeld, Norway, December, 1895. A Norwegian arctic explorer, a companion of Peary in his explorations of Greenland 1891–92 and 1893–95.

Athabasca*. In 1905 it was divided between the new provinces of Alberta and Saskatchewan.

Atherton (ath'ėr-tọn), Mrs. (**Gertrude Franklin**). Born at San Francisco. A contemporary American author, grandniece of Benjamin Franklin. She has published "The Doomswoman" (1892), "A Whirl Asunder" (1895), "Patience Sparhawk and Her Times" (1897), "His Fortunate Grace" (1897), "American Wives and English Husbands" (1898), "The Californians" (1898), "A Daughter of the Vine" (1899), "The Valiant Runaways" (1899), "Senator North" (1900), "The Aristocrats" (1901), "The Conqueror" (1902), "The Splendid Idle Forties" (1902), "Rulers of Kings" (1904), "The Bell in the Fog" (1905), "The Travelling Thirds" (1905), "Ancestors" (1907), etc.

Atkinson*, **Edward.** Died at Boston, Mass., Dec. 11, 1905.

Atreus, Treasury of. See *Treasury of Atreus.*

Atsuta (ät-sö'tä). A town in Japan a short distance southeast of Nagoya. Population, upward of 25,000.

Atwater (at'wâ-tėr), **Wilbur Olin.** Born at Johnsburg, N. Y., May 3, 1844: died at Middletown, Conn., Sept. 22, 1907. An American physiological chemist, professor in Wesleyan University, Middletown, Connecticut, from 1873. He was the first director of the Connecticut Agricultural Experiment Station (the first to be established in the United States) 1875–77; was organizer and first director of the office of experiment stations in the United States Department of Agriculture 1888–91; was director of the Storrs Agricultural Experiment Station 1888–1902; and from 1894 had charge of the experiments upon nutrition established by the Department of Agriculture. With Rosa he was the inventor of the respiration calorimeter, used to demonstrate experimentally that the law of the conservation of energy holds true of the vital processes of the human body, and for various other physiological inquiries.

Atwood (at'wůd), **Charles B.** Born at Millbury, Mass., May 18, 1849: died at Chicago, Dec. 19, 1895. An American architect. He was educated at the Lawrence Scientific School of Harvard University and in the office of Ware and Van Brunt in Boston. He is especially known as the designer-in-chief of the Columbian Exposition at Chicago in 1893, where he created the Fine Arts Building and the Peristyle.

Aubertin*, **Charles.** Died in 1908.

Audiffret-Pasquier*, **Duc d'** (**Edme Armand Gaston**). Died June 4, 1905.

Auditorium (â-di-tō'ri-um). A large building in Chicago, combining a hotel and a theater. It is situated at the corner of Michigan Avenue and Congress street, and has a front of 360 feet on the latter street. It was erected 1887–89.

Augur*, **Christopher Colon.** Died at Washington, D. C., Jan. 16, 1898.

Augustin (äö-gös'tēn). A contemporary Spanish colonial governor. He was captain-general of the Philippines at the time of the Spanish-American War and, shortly before the surrender of Manila to the United States, August 13, 1898, turned over his command to General Jaudenes and escaped with his family on board the German ship "Kaiserin Augusta."

Aumale*, **Duc d'** (**Henri Eugène Philippe Louis d'Orléans**). Died at Zucco, Sicily, May 7, 1897.

Aus der Ohe (ous dãr ō'e), **Adèle.** Born at Hanover, Germany. A contemporary German pianist and composer, a pupil of Liszt and Kullak. She has played frequently in the United States since her first visit in 1886. Her compositions include several pieces for the piano and a sonata for piano and violin.

Austin*, **Alfred.** He was appointed poet laureate in December, 1895.

Australasian Federation*. After several years of discussion, the new Australian commonwealth was inaugurated on Jan. 1, 1901.

Australia*. It is now, with Tasmania, united under a federal government inaugurated Jan. 1, 1901. The six former colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania are denominated the 'original states.' Legislative power is vested in a federal parliament, consisting of a governor-general (representing the king), a senate, and a house of representatives. There is an executive council of seven ministers of state. The official title is the Commonwealth of Australia.

Austria*, **Lower.** It has 64 representatives in the Austrian Reichsrat and a Landtag of 127 members.

Austria*, **Upper.** It has 22 representatives in the Austrian Reichsrat and a Landtag of 50 members.

Avebury, Baron. See *Lubbock, Sir John.*

Averell*, **William Woods.** Died at Bath, N. Y., Feb. 3, 1900.

Avery (ā'vẹr-i), **Samuel Putnam.** Born at New York, March 17, 1822: died there August 12, 1904. An American connoisseur and collector. He began life as an engraver in New York City, and in 1865 entered business as a picture dealer. In this capacity he assisted in the formation of many fine collections. In 1867 he was appointed commissioner in charge of the American art department at the Universal Exposition in Paris. In 1892 he and his wife founded, in memory of their son, the Henry O. Avery Architectural Library at Columbia University. During his life he was instrumental in bringing to America a large number of the finest works of art in every department.

Awata (ä-wä'tä). A village near Kioto, Japan, noted for its pottery, a yellow faïence, first made in the seventh century.

Ayrton*, **William Edward.** Died at London, England, Nov. 8, 1908.

Bacarra (bä-kär'ä). A town of Ilocos Norte province, in the northwestern part of Luzon, Philippine Islands. Population (1903), 7,669: municipality, 14,616.

Bach*, Baron **Alexander von.** Died Nov. 13, 1893.

Bacheller (bach'el-ėr), **Irving Addison.** Born at Pierrepont, N. Y., Sept. 26, 1859. An American journalist and author. For a number of years he was on the staff of the Brooklyn "Times" and on that of the New York "World." He is the author of "The Master of Silence" (1890), "The Still House of O'Darrow" (1894), "Eben Holden" (1900), "D'ri and I" (1901), "Darrel of the Blessed Isles" (1903), "Vergilius" (1904), "Silas Strong, Emperor of the Woods" (1906), "The Hand-Made Gentleman" (1909), etc.

Bacher (bäćh'ėr), **Otto H.** Born at Cleveland, O., March 31, 1856: died at Bronxville, N. Y., Aug. 16, 1909. An American painter, etcher, and illustrator. He was a pupil of Duveneck, in Munich, and of Lefebvre, Boulanger, and Carolus Duran in Paris. He was especially successful in etching landscapes and architectural subjects. He wrote "With Whistler in Venice" (1908).

Backlund (bäk'lönd), **Johann Oskar.** Born in Sweden, April 28, 1846. A Swedish astronomer. He was appointed observer at the observatory at Dorpat, Russia, in 1876, adjunct astronomer at Pulkowa in 1878, astronomer of the Academy of Sciences at St. Petersburg in 1887, and director of the observatory at Pulkowa in 1895.

Bacolod (bä-kō-lōd'). A town, the capital of Negros Occidental province, in the northwestern part of Negros, Philippine Islands, situated in lat. 10° 41′ N., long. 122° 56′ E. Population (1903), 5,678.

Bacoor (bä-kō-ōr'). A municipality of Cavité, southern Luzon, Philippine Islands. A military road follows the coast from Bacoor to Manila. Civilized population (1903), 10,925.

Baddeck (ba-dek'). A fishing village and summer resort on Cape Breton Island, Nova Scotia, situated on the Little Bras d'Or. It is the capital of Victoria County. Population, about 1,700.

Baden-Powell*, Sir **George Smyth.** Died in 1898.

Baden-Powell (bă'dẹn-pou'l), Sir **Robert Stephenson Smyth.** Born Feb. 22, 1857. A British major-general, inspector-general of cavalry from 1903, especially noted for his defense of Mafeking in 1900, during the Boer War. He served in India, Afghanistan, and South Africa 1876–89; in Zululand in 1888; in Malta 1890–93; in Ashanti 1895; in Matabeleland 1896–97; and in South Africa, as lieutenant-colonel, 1897–99. With a force of 1200 men he was besieged in Mafeking for 215 days, being relieved on May 18, 1900. From 1900–03 he was general of South African constabulary. He retired in 1904. Among his publications are "Cavalry Instruction" (1895), "The Matabele Campaign" (1896), "Sport in War" (1900), etc.

Badger State. A popular name of the State of Wisconsin.

Baguio (bä-gē-ō'). A town, the capital of Benguet province, in the western part of Luzon, Philippine Islands, in lat. 16° 32′ N., long. 120° 38′ 50″ E. Civilized population of municipality (1903), 489.

Bahrein*, or **Aval, Islands.** They are under British protection.

Bailey (bā'li), **Liberty Hyde.** Born at South Haven, Mich., March 15, 1858. An American botanist, horticulturist, and educator, director of the N. Y. State College of Agriculture in Cornell University from 1903. He was professor of horticulture and landscape-gardening in Michigan Agricultural College (of which he is a graduate) 1884–88, and professor of horticulture in Cornell University 1888–1903. Among his works are "The Survival of the Unlike" (1896), "Evolution of Our Native Fruits" (1898), "The Principles of Fruitgrowing" (1897), "Cyclopedia of American Horticulture" (1900–02), "The Nature-Study Idea" (1903), "Outlook to Nature" (1905), "Cyclopedia of American Agriculture" (1907–09), text-books of botany and agriculture, and handbooks of horticultural practice.

Bailey*, **Philip James.** Died at Nottingham, England, Sept. 6, 1902.

Bain*, **Alexander.** Died at Aberdeen, Scotland, Sept. 18, 1903. He was lord rector of the University of Aberdeen 1881-87.

Baird*, **Absalom.** Died at Relay, Md., June 14, 1905.

Baird*, **Charles Washington.** Died in 1887.

Baird*, **Henry Martyn.** Professor of Greek in the New York University 1859–1902. Died at Yonkers, N. Y., Nov. 11, 1906.

Baker, Sir **Benjamin.** Born 1840: died at Pangbourne, Berkshire, May 19, 1907. An eminent English engineer. His most important works are the Forth Bridge and the dam across the Nile at Assuan.

Baker*, Mrs. (**Harriette Newall Woods**). Died in 1893.

Baker (bā'kėr), **Marcus.** Born at Kalamazoo, Mich., Sept. 23, 1849: died at Washington, Dec. 12, 1903. An American cartographer, connected with the United States Coast and Geodetic Survey 1873–86, and with the United States Geological Survey 1886–1903.

Baker (bā'kėr), **Ray Stannard.** Born at Lansing, Mich., April 17, 1870. An American magazine writer. He is the author of "Boys' Book of Inventions" (1899), "Second Boys' Book of Inventions" (1903), "Our New Prosperity" (1900), "Seen in Germany" (1901), "Following the Color Line" (1908), "New Ideals in Healing" (1909), and has written many short stories and articles on industrial and political topics.

Balabac (bä-lä'bäk). A hilly island south of Palawan (Paragua), and belonging to Paragua province in the Philippines. It has several good harbors. Area, 122 square miles. Population (1903), 455; only 18 were civilized.

Balaguer*, **Vittorio.** Died at Madrid, 1901.

Balakiref (bä-lä-kē'ref), **Mily Alexejevitch.** Born at Nijni-Novgorod, Jan. 2, 1837. A Russian composer, one of the founders of the new school of Russian music. In 1862 he established the Free School of Music in St. Petersburg, where works of the young Russian composers were given. In 1869 he was appointed director of the Imperial Chapel and conductor of the Imperial Musical Society, but retired in 1872. He has composed symphonic poems, overtures, a symphony, songs (including collections of folk-songs), and piano pieces.

Baldwin (bâl'dwin), **Evelyn Briggs.** Born at Springfield, Mo., July 22, 1862. An American meteorologist and arctic explorer. He accompanied Peary to North Greenland as meteorologist 1893–94, and was a member (second in command) of the Wellman expedition to Franz Joseph Land 1898–99. In 1901–02 he organized and led the Baldwin-Ziegler polar expedition, and established a chain of stations, embracing portable houses and a cargo of equipment, through the

Franz Joseph Land archipelago in contemplation of a sledge journey thence to the north pole during the proposed second year's work of the expedition. He also formed three stations of safety on Shannon Island, on the northeast coast of Greenland, in accordance with his plan to effect the return journey along that unexplored territory. These safety stations embrace three houses filled with an additional cargo of equipment. In addition to an exceptionally large pack of dogs, fifteen Siberian horses were used with marked success for drawing the sledges upon the sea-ice.

Baldwin (bâl′dwin), **James Mark.** Born at Columbia, S. C., Jan. 12, 1861. An American psychologist, professor of philosophy and psychology at Johns Hopkins University, Baltimore, from 1903. He was a professor of philosophy at Lake Forest University, Illinois, 1887–90, and at Toronto University, Canada, 1890–93, and of psychology at Princeton University, 1893–1903. He has written "Handbook of Psychology" (1889–1890), "Elements of Psychology" (1893), "Mental Development in the Child and the Race" (1896), "Social and Ethical Interpretations" (1897), "Story of the Mind" (1898), "Fragments in Philosophy and Science" (1902), "Development and Evolution" (1902), and "Thoughts and Things" (1906–08), and edited the "Dictionary of Philosophy and Psychology" (1901–06). He founded the "Psychological Review" in 1894 and still edits it.

Balfour*, **Arthur James.** He was first lord of the treasury and leader of the House of Commons 1895–1906, and prime minister 1902–05. He was member of Parliament for the Eastern Division of Manchester 1885–1906, and for the City of London 1906–. He also wrote "Essays and Addresses" (1893, 1905), "The Foundations of Belief" (1895), "Economic Notes on Insular Free Trade" (1903), "Reflections Suggested by the New Theory of Matter" (1904), etc.

Balfour (bal′fôr or bal′fėr), **Gerald William.** Born April 9, 1853. A British Conservative politician, brother of Arthur James Balfour. He was educated at Eton and at Trinity College, Cambridge. He was member for Central Leeds 1885–1906; was secretary to his brother, A. J. Balfour, when the latter was president of the Local Government Board 1885–86; was chief secretary for Ireland 1895–1900; was president of the Board of Trade 1900–05; and was president of the Local Government Board in 1905.

Baliuag (bä-lē′ō-äg). A municipality of Bulacan province, in the southern part of Luzon, Philippine Islands. Civilized population (1903), 15,936.

Ball*, Sir **Robert Stawell.** He was astronomer royal of Ireland 1874–92, and professor of astronomy and geometry and director of the observatory at Cambridge 1892–. He has written a number of works on scientific subjects.

Ballinger (bal′in-jėr), **Richard Achilles.** Born at Boonesboro, Iowa, July 9, 1858. An American lawyer, appointed secretary of the interior, March 5, 1909. He was mayor of Seattle 1904–06, and commissioner of the General Land Office 1907–09.

Baltimore*. A large part of the wholesale business and financial section of the city (over 2,000 buildings) was destroyed by fire February 7–8, 1904.

Bamberger*, **Ludwig.** Died at Berlin, March 14, 1899.

Banajao (bä-nä′yä-ō). An extinct volcano of La Laguna province, in the southern part of Luzon, Philippine Islands, approximately in lat. 14° 2′ N., long. 121° 27′ E. Height, 7,382 feet. Also *Majaijai.*

Banff (banf). A post-village of Alberta, Canada, situated on the Canadian Pacific Railway. It is a pleasure resort and the railway station for the Banff National Park. It has hot sulphur springs. Elevation, 4,500 feet above the sea.

Bangs (bangz), **John Kendrick.** Born at Yonkers, N. Y., May 27, 1862. An American author, editor, and humorist. He was graduated at Columbia in 1883; was associate editor of New York "Life" 1884–88; and was editor of the "Drawer" 1888–99, and of "Literary Notes" 1898–99, in "Harper's Magazine"; of "Literature" 1898–99; of "Harper's Weekly" 1898–1900; of the "Metropolitan Magazine" 1902–03; and of "Puck" 1904–05. He has published numerous humorous stories and articles.

Bangued (bän-gād′). A town, the capital of Abra province, northwestern Luzon, Philippine Islands, situated in lat. 17° 37′ N., long. 120° 39′ E. Civilized population of municipality (1903), 12,956.

Banks*, Mrs. **George Linnæus** (**Varley**). Died at Dalston, England, May 5, 1897.

Bantayan (bän-tä-yän′). 1. One of the Visayan group of islands in the Philippines, northwest of Cebu. Its fisheries are of some importance. Area, 47 square miles. Population (1903), 18,325.—2. A port in the southwestern part of Bantayan Island, province of Cebu. Population (1903), 5,242.

Banville*, **Théodore Faullain de.** Died at Paris, March 13, 1891.

Bara*, **Jules.** Died June 26, 1900.

Barbara Frietchie (bär′ba̤-rä̤ frē′chi). A war ballad by John Greenleaf Whittier, first published in the "Atlantic Monthly" for October, 1863. The incident told (the waving of the Union flag in the faces of Confederate troops) was based on a report of the patriotic act of a woman at Frederick, Maryland, when it was occupied by the Confederates under General Thomas J. Jackson.

Barber (bär′bėr), **Edwin Atlee.** Born at Baltimore, Md., Aug. 13, 1851. An American ceramist, archæologist, and writer, director of the Pennsylvania Museum and School of Industrial Art at Philadelphia. Among his publications are "Pottery and Porcelain of the United States" (1893), "Anglo-American Pottery" (1899), "American Glassware" (1900), "Tulip Ware of the Pennsylvania-German Potters" (1903), "Marks of American Potters" (1904), "Artificial Soft Paste Porcelain" (1907), "Salt Glazed Stoneware" (1907), "Tin Enamelled Pottery" (1907), "Lead Glazed Pottery" (1908), etc.

Barbier*, **Paul Jules.** Died at Paris, Jan. 16, 1901.

Barchester (bär′ches-tėr) **Towers.** A novel by Anthony Trollope, published in 1857.

Baret, or **Barret** (bar′et), **John.** Died about 1580. An English lexicographer. He received the degree of M. A. from Trinity College, Cambridge, in 1558 and the degree of M. D. at Cambridge in 1577. In 1574 he published "An Alvearie, or Triple Dictionarie in English, Latin, and French."

Bargiel*, **Woldemar.** Died at Berlin, Feb. 23, 1897.

Bar Harbor (bär här′bo̤r). A noted summer-resort in the island of Mount Desert, Maine. Population (1900), about 2,000.

Baring*, **Evelyn.** He was British agent and consul-general in Egypt 1883–1907. Created Baron Cromer 1892, Viscount 1899, Earl 1901.

Baring-Gould*, **Sabine.** Died at Port Elizabeth, South Africa, June 4, 1906.

Barker (bär′kėr), **Albert Smith.** Born at Hanson, Mass., 1843. An American naval officer, commissioned rear-admiral in 1899. He was graduated from the United States Naval Academy in 1861; served in the Union navy during the Civil War (New Orleans, Port Hudson); ran a line of deep-sea soundings around the world while in command of the Enterprise 1883–86; was a member of the board of strategy at the opening of the war with Spain; commanded the Newark and later the Oregon; and relieved Admiral Dewey at Manila in May, 1899. From 1900–03 he was commandant of the New York Navy Yard, and was commander-in-chief of the North Atlantic fleet 1903–05. He retired in 1905.

Barker*, **George Frederic.** He was professor of chemistry and physics in the University of Pennsylvania 1872–1900 (emeritus).

Barker (bär′kėr), **Wharton.** Born at Philadelphia, May 1, 1846. An American politician and financier. He was graduated at the University of Pennsylvania in 1866, and has been identified with many important commercial and financial enterprises, including Russian canals and railways. In 1895 he visited China, on the invitation of Li Hung Chang. He received the cross of St. Stanislaus from Alexander II. of Russia, in 1879. He was a prominent Republican until 1896, when he joined the Populist party. As presidential nominee of the anti-fusion Populists in 1900 he polled a popular vote of 50,373 against the 7,207,923 votes cast for President McKinley.

Barlow*, **Francis Channing.** Died Jan. 11, 1896.

Barlow (bär′lō), **Jane.** Born at Clontarf, Ireland, Oct. 17, 1860. An Irish novelist and poet. Among her works are "Bogland Studies" (1892), "Irish Idylls" (1892), "Kerrigan's Quality" (1893), "The End of Elfintown" (1894), "Strangers at Lisconnel" (1895), "A Creel of Irish Stories" (1897), "At the Back of Beyond" (1902), "By Beach and Bog Land" (1905), "Irish Neighbors" (1907), etc.

Barnard (bär′närd), **Charles.** Born at Boston, Mass., Feb. 13, 1838. An American writer. Among his works are "First Steps in Electricity" (1887), "Tools and Machines" (1903), "The Door in the Book" (1903), and "The County Fair," and other plays.

Barnard (bär′närd), **George Grey.** Born at Bellefonte, Pa., May 24, 1863. An American sculptor. He was educated at the Art Institute, Chicago, and at the École des Beaux Arts, Paris (1884–87). He was awarded gold medals at the Exposition Universelle, Paris, 1900, the Pan-American Exposition, Buffalo, 1901, and the Louisiana Purchase Exposition, St. Louis, 1904. His marble statue of the "Two Natures" is in the Metropolitan Museum, and his "God Pan" in Central Park, New York City. He has developed a powerful emotional style.

Barnard College. A college for the higher education of women, founded in New York City in 1889. It was incorporated in Columbia University in 1900. It has about 580 students.

Barnardo (bär-när′dō), **Thomas John.** Born in Ireland, 1845: died at Surbiton, England, Sept. 19, 1905. A British philanthropist, noted for his labors in rescuing and training destitute children. He began his work in London about 1866; established a home for orphaned children in 1867; founded a village for girls at Ilford in 1873, and a hospital for sick waifs in 1887; and formed the "Young Helpers' League" in 1891. The institutions which he founded have rescued and trained upward of 66,800 waifs, about 20,500 of whom have established themselves in Canada and the colonies.

Barnato (bär-nä′tō), **Barnett Isaacs.** Born in London, July 5 (?), 1852: died June 14, 1897. An English speculator and capitalist. He was the son of poor Jewish parents, and, according to report, supported himself as peddler, billiard-marker, etc. In 1872 or 1873 he left London for South Africa, where he made a large fortune in the Kimberley diamond-mines and the gold-mines around Johannesburg. In 1888 his diamond-mining interests were joined with those of Cecil Rhodes. In the same year he was returned to the Legislative Assembly at the Cape as member for Kimberley, and was reelected in 1894. In 1895 he returned to London, and was the center of the speculation in South African mining stocks known as the "Kafir Circus"; he was popularly known as the "Kafir King." The failure of the so-called "Barnato Banking Company" in October, 1895, subsequent losses, and great mental strain are supposed to have affected his reason. He committed suicide by jumping into the sea from the steamship Scot near Funchal.

Barnby*, Sir **Joseph.** Died at London, Jan. 28, 1896. He was knighted in 1892.

Barotseland (ba-rot′se-land). A region in Rhodesia, north of the Zambesi river; Northwestern Rhodesia. It is administered by the British South Africa Company. Area, est., 182,000 sq. miles; pop., over 350,500.

Barr (bär), **Robert**: pseudonym **Luke Sharp.** Born at Glasgow, Scotland, Sept. 16, 1850. An English novelist and editor. He was educated in Toronto, Canada; taught in Canada until 1876; joined the editorial staff of the Detroit (U. S.) "Free Press" in that year; established the weekly English edition of the "Free Press" in London in 1881; and in 1892 founded, with Jerome K. Jerome, the "Idler" magazine, of which he was co-editor until 1895. Among his works are "From Whose Bourne" (1893), "In a Steamer Chair" (1892), "The Face and the Mask" (1895), "In the Midst of Alarms" (1894, 1900), "The Strong Arm" (1900), "The Countess Tekla" (1899), "The Unchanging East" (1900), "Over the Border" (1903), "The O'Ruddy" (1904: with Stephen Crane), "The Woman Wins" (1904), "A Chicago Princess" (1904), "Speculations of John Steele" (1905), "The Triumph of Eugene Valmont" (1906), "A Rock in the Baltic" (1907), "Cardillac" (1909), etc.

Barrès (bä-rās′), **Maurice.** Born at Charmes-sur-Moselle, France, Aug. 17, 1862. A French politician, journalist, and author. He was a Boulangist deputy 1889–93. Among his works are "Sous l'œil des barbares" (1888), "Un homme libre" (1889), "Le jardin de Bérénice" (1890), "L'ennemi des lois" (1893), "Les déracinés" (1897), "Le voyage de Sparte" (1906), etc. He was elected to the French Academy in 1906.

Barrett*, **Wilson.** Died at London, July 22, 1904.

Barrias*, **Félix Joseph.** Died at Paris in January, 1907.

Barrias (bä-ri-äs′), **Louis Erneste.** Born at Paris, April 3, 1841: died there Feb. 4, 1905. A French sculptor. He was a pupil of Cavelier, Cogniet, and Jouffroy, and of the École des Beaux-Arts. He was awarded the grand prix de Rome in 1865, the première médaille at the Salon of 1872, and the médaille d'honneur in 1878. In 1884 he was elected a member of the Institut. He produced a large number of fine decorative and independent works. Among the more important may be mentioned the "Oath of Spartacus" (1872), "Religion and Charity" (1873), and the "Defense of Paris" at Courbevoie.

Barrie (bar′i). A town of Ontario, Canada, the capital of Simcoe County, situated on the western shore of Lake Simcoe. Population (1901), 5,949.

Barrie*, **James Matthew.** Among his later works are "Sentimental Tommy" (1896), "Margaret Ogilvy" (1896), "Tommy and Grizel" (1900), "The Little White Bird" (1902), "Peter Pan in Kensington Gardens" (1906), etc. He has also written the plays "The Professor's Love Story" (1895), "The Little Minister" (1897), "Quality Street," "The Admirable Crichton," "Little Mary" (1903), "Peter Pan" (1904), "Alice Sit-by-the-Fire" (1905), "What Every Woman Knows" (1908), etc.

Barrili*, **Antonio Giulio.** Died near Savona, Italy, Aug. 15, 1908.

Barros Arana*, **Diego.** Died Nov. 4, 1907.

Barrows*, **Elijah Porter.** Born at Mansfield, Conn., Jan. 5, 1817: died at Oberlin, O., Sept. 14, 1888.

Barry*, Sir **John Wolfe Wolfe-.** He was knighted in 1897.

Barth (bärt), **Auguste.** Born at Strasburg, March 22, 1834. A French orientalist. Among his works are "Les religions de l'Inde" (1879) and "Inscriptions sanscrites du Cambodge" (1885). He has also written for the "Journal asiatique," "Mélusine," "Mémoires de la société de linguistique," "Journal des savants," and "Revue de l'histoire des religions."

Bartlett (bärt′let), **Homer Newton.** Born at Olive, N. Y., Dec. 28, 1845. An American musician. He has written numerous compositions for the voice, the violin, the piano, etc.

Bartlett*, **John.** Died at Cambridge, Mass., Dec. 3, 1905. He was senior partner of Little, Brown and Co., in Boston, 1878–89.

Bartlett (bärt′let), **Paul Wayland.** Born at

New Haven, Conn., 1865. An American sculptor, the son of Truman H. Bartlett, also an American sculptor of note. He was a pupil of Fremiet and of the École des Beaux Arts in Paris; was created a chevalier of the Legion of Honor in 1895; and was awarded a gold medal at Buffalo in 1901, the grand prize at St. Louis in 1904, and the first medal at the Liège exposition in 1905. Among his prominent works are a statue of Michelangelo in the Congressional Library, Washington; the "Bear Tamer" in the Metropolitan Museum in New York City; equestrian statues of General McClellan in Philadelphia and of Lafayette in Paris; and many excellent busts.

Bartlett*, Samuel Colcord. Died Nov. 16, 1898.

Bartol*, Cyrus Augustus. Died Dec. 17, 1900. He was pastor of the West Church in Boston 1861–87.

Bartoli*, Adolfo. Died at Genoa, May 16, 1894.

Barton*, Clara. She was president of the American National Red Cross Society 1881–1904. She went from the United States to Constantinople to administer the funds of the National Armenian Relief Committee Jan. 22–Sept. 12, 1896; superintended relief work during the Spanish-American War in 1898 and the Boer War 1899–1902, conducted Red Cross work in Galveston, Tex., August, 1900, etc. She has written "History of the Red Cross in Peace and War" (1898), etc. † 1912

Barton (bär'ton), Sir **Edmund.** Born at Glebe, Sydney, N. S. W., Jan. 18, 1849. An Australian statesman, first premier of the Australian Commonwealth. He was educated at the University of Sydney and was called to the bar in 1871; was a member of the Legislative Assembly of New South Wales 1879, 1880, 1882–87, 1891–94, and 1898–1900, and its speaker 1883–87; was attorney-general of New South Wales 1889 and 1891–93; and was a member of the Federal Conventions of 1891, 1897–98. He went to England in 1900 as the Federal delegate for New South Wales in support of the Federal Constitution Bill and was the first premier and minister for external affairs of the Australian Commonwealth, 1901–03. He has been judge of the High Court of Australia since 1903. He was made a privy councilor in 1901, and was knighted in 1902.

Barton (bär'ton), **Port.** A bay on the western coast of Paragua, Philippine Islands: safe for large vessels in all weather.

Bartsch (bärtsh), **Johann Adam Bernhardt,** Ritter **von.** Born at Vienna, Aug. 17, 1757: died at Vienna, Aug. 21, 1821. An Austrian engraver and historian of engraving. He was a librarian of the Imperial Library and a member of the Academy of Art in Vienna, and in 1816 was appointed custodian of the Cabinet of Engravings. His most important publication is the monumental "Peintre-graveur" (1802–1821: 21 volumes), a catalogue of engravers and engravings before the nineteenth century.

Barus (bar'us), **Carl.** Born at Cincinnati, Ohio, Feb. 19, 1856. An American physicist, professor of physics at Brown University from 1895. He was physicist of the United States Geological Survey 1880–92; professor of meteorology of the United States Weather Bureau 1892–93; and physicist of the Smithsonian Institution 1893–95. The Rumford medal of the American Academy of Sciences was awarded to him in 1900 for his researches in heat. He has published numerous scientific papers.

Basilan (bä-sē'län) **Islands.** A group of islands south of the western peninsula of Mindanao, in the Philippines, and now a part of Zamboanga district of Moro province. It consists of 32 named and 12 unnamed islands. The largest, Basilan, is mountainous, wooded and fertile, and has, at Isabela de Basilan, on the northwest coast, a harbor safe in all weather for large vessels. Area of the group, 501.8 square miles. Population of Basilan Island (1903), 27,017.

Basilan (bä-sē'län) **Strait.** A strait which separates Basilan Island from Mindanao, in the Philippines, and connects the Sulu (Jolo) with the Celebes Sea. Width, about 8 miles.

Basin Ranges. A name given by the United States Geographic Board in 1907 to all those ranges which lie between the Plateau Region on the east, the Sierra Nevada and Cascade Range on the west, and the Blue Mountains of Oregon on the north, including the Wahsatch and associated ranges.

Baskerville (bas'kėr-vil), **Charles.** Born at Deer Brook, Miss., June 18, 1870. An American chemist and author, professor in the College of the City of New York from 1904. He was a member of the faculty of the University of North Carolina 1892–1904. The discovery of two supposed new elements, berzelium and coralinium, was announced by him.

Bastable (bas'ta-bl), **Charles Francis.** Born at Charleville, County Cork, Ireland, 1855. An Irish economist, professor of political economy in the University of Dublin from 1882, and of jurisprudence and international law since 1902. He has written "The Commerce of Nations" (1892), "Public Finance" (1892), "The Theory of International Trade" (1897), etc.

Bastian*, Adolf. Died at Port of Spain, Trinidad, Feb. 3, 1905.

Bastidas (bäs-tē'däs), **Rodrigo de.** A Spanish navigator and explorer of the fifteenth century. After the discoveries of Columbus he joined de la Casa in an expedition to the New World. He visited the shores of the Caribbean Sea, including the site of Cartagena.

Bataan (bä-tä-än'). A peninsular province of southwestern Luzon, Philippine Islands, south of Zambales province, and between Manila Bay on the east and the China Sea on the west. Capital, Balanga. Two groups of mountains, continuations of the Zambales range, culminate in the Mariveles Peaks, the loftiest of which is an extinct, truncated volcano, 4,615 feet in height. Mariveles Bay, on the southern coast, is a safe harbor in all weather. The province is watered by many small streams, and produces sugar-cane, tobacco, rice, and indigo. The native inhabitants are chiefly Tagalogs. Area, 537 square miles. Population (1903), 46,787.

Batac (bä'täk). **1.** A municipality of Ilocos Norte province, in the northwestern part of Luzon, Philippine Islands. Civilized population (1903), 19,524.—**2.** A town of the same province. Population (1903), 5,767.

Batan (bä-tän'). An island of the Batan group, north of Luzon, Philippine Islands. It belongs to Cagayan province. Its coal deposits are of good quality, and are now in part worked by the United States for transport supply. Area, 24 square miles. Population (1903), 5,332.

Batangas. 2. The most southerly of the western provinces of Luzon, Philippine Islands. It is bounded by Cavite (separated by the Tagatay Mountains) and La Laguna on the north; La Laguna, Tayabas, and Tayabas Bay on the east; and the Mindoro Sea and Mindoro Island (separated by Verde Island Passage) on the south. Capital, Batangas, on Batangas Bay, in lat. 13° 45′ 30″ N., long. 121° 03′ E. The native population is Tagalog. The mountains are wooded and the valleys fertile, producing coffee, maize, pineapples, rice, and sugar-cane. The province is rich in mineral springs and streams the waters of which are beneficial in cutaneous diseases and in rheumatism. The north-central part of Batangas is occupied by Lake Bombon or Taal, in which is situated Taal volcano. Area, 1,201 square miles. Population (1903), 257,715.

Bates*, Arlo. He was editor of the "Boston Sunday Courier" 1880–86, and has been professor of English literature in the Massachusetts Institute of Technology since 1893. Among his later works are "A Lad's Love" (1887), "The Philistines" (1889), "The Puritans" (1898), "Talks on Writing English" (1901), "Diary of a Saint" (1902), "Talks on Teaching Literature" (1906), "The Intoxicated Ghost" (1908), etc.

Bates (bāts), **John Coalter.** Born in St. Charles County, Mo., Aug. 26, 1842. An American soldier, appointed major-general in the United States Army in 1902. He entered the army in 1861 and served with the Army of the Potomac until the close of the Civil War; was promoted colonel in 1892 and brigadier-general in 1901; served in the Santiago campaign (promoted major-general of volunteers); was commander and military governor of the department of Santa Clara, Cuba, and of Cienfuegos, in 1899; and was sent to the Philippines in 1899, where (1900) he commanded the department of Southern Luzon and conducted the campaigns there and in Mindanao. He became lieutenant-general, Feb. 1, 1906, and retired from active service in April of the same year.

Bates (bāts), **Katharine Lee.** Born at Falmouth, Mass., Aug. 12, 1859. An American writer and educator. She was graduated at Wellesley College in 1880 and has taught there since 1885, becoming professor of English literature in 1891. She has written "Rose and Thorn" (1889), "English Religious Drama" (1893), "American Literature" (1898), "Spanish Highways and By-Ways" (1900), etc.

Bateson (bāt'son), **William.** Born at Whitby, England, 1861. An English naturalist, fellow of St. John's College, Cambridge, from 1885, and professor of biology at Cambridge since 1908. Besides numerous papers on biological topics he has published "Materials for the Study of Variation" (1894), and "Mendel's Principles of Heredity" (1902).

Battenberg, Princess Ena of. See *Victoria Eugénie.*

Battenberg*, Henry, Prince of. Died Jan. 21, 1896.

Battey*, Robert. Died at Rome, Ga., Nov. 8, 1895.

Battle Hymn of the Republic, The. A song written by Julia Ward Howe during a visit to the camps near Washington in 1861. It is sung to the same tune as "John Brown's Body." The opening line is "Mine eyes have seen the glory of the coming of the Lord." It was first published anonymously in the "Atlantic Monthly" for February, 1862.

Battle of Mukden. See *Mukden.*

Battle of the Sea of Japan. See *Sea of Japan, Battle of the.*

Battle of the Sha River (Shaho). See *Sha.*

Battle of the Yalu River. See *Yalu River, Battle of the.*

Bauan (bäö-än'). A municipality of Batangas province, in the southwestern part of Luzon, Philippine Islands. Civilized population (1903), 39,094.

Bauernfeind*, Karl Maximilian von. Died at Munich, Aug. 2, 1894.

Baumann (bou'män), **Oskar.** Born at Vienna, June 25, 1864: died there, Oct. 12, 1899. An Austrian explorer and traveler in Africa. In 1885 he accompanied Oskar Lenz to Stanley Falls on the Kongo; in 1890 explored Usambara; and 1891–93 explored the regions south and west of the Victoria Nyanza. From 1896 he was honorary consul in Zanzibar.

Baumbach (boum'bäch), **Rudolf.** Born at Kranichfeld, Germany, Sept. 28, 1840: died at Meiningen, Sept. 22, 1905. A German lyric poet. He is best known for his poetic rendering of popular legends. Among his works are "Zlatorog" (1877), "Horand und Hilde" (1878), "Frau Holde" (1881), "Thüringer Lieder" (1891), "Neue Märchen" (1896), "Bunte Blätter" (1897), etc.

Baur*, Albert. Died May 7, 1906.

Bavier*, Simon. Died at Basel, Jan. 28, 1896.

Bayamon (bī-ä-mōn'). **1.** The former name of the department of San Juan in the northern part of Porto Rico.—**2.** A city in the department of San Juan, Porto Rico, situated on the Bayamon River. Population (1899), 2,218.

Bayard*, Thomas Francis. Died Sept. 28, 1898.

Baybay (bī-bī'). A municipality in the northern part of the island and province of Leyte, in the Philippine Islands. Civilized population (1903), 22,990.

Bayer*, Karl Robert Emmerich von. Died June 30, 1902.

Bayliss (bā'lis), Sir **Wyke.** Born at Madely, Salop, Oct. 21, 1835: died at London, April 6, 1906. A British artist, president of the Royal Society of British Artists from 1888. He was knighted in 1897.

Bayly*, Ada Ellen. Died at Eastbourne, England, Feb. 8, 1903.

Bayne*, Peter. Died Feb. 10, 1896.

Bayombong (bī-ōm-bōng'). A town, the capital of Nueva Vizcaya province, Luzon, Philippine Islands. It is situated on the Magat River in about lat. 16° 28′ N., long. 121° 4′ 30″ E.

Bay State. A name given to Massachusetts because of the bays (Massachusetts, Cape Cod, and Buzzard) which indent its coast.

Bazin (bä-zaṅ'), **René François Marie:** known as **René.** Born at Angers, France, Dec. 26, 1863. A French novelist and writer of travels. He studied law in Paris and upon his return to Angers was made professor in the Faculté Libre de Droit. Several of his works have been crowned by the French Academy, of which he was elected a member in 1903, succeeding Legouvé. He has published "Ma tante Giron" (1886), "Une tache d'encre" (1888), "Les Noellet" (1889), "La sarcelle bleue" (1892), "Sicile" (1892), "Madame Corentine" (1893), "Les Italiens d'aujourd'hui" (1894), "Terre d'Espagne" (1895), "En province" (1896), "De toute son âme" (1897), "La terre qui meurt" (1899), "Les Oberlé" (1901), "L'isolée" (1905), "Le blé qui lève" (1907), "Le mariage de Mademoiselle Gimel, dactylographe" (1909), etc.

Beale*, Lionel Smith. Died March 28, 1906.

Beard*, William Holbrook. Died Feb. 20, 1900.

Beardsley (bērdz'li), **Aubrey Vincent.** Born at Brighton, England, Aug. 24, 1872: died at Mentone, France, March 16, 1898. An English illustrator and draftsman. He had little special training and at first divided his time between business and an architect's office. From this he turned to book illustration, in which he found extensive employment. His work is full of charming caprices which suggest Preraphaelitism, the Japanese convention, and French art of the eighteenth century.

Bear State, The. A name variously applied to Arkansas, California, and Kentucky.

Beaufort (bō'fọrt) **Sea.** A part of the Arctic Ocean, lying north of Alaska and the provinces of Yukon and Mackenzie, and west of Banks Land.

Beaumont (bō'mont). A city of Texas, the capital of Jefferson County, situated on the Neches River. It has an extensive lumber trade, car-shops, machine-shops, etc. Large deposits of oil have been discovered in its vicinity. Population (1900), 9,427.

Béchamp (bā-shoṅ'), **Pierre Jacques Antoine.** Born at Bassing, near Dienze (Meurthe), Oct. 16, 1816: died at Paris, April 15, 1908. A distinguished French chemist, especially noted for his researches in organic, and particularly in biological, chemistry (fermentation, etc.).

Becque (bek), **Henri François.** Born at Paris, April 9, 1837: died there May 12, 1899. A noted French dramatist and critic. His works include "L'Enfant prodigue," "Michel Pauper," "L'enlèvement," "La Navette," "Les honnêtes femmes," "Les Corbeaux," "La Parisienne," "Le départ," "Veuve," "Le domino à quart," and "Une exécution"; an opera, "Sardanapale," music by de Joncieres; a volume of "Memoirs"; "Querelles littéraires"; etc. He received the decoration of the Legion of Honor in 1886.

Becquerel (bek-rel′), **Antoine Henri.** Born at Paris, Dec. 15, 1852: died at Paris, Aug. 25, 1908. An eminent French physicist, professor at the Ecole Polytechnique from 1895: son of Alexandre Edmond Becquerel. In 1896 he discovered the radiation from uranium which bears his name ('Becquerel rays'). His investigations were concerned chiefly with phosphorescence, ultra-red radiation, and spectroscopy. In 1903 he received, with Curie, the Nobel prize in chemistry. In 1908 he was made perpetual secretary of the Academy of Sciences.

Bedford, Duke of. See *John of Lancaster.*

Bedford (bed′fọrd), **Francis.** Born at Paddington, London, June 18, 1799: died at Shepherd's Bush, Hammersmith, June 8, 1883. An English bookbinder. In 1817 he was apprenticed to a binder and later became assistant to Charles Lewis (b. 1786 d. 1836). He was an especial protégé of the Duke of Portland, and was the best English binder of his time.

Beecher*, Charles. Died at Georgetown, Mass., April 21, 1900.

Beecher (bē′chėr), **Charles Emerson.** Born at Dunkirk, N. Y., Oct. 9, 1856: died at New Haven, Conn., Feb. 14, 1904. An American paleontologist and geologist, professor of paleontology and curator of the geological collection at Yale University. He published "Studies in Evolution" (1901) and various scientific papers.

Beecher*, Thomas Kinnicut. Died at Elmira, N. Y., March 14, 1900.

Beer*, Adolf. Died at Vienna, May 7, 1902.

Beets*, Nikolaas. Died at Utrecht, March 14, 1903.

Behring (bā′ring), **Emil von.** Born at Hansdorf, near Prussian Eylau, Germany, March 15, 1854. A German physiologist, professor of hygiene and director of the Hygienic Institute at Marburg from 1895. In 1890 he announced his discovery of the anti-diphtheria serum. Since that time he has devoted himself chiefly to the study of immunity. He received one of the Nobel prizes for 1901. Among his works are "Die Blutserumtherapie" (1892), "Die Geschichte der Diphtherie" (1893), "Therapie der Infektionskrankheiten" (1899), and "Beiträgen zur Experimentellen Therapie" (1900).

Beilstein (bīl′stīn), **Friedrich Konrad.** Born at St. Petersburg, Feb. 17, 1838: died there, October, 1906. A Russian chemist, professor of chemistry at the Institute of Technology in St. Petersburg from 1866. He made important investigations in physical and organic chemistry. His most important publication was his "Handbuch der organischen Chemie" (1880–83).

Belcredi*, Richard, Count **von.** Died Dec. 2, 1902.

Belfast*. In 1908 the Queen's College was raised to the rank of a university.

Belfort*, Battle of. Sometimes called the battle of Héricourt, from the town of that name, between Belfort and Montbéliard, near which the battle occurred.

Belgium*. The Kongo Free State was annexed to Belgium by the treaty of Nov. 28, 1907.

Bell*, Alexander Melville. Died at Washington, D. C., Aug. 7, 1905.

Bell*, Sir **Isaac Lowthian.** Died Dec. 20, 1904.

Bell*, James. Died March 31, 1908.

Bell (bel), **James Franklin.** Born at Shelbyville, Ky., Jan. 9, 1856. An American soldier. He was graduated at the United States Military Academy in 1878; served on the plains until 1894; and was aide to General Forsyth in California 1894–97. He took part in the campaign in the Philippine Islands in 1898; was awarded a medal of honor by Congress for gallantry in action near Porac, Luzon; was brigadier-general of volunteers 1899–1901; and was provost-marshal-general of Manila until 1901, when he was made a brigadier-general in the regular army. In 1903 he was appointed commandant of the Infantry and Cavalry School, Signal School, and Staff College at Fort Leavenworth, Kansas, and in 1906 chief of the general staff of the United States Army, succeeding Lieutenant-General John C. Bates. He was made a major-general in 1907.

Bell (bel), **James Montgomery.** Born at Williamsburg, Pa., Oct. 1, 1837. An American soldier, promoted brigadier-general in 1901. He entered the army in 1862 and served in the Civil War, in various campaigns against the Indians, on the frontiers, and in the Philippine Islands 1900–1901. He retired in the latter year.

Bell*, John. Died in March, 1895.

Bell (bel), **Robert.** Born at Toronto, Canada, June 3, 1841. A Canadian geologist, connected from 1857 with the Geological Survey of Canada, of which he became the director. He was naturalist and geologist of the Neptune (1884) and Alert (1885) expeditions to Baffin Bay and Strait, and of that of the Diana (1897) to the south coast of Baffinland, and has made important geological and topographical surveys in many parts of the Dominion. From 1863 to 1867 he was professor of chemistry in Queen's University, Kingston.

Bellamy*, Edward. Died in 1898.

Bellingham (bel′ing-ham). A city of Whatcom County, Washington, situated on Bellingham bay about fifty miles southeast of Vancouver, formed by the union in 1903 of New Whatcom and Fairhaven. Population estimated (1906), upward of 30,000.

Belloc (be-lok′), **Hilaire Joseph Peter.** Born July 27, 1870. An English writer, illustrator, and Liberal politician. He was educated at the Oratory School, Edgbaston, and at Balliol College, Oxford, and was elected to the House of Commons for Salford, south division, in 1906. He has published "The Bad Child's Book of Beasts" (1896), "More Beasts for Worse Children" (1897), "The Modern Traveller" (1898), "The Path to Rome" (1902), "Caliban's Guide to Letters" (1903), "Esto Perpetua" (1906). "The Historic Thames" (1907), "On Nothing" (1908), etc.

Beltrami (bel-trä′mi), **Eugenio.** Born at Cremona, Nov. 16, 1835: died at Rome, Feb. 18, 1900. A noted Italian mathematician, one of the originators of the non-Euclidean geometry. He was originally a civil engineer, and became professor successively at Bologna, Pisa, Rome, Pavia, and again at Rome. His "Opere matematiche" were published in 1902.

Benavides (be-nä-vē′dās), **Alonso de.** Born about 1580. A Spanish Franciscan friar who in 1621 was appointed 'Father Custodian' of the missions of New Mexico. He arrived on the Rio Grande in 1622 and indefatigably labored to convert the Puebloans, assisted by twenty-six others of his order, till 1629, when he was relieved. In 1630 he went to Spain and through Santander presented to the king the now world-famous "Memorial" containing the record of his work, travels, the natives, their towns, etc. This was published in 1630 at Madrid and was soon translated into other languages. No English translation was made until recently. The work forms the foundation of the history of New Mexico for that period. In 1632 he published another book on the opening to commerce of the rivers of the Bay of Espiritu Santo. He became assistant bishop in Portuguese India, and on the death of Archbishop Goa succeeded him.

Benedetti*, Count **Vincent.** Died at Paris, March 28, 1900.

Bengal*. The districts of the old province of Bengal which lie east of the Ganges have recently been combined into a separate administration, the lieutenant-governorship of eastern Bengal and Assam.

Benguet (ben-get′). An inland province in the western part of Luzon, Philippine Islands. Capital, Baguio. It is bounded by La Union and Lepanto-Bontoc (separated by spurs of the Caraballos Occidentales) on the north; Nueva Vizcaya (separated by the Cordillera Sur) on the east; Pangasinan on the south; and La Union on the west. It is traversed by the Agno, which rises in the mountains of the north and flows southward into Pangasinan. The surface is irregular, and indicates former great volcanic activity. For centuries gold and copper have been mined in small quantities by the Igorrotes, who form about 95 per cent. of the population. Area, 822 square miles. Population (1903), 22,745.

Benham (ben′am), **Andrew Ellicott Kennedy.** Born at New York, April 10, 1832: died at Lake Mahopac, N. Y., Aug. 11, 1905. An American naval officer, promoted rear-admiral in 1890. He entered the navy in 1847 and served through the Civil War. In 1894 he was in command of the United States squadron at Rio de Janeiro and forced the insurgent Brazilian vessels to raise the blockade of the port.

Benjamin (ben′ja-min), **Marcus.** Born at San Francisco, Cal., Jan. 17, 1857. An American chemist, editor to the United States National Museum from 1896. He was graduated from the School of Mines, Columbia University, in 1878; was chemist to the United States laboratory of the New York appraiser's stores 1883–85; and was sanitary engineer of the New York Board of Health in 1885. He has contributed scientific articles to many publications; and has been a member of the editorial staffs of various encyclopedias and dictionaries.

Benjamin (ben′ja-min), **Park.** Born at New York, May 11, 1849. An American patent lawyer and writer, son of Park Benjamin, the poet. He was graduated at the United States Naval Academy in 1867 (resigning from the navy in 1869), and at the Albany Law School in 1870, and was associate editor of the "Scientific American" 1872–78. He is the author of "The Age of Electricity" (1886), "The Voltaic Cell" (1892), "Intellectual Rise in Electricity" (1895), "The United States Naval Academy" (1900), etc. He has also edited Appleton's "Cyclopedia of Applied Mechanics" (1880), and "Modern Mechanism" (1892), and has written extensively on naval subjects.

Benjamin (ben′ja-min), **Samuel Greene Wheeler.** Born at Argos, Greece, Feb. 13, 1837. An American author and artist, the son of an American missionary. He was graduated from Williams College in 1859: studied law, seamanship, and art; and served as first United States minister to Persia, 1883–1885. His works include "Contemporary Art in Europe" (1877), "Art in America" (1879), "The Multitudinous Seas" (1879), "Troy, its Legend and Literature" (1880), "Persia and the Persians" (1887), numerous paintings, etc.

Benn (ben), **Alfred William.** Born in Westmeath County, Ireland, 1843. A British classical scholar and historian. He is the author of "The Greek Philosophers" (1882), "The Philosophy of Greece" 1898), "A History of English Rationalism in the Nineteenth Century" (1906), "Modern England" (1908).

Bennett (ben′et), **James Gordon.** Born at New York, May 10, 1841. An American journalist, proprietor of the New York "Herald": son of James Gordon Bennett. Under his auspices (with the London "Telegraph"), Henry M. Stanley made his journey of exploration across Africa 1874–77. He also fitted out the Jeanette polar expedition in 1879.

Bennigsen*, Rudolf von. Died at Bennigsen, Aug. 7, 1902. He was a member of the German Reichstag 1881–83 and 1887–98.

Benson (ben′sọn), **Edward Frederic.** Born at Wellington College, Berkshire, England, July 24, 1867. An English novelist, son of Edward White Benson, Archbishop of Canterbury. He is the author of "Dodo" (1893), "The Babe" (1897), "Mammon and Co." (1899), "Scarlet and Hyssop" (1902), "The Challoners" (1904), "The Angel of Pain" (1906), "The Blotting Book" (1908), "The Climber" (1909), etc.

Benson*, Edward White. Died at Hawarden, Flintshire, Oct. 10, 1896.

Bentley (bent′li), **John Francis.** Born at Doncaster, England, 1839: died at Clapham, England, March 2, 1902. An English architect. He was especially successful in the designing and decoration of Roman Catholic churches. In 1894 he was made commissioner to erect the new Roman Catholic cathedral of Westminster, of which the structural part alone was finished at his death.

Bentzon (baṅ-tsoṅ′), **Th.** The pseudonym of Mme. Blanc.

Ben Venue (ben ve-nö′). A mountain near the Trossachs, Scotland, rising from the southern shore of Loch Katrine. Height 2,393 feet.

Beraldi (be-räl′di), **Henri.** Born at Paris, Feb. 6, 1849. A French collector and historian of engraving. He inherited from his father a collection of many thousand engravings to which he made large additions. He is best known by his "Les graveurs du XVIIIe siècle" (1885–86), "Les graveurs du XIXe siècle" (1885–1892), and "Estampes et livres Paris" (1892).

Berenson (ber′en-sọn), **Bernhard.** Born at Wilna, Russia, June 26, 1865. An American art critic and writer. He is the author of "Venetian Painters of the Renaissance" (1894), "Lorenzo Lotto, an Essay in Constructive Art Criticism" (1895), "Florentine Painters of the Renaissance" (1896; rev. ed., 1909), "Central Italian Painters of the Renaissance" (1897), "The Study and Criticism of Italian Art" (1901: second series 1902), "The Drawings of the Florentine Painters" (1903), "North Italian Painters of the Renaissance" (1906), and shorter contributions to various magazines and reviews.

Beresford (ber′es-fọrd), Lord **Charles William de la Poer.** Born in Ireland, Feb. 10, 1846. An English admiral and parliamentarian, second son of the fourth Marquess of Waterford. He entered the navy in 1859 and rose to the rank of rear-admiral in 1897, of vice-admiral in 1902, and of admiral in 1906. He was rear-admiral in the Mediterranean 1900–02, commanded the Channel squadron 1903–05 and the Mediterranean fleet 1905–06, and was commander-in-chief of the Channel fleet 1906–09. He has been a Conservative member of Parliament for various terms. In the bombardment of Alexandria in 1882 he commanded the Condor, and in the Nile expedition of 1884–85 was a member of Lord Wolseley's staff, and subsequently commanded the naval brigade at the battles of Abu-Klea, Abu-Kru, and Metamneh, in the Sudan. He has written "Nelson and his Times" (1898: with W. H. Wilson), "The Break-up of China" (1899), etc.

Bergmann (berg′män), **Ernst von.** Born at Ruhen, Livonia, Dec. 16, 1836: died at Wiesbaden, March 25, 1907. An eminent German surgeon, professor of surgery and director of the surgical clinic of the University in Berlin from 1882. He was especially noted for his work in aseptic surgery.

Berlin*, University of. The number of students is over 8,200; of professors and teachers, about 500.

Bernardino Strait. See *San Bernardino Strait.*

Bernhardt*, Sarah (Rosine Bernard). In 1899 she founded in Paris the Théâtre Sarah Bernhardt, of which she is director. She is also professor at the Conservatoire. She has appeared also in "Phèdre," "La dame aux camélias," "La Princesse Lointaine," "L'Aiglon" (1903), "Théroigne de Méricourt" (1905), "La sorcière" (1906), "Sainte Thérèse" (1906), "Les Bouffons" (1907), etc. Her "Memoirs" were published in 1907.

Berthelot, Pierre Eugène Marcellin. Born at Paris, Oct. 25, 1827: died there, March 18, 1907. He became professor in the École de Pharmacie in 1860 and in the Collège de France in 1865; was general inspector of higher education in 1876; became a member of the Senate in 1881; and was minister of education 1886–87. He published numerous works on chemical and allied topics, "Science et libre pensée" (1905), "Archéologie et historie des sciences" (1906), etc.

Bertillon (ber-tē-yoṅ′), **Alphonse.** Born at Paris, April 22, 1853. A French anthropologist, chief of the department of identification in the Prefecture of Police of the Seine. He devised a method of identifying criminals by means of measurements. He has written "L'anthropométrie judiciaire" (1890), "Identification anthropométrique" (1893), "La comparison des écritures et l'identification graphique" (1897), etc.

Bertrand (bãr-troṅ′), **Joseph Louis François.** Born at Paris, March 11, 1822: died there, April 3, 1900. A noted French mathematician and littérateur. He was educated at the École Polytechnique, and held in succession positions on the staffs of the Lycée Saint-Louis, École Polytechnique, École Normale, Collège de France, and Lycée Napoléon. He was elected a member of the Academy of Sciences in 1856 and its perpetual secretary in 1874, and succeeded J. B. Dumas as member of the French Academy in 1884. His works include "Traité d'arithmétique" (1849), "Traité d'algèbre" (1850), "Traité de calcul différentiel et de calcul intégral" (1864–70), "Thermodynamique" (1887), "Calcul des probabilités" (1889), and various other mathematical articles and treatises. He also published "Les fondateurs de l'astronomie moderne" (1865), "L'académie des sciences et les academiciens de 1666 à 1793" (1868), "D'Alembert" (1889), "Blaise Pascal" (1890), etc.

Bertrand (bãr-troṅ′), **Marcel.** Born at Paris, July 2, 1847: died Feb. 13, 1907. An eminent French geologist, professor of geology in the French National School of Mines. In 1896 he was elected a member of the Académie des Sciences as successor to Pasteur.

Besant (bez′ant), Mrs. (**Annie Wood**). Born at London, Oct. 1, 1847. An English theosophist and writer on theosophical and philosophical topics. In 1867 she married Rev. Frank Besant and was legally separated from him in 1873. She was influential in the radical free-thought movement represented by Charles Bradlaugh, and in 1880 became prominent as a pupil of Madame Blavatsky and a member of the Theosophical Society. In 1898 she founded the Central Hindu College at Benares, in 1904 a girls' school at Benares, and in 1907 the University of India. Her publications include "Reincarnation" (1892), "Death and After" (1893), "Karma" (1895), "Four Great Religions" (1897), "Esoteric Christianity" (1901), "A Study in Consciousness" (1904), "Theosophy and the New Psychology" (1904), "Hints on the Bhagavad Gitâ" (1906), "The Wisdom of the Upanishats" (1906), etc.

Besant* (be-zant′), Sir **Walter.** Born Aug. 14, 1836: died June 9, 1901.

Beside the Bonnie Brier Bush. A collection of short stories by Ian Maclaren (John Watson), published in 1894. The book contains sketches, humorous and pathetic, of Scottish village life and is one of the most popular works of the so-called "kailyard" school of fiction.

Besnard (be-när′), **Paul Albert.** Born at Paris, June 2, 1849. A French painter. He studied at the École des Beaux-Arts and with the painters Cabanel and Brémond, winning the grand prix de Rome. In 1890 he took part in the installation of the secession of the Salon du Champ de Mars. His decorations of the École de Pharmacie are notable.

Bessemer*, Sir **Henry.** Died at London, March 15, 1898.

Best (best), **William Thomas.** Born at Carlisle, England, Aug. 13, 1826: died at Liverpool, May 10, 1897. An English organist. He edited many organ classics.

Beutenmüller (boi′tn-mül-ėr), **William.** Born at Hoboken, N. J., March 31, 1864. An American entomologist and writer on related subjects. He is editor of the "Journal" of the New York Entomological Society and since 1889 has been curator of the department of entomology in the American Museum of Natural History, New York City.

Beveridge (bev′ėr-ij), **Albert Jeremiah.** Born on a farm on the border of Adams and Highland counties, Ohio, Oct. 6, 1862. An American lawyer, Republican politician, and writer. He was graduated at De Pauw University, Indiana, in 1885, and was admitted to the bar. He was elected United States senator for Indiana in 1899 and again in 1905. His works include "The Russian Advance" (1903), "The Young Man and the World" (1905), etc.

Beyrich (bī′rich), **Heinrich Ernst.** Born at Berlin, Germany, Aug. 31, 1815: died there, July 9, 1896. A German geologist and paleontologist, professor in the University of Berlin from 1856. He was associate director of the Geological Survey of Prussia and published a number of important paleontological works.

Bezold (bet′zōld), **Wilhelm von.** Born at Munich, June 21, 1837: died at Berlin, Feb. 17, 1907. A noted German meteorologist, professor of meteorology and director of the Meteorological Institute at Berlin from 1885. He is best known for his studies in the physics of the atmosphere and in terrestrial magnetism. He published numerous scientific works and papers.

Bickerdyke (bik′ėr-dīk), **John.** The pseudonym of Charles Henry Cook.

Bickersteth*, **Edward Henry.** Died May 16, 1906.

Bicol (bē′kōl). The chief river of Ambos Camarines, southeastern Luzon, Philippine Islands. It flows from Lake Bato northwest to San Miguel bay, and is navigable by steamers of 9 feet draft to Nueva Caceres, a distance of 15 miles. Also *Inaya.*

Bida*, **Alexandre.** Died Jan. 2, 1895.

Biedermann*, **Friedrich Karl.** Died March 5, 1901.

Bierstadt*, **Albert.** Died at New York, Feb. 18, 1902.

Big-bend State, The. The State of Tennessee, so called from the Tennessee river ('the River of the Great Bend'), which traverses it.

Bigelow (big′e-lō), **Poultney.** Born at New York, Sept. 10, 1855. An American journalist and historian, son of John Bigelow. He was graduated from Yale University in 1879, and was admitted to the bar in 1882, but abandoned law for journalism and traveled extensively. He edited "Outing" 1885–87; served as foreign correspondent on "Harper's Weekly" and the London "Times"; and has written and lectured on modern history and colonial administration. His publications include "The German Emperor and his Eastern Neighbors" (1891), "Borderland of Czar and Kaiser" (1893), "White Man's Africa" (1897), "Children of the Nations" (1901), "History of the German Struggle for Liberty" (completed 1906), etc.

Biggs (bigz), **Herman Michael.** Born at Trumansburg, N. Y., Sept. 29, 1859. An American pathologist and bacteriologist, professor in New York University and Bellevue Hospital Medical College from 1887, and chief medical officer of the Health Department of the city of New York from 1902. He established the bacteriological laboratories of the Health Department of New York City in 1892, the first municipal institution of the kind, and is director of the Carnegie Laboratory of the Bellevue Hospital Medical College.

Bikélas (bi-kā′läs), **Dimitrios.** Born at Hermupolis, on the island of Syra, in 1835: died at Athens, July 20, 1908. A Greek poet and essayist. His best known work is his novel "Lukis Laras" (1879), a story of the Greek war of independence. A collection of his poems was published in 1862 (second edition, 1885). He also translated a number of Shakspere's plays into modern Greek.

Biliran (bē-lē-rän′). An island of the Philippines, off the north coast of Leyte and belonging to Leyte province. Its surface is mountainous. The highest peak is Mabui, 4,430 feet in height. Area, 190 square miles. Population (1903), 19,147.

Billings (bil′ingz), **John Shaw.** Born in Switzerland Co., Ind., April 12, 1839. An American librarian, director of the New York Public Library from 1896. He was graduated at Miami University in 1857 and at the Ohio Medical College in 1860, and served in the Northern army as a surgeon during the Civil War. In 1864 he was transferred to the surgeon-general's office in Washington and took charge of the medical library there. From 1893 to 1896 he was professor of hygiene in the University of Pennsylvania. Among his publications are the index-catalogue of the library of the surgeon-general's office, and the reports on vital and social statistics for the eleventh census.

Billotte (bi-lọt′), **René.** Born at Tarbes (Hautes-Pyrénées), June 24, 1846. A French painter, one of the founders, and secretary, of the Société Nationale des Beaux-Arts. He was a pupil of Eugène Fromentin. His work is represented in the Luxembourg, Paris, in the Pennsylvania Academy of the Fine Arts, the Carnegie Institute of Pittsburg, and elsewhere; and he has received numerous medals.

Binet (bē-nā′), **Alfred.** Born at Nice, France, July 8, 1857. A French psychologist, director of the laboratory of physiological psychology at the Sorbonne. Among his works are "La psychologie du raisonnement" (1886), "Le magnétisme animal" (1887: with Charles Féré), "Études de psychologie expérimentale" (1889), "Les altérations de la personalité" (1892), "L'âme et le corps" (1905), etc. He is one of the editors of "L'année psychologique."

Binmaley (bēn-mä-lā′). A municipality of Pangasinan province, in the western part of Luzon, Philippine Islands. Civilized population (1903), 16,439.

Binondo (bē-nōn′dō). A division of the city of Manila, Luzon, Philippine Islands. Civilized population (1903), 16,657.

Binyon (bin′yọn), **Laurence.** Born at Lancaster, England, Aug. 10, 1869. An English author and poet, assistant in the department of printed books of the British Museum 1893–95, and in the department of prints and drawings from 1895. Among his works are "Lyric Poems" (1894), "Poems" (1895), "London Visions" (1895, 1898), "The Praise of Life" (1896), "Porphyrion and Other Poems" (1898), "Odes" (1900), "The Death of Adam" (1903), "Penthesilea" (1905), "Paris and Œnone" (1906), and "Attila" (1907). He has also compiled a catalogue of English drawings in the British Museum.

Bird (bėrd), **Arthur.** Born in Cambridge, Mass., July 23, 1856. An American composer, resident in Berlin since 1886. He has composed a symphony and other orchestral works, a comic opera, "Daphne," and many piano pieces. In 1901 he received the Paderewski prize for the encouragement of American composers.

Birmingham, University of. See *University of Birmingham.*

Biron (bē′rōn: F. pron. bē-rôṅ′), **Ernest Johann**: also *Biren*; originally, perhaps, *Bühren.* Born Dec. 1, 1690: died Dec. 28, 1772. Duke of Courland: the son of noble parents, in Courland, but according to old authorities a groom, or shoemaker. He was educated at the University of Königsberg, and in 1724 became permanently connected with the court of the widowed duchess of Courland, Anna Ivanovna, niece of Peter the Great. He accompanied her to Russia when she ascended the throne, in defiance of the express stipulation excluding him, in the pact of the new empress with the Russian nobles who gave her the empire, and was created by her hereditary duke of Courland. As chief favorite, hated by all for his cruelty and haughtiness, he ruled Russia during the entire reign of Anna Ivanovna (1730–40); and this epoch, regarded as the worst in Russian history, is known as the "Bironovshtchina." Having made the infant Ivan Antonovitch her heir, the empress appointed Biron regent of Russia during the emperor's minority; but he had ruled only a few weeks, when (1741) he and his family were exiled to Siberia. The Empress Elizabeth (1742) allowed him to live in Yaroslavl, on the Volga; Peter III. summoned him to St. Petersburg, restoring his orders and property; Catharine II. (1762) restored to him the duchy of Courland; and he reigned in Mitau until 1769, when he abdicated in favor of his son Peter.

Birrell (bir′el), **Augustine.** Born at Wavertree, near Liverpool, England, Jan. 19, 1850. An English essayist, lecturer, and statesman. He studied at Cambridge; was admitted to the bar in 1875; sat in Parliament as Liberal member for Fifeshire West 1889–1900, and for Bristol North 1906–; was professor of law in University College, London, 1896–99; was bencher of the Inner Temple 1903; and was appointed president of the board of education, with a seat in the cabinet, December, 1905. He was appointed chief secretary for Ireland in 1907. He is the author of "Obiter Dicta" (1884: second series 1887), "Life of Charlotte Brontë" (1885), "Res Judicatæ" (1892), "Men, Women, and Books" (1894), "Sir Frank Lockwood" (1898), "Collected Essays" (1900), "Essays and Addresses" (1901), "Miscellanies" (1901), "William Hazlitt" (1902), "In the Name of the Bodleian" (1906), "Andrew Marvell" (1906), etc.

Bisayas. See *Visayan Islands.*

Bischoff (bish′ōf), **Joseph Eduard Konrad**: pseudonym **Konrad von Bolanden.** Born at Niedergailbach, Rhine Palatinate, Germany, Aug. 9, 1828. A German novelist. He was ordained priest in the Roman Catholic Church in 1852, and in 1872 was appointed by Pope Pius IX. acting privy chamberlain. His works include "Franz von Sickingen" (1859), "Barbarossa" (1862), "Die Aufgeklärten" (1864), "Angela" (1866), "Deutsche Kulturbilder" (1893–94), "Die Säule der Wahrheit" (1907), etc.

Bishop (bish′up), Mrs. (**Isabella Lucy Bird**). Born at Boroughbridge-hall, Yorkshire, October 15, 1832: died at Edinburgh, Oct. 7, 1904. An English writer of travels, philanthropist, and geographer. She traveled extensively in North America and Asia, was especially interested in medical missions, and built five hospitals and an orphanage in the East. Among her books of travel are "The Englishwoman in America" (1856), "Unbeaten Tracks in Japan" (1880), "Among the Tibetans" (1894), "Korea and her Neighbours" (1897), "The Yangtse Valley and Beyond" (1899), etc.

Bishop (bish′up), **William Henry.** Born at Hartford, Conn., Jan. 7, 1847. An American novelist. He was graduated from Yale in 1867; studied architecture; became proprietor and editor of the Milwaukee "Commercial Times"; and was instructor in modern languages at Yale 1893–1902. In 1903 he was appointed United States consul at Genoa and in 1905 consul at Palermo. His novels include "Detmold" (1879), "The House of a Merchant Prince" (1885), "The Golden Justice" (1887), "A Pound of Cure" (1894), "Writing to Rosina" (1894), "Tons of Treasure" (1902), etc.

Bishops' Bible, The. A folio edition of the Bible, published in October, 1568. It was a revision of the Great Bible of 1539, organized by Archbishop Parker and undertaken in 1563 by himself, eleven bishops, and four deans and prebendaries. It was not reprinted after 1606.

Bismarck (bis′märk), **Herbert,** Fürst **von.** Born at Berlin, Dec. 28, 1849: died at Friedrichsruh, Sept. 18, 1904. A German statesman, son of Prince Otto von Bismarck. He was occupied chiefly with diplomatic affairs and was secretary of state for foreign affairs 1886–90.

Bismarck*, **Otto Eduard Leopold,** Prince **von.** Died at Friedrichsruh, July 30, 1898.

Bitter (bit′ėr), **Karl.** Born at Vienna, Austria, Dec. 6, 1867. An Austrian-American sculptor. He was educated at the Academy of Art in Vienna, and came to New York in 1889. His work has been chiefly monumental, the best examples being decorations of the expositions at Chicago, 1893, Buffalo, 1901, and St. Louis, 1904. He was elected a member of the National Academy of Design in 1902.

Bitterroot Range. A range of mountains extending from Clark's Fork, on the northwest, to Monida, the crossing of the Oregon Short Line on the southeast, including all mountain spurs. *U. S. Geog. Board*, Feb. 6, 1907.

Björnson*, **Björnstjerne.** In 1903 he received the Nobel prize for literature.

Black*, **William.** Died at Brighton, Dec. 10, 1898.

Blackmore*, **Richard Doddridge.** Died at Teddington, Jan. 20, 1900. His latest works include "Perleycross" (1894), "Fringilla" (1895), "Tales from the Telling House" (1896), "Dariel" (1897).

Blackwell (blak′wel), **Elizabeth.** Born at Bristol, England, Feb. 3, 1821. An English-American physician. Her family emigrated to the United States in 1832. In 1849 she was graduated at the Geneva Medical College (Geneva, N. Y.), being, it is said, the first woman to obtain a medical diploma in the United States. After two years of study abroad she began the practice of medicine in New York City. In 1869 she returned to England.

Blackwood*, Frederick Temple Hamilton. Died Feb. 12, 1902. He was ambassador to France 1891–96.

Blaikie (blā′ki), **William.** Born at York, N. Y., May 24, 1843: died at New York, Dec. 6, 1904. An American lawyer, and writer on physical training. He was graduated at Harvard in 1866 and at the Harvard Law School in 1868, and accompanied the Harvard crew to England in 1869. He wrote "How to get strong and how to stay so" (1879), "Sound Bodies for our Boys and Girls" (1883), etc.

Blake (blāk), **Francis.** Born at Needham, Mass., Dec. 25, 1850. An American physicist, inventor (1878) of a widely used telephone transmitter which bears his name.

Blakelock (blāk′lok), **Ralph Albert.** Born at New York, Oct. 15, 1847. An American landscape painter. He was destined for the medical profession but became instead a self-taught artist and musician. He traveled in the far West and embodied his study of Indian life in his work. His painting is notable for its dignity and power, and for its rich color and strong individuality.

Blanc (bloṅ), Mme. (**Marie Thérèse de Solms**): pseudonym **Th. Bentzon.** Born at Seine-Port, Seine-et-Marne, Sept. 21, 1840: died Feb. 5, 1907. A French novelist, journalist, and critic. She was for a number of years on the staff of the "Revue politique et littéraire" ("Revue bleue") and the "Revue des deux mondes." She wrote many novels, among them "Un Remords" (1878), and "Tony" (1884), both of which were crowned by the French Academy; and a number of her contributions to the "Revue des deux mondes" were collected and published under the titles "Nouveaux romanciers américains" (1885), "Litterature et mœurs étrangères" (1887), and "Les américaines chez elles" (1895).

Blanchard*, Émile. Died at Paris, Feb. 10, 1900.

Blanco y Arenas, Ramón, Marquis de Peña Plata. Born in 1832: died April 4, 1906. A Spanish general, appointed governor-general of Cuba in October, 1897. He fought in the Carlist war; served in Cuba during the rebellion of 1868–78, and was captain-general of that island 1880–81; was captain-general of Catalonia 1877–79, 1882, and 1887–93, and was captain-general of the Philippines in 1894.

Bland (bland), Mrs. (**Edith Nesbit**). Born at London, Aug. 15, 1858. An English novelist, poet, and writer of children's stories. Among her works are "A Pomander of Verse" (1895), "Songs of Love and Empire" (1897), "The Story of the Treasure-Seekers" (1899), "The Wouldbegoods" (1901), "The Red House" (1903), "Oswald Bastable" (1905), "An Incomplete Amorist" (1906), "The Enchanted Castle" (1908), etc.

Bland (bland), **Richard Parks.** Born near Hartford, Ky., Aug. 19, 1835: died near Lebanon, Mo., June 15, 1899. An American politician. He was admitted to the (Utah) bar in 1860, and was a Democratic member of Congress from Missouri 1873–95 and 1897–99. Throughout his congressional career he was a conspicuous champion of the free coinage of silver and was the author of the Bland Silver Bill (1878).

Blashfield (blash′fēld), **Edwin Howland.** Born at New York, Dec. 15, 1848. An American painter. In 1867 he went to Paris and entered the atelier of Léon Bonnat, coming also under the influence of Gérôme and Chapu. He has been especially successful in the execution of monumental decorations, among which are a dome in the Manufactures and Liberal Arts Building at the Chicago Exposition in 1893; the central dome of the Congressional Library in Washington; "Westward," a large picture in the State capitol, Des Moines, Iowa; and a ballroom ceiling in the Waldorf-Astoria Hotel, New York City. He has been a member of the National Academy of Design since 1888.

Blass (bläs), **Friedrich.** Born at Osnabrück, Jan. 22, 1843: died at Halle, March 6, 1907. A noted German philologist, professor of classical philology at Halle from 1892. He was especially distinguished for his studies of the Greek language and his work upon Greek texts.

Bleriot (ble-ri-ō′), **Louis.** A French inventor and aviator. He crossed the English Channel in a monoplane invented by himself on July 25, 1909, starting from Calais and landing at the Shakspere Cliff near Dover. The time occupied by the flight was about 40 minutes. He was awarded the £1,000 prize offered by the "London Mail" for the first aviator to make an unbroken flight across the Channel by daylight.

Blind*, Karl. Died at London, May 31, 1907.

Blind (blind), **Mathilde.** Born at Mannheim, March 21, 1841: died at London, Nov. 26, 1896. An Anglo-German poet, daughter of a banker named Cohen, and step-daughter of Karl Blind. She published "Poems by Claude Lake" (1867), "The Prophecy of St. Oran" (1881), "The Heather on Fire" (1886), "The Ascent of Man" (1888), "Dramas in Miniature" (1891), "Songs and Sonnets" (1893), "Birds of Passage" (1895). She translated Strauss's "The Old Faith and the New" (1873–74) and "The Journal of Marie Bashkirtseff" (1890), and wrote biographies of George Eliot (1883), and Madame Roland (1886).

Bliss (blis), **Cornelius Newton.** Born at Fall River, Mass., Jan. 26, 1833. An American merchant and cabinet officer. He was treasurer of the National Republican Committees of 1892, 1896, 1900, and 1904, and was secretary of the interior 1897–98.

Bliss (blis), **Frederick Jones.** Born on Mount Lebanon, Syria, Jan. 22, 1859. An American archæologist, explorer for the Palestine Exploration Fund (London) 1891–1900. He excavated the site of Lachish (Tel-el-Hesy), and conducted explorations at Jerusalem and other localities. His publications include "A Mound of Many Cities" (1894), "Excavations at Jerusalem 1894–97" (1898), "Excavations in Palestine, 1898–1900" (1902), and "The Development of Palestine Exploration" (1906).

Block*, Maurice. Died at Paris, Jan. 9, 1901.

Blodget*, Lorin. Died March 24, 1901.

Blomfield (blum′fēld), Sir **Arthur William.** Born at Fulham Palace, London, March 6, 1829: died at Broadway, Worcestershire, England, Oct. 30, 1899. An English architect, fourth son of Charles James Blomfield, Bishop of London. He was articled for three years (1853–56) to Philip Charles Hardwick, architect of the Bank of England, whom he succeeded in this office in 1883. He was especially identified with the Gothic revival of the middle of the nineteenth century, his best buildings being churches. At various times he had charge of restorations at the cathedrals of Salisbury, Canterbury, Lincoln, and Chichester. His reconstruction of the Church of St. Mary Overie in London is especially notable.

Blomfield (blum′fēld), **Reginald.** Born Dec. 20, 1856. An English architect and writer, a nephew of Sir Arthur Blomfield. His practice is mainly confined to residential architecture and gardens. Among his published works are "The Formal Garden in England" (1892), "History of Renaissance Architecture in England" (1897), "Studies in Architecture" (1906), and numerous contributions to architectural periodicals.

Blondel (bloṅ-del′), **Jacques François.** Born at Rouen, France, Jan. 8, 1705: died Jan. 9, 1774. A noted French architect. He executed several important works in Paris and in 1773 designed an extensive scheme of reconstruction in the city of Metz, according to which were built the Hôtel de Ville (1765), the Place d'Armes, and the portal of the cathedral (1771). He also designed similar improvements in Strasburg. In 1739 he opened an architectural school in Paris which was merged, in 1756, with the Académie d'Architecture in which he became professor. He is best known from his books "De la distribution des maisons de plaisaunce" (1737–38), "Architecture française" (the "Grand Blondel," 1752–56), and "Cours d'architecture civile" continued by Patte (the "Petit Blondel," 1771–77).

Blondin*, Charles (**Émile Gravele**). Died at Ealing, London, Feb. 22, 1897.

Blondlot (bloṅd-lō′), **Prosper René.** Born at Nancy, France, July 3, 1849. A French physicist, appointed adjunct professor in the University of Nancy in 1886 and full professor in that institution in 1896. He is the author of a treatise on static electricity ("Introduction à l'étude de l'électricité statique": 1885), of a volume on thermodynamics ("Introduction à l'étude de la thermodynamique": 1888), and also of numerous papers on physics and particularly on electric waves. Blondlot's announcement in March, 1903, of the discovery of a new type of obscure rays, which he named N-rays, after his birthplace Nancy, attracted wide attention and his observations have since been a subject of lively discussion among physicists.

Blood (blůd), Sir **Bindon.** Born Nov. 7, 1842. A British lieutenant-general, commander of the forces in the Panjab (northern command, India). He served in the Jowaki expedition (1877–78), the Zulu War (1879), the Afghan War (1880), the campaign in Egypt (1882), and the relief of Chitral (1895); was commander of the Malakand field force and the Buner field force (1897–98); was lieutenant-general in command of the troops in the eastern Transvaal in 1901; and retired in 1907.

Bloody Angle. A salient at Spottsylvania Court House, which received this name from the severe fighting which followed the capture there by General Hancock of about 4,000 Confederate soldiers under General Edward Johnson, May 12, 1864.

Bloomfield (blöm′fēld), **Maurice.** Born at Bielitz, Austria, Feb. 23, 1855. An American scholar, professor of Sanskrit and comparative philology in Johns Hopkins University. He was graduated at Ferman University, Granville, S. C., in 1877. He has edited the Kāngika-Sūtra from the original manuscripts (1890), translated the hymns of the Atharvaveda (in Max Müller's "Sacred Books of the East"), and edited, with Professor Garbe of Tübingen, the Kashmirian Paippaladaveda (1901). Among his other publications are "The Atharva-Veda and the Gopatha-Brāhmaṇa" (1899); "Cerberus the Dog of Hades" (1905), a concordance of the entire literature of the Veda (1907), and numerous technical articles.

Blouet*, Paul. Died at Paris, May 24, 1903.

Blowitz (blō′vits), **Henry Georges Stephane Adolphe Opper de.** Born at Blowitz, near Pilsen, Bohemia, Dec. 28, 1825: died at Paris, Jan. 18, 1903. A journalist, the Paris representative of the London "Times." His parents were Austrians of Hebrew descent, but he adopted the name of his birthplace and was naturalized a Frenchman in 1870. He commenced life in France as a teacher of German at Tours, Marseilles, etc.; became a contributor to "La Gazette du Midi" and other papers; and in 1871 became connected with the London "Times." He was decorated (1871) with the badge of the Legion of Honor (officer of the Legion in 1878). He wrote "Feuilles volantes" (1858), "Midi à quatorze heures: l'Allemagne et la Provence" (1869), "Le mariage royal d'Espagne" (1878), "Une course à Constantinople" (1884), "Memoirs" (1903), etc. He retired in 1901.

Blue Hill Meteorological Observatory. A meteorological observatory at Hyde Park, Massachusetts, founded by Abbott Lawrence Rotch in 1885 and directed by him.

Blue Mountains*. 3. These include all the mountains of northeastern Oregon with the exception of the Wallowa Mountains, and extend into Washington. *U. S. Geog. Board*, 1907.
